HYATT

The Bearing that Serves the Greatest Number of Motor Cars

Satisfactory service to the owner is the first consideration of good motor-car construction.

No better proof of the good service of Hyatt Roller Bearings could be offered than their continued use in various locations by these manufacturers who make ninety per cent of all motor cars built.

Pleasure Cars

A KLAXON for 1,800,000 MOTORISTS

To Klaxon Dealers: Right now—on the streets and roads of the United States—there are more than a MILLION small cars with signals that are feeble, weak, unsatisfactory or entirely useless. Some are old-time bulb horns. Some are "Buzzers." Some are cheap hand horns. A big majority of the owners of these million cars will want the new Klaxon-3.

Because it has the KLAXON NOTE. Because it has the Klaxon OVAL Projector that sends the sound straight ahead instead of scattering it. Because it CARRIES. Because it WARNS. Because it pushes from BEHIND—the *new* and *better* straight-from-the-shoulder way. Because it ALWAYS WORKS. Because it has Klaxon QUALITY in it, the Klaxon NAME on it, Klaxon reputation BEHIND it. And because it costs THREE DOLLARS.

Add to this million cars another 800,000 small cars that will be sold in 1917—with equally unsatisfactory, ineffective horns on them. That's a possible market of 1,800,000.

How much of this market is in your own town? Estimate the number of cars there—and you can safely figure that TWO-THIRDS—two cars in every three—are bang-up good prospects for Klaxon-3s.

We are doubling the capacity of the largest signal factory in the industry to take care of the demand for KLAXON-3s. But we suggest that you write your jobber at once to avoid disappointment in deliveries.

Klaxon Company, Newark, N. J.

THE charm of the Colonial is the inspiration for many of the most beautiful homes of today. Fortunately the return to white and mahogany comes at a time when almost every housekeeper knows the easy, successful way to take care of finely finished woodwork and furniture.

Like most other articles that cannot be cleaned safely or satisfactorily by ordinary methods, enameled wood trim and choice pieces of cabinet work require only the judicious application of Ivory Soap to look their best.

Ivory Soap removes the dirt without harming the finish. Its mild, white, pure, neutral lather does nothing but cleanse. Being free from alkali and all harsh materials, it is perfectly safe. Being free from unsaponified oil, it leaves no greasy film.

Just the usual care which common sense suggests when applying water to a finished wood surface — lukewarm suds, dampening only a small part at a time, prompt drying with a chamois skin—insures success with Ivory Soap.

Directions for cleaning over a hundred articles not ordinarily washed with soap and water are included in this booklet "Unusual Uses of Ivory Soap." Thousands of women have found it very helpful. You should have a copy. It is free. Address The Procter & Gamble Co., Dept. 25-A, Cincinnati, Ohio.

THE PIKER'S MARKET

By Maximilian Foster

A FEW days ago, in one of the more or less palatial refreshment places that dot the Wall Street district, a group of plainly dressed men, all of commonplace appearance, stood at the bar, drinking champagne at seven dollars a bottle. All reports to the contrary, the bubbling grape is not Wall Street's daily tipple. "A piker's drink" is what the big men, the big operators and brokers, term it; though never mind about that. The bartender having rung up the check on the cash register, one of the men, a middle-aged person who, from his looks, might have been taken for a shopkeeper or a small professional man, produced a roll of bills.

The roll was huge. It was in its dimensions of the shape and size of a tomato can, added to which all the bills were of big denomination—all but one, it seemed. Buried in the roll was a single, simple V; and as the glance of the man fell upon it he hiccuped disdainfully.

"Here, you dog!" he grunted. "What're you doing among real money?" And, crumpling the bill into a ball, he tossed it to the floor.

This anecdote is not related because of its humor. It is not even alleged to be funny. The sole reason why it is published here is that it seems to cast a vivid and illuminating light on what, just now, is going on in Wall Street. Never has Wall Street had so much money. Never has the public shared so freely in that money. This, in fact, is the point to be dwelt upon. Not only have outsiders been running the market—running away with it, one might say—but they have never before been of such an obscure, indiscriminate class.

The anecdote just related was told to a broker, the head of one of Wall Street's biggest margin houses, and he nodded indifferently.

"I know," he said; "the Street's filled with clowns like that. This is the Public's Market, you know. You could call it the Piker's Market instead."

The Miraculous Flood of Inpouring Money

AS EVIDENCE of this the broker hauled out the firm's account book. Two hundred and sixty-two separate accounts showed on the book in question, and of this number only fifteen displayed transactions in lots of one hundred shares or more. The remainder were trading in lots of five, ten and twenty shares. However, this must not be taken to mean that the bulk of the present speculation is done in fractional lots—for that matter, in separate hundred-share transactions; there is still a mass of heavy trading taking place. The point is that, mixed in among this, more shoestring dabbling is going on in Wall Street than the Street ever before has known.

The cause—that and the reason for the present tremendous bulge in Wall Street securities—is known, of course, to everyone. Three years ago an air of gloom pervaded every brokerage office. It was predicted freely that the country never again would see a big bull market. It was said everywhere that the public was out of the market, and out of it for good. To all intents this was true. The public was, indeed, out of the market; and only a convulsion could bring it back again. It had been tricked too long. It had been jobbed and cheated; swindled so often that at last it had grown wise. Added to this, much light had been let in on Wall Street ways and methods by various legislative inquiries—by these and by what the newspapers and periodicals published. Consequently no market that was purely manipulative would ever again attract the public. If ever it came back it would indeed be only through a convulsion. Well, the convulsion happened.

It was the war, of course. But for the war—for the miraculous flood of money the European conflict has caused to pour into America—there would have been no big bull market. However, now that it has come, now that it is here, the wave swelling high, it is curious to look on and see how the Street is taking it; to look back, too, and see how the Street at the beginning took it. Nothing that ever happened is better illustrative of the fact that Wall Street speculation is gambling, pure and simple; that, so far as Wall Street, as a mass, is concerned, its trading is based on guesswork—based solely and entirely on chance. Few among those who dabble in the market saw at the outset what the war would mean. The majority, the mass of outsiders on which professional Wall Street fattens, guessed exactly opposite from the truth.

When Gloom and Disaster Stalked in Wall Street

IN JULY, 1914, the first gun was fired. The war was on, and instantly the conflict became the biggest bear argument ever heard in the Street. Of course, for a time there was logic in this. It was only natural that Europe, in frantic need of money, would throw into the market its hoard of American securities. This, in fact, it did—or, rather, it attempted to do it; and, to prevent what probably would have been the biggest panic the world has ever seen, the New York Stock Exchange closed its doors. This averted the panic; but, though it did, it could not avert the gloom, the despair that, like a creeping flood, settled down on the Wall Street district.

The country was saved; but it was saved only for the moment, said Wall Street. Ruin, it averred, was at hand. Give it time, give it a few months or so, and the United States would come crashing down financially with all the rest of the world. This prophecy, uttered as if by Jeremy, was heard in every Wall Street brokerage office. Rather curiously, it was uttered also in more than one more dignified financial rendezvous. The United States, it was repeated, faced the most perilous crisis in its history.

Perhaps it did. Perhaps, as it was said, the country trod the brink of disaster, of destruction. At any rate, so said Wall Street; and isn't Wall Street the country's pulse? The Street says it is. The Street, at the same time, believes it is. The only trouble was that while Wall Street, as a whole, was moaning its jeremiads, the country's industries had reawakened. Mills were going; factories were working; farms, mines, railroads—these and every other form of industry again were pegging away. In Wall Street there might be gloom—disaster, ruin and destruction might be stalking there; but, though it was, the rest of the United States didn't seem to heed it much. What it heeded was the rising stream of dollars—earned legitimate dollars—which already had begun pouring in. It thought little about Wall Street's distress. It cared even less about it too. So Wall Street kept on moaning.

That is the significant fact about the United States' historic financial center—the speculative side of that center, at all events: Its own misery it feels to be the entire country's misery. It is, in fact, the most self-conscious, self-centered community we possess. Given all its reputation for wiseness, for clearness of mind and alert farsightedness, the Street seems frequently incapable of seeing beyond its own nose. In this case, anyway, while the country had begun to roll up wealth, all that one heard from Wall Street for months was groans. On December 12, 1914, the Exchange reopened its doors. Again trading was resumed, but still the Street moaned on. It was, in fact, not until after the big boom in business—legitimate even if exceptional—was sweeping well

Digitized by Google

along in its growth that manipulative, speculative Wall Street began to blink, to open its eyes.

The bulge, to its astonishment, was everywhere. Every other market had risen, and these markets still were rising. Manipulation was not the cause, either. The rise in each case was natural. Iron was up. Copper was up. It was the same, too, with lead, spelter, tin and what not. Foodstuffs were up also—all rising, climbing. Wall Street, seeing this, blinked again. Yet it still couldn't see the truth. Stocks weren't up; the pet, precious issues on which Wall Street feeds were as yet anæmic, moribund. Therefore, averred Wall Street, the prosperity talk was all bunk. Wasn't there a war? Wasn't the war the biggest bear argument the Street had ever had? Convinced that it was, the speculative element resumed its dyspeptic prophecies. These it alternated with attacks on the Government, on the President and his policies.

In the light of recent happenings it is amusing now to turn back to the literature that in those days Wall Street was putting forth. Caution was its keynote, not thoughtful caution, but whimpering timidity. Of the country's prosperity, in so far as the market reflected it, no hint was evident. The "list" was still limp. The margin houses were still vacant of customers. As they said there, "you couldn't raise money on twenty-dollar goldpieces," and every broker who had sold his car in the starvation times of 1913–1914 was still afoot. Prosperity? It was a joke. Since it hadn't hit Wall Street, the Street didn't believe it existed. This isn't all, either. Even when it awakened to the facts, blinked again and saw the money rolling in, the Wall Street crowd—that gang of alleged "investors" which is believed to make the market—all did their utmost to discount and discredit the country's tide of prosperity. It wasn't real, said the gang. It never would last. Even the margin houses—most of them, at any rate—took that same stand. Clients with their commissions are the meat and drink of these concerns; without commissions and clients they would one and all go under; yet there was hardly one of these houses with foresight enough to grasp the facts at hand. True, when the market began to stir they did urge their clients to buy. It was their business to do so. The more their customers bought, the more the commissions that came in. But though indeed they urged, urged hungrily, too, it was a cautious, deprecatory urging. The rise was only temporary, they said. They also added that the market was probably being nursed along in order that those on the inside might get out gingerly on the outside. "Be cautious," was the warning. "Don't hang on long." To be brief—to be brutally frank—when the Street had the big bull market it had been hankering for all the years since 1907, the Street, as a whole, didn't realize the fact.

But then why wonder? Wall Street of itself does not make bull markets. In all its history not even the so-called inside interests have made one. Always and inevitably it is the public that does it. All that the bulk of these insiders ever do is to raid or job and manipulate. At times, to be sure, they may control the market for awhile. One stock or group of stocks they may breeze up or down; but they might as well seek to control the solar system as to try to control the entire list.

Fireworks in Bethlehem

IT WAS along toward the end of March and the beginning of April in 1915 that Wall Street first responded to the boom. In other words, it had taken the Street's alleged wiseacres something like three months to awaken to the facts. Meanwhile, under the noses of those who say they can read the tape a vast amount of quiet buying had been going on.

Little of this was Wall Street buying. It was inside buying, of course, but all the insiders were not of the regulation Wall Street sort. Instead, they were persons in a position to know—to know actually, not to guess as Wall Street nominally guesses. Those who did it were the men in charge of the industries that first felt the impulse of the rising tide. These men had begun to see, and to see clearly, what the war meant commercially for the United States. So while the profits were piling up, while Wall Street was still moaning and saying the country faced destruction, they began quietly to buy. An instance of this appears in that well-known and now historic war bride, Bethlehem Steel. The course of Bethlehem shows accurately the value of the Street's alleged foresight.

In December, 1914, when the Exchange reopened, Bethlehem sold round 42. To the insider—of the Wall Street speculative sort—the stock looked inactive and uninteresting. It was reported that the concern had been grabbing off big contracts for munitions, and the report was confirmed virtually by the company itself; but the news still was pooh-poohed. If Bethlehem was making money, rolling up a wad, why didn't the stock show it? Why didn't it rise, setting off fireworks? This, in fact, is the Street's way of seeing things. It believes nothing till the market shows it. Before long, however, Bethlehem did begin to rise. And presently it began to shoot off fireworks. Then, but not until then, the Street sat up and took notice.

As this is written, two years have passed since the Exchange reopened its doors. Bethlehem, selling then at 42, has in that time sold up to 700, and is now selling round 644. However, had anyone suggested in 1914—for that matter, until months later—that Bethlehem ever would do this, the insiders would have laughed in his face. The stock, in fact, is a sort of joke; for it fooled even those Wall Street persons who are really on the inside—namely, that small intimate group that is the financial district's famous board or boards of interlocking directors. They, too, discounted and discredited what was happening. At any rate, it is told gleefully how some of them—these the "wisest" at that—"got out from under," as they expressed it, when the stock touched 75. They "unloaded" at 75—not at 700. Sad, wasn't it? Indeed, it was more than sad, it seemed to some of them inconceivably bitter and unjust.

Bethlehem, the first of the war brides, is not, however, the only one. There are a dozen others. In December, 1914, General Motors sold at 86. Recently it was selling round 750, and has sold as high as 850. Then there is International Mercantile Marine. When the Exchange reopened that stock was kicking round underfoot, offered at $1 a share and no takers. Recently it was active at 47. International Paper, rising from 8 to a high point of 75½, is another; and so is Central Leather, ranging from 32⅜ to 123. One might go on naming them by the dozen; but their number is not the point. The thing to be digested is that in nearly every instance of a rise the alleged inside traders promptly got on the outside, "unloading," as they termed it, once they'd taken a few points' profit. To be sure, after awhile they got aboard again; but by then the bloom had already been taken from the flower. It was the raw public that had taken it.

This does not mean that speculative Wall Street has not made money. It not only has made it, it has made more than it has ever made before. Elated as it is, though, the elation is tinged with a note of regret. If only it had guessed! If only at the outset it had seen! That is the sad part about it—Wall Street did not see. It did not, for that matter, even dream what was coming.

Of All Sad Words

ONE afternoon recently half a dozen men, each man long familiar with the Street, sat at a table in a brokerage office. That day one share of General Motors had been sold at 750, a drop of 60 points from the previous quotation; and one and all they were animatedly discussing the stock. All six had made money in the security, but still one and all voiced complaint.

It was the old story: Why hadn't they got in at the bottom and hung on till the top? One of the six, to estimate what he'd "lost," drew forth a pencil and began to figure on the back of an envelope. The basis of his figuring was on a thousand shares bought at 86 on ten points margin, and sold at 850.

The result was vivid: Less interest and commissions, the net profit figured out $756,262.50.

Gloom settled on their faces. They all sighed. Then with an effort they had changed to another topic, when the man with the pencil fetched another deep breath.

"Say," he exclaimed, "just think what'd have happened, too, if we'd pyramided every ten points up!"

The suggestion broke up the party. Silently they kicked back their chairs, and each departed in a different direction. It was too much to dwell upon. That was only human nature. You know what the poet says, that hackneyed line: "Of all sad words of tongue or pen. . . ." One wonders whether the poet wasn't a Wall Street speculator!

Just what has happened in Wall Street—what, too, is still happening there—the figures will serve to show. The year 1913 was a lean, bleak time in the market; the year 1914 was much worse. In 1913 the year's average of daily sales was 279,740; while in 1914 the average sank to 236,610. As a whole, however, 1914 was much worse for Wall Street than these figures indicate, the average having been computed on the basis of working days. Thus, while in 1913—lean as it was—there were 83,362,639 shares dealt in, the total year's sales for 1914 were only 48,031,833. In other words, this means that for the year the average turnover for each member of the Stock Exchange's 1100 members was only 43,665 shares.

The profits from this would not pay office rent and clerk hire. However, notice the figures for 1915. From 48,031,833 shares in 1914 the sales on the Exchange for 1915 sprang to 173,654,186 shares. The turnover averages 157,867 shares for each individual on the floor. Now, for 1916, it is estimated that the transactions for the year will reach 225,000,000 shares—a turnover of about 200,000 shares for each of the 1100 members. In November alone 35,709,915 shares were dealt in, an amount only 13,000,000 shares under the sum total for all of 1914. Added to this, in 1916 there already have been eight days on which more than 2,000,000 shares have been dealt in. The significance of this will be seen when it is remembered that until 1916 there had not been a single 2,000,000 share day since 1907. There were three in that year.

The Odd-Lot Traders

MILLION SHARE days no longer attract attention in Wall Street. They happen nearly every day. What is more, they will keep on happening till the market bursts. And that it is due presently to burst seems likely. At any rate, the prevailing uneasiness in Wall Street appears to forecast something like this. It is still further forecast by the class of persons that now are in the market.

Recently, in one of Wall Street's biggest brokerage houses, the manager of the place led the writer into the customers' room. The place was crowded. That day Ohio Cities Gas had begun to buzz and splutter. Selling at 75 early in October, it was now climbing fitfully to a high point of 124¼; and the customers' room was packed as closely as the proverbial sardine can. With a jerk of his thumb the room manager indicated the front row of chairs before the quotation board.

"See those fellows?" he asked.

The writer saw them. Like the men in the barroom—the fellows buying champagne at $7 a bottle—all were of ordinary appearance. As a matter of fact, few in the room were anything else.

"Well, listen now while I tell you what they are," said the manager; and one by one he gave their occupations.

There were eight men in the row of chairs. The first was a head gardener employed on a Long Island estate. In the chair adjoining was a drug clerk. The third was a retail shoe dealer from across the bridge in Williamsburg. The fourth was a university professor. In turn, the three next to him were a dentist, a retail butcher, and the proprietor of an uptown café.

"That's how it's going," voiced the manager. "Every piker in Christendom has broken into Wall Street with his shoestring."

Crowds in brokerage offices seldom seem a very elevating or elevated lot, but never before have they looked so obscure, so indiscriminate. In the odd-lot houses this is especially the case. Odd lots, it should be explained, are any fractional part of one hundred shares, a hundred shares being the unit of all transactions on the Exchange. Amounts under that are seldom dealt in; and, as the habit has become almost a rule, this apparently would prevent gambling on margin in less amounts. As a fact, it doesn't. To-day from 25 to 27 per cent of all transactions in the market are odd-lot trades; and what is more, a heavy percentage of this odd-lot trading is done on limited margins. Shoestrings of $100 or $200 are the rule, and in consequence money has been brought into Wall Street that otherwise would have gone to the bucket shops.

The system of operation is this: Houses engaged in the odd-lot business will sell any number of shares of stock, from 1 to 99, at the offered price of 100-share lots on the New York Exchange; conversely, they will buy any odd lot at the bid price. Thus, if 51 is bid for 100 shares of United States Steel, you may sell one or more shares for 51; if 100 shares of Steel are offered for sale at 51⅛, you may buy one or more shares at this price.

Say, however, that the stock the dabbler wishes to purchase or to sell is inactive, and the market for 100 shares is quoted 80 bid, 82 asked, the dabbler may either sell at 80 or buy at 82; or he may enter his order to purchase or sell at the next 100-share transaction. In this case the odd-lot order will be executed ⅛ under this forthcoming 100-share sale, if a selling order; or ⅜ over the sale, if a buying order. This fraction of a point is the

(Concluded on Page 64)

THE WRONG PEW

By Fannie Hurst

ILLUSTRATED BY MAY WILSON PRESTON

In Complete Exhaustion She Slid Into Her White Iron Cot Against the Wall

FOR six midnights of the week, on the roof of the Moncrieff Frolic, grape-wreathed and with the ecstatic quivering of the flesh that is Asia's, Folly, robed in veils, lifts her carmined lips to be kissed, and Bacchus, whose pot-belly has made him unloved of fair women, raises his perpetual goblet and drinks that he may not weep.

On the stroke of twelve, when on stretches of prairie the invisible joinder of night and day is a majestic thing, the Moncrieff Follies—twenty-four of them, not counting two specialty acts and a pair of whistling Pierrots—burst forth into frolic with a terrific candle and rhinestone power.

Saint Geneviève, who loved so to brood over the enigmatic roofs of the city, would have here found pause. Within the golden inclosure of the Moncrieff Roof, a ceiling canopied in deep waves of burnt-orange velvet cunningly concealed, yet disclosed, amber light, the color of wine in the pouring. Behind burnt-orange portières of great length and great depth of nap the Twenty-Four Follies, each tempered like a knife edge, stood identically poised for the first clash of Negroid music from a Negroid orchestra.

At a box office built to imitate a sedan chair—Louis Quinze without and Louis Slupsky within—Million-Dollar Jimmie Cox, of a hundred hundred Broadway all-nights; the Success Shirt Waist Company incorporated, entertaining the Keokuk Emporium; the newest husband of the oldest prima donna; and Mr. Herman Loeb, of Kahn, Loeb & Schulien, St. Louis, waited in line for the privilege of ordering *à la carte* from the most *à la mode* menu in Oh-là-là, New York.

The line grew, eighty emptying theaters fifteen stories below sending each its trickle toward the Midnight Frolic—men too tired to sleep, women with slim, syncopated hips, and eyes none too nice. The smell of fur and fragrant powder on warm flesh began to rise on a fog of best Havana smoke. At the elevators women dropped out of their cloaks and, in the bustle of checking, stood by, not unconscious of the damask finish to bare shoulders.

When Mr. Herman Loeb detached himself from the human tapeline before the box office, the firm and not easily discomposed lines of his face had fallen into loose curves, the lower lip thrust forward and the eyebrows upward. Sheep and men in their least admirable moments have that same trick of face. He rejoined his companion, two slips of cardboard well up in the cup of his palm.

"Good seats, Herman?"

"I ask you, Sam, is it an outrage? Twenty bucks for a table on the side!"

"No!"

"Is that highway robbery or not, I ask you!"

Mr. Samuel Kahn hitched at his belt, an indication of mental ferment.

"I wouldn't live in this town, not if you gave it to me!"

"It's not the money, Sam. What's twenty dollars more or less on a business trip, and New Year's Eve at that? But it's the principle of the thing. I should be made a good thing of yet!"

"Twenty bucks!"

"Yes, and like he was doing me a favor, that Louis Slupsky in the box office who used to take tickets in our Olympic at home. Somebody at the last minute let go of his reservation or we couldn't have got a table."

"Twenty bucks, and we got to feel honored yet that they let us sit at a table to buy a dinner! But say, Herm, it's a great sight, ain't it?"

"There's only one little old New York! Got to hand it to this town—they're a gang of cutthroats but they do things up brown. A little goes a long ways, but I always say a trip to New York isn't complete without a night at the Moncrieff Roof. You sit here, Sam, facing the stage."

"No, you! An old bachelor has got the right to sit closer to a girl show than a married man."

They drew up before a small table, edging a shining area of reserved floor space and only once removed from the burnt-orange curtains.

"A ha!" exuded Mr. Samuel Kahn, his rather strongly aquiline face lifted in profile.

"A ha!" exuded Mr. Loeb, smiling out of eyes ten years younger. Blue shaved to the last hair and less aquiline, his was the kind of profile that has driven strong men to pose for street-car advertisements of Red Wing collars.

"What'll you have, Sam?"

"Say, what's the difference? I'll take a cheese sandwich and a glass of beer."

"Now cut that! Maybe I squealed about the twenty bucks, but that don't make me out a short skate. This isn't Cherokee Garden at home, man. I'm going to blow my brother-in-law to New Year's Eve in my own way, or know the reason why not. Here, waiter, a pint of extra-dry and a layout of sandwiches."

"If you can stand it, I guess I can!"

"It's not on the firm either, Sam; it's on me!"

"For the price of to-night Ma and Etta would hang themselves, ain't it?"

"Say, we only live once. I always tell Ma she can't take it with her when she goes. Anyways for the discount we got on those Adler sport skirts, we can afford to celebrate."

"Say, Herman, I wish I had a dime for every dollar what is spent up here to-night. Look at the women! I guess American men don't make queens out of their wives!"

"For every wife who's up here to-night I wouldn't take the trouble to collect the dimes," said Mr. Loeb with cunning distinction.

"I guess that ain't all wrong neither. It ain't such a pleasure to be away from your family New Year's Eve, but I can assure you I'd rather have Etta having her celebration with Ma and *Grossmatter*, and maybe the Bambergers over at the house, than up here where even a married woman can blush she should be."

"Take it from me, old man, a flannel petticoat in the family is worth all the ballet skirts on this roof put together."

"I bought Ma and Etta each one of them hand bags to-day at Lauer's for nine dollars. What they don't know about the price won't hurt them. Two for nine I'll tell them."

"To this day Ma believes that five-hundred-dollar bar pin I brought her two years ago from Pittsburgh cost fifty at auction."

"There's Moe Marx from Kansas City just coming in! Spy the blonde he's with, will you? I guess Moe is used to that from home, nix! There's a firm, Marx-Jastrow, made a mint last year."

"Look!"

The lights had sunk down, the sea of faces receding into fog. The buzz died too, and doors were swung against the steady shuffle of incomers. From behind the curtains a chime tonged roundly and in one key. One—two—three—four—five—six—seven—eight—nine—ten—eleven—twelve!

Then the orange curtains parted and on a gilded dais the width of the room, in startling relief against a purple circle the size of a tower clock, the Old Year, hoar on his beard and with limbs that shivered in an attitude of abdication, held out an hourglass to a pink-legged cherub with a gold band in his or her short curls.

A shout went up and a great clanging of forks against frail glass, the pop of corks and the quick fizz ensuing. The curtains closed and the lights flashed up. Time had just sailed another knot into space, and who cared?

At a center table already a woman's slipper was going the rounds. It began to sag and wine began to ooze through the brocade.

"Well, Hermie, here's a happy New Year to you!"

"And to you, Sam, and many of 'em!"

"To Ma and Etta and *Grossmatter!*"

"To Kahn, Loeb & Schulien!"

"To Kahn, Loeb & Schulien and that to this time next year we got the Men's Clothing Annex."

They drank in solemn libation.

The curtains had parted again. A Pierrot, chalky white, whistled in three registers, soprano, bass and baser. A row of soubrettes rollicked in and out again in a flash of bushy skirts.

"Say, look at the third one from this end with the black curls all bobbing. I'm for her!"

"Where?"

"Gone now!"

Mr. Kahn leaned across his singing glass, his eye quirking into a wink.

"Old man, you can pull that woman-hater stuff on the home folks, but it takes your brother-in-law to lead you to the live ones. Eh?"

"You dry up," said Mr. Loeb, peering between the halves of a sandwich.

On a glass runway built over the heads of the assembled, a crystal aisle for satin feet, the row of soubrettes suddenly appeared, peering over the crystal rail, singing down upon the sea of marcelled, bald and dead heads. Men, sheepish of their smiles but with the small heels overhead clanging like castanets into their spirits, dared to glance up.

"Gad, Herman! What'll they think up next! Whatta you know about that—all those little devils dancing right over our heads!"

"There she is!"

"What?"

"The little one in the boy's black satin suit, with the black curls bobbing!"

"Watch out, Herm! You'll die of crick in the neck."

"I don't see any blinkers on you!"

"Hey, old man! Your mouth's open."

"I know. I opened it," said Mr. Loeb, his head thrown back and eyes that were suddenly bold staring up at the twinkling aisle.

At a table adjoining a man reached up, flecking one of the tiny black satin feet with a whirl of his napkin.

"When You Come Back From New York, You Bring Grossmatter a Fine Present, Not?"

Digitized by Google

Then Mr. Herman Loeb, of St. Louis, committed an act of spontaneous combustion. When came the turn of the black satin and the bobbing curls to bend over the rail directly above him, he flung wide his arms, overturning a wine bottle.

"Jump!" he cried.

Beneath the short black curls a mouth shaped like a bud, reluctant to open, blew him a kiss. Then came a cue of music like an avalanche, and quicker than Harlequin's wink the aisle was clean.

"Gad!" said Mr. Loeb, his strong profile thrust forward and a light on it.

"That little one with the black curls? Say! You can put her on your watchfob and take her home."

"Wouldn't mind!" said Mr. Loeb.

"You and Moe Marx are like all the women haters. You don't know it, but you're walking in your sleep and the tenth-story window's open."

"We oughtn't to come up here in business clothes," said Mr. Loeb, eying his cuff edges.

A woman sang of love. A chorus, crowned and girdled in inflated toy balloons, wreathed in and out among the tables.

"She's not in that crowd."

Men to whom life for the most part was grim enough vied for whose cigarette end should prick the painted bubbles. A fusillade ensued; explosions on the gold-powdered air—a battle *de luxe!*

Mr. Kahn threw back his head, yawned and slid a watch from his waistcoat pocket.

"W-ell, a little of this goes a long way. If we want to pull out of this town a day after to-morrow we've got to get down to Cedar Street early in the morning on that sweater job lot. It's about time for us to be getting across to the hotel."

"Wait!" said Mr. Loeb.

A jingling and a right merry cacophony of sound came fast upon the bubble bombardment, and then, to a light runnel of song, the row of twenty-four, harnessed in slotted sleigh-bells and with little-girl flounced frocks to their very sophisticated pink silk knees.

The devices of vaudeville are perennial. Rigoletto, who set a court's sides aching, danced to bells. The row of twenty-four, pink and white as if the cradle had just yielded them up, shivered suddenly into an ecstasy of sound, the jerked-up shoulder of one, the tossing curls of another, the naughty shrug of a third, eking out a melody.

A laugh rose off the crowd.

"Say, this town'll fall for anything! That act's got barnacles. But the little devils look cute, though. Say—say, old man, cut that out! This is no place for your mother's son. Say!"

Mr. Loeb was leaning forward across the table top, his head well ahead of his shoulders. Of the third from the end of the row of twenty-four, a shoulder shrugging to the musical nonsense of bells was arching none too indirectly toward him, and once the black curls bobbed, giving a share of tremolo to the melody. But the bob was carefully directed, and Herman Loeb returned it in fashion, only more vehemently and with repetition.

"Say, Herman, enough is enough! You'll have her here at the table next. It's like Al Suss always says, the reason he woke up one morning and found himself married to the first pony in the sextet was because he stuck a stamp upside down on a letter to her and found he could be held for a proposal in stamp language."

To a great flare of the Negroid music, the row of twenty-four suddenly turned turtle, and prone on a strip of rug, heads to audience and faces to ceiling, twenty-four pairs of legs, ankleted in bells, kicked up a syncopated melody. From a Niagara of lace, dainty insteps quivered an arpeggio. A chromatic scale bounced off a row of rapidly pointing toes. The third from the end, seized with sudden chill, quivered into grace notes, small pink feet kicking violently to the chandelier.

Men red with laughter pounded their plates. The rhythmic convulsion passed down the prostrate line, forty-eight feet twinkled a grand finale, and the curtains swung, then opened, remaining so.

The line of twenty-four danced down and across the wide hairline that separates life and stage, butterflies sipping from table to table. The cabaret was done. Lights resumed and the business of food and drink.

Mr. Loeb flung out an arm, pulling awry a carefully averted pink sash.

"Say, little Jingle Bells, you and your friend!"

"Cut it out, Herm! If we want to be down on Cedar Street by ——"

"What's your hurry, little one?"

"It ain't mine, it belongs to the management."

"Won't you join us?"

"Herm, that job lot of sweaters ——"

"Oh, come on, little Jingle Bells!"

"My friend too?"

"Sure, your friend."

They teetered, the two of them like animated dolls, arm in arm, and so at ease.

"Here, you little Black Curls sit next to me, and you, Blondey, over there by my brother-in-law."

They fluttered into place.

"What'll you have, girls?"

"Anchovies and fine-chopped onions for mine, Joe. Tell 'em in the kitchen I said fine, and if the gentlemen are going to order wine, bring me a plate of oyster crackers first to take off the edge of my emptiness."

"Sure, another bottle of wine, waiter."

"Hermie, we ——"

"And you, little Jingle Bells, same as Blondey's order?"

"Yeh."

"Say, you know what?"

"No, what?"

"I fell for those bouncing black curls of yours before I was in the place five minutes."

At that there was an incredible flow of baby talk.

"Gemmemen ike ikkie gurl wiz naughty-naughty black curl-curlies?"

At Three o'Clock, in a Magistrate's Office, Herman Schulien Loeb and Sadie Helen Mosher Became as One

"You bet your life I do," said Mr. Loeb, unashamed of comprehension.

Mr. Kahn flashed another look at his watch.

"Say, don't you know, you girls oughtn't to keep us boys up so late. Ain't there no wear out to you?"

The yellow curls to his right bounced sharply.

"He asks if there's a wear out to us, Cleone? I wish it to you this minute, Baldy, that you had the muscles in the back of my legs. I guess you think it's choice for us girls to come out on the floor after the show!"

"Sylvette!"

"Yah, it's my New Year's resolution to tell the truth for thirty minutes if I'm bounced for it. If you got to know it, it's a ten per cent rake-off for us girls on every bottle of golden vichy you boys blow us to."

"Honest, Sylvette, you're wearing scrambled eggs instead of brains to-night. Why don't you cry a few brinies for the gemmemen while you're at it!"

That so quickened Mr. Loeb's risibilities that he dropped his hand over Miss Cleone St. Claire's, completely covering yet not touching it.

"You're a scream, kiddo! Gee, I like you!"

She drank with her chin flung up and her throat very white.

"Bubbles! Bubbles! God bless all my troubles!"

"Well, I'll be darned!" said Mr. Kahn, smiling at her.

"The gemmemen from out of town?"

"St. Louis."

"I had a friend out there—Joe Kelsannie, of Albuquerque. Remember him, Sylvette?"

"Do I!"

"I'm going out there myself some day if the going's good, and get me a cowboy west of Newark."

Mr. Loeb leaned forward smiling into her quick-fire eyes.

"I'll take you!"

"Stick her on your watchfob, Herman."

"No, sirree, I'll take her life size."

"Watch out, Hermie; remember the upside-down postage stamp!"

"Want to go, Jingle Bells?"

"Sure."

"But I'm on the level, little one. No kidding. Day after to-morrow. St. Louis—with me!"

Miss Cleone St. Claire drew herself up, the doll look receding somewhat from her gaze.

"Say, bo, you got me wrong. I'm one of the nine hundred and ninety-nine thousand chorus girls you could introduce your sister to. Aren't I, Syl?"

"You let that kid alone," said Miss Sylvette de Long, in a tone not part of her rôle. "When the traffic policeman sticks up his mitt it's time to halt, see?" Lines not before discernible in Miss De Long's face had long since begun to creep out, smoky shadows beneath her eyes and a sunburst of fine lines, showing through the powder like stencil designs.

"Come on, Herm, it's getting late, and if we want to be down on Cedar ——"

"You think I'm kidding this little black-eyed chum of yours, don't you, Blondey?"

"Sure not! You want 'er to grace the head of your table and wear the family heirlooms!"

"Well, Sam, you're my brother-in-law—married to my own sister and living under the same roof with me—am I a habitual lady fusser, or do they call me Hermie the Hermit at home?"

"Never knew him to talk ten straight words to a skirt before, girls," said Mr. Kahn through a yawn; "and if you don't believe it, go out and ask Louis Slupsky, who used to play chinies with him."

"Say, you," said Miss De Long, edging slightly, "you're about as funny as a machine gun, you are! If you got a private life, why ain't you back in St. Louis a night like this showing her and the kids a good time!"

She was frankly tired, her eyelids darkening.

"I wish to heaven I was," said Mr. Kahn suddenly. "Take it from me, girl, it was nothing but a business hangover kept me. Come, Herm, if we ——"

"You think I'm kidding, little Jingle Bells, don't you?"

Miss St. Claire sat back against her chair; her black eyes had quieted. "If you ain't kidding you must be crazy with the heat or dr——"

"Look at my glass. Have I touched it?"

"The man's raving, Syl! Wants to marry me and take me back to St. Louis, Thursday."

"Cut the comedy and come! Herm, it's getting on to three in the morning."

"This little girl keeps thinking I'm kidding, Blondey. I always knew if I ever fell for matrimony it would be just like this. Right off the reel. No funny business. Just bing! Bang! Done!"

"Catch me while I swoon, but he sounds on the level, Cleone."

Digitized by Google

"Bubbles! Bubbles! God Bless All My Troubles!"

"Well, what if he is? Of all the nerve! Whatta you know about me? How do you know I haven't got three kids and a crippled husband at home? How do you know ——?"

"I know, little Jingle Bells! Why, I was as sure of you, the minute I clapped eyes on you, as if we'd been raised next door to each other. I can see right down in your little life like it was this glass of wine."

Miss St. Claire threw out her arms in a beautiful and sleepy gesture.

"Well, boys, this is a nice little party, but I got to get up at three o'clock to-morrow afternoon, and I need the sleep. Oh, how I love my morning sleep!" She drew back, her bare outflung arm pushing her from the table. "If you'll call me and my roommate a taxi——"

"No, you don't, Jingle Bells!"

He placed a hand that trembled slightly on the sleeved part of her arm. She opened wider her very wide black eyes.

"Are you bats?" she said.

"I'm going to marry you and take you home with me, if I have to carry you off like a partridge."

"Cleone, I tell you the man means it!"

"You're right, Blondey. I never meant anything more in my life."

A sudden shortness of manner crept over Mr. Kahn.

"Man, you're drunk!" he cried, springing to his feet.

"See my glass!"

"Then you're crazy!"

"Sit down, old Baldy. Why's he crazy? That little roommate of mine is as straight a little girl as ——"

"Why, I tell you he's crazy! That man's the head of a big business. He can't kick up any nonsense like this. Come on, Herm, cut the comedy. It's time we were getting across to our hotel. Look at the crowd thinning, and what's left is getting rough. Come!"

"If you don't know how to behave yourself, Sam, in the presence of these ladies, maybe you better go back to the hotel alone. I'm going to see these young ladies to their door, and before we go me and this little girl are going to understand each other."

Mr. Kahn sat down again in some stupefaction.

"Well, of all the nerve! Who are you? Whatta you think I am! Syl, what's his game?"

Miss De Long thrust forward her tired and thinning face; her eyes had a mica gleam.

"Cleone, he wants to marry you. A decent man with a decent face from a decent town has taken a shine to you and wants to marry you. M-a-r-r-y! Do you get it, girl?"

"How do you know he's decent? I don't know no more about him than he knows about me. I ——"

"Ain't you got no hunch on life, girl? Look at him! That's how I know he's decent. So would you if you'd been in this business as long as me. Can't you tell a real honest-to-god man when you see one? A business man at that!"

"You got me right, Blondey. Kahn, Loeb & Schulsen, Ladies' Wear, St. Louis. Here's my card. You give me an hour to-morrow, Jingle Bells, and I'll do all the credential stuff your little heart desires. Louis Slupsky knows me and my whole family. His mother used to stuff feather pillows for mine. Kahn here is my brother-in-law and partner in business. He's a slow cuss and ain't grasped the situation yet. But are you on, little one? Is it St. Louis Thursday morning, as Mrs. ——?"

"Herm! You're er——"

"Syl—what'll I—do!"

"An on-the-level guy, Cleone. Marry! Do you hear: M-a-r-r-y! Say, and it couldn't happen to me!"

"Herman, man, I tell you you're off your head. Think once of your home—Ma, Etta, *Grossmutter*—with a goy girl that ——"

"Easy there, Baldy, you're adding up wrong. You and her both celebrates the same Sundays. If anybody should ask you for Sylvette de Long's birth certificate, look it up under the G's. Birdie Goldsmith. It's the same with my friend. Cleone, tell the gemmemen your real name! Well, I'll tell it for you. Sadie Mosher, sister to the great Felix Mosher who played heavy down at Shefsky's theater for twenty years. *Goy!* Say, Sammie, it's too bad a nut from the bug house bought the Brooklyn Bridge to-day or I'd try to sell it to you."

"Little Jingle Bells, if I put you in a taxi now and shoot up those credentials, will you marry me to-morrow at noon?"

"I—oh, I dunno."

"Marry, he says to you, girl. Think of the minus number of times girls like us get that little word whispered to 'em. Think of the short season. Moncrieff's a grouch. The back muscles of your legs! Marry, he says to you, girl! Marry!"

"To-morrow at noon, little one?"

"I—I sleep till three."

"And it couldn't a been me!"

"Little Jingle Bells?"

"Why, y-yes, I—I'm on."

At three o'clock on Wednesday afternoon, in a magistrate's office, beneath a framed engraving of a judicial court in wigged session, Herman Schulien Loeb and Sadie Helen Mosher became as one. A bar of scant metropolitan sunshine, miraculously let in by a cleft between two skyscrapers, lay at the feet of the bride.

Slightly arear of them: Mr. Louis Slupsky; Mr. Samuel Kahn, with a tinge the color of apoplexy in his face; and Miss Sylvette de Long, her face thrust forward as if she heard melody. The voice of the magistrate rose like a bird in slow flight, then settled to a brief drone.

East is East and West is West, and St. Louis is neither. It lies like a mediator, the westerly hand of the east end of the country stretching across the sullenest part of the Mississippi to clasp the easterly hand of the west end of the country.

Indians have at one time or another left their chirography upon the face of St. Louis. But all that is effaced now under the hot lava of Americanism that is covering the major cities in more or less even layers. Now it stands atop its Indian mounds, a metropolis of almost a million souls, a twenty-story office building upon the site of an old trading post and a subway threatening the city's inners. There is a highly restricted residence district given over to homes of the most stucco period of the Italian Renaissance, and an art museum, as high on the brow of a hill as the Athenians loved to build. St. Louis has not yet a Champs-Elysées or a Fifth Avenue. And of warm evenings it takes its walks without hats. Neither is the café or the cabaret its evening solace.

It dines, even in its renaissance section, placidly *chez soi*, or rather *zu Hause;* the family activities of the day here thrown into a common pool of discussion.

On Washington Boulevard, probably sixty dollars a foot removed from the renaissance section, architecture suddenly turns an indifferent shoulder to period, Queen Anne rubbing sloping roof with neighbor's concrete sleeping porch of the hygienic period. Only the building line is maintained, the houses sitting comfortably back and a well hosed strip of sidewalk, bordered in hardy maples, running clear and white out to De Balaviere Avenue, where the *art-nouveau* apartment houses begin to invade. In winter, bare branches meet in deadlock over this walk. On the smooth macadamized road of Washington Boulevard automobiles try out their speed limit.

One such wintry day with the early dusk already invading, Mrs. Herman Loeb, with red circles round her very black eyes and her unrouged face rather blotched, sat in one of the second-floor-front rooms of a double buff-brick house on Washington Boulevard, hunched up in a red velvet chair, chin cupped in palm, and gazing, through perfectly adjusted Honiton lace curtains, at the steady line of home-to-dinner motor cars.

Warmth lay in that room and a conservative mahogany elegance—a great mahogany double bed, immaculately covered in white, with a large monogram heavily hand-embroidered in its center; a mahogany swell-front dresser, with a Honiton lace cover and a precise outlay of monogrammed silver. Over it a gilt-framed French engraving with Maternal Love writ in elegant script beneath. A two-tone red rug ate in footsteps.

Mrs. Loeb let her head fall back against the chair and closed her eyes. In her dark stuff dress with its sheer white collar she was part of the note of the room, except that her small bosom rose and fell too rapidly. A pungent odor of cookery began to invade; the street lamps of Washington Boulevard to pop out. The door from the hallway opened, but at the entrance of her mother-in-law Mrs. Loeb did not rise, only folded one foot closer under her.

"You, Sadie?"

"Yes."

"Herman home yet?"

"No."

"Smell? I fixed him red cabbage to-night."

"Yes, I smell."

"How she sits here in the dark. Thank goodness, Sadie, electricity we don't have to economize on."

The Fat Pay Envelope and the Thin

By FORREST CRISSEY

IN THESE strange days, when Business is scattering showers of gold, several million men are asking themselves whether 'twere better to stick to white shirts and a Position or abandon these genteel signs of "class" and make a grab for overalls and a Job.

The Fates have sprung the "deadly parallel" on the salary check and the pay envelope, and turned the spotlight of comparison upon them, with an unprecedented candle power that compels attention. Probably the position and the job have never before been such close competitors. Certainly this country has never seen a time in the past when the salary check was less chesty or the pay envelope more puffed up with the pride of life.

More than one weary accountant has lately looked up from his task of figuring the wages, the overtime, and the various bonus rewards of a force of workmen, and wondered whether he wasn't in the wrong pew, and whether he wouldn't improve his personal finances by throwing up his position and joining the ranks of the humble jobholders. In certain sections of the country reflections of this sort are fast becoming a favorite indoor sport of office help. Somehow this seems to be rather a serious pastime and not highly productive of smiles. On the other hand the wageworker is inclined to wear a broad grin.

The Remington Arms Company Plant at Bridgeport, Connecticut

A pot-bellied, turtlelike craft, plying between the Wilmington pier and Pennsgrove—the natural port of entry for the great powderworks—carries thousands of toilers back and forth and is a genuine Tower of Babel, so far as the confusion of tongues heard on its decks is concerned. Almost every race is represented by the passengers to be found in its smoking room on any trip across. Italians rub elbows with Russians, and a Portuguese from the Azores borrows a light from his Polish neighbor.

As a boyish mountebank was entertaining the crowd by clever balancing tricks, a husky lad, fresh from a Delaware farm, leaned toward his Italian seat mate and timidly asked:

"Like your job over there?"

Instantly a smile flashed over the dark face, his white teeth gleamed merrily, and he laughed as only the Latins can laugh.

"Lika de job?" he exclaimed. "Ha! Ha! Eas-ah mon, kid! Eas-ah mon!"

"Dat's de right dope, too," volunteered a recruit from New York's East Side. "He's told de whole t'ing in a breath!"

And he had. It was Labor's judgment reduced to a single crisp sentence of American slang: "Easy money, kid!" Here was the wage-earner's acknowledgment to the War Bride.

Workers Who Buy Motors and Pianos

JUST outside the great works, where a million pounds of smokeless powder is made every day, is a workmen's village of nine hundred and eighty-one neat little houses, practically all of them containing six rooms, and every one equipped with a bath and electric lights. The cleanliness and order seen everywhere in this village are remarkable and suggest a military encampment.

"When it comes to the question of what the workers are getting in the way of wages," said my official guide, "those little houses ought to be taken into consideration, it seems to me. Their occupants pay only six dollars a month and they get their electricity at four cents a kilowatt. This means that the light bill of a tenant seldom exceeds seventy-five cents a month. A large proportion of the families occupying these houses had little or nothing when they came here, just following the outbreak of the big war and later. Many of them were absolutely destitute."

As we walked along the streets of this wonderful little village, which sprang up almost in a night and yet has an appearance of permanency, from house after house I caught strains of music—here the voice of a prima donna warbling a classic aria; there a piano repeating a Paderewski performance with a faithfulness that told unmistakably of the "player roll." Our ears were occasionally greeted with efforts of a simpler nature, indicating that the piano was responding to the touch of human fingers. When we reached the office of the quartermaster—who is, in an unobtrusive way, the controlling genius of the powder town—I at once put the question:

"Can you give me any idea of how many pianos, player pianos and phonographs there are in your village?"

"Certainly," quickly answered the quartermaster's assistant. "We have one hundred and fifty-five pianos, seventy-seven player pianos, and one hundred and seventy-six talking machines; but that isn't all, by any means. There are seventy automobiles and twenty-one motorcycles—all owned right here by the wageworkers of this village."

This statement served as preparation for a sight that met the eye at every plant we visited on Carney's Point—a parking space crowded with automobiles.

"I suppose those belong to the bosses, supervisors and other production executives," I remarked.

"They do not!" was the emphatic answer of my guide. "They belong to the operatives—the common toilers who do the unskilled work; men who live outside our little village and drive in to their shifts. You notice that car there in the eleven-hundred-dollar class? That is the property of an operative in the finishing department of this plant. His regular wage is four and a half dollars for nine hours, with seventy-five cents an hour for Sundays and legal holidays. He boards about eight men and carries them to and from their work. They pay him a dollar a day for board—so I understand—and a jitney fare. Under these conditions Joe can afford to own a good car."

Not long since a man connected with the quartermaster's department struck out into the country for half a day's hunting, to relieve the tension of the long strain he had been under in the construction work, when about twenty-two thousand men were working at Carney's Point. When he was ready to return he found himself some ten miles from the plant on a farm that had a half-abandoned appearance. At the house he met the owner of the place and asked whether there was any chance to get a ride into town.

"Sure!" was the answer. "I'm going to get out the jitney and start for the works in half an hour. I guess you think this farm looks rather tough. It does—but there's a reason! Anyone would naturally think that, with fresh eggs at from fifty-five to seventy-five cents a dozen and other produce in proportion, farms round here would be running at full tilt. But when the war boom struck this section I soon found out where I got off. Scouts from the powderworks and other munition plants were scouring the country all about here for men at big wages. Even if it had been possible for me to have paid five dollars a day, or thereabouts, in the big rush I could not have secured a hired hand. Why? Because you cannot hold farm work strictly to an eight-hour basis. The men know this and prefer to go into the works, where they are through at the tap of the bell, unless they prefer to work a double shift and double up on their earnings.

"There was just one thing for me to do in the face of this situation, and I did it—got a job at the powderworks. I began at twenty-eight and a half cents an hour, the dead line at which all American labor is started here. Of course the bonuses brought this up about forty per cent, and before long I managed to get a little advance of the basic rate. I work Sundays and holidays right along, and occasionally double up on my shifts. This means that I knock down pretty good money.

"Some of my neighbors owning or renting small farms saw the situation in the same light that I did and decided to go out after powder money. They figured that the farms would earn them more money idle than at work under such wage conditions. I happened to own an automobile, while several farmers between here and town had not yet bought machines. This makes it possible for me to pick up a full jitney load going to and from my work, and my fares more than pay for my fuel and the cost of keeping up my machine."

A Talk With the Installment Man

A GENTLEMAN in Wilmington owning a farm a considerable distance out of town tells me that the only farm labor he can get is "colored," and that he is obliged to pay these negroes two and a half dollars for an eight-hour day, and feed and house them. He admits that it is well for him that he is not dependent upon the income from his farm for a livelihood. His income is also in the form of powder money. With this source of supply he is able to support a farm or two.

But to return to the powderworks. In the office of the quartermaster I was introduced to a caller with the remark:

"Here is a man who has a better line on the financial condition of the ordinary workers in these plants than has anybody else, perhaps. He is the collector for a big installment furniture house having accounts in about half of the houses in our village. This means that he knows how much or how little the families bring here when they come, and how they get on from month to month. For this reason he is very close to the people, and his view of their circumstances and affairs should count for a whole lot.

"So far as the company is concerned, its policy is to refrain from interfering in any way with the personal affairs of its employees. It is their landlord, to be sure; but its representatives enter their homes only upon request, or when it is absolutely necessary in order to look after the property. Of course when there is sickness or childbirth in a home, and the presence of a nurse is desired, the company is glad to send one. Because of this policy it is natural that men selling goods in the homes of our people should know more about their personal affairs than we do."

This keen commercial man to whom I was introduced, and who has the run of the homes in the village and enjoys the confidence of a large share of the housewives there, declares that it is difficult to overstate the meagerness of the equipment most of the families brought with them. Of course there were exceptions; but, owing to the fact that a period of decided labor depression immediately preceded the outbreak of the war, the condition of most wageworkers was then at the lowest ebb.

In this connection, too, it should be recalled that the great powderworks was one of the first to get under way

Digitized by Google

in meeting the military demands of the warring nations. Consequently the thousands of laborers who poured into Carney's Point at the beginning of the boom came without a taste of war prosperity and, as a rule, were lean and hungry, and traveled with little more household equipment than could be carried in a box and one or two shawls. Many of them were not only destitute but in debt, and their transportation was furnished them.

"Here," declared the collector for the furniture house, "is a typical case of what has occurred in the homes of the wageworkers in this district ever since the war started: In a house not two blocks from this office lives a man, with his wife and children, who had exactly five dollars when he landed a year ago. Naturally the first thing they needed was a cookstove. They had to have it at once. This meant that I was sent for. The man looked all right to me and so I gave him a line of credit. He has bought and paid for more than two hundred and fifty dollars' worth of furniture since their arrival. As a result their home is now comfortably furnished. The whole family is well clothed; and if the husband continues to earn as much money next year as in the past year they will not only have a good household equipment, from the standpoint of a workingman, but money in the bank as well.

"Every now and then a housewife will hand me a jolt. Only yesterday the wife of a powder presser, whose pay probably runs from twenty-four to twenty-six dollars a week, met me at the door with the inquiry: 'How much do we owe you now?' I answered that the amount unpaid was eighty-three dollars. Instantly she asked whether I would accept eighty dollars in full settlement of the account. Another woman, whose husband earns between five and six dollars a day, offered ninety-five dollars in settlement for her balance of one hundred dollars. The discount habit is spreading through the village and the whole works. This is decidedly interesting to anyone in a position to realize the condition of the average family on its arrival at Carney's Point."

Thrifty Workers Who Save Money

"OF COURSE there are cases of families who try to stave off their payments or beat us out of money; but these are mighty scarce now, for the undesirable element has been very carefully weeded out. I do not suppose there is a family living in this little village here, just outside the works, that has an income of less than ninety dollars a month. Many of them have a good deal more than that on the wage of a single worker. Some of the families, of course, have two or three men in the plant bringing in good pay. Is it any wonder that we find an outfit of good furniture, a piano or player piano, or a musical instrument of the talking-machine type in homes of this sort—not to speak of an automobile in the little garage made from scrap lumber?

"Though I find some cases where families have hard work to keep up with their payments, because the father spends too much money on week-end sprees, these unfortunate occurrences are not so numerous with the family men as one would naturally suppose; and they are far more frequent among the floaters, the unattached fellows who inhabit the bunkhouses. It must be admitted; too, that extravagance is not entirely confined to the men, and that sometimes this unprecedented prosperity goes to the head of women, who buy more recklessly than their husbands imagine. However, as a whole, this community is about as happy and thrifty as can be found anywhere, I believe."

Pennsgrove Swarms With Jitneys

Now a word about earnings outside the work of making military powder: A carpenter was pointed out to me, with the remark that his regular pay and bonus brought him five dollars and forty cents for a nine-hour day, with time and a half for Sunday work, which he never failed to put in. This man has no children, but owns an automobile which cost him a little less than seven hundred dollars, and a talking machine of the best type.

One of the most eloquent testimonials as to the effect of present earnings of unskilled laborers in the great powderworks on outside labor of the same character is given by the owner of the milk route that serves the powder village. This man is suffering from a state of prosperity that threatens to break him down through overwork. He gets a cent a quart for delivering two thousand quarts of milk a day; but he cannot get a driver to give him even temporary relief. He has offered sixty-eight dollars a month for one, without a single response.

In answer to the question: "Have you any deserters from the ranks of the White Shirt Brigade among your men in overalls?" my guide pointed out two young men just quitting their shift and remarked:

"The shorter of those boys was a clerk in a Wilmington hat store when the war broke out. His salary was ten dollars a week, and he dressed like a clubman—for a while! Being of the right sort he saw that he must either get a raise or else cut his expenditures in some miraculous way. His friend, there, clerked in a shoe store and drew twelve dollars a week. When they found out what workingmen were pulling down over here in the powderworks they decided they were paying altogether too high for white-shirt privileges; and so they took a plunge into overalls.

"Now one of them gets about twenty-two dollars a week and the other twenty-five. They are bright boys and it will not be long before they will be doing better than that. There are scores of men over here in the mills working as unskilled laborers who have given up positions, and sacrificed the associations that go with clean clothes and a white collar in working hours, in order to earn more money—in other words, to earn enough money to keep pace with the present high prices of necessities."

About the minimum salary for a clerk in the employ of the powder company appears to be sixty-five dollars a month. The range is up to a hundred dollars a month, broadly speaking. A storekeeper gets about a hundred dollars; but to these amounts must be added the twenty per cent bonus, and in some cases a special stock bonus. Outside the munition plants salaried men are not getting pay checks, as a rule, to correspond with this range of compensation. Business executives do not hesitate to admit that, as the scales stand at the moment, the wage-earner has at least a little edge on the salaried man. But they point out that there are compensations to offset this in the long run; that the instant when the present scale of powder production suffers a drop the unskilled laborer who is now receiving almost unbelievable pay, compared with any previous earnings, will be the first to find himself out of employment; that the salaried man will receive special consideration and every effort will be made not only to retain him but to do so, as long as possible, at his present basic salary.

Of course the appearance of the Dove of Peace will send all the bonuses and emergency rewards of every sort scurrying over the horizon. No doubt this parting with the pleasant-faced bonus will be sad and in many cases fiercely resisted; but it seems to be as inevitable as painful. Here, as everywhere else, employers are placing every possible emphasis on the fact that all special advances made to men on salaries are in the nature of emergency payments, made to relieve the stress of abnormal conditions, and are not to be considered as advances in salary.

The Prosperity at Eddystone

BETWEEN Wilmington and Philadelphia is the great munition center of Eddystone. Here a general manager sketched the situation tersely by saying:

"Office men can go into the shop and earn six or seven dollars a day; and quite a number of them do this. Many more are prevented from taking the step because it would hurt their pride. For example, a man who has been a timekeeper or a timekeeper's assistant feels that he has, in a sense, been in authority over workmen, and that to change places would be a comedown not easily accepted, even with increased compensation. Storekeepers' clerks usually getting sixty dollars a month now receive eighty; the typical shopman ordinarily getting twenty-five cents an hour is now pulling down seven or eight dollars a day as a handy man.

"There are plenty of girls in these plants drawing five and a half dollars a day. Toolmakers who formerly drew forty-five or fifty cents an hour now get from ten to fifteen dollars a day, with time and a half for overtime. Most of them are spending their money rather magnificently, I regret to say. However, you can see that the yard out there is littered with motorcycles and automobiles. There is no doubt that the homes of all these workers, without respect to their grade, are improved in their equipment and their general conditions. Many of them are very greatly improved in these respects.

THE LUCK OF A SOURDOUGH

By Helen Van Campen

ILLUSTRATED BY W. H. D. KOERNER

IF THERE hadn't been a little better than wages in placer gold on Griffith Creek I couldn't have stayed with my quartz ground for nine years. I bonded it to some parties the second year after discovery; then some papers were packed in that fall, and here the guy, Rannols, was advertising how the wonderful Griffith Group had eight claims, five on the strike of the ledge; outcroppings showed the ledge to be from five to eighteen feet wide and distinctly defined for five thousand feet along the strike. Samples taken at frequent intervals, clear across the ledge, averaged two hundred and thirty dollars a ton. Then came half pages of guff about me, the discoverer, a man who had prospected the gold countries of the earth for thirty years—I ain't but thirty-eight right now—and they had me tossing out that, with the average width of over ten feet for the length of five thousand feet, there was fifty thousand cubic feet in the first foot from the surface, equivalent to twenty-five hundred tons at two hundred and thirty dollars—a little more than half a million in the grass roots, and millions beneath if it only went down a few feet!

It told how we was close to a fine wagon road, had ninety men at work and a cyaniding plant going up, modern bunkhouses on property, workmen's houses being erected, post office to be speedily petitioned for, and much less snow than people supposed fell in the Alaskan Coast Range. A restricted sale of stock was to provide capital for operating expenses. Then there came pictures—they had my name under a whiskery old pill who looked like he had been Siwashing it since '97; and the prints showed Bill Fairman's camp on Quartz Creek, and two of the dumps from Frank Young's camp at Cooper Creek—both placer properties; though I suppose that school-teacher money Rannols was after wouldn't know any different if he had made it all pictures of a quartz district.

I read those pieces while I set in a mosquito tent with my dogs—we was the ninety men and the cyaniding plant, and the millions in sight was the few surface cuts for which Rannols made a first payment of twelve hundred; my tunnel hadn't reached the vein then. I got hotter and hotter as I read over his lies, and thought of the suckers "Outside" who would be telling their friends about their Alaska Gold Mine—and whiskers on me, too, in the photo! And if I could have caught up with Rannols that morning—but he was back in the East, thinking up more ads. I went to Seward and cabled, but he didn't answer; and I doped out how I would write, and meant to, but letters are hard for a guy used to the hills and never getting mail, and it came October when the next payment on the bond was due. The money wasn't at the bank.

I waited one more boat, and then I seen I had an out, and the claims were mine again. The check showed up in November, he explaining how he had been to London for capital, and saying "Yours cordially, T. Harvey Rannols"; but I was through. They took up some ground and some options on Satan Creek, below me, locating on the snow over parties whose stakes had been drove in the summer; and they brought a gang of miners and muckers in the next spring, and actually put up buildings and worked me out of the ads without changing the rest much. They say he cleaned a bundle. The shacks have long ago fell down under winter snows, and picks and shovels and rusted barrows are in a heap in the superintendent's windowless office.

I was sure I really had something in the Griffith Group, and I didn't want to mix in with another bunk outfit; so, winter and summer, I drove my tunnel. But it was slow, like a one-man job is bound to be. I was high on a mountain, where the snow stayed until late in June, and I had to buck ice in the tunnel. It stayed about twelve above in the mine all year, and the drills broke from the cold. I drug all my timbers from a mile below, and packed grub up on my back and a little two-dog sled. I'd had to be hunting sheep all the time to keep more dogs; but a guy wants somebody round; and Dan and Polo, when they didn't hunt meat, stuck with me on the work. In the little valley, where my creek flows into Satan, it was sheltered, and I cleared enough land for a big cabin, storehouse, woodhouse and bunkhouse—somebody might come by, making for the head of Resurrection Creek, and I hate for a tired guy to sleep on a split-log floor. The ice got out of my garden by mid-May and the rhubarb was getting big by June first, and I always had vegetables left when the new ones began to bulge in the permanent daylight. Of course being at the claims made it chancy for things freezing down in the cabin; but when it was below twenty I would go down and light a good smudge, and look for Bingo, the tame otter, to wiggle up from the creek and screech for sugar—they love that.

When the high water lowered I lived at the camp and panned the creek, except a little time to snooze and keep a fire under the beans and meat; and when the nuggets and dust reached high enough in my bottles, that was the price of flour and fruit, and odds of grub, winter clothes, and powder for blasting.

I took one paper, with the Western mining news, and a weekly that had good pictures to cut out—society folks and actresses. That was how I first seen Lucette Loring's photo. It said she had flew in an aëroplane and made stuff for the Allies' wounded, and could get married every day, but wouldn't, because she was looking for her ideal man. She seemed little and sort of loving-eyed and smily. I didn't like a big lady, being a thick though not so very tall guy myself; still I am called a big man—two inches over six feet, though my brothers was all six feet four. They all got small wives, who run them.

Well, I thought, would anyone like Lucette notice me? But folks are the same all over; and, with me dressed flossy, and explaining how I had a rich property—and she would like the garden and the dogs, and the flowers everywhere, wild roses and hyacinths and big violets; I pick 'em myself when they first come. And Alaska is an awful gay country. People in the big camps are dancing and playing cards, and dog teaming by moonlight, and chasing off on launch trips for picnics—I would tell Lucette we wouldn't have to spend more than six or eight months on the Group, maybe longer when I was installing the concentrator and machinery for a hydroelectric plant to run mine and mill. Wasn't figuring on the cyaniding process, for there's too much sulphide in my ore. She would be interested. That is where a bright woman comes in. I didn't want just a dummy, who only knew how to get the wash white in rainy weather—someone dashing, like Lucette. I set down and wrote her how big the Group looked as a producer, and that I'd be going Outside when I could get away; and how I had her pictures.

It Said She Could Get Married Every Day, But Wds Looking for Her Ideal Man

That fall I built some shacks for a chechako on another creek, and started his flume—he was putting it on the wrong side of the water; and I hauled and sawed his winter wood and showed him how to lay his railroad rail for sluices the next spring. There was three hundred made, and I put it by in a poke. I used moose drips for butter in the winter, and left out canned tomatoes and apricots and bacon—you hanker for bacon too. I was saving to go out for capital. I'd sent samples from the same batch to Nome, Salt Lake, New York and Seattle, and the returns checked mighty close. I had a mine! But it was twenty-two miles from a wagon road that was mostly mudhole, with a nine-hour climb into the air—you could get halfway up with dogs in winter, and I had swamped a trail so one horse could make it partway in summer.

It would take lots of cash to get going right; but I seen myself setting smoking a big two-bitter, across from swell-dressed chaps in a swell San Francisco office, who was taking over a big part of the Group and hiring me for manager. Nights when I had to stick by the stove, watching a mess of sourdough bread, I mulled over how I would spread out maps, assay certificates and estimates. With what I had in the old poke, I could put in the whole summer rocking out placer gold; and by fall I could go. It was a mean winter, extra heavy snow, and winds so strong that once the dogs and I stayed in the tunnel forty hours—you couldn't stand against it on that mountain. And my vegetables froze down below.

When the dogs and I holed up, nights, in the little wickiup near the mine, it was often fifty weather on the other side of us, and the stars crackled in the sky. I was getting mighty grouchy, nervous at the wind when it started, tired and lonesome. Nobody was working near me. It was all placer country except on my creek and the Rannols ground on Satan. I would look out at the big peak stretching off toward the ocean—everything white. And suddenly I said to the dogs they could hire another manager—I'd stay Outside, where there was lots of humans. After that day I wouldn't look at the hills; I was hating them too much. The thunder of snowslides began and warm breaths came up from below. I could thaw my powder without keeping the stove going all night. It was spring—somewhere.

I didn't want to help the ice out of my garden below; didn't care if I had one at all. I kept thinking of fresh fruit and canned tomatoes—and Lucette. The snow gave under my snowshoes when I mushed to the cabin one morning, and I went through into water every other step. I could smell ferns in my little valley—under the tundra, but coming. Bingo was asleep on the doorsill, and he screeched at my yell when I saw there was a letter hanging by a string from the Yukon porch—a letter, to me! It said "World of Folly Company. En Route," and was wrote in a good, strong, stand-up hand.

I couldn't see that warming turquoise sky for a minute—or the frisking dogs with their yellow eyes on me. She said maybe I would catch the show in California in June—it was mid-May now.

I went in and stared at her picture. Then I put important papers inside my vest, oiled all the guns and hung 'em up, and poured a couple pounds of sugar into a gold pan for Bingo. It was six that night when I hit Jim Logan's road house and store on the Interior mail trail, and hollered to his dogs to shut up. Grass was on the flats and fireweed and ferns were showing. A couple of mushers were sacking their own grub back of the counter, Jim's kids was all excited, and Nadia, his squaw, was sewing a yellow dress on her hand machine back in the kitchen, with Jim in his good suit, and the derby he bought in Valdez, in 1904, down over his fat face, turning the wheel. In half a minute they told that Jim was taking Nadia and the two youngest to Seattle—they would put Henry and Tessie in a private school, and Nadia could get store dresses and see the fine city.

Mrs. Noble, who cooked for an outfit over on Resurrection, had mushed in, and over the talking she was telling Jim and the squaw to get her a rose-pink satin corset, that had to be terrible small in the waist. She is a very hefty lady who wears male corduroys except for dances; but she

Digitized by Google

sure is slender-waisted. I set there, keeping the dress pulled straight, until Jim said:

"Why such a face?"

"Because I come down to borry a thousand bucks and you'll need all you got."

"We got lots a' t'ousand bucks, you foolish Griff!" says Nadia, giggling.

"I'm willin' to give an interest in the Group," I says, though I had always meant to keep the mine clear.

Jim got red, and asked if he hadn't been a friend, and had my trade, and who was I insulting? Then the kids all hunted for the ink, and when I took out over the trail to town my dogs was left there, I had a twenty-piece to get the corset, because she wouldn't trust them about the little waist, and the thousand check was in my kick. I walked all night—I couldn't have slept, for that letter said the show was going to San Francisco; and so was I.

A shirt-sleeved guy took me past doors whence actresses, all painted, peeked out, and a snickery one says to another door, there was Lucette's Alaskan!

The show was finished, and I seen the roses I had staked an usher to send to the back, before I glimpsed Lucette, who called:

"Come in!"

Now you read how the sturdy outdoor man is struck dumb and can't speak at a time like this; but that ain't so. She was out of her stage clothes and in a shimmery bright-green dress, with a white fox on her shoulders—not a prime hide either, for the hair come out; but I knew of some silvers I could send North for.

"Oh, you nice big, strong Alaskan miner! Where's your fur boots and hoods?" she says—smily like in her picture; and she put a little hand into mine, and I shook it as easy as I knew, and says:

"Never mind that; tell me if you're glad I come round three thousand miles to see the sweetest girl alive!"

"Only three thousand? Why, we go five times that on the road in a season!" she says, looking disappointed. "Well, no matter. Tell me everything about your frozen North."

"I got a cute garden," I says. "I raise awful tender rhubarb. It ——"

"Oh, I hate the beastly sour stuff! No peaches?"

"It's cold for them; but elegant turnips and tomatoes. They ——"

"They simply kill me! No fresh figs? They're lovely in this state."

"No," I says, worrying; and, besides, I flashed myself in her glass, and my hair being so short looked funny. "But I had young onions by July last year."

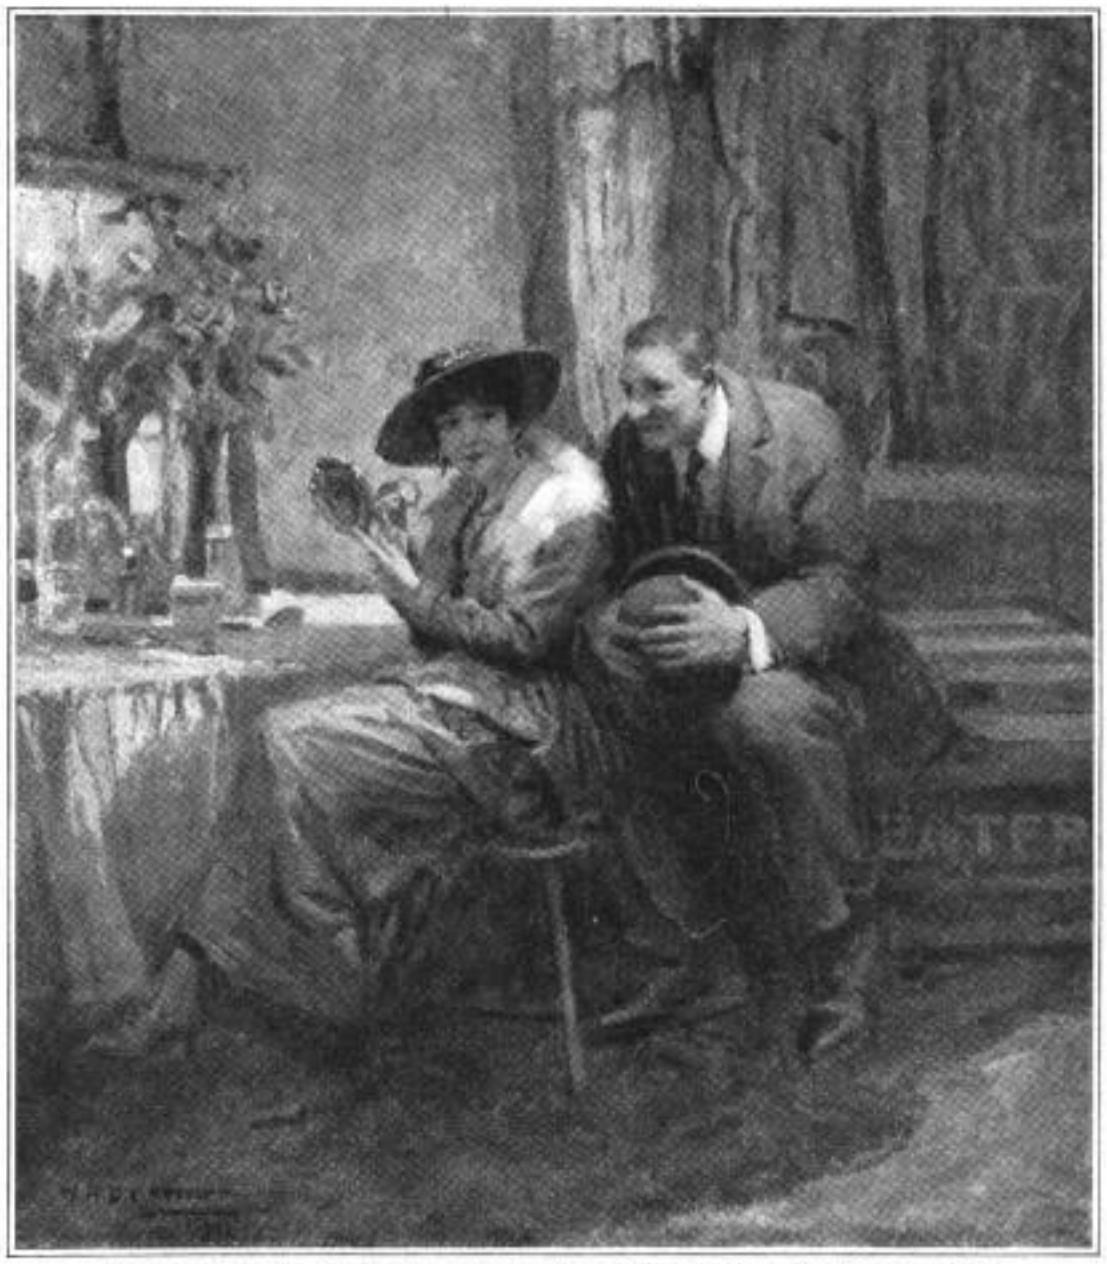
"Oh, the vile things!" she says, shuddering. "Tell me, are furs frightfully cheap there?"

"Good grades ain't never cheap to a chechako's notion. The idea is, they're used to bein' sold seconds, I s'pose, for firsts. Prime dark minks are three-six bits, as they run; but they might be up to eight a skin for a pick, while ——"

"Great heavens! What robbery! I bought this darling fox for eighteen."

"It's mighty small," I says. "An' it's a slipper—left too long in the trap."

"Huh! I think it looks well; but never mind—you've got a gold mine?"



She got close to the mirror and dusted on powder, and left it that way. Then she took out a gold affair and made her mouth redder—it looked good to me before. I was starting to explain about the Group when she says:

"Smell that? That beefy disgusting smell? They stuck a couple of vodeville acts in this piece when the original principals dropped out, before we came on the road; you saw the performing dogs? He cooks for them right outside the dressing rooms! I don't intend to put up with it; would you? I don't have to—I had offers for New York; but it was a good chance to look at the West, which is ridiculous, I think—fancy last night not getting holders for green corn, though it's early! I suppose that's something—barbarous, you know! And bringing salad first in this place! Now it's not a Latin custom—they can't claim that; and the French assuredly don't. Still, there the waiter stood until I insisted on the dinner coming; and he said, why, we hadn't touched the salad yet. Bah!"

"We'll get them Ententy Powers after him," I says; but she frowned, saying:

"On-tant is the correct pronunciation. He was an idiot—that's all. There are so many idiots. By the way, did you see last week's Seattle Times? They gave me half a column—though they ought to, heaven knows!"

"Last week I was ridin' out a seventy-mile gale on the ocean, comin' toward you," I says tenderly. "You wouldn't be 'fraid of the sea, would you?"

In a Second I Was Telling Her About Them Nine Lonesome Years, and How Her Picture Kept Me Going That Last Winter

"My friend, Mr. Ed Thomas—the Georgia Thomas family—oil in West Virginia and street railroad in Savannah, you know—his yacht is four hundred feet over all and we've been in much worse storms than yours!"

She perked her little head at me—her inky-black hair was drew flat on each side of her small face and sort of plastered there; and big, long jet earrings waggled in the shade of a flat two-foot green satin hat. We kept looking, and she smiled—her teeth was nothing special, different sized and not white and shiny like I had supposed. But that wasn't her fault; and her black eyes was like the picture when she smiled—melty. A thrill hit me when she reached up—I was still standing—and touched my fingers. In a second I had sat on her trunk, marked "Theater," and was telling her about them nine lonesome years, and how her picture kept me going that last winter; and now the Group was a sure winner; and I could have yachts—though I get powerful sick in a swell.

She looked meltier then, sighing; and I sighed myself. She put on more powder abstractedly and a splash of perfume—some of the cussed truck got on me. Then she looked up; and, sure enough, in the corridor a guy was cooking dog grub!

And the little rascals that had been in the show was setting in a bunch, some asleep, and more bright-eyed and whisking tails at me, when I says:

"Hello, sports! You ain't figurin' to eat at this hour?"

"Naw, it's breakfast; but they like watchin' me," says the guy. "They know I'm goin' to take 'em for their run to the beach."

"They're grand animals," I says, rubbing some soft necks, while the poodles whined for me not to quit. "Have a cigar?"

"Come away," says Lucette coldly. "No—down, you brute! Mussy things!"

I had not thought there was a live woman who didn't love dogs. I was walking her off when she says where on earth was all the cabs; so I hailed a taxi and excused myself, and in a minute we was in the pleasant gloom, setting close. And I kept thinking, would I or not put my arm round her, until I says: "Could you love a big roughneck who would treat you awful square?"

"Yes," she says.

And I began whispering how I had thought and thought of her; and she whispered she had thought about me! The dear little woman!

The cab halted where she had told him; and he soaked me two bucks, which I let go, though minded to wallop him, for we had come just three squares. A uniformed fellow rushed at us, but I had opened the door; and he cried good evening and Lucette's name.

"Give him a fifty-cent tip," she says.

"What for? He ain't done anything," I says.

"He knows me; and a person prefers not to be cheap," she says coldly.

I said nothing and did not give up, and she muttered. We had a table in the middle of a restaurant all white and gold and waiters; and parties came over to greet Lucette, who would introduce me as Mr. Griffith from Alaska, saying I had an enormous gold mine, and they would ask what was the opportunities up there, and, I must say, acted very polite toward me, though I paid all the checks. Finally she asked didn't I have a hard gray hat, so I would look more Northern. I had just blew six for a London derby to go with my dark suit.

"Them hats go well in the hills; but in our country they say if you come Outside in 'em, an' wear nugget jewelry, prices go up thirty per cent," I joked; but she said, just the same, it was more romantic.

We set there till I was nigh roasted and had to yawn inside myself; and it appeared that, unless they had a jump, she never got up until eleven, as her work wore her out. So I said when did she exercise; and it seemed she had no time, with a show every night and two matinées, as it made demands I could not understand. At the end she told me to give the waiter a couple of dollars. He was from Broadway—I guess so, for on her friends' drink checks he had short-changed me for about six bits; so I slipped him just a half when she wasn't noticing.

Lucette ordered me to come to her hotel for breakfast at noon, which was dinner for me; and parting, she gave me a melty look and squeezed back when I held her hand. I could hardly shave next morning, thinking of her and being shy of sleep too. Them cars jolting past got me, and I would leap up every time I heard a siren, which I had read was fire alarm; but some were on bicycles.

The first crack, I gave a man a gold five dollars for a bright penny; and when I counted up and went back he got sniffy and cried not to pull that dodge round there—the thieving rat! If it hadn't been downstairs in her hotel —— I was hot, anyway, for the tan shoes I had bought at a fancy-seeming trap in Grant Avenue dug into my foot just abaft the big toe; and when I took them back the man said he couldn't help it; they was what I had took.

"Took when you said, for sure, they was right for me. The linin's of both wrinkle an' the feet are blistered already! Feel that linin'!"

He said it was my size, and they belonged to the Retailers' Association, and when a shoe was worn it was sold; so I limped out, though I cussed him first. Next I eyed the windows and seen a rose-pink satin corset, and explained

Digitized by Google

to a friendly lady within about Mrs. Noble's waist, and she took great interest; and, though it was twenty-eight bucks, I took one, deciding I would stand the eight. Back in the room, I spread it on the bed, studying till I took my rule out of the grip. The waist was four inches wider than the hips!

Well, I set there; and though I had gone in easy the first time, it seemed like I'd rather be shot than return. But I had to; there was Ella Noble trusting me. When I got in a whole raft of dames were yanking corsets round, and fitters was swimming about in the crowd, some disappearing into little cubby-holes. I found the lady, and we had a fierce talk, her declaring it was the style—I said I had went into that; the party this was for, style or not, wanted a little waist! All the selling ladies and some customers got massed, asking what did a man know about it, and the corset was a pet.

Well, maybe so; but in the end I asked for my dough; and the clerk fainted and come to, moaning. I was half a nut myself then; but I stuck, for, dog-gone her, she got me right about that waist, in the start! The manager, in black, said it wasn't their custom; I could have another corset, but ——

"Girls," I says, "come through with that twenty-eight! I'll get it if I stand here an' holler all day."

They threw it at me then. I spent the next two hours looking at the displays, and there were some pinks. And I tried one place, where they said they had 'em small; but when I showed my rule they got dispirited, but cheered up when their boss said: "Dart it in." So at last I had found a way, and it was to be sent next day. Lucette had the shades of her sitting room drew way down, and when I pulled some up she says:

"Heavens! Put them down; that light is frightful! Oh! I feel dreadful! And I ripped a darling waist; and there's no hooks left on anything, it seems. I'm not carrying a maid; the management's too stingy to pay her fare."

There was a wardrobe trunk, like ads I had seen, and the clothes looked a trifle forgotten. Things lay on all the chairs, and she was in a light-blue trailing dress, with a busted ruffle catching chair-legs and rockers. But her hair was plastered slick on each side, and her feet cute in blue slippers. I thought we could go down to eat, but she said it was cozier here; so I phoned six or eight times trying to get a waiter, and he was Greek when he came and knew no English, but seemed amiable. It must have been two hours before he got the grub delivered, and then left out my strawberries. But I had eaten them every meal since reaching the Outside.

Finally Lucette decided to get ready, and bade me read while waiting. There was the Life of Lincoln on the table. Emerging all powdered and in violet silk, she sent me the first melty glance; and, thrilling, I says, after a tender smile:

"Turn round. Ain't something coming loose in back?"

The top part of the dress was, and she seemed desperate; but I can sew, and she found a box and some thin dark thread, saying to sew it very tight, so the belt, skirt and top would stay put. Then she stood and wiggled while I switched the needle for a bigger one and took a bigger spool; and at last we got to the street. She was going to a store for gloves, and I stuck outside, sweating in the heat, my stiff collar eating off my neck. In about three minutes she tore out, her eyes snapping as she panted:

"Oh, my heavens! You sewed it on the outside, with white thread; and every woman in there stared until I saw it in the glass! And here I am without a coat!"

"Gosh! Was that wrong?" I says; but she was backed to the wall, panting:

"That's it—laugh! You send American Beauties to the dressing room instead of over the foots, where it'd help my popularity; you won't wear the hat you should; and now—now!—I don't move a step until I have a coat—any coat! And you just go buy one! Anything to cover my shame!"

She was crying, and I slunk into the store and grabbed up a four-dollar sweater from a sale table; but when I brought it she said what did I think she was, and to get something decent or end it all right there! I seen my chance then, and I marched in and blew eighty bucks on a mustard-color satin gag that had big silk tassels and would go swell with her hair.

"You dear boy!" she says so sweetly; and my heart went quicker.

And with her beautiful in the new wrap, we rode in an auto—though going down hills and shaving other cars had me scared—through the Presidio and the Park, and back to the tavern to feed. She got a note at the table, and read it hasty, talking very swift meantime. But I didn't think of it then, for we had it all settled—we was engaged! She wrote on the blank side of her note, looked round, and, sighing, dropped it into a wrap pocket. When she had to go to make up I ordered more flowers, and staked my usher to do it right this night—over the foots, forty dollars' worth, with wide ribbons, and a card marked: "From Griff to Sweetheart."

I set in the audience, watching her come out and sing and dance. I felt like ordering a yacht like her friend's, and a fancy auto.

That gliding through the Presidio and the Park with her, earlier, wasn't much like packing hundred-pound loads up my mountain. She had set up like a queen, saying the Jersey Palisades was better than that Pacific—I don't know yet what they are.

Well, I had made a phone date with a big firm to bring my papers next morning. I done that in the store where we selected the diamond ring—four hundred; but that would soon be chicken feed to me, and she had gave me a light kiss at the stage door. I was in a happy fog, seeing her dance and sing, and people clapping; and I told myself, cities for mine! We could get a maid to keep her ruffles sewed. I could see how Lucette had got in love with me, for I was used to my hair now, and limping less in some patent leathers. I had showed her how city men can't balance, and just a poke will send them over—the guy had looked at her flip, anyway, hearing her talking rather loud about the show. She mentioned herself how my gray eyes stared right at people, and that making all that fortune was wonderful—the coming one, that was; she thought I had it already.

Naturally I attracted her, after them actors she had knew, handing her fool compliments—I had said to get them teeth straightened if it cost a thousand, and couldn't she do without so much lip rouge and powder—knowing she would prefer truth from a lifemate—and she must learn to rise early and walk at least a few miles daily.

The show ended, all of them singing and her smiling straight at me. I stuck in a cigar store a while; then the shirt-sleeved guy led me to her dressing room. The performing dogs was barking as they ran upstairs, and their stew smelled nice.

"Help with this—dear," says Lucette, and as I put on the new wrap that note dropped.

Instantly she slid a foot over the paper, talking very fast. It made me uneasy. Getting powder from a wide dish, she worked her foot near the theater trunk, pushing the paper under as somebody yelled her name.

Then She Stood and Wiggled While I Switched the Needle for a Bigger One

"Heavens! It's the manager's wife, our prima donna, or I wouldn't go. Wait for me!" she says. "You'll pardon me, dear?"

I just nodded. Next minute I dragged that paper out with my knife, and read:

Lose Mr. Alaska so we can take our midnight ride. Bestest love! Answer on this or when passing my table, next the door. Say what time, as if just bowing; will get you. ARTIE.

In her stand-up hand the other side said:

Hotel lobby; twelve. Shall tell him I have to rehearse a new part. Bestest love! Thousand kisses! LUCY.

I recollected her pausing as we left the tavern, and a young guy, with one of those pathetic little mustaches, standing when she bowed. In the corridor the performing dogs was clustered round the fellow lighting an alcohol stove for their meat kettle. One poodle put his nose up for me to rub, and he made me think of Dan and Polo at home. My legs was wabbly as I found the stage door. I had put the note in the powder dish, writing under her part of it:

You needn't rehearse that new part. Good-by!

The first parties I seen said their field men was in the Tolovana and up the Kobuk, and it'd be too late in the fall, when they got through, to look at my ground before snow. But the second people had me there all morning in a Market Street office, questioning, shaking their heads over my assays, until the senior partner says:

"Of course you know Henry Shultz, Mr. Griffith? I thought you would. All right, is he?"

"Sure!" I says; though I wasn't keen on Hank, who had pulled some rough stuff at times, but was married now and running a sawmill.

"We don't think so," he says sharply. "And we were well acquainted with the Griffith Group before you came in, sir! Also with the Rannols Exploration Company and Shultz and other robbers back of it. We can tell you much of the Griffith Group, where our investigators found a ten-foot prospect hole in place of the plant you gentlemen advertised, and with which you robbed the wretched public! Good morning, sir! And let us advise you to exploit yourself elsewhere than in a mining center where men have memories and files!"

"If—if you was just not quite so old, the both of you, I'd crack your heads together," I says; and he rang a bell sudden, shrinking away from me. "I was a goat for Rannols—took the ground from him; spent mine ——"

"Call an officer if he threatens you, Parker," says the old man to a clerk most as old who rushed in. "This is Griffith, Parker, of Rannols', you know. They got your poor little eight hundred for their precious stock."

The old clerk regarded me same as a snake, and I was too full of rage to do more than bust by him and get out. Outside I figured would I go back and trim the whole office; but it was only old men and females at typewriters.

I squeezed the canvas sample sacks in my pockets until the rock cut through, and stood on one of them isles of safety in the street's center for an hour, till I climbed on a street car and rode on it till I could face the hotel clerk I had told how I would be rich when I come in.

The next week was awful—my feet and back dead from the pavements, and me whispering the name of Griffith quieter to each office boy in the financial district. It seemed like my Group had been a scandal—Rannols, at the big blow-off, had gave a statement that there never had been any showing in those eight claims, though on Satan Creek there was gold! Those firms must have tipped each other, for in some they told me, first off, they didn't handle anything except legitimate propositions; and they would have a little army ready to see I found the elevator.

I didn't go to any more shows at night; didn't do anything except set in the room and sweat, and think of Her and her Artie, and if Polo's leg, where the whistler he was digging out bit him, was better, and whether any volunteers had come up in the garden. But I didn't want to go North—couldn't go, when this trip was what I had figured on for years; and if they wouldn't listen to me here, where could I go? I would see some busy guy in a pinchback suit, and eyes like buttonholes, bustle in to see the board in the Exchange, and wish I was him, or one of them who nodded to the desk boy in the offices where the money was, and strolled right in past the glass doors that said Private!

Finally I had visited all the places I knew, and at eleven one blowy morning I stopped on a California Street corner, staring, without thinking of him, at a stoutish gray-haired man in a wide window.

THE GOLD TOKEN

By Garet Garrett

ILLUSTRATED BY W. B. KING

MIND you, this is history. In the eccentricity of time the year 1896 was reserved for the exercise of man's favorite frenzy—that is, to make a fetish of his poor little tokens and invest them with magical properties. Whether white or yellow metal should be the symbol of trade was believed to be the answer to all good and evil.

Many strange things happened. A professor of bad economics, who thought the Gold Devil had queered his job, turned vender of good metal polish. He came one day to Wall Street, where a lot of people, with paper money in their hands, were anxiously waiting for the doors of the United States Subtreasury to open. To show them a cleansing miracle, he scaled the pedestal of the Washington Statue and rubbed up the first President's heroic bronze shins. It was wasted advertising.

The paper money the people had in their hands was the kind called greenbacks and the clamor was to change it for gold while yet the government's diminishing store of that precious metal survived the daily raid of Europe. Each morning the gold reserve was less, the line of Jew and Gentile gold hoarders longer, and the demands of Europe more insistent. That had been going on for many weeks. The professor was not so mad as the people who were hoarding gold; and they were not so mad as other people, in the West, who cried for white money and worshiped a silver calf. All these together were less mad than Congress, with whom the President pleaded in vain to repeal the absurd law which required that, as fast as the Treasury redeemed the wretched greenbacks, they must be reissued. That was why the same greenbacks came again and again to be redeemed in gold, like an endless chain of evil.

Fancy a daily run on the United States Subtreasury! It was a fascinating spectacle. By a freak of irony there was nowhere to be had a better view of it than from the high windows of Cæsar's banking house, directly across the street. The irony lay in the fact that this was probably the Yellow Devil's habitat. Cæsar himself it was who, under pretense of believing in his country, meditated the crucifixion of its people upon a cross of gold.

You might have innocently believed it; for so many people did. But if by some stroke of strategy you had got inside the bank that morning, to see with what an air human beings could go about preparing so ghastly an event, you would have been deeply disappointed. It was very quiet there. Men went leisurely about with documents in their hands, or stopped at each other's desks and talked about the weather.

However, business had not begun. It was only nine-thirty. Cæsar had not come. Two men stood at one of the windows, staring out. One was the cashier, who believed in trifles and took big things for granted. The other was Sammy Postgate, prodigy, who believed in arithmetic.

"What a shame!" said the cashier. "It is too late now to do anything about it."

"It will last a week," said the other.

The cashier shook his head.

"It will never be the same again. Bronze is peculiar stuff."

"Bronze?" said Sammy Postgate. "W-w-what are you talking about?"

"A crazy peddler just now got up there and polished them bright, from the knees down. I saw him when he started, and telephoned over; but before they could reach him the damage was done."

"Is that what you see?" inquired Sammy, disbelieving at first. "Why, man dear, where's your imagination? Look! A run on the National Treasury! In a week the government will have to shut up, like a Jew banker on the East Side. It will quit! Stop paying! Turn them away! Put up its shutters! The gold bin will be empty! And here you are taking on because a peddler cleaned up G. W.'s shins!"

"Yes," said the cashier; "you say he cleaned them up. So a lot of people think; they would have the whole figure polished to match the shins. It takes years and years to give that beautiful color to bronze. When people have forgotten that they were ever such fools as to hoard their gold for fear the government would go bankrupt, that crazy peddler's work will still show. Bronze is funny stuff."

"If We are to Hold Our Own With Europe We Shall Have to Work With the Money of Highest Efficiency"

"They're not such fools as you think," said Sammy, scorning the peculiarity of bronze. "They are doing only on a small scale what this house has been doing in a big way for many months. They are protecting themselves. Why shouldn't the people get their gold while they can?"

The cashier made a gesture of impatience.

"It isn't theirs, for one thing," he said; "and you're as stupid as they are."

"I tell you the country is insolvent," said Sammy. "I've got the figures to prove it." He dropped his voice and continued: "The Old Man knows. We've sold thirty millions of securities in Europe in the last eight months—this house has—and some of them at a loss. What do you think that means? We have been getting out. That's what it means! They don't catch us in the wreck."

The cashier thought differently. The country could never go bankrupt so long as one man lived. Every morning, as he mounted the steps from the street level to the door of his banking house, Cæsar glanced backward over his shoulder at the gold hoarders and sneered. The cashier had seen this. It thrilled him. As for the government's having to suspend gold payments, that would not be allowed, either, so long as Cæsar lived. Had he not averted that disaster the year before when he placed an immense quantity of gold in the government's hands and took its bonds in payment?

Everybody predicted that he would smash up with it. Instead of that, the bonds advanced tremendously from the price at which he took them; and then the very people who said it was a hopeless undertaking in the beginning denounced him for having made a profit out of the government. People were queer. They would clean up the whole Washington Statue. But it was of no use to argue with Sammy. He could prove anything by arithmetic. He was a devil with figures. And besides, though everybody called Cæsar the Old Man, they should do it with reverence or affection; whereas Sammy did it flippantly. So the cashier shifted the attack unexpectedly and said:

"Trouble with arithmetic, Sammy, man invented it; whereas God invented people, and there is no telling what they will do. You'd better not let the Old Man find out how you are speculating in the stock market. He's very hard about that."

"What do you know about me?" asked Sammy uneasily.

The cashier regarded the young man's little fox face and did not reply. He waited for him to boast, as he was sure to do. "I'm not the only man in this house who speculates," Sammy added. "I've been successful. That's the only difference."

"It's beginning to be talked about," said the cashier. "There's nothing in it. I've seen too many young men get started that way. Success at the beginning is fatal. I never made a speculative trade in my life."

"That may account for your having risen in forty years to be a cashier," said Postgate in his worst manner.

With that he left the cashier to his contemplation of bronze and returned leisurely to his own desk.

It was now ten years since Cæsar, passing through the main corridor of his bank, happened to look in the direction of the mailing desk, saw Sammy for the very first time, stopped short, stared, and then returned to his private office, whither he summoned the subordinate who was responsible for all petty office affairs.

"There are two boys at that mailing desk outside," said Cæsar. "As I passed just now one was holding out his tongue for the other boy to wet the stamps on."

"I never saw anything like that, sir!" said the subordinate, terrified.

"Discharge the boy who was holding out his tongue," said Cæsar, "and send the other one here to me at once."

He waited. Sammy, who had wetted his stamps on another's tongue, presented himself, and was unterrified. Cæsar asked his name, his age, where he came from, whether he knew arithmetic; and then, at random, put this question:

"If exchange is four-eighty-eight, and Atchison is twenty in London, what is the equivalent New York price for Atchison?"

He motioned toward pencil and paper, but the boy answered correctly out of his head. Cæsar was startled. If exchange was four-eighty-eight-and-a-half, and Erie was nine in London, what was the New York equivalent for Erie? Again the boy answered correctly out of his head. At that, and with not another word, the great banker got up and went home.

Next day two new boys, instead of one, were hired for the mailing desk, and the one who could do problems in his head was sent to the Foreign-Exchange Department. He learned with amazing rapidity. In five years he was the most efficient member of the foreign-exchange staff, though not the head of it, owing to his immature age; and Cæsar was in the habit of asking him things and of calling upon him for statistics that required special and careful preparation. He was never disappointed.

At length came those gold transactions of Cæsar's with the government, in the conduct of which it became necessary to run a corner in foreign exchange, a thing that had never been attempted in the world before. Then Sammy was invaluable. One night, when they had toiled late downtown, he went with Cæsar to the library of the Fifth Avenue home, to work out calculations for the morrow; and afterward Sammy had been refreshed in the wonderful dining room, to which all the world had contributed objects of art.

It was there he met Helen, the daughter of Cæsar, who talked to him knowingly and, as he thought, almost confidentially. She asked him a lot of questions about her father. He had never imagined a woman like her. She was not beautiful. He cast about in his mind later for a phrase to fit her, and put it down that she was a "tremendous woman!" What amazed him most was that she treated Cæsar without fear and asked him questions that no man in Wall Street would have dared to ask him. Moreover, he answered them. Next day Sammy sent her a book about something they had mentioned, and she acknowledged it daintily in her own writing.

Thereafter his recreation, beyond arithmetic, was to elaborate the daydream of being called to Cæsar's private office and hearing him say:

"Mr. Postgate"—not Postgate, or Sammy—"Mr. Postgate, how should you like to become a member of this firm?" He knew exactly what he would say. Then Cæsar would name the terms and they would shake hands; and Cæsar would say: "Can't you come up for dinner to-night? Don't bother to change. Come just as you are." It would be very different dining in the Fifth Avenue house and meeting Helen as Cæsar's partner.

Digitized by Google

The aspect of Cæsar that interested Sammy most was that of speculator. He was perhaps the only subordinate in the great banking house who perceived clearly that its head was the most daring speculator of his generation in money, in exchange, in securities and in events; but on a scale so large and by calculations so imaginative as to lift his operations away above common definitions.

Knowing this, he believed that, even if Cæsar should find out that he had been speculating, he could successfully defend his conduct. His mind and Cæsar's had been working in parallel lines. He was sure of that. Out of his own intelligence he had made the staggering discovery that the country was statistically bankrupt. He had demonstrated it incontrovertibly, and he was going to lay it before Cæsar.

He had been asked to develop statistics in a certain simple form to show the country's exports and imports over a series of years. While he was doing this a startling implication of the figures presented itself to his mind. The country was insolvent! There was no doubt about it. The conclusion was irresistible. Having performed and delivered the routine work requested, he went further, on his own account, and proceeded to throw the figures into the form of an income account—as if the country were an individual or a corporation, subject to liquidation, with so much income, so much outgo, and so much surplus or deficit resulting. The outcome was amazing.

That the world doubted the ability of the country to continue paying its obligations in gold, everybody already knew. That there was grave doubt as to the ability of the country to pay its debts at all, in silver or gold or goods, was a very different matter. It was calamitous. Europe had been draining our gold away, not only because she feared that gold payments would be suspended but because we owed her a prodigious debt. It was steadily rising.

It Would Astonish Cæsar to Learn That a Clerk Had Divined the Truth

Taking the last year, for example, the outgo to foreign countries—namely, the money directly spent by Americans abroad; the freight paid or owed for exporting American goods in foreign bottoms; the dividends and interest paid or owed on American securities held abroad; and the profits of foreign corporations and persons doing business in the United States—had been approximately $400,000,000
The net value of American goods exported had been only 210,000,000
Leaving a balance of debt due to foreign countries, to be settled in goods or money, of $190,000,000

One year alone was not so bad; but in fifteen years the outgo to foreign countries had been $3,600,000,000. In the same fifteen years the net value of goods exported had been only $1,300,000,000; leaving, to be paid in money or to stand owing, the enormous sum of $2,300,000,000.

No wonder that every fast ship leaving New York was a treasure ship, bearing gold to Europe! The country had not been able to pay its debt in goods and was being called upon to pay in gold. And, as Sammy said, the bottom of the gold bin was in sight!

Having worked up an elaborate demonstration of the country's statistical bankruptcy, in thirty typewritten pages, he styled it: "Profit-and-Loss Account, U. S." This, on the first favorable opportunity, he proposed to lay before Cæsar. He doubted not that Cæsar already knew. Indeed, the figures explained to Sammy everything he knew the great banking house to have been doing for two years past—its enormous accumulation of resources, in the first place, and its continuous heavy sales of securities abroad more recently.

But if Cæsar thought that he alone foresaw the calamity which could not much longer be averted he was mistaken. It would astonish him to learn that a foreign-exchange clerk had divined the truth. He might be very angry at first, though in the end he would have to say: "Postgate, this is something that must not be talked about. Let us keep it to ourselves for a while."

Sammy was in the midst of these meditations when a flutter went through the whole establishment, like the stir of leaves before a wind. The carriage of Cæsar had appeared at the head of Wall Street. The big hall man ran to the door to take his hat and stick the instant he should cross the threshold. The cashier left the window, pretending not to hurry, and found pressing work upon his desk. Sammy began to make figures on a pad. Two office boys on a bench sat up straight and stiff. The four junior partners, at their respective desks, assumed airs of expectancy. One scooped up his papers and stood ready to be called.

Cæsar passed rapidly down the corridor to his private office, a place set off with glass partitions, and spoke to no one on his way. He had no habit toward his subordinates. Sometimes he spoke and often he did not. But his omission always included junior partners as well as office boys; so there was no discrimination. His subordinates feared him more than they loved him. None hated him. As he sat down at his desk before his personal mail, all opened and laid flat, one letter on another, a male stenographer came and stood at his side, notebook in hand. There were no female stenographers in this banking house.

He attacked his mail ferociously. More than half of it he tossed to one side for the stenographer, without comment; they were letters to be acknowledged and filed. On others he made illegible marks in pencil. To one he dictated a few lines. At the last was a letter unopened, bearing a foreign stamp. He read it carefully and put it aside under a desk weight. It referred to a collection of art objects. He nodded the stenographer away and rang for a boy, who brought the junior partner.

"Is that D. & R. reorganization plan ready?"

"Here it is," said the partner; he had finished it at two-thirty A. M., and was very tired.

Cæsar took it—forty typewritten pages—and went through it as if it was a Mother Goose Picture Book. His faculty of absorbing such things by page impressions tremendously awed his partners. With the last page, on which were set forth the terms of exchange—new securities of a company-to-be for the old securities of a railroad that had gone bankrupt—he went more slowly. He actually read it.

He put the document down and made a few rapid calculations on a pencil pad. Then he got to his feet and walked heavily about the little office, thinking. The partner had left the glass door open. He saw what was coming and deftly closed it, but not in time to prevent Cæsar's first fierce exclaimer escaping to the corridor outside:

"Do you think this is a charitable institution?"

The rest was in pantomime, to an outside point of view. The other partners, the cashier, Sammy and everyhody watched it through the glass partitions. Cæsar first lit a huge cigar and went over to the ticker, as if to look at the tape, which he forgot to do. He went back to his desk and picked up the offending document, to wave it menacingly in the junior partner's face. He flung it back to the desk from a distance, and then followed it, to beat the desk with his fist. As he warmed to the subject he walked faster and turned more sharply and unexpectedly, so that the junior partner had to jump to keep out of the way.

This lasted ten minutes and ended abruptly. Cæsar stopped before the Broad Street window, smoking, and stood there gazing out until the junior partner knew that he was free to take up his unsatisfactory work and go.

After a while Cæsar turned and beckoned another partner in, conversed with him briefly, and returned to the window. The second partner went out and began calling, in turn, by telephone the presidents of the twelve largest private and national banks in Wall Street. They were to meet Cæsar at noon. Before the last of the summonses was served, it was known all over the house that a conference of bankers had been called. The cashier tried to catch Sammy's eyes interrogatively, but the eyes of Sammy were in use. A boy was coming straight to his desk from Cæsar's office.

"You're wanted," said the boy.

As far as the door Sammy carried himself consciously. This might be his opportunity. But as he faced Cæsar he saw only the man everybody feared. He could not think coherently. He recalled the sensation of having once collided with a tree in the dark. Something was wrong. He had never seen the face so purple. Its ugliness had never affected him sickishly before. He avoided its menacing eyes, which had a trick of becoming focused upon a human thing fixedly, while the owlish brows, slanting at a steep angle upward, twitched violently. It was very disconcerting. Sammy wondered whether Cæsar had ever been a baby.

"No employee of this house is permitted to speculate," said Cæsar in a tone of regal annoyance.

So that was it! Cæsar had found it out. The situation was not at all as Sammy had thought it might be. He had lost the daring to meet it. Had his mind been working parallel to Cæsar's? Suddenly he was not sure. And if it had, would that fact increase or diminish the wrath? However, no common evasions of speech would avail. To plead would be fatal.

"I've something here I want to show you, sir," said Sammy.

He produced his demonstration. As Cæsar did not reach for it he laid it on his desk.

"You know that?" said Cæsar, referring to the rule about speculation.

"I know it, sir," said Sammy; "but there is my reason." He pointed to the document.

Cæsar looked at it remotely. He took it up between thumb and forefinger as if it were soiled. The legend, "Profit-and-Loss Account, U. S.," induced him to turn the first page. He saw at a glance what Sammy had done, but went through it page by page to the last. Then he swung round in his chair, facing the window, leaving his back to Sammy.

It was a true and interesting statistical performance. To the mind of Cæsar it was nothing more. He was not worried about the statistical bankruptcy of the country. He was not thinking about Sammy's demonstration at all as he sat staring into Broad Street, crushing the paper in his hand. The figures, by a common trick of irrelevant suggestion, had thrown him back upon a train of unfinished calculations.

His mental condition for several weeks had been that of a chess player who thinks forward to the twentieth move, wants the twenty-first, and is just on the point of getting it when a book drops, a man speaks or a clock strikes. The whole structure collapses and has to be built up again from the beginning. The problem his mind wrestled with was how to keep the country in credit—gold credit—until its creditors should have confidence in it again.

Sammy, of course, knew naught of this. He was in an ecstasy of uneasiness. Fifteen minutes passed. The suspense was intolerable.

"I could add something to it," he said.

Cæsar wheeled about, startled. He regarded Sammy with angry amazement and roared:

"What are you doing here?"

Sammy, though taken off center in that way, had so far recovered his wits as to be able to think fast. He concluded it was a test. He was being bullied.

"You sent for me, sir," he answered with what face he could command.

Gradually Cæsar regained his objectivity. He looked, with a puzzled air, at what he had been crushing in his hand, opened it out, read the legend, and recalled what it was and why he had sent for his foreign-exchange clerk. With an exclamation of disgust he tossed the "Profit-and-Loss Account, U. S.," into the wastebasket, and said to Sammy:

"Go to the cashier and get two weeks' pay. You are discharged!"

How little a Postgate mattered! Cæsar turned his back and forgot his existence. He stood at the window again, gazing with his mind's eye upon the calculation that it was necessary to reconstruct and complete before the bankers were met. They were already coming in. One by one they hurried down the corridor to the conference room. All of them were anxious, more fretful and more impatient than Cæsar, whose back they saw as they passed his den. They waited for him in the conference room—ten minutes, twenty, half an hour—and began to feel annoyed. They were never sure whether he did such things in aberration or to impress them with his contempt for their time.

Two of the junior partners stood in suspense outside his door, not daring to interrupt, but anxious to remind him that the bankers waited. Suddenly he turned, looked at his watch, and walked rapidly down the corridor to the conference room. It was artificially illuminated in daytime. The bankers sat round a long oval table. Cæsar never saluted them. He sat down at the head of the table, rocked forward on the front legs of his chair, and spoke to the president of the largest national bank:

"How much credit have you got in London?"

He asked deep, impertinent questions in that way, with a bluntness which was either supreme tact or the lack of it. Men were accustomed to it.

"Not more than six millions," was the answer.

"And you?"—to the private banker who had important connections in Germany.

"Aboud vour," he answered.

They were exposing to him, without self-protection, the final secrets of their resources. And they were afraid to lie. One by one they answered, categorically, and among them they could raise sixty millions of foreign credit.

"I am going to assess the foreign stockholders of the D. & R. Railroad for twelve millions," said Cæsar. "Then I have arranged to place twenty millions of new securities abroad. That will be thirty-two. I can raise eight more,

Digitized by Google

which, added to your sixty, will give us one hundred million dollars, or twenty million pounds sterling, of foreign credit to sell."

"What do you propose?" asked the head of the largest national bank.

"Up to a hundred million dollars," said Cæsar, "we have got to sell here all the foreign credit anybody needs to remit abroad, in lieu of gold. We must not let any more gold go out. Do you subscribe the amounts you have severally named? I subscribe forty millions."

The private banker with important connections in Germany was the first to speak.

"You vill untersdand," said he, "zat ve haff namdt, in each gaze, ze exdreme amoundt. I haff done so. Zat iss ze ent! You haff now azked us to subscribe ze lasdt tollar uf voreign gredit ve gan raise. Zuppose id iss nod enuf? Zuppose ve zell ze von hundredt million tollars uf voreign gredit, und id iss nod enuf? Id iss ze ent!"

Cæsar was silent.

"Nobody can tell what will happen to-morrow," said the head of the largest national bank. "We are dealing with psychological phenomena. There may be a panic to-morrow. Bryan will speak to-night at Madison Square Garden. We may need to draw heavily upon our foreign credit to protect securities. If we pledge it in this way we cannot use it in any other emergency. If, after we have done this, the country goes for silver, we are ruined."

Another banker said:

"I have had discouraging reports this morning from my correspondents in the Middle West. Even Ohio may go for Bryan. I see nothing but repudiation ahead of us. The people are not sane. God help them!"

When they were all through they looked at Cæsar. They were not sure that he had listened. Beating slowly on the table with both of his great spongy fists he spoke in his irresistible manner, and they knew beforehand that when he had finished they would subscribe.

"Let us admit," he said, "that if the people vote for free silver we shall be ruined all in a heap three months from now. We do not know that they will. I think they won't. What we do know is that unless we act at once to protect the gold the government will have to suspend gold payments in a week, and we shall have to put up our own shutters before the people have had a chance to vote at all. I subscribe forty millions!"

They followed him. The conference ended in five minutes more, and Cæsar never so much as said "Thank you, gentlemen!" That afternoon, on the announcement that a pool had been formed to sell a hundred million dollars of foreign exchange, engagements of eight million dollars gold for shipment to London were canceled. The remitters of gold purchased bills of credit from the pool and sent those instead. Before three o'clock it was rumored on the Stock Exchange that the house of Cæsar was buying stocks.

Cæsar went home early. Sammy did not go home at all. After leaving Cæsar's presence he went and sat at his desk for half an hour before he could realize what had happened. He told himself again and again that he had taken it weakly. He ought to have gone back at Cæsar with a defense. He had better have been defiant than weak. He thought of all the things he might have said. At length egotism raised its indignant head. The greatest of speculators had discharged him for speculating!

He determined not to take his two weeks' pay. He would show his independence.

Besides, he could not so humiliate himself as to ask the cashier for it. He did not need the money. He did not need the job, for that matter. It was the disgrace of having been dishonorably dismissed that hurt. However, he had a profit of nearly fifty thousand dollars in the stock market. That was a lot of capital. He would become a speculator such as even Cæsar would have to respect.

On this turn of thought he wondered what the stock market was doing, or how it was closing, and walked out and round the corner to his broker's office to see. That was a mistake. He had never appeared in the broker's office before. All his business had been conducted by telephone. As he took a chair in the customers' room the broker came and sat down beside him.

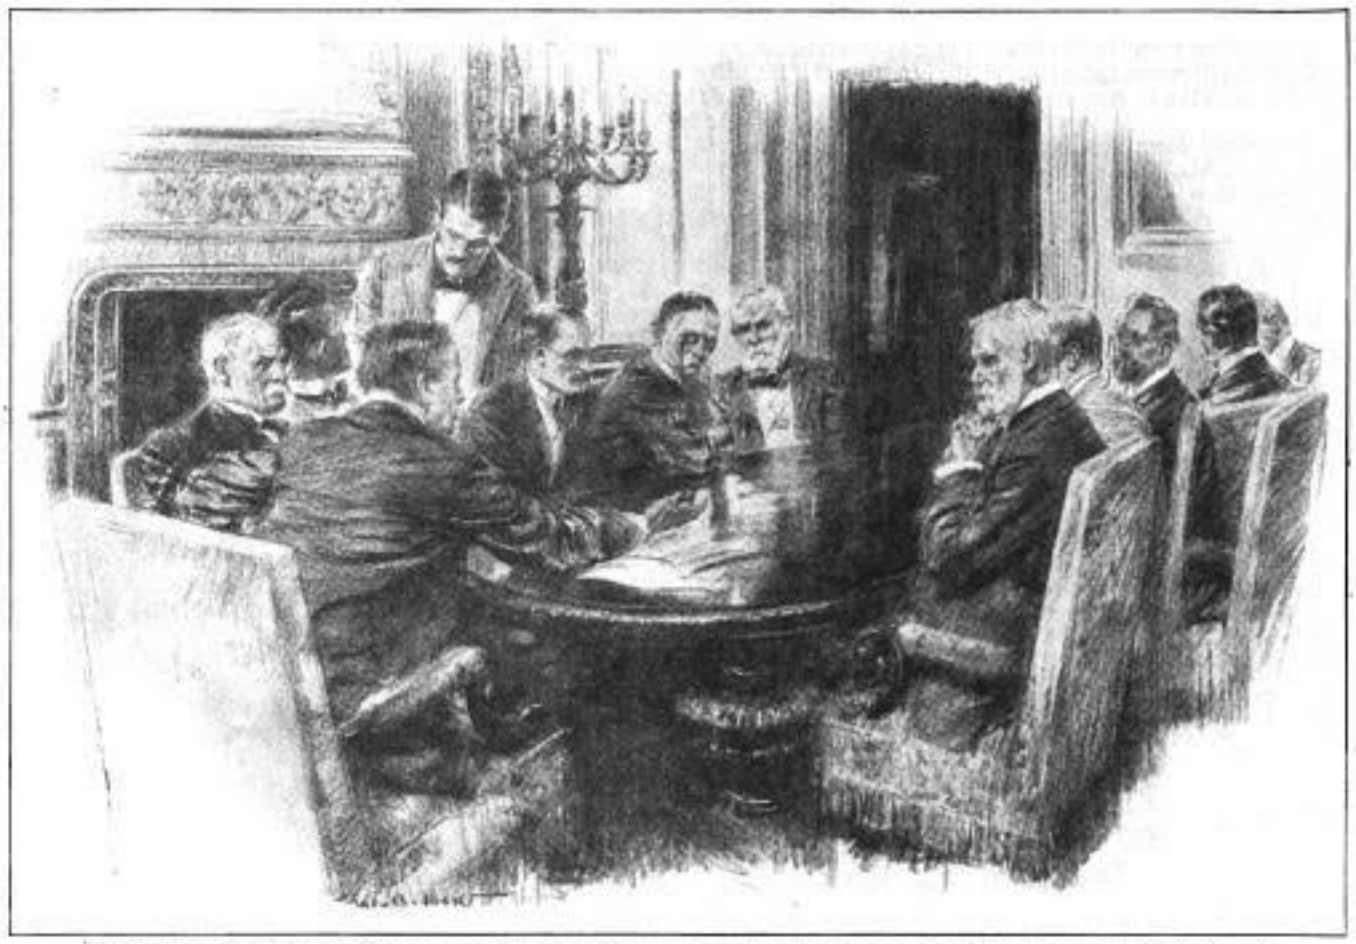
"Anything wrong?" asked the broker.

Sammy started. Why should the broker think anything was wrong? He asked him that.

"No reason at all," said the broker; "only it's strange to see you here in the office, you know."

Sammy lingered for a few minutes and went out. The broker followed him.

"I hear your house is buying stocks."



"Oh, you do," said Sammy, and went on.

Then the broker knew that something was wrong. He easily guessed what it was.

At seven o'clock Sammy found himself in the neighborhood of Madison Square Garden. He had been walking about aimlessly for hours. It gave him a twinge to recall that he had expected to be detailed by Cæsar to attend the Bryan meeting and report upon it. A great crowd was moving in. He allowed it to pick him up.

The place was already filled. People were standing in the aisles. Lights blinked through a blue haze of smoke from the kind of cigars with which the electorate regales itself when it accepts the invitation to come and be seated and hear itself called sovereign. Sammy, despising everything, wriggled himself to the balcony and found a place to stand. He heard a woman say:

"But I have a ticket calling for a box seat."

"Unless We Act at Once the Government Will Have to Suspend Gold Payments in a Week. I Subscribe Forty Millions!"

He turned to see. It was the daughter of Cæsar. Her way was blocked. She could get no farther. A man said:

"It would do you no good, madam, to get through. The boxes are all filled. People took them without tickets. They couldn't be stopped."

She neither protested nor insisted. She was tall enough to be able to see and was evidently willing to stand. She pushed forward to a position only a few feet from where Sammy stood, and stopped. The stage was occupied by committees, prominent citizens, and so on, grouped in a crescent round a little table at the front, on which stood a pitcher of water and glasses. There were three empty chairs by the table. When the men for whom they were reserved came out from the wings the cheering for one of them—the middle one of the three—lasted ten minutes.

A man, who announced that it would be presumptuous for him to speak at all, spoke for thirty minutes, and might have gone on speaking forever if the scraping of thousands of feet and the coughing of the people had not warned him to introduce the Peerless One. As he stood forth, the cheering lasted twenty minutes and ten seconds, as is a matter of record; men held stop watches on it and the exact time was afterward reported in the newspapers. During an hour and a half the Peerless One, passionately in earnest, plausible to the multitude, and very awkward with his hands and feet, denounced gold, its works and its owners—and Cæsar more than all.

Then the human current set outward and Sammy, moving with it, drifted against Helen. In the passage of egress, thirty feet wide and a hundred long, in three levels, broken with steps, the human stream, hot, smelly and unamiable, piled up like a tide rip. Nobody could help it. One had to push, because those behind were pushing; and those behind couldn't help it, either, because back of them ten thousand were pushing. A man said:

"Look out, there! Your woman is fainting."

At that a fat woman began to scream hysterically:

"Oh, let me out! Please let me out!"

Sammy was directly behind Helen and was being pushed roughly against her. The human atom ahead of her was a broad-backed animal, incompressible. An idea occurred to Sammy! He could extend his arms straight ahead, one on each side of Helen's person, and by pressing hard against the animal in front take some pressure off of her. He did it at once. The thought that he was protecting the daughter of Cæsar, even without her sanction or knowledge, stimulated his imagination. There might be a panic. He would save her.

What revenge!—to be able to hand her over to Cæsar, saying: "There is your daughter, sir! I have had the honor to preserve her."

Neither Helen nor the broad-backed animal noticed. The pressure increased. Weak men were crying out: "Stop pushing!" Two or three women screamed at once. Once Sammy, who weighed only one hundred and fifteen, lost his feet and had to pull himself up by his hold on the incompressible animal.

"Here!" he shouted. "Be careful, can't you? You don't know whom you are crowding."

He referred to the identity of Helen, but the incompressible animal, who screwed his head round, misunderstood, and said:

"You make a lot of squeezin', young one, whoever you are."

Helen also misunderstood both the efforts and the concern of Sammy, and said to him:

"Can't you take care of yourself, please, without holding on to another person, and stop stepping on my heels?"

A minute later the three of them popped into the street. The broad-backed man, a son of toil, cast a glance of admiration at Helen as her full proportions were disclosed. She was very tall, deep-chested, and her slightest movement suggested an uncommon degree of physical efficiency. Her carriage was waiting. Sammy watched her into it and was deeply hurt. She had not cut him. It was worse than that—she simply did not know him! He could not have said—he told himself over and over that it would have been ridiculous for him to say—in the crowd or afterward: "I am Mr. Postgate." Moreover, he was now merely a Mr. Postgate, whereas before he had been a servant of Cæsar.

When Helen got home she looked into the library to see whether Cæsar was alone, as he had invited her to do. He was playing solitaire. He had been at it since eight o'clock, interrupted only by telephone conversations with the men he had sent to Madison Square Garden. As Helen entered he looked at her in his most amiable manner. She interested him tremendously when he had the leisure. Her intellectual curiosity delighted him.

"I heard the Bryan speech," said Helen, seating herself comfortably in a position to face Cæsar across his little teakwood card table. "Does it interest you?"

"Thank you, no," he said, and went on with his game.

PUTTING ON PERCIVAL

A Story of a Mother-Proof Household—By Corinne Lowe

AND do you mean to say that you aren't even going up to look at Percival?" said Mrs. Bellwether Dulcimer, eying her daughter as she stood there in the great velvet-hung living room of the Dulcimer country place.

Mrs. Doré Van Hook looked a trifle startled; but the smile remained in curl.

"Oh," said she lightly, "why disturb him when he's sleeping?"

To this her mother replied with silence, and in this form of repartee the old society leader's gift was unquestioned. No words could have whistled through the air more sharply than the silence that ensued.

Mrs. Doré Van Hook had motored down that evening with her husband and house guest, Mr. Nelson Romper, from the Van Hook lodge in the Adirondacks. During a period of six weeks she had not laid eyes on her children. These, together with Miss Finch, had been staying with their grandmother, here at The Brambles. To-morrow, in the early morning, Mrs. Van Hook was motoring on to Hot Springs for several weeks, prior to the opening of the town house; and this night represented, therefore, the one possible moment for the phalarope parent to alight near her offspring.

"Well?" asked Mrs. Van Hook nervously, breaking at last the long silence.

She moved over to the great fireplace and held out her hands to the blaze. The challenge of the flames was a direct one, but Mrs. Van Hook met it superbly. The hands, which now let the firelight through like a shell, were exquisitely fragile; the figure, even in its smart bulkiness of motor togs, was hipless and lithe, and like scrolls of mahogany gleamed the dark hair. Yes, admitted Mrs. Bellwether Dulcimer rather enviously, this daughter of hers was now, at thirty-nine, imperturbably young.

Mrs. Van Hook Kicks Over the Traces

"YOU look happy!" jumped Mrs. Dulcimer out of her long scrutiny.

Mrs. Van Hook turned with a laugh.

"Nonsense, mother!" she retorted. "It's that new electric treatment I'm having for my eyes. Perfectly wonderful! You must try it."

"Humph!" sniffed Mrs. Dulcimer.

Did Dorcas really think she could be deceived? Didn't she realize the difference between this new look of hers and that of nearly all the people they both knew? Those others had a surfeited air. She, Dorcas, had a just-enough air. Just enough—that was happiness! And Mrs. Dulcimer could not have happiness going off like an alarm clock among those comfortable, sleeping standards of hers. It was with a distinct sense of danger that she now asked:

"Is Mr. Nelson Romper going with you to Hot Springs?"

Mrs. Van Hook wheeled about.

"Of course not," said she coldly. "Why do you ask that?"

The onyx eyes regarded her bitterly.

"How much is he worth—this explorer person?"

Her daughter started. It was exactly that question which, uttered in exactly the same tone, had put an end to her affair of twenty years ago. She looked down now into that chasm of unemotional wifehood and motherhood into which it had dropped her, and there was a long, long pause before her answer came.

"Oh, I don't know—nothing, I suppose—in money. But what does that matter? What have I got to do with Mr. Nelson Romper?"

"What have you got to do—— Just wait a moment." And without another word Mrs. Dulcimer went to the great table in the center of the room. "Here," said she, bringing back a paper which she thrust into the other's hand; "I thought you might like to see what the Weekly Gadfly has to say about you."

Dorcas Van Hook threw the paper angrily to the ground.

"You won't read it? Very well, then; I shall tell you what is in it. The article speaks of the increasing number of divorces among women in middle life. It asks why it is that matrons, and even grandmothers, who have worried along very comfortably with their humdrum millions suddenly get some flare when they are old enough to know better. It alludes to the threatened breach between you and Doré, and wants to know whether you will be the next to join the band of belated divorcées, of which ——"

"Stop, mother; for pity's sake, stop! I won't have my friendships ——"

"—— of which," continued Mrs. Dulcimer mercilessly, "Mrs. Sydney Glumheim, Mrs. Sweepwell Broome ——"

"That horrid creature," cried Mrs. Van Hook—"going round to public dancing places with men young enough to be her sons! How dare they mention me in the same breath!"

"All very well," replied the mother; "until she was forty-odd she was an exemplary character. She was wrapped up so tight in her proper duties that she was like a rug put away from the moths. And nobody—no man could ever say that Cynthia Broome in her younger days ever gave him the slightest encouragement. That's why I wonder ——"

"Hush, mother! Here he is—please!" And the tall, bronzed man who entered put an end to this significant conversation.

It did not, however, put an end to the subject. The following spring Mrs. Doré Van Hook arranged a divorce from her husband, and soon afterward she married the bronzed explorer. In this arrangement Mr. Doré Van Hook behaved very handsomely. He settled a million dollars upon Dorcas, and with this sum she and Mr. Romper settled down permanently in Paris. In the years that were to come she saw her children only occasionally and casually. Meantime the fourth floor went along just exactly as it had before her departure.

The only person, indeed, who was crushed by Mrs. Van Hook's decision was her mother.

"Well!" snapped she. "So you've done it, have you?" She looked at this other being, who had constituted for her merely an ensign of victory, as resentfully as at some inanimate thing that had suddenly waked to defeat her. "You—at your age!" she groaned.

"Poor old mother!" said Mrs. Van Hook, feeling for the first time in her life compassion for this battering personality. "Of course you don't understand." She paused for a moment and then went on: "You see, mother," she tried to explain, "I've been trying for years to intellectualize my emotions. But I couldn't do that forever. There had to come a time when I emotionalized my intellect. Good heavens," she cried with sudden fury, "you can't expect a woman like me to live on time-tables all my life!"

"Time-tables! So that is what you call your children?"

"Well, what else?" said Mrs. Van Hook bravely. "For years I've been looking them up, seeing that they ran at certain times, studying them out. They were just part—I couldn't help it—of a worldly system and a worldly life. Besides," she added, "I'll be just as much good to them this way. Miss Finch is staying with them, and she and Doré have promised to carry out my ideas for their education."

"That's too bad!" remarked her mother. And with that she left her.

To Percival the news of his mother's step was broken by Miss Finch.

"Percival," said she solemnly to the small boy in the Norfolk jacket, "I have something very painful to say to you: Your father and mother ——"

The boy's handsome head turned above the round white collar and his eyes met hers.

"Divorced?" asked he calmly.

"Why, who told you?"

"Nobody; but I've often wondered about it. Barkley Shinn's mother and father are, and so are Stumply Vander Whoop's."

This maturity of Percival had been gained from the Newport Casino, from horse shows and other society occasions which threw the family group into unaccustomed relief. It plunged him now into another question:

"Will they marry again—father and mother?"

"I don't know—perhaps."

"And we—Marian and Hildegarde and I—where shall we go?"

"Oh—here, where you have always stayed."

"Oh!"

The small boy gulped down his disappointment. For a moment he had thought the change in relations might mean a change in environment. But, no! Adventures were like Wassilissa's doll—they hid away in books; far, far away from unlucky rich children. It was this thought which lay uppermost in his mind that night when he closed his eyes to the correct Persian figures of his bedroom.

"H'm!" remarked Tompkins, the fourth-floor footman, to Percival's new nurse. "If 'e don't molt his mother easy! But—my eye!—when Freda left us, then you just ought to 'ave 'eard 'ow 'e did go on!"

They Hire a Tutor for Percival

PERCIVAL'S new nurse was called Grunwald. She had been with him now ever since Freda's lamented departure, and in this time he had felt no more emotion for her than for a spigot. She dressed him in the morning and evening; she drew his bath for him; she took him to Central Park to play; and she "turned on" every practical occasion of his life. But she had none of Freda's talent for life, or her wonderful fairy tales, or her dear, slanting, funny eyes.

Compared with Freda she was, indeed, very much like a shining and methodical spigot beside an enchanted rod which draws unexpected streams from rocks and arid places. And when, at the age of eight, Percival was turned over to the double care of Tompkins, the footman, and Mr. Agley Rasher, the tutor, he felt absolutely no regret for Grunwald's leave-taking.

Mr. Agley Rasher, the tutor, was a young college man, with the tidy features, the serene gaze and the broad shoulders you are led to believe, from the street-car advertisements, are the exclusive and logical possession of those who wear Sokocute pyjamas and Nift-tie collars. Mr. Rasher was the master of every manly accomplishment. He could box, swim, ride, bowl, play tennis and sail a boat; in fact, his postgraduate course in Greek epitaphs of the fourth century had not interfered in the least with his realization of the well-rounded Greek life. Mrs. Van Hook had picked out Mr. Rasher just before her departure. He represented her final touch of motherly solicitude.

"I want you to make a man of Percival," she had said to Mr. Rasher. "Don't let him turn into a dreadful little snob."

"All right," responded the young man cheerfully. And it must be said that he deferred the calamity.

Along with the new tutor came a change in the fittings of Percival's room—the third he had known since graduating from the splendid Sforza cradle. In all these expert considerations of the particular phases of his development

Digitized by Google

extreme simplicity had been the keynote. Yet simplicity here was exactly like that of the little Van Hook girls' fine lingerie frocks, which cost one hundred dollars each. This may be understood from the fact that a simple little set of nursery or child's bedroom furniture, painted and made to order, costs as much as four hundred dollars. Add to this the curtains, friezes, carpets and services of the decorator, and you obtain the one thousand dollars the Van Hooks paid for each room's stimulating change of atmosphere.

After Percival reached the age of six months the splendid Sforza cradle and the silk-paneled walls had been overturned in favor of militant daintiness. The walls of his room were covered with Mother Goose figures; the furniture, of whitewood, was sprinkled with rosebuds; a rose-colored carpet was spread on the floor; and the latticework sides of the small white bed—one of which let down on hinges—were trailed with a realistic painted rose vine.

As soon as Miss Bongout, the decorator, beheld this room she indicated that Percival had been the victim of a defective æsthetic development.

"Pink and white," she murmured patronizingly to Miss Finch, who was showing her about. "Rather unfermented, don't you think? Now I see this room with a lovely neutral background. I see"—squinting her eyes as though blinded by the glory of the vision—"up there a frieze of Persian figures—you know nothing is more beautiful than the forms in those old Persian manuscripts. The bed and furniture will be a lovely deep imaginative Persian blue; and as for the curtains—printed with the same figures as the frieze."

"Very well; do what you think is best," said Miss Finch meekly.

In the next months it was quite apparent that, though the laws of the Medes might have a chance, those of their neighbors were as undigressional as ever. The figures selected for Percival's frieze were taken from a Persian manuscript illustrating the story of the Flood, and were painted in exquisite soft tones of blue and yellow and red. The chintz curtains at the windows repeated these forms in hand-blocked printing. And finally, to go with the "imaginative" blue furniture, there was a little bowl and pitcher.

"But the boy's bath is right next door!" protested Miss Finch.

"Oh," said Miss Bongout, "that doesn't matter—the thing is, the child must be taught to do things for himself. It will give him a sense of responsibility to feel that he is pouring water into his own little basin."

"It seems to me," demurred Miss Finch, "that it is a terrible affectation of simplicity."

But Miss Bongout proceeded relentlessly. With her harrow of correct taste she plowed up the nursery and sowed it with correct Oriental forms and colorings. Then she took in hand the little girls' rooms and prescribed for them "something soft and tender and maternal." Then, when the Fifth Avenue mansion was regenerated, she turned her attention to the country home.

The Great Adventure

BUT in children's rooms there must be an everlasting rotation of furniture crops. What will suit a boy of four will not suit a boy of eight. So it was that Mrs. Van Hook's farewell solicitude for her son took the form of another scenic shift.

"I would give him now something bold and free and adventurous—the boy's mind, don't you know?—something like Treasure Island," advised the inspired decorator.

Along with Mr. Agley Rasher, therefore, Percival received this nudge to his fancy. Right here, too, it may be stated that the tutor did not approve of the other contemporary advantage.

"Seems rather too bad, don't you think?" said he to Miss Finch, "that a boy's dreams should be made so literal. He oughtn't to be charioted along by curtains and bedclothes and things. Why, when I was a boy my little bare room was alive with those very things!"

The difficulties of his task had commenced by this time to weigh upon Mr. Rasher. What was snobbery but a sense of separation raised to scorn for those from whom you were separated? Already, he could see, Percival had the sense of being set apart. How long could he be kept from the biting consciousness of superiority? The young tutor perceived that he would have to fight single-handed against all the odds of a set environment.

At his very first meeting with the boy Mr. Rasher had been conscious of his problem. Here was a well-bred boy of eight, tall, and with the look of health that was the result of his perfect physical environment. Yet there was no exuberance about him. The face was settled—already that of someone who has always accepted instead of selected.

"Gee!" thought the young tutor. "He's as pink and stiff as an ice." Aloud he said: "Percival, I hear that to-morrow is your birthday. What do you want most in the world?"

The small heir to fifty million dollars, gorged with French and German and dancing and music and athletics, the small boy whose every minute was filled with some specified outlet, looked up at him somberly, and Mr. Rasher never forgot his answer.

"I'd like," said the boy slowly, "one hour in which to do exactly what I want to do."

"Good!" thought the tutor. "He's all right so long as he can really want something."

"Well," said he kindly, "I'm going to make you a present of that hour. Only—will you tell me what you are going to do with it? That's fair now, isn't it?"

"I dare say," admitted Percival; and Mr. Rasher winced to see how carefully the boy had been sheltered from the American "I guess." Percival thought for a moment: "But will you let me go alone?"

"Where is it you want to go alone?"

"Why, on a street car—down to the Aquarium."

Mr. Rasher thought for a minute.

"Very well," said he at last; "I'll let you go."

The small pink face glowed and the big white teeth, with their scallops, showed in a grin.

"And you won't reconsider?" he asked anxiously.

"I won't go back on anything I say," replied the tutor, carefully corrective of Percival's purist speech.

Immediately after this conversation Mr. Rasher called up a detective agency and arranged to have Percival followed in his romantic adventure. In doing this the young man had a mean sense of cheating.

"Still," he argued to himself, "it's the same thing—pragmatically. He'll get the feeling of independence just exactly the same."

When Miss Finch heard of Percival's radiant moment of liberty she almost slipped out through the negligent hooks.

"But, Miss Finch," contested the young man, "it was perfectly safe. I had two men follow him every step of the way."

The Cost of Learning to Dance

"IT WILL put foolish ideas into his head," said Miss Finch. "You must never let it happen again. Why, not one of those Van Hook children has ever been out alone in his life!"

Mr. Rasher groaned. He could see his system of development shrinking to mere reading, writing and arithmetic.

During his eight years Percival had come into contact with many children. These, however, like everything else in his small life, were carefully sorted over and picked out. Of this fact Bailey's Beach, at Newport, offered abundant proof. In the morning no children ever come to this famous inclosure. It is entirely given over to grown-ups, each of whom is admitted only upon the recognition of proper credentials.

In the afternoon, however, every nurse at Newport brings her charge to Bailey's Beach—provided that charge can qualify by the proper amount of parental wealth and position. With this sterilized group of youngsters Percival learned the secrets of the bounded main. In time he found out that two miles below Bailey's Beach there was a public beach where the unfastidious ocean shared her purple robe with other children. But already Percival was beginning to feel that he had somehow been set apart.

To this knowledge even the democratic park contributed. From the time when Miss Rice wheeled him out in his crested and ermine-wrapped perambulator he had been taken each winter day to the fashionable Seventy-second Street entrance of Central Park. Here nurses, attired in English caps and cape coats, and united by the consciousness of ministering only to the most fashionable families, twittered among perambulators and roller skates and hoops. Here Percival was carefully guarded from children whose background was not similar to his own.

One day, when he was five years old, the little boy turned to Freda.

"Why do we never go to the park on Saturday and Sunday?" asked he.

"Oh," said Freda, "all sorts of children go on those days. Miss Finch never would allow it."

Likewise did his dancing lessons shield him from the cold outside atmosphere. These classes were conducted through the winter months by Miss Constance Leapton, a member of the same social set to which she ministered. Miss Leapton's classes, each member of which paid five dollars a lesson, generally met twice a week. These facts determined the weekly expenditure of thirty dollars for the dancing lessons of the three Van Hook children. It was deserved by the expert eliminations of "all sorts of children."

At the dancing classes Percival got his first taste of the managed propinquities from which he was to suffer all his life. There was in his class a very rich little girl, named Becky Donnerwell, whose father's country place adjoined that of the Van Hooks. Percival did not like Becky. She wore

THE WRONG ROAD

By George Pattullo

ILLUSTRATED BY HARVEY DUNN

"Give Me Something to Eat. I am Famished"

THIS younger brother of Dario Pez, sir, was a fine, handsome young fellow, who had the disagreeable vice of thievery.

"*Aunque la mona se vista de seda, mona se queda*," said Dario Pez when he first saw him all covered with diamonds and a big gold chain, just like a gentleman—"'Though the monkey is dressed in silk, it is still a monkey.' Hey, Don Francisco?" But Juan Pez merely grinned in an impudent fashion and waved the rich cigar he was smoking. And the same night he lost eleven thousand dollars at Los Kenos. I know, because I won it. But where did this Juan obtain so much money, sir? Ah, that is the question!

That he was a very bad person in every respect soon became evident. The very day of his arrival in our army he entered the general's presence with a long piece of writing on a paper, and he was laughing heartily.

"What have you there, *hermanito?*" asked Dario Pez.

"It is a list of certain holy ones," answered this Juan Pez.

"And why do you make it? I did not know that you were religious. Let me see."

"It is this way, general: All the saints in the *capilla* were shot disastrously through the head by bullets during the battle, and we took down their names, I and Benito; so that in case we apply for a miracle we may keep in mind those who have already been executed and thus waste no time in supplicating them."

By goodness, sir, what do you know about that?

The family of Dario Pez were extremely affectionate, sir. Mark what happened: No sooner had his fame spread abroad, because of his achievements with the Army of Deliverance, than there arrived, as fast as their little donkeys and their own shanks could bring them, his father and mother, and their fathers and mothers; and four uncles, with their wives; and five aunts, with their husbands; and a sister; and twenty-two cousins, once and twice and three times removed; and the young fellow of whom I have spoken, who was younger brother to Dario Pez and seemingly much beloved of him because of his joyous nature.

They all went to live in the great house where Dario Pez lived with Lucita, his wife. He did not turn them off, sir. No; it is our custom for the head of the family to provide, which custom runs through all classes. The poor man looks to the head of his family; who looks to the *administrador;* who, in turn, looks to the *hacendado;* who derives his power from somebody above. And there you have it!

Dario Pez took care of them all. He was very kind to his family, sir. To his father he gave the butchering concession for the city, which carried the sole right to supply the population with meat; and he gave to the others, also, according to the degree of their relationship. But to this Juan Pez he handed the richest plum of all: He appointed him purchasing agent for the army.

It was a lucrative and highly desirable post, for the purchasing agent had the buying of all arms and ammunition, and supplies of whatever sort, and great sums of money must pass through his fingers. That some of it should stick was a natural supposition, and Dario Pez expected no less. Therefore this Juan was transported with delight, sir, and made his appearance in grand clothes, with handsome diamonds and a massive gold chain for his watch. He who had limped into the city a fortnight before in his bare feet, and with his stomach as flat as a board, now went about like a gentleman, with a noble rotundity in prospect. Also, he gave rich presents to certain ladies of his acquaintance.

You may well suppose that the officers of his Staff did not like this appointment Dario Pez had made. All of us had fought and starved in his service. And what had this Juan done?

"Cheer up, Don Francisco!" said Dario Pez to me. "I have not forgotten you. You will receive the game of Los Kenos."

That promise did much to improve my humor, sir, for the game of Los Kenos is very profitable to the owner. Yet I could not resist an impulse to warn him; which I did as delicately as possible, for this Juan Pez was his brother, after all.

"So you think he's stealing, do you?" demanded Dario Pez. "What gives you that idea?"

"Why, *mi general*, only look at him! See the rich appearance he makes, and his big automobile, and the gifts he has given."

Dario Pez made a little clucking sound with his tongue.

"So!" said he. "And do all my officers think the same? How much do they figure he has stolen, Don Francisco?"

"It must be thousands and thousands, general."

"So much the better," he rejoined. "He will have less temptation to steal now than a new man would."

And, sir, that ended the matter.

At this time we were very short of everything an army needs, for the capture of the city had exhausted our ammunition and the booty did not nearly offset the depletion. But we had the beautiful goldpieces wrung from El Señor Don Carlos Balderrama; and, so long as they lasted, Dario Pez poured them out like water for cartridges and rifles, shoes, blankets and warm underwear for his boys. He wanted everything good, Dario Pez did; and he wanted everything quick. Nor would he hear of obstacles. Prices meant nothing to him.

"We must have fifty thousand dollars at once for more ammunition," this Juan Pez would say; and, by goodness, sir, it would be turned over to him immediately.

"What about those cannon? I must have them within eight weeks," declared the general at the top of his lungs.

"Impossible! They cannot be shipped across the Line just now."

"There is no such word as impossible!" bellowed Dario Pez, banging his fist on the table. "I never want it used in my presence. Do you hear me, *hombre?* Those cannon must be got. If you cannot buy them, make them. Others have done as much. *Ah, qué pelado,* have I men in my army, or old women? What is the good of holding this great city if we cannot obtain a few little cannon?"

"I will try," answered his brother humbly; for he never crossed him.

A fortnight later he came swaggering into the room where the general was listening to me translate from a New York newspaper the events transpiring in our country.

"It is done, general. Come out and see."

"See what?"

"The new cannon."

"Is that so?" cried Dario Pez eagerly. "Let's go, *muchachos.*"

Sure enough, he had a cannon, sir—a queer-looking thing, made of brass. It was set up in an angle of the trenches we had dug round the city, and a thick dirt roof, sustained by heavy beams, protected it.

This Juan Pez conducted his brother to the shells that the cannon fired.

They were very ingenious, sir. At the end that would strike the object was a nail.

"When that hits," he explained, "it is driven in and explodes the charge. Boom! Boom! Like that, general. And your enemies are blown to bits!"

"Excellent! But make more of them, Juan. A dozen is none at all. Where did you get the brass for this gun?"

"Over yonder."

"Where is over yonder?"

"In the *capilla*," he answered defiantly.

"General," I cried, "this cannon has been fashioned out of a cross; and so there is a curse upon it."

"What nonsense is this? We are grown men, and not children, Don Francisco."

"Nevertheless, it is so, general. The brass used in the making came from a huge cross, and the cross came from the *capilla*. And it is generally known that devils have been imprisoned therein these many hundreds of years."

By goodness, sir, Dario Pez opened his eyes.

"Devils, you say? Now that is a good one! How many of 'em?"

"That is the story told to me. And it is generally known to be true."

"Well, well! Are you crazy, Don Francisco? Do you feel queer anywhere? In the head, maybe?"

"It is the truth about this cannon that I have learned."

"Go on," said Dario Pez. "Take a long breath and tell it. You say this cross has been holding devils safe in yonder church for hundreds of years?"

"That is what they say, general."

"Well, we won't let it worry us, then; for by this time they must be very old and feeble, Don Francisco.

"Moreover, if they have moved to the cannon they will make fine weapons to use against my enemies. Hey, *muchachitos!* Go fetch me a gunner—one of you. I wish to see how this bad baby works."

Off went this Juan Pez, and presently came back with a fellow from the artillery; and he held a swab in his hands. On seeing the general he swelled out his chest and strutted up to the cannon.

"Devils, is it?" he cried. "Well, here is their match. I'm the best artilleryman in the whole bunch. See for yourself, general. Watch me and judge."

And, with that, before any of us could stop him, the ignorant scoundrel rammed his swab into the brass cannon. Instantly the devils inside complained with a terrible explosion. There had

When She Began to Speak Her Agitation Was Great

Digitized by Google

been a shell in it, which the gunner did not know, sir. Three officers were killed and splinters wounded some soldiers outside the emplacement, and one of the brass pieces passed through the hat of Dario Pez, parting his hair very neatly.

Yes; that bit of brass from the devil-possessed cannon almost did the job for Dario Pez and me. We were furious. We would have punished the boastful artilleryman severely, but he could not be found. He was scattered widely, sir.

This affair made Dario Pez very thoughtful. He was not given to superstition, but when a portent is so unmistakable none but a fool would ignore it. Therefore, he said to this Juan that night:

"Be more careful in future, brother, else something evil will assuredly befall you. I have already cautioned enough. You must have respect for sacred things and act like a man of honor."

But Juan, sir, had respect for nothing. It was not long before complaints about him reached Dario Pez.

"What is this I hear?" he asked at supper one night. "Why did you steal that automobile?"

"Steal it, general? It was a present to me."

Dario Pez eyed him a while and then he grunted.

"He was here today to tell me how the gift was made. And he showed me the marks of a saber. Take care, little man! I have raised you up and I can as easily cast you down. You are on the wrong road."

This Juan, he said nothing; but he did not give back the automobile to the rightful owner. And the reason that he dared to ignore the warning was this:

"We must have more cartridges, *hermanito*."

"Give me the money and I will buy them, general."

"But I have no more. It is all spent. Buy them anyway, and we will pay for them later."

"But they will not trust us."

"What!" roared Dario Pez. "They refuse to accept my word? The scoundrels!"

This Juan Pez glanced at him shrewdly and twirled his underlip, which was a habit he had, sir, when he was up to any deviltry.

"There is a way."

"Let me hear it, then."

"Print your own money."

The suggestion startled Dario Pez and he stared at his brother. Then he sprang up joyously and embraced him.

"Good for you, little brother! Good for you! You are a *gran hombre!* You use your head!" he exclaimed. "If only all my officers would do the same! A body without a head is merely a dummy. Have a bunch of money printed at once. And, listen—have my picture put on it."

Well, sir, it was done; and for a while things went merrily with us. We bought all we needed, and when the foreigners who sold us ammunition demurred at accepting our money, Dario Pez was not at a loss. No; he did not let that stop him.

He promptly took over cattle and bullion from the owners in our territory and paid for them at the market price in the new money. Then he shipped them by the trainload to the Border and received American gold in return. With that he bought rifles.

"It is a fine world, Don Francisco," he observed to me.

"Sometimes, general—yes. Then, again, not so much so."

"What I do not understand," he continued complacently, "is why a government should ever be hard up for money. It is absurdly simple, Don Francisco. With a printing press in good order, and an army of brave boys to enforce your decrees, there seems to me no excuse for poverty. It is a noble life we are leading, Don Francisco."

By goodness, sir, what do you know about that!

This brother of his was very haughty toward the officers of the Staff, so that we did not love him. Quarrels were frequent. We had done the fighting; we had bled and suffered; and along came this conceited boy to reap the reward of our sacrifices! What wonder that we resented his behavior!

"No quarreling," Dario Pez ordered. "I won't have it. There you go—two cakesellers in the street. One in front of the other will spoil his trade; and so they must fight."

He was very busy, sir. Dario Pez was organizing all the country under his control and getting his army in shape for a fresh campaign. Recruits came in every day and it was necessary to equip them.

That made much work for this Juan. Yet he had time for other matters. His extravagance and his doings were the talk of the town, but nobody had the hardihood to mention them to the general. Once Lucita repeated at dinner some gossip she had heard; but Dario Pez only shrugged his shoulders.

"Boys will be boys," he said. "You can't place an old head on young shoulders. I did the same, *chula*. Every man worth his salt is hard to control in youth. Like horses, like men—the mean ones are the best."

And this Juan pleased him greatly in one respect: That was in his attentions to a young lady of the city, the Señorita Teresa Jaurequi, the only child of a large landowner of the state who had espoused our cause. Juan made no secret of his intentions. He went boldly to Señor Jaurequi and made his proposal, and after taking due time to consider it—though he was prepared to accept the general's brother as his son-in-law on the spot, sir—the young lady's father gave his consent.

The Señorita Teresa was also very willing, this Juan having carried on his courtship very ardently and with far more discretion than I would have given him credit for. And then he was known to be fabulously rich; and he dressed like a lord and talked louder than the general himself.

So Fortune smiled on Juan Pez. His bride would inherit vast wealth and she was extremely beautiful, sir, and accomplished, and young, and ardent. What more could a man desire?

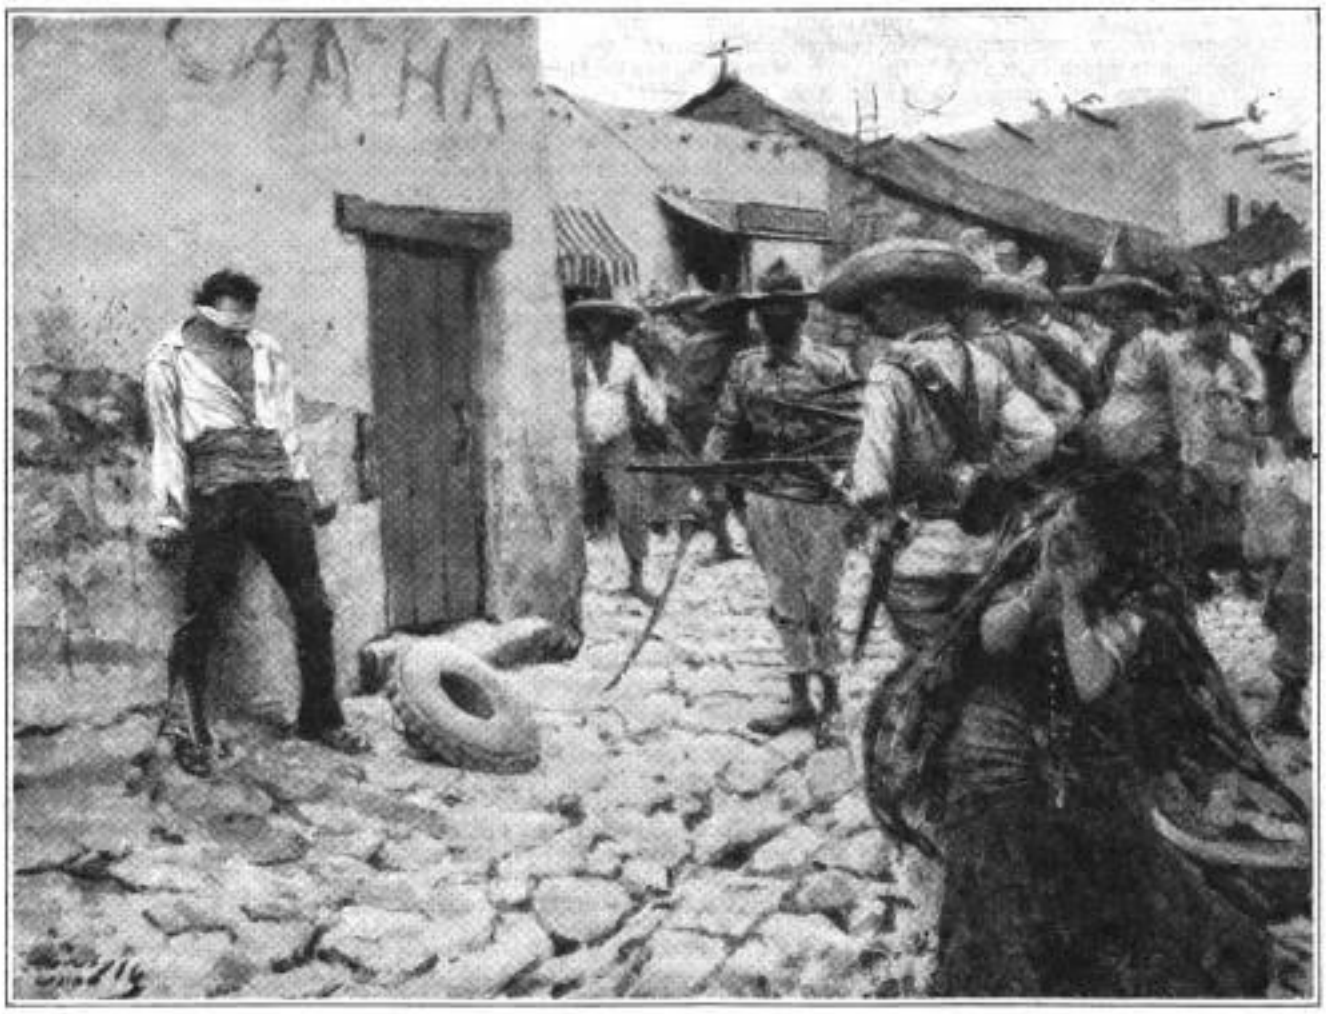
It was said, however, that she was a proud and imperious lady, and possessed of a very devil of a temper, which I fervently hoped to be true.

Well, at last the army was ready and began a march toward the north.

Where we were going, or what object we had in view, none of us knew. Dario Pez kept his own counsel and nobody liked to ask him.

On the fifth day we arrived at the American-owned plantation of Corralitos; and there we rested. The manager opened wide the whole place to the general. The cowboys, too, welcomed us. They mingled with our troops fearlessly, did those Mormon boys, and helped to make things pleasant.

By goodness, sir, the good things we had to eat! Cantaloupes were provided in thousands and our poor hungry soldiers filled their stomachs. The horses, also, got a fine feed; they ate all the hay, and everything else there was on the ranch. This was accomplished in sixty hours and it became necessary to move on.



We struck for La Ascencion, thirty-six miles distant. It was a very agreeable town, sir, and we remained in it a fortnight to enable Dario Pez to gather certain forces with whose leaders he had been negotiating.

We went in for amusements. There were many Mormon colonists in that vicinity, and they were of opinion that their horses possessed greater speed than ours. Dario Pez and his officers, they thought differently. To decide these disputes we held races, and we always used to bet on them.

Some days those Mormon boys would go back to their homes with bundles of our money. Yes; they would leave us broke and wondering what had happened. On the other hand, we managed sometimes to make them feel very sick, sir.

On three occasions they were obliged, those Mormon boys, to make trips to the Border with hides in order to get money to continue the sport.

We had cockfighting too. Dario Pez was passionately fond of the sport; and at all the contests of which he was a spectator he insisted on tying the spurs to the roosters' legs himself. This habit of his proved very successful, sir. After a while nobody would bet against the bird the general favored, for invariably something would go wrong with the other's spurs.

Then a Wild Scream Made Me Jump and I Saw the Rifles Waver

The fun seemed to do him good. He was happy. He would go round singing:

"Yo solito voy y vengo
Como las olas del mar."

Every afternoon he would take his soldiers into the open and lecture them. He would tell his boys not to waste ammunition; to let the enemy come to close range, so as to use bullets with effect. And he preached sobriety on every occasion.

"A man who gets artificial courage is no use to me," he declared over and over. "Let not the tares spoil the good grain, my children."

He was always at his best in the open. In the city, Dario Pez seemed restless, ill at ease. He could not work well and betrayed indecision; he often told me that the surroundings of a city were belittling. But out amid the whispering trees, or in the great waste places, or under the stars at night—then, indeed, he showed what was in him. He seemed to be in everlasting communion with the sky, sir. I have heard him call the stars by name—address them as friends—talk to them.

"Someone," he announced angrily, "has been smuggling stuff into the camp! I won't have it. Any man caught drunk will be severely punished. Tell that to your boys; and remember this—I expect my officers to set an example."

Well, sir, the first offender was this Juan Pez, sir. Perhaps he considered that the rule did not apply to him, being full of foolish pride. But Dario Pez speedily undeceived him.

"What! My own brother is insubordinate?" he shouted, his eyes beginning to roll; and he commanded that this Juan should be brought into his presence.

"Don Francisco," he then said to me, "and you, Captain Banda and Colonel Ochoa, you will each administer five strokes to this fellow with the backs of your sabers."

Digitized by Google

By goodness, sir, we stared at one another! We did not love this Juan Pez, but he was the general's brother and a fellow officer.

"And hear me, *hombres*," added Dario Pez: "If any one of you three withholds his hand he will receive twenty-five strokes himself from one who won't. I will stay and watch."

There was no escape. With Dario Pez looking on, we had to do our best. So this Juan stood quite still while we three swung our heavy sabers, one after the other, across his back; and we put our strength into it. At the last he fainted.

"Now," said the general when it was all over, "get away from my presence, Juan. I have heaped riches upon you; yet you defy me. I load you with honors, and you would bring shame on our name. There's a pill of my making."

It made us all sorry for the poor young man; but the affair soon blew over and seemed to have been forgiven on both sides. But this Juan, sir, never forgave.

Couriers brought word that a strong enemy force was moving from the west against the city, in which only a small garrison had been left on our departure. So it became expedient to return swiftly to that place and foil them. Dario Pez took three thousand of his cavalry and started at midnight on the return march, leaving the remainder of the army to follow as best they might.

By goodness, what a ride it was! Fifty miles in such a country is a heavy day's journey for cavalry, sir; but Dario Pez, he took his column a hundred and five miles without a stop, except to water the horses and swallow a mouthful of food. Our sufferings were terrible.

Colonel Ochoa remonstrated, telling him that it was nothing less than murder.

"What!" he exclaimed in great surprise. "They are tired? Why, I feel perfectly fresh, colonel."

Well, he got there with time to spare, for the enemy delayed at several towns. That is the way Mexicans usually fight, sir. They are always going to do great things to-morrow.

So the main body was enabled to rejoin him, and preparations went forward to meet an attack. In these the procuring of more ammunition played an important part, and this Juan Pez was kept busy night and day. We threw out relays of pack trains clear to the Border and poured a flood of real money into the greedy hands of the agents through this Juan.

While we were waiting for the enemy to venture into a favorable region for our attack a visitor arrived one day to see the general and took her place in the line of women who besieged his quarters daily in order to beg for favors. She was footsore and weary, for she had walked all the way from La Ascencion, sir; and when she began to speak her agitation was so great that tears trickled down her cheeks, and she sobbed convulsively.

"Clear the room, Don Francisco," commanded Dario Pez; and I did so. "Now," he continued, "tell me everything, *muchachita*. And do not be afraid. I am here to protect you."

By goodness, what she told him sent the general into a dreadful rage! He sent me on the jump for his brother. "Viper," he cried to him, "is what this poor girl says true? Look at her!"

This Juan did so, and turned a mighty sick color; but he was an impudent fellow and never at a loss for words.

"It is not," he replied stoutly. "I never saw the woman before, general."

"So!" said Dario Pez, bending his brows at him. "I do not believe you. But meantime you shall have the benefit of the doubt while I look into the matter. Don Francisco, escort this young lady to my house and inform the Señora Pez that she is under her protection.

"And listen to me, Juan: If what this child says turns out to be the fact, you will be in a pretty pickle. What about the Señorita Teresa? Bah! Get out of my presence! With your feet on the broad highway to honor and wealth, you branch off into the wrong road—monkey that you are!"

Lucita received the girl very kindly, she being poor and in misfortune. But Dario Pez had no time to investigate Lola's story just then; the very next day a courier arrived to tell him that the enemy were approaching to capture the city, and they had seven thousand seasoned fighters.

That was good news to the general. He had been waiting to catch them on the move, and now he made his preparations for an onslaught. It was against his policy to await an attack.

"The aggressor has the advantage," he frequently asserted. "It is half the battle, other things being equal. The man who hits first hits twice."

Accordingly he dispatched a force of five hundred cavalry under Colonel Ochoa to feel out the advancing army, and piled some infantry and the artillery aboard trains. These were to proceed slowly westward until the cavalry had got into touch with the enemy vanguard, and were then to take up certain prepared positions where Dario Pez planned to give battle.

I accompanied him, sir, on the first of these trains. He also took this Juan along, though, for some reason hidden from us then, he betrayed a strange reluctance to go.

"Let me stay here and continue my work," Juan entreated.

"What! Are you afraid?" cried Dario Pez.

"No, general; but I am sick."

"That is a good one! Do you hear him, Don Francisco? He is sick! A lot of *hombres* get sick with a fight in prospect, *hermanito*. So forget it and get busy."

Well, a terrible misfortune overtook Colonel Ochoa. He found several hundred of the enemy at a little place named Sauceda and immediately deployed his force, thinking to surprise them.

But he got a surprise himself instead, sir, and a very painful one; for, though taken unaware, the troops in Sauceda fought with spirit and drove back our cavalry, with much slaughter. And they did not appear to mind the fire of our men at all. Colonel Ochoa was furiously mystified. He could not understand it. His cavalry considerably outnumbered that opposed to it, but its fire was pitifully weak.

In a rage, the colonel, sir, grabbed a rifle from one of his troopers and sighted on a roof about six hundred yards away. Now he was a crack shot and he knew that the ball ought to send up a spurt of dust. But what was his amazement when he missed the roof altogether. Yes; the miserable cartridge failed to explode. Colonel Ochoa jerked it out and tried again. This time there was a faint report and the bullet went moaning a couple of hundred yards and then spent itself in a sandbank. Then the truth was revealed to him—his ammunition, sir, was no good!

There was nothing to do but order a retreat, and they slowly drew off. But he left seventy of our boys dead on the ground, the price of somebody's treachery. Fortunately the opposing commander did not pursue them, fearing, from the weakness of the attack, that it was only a trap; and so Colonel Ochoa escaped without further losses.

But judge of his feelings, sir. Think of his rage as he counted his losses, all the time knowing that the same disaster must overtake the whole army at the first battle! It was plain that condemned ammunition had been unloaded on us.

She Came Proudly In, Sir, All Smiles and Good Humor; and She Was Dressed in Her Richest Dress

Not an instant was to be lost. He dispatched a courier and, lest Dario Pez should doubt his story and interpret it as an excuse for failure, he himself followed the rider, bringing some of the ammunition in a bag with him. I was in the car when he threw it down in front of the general and burst into tears.

"Send for my brother," commanded Dario Pez, holding two of the cartridges in the palm of his hand; and I saw the veins on his forehead swell up.

You can bet, sir, I did not let the grass grow under my feet in executing this commission. But Juan Pez was not on board the train. He had disappeared as by black magic.

"Is it so?" said Dario Pez with a strange calmness when I reported to him. "Then I know what I wanted to know. Send out and get him. He cannot have got very far."

Well, while our troop trains were slowly backing toward the city I headed a column of two hundred men which scoured all that region for this Juan. And we found him, sir. At last we found him. He had taken refuge in a woodcutter's hut up in some hills, and he hid under the bed when we approached. So does conscience make us cowards.

But we dragged him out and placed him on a horse; and then we rode swiftly to rejoin the general. It was not, however, until we came within sight of the city on the third day that we overtook his train, which was at rest on a siding.

"Welcome, little brother!" cried Dario Pez, jumping up to greet him. "What time is it?"

This Juan was scared half to death, sir, and could by no means fathom the intention of the general; but he fumbled in his pocket and brought out the magnificent, bejeweled watch.

"Ten minutes past eleven, Excellency," he stammered.

"Good!" cried Dario Pez, his hand on his gun. "Fortunate above all men art thou, little brother; for thou knowest the hour of thy death."

For a moment I feared that, in his rage, Dario Pez intended to execute Juan with his own hand. Instead, he turned sharply away and said to Captain Banda:

"Tie him to the cowcatcher. He can carry our message to them."

By goodness, sir, he was going to set this Juan on a crazy engine and send him against the enemy! Yes; Dario Pez planned to delay them a while by wrecking their first troop train. To stop their advance he might have torn up the tracks as he retreated, but he wished to halt them where they were, and no force he might send out could reach the railway line at a point sufficiently distant, because of their advance guard. Therefore, Dario Pez, sir, bethought him in this extremity of dynamite and a crazy engine.

It would have been no more than justice, and Juan richly deserved his fate; but there were reasons why such an act of retribution should not be performed. Sir, I knew what horror the execution of his own brother would inspire throughout the country.

It would make void every guaranty he might give of safety and protection. Therefore, I summoned all my courage to protest.

"But, *mi general* ——"

"What now, Don Francisco?" he roared at me, turning purple. "Do you wish a seat beside little Juan on the journey?"

"No, sir; but I am of opinion that the journey should not be made—at least, not in that fashion."

"Indeed! Why so? Hurry up and tell me, because the engine is puffing to be gone."

"General," I said hurriedly, drawing him aside, "calm yourself for one moment and listen to me."

"I am perfectly calm, Don Francisco. I never killed anybody in calmer mood."

"Then, consider: this engine must travel many miles before it encounters the train you wish to destroy. If you place Juan on it, what assurance have you that in the interval he may not succeed in working himself free and thus undo the fine job you have planned?"

"We'll tie him so damned tight he'll never budge an inch until he starts for heaven," declared Dario Pez; but I could discern that my argument had made an impression.

"Besides, general ——"

"Besides what, Don Francisco?"

"Your enemies would say ——"

"Take him back to the city," commanded Dario Pez abruptly, and Juan was saved for the moment.

Well, sir, they sent that crazy engine against the enemy, and Captain Banda rode in the cab. He conducted that engine very skillfully for many miles until he came in sight of one of the troop trains slowly climbing a long grade. Back of it lay a valley, and in the valley were three more trains, also full of soldiers.

By goodness, when Banda saw those trains he gave a whoop and threw that engine wide open! Then he jumped and rolled down the bank, and got up and ran as fast as he could into the hills. And the engine went on, sir, and blew the front cars all to hell very nicely; which would delay them several days at least.

While this was happening the army was moving back to the city.

"Don Francisco," said Dario Pez to me as soon as we began to pull in, "get a pack train together at once."

THE NEW ENGLISHWOMAN

As Seen by the Duchess of Marlborough and Lord Northcliffe

By Viola Rodgers

Miss Eliza More, Descendant of Sir Thomas More Family, Who is Superintendent of Viscountess Wolseley's School of Gardening at Glynde, Sussex

WHEN the great call to arms came to the men of her country the lady of England did not sit back stunned and dazed and helpless; she didn't gasp and have the vapors that were the ladylike thing for a startled English female to have in the chaste and virtuous days of good Queen Victoria, but she straightened up, took full measure of what there was to be done as her men packed their kits and scrambled off to the training camps and to the Front—and she did it! She is doing it; and she isn't talking about it or becoming maudlin over what used to be.

It is the "now" in the Englishwoman that has made her the great unexpected war asset of her country. Her task is set before her—she is going to it without regret, without tears, but with a firm determination to ride to hounds along with the men—this time they are the dogs of war. Her calm under the terrific cataclysm that has shaken the foundation stones of centuries-old family life and customs is hard to understand; we believe it to be indifference, but in not giving way to her sorrows the English lady follows the unwritten law of her class: It isn't done!

For example, an American reporter on a well-known London paper was given the painful assignment by the proprietor of the daily to convey the news—just received by them—of her husband's death, at Saloniki, to the Duchess So-and-So. The man told me how he took a stiff Scotch and then rode round the block several times before he had courage to present himself at her door; and how, later, she came down to her library to receive him and, with perfect control, asked whether he brought news of her husband's death. He answered in the affirmative, and the duchess thanked him for his courtesy and said:

"We must expect such things to happen. It's war, isn't it?"

Her dead husband had done his bit. She accepted it philosophically as such—that is, so far as not letting an outsider see her real emotion.

It is this training, this curbing of the emotional nature, which perhaps race and tradition give—the it-isn't-done of social ethics in England—that accounts for the remarkable adaptability of the women to their new outlook on life. It accounts for their taking up living and social conditions that make for the greatest self-sacrifice, deprivation and discomfort, with an enthusiasm and thoroughness and competence which have astonished the world. It has made it possible to equip in two years one of the greatest armies known to history and to supply munitions the like of which no country has ever seen.

In these huge dingy munition plants, where thousands of Englishwomen of all classes work day and night, ruining their looks, disfiguring their faces through the chemical fumes until they can scarcely be recognized by their friends, with vivid orange spots on face and arms, or completely covered with the ghastly saffron hue, these "canaries"—as their men comrades have dubbed them—work at the greatest personal risk to send their soldier boys munitions; and in so doing add their bit to England's defense.

The work in these factories—in the most dangerous high-explosive departments—is not being done by ignorant women of the slums, but by women, in three instances that I know of, from titled families, and many high-school teachers, women secretaries and former well-trained housekeepers.

Titled Ladies Who Do Their Bit

"AN ORDINARY, ignorant, undisciplined woman cannot do the delicate and dangerous work required in filling brass cartridge cases and fusing and packing them," a superintendent told me. "It takes women of discernment and intelligence; and we find that the more highly educated and refined the women workers in these danger zones are, the easier and more swiftly the work is done."

But, though there are a million and a half women preparing munitions, there are other millions not one of whom is idle. Ladies who went twice a year to Paris for their frocks and hats are getting into clothes and hats they have made themselves. Last summer it became the thing for women guests at country houses to go into the kitchen with the hostess and do up a few dozen jars of fruit and jellies for home consumption, or for the wounded boys in the hospitals. Every country house in England, without exception, was the convalescing home of wounded soldiers, with the nurses in spick-and-span simple blue and white wash frocks—women friends of the châtelaines of these great estates waiting on "their men" and getting them bucked up for the Front again.

Up in Thirlstane Castle in Scotland—in the beautiful Waverley country—the Viscountess Maitland, daughter-in-law of the Earl of Lauderdale, has taken complete charge of that enormous estate, thirty miles round. She acts as its factor, which is a sort of combination manager-superintendent. On this estate, with its great dairy, five enormous farm plants, an entire village and two churches, Lady Maitland spends her mornings in the business of the estate and in caring for its tenants. Besides this, she has kept up her gardens, and acted as head nurse in a convalescent-soldiers' home, into which the castle was turned all summer. Dozens of officers and soldiers came up to Thirlstane, and went back to the Somme after having regained health through the untiring attentions of Lady Maitland and her lady nurses.

Viscountess Wolseley, Who Has Enlisted an Army of Fifty Thousand Women to Work in the Fields and on the Farms While the Men are at the Front

On every estate in Scotland and England the same conditions prevail; and, so far as the outside world knows, social life is going on as usual. Débutantes, who formerly were invited to meet possible husbands, now milk cows, dig potatoes and pick the beans; dowagers make bandages or bind up legs and arms of wounded men. Lady Maitland has her husband, six nephews and her only son at the Front. It's the same story in every great house in England. In October, upon the death of Honorable Edward Wyndham Tennant, eldest son of Lord Glenconner, brother-in-law to Mr. Asquith, the fifty-fifth heir to a peerage had lost his life in the war.

As for giving up all social life, except where it is done to cheer the soldier boys on leave and in convalescence; as for the drudgery where luxury once prevailed, the English lady has nothing to say. Her new business is not society—nor is it philanthropy; but it is the business of war. She is just as much a soldier at heart as if she shouldered a gun and wore khaki. Her fighting spirit is as strong as that of her men, but she fights with different weapons. Can one believe, for instance, that the women who "man" every department, from the commissary to the X-ray machinery, in that great woman-hospital in Endell Street, where twelve hundred soldiers fill the cots, are not fighting for England just as much as the Tommy in the trenches? That's what these women ask you. They do not go into it as women, but as a part of the fighting strength of England.

The day of mincing Lady Bountifuls in England is ended. Philanthropy as a fad has been chucked out. It is no longer fashionable—in other words, it isn't being done—to affect an attitude of class. That's sheer intolerable swank, and nobody swanks in these days of work and war. Indeed, the ostentatious displays of any sort that make for telling the tale of social differences, either those of wealth or family, have gone—many think forever—in England. The coronet on the linen handkerchief is looked upon almost as snobbery now, in the days when the two hours spent on embroidering

Girls From Wealthy and Titled Families are Learning Practical Gardening

Digitized by Google

that fine class distinction, measured in time in the munition factory, or in making bandages, or relieving a death watch in some hospital, might save a life for her country.

A woman who rides in an automobile that is not in war service is made as uncomfortable by passing comment or jeers as if she were a Lady Godiva riding through the London thoroughfares. "Shame," indeed, is the word she will most often hear. The signs on billboards in all parts of London, in letters so large that he who runs may read, warn women against extravagance in dress, in all outward display, and in the necessity of economy in everything—in servants, in food, and in all forms of luxury; in fact, luxury no longer exists.

The social secretary, once so necessary in the busy life of the London hostess, has ended her little day. Even so wealthy and aristocratic a member of London social life as the Duchess of Marlborough does her own personal secretary work; and she is so busy she would have to become a nonunionist if the eight-hour law prevailed. Her working hours are longer than those of the scrubwoman.

"I work just as every Englishwoman must work—we must make no sex distinction in giving equal service to our country; we suffragists never have done so, but now all women have begun to realize that that must be," said the duchess.

Her ideas as to woman's place in war, and what it will do for her when war shall have ceased, were given to me in an interview in the library of her beautiful home in Curzon Street, in London:

"We are in war, and we must accept conditions—hardships; grief; whatever may come. It is hard for a mother to send her boys off to war. One of mine has already gone along, just as every mother's son has gone or is going. It is hard—war is hard—but what can be done by wasting tears and words? Nothing; absolutely nothing. Our incomes have been taxed almost half and they will be taxed more—what of it? We must just adjust our lives to the present conditions, as men have been trained to do.

"War has made, in a few fleeting months, changes in social conditions and personal outlook on life that under the slow, easy gait of undisturbed normal England would have taken a century or more to accomplish. But the new conditions for women have not come overnight. We, as suffragists, have been working quietly but surely, changing the mental attitude of Englishwomen, and have in part prepared them to meet the present great struggle with courage and efficient aid to our men; and if Americans believe that war alone has developed Englishwomen, it is a mistaken idea. The war has given us our opportunity. Englishwomen are as interested in and as well informed on all public questions as American women are.

"Indeed, they take a more active interest in politics than do the majority of American women. But the war has provided the opportunity for the exercise of their influence in those wider fields of usefulness so long denied to them. Women's varied resourcefulness and usefulness have definitely proved the active part they are destined to take in war as well as in peace, and have refuted the argument that has denied them the vote on the ground of nonparticipation. Their part in this war has been quite as important as that of the men.

"In the industrial world, in the medical and nursing professions, and in countless other vocations, women have replaced the men who have enlisted, and have proved highly efficient and dependable. What the men will demand and expect after the war depends on their altered outlook, and on the temperamental changes produced by the conditions of war—grave problems that will be worked out after the conflict.

"With women it is different. There is no question as to their future share in the economic development of their country. They have proved their capabilities and their fitness. They will no longer be content to remain idle or to work in positions that scarcely yield a living wage, as they have done in the past. Education for women will, I believe, be along entirely different lines from those adopted in the past, and the education of the younger generation must be highly specialized and technical as against what used to be known as 'accomplished'; it must train girls to be self-supporting in many cases, and in others economically independent if they choose to be.

"As to the upper classes, the women will have to take equal responsibility in the problems that will confront all classes in the days to come. Class distinctions have been largely swept away among the women of England through the suffrage movement, for they have, with a common cause, met on a common footing. This new confraternity and *esprit de corps* will grow as necessity for common action increases with the need of solving economic problems, which even now are confronting all classes. With the high taxation that the war has brought upon us, much luxury has had to be dispensed with.

"Things which formerly were looked upon as essential to the happiness of women of the upper classes have gone, in many cases not to return. Luxury, in the vulgar sense of display and foolish extravagance, will no longer obtain; and it is a wise and good thing that this should be so. It would surely be highly desirable to reduce the waste and vulgarity of display and extravagance in every country, as a result of the war; for the example of ostentatious luxury has engendered a false notion of values through all classes, and it has caused much suffering and distress to those who have thereby lived beyond their means in the futile striving to keep up appearances.

"Many who have heretofore brought up their daughters in idleness will no longer be able to do so; and girls are no longer being brought up to regard marriage as their only ambition—for the opportunities of marriage will be greatly decreased, so that their education will have other objects in view. They will have to take up vocations and professional careers, with the result that useful, well-trained, competent members of society will be made out of material which heretofore has not worked out its fullest capabilities.

A SCRAP OF PAPER

VIII

By Arthur Somers Roche

ILLUSTRATED BY WILL FOSTER

TRAIN after train left the terminal, but Dixon Grant boarded none of them. He had told Kirby that he would leave the city, and had agreed with her that it was dangerous for him to remain; but he was a red-blooded youth, and the more he considered leaving Kirby in the city while he betook himself elsewhere, the more his courage rebelled at the plan. If he were traced by the Masterman agents it was possible that his relation to Kirby might be discovered. He had never told any of his associates in the bucket shop of Kirby; he had never told any of his fellow lodgers; but detectives might learn of her existence. They might look up all his acquaintances in that artistic colony to which Kirby belonged and where he had first met her at a studio supper. He had always held aloof from his business associates, despising, as he did, the business in which he was engaged, and having a mild contempt for those similarly employed and without desire for a change of vocation. But the set to which Kirby belonged, and into which—by virtue of an old school friend become author—he had entered, knew that he and Kirby were close friends. If one of this set were approached, and should happen to talk, in some way or other Kirby might be subjected to annoyance, if nothing worse, and it ill became him to leave her to face it alone.

At any rate, not until he had communicated with Kirby and learned that she had accomplished her mission of storing the paper in a Masterman vault would he think of leaving the city. Brave and capable as he knew her to be, there might be a moment when two husky fists would be of infinitely more value than her ready woman's wit. Until she had arranged to hide herself, a move that, in his rising alarm for her, appeared to him as advisable as his own flight, he would be near at hand. So he stayed in the terminal—while trains by the score pulled out for Jersey and beyond—standing near a row of telephone booths.

Once, twice and again he entered the telephone booth, each time certain that she could not have returned from downtown so soon, yet unable, in his impatience that magnified danger, to let a reasonable time elapse. After the third unsuccessful attempt to reach her at the Greenwich Studios, he walked over to the cigar stand and purchased a smoke. He was lighting the cigar at the little gas flame when he was touched on the arm.

"Well, what have you been doing—tapping the firm's till?"

He turned to face Gene Carnahan, a fellow clerk in the office of Bryant, Manners & Co. It took an effort for him to return Carnahan's smile.

"If I had I'd not be standing quietly here, Gene," he laughed.

Carnahan was the only one of his fellow clerks with whom he had had much to do. They occasionally lunched together, and Grant rather liked the jolly little fat man, although they were not at all intimate. But Grant felt that Carnahan, like himself, worked for the bucket shop only because of dire need, and that Carnahan was as anxious as himself to get into something else. So a subtle bond of sympathy had been created between them.

Grant offered Carnahan a cigar.

"What's the point of the merry wheeze, Gene?" he asked.

Carnahan looked quickly at Grant. He got his cigar going.

"Personally, Dick," he said, "about the only thing that restrains me from grabbing off a bank roll from our esteemed bosses is the fact that I have a wife and two kids. The way Bryant and Manners get their coin doesn't establish for them any valid title to it, so far as I can see. It could hardly be termed stealing to take anything from them—at least, so broad-minded a man as myself wouldn't consider it such. So I'm not shocked. Dick, have you been nicking the office funds? If so, let me assure you that, while you're a confounded rascal, you have my deepest sympathy, my undying envy at your nerve, and my blessing and best wishes for a speedy voyage to a port where extradition doesn't reign. If you haven't—and of course you haven't—why does the Greenham Detective Agency take such an interest in your whereabouts? And since when have you become so pally with his lordship, Sir Fitz-Roy Bray?"

"Chop the chatter, Gene," said Grant. "Get down to cases. What are you driving at?"

"I just phoned the office. I've had the afternoon off to attend to some private business. I phoned to inquire about some work I'd left unfinished. Young Clarkin, the phone clerk, he of the cavernous ear and clacking tongue, slipped me some information which, in view of your repressed excitement, I will now pass swiftly on to you." He dropped the grandiloquent manner. "Clarkin, anxious as ever to disseminate information, told me that the Greenhams had just been in the office inquiring about Sir Fitz-Roy. Seems that he's a well-known crook named Harry Mack. The Greenhams wanted to know if Mack had phoned the office this afternoon and whom he had asked for. Clarkin said that you were the baby, and that he had given Sir Fitz-Roy, or Mack, your address. Said that the firm was quite het up about your not showing up this P. M. What's the answer, old top?"

Grant stared at Carnahan.

"When I know the answer fully, some day, I'll let you know, Gene. In the meantime, do you suppose you can forget having seen me to-day? I haven't robbed anybody; you're not making yourself an accessory."

"As if I couldn't be a little thing like that for a man I like!" said Carnahan. "I've forgotten I ever knew you, Dick. Is that enough?"

Grant pressed his hand.

"It's enough, Gene. Thanks."

"Forget it! And if you want —— There's my train. S'long, Dick." And the little fat man dashed off.

Grant looked after him. He had learned something in the last few minutes—that he had a friend on whom he could count. It was knowledge that cheered for a moment. But only for that long, for then it was shoved aside by a sterner knowledge, the knowledge that the Greenhams were upon his trail. His reasoning had been correct; he had been traced by the Masterman agents. How long before Kirby would be traced? He leaped again into the telephone booth.

He got the Greenwich Studios and asked for Miss Rowland's apartment. A voice undisguisably masculine answered. Grant's heart thumped.

"Is Miss Rowland there?"

"Who is this?"

"I wish to speak to Miss Rowland."

"Who is this?"

"The King of Spain," snapped Grant. "Is Miss Rowland there?"

He seemed to detect caution in the voice that replied:

"She's just stepped out. Any message? It is her brother talking. Who is this?"

It was clumsy work; it would have been far better for the man not to have answered the telephone. For Grant stepped quietly out of the booth, paid for the call and walked swiftly out into the street. There he stood a moment in indecision.

Kirby Rowland had no brother! Who, then, could be posing as that nonexistent brother except someone vitally interested in the paper signed by the millionaires? Of course it might have been a burglar, it might have been the janitor, it might have been anyone at all playing an asinine joke. But the probabilities were strongly against any such coincidence. It was an agent of Masterman, or else Sir Fitz-Roy Bray, otherwise Harry Mack.

He walked slowly down the street. Sir Fitz-Roy—Harry Mack! He knew that Mack was a client of the firm, and that was all. He had nodded to the man occasionally, but no more. Why, then, should Mack have telephoned for him and inquired his address? Why should the Greenhams, commonly known to be retained by the Masterman

Digitized by Google

interests, inquire for Sir Fitz-Roy? Because Sir Fitz-Roy, otherwise Harry Mack, had gained, and was known to have gained, possession of the paper now in the Masterman vaults—probably.

And Mack had telephoned him, Dixon Grant, because it was Mack who had placed in Grant's pocket the paper. But why had he parted with possession of the paper? Grant shook his head. Why had Mack chosen such a repository as Grant's pocket? Again he shook his head. The answers to those questions were not clear. Sufficient that the thing had been done, that Mack had learned Grant's address, that the Greenhams had learned as much as he, Mack, knew, and that —— The telephone conversation was no impertinent joke perpetrated by someone who had gained access to Kirby's room; it was no burglar. Burglars do not answer the telephone in apartments they are robbing. It was Mack or a Masterman agent. And this being so, where was Kirby? She was due home now, some little time ago. His next to the last telephone call had been a bit too early for her return, but she should have been home a few moments after that. And that was almost three-quarters of an hour ago. What had happened in those forty-five minutes between her coming home and the answering of the last phone call by her pseudo-brother?

It was that question that made him leap aboard a southbound car and that made him fret at its slowness. It was a question that no fear for self, no fear for the wrecking of their great plan, nothing could prevent him from seeking answer to. For he loved Kirby Rowland, and if anything had happened to her he was to blame, because he had left her alone to face issues that would have appalled strong men.

But discretion is ever the better part of valor. His blood cooled on the all too slow journey downtown. If Kirby were, say, imprisoned in her own apartment he alone would be unable to rescue her by violent assault. Cunning would be needed, unless indeed he chose to give up their great plan. And that, imbued as he now was with her altruism, he hoped not to do. But cunning needs thought and wariness. So he swung off the car at the next stop, pulled his hat down over his eyes and, thinking hard, approached the Greenwich Studios at a gait that, being slower, was less an invitation to curiosity than the break-neck pace at which he had first started out.

He turned the corner of the street on which stood the Greenwich Studios. From the Greenwich Studios came two men; they turned toward Grant. His mouth grew hard as he recognized—too late to turn back, he thought, without being recognized himself—the handsome countenance of Harry Mack. And with Mack was a man who had been pointed out to him as Terence Greenham!

Their arms were linked; to the casual observer they would have seemed two middle-aged chums. To Grant's understanding eye that linking of arms was seizure; the twain were captor and captured. And they had come from the Greenwich Studios, which housed Kirby Rowland!

His slow pace slackened for a few strides into a dawdle. Mack was Greenham's prisoner. That meant, since they came from Kirby's house, that Greenham had caught Mack there, most likely, for it was hardly probable that Mack had led the detective there. If so he would not be held by the arm by the detective. They would have reached a compromise which would have assured Mack his freedom. The man capable of posing as an English nobleman, and of stealing the precious paper, would hardly be driven by threats. Grant knew character a little, and he had seen the handsome but hard face of Harry Mack too often to deem the man weak. They had met at Kirby's house; that was the answer. But where was Kirby?

This question, important though it was, he put aside for the moment. If necessary he would divulge the hiding place of the document and so save Kirby from harm. But until he knew what danger, if any, menaced her now, he would do well to keep his face from the eyes of Harry Mack. He turned abruptly into a tobacconist's and asked for cigarettes, while he kept one eye upon the door. The two men with the linked arms stopped outside the shop.

"Really, old fellow, you can't put a bullet through me because I want a smoke and insist on buying my own cigars, you know," said the voice of Handsome Harry, in the assumed drawl that fitted the identity of Sir Fitz-Roy.

"Very well," Grant heard Greenham reply. "But no tricks!"

It was evident that although Greenham had Mack under arrest he did not care to advertise the fact by a brawl. Still with linked arms the two men entered the tobacconist's. Inwardly cursing the luck that had driven them to enter his place of refuge, Grant bent over the counter as though choosing from its contents.

"What have you, my man?" Mack asked the shopkeeper. "All your deuced American cigars burn my tongue. Have you anything mild?" And then he touched Grant on the shoulder: "I say, my friend, can you recommend anything decent? My cousin here doesn't smoke, so he can't tell me. What would you recommend?"

"If I Get a Crack at That Paper, Masterman, I'll Certainly Print It"

And unless the sense of touch lied Grant felt the fingers of Harry Mack pinch his shoulder. There was nothing to do but answer. Face averted, wondering, ready for a mad dash past both men, Grant mumbled the name of the cigar he had bought at the terminal a while ago. But Mack was not satisfied.

"I say, you mention it as though you didn't believe it's any good at all. Can't you look me in the eye and give me your word of honor that it is a good cigar?"

"Come on, Mack, quit annoying the man," said Greenham testily.

But Grant lifted his eyes to Handsome Harry. Certain that the crook had recognized him and was making game of him, the young man doubled his fists and lifted his shoulders, prepared to swing at the nearest jaw, but the expression on the face of Handsome Harry made his fingers unfold. For the international crook, his back to Greenham, shook his head the least trifle, while his forehead wrinkled in a frown that could be nothing other than a warning. It was a signal that lasted only a fraction of a second, but was unmistakable. Then Mack laughed.

"Beg pardon for ragging you, sir. That cigar is really good? Give me a half dozen," he said to the tobacconist.

Mystified, inwardly trembling, wondering what could have been Mack's reason for the warning and what it meant and why the crook did not leap upon him, despite Greenham's presence, and demand the return of the paper, Grant lit a cigarette at the stand, still keeping his face from Greenham. The detective did not know him, so far as Grant was aware, but he might have obtained a description of Grant, and the latter knew not how effective, in a capable detective's brain, such a description might be.

Mack took his cigars with his free hand and paid for them with the same member. He put one in his mouth and leaned toward the lighter. He removed it; then turned toward his captor.

"I tell you flat, Greenham," and he enunciated the detective's name clearly, "I won't go back to those studios. I wouldn't for anything."

Greenham stared at his prisoner.

"Now what the devil do you mean by that?" he demanded, surprised into the question.

"Just what I say," said Mack. "There's nothing there for me, and I tell you flat I'll go nowhere without a reason. I'll go to your bally headquarters if you insist, but there's nothing at the Greenwich Studios and I won't go back there."

Greenham's jaw dropped slightly.

"Well, who the dickens asked you to? Look here, Mack, I'll have no more of your nonsense. You come along with me or I'll ring for a wagon!" Despite the presence of tobacconist and stranger, Greenham grew angry and did not lower his voice: "Why, you cheap con man, do you think you can make a rag of me? You've stalled long enough. Who're you trying to kid anyway? I've had enough of this! I've stopped to get a drink and now for a smoke, and I've had enough. Come on!"

"Why, blast it all, if you haven't a temper, Greenham, old cock! Deuced if I thought it of you! Lead on, my friend."

And smiling and chipper, Handsome Harry allowed the frowning detective to lead him from the shop. The tobacconist stared after them. He turned to Grant, as mystified as himself:

"Well, I'll bet that's a fly cop making a pinch! And I thought they were pals. Class to that crook, eh?"

"There is," said Grant dully. A moment later he, too, passed out into the street and turned again toward the Greenwich Studios. But he took only a couple of steps before he paused.

Why hadn't Mack recognized him? Or, rather, not that, for Mack had recognized him: his frown and nodded head were proof of that. But why hadn't the crook denounced him to Greenham? The chances were a million to one that Greenham had taken Mack into custody because of the affair of the paper, and million-to-one chances may ordinarily be looked upon as facts. Then why didn't Mack, under arrest, with his hold on fortune broken, denounce Grant? There was no use in trying to figure that out; let it suffice that Mack had not denounced Grant.

Sir Fitz-Roy Bray had not impressed Grant as being a fool; and Gene Carnahan had said that Bray was a crook named Mack. A crook clever enough to pass himself off as an English nobleman was not a fool. Then why the queer talk that had angered Greenham? Why should Mack want to anger his captor?

"There's nothing at the Greenwich Studios. I'll go nowhere without a reason."

These scraps from Mack's statements to the detective came back to Grant. Only fools make meaningless remarks. Mack was no fool: therefore, his remarks held meaning. For whom? For Grant!

It was clear enough. For reasons of his own Mack would not denounce Grant. More, he was shielding Grant, for he was warning the clerk that Kirby Rowland was not at the studios, and that there was danger there. There was no other meaning save that. And there was no reason in the world for Mack to attempt to deceive Grant. Kirby was not in the studios. Nor could she be under arrest. Mack had informed him of so much, that he would have informed him of this last had it happened. He felt a sudden, unaccountable faith in the man whom he knew to be a crook and who, undoubtedly, if his hard face were any indication of his character, would kill without compunction any who stood in his path.

Mack's hints were truthful ones. Kirby was not at home and, further, she could not be expected home. This last deduction was as plain as the first. Otherwise Mack would not have made the statement so emphatically that he would not go back to the studios. But how could Mack know

Digitized by Google

she was not coming back? His heart leaped as he answered that question—because she had come and gone!

But where? That was for Dixon Grant to find out. He set out at once in search of Kirby.

IX

THE clock on a near-by church tower struck eleven, each note distinct, menacing. The three men in the library seemed to brace themselves against the sounds, as slaves might before the lash of the whip. Their attitudes beneath the real whips could not more clearly have indicated their characters, for Blaisdell seemed to cringe as each stroke of the bell floated through the open window; Cardigan seemed to grit his teeth and square his shoulders; while Masterman's face grew more and more impassive as the strokes continued. Only his eyes, gloomy, brooding, showed the fire pent up within him. And thus, in other and less happy incarnations, might all three have stood physical torture.

A knock sounded gently on the door as the last stroke died away.

"Come in," said Masterman harshly.

A liveried servant showed for a second on the threshold.

"Mr. Greenham," he announced softly, then closed the door, himself outside.

As a captive at the stake might have looked at a rescuer Blaisdell looked at the detective.

"Well, well, well, have you caught her, have you caught her, have you caught her?" His teeth chattered, though his forehead was moist and his eyes feverish.

"Have you got the paper?" rumbled Cardigan, his head thrust forward.

Masterman merely looked at the detective, and it was to him that Greenham directed his answer:

"Not yet. But I hope ——"

"Hope," said Masterman, "is the refuge of the incompetent. What have you done?"

Greenham flushed.

"I have operatives at the railroad station. I've notified practically every hotel in the city to have their house detective keep on the lookout for a woman answering this Rowland girl's description. As I phoned you earlier in the evening, she got away by a trick, but it's only a matter of time when ——"

"When seconds mean millions, Greenham, kindly refrain from referring to time so carelessly," snapped Masterman. "She got away? A young girl—an artist, you said? Away from you, said to be one of the greatest detectives on earth! Greenham, at any other time I'd laugh. As it is—what else have you done?"

"I have operatives tracing her friends. I expect at any moment to hear from them that she has been located."

"Hope again," said Masterman, "when I want facts! And this Mack? Have you discovered his reason for interfering?"

"He refuses to talk," replied Greenham, "except to state that if he isn't released by midnight he'll have something to say to the papers."

"To the papers!" Cardigan's bull-like roar shook the chandelier. "Another bit of your damned incompetency, Greenham. When you had the man, why didn't you hide him somewhere? Why take him to headquarters where he could get lawyers, and—Greenham, if I had an office boy as big a fool as you I'd fire him!"

"Kidnaping isn't as feasible as it sounds," said Greenham angrily. "I did the best I could. I've had him locked up, and—you talk about kidnaping. What good would that have done? He's in league with this Rowland woman, that's certain, else why did he rescue her from Schmidt? And when he's turned loose he'll try to see her, won't he? And won't my men be on his trail?"

"And weren't they this afternoon?" sneered Cardigan.

"They'll not lose him again," promised Greenham.

"Perhaps," said Masterman. "In the meantime ——" He walked to the window and stared out into the night. Somewhere in this city was a chit of a girl who was defying him, Martin Masterman, whom no man had ever defied save to his cost. She was defying Martin Masterman—she would make her defiance good!

To-day she had asked the car lines of the city to issue universal transfers; to-morrow—but there must be no to-morrow! He turned back into the room and the light from the chandelier struck full upon his face, showing things there that up to that time had been hidden.

"Greenham," he said, "men may be made to talk. This afternoon it did not seem possible that Mack was in league with this woman. Their demands are so different."

He was silent for a moment. Might it not be possible that the woman's demands were made merely to show that there must be no trifling with the demands of Mack?—to emphasize, as it were, Mack's demands? He shook his head. This did not seem probable, much as he wished it were. Mack's actions during the afternoon, as learned by Greenham and reported to Masterman, gave the lie to that conclusion. The crook and the girl were independent factors. That Mack had aided the girl clouded this reasoning, but Mack was a blackmailer, pure and simple, while the girl—Masterman had never seen her, but she had talked to him, and the voice indicates much—more sometimes than features do. She was no blackmailer. Yet Mack had rescued her. He must have had a reason. He must know where to find her. There was ruthless purpose on the face of Masterman when he spoke again:

"You're right, Greenham, when you say that Mack will try to find this Rowland person. But you're probably wrong when you say that your operatives will not lose him again. He's too clever. If he knows where this Rowland woman may be found he must be made to tell! This is no petty matter; this is a matter that affects the business of the nation. And one man cannot stand in the way of business and progress. Understand?"

"You mean ——?" Greenham hesitated.

"Don't be an ass," snapped Masterman. "You're no child! I told you this afternoon that I'd stand behind you. And you merely placed him under arrest on some trumped-up charge."

Greenham wet his suddenly dry lips.

"Mr. Masterman, I thought you meant that any false-arrest stuff—any suits for damages ——"

Masterman cut him short with a gesture.

"I said I'd stand behind you. I meant it. Find out where this girl is!"

Greenham shook his head. "It's too late."

"Too late? Who says so? I tell you this woman must be found. I tell you ——" For the first and last time in his life Martin Masterman lost control of himself. "Find her!" he cried; "find her!"

"Well, What Have You Been Doing—Tapping the Firm's Till?"

The demon unleashed in the soul of the master of transportation frightened Greenham. He answered almost in a whisper.

"It's too late!" he repeated.

"That's twice you've said that," raged Masterman. "Don't you understand that I control the authorities?"

"But not the judges; not all of them," said Greenham. "And Mack has seen a judge."

Masterman regained his self-control at once. He sat down.

"Seen a judge? Who?"

This gave him something to plot against, a chance for scheming. The world was a stage—his stage, and all men were actors—his actors. But just now it had seemed that the play was ended, the plot run out, and so he had lost control of himself. But there was to be an epilogue.

"How did Mack see a judge?"

"He didn't himself, but a lawyer did. He went to Judge Marchand, and the judge granted a writ of habeas, returnable to-morrow morning. Mack must have planted the lawyer; had some deal with him that if he didn't show up at a certain time to apply for the writ ——"

"Who's his lawyer?"

"A Jefferson Market shyster named Peterthwaite."

"Purchasable?"

"Too late. He found Marchand at his home and got the writ. Even if he backed out, Marchand wouldn't. There's one man that can't be reached."

Masterman nodded. No one need tell him of the incorruptibility of Judge Marchand.

"But a business necessity—Marchand might do something," said Greenham.

"He can't recall the writ if it's been served on the Commissioner—a writ demanding that Mack be produced in court to-morrow morning," snapped Masterman.

Greenham had known this as well as the financier. Only to ease the tension had he volunteered the suggestion. Masterman's face was impassive once again. His voice was chill.

"The writ is returnable to-morrow morning, eh? But that's ten hours off. In the meantime, Mack might be made to talk!"

"When he has to be produced before the judge in the morning?"

"Well?" The great man's tones were icy.

Greenham shook his head.

"I don't know just what this crisis is, Mr. Masterman; you haven't told me. But it can't be any greater than the one if anything happened to the man for whom Judge Marchand had issued a writ of habeas corpus. I know Marchand; I'll not monkey with him. And I advise you not to. Better let Mack go at midnight as he demands. The Citizen is after you all the time. If Mack should choose to talk to one of their reporters ——"

"Keep reporters from him," said Masterman.

"He'll talk to someone—the policeman on guard in the corridor. He said to tell you that."

"He said that this morning, but I thought a friend of his had the paper then. As it is, no paper would believe his story, would dare to print it without proof."

"But it's known that I arrested him, and that I work for you. The Citizen's reporters are clever. They'd put these facts with Mack's story."

Masterman sank a little lower in his chair.

"Greenham, release the man. Have your men follow him, but—get the Rowland woman! I'll pay you—you know me. You needn't bother about pay. Greenham, she's won her first move; I leave it to you to see that she makes no other."

"The first move? Then the universal transfers ——"

The liveried servant knocked again on the door.

"Mr. Lindley Jackson, sir."

"Show him up," said Masterman.

Still impassive, he turned to Greenham.

"Greenham," he said rapidly, "if Mack is released and his lawyer informs Judge Marchand of that fact, the habeas proceedings fall flat, don't they? Then let Peterthwaite—he can be bought—see Marchand to-night and tell him of Mack's release. Then—— Ah, Mr. Jackson, glad to see you. You know Cardigan and Blaisdell, eh? Sit down and have something to smoke." He walked with Greenham to the door. "Mack might elude anyone following him, eh?" he said in a whisper. "But if they shouldn't follow him? If they rush him away in an auto? You understand?"

Greenham nodded. Not for long was Masterman circumvented by the entrance of the incorruptible Judge Marchand upon the scene. Marchand, not knowing the gravity of the situation, merely thinking that Peterthwaite's client was some victim of ordinary police activity, would be satisfied with that shyster's statement that Mack had been

Digitized by Google

released before the serving of the writ of habeas. If Peterthwaite's eloquence had been enough to persuade the judge to issue the writ in advance of any preliminary hearing before a magistrate; if he had played upon Judge Marchand's well-known distaste for police detention, under insufficient reason, of innocent men, he would be able to gull that able but too-trusting jurist further. And Mack could be spirited away, made to talk. He came out of his dream of justifying Masterman's faith in himself with a jar, for, seated at the wheel of a powerful runabout that stood beneath an arc light, was a man whom he knew well, Tom Hanrahan, of the Citizen. Across the street were two other small cars, and on the sidewalk, talking to Hanrahan, were two other reporters from the paper owned and published by Lindley Jackson. Greenham stared.

"What's the idea?" he asked, as Hanrahan grinned and the other two approached.

"You're news, old top," said Hanrahan. "When our respected boss is invited at the witching hour to visit Masterman, he takes a few of us along. Where you going, chief? For I'm going the same place and I'll take you with me."

And Tom Hanrahan could give all the trumps to the best detective that ever lived—Greenham admitted this himself—and score a grand slam. He could not be eluded. Right off the bat Masterman's scheme had been beaten. There could be no kidnaping of Harry Mack while Hanrahan, at his chief's behest, was trailing the people who left the Masterman household.

Greenham made the best of a bad matter.

"Headquarters, Tom," he said.

A little later Handsome Harry Mack was released.

"I pinched him on general principles—international crook," Greenham explained to the reporter. "No charge against him; made a mistake. Meant to have him released earlier, but cable from England saying he wasn't wanted for job over there didn't arrive till late, while I was conferring with Masterman about some matters that are nobody's business, Tom, old chap. I didn't want Mack to have to sleep in a cell if he's done nothing, that's all."

He had to tell all this, for the reporter, he knew, would not leave him until he went to bed, and would certainly learn the detective's mission at police headquarters.

However, he still hoped to have his men trail Mack after his release and carry out Masterman's suddenly conceived plan. But Tom Hanrahan had no explicit orders from his chief. He was to trail whoever left the Masterman household, on general principles; if there were no news in them, he could drop the trail. There was no news, so far as Hanrahan could see, in Greenham. But an international crook was always good for a few sticks on the front page.

"Blind steer the boss gave me, eh?" mused Hanrahan. "Well, then I'll get a yarn out of this Mack."

And when Mack was released the reporter proffered the use of his car, which Handsome Harry, with a grin at Greenham—he was no chicken, this Handsome Harry, and was quick to guess Greenham's impotent anger and its cause—accepted thankfully. In the reporter's high-powered runabout—owned, be it remarked, by Mr. Jackson—Handsome Harry sped uptown. After they had ridden for a couple of squares the crook spoke to the reporter.

"I suppose you know," he said, "that Greenham's men are following us in taxis?"

"What's the answer?" inquired Hanrahan. "Where do you and Martin Masterman hitch up?"

It was imperative, thought Handsome Harry, that he shake off the trailing sleuths. He understood perfectly that the next time he was taken into custody he would be placed where no writs of habeas or threats to tell the newspapers what he knew would earn his release. Of course he could tell Hanrahan the truth, and Hanrahan's paper would protect him from Greenham's agents. But, needless to say, Handsome Harry was not telling anyone the truth just yet, not until his own game had been played and lost. And he did not intend to lose.

"The answer?" echoed Handsome Harry easily. "Well, suppose I should tell you that the Botticelli bought by Martin Masterman last winter for one hundred and forty thousand dollars was a fake, and that Martin Masterman thought he could prove I planned the fake and copped his money? What sort of a story would that make?"

"And those birds behind are unsatisfied still of your innocence and are trailing you to lend them to better evidence?"

"Go to the head of the class, Mister Reporter for the Citizen," laughed Handsome Harry.

They were crossing a crowded street. Hanrahan looked back again. A story that would make Martin Masterman ridiculous would tickle Lindley Jackson, who hated the millionaire, and Jackson was Hanrahan's employer.

"Those taxis can make forty-five if they have to. This baby," and he patted the wheel, "will do ninety. Do you like fast riding, Mr. Mack?"

"Anything less than fifty feels tame to me," grinned Mack.

"Well, let's be wild for once," said Hanrahan.

The runabout shot ahead like a bullet. A few squares farther on it was bettering fifty miles, and before many minutes the pursuing taxicabs were out of sight.

"The Masterman Influence Can Get a Warrant for Your Arrest on Any Charge. For Mine Too"

x

IN ONE corner Masterman discussed with Creighton, publisher of the Tribunal, some additions lately made to the Art Museum. Blaisdell, nervous, and showing slight traces of the fact that he had consumed three pints of champagne, complimented Highlands, owner of the Star, on the series of Sunday articles the Star was printing about the food sources of the country; a series, by the way, which proved to the satisfaction of its author, his employer and Blaisdell, that the country would starve but for the genius of the little greedy man who was Lord of the Granary and Market.

Sanderson, Mannering and Cowdray, owners of the Planet, the Orb and the Dispatch, chatted on various subjects with Cardigan. Yerkes and McGaffey, of the Wire and the Transcript, two papers as wide apart in politics and treatment of the news as the two poles, who through their editorial columns sneered and decried each other, chatted with every evidence of pleasure.

Only Lindley Jackson, owner, publisher and editor of the Citizen, sat alone. His champagne was untasted; the plate of sandwiches on the little table beside his chair remained undiminished. He even smoked one of his own cigars rather than the rare, expressly manufactured panetelas of Martin Masterman. Careless about his appearance apparently, one looked twice at Lindley Jackson, greatest newspaper genius of his age, before one saw that everything about him was in harmony. If his hair seemed untidy one noted that it was a careful untidiness. The loosely knotted tie with its poetically flowing ends matched the rumpled hair, and the soft shirt bore out the scheme. An artistic poseur, even the pose gave the effect required of loosely restrained energy.

A man of great genius, he was not above demanding flattery of his genius. Altruistic publicly, always making the Citizen stand for the rights of the people, privately he was a bit of a snob. But his snobbishness was intellectual; it was not based on any material possessions. He despised the three millionaires more because he deemed them vulgarians than because of their methods of acquiring wealth. His real, though unuttered, objection to colossal wealth was that it brutalized the possessor and all those with whom the possessor came into contact. He had no real love for the people, because he did not respect them. That, for centuries, they had permitted a few to rob them in wholesale fashion, and enslave them, made them worthy of contempt. He believed the people neither capable of self-rule nor worthy of it; but he believed, and sincerely, that because the people did not deserve a thing was no reason why they should not have it. The people could hardly make a greater mess of their affairs than was being made for them by others; it was their inalienable privilege to go to the deuce in their own way. He believed that all had inherited the earth equally; that one man had as much right to rule as another. That he might not be fit to rule was beside the question. A queer combination was Lindley Jackson, and he fought with all his genius, unsparing of his health or wealth, for a people in whose genius, in the mass, he did not trust, because the divinity in each human being, however clouded by ignorance, carried with it title to a share in earthly power. So he believed, and so he fought. And now he glowered at Masterman. He hurled his cigar into a fireplace.

"I take it," he said, suavely insulting, "that we aren't here to discuss art, prize-fighting, or"—with a sneer at Blaisdell—"the wonderful genius of the gentleman who invented the food corner. We're here because Masterman wants something of us. What is it, Masterman?"

There were very few men who spoke to the master of transportation without the prefix "Mister." If they knew him intimately he was "Martin." Otherwise, "Mr. Masterman." But Lindley Jackson was one of the few who did not fear Martin Masterman. His great newspaper was financially independent of the financier. More than once had Masterman planned to ruin Jackson, but the latter had been too clever for him. He even forced the very interests he denounced to advertise in his paper, in very fear of what further injury he might do them.

Cowdray and Yerkes frowned at the publisher of the Citizen. Others stared at him, hostility in their eyes; but Masterman smiled ingratiatingly. He struck his library table with the palm of his hand, and those present came to attention as at a chairman's gavel. Masterman came directly to the point:

"Mr. Jackson is right; I beg his pardon for taking up his time with trivialities. I have invited you gentlemen who lead public opinion to come to my house because I wished to ask something of you. But not for myself—for the nation."

He paused and looked into every face. From all save one he received the glance of encouragement, of subservience, he wished. That one was the scowling countenance of Lindley Jackson.

"Patriotism, gentlemen," continued Masterman, "is not dead yet. I know that, and because I know it ——"

Jackson took out his watch.

"Five minutes of twelve," he interrupted rudely. "I have to be at my office at twelve-thirty. Forget the introduction, Masterman. Come down to earth."

Masterman winced slightly at the interruption, but he held in his anger. It would not do to quarrel with Jackson.

"I will," said he. "To-night, gentlemen, there is loose a force that menaces—have I your assurance that what I say will be treated confidentially?"

There was a murmur of assent from all save Jackson. He answered: "You most certainly have not, Masterman. I'll print anything you say to-night if it has news value."

PHILADELPHIA, JANUARY 6, 1917

Speaking of City Government

PERHAPS the ideal of automatic government is reached in Chicago, though many other American communities press her close for the palm. The fact came to mind recently upon looking over the newspapers of that city. They were saying that several thousand public employees would probably have to work without pay during the last month of the year, if they worked at all; that there was no money in sight to feed the horses in the Police Department or buy gasoline for the patrol wagons; that the whole Electrical Department would very likely have to close for lack of operating funds, thereby paralyzing the police and fire alarm systems and leaving many streets in darkness.

The trouble, it appeared, was that in something less than eleven months the departments had spent all the money appropriated for a year—for which situation, as one paper explained, "the City Council threw the blame on the department heads; while the departments hurled the blame back upon the aldermen."

Admittedly nobody in particular is responsible for government in Chicago; nobody in particular conducts it; the thing just runs itself in an impressionistic and opportunistic manner. If the public-school administration is in a mess, as has frequently happened of late years, you can blame the Board of Education, which will blame the mayor; or you can blame the mayor, who will blame the board.

If the city's money has been squandered there is a mayor, a set of department heads, a comptroller and seventy or eighty aldermen—all disclaiming any responsibility on their own parts and nimbly hurling the blame elsewhere.

The mayor promised to close the saloons on Sunday; but when it comes to keeping them closed he points to the state's attorney, while the state's attorney points to him. Murders are disagreeably common, for which the police blame the courts, while the courts blame the police.

No matter what happens, nobody is responsible; everybody can very plausibly blame somebody else. What Chicago needs is three men with complete power over local government in all its phases and absolute responsibility for the results they secure.

Goods and Men

A GREAT many people are nervous about the situation of American industry after the war. They argue that millions of able-bodied and skilled men in Europe will then be released from military service and return to civil employments. Meantime, by employing women and by higher organization, Europe has created a new and extensive labor power; so, when the soldiers go to work again there will be a fall in wages, and American factories will have to compete with relatively cheaper, better-organized, more efficient labor than ever. Consequently they want protection to prevent the flooding of our markets with the products of cheap European labor.

But mostly they want free trade in men—in labor itself. We know from experience that if real wages in this country are decidedly higher than in Europe a great quantity of European labor will flow over here. It will be almost wholly unskilled labor, and so directly in competition with that labor here which is poorest paid and least able to bear competition.

That a great accession of labor tends to keep wages down is so obvious a deduction from the familiar law of supply and demand that it hardly needs arguing. No doubt it stimulates production and increases profits. With some millions more of cheap laborers we should produce more goods and be in a better immediate position to compete for foreign markets, without the toil and bother of heightening genuine efficiency by discovering the best possible methods of making and selling goods. We should also be increasing our supply of poverty and ignorance, which is already quite adequate.

If the largest and easiest possible production of goods is the chief consideration, there is nothing more to be said. If men are the chief consideration—as various American statesmen have maintained—we want a restriction upon immigration such as the literacy test would impose.

The Orator

THE speaker evidently has several more hands than he knows what to do with—he tries hanging some of them on the back of his chair, putting some in his pocket and concealing a few behind his coattails; but there are still superfluous hands that want to feel of his collar and pull down his vest. He obviously fumbles round for parts of speech; stammers; repeats himself. His corrugated brow shines with a dew of perspiration. Observing these symptoms you stretch out your legs and settle comfortably back in your chair; satisfaction and contentment possess you, because you know the speaker is horribly nervous and just as anxious to get through as you are to have him; he will say no more than he feels to be absolutely necessary.

The next speaker rises with a bland smile, poses himself deliberately, looks out over his audience with perfect self-possession. When he opens his mouth, round, well-modulated tones issue from it; the words flow smoothly from an abundant and neatly ordered supply. Whereupon you look gloomily up at the frescoes or down at the floor, hump your shoulders and resign yourself to despair. Clearly this chap is an orator, thoroughly seasoned; he likes it. You know he will talk until you drop dead.

Oratory is a noble art, for which we have the greatest admiration; only no orator should ever be permitted to speak in public. Especially with this inexplicable but evergrowing habit of big dinners there should be an iron-clad rule that the speeches be made exclusively by shy amateurs, warranted to faint after thirty minutes.

The Library Habit

OUR mail makes us a bit peevish about public libraries in general. Many times every year we are asked to recommend a book containing information on this or that subject of general interest. We are always glad to comply to the best of our limited ability; yet we never answer one of these letters without wondering why public libraries do not impress themselves more definitely and extensively upon the consciousness of those who support them or whose beneficiaries they are supposed to be.

The writer of the letter is obviously intelligent or he would not be seeking information. By the same token he is interested in subjects of general concern. Yet, as obviously, he does not know that about three times out of five there is a public institution not far from him, supported at large expense, which not only contains standard books on the subject he wants to know about, but makes a special business of supplying him with those books promptly and without expense.

From its card index he can learn in five minutes what books there are on the subject, and attendants will fetch them to him on request. Invariably, in our experience, the library staff is informed and attentive. It will go to any pains, most willingly, to put the resources of the library at the disposal of an inquirer. Within its own walls the institution functions admirably; but a great many people do not know of it in such a way that, being athirst for information, they turn to it as naturally as a dry man turns to a water faucet.

The library habit is one of the best that any person can form. There should be a more strenuous effort to inculcate it. Meantime take the initiative yourself. Get acquainted with your public library.

A Tip

THE urban population of the United States is now divided into two parts, the smaller part consisting of those who have made money on the rise in stocks during the last year, and much the larger part consisting of those who have heard about it and are regretting that they did not wade in. Among this latter part are many who think seriously of repairing their oversight by wading in now.

We have no knowledge—or even an opinion—as to whether stocks will go up or down. But we have the historical information, which anybody can verify by looking up the record, that the time when everybody wades in is usually about half an hour before stocks begin to go down. Meantime, having taken the subject in hand, we have no hesitation about giving this tip: Now is a good time to buy sound bonds; in fact, every time is a good time to buy sound bonds.

Teaching Lincoln

HOW to link public-school education visibly and tangibly up with life—that is the school problem in a nutshell. Pupils are indifferent because a hundred and one things strike their keen young imaginations more vividly than the dry stuff in the textbooks does. Set the boys at working out the batting averages toward the close of a baseball season, and see how their interest in arithmetic will quicken. To them Latin is a species of mental torment which one undergoes for the purpose of discovering that all Gaul is divided into three parts. They would as lief it should be six parts. The dime novel tucked inside the textbook on geography does not prove that the boy is dull. It proves only that the geography is dull.

We cannot think of anything more sure to engage the imagination and quicken the pulse of American youth than the study of Lincoln. It is the heart of America's story, red and warm. He saw the human side of the politics of his time, and that is all there is to progressive politics. It is all that democracy, as a political movement, involves. The boy or girl who thoroughly knows Lincoln's life has received a liberal education in the political history of the United States—and something of even higher value than that.

It is an education, moreover, that would attract and not repel youth, for it visibly breathes the life which youth finds about it outside of the schoolroom.

Roads and Schools

EVERY sort of town in the United States gets its due share of the total increase in population, and a little more. Population of incorporated places of less than twenty-five hundred inhabitants increased over a million and three-quarters in the last census period, and nearly three and a half millions since 1890. At that date they had seven and a half per cent of the total population, and in 1910 nearly nine per cent. So with the towns from twenty-five hundred up to fifty thousand, while bigger cities ran way ahead of the general rate of growth. But farm population declined from fifty-six and four-tenths per cent of total population in 1890 to forty-four and eight-tenths in 1910.

There are no glittering business opportunities in small country towns, but there are many social opportunities. It is easy for people to get together in all weathers. The public schools are much better than those in that large part of the strictly rural region where the barbarous one-room ungraded institution prevails. So people are willing to live in small country towns.

The farm problem is in no inconsiderable part a matter of good roads and good country schools. Good country schools are nearly impossible without good roads, for a really good country school is a consolidated one, drawing children from an extensive district and giving them transportation from home to school and back.

A farm on a poor road is a prison for women and children part of every year. Nobody likes a prison.

Ability and Opportunity

THERE is no such difference in men's native ability as the difference in their situations would suggest. Native ability, in other words, is much more evenly distributed than opportunity. Lester F. Ward, a diligent student of the subject, observes that latent talent is quite common, and those who struggle up out of adversity, in the main, simply strike a better chance than fails to those who remain behind. Society, he says, has great unworked mines of ability; only ten per cent of its true resources in that line has been adequately developed; another ten per cent is partly developed; eighty per cent remains almost untapped.

The figures are more or less arbitrary, but the broadening of opportunity is democracy's real job. Free opportunity is mostly for the comfortably off, not only because their children are well nourished, well housed, encouraged to play, able to continue in school, but because, by a subtle and universal freemasonry, the comfortably off are in touch with the most promising openings for their children in business and the professions.

It is the comfortably-off father who knows men that have the dispensing of promising openings. A little touch at the start gives his son an advantage over the boy who has nobody to pull a string for him. It is his son who can take the long view and afford an apprenticeship—such as many of the professions require—which yields very little immediately, but promises much later on.

The key to this problem of wider opportunity must be in the public schools; but we can hardly claim to have found it there yet.

How People Think About the War

By H. G. WELLS

AMONG the minor topics that people are talking about behind the Western Front is the psychology of the yielding pacifist and the conscientious objector. Of course we are all pacifists nowadays; I know of no one who does not want not only to end this war but to put an end to war altogether, except those blood-red terrors, Count Reventlow, Mr. Leo Maxse—how he does it on a vegetarian dietary I cannot imagine—and our wild-eyed desperadoes of the Morning Post. But most of the people I meet, and most of the people I met on my journey, are pacifists like myself, who want to make peace by beating the armed man until he gives in and admits the error of his ways, disarming him and reorganizing the world for the forcible suppression of military adventures in the future. They want belligerency put into the same category as burglary, as a matter for forcible suppression. The yielding pacifist who will accept any sort of peace, and the conscientious objector who will not fight at all, are not of that opinion.

Both Italy and France produce parallel types to those latter; but it would seem that in each case England displays the finer developments. The Latin mind is directer than the English, and its standards—shall I say?—are more primitive; it gets more directly to the fact that here are men who will not fight. And it is less charitable. I was asked quite a number of times for the English equivalent of an *embusque*. "We don't generalize," I said; "we treat each case on its merits!"

One interlocutor near Udine was exercised by our Italian Red Cross work.

"Here," he said, "are sixty or seventy young Englishmen, all fit for military service. . . . Of course they go under fire; but it is not like being junior officers in the trenches. Not one of them has been killed or wounded." He reflected. "One, I think, has been decorated," he concluded.

My French and Italian are only for very rough common jobs; when it came to explaining the conscientious objector sympathetically they broke down badly. I had to construct long parenthetical explanations of our antiquated legislative methods to show how it was that the conscientious objector had been so badly defined. The foreigner does not understand the importance of vague definition in British life.

The Conscientious Objectors

"PRACTICALLY, of course, we offered to exempt anyone who conscientiously objected to fight or serve. Then the pacifist and pro-German people started a campaign to enroll objectors. Of course every shirker, every coward and slacker in the country decided at once to be a conscientious objector. Anyone but a British legislator could have foreseen that. Then we started tribunals to wrangle with the objectors about their bona fides. Then the pacifists and the pro-Germans issued little leaflets and started correspondence courses to teach people exactly how to lie to the tribunals. Trouble about the freedom to pamphleteer followed. I admit it has been rather a sloppy business. The people who made the law knew their own minds; but we English are not expressive."

These are not easy things to say in elementary French or Italian.

"But why do people support the sham conscientious objector and issue leaflets to help him, when there is so much big work clamoring to be done?"

"That," I said, "is the Whig tradition." When they pressed me further I said: "I am really the questioner. I am visiting your country and you have to tell me things. It is not right that I should do all the telling. Tell me all about Romain Rolland."

And, also, I pressed them about the official Socialists in Italy and the Socialist minority in France, until I got the question out of the net of national comparisons and upon a broader footing. In several conversations we began to work out in general terms the psychology of those people who were against the war. But usually we could not get to that; my interlocutors would insist upon telling just what they would like to do or just what they would like to see done to stop-the-war pacifists and conscientious objectors; pleasant rather than fruitful imaginative exercises from which I could effect no more than platitudinous uplifts.

But the general drift of such talks as did seem to penetrate the question was this: That among these stop-the-war people there are really three types: First, there is a type of person who hates violence and the infliction of pain under any circumstances, and who has a mystical belief in the rightness—and usually in the efficacy—of nonresistance. These are generally Christians; and then their cardinal text is the instruction to "turn the other cheek." Often they are Quakers. If they are consistent they are vegetarians. They do not desire police protection for their goods. They stand aloof from all the force and conflict of life. They have always done so. This is an understandable and respectable type. It has numerous Hindu equivalents. It is a type that finds little difficulty about exemptions—provided the individual has not been too recently converted to his present habits. But it is not the prevalent type in stop-the-war circles. Such genuine ascetics do not number more than a thousand or so in all three of our Western allied countries. The mass of the stop-the-war people is made up of quite other elements.

In the complex structure of the modern community there are two groups, or strata, or pockets, in which the impulse of social obligation, the gregarious sense of a common welfare, is at its lowest. One of these is the class of the resentful employee, the class of people who, without explanation, adequate preparation, or any chance, have been shoved at an early age into uncongenial work and never given a chance to escape; and the other is the class of people with small fixed incomes, or with small salaries earned by routine work, or half independent people practicing some minor artistic or literary craft, who have led uneventful, irresponsible lives from their youth up, and never come at any point into relations of service to the state.

This latter class is more difficult to define than the former, because it is more various within itself. My French friends wanted to talk of the "Psychology of the Rentier." I was for such untranslatable phrases as the "Genteel Whig," the "Donnish Liberal," or the "Broad Minds of Hampstead." But I lit up an Italian—he is a Milanese manufacturer—with "these Florentine English spinsters who want to keep Italy in a glass case." "I know," he said. But he thought "everything that Marinetti, the Futurist, doesn't like" was much too comprehensive.

Before I go on to expand this congenial theme, let me deal, first, with the resentful employee, who is a much more considerable, and to me a much more sympathetic, figure in European affairs. I myself began life as a resentful employee. By the extremest good luck I have got my mind and spirit out of the distortions of that beginning; but I can still recall even the anger of those old days.

He becomes an employee between thirteen and fifteen; he is made to do work he does not like, for no other purpose that he can see except the profit and glory of a fortunate person called his employer, behind whom stand church and state, blessing and upholding the relationship. He is not allowed to feel that he has any share whatever in the employer's business, or that any end is served but the employer's profit. He cannot see that the employer acknowledges any duty to the state. Neither church nor state seems to insist that the employer has any public function.

The Cant of Rebellion

AT NO point does the employee come into a clear relationship of mutual obligation with the state. There does not seem to be any way out for the employee from a life spent in this subordinate, toilsome relationship. He feels put upon and cheated out of life. If he is a person of ability or stubborn temper he struggles out of his position; if he is a kindly and generous person he blames his "luck" and does his work, and lives his life as cheerfully as possible—and so live the bulk of our amazing European workers; if he is a being of great magnanimity he is content to serve for the ultimate good of the race; if he has imagination he says "Things will not always be like this," and becomes a Socialist or a Guild Socialist, and tries to educate the employer to a sense of reciprocal duty. But if he is too human for any of these things, then he begins to despise and hate the employer and the system that made him. He wants to hurt them. Upon that hate it is easy to trade.

A certain section of what is called the Socialist press and the Socialist literature in Europe is no doubt great-minded; it seeks to carve a better world out of the present. But much of it is Socialist only in name. Its spirit is anarchistic. Its real burden is not construction, but grievance—it tells the bitter tale of the employee; it feeds his malice; it schemes annoyance and injury for the hated employer. The state and order of the world are confounded with the capitalist.

Before the war the popular so-called Socialist press reeked with the cant of rebellion, the cant of any sort of rebellion. "I'm a rebel!" was the silly boast of the young disciple. "Spoil something; set fire to something," was held to be the proper text for any girl or lad of spirit. And this blind discontent carried on into the war. While, on the one hand, a great rush of men poured into the army, saying "Thank God! we can serve our country at last instead of some beastly profiteer," a sourer remnant, blind to the greater issues of the war, clung to the reasonless

Not a Moment to Lose

Digitized by Google

proposition: "The state is only for the capitalist. This war is got up by capitalists. Whatever has to be done—we are rebels!"

Such a typical paper as the British Labor Leader, for example, may be read in vain, number after number, for any constructive proposal. It is a prolonged scream of extreme individualism; a monotonous repetition of incoherent discontent with authority, with direction, with union, with the European effort. It wants to do nothing. It just wants effort to stop, even at the price of German victory. If the whole fabric of society in Western Europe were to be handed over to those pseudo-Socialists to-morrow, to be administered for the common good, they would fly the task in terror. They would make excuses and refuse the undertaking. They do not want the world to go right. The very idea of the world's going right does not exist in their minds. They are embodied discontent and hatred, making trouble; and that is all they are. They want to be rebels—to be admired as rebels.

That is the true psychology of the resentful employee. He is a desocialized man. His sense of the state has been destroyed.

The resentful employees are the outcome of our social injustices. They are the failures of our social and educational systems. We may regret their pitiful degradation; none the less they are a pitiful crew. I have seen the hardship of the trenches, the gay and gallant wounded; I do a little understand what our soldiers, officers and men have endured and done. And, though I know I ought to allow for all that I have stated, I cannot regard these conscientious objectors with anything but contempt.

Some Dismal Literature

Into my house there pours a dismal literature rehearsing the hardships of these men who set up to be martyrs for liberty. So-and-so, brave hero, has been sworn at—positively sworn at by a corporal; a nasty rough man came into the cell of So-and-so and dropped several h's; So-and-so, refusing to undress and wash, has been undressed and washed, and soap was rubbed into his eyes—perhaps purposely; the food and accommodation are not of the best class; the doctors in attendance seem hasty; So-and-so was put into a damp bed and has got a nasty cold. Then I recall a jolly van-load of wounded men I saw out there.

But, after all, we can be just. A church and state that permitted these people to be thrust into dreary employment in their early teens, without hope or pride, deserves such citizens as these. The marvel is that there are so few. There are a thousand or so of these hopeless, resentment-poisoned creatures in Great Britain against five willing millions. The allied countries, I submit, have not got nearly all the conscientious objectors they deserve.

If the resentful employee provides the emotional impulse of the resisting pacifist, whose horizon is bounded by his one passionate desire that the particular social system which has treated him so ill should collapse and give in, and its leaders and rulers be humiliated and destroyed, the intellectual direction of a mischievous pacificism comes from an entirely different class.

The genteel Whig, though he differs very widely in almost every other respect from the resentful employee, has this much in common: he has never been drawn into the whirl of the collective life in any real and assimilative fashion. This is what is the matter with both of them. He is a little, loose, shy, independent person. Except for eating and drinking—in moderation—he has never done anything real from the day he was born. He has frequently not even faced the common challenge of matrimony. Still more frequently is he childless. He has never traded or manufactured. He has drawn his dividends or his salary with an entire unconsciousness of any obligations to policemen or navy for these punctual payments. Probably he has never ventured even to reinvest his property.

He is acutely aware of possessing an exceptionally fine intelligence; but he is entirely unconscious of a fundamental unreality. Nothing has ever occurred to him to make him ask why the mass of men were either not possessed of his security or discontented with it. The impulses that took his school friends out upon all sorts of odd feats and adventures struck him as needless. As he grew up he turned with an equal distrust from passion or ambition. His friends went out after love, after adventure, after power, after knowledge, after this or that desire, and became men. But he noted merely that they became fleshly; that effort strained them; that they were sometimes angry or violent or heated. He could not help but feel that theirs were vulgar experiences, and he sought some finer exercise for his exceptional quality.

He pursued art or philosophy or literature upon their more esoteric levels, and realized more and more the general vulgarity and coarseness of the world about him, and his own detachment. The vulgarity and crudity of the things nearest him impressed him most—the dreadful insincerity of the press; the meretriciousness of success; the loudness of the rich; the baseness of the common people in his own land. The world oversea had by comparison a certain glamour. . . . Nobody took him by the collar and shook him.

If our world had considered the advice of William James and insisted upon national service from everyone, national service in the drains or the nationalized mines or the nationalized deep-sea fisheries—if not in the army or navy—we should not have had any such men. If it had insisted that wealth and property are no more than a trust for the public benefit, we should have had no genteel irresponsibles. These discords in our national unanimity are the direct consequence of our bad social organization. We permit the profiteer and the usurer; they make the resentful employee, and the genteel Whig inherits their wealth.

But that is by the way. It was, of course, natural and inevitable that the German onslaught upon Belgium, and civilization generally, should strike these recluse minds not as a monstrous ugly wickedness, to be resisted and overcome at any cost, but merely as a nerve-racking experience. Guns were going off on both sides. The genteel Whig was chiefly conscious of a repulsive vast excitement all about him, in which many people did inelegant and irrational things.

This child of the ages, this last fruit of the gigantic and tragic tree of life, could no more than stick its fingers in its ears and say: "Oh, please! Do all stop!" And then, as the strain grew intenser and intenser, set itself, with feeble pawings now, to clamber "*au-dessus de la mêlée*," and now to—in some weak way—stop the conflict—"*au-dessus de la mêlée*"—as the man said when they asked him where he was when the bull gored his sister. The efforts to stop the conflict at any price, even at the price of entire submission to the German Will, grew more urgent as the necessity that everyone should help against the German Thing grew more manifest.

The Freaks of War

Of all the strange freaks of distressed thinking this war has produced, the freaks of the genteel Whig have been among the most remarkable. With an air of profound wisdom he returns perpetually to his proposition that there are faults on both sides; to say that is his conception of impartiality. I suppose that if a bull gored his sister he would say there were faults on both sides—his sister ought not to have strayed into the field; she was wearing a red hat of a highly provocative type; she ought to have been a cow, and then everything would have been different.

In the face of the history of the last forty years the genteel Whig struggles persistently to minimize the German outrage upon civilization and to find excuses for Germany. He does this not because he has any real passion for falsehood, but because, by training, circumstance and disposition, he is passionately averse from action with the vulgar majority and from self-sacrifice in a common cause; and because he finds in the justification of Germany and, failing that, in the blackening of the Allies to an equal blackness one line of defense against the wave of service that threatens to submerge his private self. But when at last that line is forced he is driven back upon others equally extraordinary.

You can often find simultaneously in the same pacifist paper, and sometimes even in the utterances of the same writer, two entirely incompatible statements: The first is that Germany is so invincible that it is useless to prolong the war, since no effort of the Allies is likely to produce any material improvement in their position; and the second is, Germany is so thoroughly beaten that she is now ready to abandon militarism and make terms and compensations entirely acceptable to the countries she has forced into war. And when finally facts are produced to establish the truth that Germany, though still largely wicked and impenitent, is being slowly and conclusively beaten by the sanity, courage and persistence of allied common men, then the genteel Whig retorts with his last defensive absurdity: He invents a national psychology for Germany.

Germany, he invents, loves us and wants to be our dearest friend. Germany has always loved us. The Germans are a loving, unenvious people. But beware of beating Germany, beware of humiliating Germany; then, indeed, trouble will come. Germany will begin to dislike us. She will plan a revenge. Turning aside from her erstwhile innocent career, she may even think of hate. What are our obligations to France, Italy, Serbia and Russia? What is the happiness of a few millions of Belgians—whose numbers, moreover, are constantly diminishing—when we weigh them against the danger of incurring permanent German hostility? . . .

A Frenchman I talked to knew better than that.

"What will happen to Germany," I asked, "if we are able to do so to her, and so? Would she take to dreams of *revanche*?"

"She will take to Anglomania," he said; and added after a flash of reflection: "In the long run it may be the worse for you."

Some French Opinions

All the French people I met in France seemed to be thinking and talking about the English. The English bring their own atmosphere with them. To begin with, they are not so talkative, and I did not find among them anything like the same vigor of examination, the same resolve to understand the Anglo-French reaction, that I found among the French. In intellectual processes I confess that my sympathies are undisguisedly French; the English will never think or talk clearly until they get clerical "Greek" and sham "humanities" out of their public schools, and sincere study and genuine humanities in; our disingenuous Anglican compromise is like a cold in the English head, and the higher education in England is a training in evasion.

This is an always lamentable state of affairs; but just now it is particularly lamentable because quite tremendous opportunities for the good of mankind turn on the possibility of a thorough and entirely frank mutual understanding between French, Italians and English. For years there has been a considerable amount of systematic study in France of English thought and English developments. Upon almost any question of current English opinion, and upon most current English social questions, the best studies are in French. But there has been little or no reciprocal activity. The English in France seem to confine their French studies to *La Vie Parisienne*. It is what they have been led to expect of French literature.

There can be no doubt in any reasonable mind that this war is binding France and England very closely together. They dare not quarrel for the next fifty years. They are bound to play a central part in the World League for the Preservation of Peace that must follow this struggle. There is no question of their practical union. It is a thing that must be. But it is remarkable that, while the French mind is agog to apprehend every fact and detail it can about the British, to make the wisest and fullest use of our binding necessities, the strange English "incuria"—to use the new slang—attains to its most monumental in this matter.

So there is not much to say about how the British think about the French. They do not think. They feel. At the outbreak of the war, when the performance of France seemed doubtful, there was an enormous feeling for France in Great Britain; it was like the formless feeling one has for a brother. It was as if Britain had discovered a new instinct. If France had crumpled up like paper, the English would have fought on to restore her. That is ancient history now. Now the English still feel fraternal and fraternally proud; but in a mute way they are dazzled. Since Verdun the French have achieved a crescendo. None of us could have imagined it. It did not seem possible to very many of us at the end of 1915 that either France or Germany could hold on for another year.

There was much secret anxiety for France. It has given place now to unstinted admiration. In their astonishment the British are apt to forget the impressive magnitude of their own effort—the millions of soldiers; the innumerable guns; the endless torrent of supplies that pours into France to avenge the little army of Mons. It seems natural to us that we should so exert ourselves under the circumstances. I suppose it is wonderful; but, as a sample Englishman, I do not feel that it is at all wonderful. I did not feel it wonderful even when I saw the British aëroplanes lording it in the air over Martinpuich, and not a German to be seen. Since Michael would have it so, there, at last, they were. Michael had been a tiresome fool to insist upon it.

There was a good deal of doubt in France about the vigor of the British effort until the Somme offensive. All that had been dispelled in August when I reached Paris. There was not the shadow of a doubt remaining anywhere of the power and loyalty of the British. These preliminary assurances have to be made, because it is in the nature of the French mind to criticize; and it must not be supposed that criticisms of detail and method affect the fraternity and complete mutual confidence which are the stuff of the Anglo-French relationship.

Now, first, the French have been enormously astonished by the quality of the ordinary British soldiers in our new armies. One colonial colonel said something almost incredible to me—almost incredible as coming from a Frenchman; it was a matter too solemn for any compliments or polite exaggerations. He said, in tones of wonder and conviction: "They are as good as ours!" It was his acme of all possible praise.

That means any sort of British soldier. Unless he is assisted by a kilt, the ordinary Frenchman is unable to distinguish between one sort of British soldier and another. He cannot tell—let the ardent nationalist mark the fact!—a Cockney from an Irishman, or the Dublin from the Essex note. He finds them all extravagantly and unquenchably cheerful, and with a generosity "like good children." There his praise is a little tinged by doubt. The British are reckless; recklessness in battle a Frenchman can understand, but they are also reckless about to-morrow's bread and whether the tent is safe against a hurricane in the night.

British Methods

He is struck, too, by the fact that they are much more vocal than the French troops, and that they seem to have a passion for bad, lugubrious songs. There he smiles and shrugs his shoulders; and, indeed, what else can any of us do in the presence of that mystery! At any rate, the legend of the phlegmatic Englishman has been scattered to the four winds of heaven by the guns of the Western Front. The men are cool in action, it is true; but for the rest they are, by the French standards, quicksilver.

But I will not expand further upon the general impression of the English in France. Philippe Millet's *En Liaison avec les Anglais* gives, in a series of delightful pictures, portraits of British types from the French angle. There can be little doubt that the British quality—genial, naïve, plucky and generous—has won for itself a real affection in France wherever it has had a chance to display itself. . . .

But when it comes to British methods, then the polite Frenchman's difficulties begin. Translating hints into statements and guessing at reservations, I should say that the French fall very short of admiration of the way in which our higher officers set about their work; they are disagreeably impressed by a general want of sedulousness and close method in our leading. They think we economize brains and waste blood. They are shocked at the way in which obviously incompetent or inefficient men of the old army class are retained in their positions, even after serious failures; and they were profoundly moved by the bad staff work and needlessly heavy losses of our opening attacks in July.

They were ready to condone the blunderings and flounderings of the 1915 offensives as the necessary penalties of an amateur army, but they were surprised to find how much the British had still to learn in July, 1916. The British officers excuse themselves because, they plead, they are still amateurs. "That is no reason," says the Frenchman, "why they should be amateurish."

The Jeffery Sedan, $1630

To those seeking a car equally useful in all seasons and affording maximum comfort for winter and summer driving, combined with marked economy, the Jeffery Sedan makes instant appeal.

It is a big, roomy, handsome, enclosed car for winter, the divided seats converting the two compartments into one spacious room, where its seven passengers are luxuriously immune to cold, wind or rain.

It is a perfect town car for all the family for all social or business purposes.

Then when summer comes and a real touring car is needed, the top is quickly removed and a standard Jeffery Six touring car, driven by the powerful Jeffery 53 horsepower motor, is ready for cross-country travel. A summer top and windshield cost only $60 additional.

The Sedan top, specially designed for this car and skillfully made in our own factory, fits perfectly to the body. Thus there are no creaks or rattles even after thousands of miles of service.

You will find the Jeffery Sedan at $1630 a car of truly remarkable value.

For those who do not require an enclosed car, there is the standard Jeffery Six touring car, without the Sedan top, at $1465. This car has been quick to establish an enviable reputation. In the hands of pleased owners from coast to coast, it is giving a constant record of economical, satisfactory service.

This big, seven-passenger 53 horsepower touring car with 125 inch wheelbase at $1465, has been accepted by the public as rare motor value. You should see it at your dealer's at once.

Jeffery Sixes are priced as follows: Seven-passenger Sedan, $1630; Sedan Combination, $1690; seven-passenger touring car, $1465; roadster, $1435.

Fours: Seven-passenger touring car, $1095; seven-passenger Sedan, $1260; Sedan Combination, $1320.

All prices are quoted f.o.b. Kenosha.

Few motor car plants in the world are as well equipped to build strictly "factory-made" cars and trucks on a quality basis as the great factory of the Nash Motors Company. This plant covers 100 acres of ground. It has 32 acres under roof. It employs an army of 3,000 skilled mechanics. It is equipped to build motor cars and trucks within its own walls 93 per cent in their entirety.

GOOD YEAR AKRON

(Concluded from Page 28)

No Frenchman said as much as this to me; but their meaning was as plain as daylight. I tackled one of my guides in this matter; I said that it was the plain duty of the French military people to criticize British military methods sharply if they thought they were wrong. "It is not easy," he said. "Many British officers do not think they have anything to learn. And English people do not like being told things. What could we do? We could hardly send a French officer or so to your headquarters in a tutorial capacity. You have to do things in your own way."

When I tried to draw General Castelnau into this dangerous question by suggesting that we might borrow a French general or so, he would say only: "There is only one way to learn war, and that is to make war." When it was too late—in the lift—I thought of the answer to that: There is only one way to make war, and that is by the sacrifice of incapables and the rapid promotion of able men. If old and tried types fail now, new types must be sought; but to do that we want a standard of efficiency. We want a conception of intellectual quality in performance that is still lacking. . . .

Mr. Joseph Reinach, in whose company I visited the French part of the Somme Front, was full of a scheme, which he has since published, for the breaking up and recomposition of the French and British Armies into a series of composite armies that would blend the magnificent British manhood and material with French science and military experience. He pointed out the endless advantages of such an arrangement—the stimulus of emulation; the promotion of intimate fraternal feeling between the peoples of the two countries.

"At present," he said, "no Frenchman ever sees an Englishman except at Amiens or on the Somme. Many of them still have no idea of what the English are doing. . . ."

"Have I ever told you the story of compulsory Greek at Oxford and Cambridge?" I asked abruptly.

"What has that to do with it?"

"Or how two undistinguished civil-service commissioners can hold up the scientific education of our entire administrative class?"

Mr. Reinach protested further.

"Because you are proposing to loosen the grip of a certain narrow and limited class upon British affairs; and you propose it as though it were a job as easy as rearranging railway fares or sending a van to Calais. That is the problem that every decent Englishman is trying to solve to-day, every man of that Greater Britain which has supplied these five million volunteers, these magnificent temporary officers and all this wealth of munitions. And the oligarchy is so invincibly fortified! Do you think it will let in Frenchmen to share its controls? It will not even let in Englishmen."

The Military Oligarchy

"It holds the class schools; the class universities; the examinations for our public services are its class shibboleths; it is the church, the squirarchy, the permanent army class, permanent officialdom; it makes every appointment; it is the fountain of honor; what it does not know is not knowledge; what it cannot do must not be done. It rules India as its back garden; it will wreck the empire rather than relinquish its ascendancy in Ireland. It is densely self-satisfied and instinctively monopolistic. It is on our backs; and, with it on our backs, we common English must bleed and blunder to victory.' . . . And you make this proposal!"

The antagonistic relations of the British military oligarchy with the greater and greater-spirited Britain that thrusts behind it in this war are probably paralleled very closely in Germany; probably they are exaggerated in Germany, with a bigger oligarchy and a relatively lesser civil body at its back. This antagonism is the oddest outcome of the tremendous demilitarization of war that has been going on. In France it is probably not so marked, because of the greater flexibility and adaptability of the French culture.

All military people—people, that is, professionally and primarily military—are inclined to be conservative. For thousands of years the military tradition has been a tradition of discipline. The conception of the common soldier has been a mechanically obedient, almost dehumanized man; of the officer, a highly trained autocrat. In two years all this has been absolutely reversed.

Individual quality, inventive organization and industrialism will win this war. And no class is so innocent of these things as the military caste. Long accustomed as they are to the importance of moral effect, they put a brave face upon the business; they save their faces astonishingly; but they are no longer guiding and directing this war; they are being pushed from behind by forces they never foresaw and cannot control. The aëroplanes and great guns have bolted with them; the tanks begotten of naval and civilian wits shove them to victory in spite of themselves.

The Symbolism of Spurs

Wherever I went behind the British lines the officers were swaggering about in spurs. Those spurs got at last upon my nerves. They became symbolical. They became as grave an insult to the tragedy of this war as if they were false noses. The British officers go for long automobile rides in spurs. They walk about the trenches in spurs. Occasionally I would see a horse. I do not wish to be unfair in this matter; there were riding horses sometimes within two or three miles of the ultimate Front, but they are rarely used. From morn to eve the spurs ring everywhere.

I do not say that the horse is entirely obsolete in this war. In war nothing is obsolete. In the trenches men fight with sticks. In the Pasubio Battle the other day one of the Alpini silenced a machine gun by throwing stones. In the West African campaign we have employed troops armed with bows and arrows, and they have done very valuable work. But these are exceptional cases. The military use of the horse henceforth will be such an exceptional case.

It is ridiculous for these spurs still to clink about the modern battlefield. What the gross cost of the spurs and horses and trappings of the great British Army amounts to, and how many men are grooming and tending horses who might just as well be plowing and milking at home, I cannot guess; it must be a sum so enormous as seriously to affect the balance of the war.

And these spurs and their retention are only the outward and visible symbol of the obstinate resistance of the British official mind to the clear logic of the present situation. It is not only the external equipment of our leaders that falls behind the times; our political and administrative services are in the hands of the same desolatingly inadaptable class. The British are still wearing spurs in Ireland and in India; and the age of the spur has passed!

At the outset of this war there was an absolute cessation of criticism of the military and administrative castes; it is becoming a question whether we may not pay too heavily in blundering and waste, in military and economic lassitude, in international irritation and the accumulation of future dangers in Ireland, Egypt, India, and elsewhere, for an apparent absence of internal friction.

These people have no gratitude for tacit help, no spirit of intelligent service, and no sense of fair play to the outsider. The latter deficiency, indeed, they call *esprit de corps*, and prize it as if it were a noble quality.

It becomes more and more imperative that the foreign observer should distinguish between this narrower, older official Britain and the greater, newer Britain which struggles to free itself from the entanglement of a system outgrown. There are many Englishmen who would like to say to the French and the Irish and the Italians, and India—who, indeed, now feel every week a more urgent need of saying—"Have patience with us." The Riddle of the British is very largely solved if you will think of a great modern liberal nation seeking to slough an exceedingly tough and tight skin. . . .

Nothing is more illuminating and self-educational than to explain one's home politics to an intelligent foreign inquirer; it strips off all the secondary considerations, the allusiveness, the merely tactical considerations. One sees the forest not as a confusion of trees, but as something with a definite shape and place.

I was asked in Italy and in France: "Where does Lord Northcliffe come into the British system—or Lloyd George? Who is Mr. Redmond? Why is Lloyd George a Minister, and why does not Mr. Redmond take office? Isn't there something called an Ordnance Department? And why is there a separate Ministry of Munitions? Can Mr. Lloyd George remove an incapable general?" I found Mr. Joseph Reinach particularly penetrating and persistent.

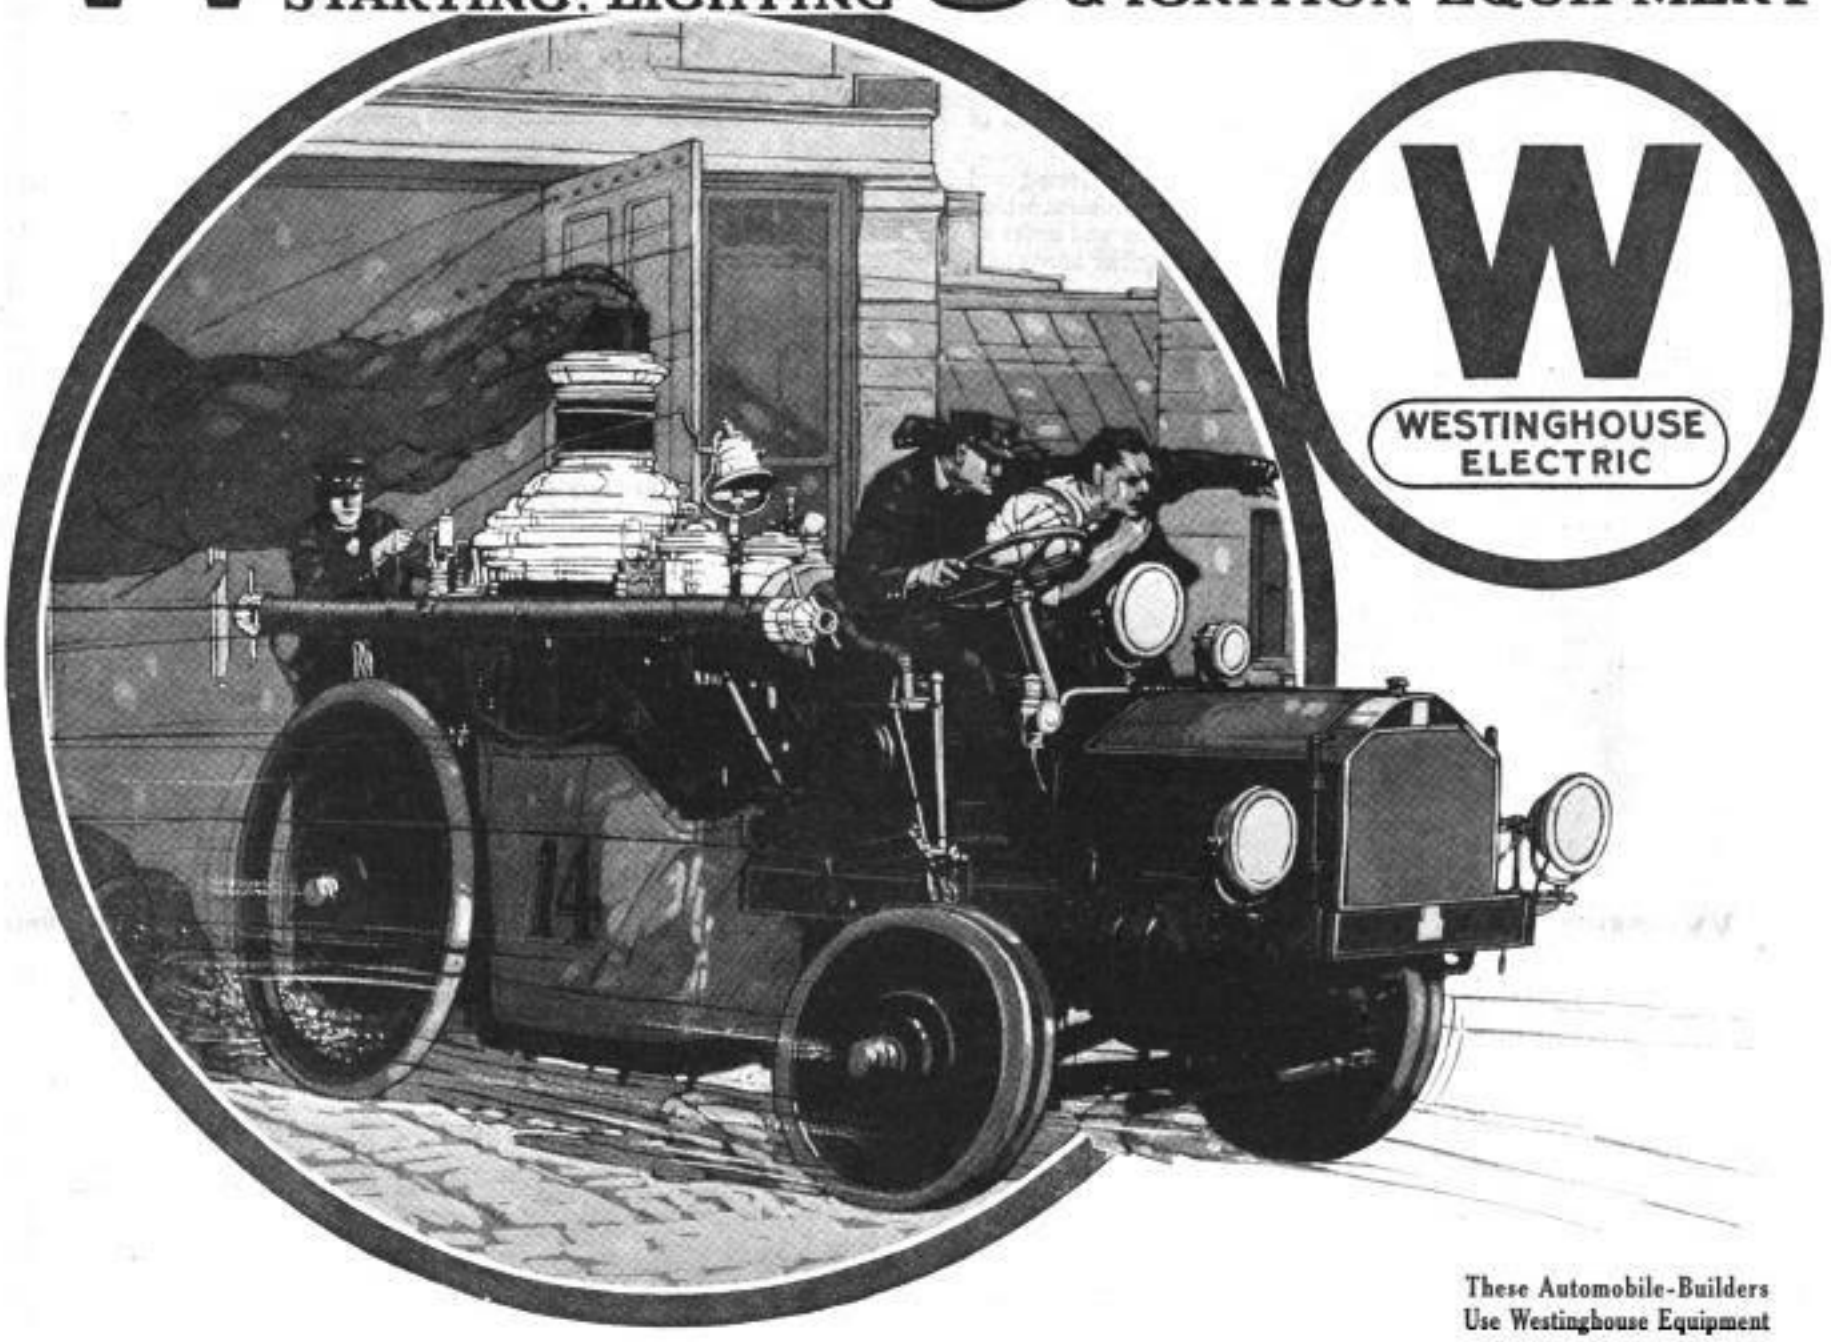
I explained that there is this inner Britain, official Britain, which is Anglican or official Presbyterian; which, at the outside, in the whole world cannot claim to speak for twenty million Anglican and Presbyterian communicants; which monopolizes official positions, administration and honors in the entire British Empire, dominates the court, and—typically—is spurred and red-tabbed. It holds tenaciously to its positions of advantage, from which it is difficult to dislodge it without upsetting the whole empire; and it insists upon treating the rest of the four hundred millions who constitute that empire as outsiders, foreigners, subject races and suspected persons.

Inner Set and Outer Set

"To you," I said, "it bears itself with an appearance of faintly hostile, faintly contemptuous apathy. This is the Britain which irritates and puzzles you so intensely; so that you are quite unable to conceal these feelings from me. Unhappily it is the Britain you see most of. Well, outside this official Britain is Greater Britain—the real Britain. It is in perpetual conflict with official Britain, struggling to keep it up to its work; shoving it toward its ends; endeavoring, in spite of its stupid mischievousness, to keep the peace and a common aim with the French and the Irish and the Italians and Russians and Indians. It is to that outer Britain that those Englishmen you found so interesting and sympathetic—Lloyd George and Lord Northcliffe, for example—belong.

"I do not want to exaggerate the quality of Greater Britain. If the inner set is narrowly educated, the outer set is often crudely educated. If the inner set is so close knit as to seem like a conspiracy, the outer set is so loosely knit as to seem like a noisy confusion. It is only beginning to realize itself and find itself. For all its crudity there is a great spirit in it feeling its way toward the light.

"This is the Britain of the great effort; the Britain of the smoking factories and the torrent of munitions; the Britain of the men and subalterns of the new armies; the Britain that invents and thinks and achieves. It has quite other ambitions for the ending of this war than some thin, haggled treaty of alliance with France and Italy. It begins to realize newer and wider sympathies; possibilities of an amalgamation of interests and a community of aim that it is utterly beyond the habits of the old oligarchy to conceive."



Editor's Note—This is the second of a series of articles by Mr. Wells.

Westinghouse

STARTING, LIGHTING & IGNITION EQUIPMENT

Getting Away at the Gong

Westinghouse Equipment is Relied Upon Where Seconds Saved in the Start May Mean Lives and Property Saved in the End

Clang! Clang! What portent of destruction is the alarm of fire.

Doors fly open, firemen leap to their places aboard the apparatus, there is a whirr, then a throb of engines and away they go.

If ever a quick, sure get-away is needed, it is when the sudden summons comes to the fire fighter. Precious then is every second saved and filled with dire possibilities is every second lost.

That's why two of the largest manufacturers of automobile fire engines—the American-La France Fire Engine Co., of Elmira, N. Y., and the Seagrave Company, of Columbus, Ohio—rely upon Westinghouse Equipment—Westinghouse Generators to do their part in keeping the storage battery fully charged and Westinghouse Motors to make sure of a quick start in any kind of weather.

The same dependability that makes Westinghouse Equipment the choice of the builders of American-La France and Seagrave fire engines has led fifty builders of pleasure-cars, trucks and other motor-driven vehicles to adopt it, though it costs more.

This is a greater number of automobile manufacturers than use any other make of electrical equipment and includes manufacturers of such cars as Pierce-Arrow, Locomobile, F. I. A. T., Hupp, Stearns, Chalmers and others.

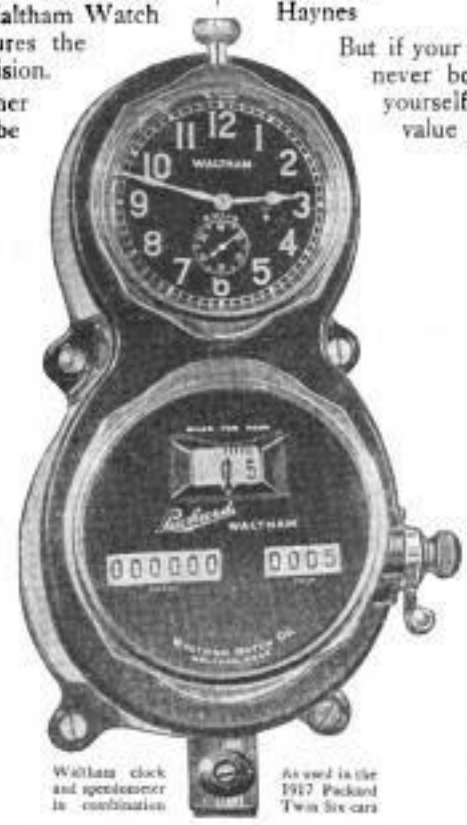
To every motorist who feels the need of a better speedometer and a better clock

The Waltham Speedometer is the product of the genius, scientific experience, mechanical skill and manufacturing facilities of the world's greatest makers of fine timepieces. It bears the Waltham guarantee—insuring Waltham accuracy, Waltham thoroughness, Waltham durability, and Waltham distinction of appearance as well as of performance.

This new Waltham Speedometer has been perfected and manufactured so that the public may have an instrument which gives correct and dependable service at all times and under all conditions. Its use is a safeguard against the familiar annoyance of a speedometer "out-of-order."

The Packard Motor Car Company has adopted and is using the Waltham speedometer for standard equipment on its 1917 cars, which, together with the fact that the Waltham Watch Company manufactures and guarantees it, assures the public of an instrument of positive scientific precision.

The Waltham Speedometer will appear on other high grade cars in the near future. (Names to be announced later.)



If you are the owner of a Waltham-equipped car, then you *know* what a perfect instrument of accuracy and beauty the Waltham Automobile Clock is. You *know* what an advantage it is to have an *absolutely reliable* timepiece on your car. You have ceased to consider an automobile clock an accessory. You consider it a necessity,—just as do the makers of the following cars, who now include the Waltham in their regular equipment:—

Brewster	Hudson	Packard
Cadillac	Locomobile	Pierce-Arrow
Cole	Lozier	Rauch & Lang
Crane	Marmon	Rolls-Royce
Detroit-Electric	Mercer	Simplex
Franklin	Owen Magnetic	Stearns
Haynes		Winton

But if your car is *not* Waltham-equipped, and if you have never bought yourself a Waltham, you are denying yourself a comfort and convenience of the utmost value to every motorist.

Durable and accurate.
Legible from tonneau.
Proof against heat and cold.
Patented driving shaft of extraordinary strength.
Registers instantly.

Waltham clock and speedometer in combination

As used in the 1917 Packard Twin Six cars

Fifteen jewels.
Two mainsprings.
Rewinding signal on dial.
Adjusted to all temperatures.
Proof against road shocks.
Runs 11 days with one winding.

Waltham

Speedometer

The principles that have been applied to this speedometer are extremely simple—so simple as to be "fool proof." This overcomes at the start many of the speedometer difficulties so generally experienced by motorists. Special attention has been given to the flexible driving shaft (patented), which obviates a frequent source of trouble to the car owner. The Waltham shaft (patented), made of a special heat-treated nickel steel, is practically indestructible. This has been proven under severe laboratory and road tests.

The Waltham Speedometer is not affected by the extremes of heat, cold, altitude or climate incident to motor travel. Its registration of every speed of the car is instantaneous and accurate; moreover, the speed dial and odometer figures are legible not only from the driver's seat, but from the tonneau of the car. For test trips or touring with the "Blue Book," the trip odometer can quickly be reset to zero or any mileage desired—an exclusive and very desirable Waltham feature.

Agencies for rendering speedometer service:
Westinghouse Electric & Mfg. Co., 1207 Michigan Ave., Chicago.
Westinghouse Electric & Mfg. Co., 2025 Euclid Ave., Cleveland.
Westinghouse Electric & Mfg. Co., 157 West 54th St., New York.
Automobile Equipment & Service Company, 1435 Vine St., Philadelphia.
Westinghouse Electric & Mfg. Co., Amberson Ave. and Penna. R. R., Pittsburgh.
Other stations to be established.

Automobile Clock

It successfully resists the roughest shocks of the roughest roads, the wear and tear of vibration, and any and all changes of atmosphere or climate. It is the only automobile clock *always* accurate and *always* reliable under such handicaps, because it is the *only* timepiece in the world scientifically designed and constructed for automobiles and nothing else.

It has two mainsprings. It has a fifteen-jewel, stem-wind and stem-set movement which runs eleven days with one winding. An indicator on the dial gives notice three days before the movement runs down.

Its accuracy is so chronometer-like that you can set your watch by it. Its presence in your car is a *guarantee* of the right time all the time.

The Waltham Automobile Clock is made in a variety of styles offering a choice of finish, and a selection of dials to suit car or taste. In its own field, the clock has the distinction and elegance of the fine Waltham watches, and harmonizes effectively with its surroundings in the handsomest of cars.

Your car should have a clock and that clock should be a Waltham. Inquire of your dealer in automobile accessories. Or if he doesn't have the Waltham, communicate with us.

A SCRAP OF PAPER

(Continued from Page 25)

It was an impasse. Unless Jackson could be made to reconsider this, there was no use in going farther in the effort to render harmless the bombshell which Kirby Rowland promised to fire. The financier was silent a moment.

"Look here, Jackson," he said at length, "be reasonable. It's a mighty vital situation. I can't even talk about it, can't even approach the subject unless I have assurance that my words will be kept secret."

Jackson thought in his turn.

"Masterman, you just mentioned some force that menaced something—probably yourself. Is it possible that I shall hear of this force from someone other than yourself?"

"It is," said Masterman. There was nothing else to say.

"Then go ahead—talk," said Jackson. "If I hear of this elsewhere I shall not be bound by my promise to you."

"Certainly not," said Masterman. "Not bound by a promise, but bound by patriotism. Listen: A certain paper was signed by certain men, who in that paper agreed, with other men, to follow a given course of action. I can be no clearer. That paper has been lost. The person who has found it threatens to take the paper to the newspapers. The publication of that paper would mean anarchy. I mean that. It is as serious as that, because the contents of the paper would be misunderstood by the people. Have I your promises, gentlemen, that, out of patriotism, you will refuse to print the contents of that document if it is offered to you?"

"In so serious a matter," said Cowdray pompously, "I am certain that none of my brethren of the press would think of printing it. You, Mr. Masterman, are not given to idle utterances. What you say is received with consideration. I think my colleagues agree with me."

There were nods of assent. Jackson sneered.

"How much of your bond issue did Masterman handle, Cowdray?" he laughed. "You'll have to do better than that, Masterman. I'll print such a paper if it's offered to me."

"Even though it wrecked business?" inquired Masterman.

Jackson smiled, crossed his knees and brought the tips of his fingers together.

"Of course, Masterman, it's clear that you and some of your precious friends signed this mysterious document, and it is equally clear that it must be inimical to the interests of the people. A newspaper's business is to print the news. What you do is news. What you do inimical to the interests of the people is tremendous news. If I get a crack at that paper I'll certainly print it."

"Though it might mean the end of the present order?"

"If this republic can't stand the exposure of the schemes of you and your fellow highbinders, Masterman, then heaven help the republic!"

"You have no patriotism!" cried Masterman.

"Patriotism, my dear man," smiled Jackson, "is capable of many definitions. I do not define it as love for a government; I define it as love for a people. I do not love the people—I despise them; but I am very sorry for them, sorry that they have been cheated out of their rights so long. If to restore to the people their rights it became necessary to tear down the system you have corrupted, then—I'd tear down the system. Am I clear?"

"Exceedingly," said Masterman.

"Thank you," said Jackson. "Now, then, why are we here? You did not call us here to tell us in inchoate terms of this document. You called us here to get our attitude in order that you might know what to do in case of our refusal to be gulled by you. That alternative has a news value, of course, or you would not have invited us to be present to-night. You have something else up your sleeve, Masterman. What is it?"

"Will you gentlemen excuse us a moment?" Masterman asked the others.

Obsequious assents were swiftly given. In response to a nod Jackson followed Masterman into another room. There the financier took out his pocketbook; he opened it.

"We are still speaking in confidence, Jackson? Well, I had doubts of your attitude in regard to the matter we have just discussed. I telephoned Mr. Warren Sheldon this evening. He immediately wrote and sent me this note. I shall read it to you:

"'*My dear Mr. Masterman:* Permit me to answer your telephonic question of ten minutes ago, to this effect: I have for Mr. Lindley Jackson the highest esteem and respect, though he has seen fit to pillory me as a conscienceless political boss times without number. But even though it has been my misfortune to oppose him in the past, it will be my good fortune to stand behind him in the future if you so wish. If your interests will be served by his nomination for the governorship, rest assured that it is a pleasure to me to serve you. With the highest esteem,

"'Yours sincerely,

"'WARREN SHELDON.'"

Warren Sheldon had, the year previously, snatched a nomination from the hands of Jackson. And now the great boss was to stand behind him—if Jackson willed. Jackson smiled.

"Because I have sometimes admitted that I do not believe the people have, as a mass, any common sense, people like you think I am a hypocrite in fighting for their rights. I don't blame you; small minds understand only small natures. But confound you, Masterman, I can't be bought. I'm a newspaper man first, last and all the time! I want the news, and the public wants me to give it to them! The public I serve because it ought to be served, whether it appreciates service or not. I want no more of your confidences or your bribes. You have news for my paper? Then give it to me now!"

There was a silence in the room, broken, as an hour earlier, by the strokes of the clock in the near-by tower. Only this time the clock struck twelve. And before its last deep tones had died away, in the next room Martin Masterman was making an announcement.

"To-morrow morning, gentlemen," he said, "the transportation lines of this city will issue universal transfers to all passengers. I bespeak, on behalf of the corporations interested, your own and the public's tolerance until the new system has had a chance. It will take time to print the millions of transfer tickets needed. There will be necessary reconstruction of many things." He paused. The cup of defeat was bitter. "This step is being taken for the benefit of the public, because the companies feel it is the public's due," he concluded.

Only Lindley Jackson dared to laugh at the last words of the grim-faced man who, all understood vaguely, had waged some sort of losing fight that night, but the gravity of whose defeat not even Jackson could guess at. Martin Masterman had invoked the aid of the press, and had lost! For if ninety-nine papers conceal what another paper prints, to the hundredth shall come the victory. This is one of the reasons why the press must be honest.

Silently and swiftly the publishers departed. News articles must be written, editorials prepared. At twenty minutes past one the first editions were on the street, declaiming, in deep headlines, the news which was to save a million nickels a day to the people of New York, and which was really the announcement of the first victory of Kirby Rowland's war.

XI

IT WAS Grant's first intention to call upon those of Kirby's friends with whom she might have taken refuge, but his second thought showed him the folly of this, not to speak of the waste of time. It would be better to telephone, though his anxiety for her safety could hardly brook the time required for telephoning. But if Greenham knew enough to find out Kirby's address, the chances were that he knew enough to put men to work tracing Kirby's social relationships. One of the Greenham men might have found Kirby already. He would be losing time, chasing from place to place. Four numbers he called without result; Kirby was not at these places, nor had her friends seen her. But the fifth call was answered by a voice that always thrilled young Grant.

"Kirby!" he gasped. "Then you're all right?"

"Why, how did you know? Aren't you in ——"

"Be right over," he interrupted.

BLUE STREAKS

$2.50 each

Guaranteed

These Tires Fulfill a Great Promise

Every Goodyear Blue Streak Bicycle Tire is a promissory note bearing our name.

It is a promise that the bicycle tire endorsed with the great name of Goodyear truly typifies the principle underlying all Goodyear products—

"To give the public the best value possible, at a price that is fair."

Every Goodyear Blue Streak Bicycle Tire is guaranteed to fulfill this mission. It must give satisfactory service. If it does not, there is a brand-new tire awaiting you.

Every Office Needs

a clean, pure, *non-gummy* oil to keep typewriters, adding and billing machines, cash registers and other office mechanisms in perfect working order.

3-in-One

is the right oil to use. Instead of collecting dirt in the delicate bearings, as inferior oils do, 3-in-One works all dust and dirt out. Minimizes friction. Wears long. Never gums or dries out.

Try 3-in-One on stubborn locks, squeaky revolving chairs and hinges. Prevents rust.

Put a few drops of 3-in-One on a damp cloth to clean and polish office desks and filing cabinets. Brings back the "new" look.

Sold at all stores—in the Handy Oil Can, 25c, and in 10c, 25c and 50c bottles.

FREE Generous sample of 3-in-One Oil and Dictionary of Uses—both sent FREE on request.

He had phoned from a drug store that was not many blocks distant from the apartments where Kirby's friend lived. A car left him a few steps from her door in five minutes. Another minute and Kirby had admitted him to the apartment.

"Alone?" he asked.

She blushed; whereupon he put his arms round her. Then she led him into the drawing-room.

"What happened?" he demanded.

She told him of her escape, and of her coming to the apartment of Jessie Sigmund, a fellow artist.

"I wanted to get somewhere, to think, to plan. I phoned Jessie and told her that I wanted her to put me up for the night. Jessie isn't the kind to ask questions, you know. She told me to come over, and offered to break an engagement she had made for the evening if I wished her to. But I didn't. So, as she was going right out, she left the key with the elevator boy. But why aren't you in Jersey? How did you know ——"

He told her of his experiences.

"Mack," he said thoughtfully, "saved us both. Why?"

"Underneath his crookedness and cruelty," she suggested, "he must have a streak of chivalry that made him ——"

"Not Mack!" laughed Grant. "He had his reasons, but chivalry was not among them. It wouldn't account for his tipping me off that you weren't at home, but that someone else probably was there. No, not chivalry. And yet, what was his reason? He hadn't experienced a change of heart, Kirby. He wants that paper for the money in it. It's beyond me!"

"Me too," she said. There was silence while both thought.

"Dick," she asked at length, "what are we going to do—you, I mean? You won't leave the city?"

"I've thought it all over," he answered, "and I absolutely refuse to leave you alone to face Masterman and Mack. I'm going to stay."

"Where?"

"Oh, I'll find a hundred places," he answered easily. "But you? Where will you stay?"

"Here, with Jessie."

He laughed. "How long before Greenham's men will be here looking for you? You slipped away once, Kirby, but they'll take care not to let you again. We must think ——"

The doorbell rang. They started.

"Don't answer," whispered Kirby.

He shrugged his shoulders.

"The hallboy knows I entered."

He had started for the door, but she ran in front of him.

"If it's one of Greenham's men I may be able to put him off. Don't let him see you."

She half pushed him into the little den off the drawing-room, and then she opened the front door. His eye at a crack in the den door, Grant saw a man face Kirby.

"Miss Sigmund?" he inquired.

"Well?" said Kirby.

"I'm looking for a friend of yours—Miss Kirby Rowland. Is she here?"

"Miss Rowland? There is no other woman here," said Kirby.

Though her back was to him Grant guessed the expression on her face: the slightly raised eyebrows, the faintly quizzical expression, with a touch of superiority in the eyes; the hint of a haughty curl to the lips.

"Then you ain't seen her to-day, Miss Sigmund?" persisted the man, politely abashed.

"And if I had, is there any reason why I should inform utter strangers of the fact? What is your business with Miss Rowland? You look, if I may say it without offense, like a detective."

"No offense at all, ma'am. That's me. I'm lookin' for the young lady, and I want her bad."

"Want Kirby Rowland? What on earth has she done?" Amazement was in every syllable.

"Why nothin', ma'am—leastwise, nothin' criminal, I don't think. But I got a friend that's mighty anxious to see her and ——"

"I can't believe any such thing," snapped Kirby. "You—you're insulting! Miss Rowland is well known to me. Good evening!"

She closed the door upon an utterly crestfallen detective. It was not what she had said; it was the *timbre* of her voice, the lightning play of expression upon her mobile features. There was abjectness almost in the man's manner as he backed away. Kirby Rowland could play the *grande dame* as well as any tragedy queen. She laughed as Grant emerged from the den.

"Did I do well?" she asked.

He did not answer as he walked swiftly across the room, raised the shade a few inches, and knelt on the floor, peering from the side of the window lest the electric light cast his shadow and betray his watchfulness.

"You did, Kirby," he then said softly, "but the game isn't over yet." He watched a moment, then beckoned to her. He made room for her to look out. "In that areaway opposite. See him—just a blotch in the shadows?"

Kneeling side by side they looked at each other.

"And what does that mean?" she asked nervously. "Didn't he believe that I was Jessie?"

He rose and helped her up.

"Undoubtedly he did—and does. But, Kirby, I wonder if either of us realizes the immensity of the forces we've set in motion against ourselves? That was a Greenham operative, as they call them, no doubt of that. Why did he come here? Because he had learned that Miss Sigmund is one of your friends? Why, not finding you here, hasn't he gone on to some other of your friends? Because, Kirby, there's a Greenham man watching the home of every friend of yours in the city. Already! I'll wager my life on it."

"Absurd," she scoffed. Yet her lips quivered slightly and her eyes took on a hunted look.

"That would take —— Oh, I know scores of people—over a hundred whom I meet round at various places."

"And if there were a thousand homes to watch, the Greenham shrewdness and the Masterman money would supply those men by noon to-morrow, Kirby. As it is ——"

"More absurd!" she said, though her expression belied her words. "How would they know my friends? And so soon? Of course I often call up Jessie, and the hallboy at the studios could have given her name and address; but the others? The ones I never telephone to and do not see often, but that are yet good friends?"

"Every newspaper office keeps a department devoted to clippings from its own and other papers," he answered. "Your name is there—lots of clippings about you, without doubt, for you're getting known in the art world. Moreover, you attend various functions given by people not without some social prominence. How simple! One of Greenham's men looked up 'Rowland—Kirby' in the clippings. He sees your name among the list of guests at various affairs. And the Greenham men are shadowing every one of those other guests, who may or may not be intimate friends of yours."

She was appalled.

"Not really?"

"I don't say that it's been done already to that extent. At least I doubt if every person whose name has been mentioned in the same item with yours has been shadowed. But by to-morrow—yes! Kirby, think what's at stake! What is the spending of a few thousand dollars to Masterman now? Miss Sigmund will be home—at midnight, you said? Well, leave it to that man across the street to find out the name of every person that enters this apartment house from now on! We were lucky just now. The night boy has come on since Miss Sigmund left; he didn't know that you'd got her key from the day boy. But when she comes home that man across the street will make inquiries."

"And what can they do now that we are prepared—that you are with me?" she demanded. "They don't dare ——"

"The Masterman influence can get a warrant for your arrest on any charge," replied Grant soberly. "For mine too. And we'd never reach the police station. It would be a case of kidnaping, pure and simple. Unless we took some other person into our confidence and had them threaten Masterman—but that wouldn't do. Too many people knowing of it—it would be public property in a day or so. And that means—we'd almost rather lose than see anarchy destroy this city, this nation, wouldn't we, Kirby?"

She shuddered.

"But what can I do?" For a moment she was helpless, looking to him for suggestion. But she was the kind that rallies quickly. "Of course! I can go to some hotel. Now!"

SEE THESE CARS AT THE AUTO SHOWS

All Have Adopted

WARNER-LENZ

At the auto shows in New York, Chicago and other cities you will see famous cars like the Packard, Marmon, Stutz, Hal (H. A. Lozier), Singer and McFarlan equipped with Warner-Lenz. Each has adopted Warner-Lenz as standard equipment, recognizing this invention as the final solution of night driving problems.

Between the writing and publication of this advertisement there will be several other cars added to the list.

This remarkable endorsement—together with sales to car owners of 300,000 pairs—is striking evidence of the general belief in the motor world that Warner-Lenz are certain to become universally used.

Solves Night Lighting

Automobile engineers, illumination experts, police and traffic officials and knowing drivers have not been slow to recognize the unusual merits of Warner-Lenz. Introduced but a few months ago, the popularity of Warner-Lenz has been phenomenal. Other leading cars are bound to adopt them as standard equipment—other thousands of drivers continue to buy in increasing volume.

Warner-Lenz give a diffused light, penetrating and wide-spread. The whole road is shown ahead, yet you blind no one. And no car equipped with Warner-Lenz blinds *you*.

Safety—Comfort

Warner-Lenz make night driving as safe and pleasant as daylight driving. In crowded city streets or on strange country roads. Nervous tension is replaced by a new freedom.

Any written description, however, is inadequate. You must drive behind Warner-Lenz to fully appreciate them.

Wait no longer. You'll buy sometime. So gain protection and comfort *now*.

Your nearest accessory dealer will supply you. If he hasn't them and will not order them for you, write to us direct, giving name and model of your car.

Prices of Warner-Lenz Per Pair

Diameter in Inches	East of Rockies
5 to 9, inclusive,	$3.50
9¼ to 10, inclusive,	4.00
10¼ to 12, inclusive,	5.00

West of Rockies 25c per pair extra

The Success of the Liberty

THE success of the Liberty is that it meets the demand for a quality car, at a medium price, embodying every feature of owner comfort. The car itself is its own best salesman. It is self-selling—to motorists who know. That's why the Liberty is covering the country.

Liberty salesmen don't argue over this car. They let their prospect drive—they let him ride—the car does the rest.

The Liberty will sell itself to you in just this way—on performance. Go to your dealer's—or see the car at the automobile shows. Ride in it—drive it.

Compare the Liberty for driving ease and riding comfort with every other car made. Make your own investigation—for your own protection. Buy on facts.

New Driving Ease

Get into the driving seat. Your hands and feet fall naturally into correct driving position.. Controls are where you would place them yourself—for comfort—for safety.

Try that surprising gear shift. Make even the unusual shift from third to second at full speed! Smooth—silent—no clash—mechanical perfection.

Try the clutch, which on most other cars requires hard pushing—and consequent fatigue. The Liberty clutch yields almost to the weight of your foot—yet it engages at a pressure of over a ton—smoothly—surely.

Try that infallible emergency brake applied with a pull *of one finger*. It stops the car instantly without a jolt—but without a doubt.

New Riding Comfort

A ride in the Liberty is a revelation. Ride anywhere—over car tracks and cobbles, ruts and breaks. You don't have to pick out the best road. Perfect springs and deep seats give a long, easy swing that means complete relaxation and solid comfort. You sit *in* the Liberty—not *on* it.

Get These Facts

Does your car steer hard? Steer the Liberty. Does your clutch throw hard? Try the Liberty clutch. Does your car ride hard in the back seat? Try the Liberty over the cobbles and the ruts. If you can't stop your car instantly, with a finger pressure, at full speed, try the Liberty emergency.

This is the straightforward way the Liberty sells itself to you—who know cars. It's a new kind of motoring because it is motoring planned, designed and built for one thing—your comfort, ease, convenience and pride. That's why the Liberty succeeds. Get into one today. Take this statement along and check it up—word for word. If it's true in every detail, you want a Liberty car.

See the Liberty at the National Automobile Shows, New York—Grand Central Palace—third floor—January 5th–13th; Chicago—Armory—January 27th–February 3rd. Five-passenger Touring Car and Four-passenger Close-Coupled Car, $1095. Detachable Sedan, $1295. Shopping Brougham, $2350.

(Continued from Page 34)

"Only Greenham and one operative have seen you so far, eh—at least, so far as we know? That would help a little, but mighty little. You don't realize the whole extent of the Masterman power and the Greenham shrewdness, Kirby. I'll bet my last cent that every hotel in the city is on the lookout for a pretty girl that answers your description. Every young woman that enters any New York hotel to-night or to-morrow will be looked over, shortly after registering, by a Greenham agent. Every house detective will have his eyes peeled for you, not knowing why you're wanted, but simply knowing that you are wanted. That man who just came in here—the last thing in the world he expected was that you yourself would answer the door at his ring. Moreover, the light was in his eyes, while your face was in shadow, and you've put on something of Jessie's, haven't you?"

She nodded.

"She told me I could when I phoned her. We're about the same size."

"Well, that helped some. He was looking for a girl who wore the same sort of clothes you had on when Greenham saw you. But at a hotel—where every girl will be scrutinized, and where you couldn't always have your face in the shadow, and where suspicion will be pointing toward you because you are young, pretty and alone—it won't do, Kirby."

"I don't suppose it would," she answered thoughtfully. "But there are hundreds of boarding and lodging houses. There no one would suspect anything, unless my description were printed in the papers, and Masterman dare not do that, for fear of what I may do in retaliation."

"Right," he admitted. "But, Kirby, you can't be chasing round to a lodging house to-night. You have no baggage, either."

"Jessie's," she said. "I could borrow a suitcase and stock and to-morrow return the things, after buying others for myself."

"It might be done," he agreed slowly, "and still ——"

Again a ring at the door. Like a flash he leaped to the window and, kneeling, looked out. The blotch was still visible in the deepening shadows of the areaway. He rose and tiptoed into the den. She looked a question at him. He pointed toward the window.

"Still outside, so it's not he," he whispered. "Open."

From behind the den door, as before, he watched, ready to leap to her rescue if need arose. He dared not answer the door himself lest another Greenham detective be there and his presence in some manner arouse suspicion. While Kirby was probably being sought more earnestly than himself, she had deceived the first Greenham man and it was probable she could do the same thing again. It was not cowardice that made him seek concealment, it was common sense. For if this were a Greenham agent ringing at the door, the failure of Kirby to open it as she had done for the other man would inevitably make the man anxious for a good look at her. Whereas, if she went to the door her very boldness would win again. Then he laughed silently from his watching place as Kirby opened the door and disclosed the cause for all this wild reasoning—a diminutive messenger boy, with a very deep bass voice and a most worldly manner.

"Miss Jessie Sigmund, lady? Message for youse, ma'am. Kin'ly sign here, an' don't forget the han'some blond that brings the good nooze. I always loves to bring telegrams to the ladies, ma'am, because they're so gen'rous. God bless their lovely eyes."

He inhaled smoke from his cigarette, tipped his cap a trifle to one side, and looked at Kirby with all the harmless impudence of a cocky young sparrow. He was about sixteen, but an old man in experience. Silently Kirby tipped him and closed the door upon his thanks.

"Did you see his eyes, Dick?" she asked. "There were pouches beneath them, and they were old, old! And his hand shook. Sixteen or seventeen—no more. And look at him! He never was a child; he has had no youth. It's for him, and thousands like him, that we are fighting—that they may have a fairer chance; that the children may see green fields and breathe fresh air! At times to-day I've wondered if I dared go on. But there are thousands of boys like him, right in this city, who will never have a chance unless those who make conditions that raise a boy like that are forced to make better conditions. Dick, the universal transfer is but the measure of our sword. If we succeed in our first move, what more may we not accomplish? We can't, we won't give up!"

"Give up, Kirby? Why, the fight is hardly started. But what about that telegram?"

She was holding it at arm's length. Telegrams held for her the dread they hold for all women who receive them rarely. She continued to stare at it.

"Poor Jessie!" she said slowly. "Her father may be dead."

Grant laughed.

"Kirby, a moment ago you frightened me. I thought you were an avenging angel, and angels, as I understand it, never marry. Now I know you're a woman, and women do marry, don't they?"

She flashed a smile that was his answer.

"But what shall I do with this?" she asked.

"Why, put it on a table where Jessie will see it the first thing when she comes home."

"But supposing it's very important. She'd want to know."

"You know where she went? Then phone her and tell her that it's here."

"And frighten her half to death! Men are so silly!" she exclaimed.

"All right," he chuckled; "we're back where we started. Put it on the table."

"But supposing it's very important? It will be hours and hours ——"

"Then open it yourself," he suggested. "If it's news she ought to have, telephone her. If it isn't you can easily explain ——"

"I wonder if I ought to?"

"I refuse to make the final decision," he smiled. "You know Jessie pretty well; it wouldn't be prying curiosity that would make you open it. She couldn't very well be offended."

She opened the message and read it; then she looked at Grant. Tiny lines appeared at the corners of her eyes; her mouth pursed bewitchingly in puzzlement.

"Listen," she commanded. She read:

"'Inform Mastermans cannot leave Denver for three weeks. Going on camping trip.

"'ADELE.'"

"What's the answer?" he inquired.

"You don't read the art news, do you? Not so much as I do, anyway. This telegram is from Adele Rohan, a great friend of Jessie's—they were together in the Latin Quarter in Paris. She's a portrait painter who's created a *furore* in the last year. A genius, with all of genius' eccentricities. It was in the papers a month ago that Masterman had commissioned her to paint the portrait of his little girl. You've read of her—Laurel Masterman, his invalid daughter? Jessie told me at the time that she'd be surprised if Adele ever executed the commission. She hates the very rich. She's half French and half Western, you know, with the exuberance of both temperaments. This is her method of flouting Masterman's millions. She wires a friend to inform Masterman: doesn't bother to inform him herself. Going on a camping trip when a ten-thousand-dollar commission is awaiting her pleasure! And Jessie told me that Masterman and Adele had never met. He simply saw some of her portraits of children at the last exhibition at the Academy, and wrote to her. He's never seen her!"

Her words were crisp and clear and her teeth met sharply over the last of them.

"Well?" said Grant.

"He's going to see her to-night!"

"Still I don't understand, Kirby."

"Men are stupid," she smiled. "Look, m'sieu, upon Ma'mselle Rohan, combination of cowpuncher and danseuse! Look! For you may not have a chance again, m'sieu. I might flout you in a second and refuse to talk with you. I am a genius; no mere worker at miniatures, unknown and humble. I am Ma'mselle Rohan, m'sieu, and if you read the papers and believe them, you must know that I have all the grace of a Frenchwoman and all the strength of a bronchobuster. Also, I am eccentric, rude and careless as to whom I offend. I despise millionaires. I work when it suits me; I come when I choose and I leave in the middle of a portrait if the mood seized me. For, m'sieu, I am Adele Rohan, and a genius before whom mere riches bow down. Do you understand? Look!"

And she tore the telegram across and then across again, dropping the pieces in a wastebasket.

"Kirby, you wouldn't! It's madness. I won't permit ——"

"We aren't married yet, Dick, you know."

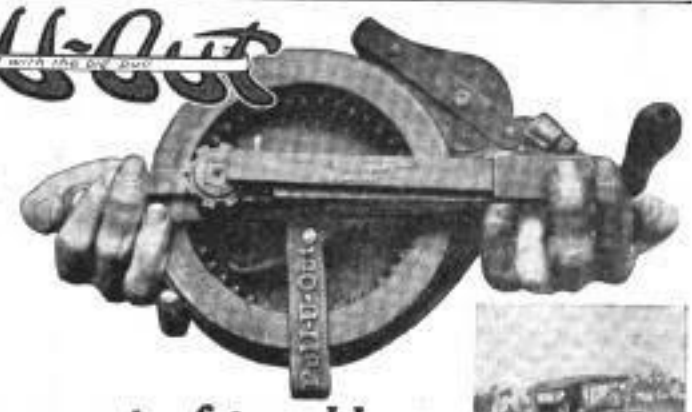
"Oh, no trouble at all! My case is a Belber—Fitall-equipped, you know—so I can get out comb, mirror or any toilet article I want, anywhere, any time."

Belber
TRAVELING GOODS

STYLE No. 870: The "Belber Ocean Greyhound" Wardrobe Trunk—garment hangers mounted on "pull-out" trolley so all clothes are in reach instantly; drawers capable of holding largest hats; secret drawer for valuables; garment-section lined with high grade Keratol.

THE QUALITY OF BELBER Traveling Goods extends to the most minute detail. Belber Fitall Bags and Suit Cases have an adjustable strap holder for your own toilet articles. Belber Wardrobe Trunks have a finesse in appointments that provides not only a place for everything, but the handiest and best arrangement possible.

There are many ways in which you can be deceived in buying Traveling Goods. There is one way to be safe—ask for Belber Traveling Goods and see that this trade mark is branded on the trunk, or bag, or suit case you buy—



BELBER TRADE MARK TRAVELING GOODS
"Outwear Travel"

On sale at good dealers' everywhere

Send for the beautiful book, "Outwearing Travel," illustrating and describing Belber Traveling Goods of every style for every purpose,—it is free.

Pull-U-Out
The little thing with the big pull

Consists of a winding drum, lever crank, 40 ft. of steel cable, two 7-ft. chains, 3 stakes. Weighs only 28 lbs. and goes in space 4x6x14 in.

Pulls you out of trouble

Here is the little machine you've heard so much about. Small enough to go into your tool box, yet powerful enough to pull the biggest auto out of mud or ditch. Simply drive in the stakes, hitch on, turn the crank. Out you come without delay, damage or cost.

Pull-U-Out is wonderful. It combines a rescuing device and a tow line—two things every auto should carry. It is also invaluable as a hoist about the house or garage. In public garages and factories it is better and cheaper than a chain block.

Does things no other machine can do

Will work in any position. Lifts or pulls. Is light, portable and inexpensive. Can be rigged up to do all manner of jobs which now require several men. *Guaranteed to deliver or money back.*

Pull-U-Out Portable Crane

We build a portable crane, which, used with Pull-U-Out, is a wonder. Weighs only 300 lbs. Costs much less than other cranes of same capacity, has longer reach and is quicker; can easily be moved about. Ask about it.

Write for booklet

Tells all about this marvelous little Pull-U-Out and the amazing things it does.

The old way—Everybody helps

Ever have to do this?

The new way—Let Pull-U-Out do it

Pull-U-Out Sales Co., 2025 Market Street, St. Louis, Mo.

Swift's Four Cut-out Calendar Dolls

Send to-day for your set

These big darlings, each with four beautiful costumes—all sixteen strikingly colored—are more than 18 inches tall, big as live new babies, can stand alone! Each doll is worth 25c. You will say you never saw such unusual calendars, even in the famous Swift's "Premium" series.

How your children will love them! How their little hearts will thrill with joy, when they dress and undress these big beauties!

You too must be stony-hearted if you will not find yourself smiling every day of 1917 as you look at these winsome little faces, and enjoying each season's change to a gay new costume.

Their Characters and Costumes

Who could resist Dashing Donald, the handsome boy doll, in any of his three gay sporting suits or his *surprise* costume?

Coy Clarabel with her bashful brown eyes, red lips and curly black hair would melt the heart of an iceberg. Nothing could be more fetching than her red, blue and green costumes.

Everyone loves Sweet Sylvia for her dewy violet eyes, and hair as golden as her nature. How pretty she looks in her white, rose, blue and red costumes!

As for Merry Myrtle, her brown hair and twinkling blue eyes are irresistible. In a pretty blue or pink or tan or scarlet costume she is sweet.

Send for these calendars—daily they will remind you of the rare quality of

Swift's "Premium" Ham and Bacon

How to Get the Calendars

One doll with four costumes, forming a complete calendar for 1917, will be sent to any address in the United States for 10c, in coin or stamps,

or—Trade Mark end of five Swift's "Premium" Oleomargarine cartons,

or—4 labels from Swift's "Premium" Sliced Bacon cartons,

or—4 covers from Brookfield Sausage cartons,

or—6 Maxine Elliott Soap Wrappers,

or—20 Wool Soap Wrappers.

[If you live in Canada send ten cents extra on each doll ordered to pay duty.]

NOTE—All four dolls—with four costumes for each, making four complete calendars, sent for 40c or four times the number of labels or wrappers required for each doll.

Swift & Company, 4117 Packers Ave., Chicago

DINGEE ROSES Sturdy as Oaks are always grown on their own roots. 66 years' experience. Satisfaction and safe arrival guaranteed. Dingee "Guide to Rose Culture." Describes over 1000 varieties of roses and other flowers and how to grow them. It's free. Send today. The Dingee & Conard Co., Box 143, West Grove, Pa.

FUNNYBONE No. 4 is now ready. It contains the latest monologues, sketches for two males, and male and female, minstrel first-parts, parodies on popular songs, sidewalk patter; comic stories for after-dinner Speakers, etc., by the same author who writes for Al Jolson, Nat Wills, Frank Tinney and Nora Bayes. FUNNYBONE No. 4 costs 35 cents; or $1 per year (four issues), subscriptions can begin with No. 1 if desired.

FUNNYBONE PUBLISHING CO., 1493 Broadway, New York.

What 15c Will Bring You from the Nation's Capital

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published **at the Nation's Center**, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new Friends. The Pathfinder, Box 42, Washington, D. C.

"But the risk! Masterman may not know Miss Rohan, but his friends ——"

"I told you she was eccentric. She knows no one in New York but Jessie. She divides her time between Colorado and Paris; she is in New York merely between ocean liner and transcontinental train. And even if someone who has met her in Paris or Denver should see me—there is risk in everything, Dick. Where else can I go in safety? Some boarding house? I refuse. The risk of this other scheme tempts me. And, besides, what was it you said a moment ago? The man who came here—the last thing in the world he expected was for me, in flight from his fellows, to answer the bell. Will Masterman dream that I dare go to his own house? Remember Poe's story of the purloined letter. The safest hiding place is the most obvious; no one thinks you will be there. I am going to Martin Masterman's."

He knew how useless it was to battle against her will when this reckless mood was upon her. Moreover, there was hard common sense in what she proposed. She must go somewhere to hide. Why not in Masterman's house? Still he objected.

"Supposing Miss Rohan comes on after all? You'd be arrested as an impostor."

"I can risk that, Dick, in a war like this."

"But how will you manage? You haven't clothes ——"

"I'll take Jessie's suitcase with a few things; I'll leave a note telling her what I've borrowed. To-morrow I'll go shopping. I'll say my trunk is on the road somewhere. I have plenty of money; I took all that was in the apartment—two hundred dollars." She looked suddenly at him. "And you, Dick; have you any money?"

He smiled assurance.

"All I own in the world is in my pocket, Kirby. I'm stronger financially than you are. I have three hundred dollars. Not enough to make it worth while to bother with a bank account, and it's always with me. I'm all right. Do you really insist on going to Masterman's house?"

"I do. From there I'll dictate terms and never be suspected. And you can telephone me in perfect safety. Ask for Miss Rohan. Dick, what we've started we must finish, mustn't we? I am certain God is with us."

"He is always on the side of justice," he answered.

"Then since we work for justice, there is no wrong in my impersonating Adele Rohan. And luckily I can paint a large portrait as well as a miniature. By the time she is due here I will have worked out our plans—with your help, for we must see each other. And after that let Masterman find out; I don't care. But where will you be?" she asked with quick concern.

"In some lodging house," he told her. "I'll be safe; but, Kirby, go slow. Let's see how this transfer business works out before we demand more. You know it's the custom of the ages after all, and you and I—well, let's go slow."

"You don't believe we're doing wrong?"

"No, not that. But we want to see how it works out."

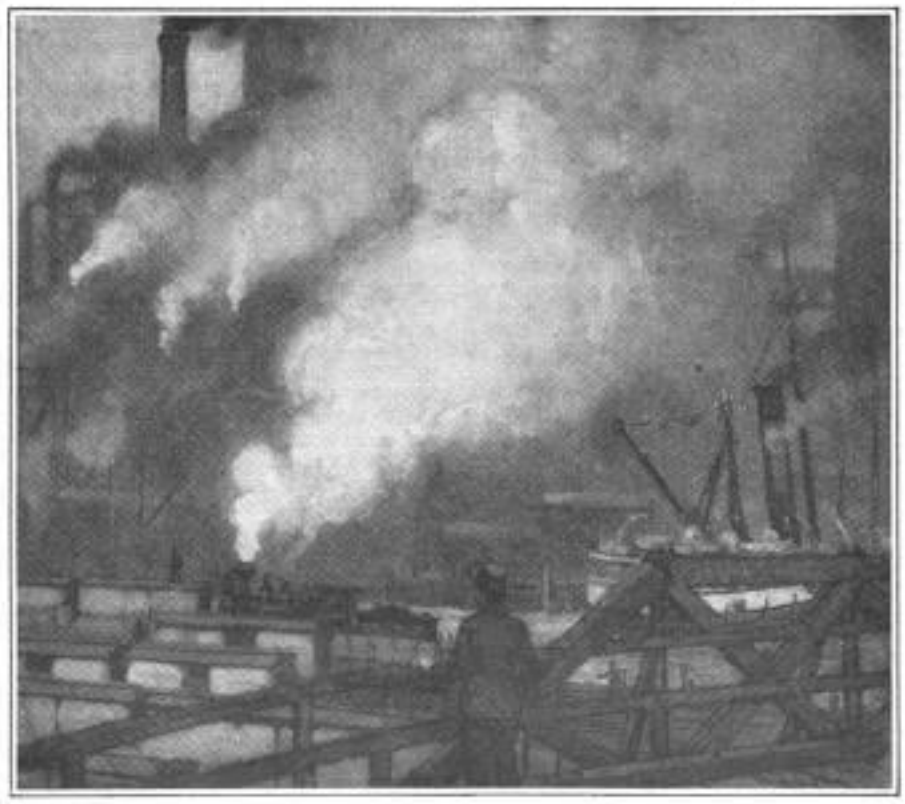
"It will work out for the benefit of the people whose war we wage," she answered.

She disappeared into a bedroom, where she put some things of Jessie Sigmund's into a suitcase. Then she reëntered the little parlor and wrote a note to Jessie. It was a request to keep her visit secret and to forgive her for not waiting to see her friend.

"It will do," she said, after reading it to Dick. "Jessie is my dearest girl friend, and what would make another suspicious will not have that effect on her."

"But you don't tell her about the telegram," remonstrated Dick.

"And give the whole game away? That would be bright!"



He flushed.

"I'm dull. But we'd better not leave the pieces of the message." He drew them from the basket and burned them. They looked about the apartment as a shipwrecked couple might look at the island that had given them succor, and which they dreaded leaving for the flimsy craft they had constructed themselves.

Then, having telephoned for a taxi and learned that it waited below, they left the apartment. Kirby gave the key to the night hallboy, and did not wait to notice if he was surprised. Undoubtedly he was, for the Greenham operative had given him a generous tip, and almost immediately he crossed the street and told the waiting detective that it could not have been Miss Sigmund who had opened the apartment door for him. But by that time the taxicab had rounded a corner and was gone. Later its chauffeur informed the Greenham operative that he had dismissed his charges at the terminal, but no one there remembered having seen a couple who answered to the descriptions of Kirby and Dick either take a train or another taxi. The reason was obvious. They had separated. Kirby had crossed the street and taken a taxi alone, for the house of Martin Masterman. Dick had gone to the express office and ordered the suitcase sent to Miss Adele Rohan, care of Martin Masterman. Then he had vanished into the subway.

While Terence Greenham reported to Masterman, and while the obstinacy of Lindley Jackson prevented Masterman from defying Kirby's demands, that young woman, thoroughly worn out by her exciting day, was sleeping in an apartment provided by the nervous, elderly wife of Masterman, who, born to comparative poverty, had never really grown used to wealth—at least, not so used to it that she dared snub genius. And genius had very brusquely refused to talk, but had demanded to be shown her room. She even refused to look at the sleeping child whom she was to begin painting on the morrow or soon after. For Kirby had heard Terence Greenham's voice as she passed the financier's library, and bed seemed the safest haven for her.

ONE YEAR of the HUDSON SUPER-SIX

A year ago a stranger—an enigma. A new invention with astounding claims. It perfected the Six and turned interest back from added cylinders. It showed the way to real efficiency. Holder of all worth-while records. Applauded by 25,000 enthusiastic owners. The Largest Selling Front Rank Car.

A STORY UNPARALLELED IN AUTOMOBILE HISTORY

Two years ago, with us and with others, the trend was toward motors of the V-type.

We were then the foremost builders of the light-weight Six. Its advantages and limitatiops were fully understood by us.

Its smoothness of operation quickly made the Six the accepted type over Fours. But as the motors were developed limitations were encountered which prevented the realization of engineering ideals.

The problem was approached principally from the standpoint that if added cylinders were adopted, all such limitations would be banished.

For a time it seemed the Six would cease to command the leadership it had maintained.

Just before the New York Automobile Show one year ago, all interest centered in motors of the multi-cylinder type.

But at the Show, the Hudson Super-Six made its début. Then instantly interest swung to it.

We claimed a new type. The factor which had limited the efficiency of all types—Fours, Sixes, Eights and Twelves—had been discovered and overcome.

A new principle in design had been revealed.

What had been sought by leading engineers for years had been found by Hudson.

The simplicity of the Six could be retained. Motor limitations had been removed. Added cylinders were not needed.

So leadership, because of that, was accorded the Super-Six.

The trend to the multi-cylinder was arrested.

Numerous makers gave up their Eight and Twelve cylinder plans.

Let us review the year's developments:

The Super-Six Showed the Way

Hudson engineers approached the problem from a new angle. They solved it with a mathematical principle upon which a basic patent was granted.

By that single invention the most sought-for solution to motor car problems, regardless of the number of cylinders, was found.

Greater power was obtained. More flexibility was shown and when the car was tried for endurance it successfully met tests never imposed on motor cars before. These things we think essential to efficiency. *They are efficiency*. You will see by what the Super-Six has done in winning all worth-while stock car records that our claim to 80% increased efficiency is a modest boast.

Greater Proof of Endurance

Until the coming of the Super-Six practically all records for speed, acceleration, hill climbing and endurance were held by Fours. The Sixes had not done much.

A few records had been won by cars of the multi-cylinder type.

But the Super-Six instantly changed that condition.

We first proved the endurance of the Super-Six motor by running a stock chassis 1819 miles in 24 hours. That beat the best previous endurance record by 52%. It is perhaps the world's most coveted record.

We showed greater power by winning the Pike's Peak Hill Climb, the greatest "non-stock" event of its kind. And we defeated twenty famous contenders in the world's most trying power test.

We proved road service by driving a 7-passenger Super-Six Touring Car from San Francisco to New York in 5 days, 3 hours and 31 minutes.

Then we turned around and went back, completing the round trip in 10 days and 21 hours. Thus twice in one round trip with a single car we established America's greatest proof of endurance. It was the first car ever to attempt the round trip against time.

Our invention gives more power without added cylinders or weight. It gives quicker acceleration and adds a yet unknown degree to the endurance of the motor.

All this came from the solution of that one problem which engineers had been unable to solve. The power that had been wasted in the motor itself was delivered where it was useful and available.

This Turned Interest Back to the Six

But many did not distinguish between a Six and the Super-Six.

As a result all makers of Sixes profited. Many buyers thought by what the Super-Six had shown that any good Six could do as well. So when they found it difficult to get prompt delivery of a Super-Six they accepted a Six.

Now they know there is no similarity between Sixes and the Super-Six save in the number of cylinders used.

They know that without the Super-Six invention all motors are limited as to efficiency. They know that with the Super-Six invention any motor of one, two, four, six, eight or twelve cylinders delivers more power—is more flexible and will give longer service, many times over.

And they know that being patented such efficiency is exclusive to the Hudson Super-Six. It is the only known principle by which such efficiency may be obtained.

The Gasoline Saver

The Super-Six possesses many other exclusive advantages.

One is the gasoline saver, a device which adds gasoline mileage. By it the low-grade gasoline now on the market is made more efficient. At a nominal charge it can be quickly installed on any Hudson Super-Six not so equipped.

Note the variety of models in which the Hudson Super-Six is produced. Every taste is met. Every comfort provided for.

It is a fine car in every sense of the word. Men who want the finest will not be content with less.

One year of the Hudson Super-Six convinces us it is the only permanent type thus far produced.

PAIGE

The Most Beautiful Car in America

Introducing-

"THE MOST BEAUTIFUL CAR IN AMERICA"

At the Automobile Shows in New York and other principal cities, we shall introduce what we sincerely believe to be the most beautiful car in America.

This, we admit, is a bold and sweeping statement.

It is probably the most sensational announcement that has ever been made by a manufacturer of medium-priced automobiles.

But we mean precisely what the words imply, and only ask that you reserve final judgment until you have seen our exhibits with your own eyes.

It is not our purpose, in this advertisement, to describe one single detail of the latest and greatest Paige Achievement.

We merely invite you to attend the Automobile Shows—key your expectations up to the very highest pitch—and determine for *yourself* whether or not we have been guilty of exaggeration.

A moment's reflection, however, must convince you that we would not and could not make any such claim unless it were substantially correct.

Our entire reputation and position in the motor car industry depend upon the accuracy of our public utterances.

Knowing this, it is not likely that we would voluntarily assume responsibility for a statement which could be refuted to our everlasting discredit.

If, though, you are still inclined to doubt, please remember that Paige has been one of the truly *creative* factors in the motor car industry.

From the very beginning our body designs have been absolutely unique and refreshingly distinctive.

If imitation is the most sincere form of flattery, we should indeed feel elated, because it is generally admitted that Paige designs have served as the models for practically every quality car in the industry.

Nothing could more strikingly emphasize the fact that Paige has *always* built beautiful cars—and can be logically expected to produce—"The Most Beautiful Car in America."

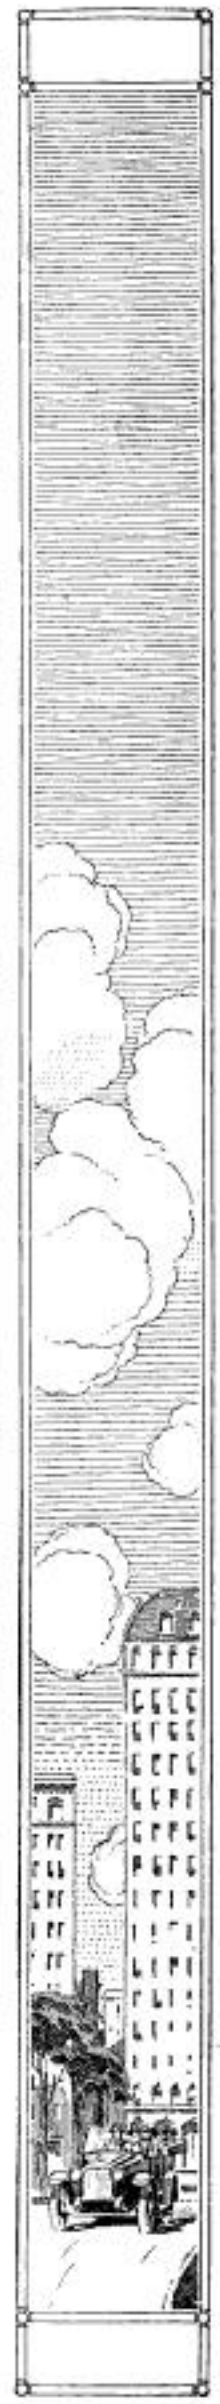
So far as the mechanical features of our product are concerned, you need only consult the thousands of owner records which have been established during the past seven years.

The Paige motor and chassis are world famous. They have been developed by the ripest engineering genius that the industry affords.

In them, we have incorporated every improvement, every refinement, that could possibly increase the efficiency of a smooth-running, ever-dependable motor car.

As we have said time and time again, you can only expect to get out of an automobile precisely what the manufacturer puts into it.

There is no substitute for basic quality. To build the truly great things in this world one must work with his Heart quite as well as with his Hands.



But for the present, we are going to say no more. When the doors of the first Automobile Show are thrown open to the public, our case will be in the hands of the jury.

It is then that we want you to remember this advertisement—every word of it—and determine for yourself whether or not our claims are justified.

Will you make it a special point, please, to see—"The Most Beautiful Car in America"?

At the New York Show—Space A-4

THE WRONG PEW

(Continued from Page 7)

She pushed a wall key, a center chandelier of frosted electric bulbs springing into radiance. In its immediate glare Mrs. Loeb regarded her daughter-in-law, inert there beside the window.

"Get your embroidery, Sadie, and come down by me and Etta till the men get home to supper. I want her to show you that cut-work stitch she's putting in her lunch napkins."

"Ugh!"

"What?"

Mrs. Bertha Loeb approached with the forward peer of the nearsighted. Time and maternity had had their whacks at her figure, her stoutness in no way enhanced by a bothersome shelf of bust, but her face—the same virile profile of her son's and with the graying hair parted tightly from it—guiltless of lines except now, regarding her daughter-in-law, a horizontal crease came into her brow.

"You want to go sit a while by *Grossmutter* then?"

"No. Gee, can't—can't a girl just sit up in her room quiet? I'm all right."

"I didn't say, Sadie, you wasn't all right. Only a young girl with everything to be thankful for don't need to sit up in her room like it was a funeral, with her mother and sister and *Grossmutter* in the same house."

On the mahogany arms of her chair Mrs. Herman Loeb's small hand closed in a tight fist over her damp wad of handkerchief.

"I—I ——"

"What?"

"Nothing."

"Sadie, you been crying again."

"What if I have?"

"A fine answer from a girl to her mother."

"I—you—you drive me to it—your questions ——"

"I shouldn't have the interest of my own son's wife at heart!"

"Can't a girl get—get blue?"

"Blue?"

"Yes, blue."

Mrs. Bertha Loeb reached out her hand with its wide marriage band slightly indented in flesh; the back of that hand was speckled with large, lightish freckles and trembled slightly.

"Sadie, ain't there just no way we can make you feel happy in St. Louis? Last night through the door to my room I couldn't help hear again you and Herman with a scene. Take your feet down off the plush, Sadie."

"Oh, yes, you heard, all right."

"Ain't you got a good home here, Sadie? Everything in the world a girl could wish for! A husband as good as gold, like his poor dead father before him. Ain't we done everything, me and my Etta, to make you feel how—how glad we are to have you for our Hermie's wife?"

"Oh, I know, I know."

"What maybe we felt in the beginning—well, wasn't it natural, an only son and coming such a surprise—all that's over now. Why, it's a pleasure to see how *Grossmatter* she loves you."

"I—I'm all right, I tell you."

"Didn't we even fix it you should go in a flat on Berlin Avenue housekeeping for yourself, if you wanted it?"

"Yes, and tie myself down to this dump yet. Not much!"

"Well, I only hope, Sadie Loeb, you never got in your life to live in a worse dump. I know this much, I have tried to do my part. Did I sign over this house to you and Herman for a wedding present, giving only to my own daughter the row of Grand Avenue stores?"

"I never said you didn't."

"Have you got the responsibility even to run your own house, with me and Etta carrying it on like always?"

"Am I complaining?"

"Do I ask of you one thing, Sadie, except maybe that you learn a little housekeeping and watch how I order from the butcher, things what every wife should know if she needs it or not? In the whole year you been my daughter, Sadie, have I asked of you more than you should maybe help the upstairs girl a little mornings, and do a little embroidery for your linen chest, and that maybe, instead of sleeping so late till noon every morning, you should get up and have breakfast with your husband?"

"If you begin going over all that again I—I'll just yell!"

"With anybody pouting in the house I just ain't got heart to do nothing. I don't see, Sadie, you had such fine connections in the East that ——"

"You just leave my friends in the East out of it. If you wanna know it, they're a darn sight better than the wads of respectability I see waddlin' in here to swap *Kaffee Klatsches* with you!"

"Just let me tell you, Sadie Loeb, you can be proud such ladies call on you. A girl what don't think no more of her husband's business connections than not to come downstairs when Mrs. Nathan Bamberger calls! Maybe our friends out here got being good wifes and good housekeepers on the brain more as high kicking in New York; but just the same Mrs. Nathan Bamberger, what can buy and sell you three times over, ain't ashamed to go in her Lindell Avenue kitchen, when her husband or her son likes red cabbage, what you can't hire cooked, or once in a while a miltz."

"Say, if I've heard that once, I've ——"

"Then too, Sadie, since we're talking—it's a little thing—I haven't liked to talk about it, but I—I got the first time I should hear the word Ma on your lips. You think it's so nice that a daughter-in-law should always call me Say, like a bedpost?"

"I—I can't, Mrs. Loeb—it—it just won't come—mother."

"Don't tell me you don't know any better! A girl what can be so nice with poor old blind *Grossmutter*, like you been, can be nice with her mother-in-law and sister-in-law too, if she wants to be. I didn't want I should ever have to talk to you like this, Sadie, but sometimes a—a person she just busts out."

And then Mrs. Herman Loeb leaped forward in her chair, her small tight fist pounding each word:

"Then let me go! Whatta you holding me here for? Let me go back, Mrs.—mother! Let me go! I don't deny it, you're too good for me round here. I don't fit! Let me go back to the old room and—my old roommate where—where I belong with my—my crowd. You tell what you just said to Herm! Get him to let me go back with him on his trip to-morrow night. Please, Mrs.—mother—please!"

"You mean to New York with him on his business trip for a visit?"

"Call it that if you want to, only let me go! You—you can tell them later that—that I ain't coming back. I—I've begged him so! I don't belong here. You just said as much yourself. I don't belong here. Let me go, Mrs. Loeb. Let me go! You tell him, Mrs. Loeb, to let me go."

Mrs. Bertha Loeb suddenly sat down, and the color flowed out of her face.

"That I should live to see this day! My Herman's wife wants to leave him! Oh, my son, my son! What did you do to yourself! A di—a separation in the Loeb family! I knew last night when I heard through the door and how worried my poor boy has looked for months, that it didn't mean no good. Since her first month here I've seen it coming. I did my part to ——"

"Yes, Mrs. Loeb, and I done my part!"

"Oh—oh—oh, and how that boy of mine has catered to her! Humored her every whim to keep her contented! I always say it's the nix-nux wifes get the most attentions and thanks from their husbands, I ——"

"I done my part. I tried as much as you to make myself fit in out here. I—I just ain't your kind, Mrs. Loeb. Yours and—Etta's. I—I can't be saving and economical when I see there's plenty to spend. I—I was raised with my brother down in Shefsky's theater, where nobody cares about monogrammed guest towels and about getting up before noon if they don't want to. The evenings here kill me! Kill me! I hate pinochle! I gotta have life, Mrs. Loeb. I hate *Kaffee Klatsches* with a lot of—I—I tell you I got different blood in my veins, Mrs. Loeb, I ——"

"No, no, Sadie Mosher Loeb, that kind of talk don't go. You got just the same *shaddos* like us. Saturday is your ——"

"Yes, yes, I'm in the right church all right, Mrs. Loeb, but I'm in the wrong pew. Mrs. Loeb, please can't you understand I'm in the wrong pew!"

And all her carefully confined curls, springing their pins, fell forward a shivering mass.

Here, Indeed, *Is*

E. H. SOTHERN

As Angelo, the deformed and irascible banker of Naples, and again as the uncanny Duke d'Vesuvius, E. H. Sothern is indeed E. H. Sothern.

In all the splendid program offered during its twenty years of leadership among motion-picture producers

THE VITAGRAPH COMPANY

has released no more unusual, intensely dramatic photoplay than

"THE MAN OF MYSTERY"

A Drama of a Man Who Returned from the Valley of the Shadow, to Live Again Among Those Who Thought Him Dead.

Supported by the popular actress, Miss Charlotte Ives, Mr. Sothern weaves the spell of his genius through all the tense situations of this unusual play.

"The Man of Mystery," and its two classic predecessors, "The Chattel," and "An Enemy to the King," record Mr. Sothern's genius incomparably on the motion-picture film.

(Continued from Page 41)

In that surcharged moment and briskly exuding a wintry out-of-doors, Mr. Herman Loeb entered and stood for a moment in the open doorway, in the act of removing his greatcoat.

"Herman, my son! Oh, my son!"

"What's wrong, ma? Sadie!"

"It's come, Herman, like I always predicted to Etta it would. Your wife, my poor boy, she wants to leave you. This should happen to a Loeb yet—a separation in the family! My poor boy! My poor boy!"

"Why, ma, what—what's Sadie been telling you?"

At that Mrs. Herman Loeb raised her streaming face, her eyes all rid of their roguery and stretched in despair.

"I didn't want to let out to her, Herman. I wanted to make a quiet get-away, you know I did. But she nagged me! She nagged me!"

"Ma, you shouldn't ——"

"She heard us last night and heaven knows how many nights before that. She's wise. She knows. She knows it's been a year of prison here for ——"

"Oh, my poor boy! Prison! A girl like her finds herself married into one of the most genteel families in St. Louis, a girl what never in her life was used to even decent sheets to sleep on!"

"Ma!"

"Till three o'clock in the afternoon she told me herself how her and them girls used to sleep, two and three in a boarding-house room, and such a mess!"

"Ma, if you and Sadie don't cut out this rowing I'll put on my hat and go back downtown where I came from. What is this, anyway, a barroom or a home out on Washington Boulevard? You want *Grossmutter* to hear you? Ma! Sadie!"

"My poor boy! My poor boy!"

"I didn't start it, Herm. I was sitting up here quiet. All I ask, Herm, is for you to take me back to New York to-morrow night on your trip. Let me go, Herm, for—for an indefinite stay. It ain't this house, Herm, and it ain't your mother or your sister and—and it ain't you—it ain't any one. It's all of you put together! I can't stand the speed out here! There ain't none!"

"I guess she wants, Hermie, for her bad-girl notions, you should give up the best retail business in St. Louis and take her to live in New York, where she can always be in with that nix-nux theatri——"

"No, no, he knows I don't want that!"

"If she did, ma, we'd go!"

"Herm knows it was all a mistake with me. I didn't know my own mind. I wanna go back along where I came from and where I belong! It ain't like I was the kind of a girl with another man in the case ——"

"We should thank her, Hermie, there ain't more scandal mixed up in it yet!"

"Ma!"

"My poor boy, what could have had his pick from the first girls in St. ——"

"Ma!"

There was an edge to Mr. Loeb's voice that had the bite of steel. He tossed his greatcoat to the snowy bed, walking between the bed end and the mantel, round to the crouched figure of his wife.

"There, there, Sadie!" he said in his throat, and stooping over her; "I give in! I give in!"

Her head flew up.

"Herm!"

"My son!"

"No, no, ma, it's no use trying to put anything but a jingle-bell harness on poor little Jingle Bells. She don't understand us any more than we—we can understand her!"

"That's it, Herm; that's why I say if you'll only let me go!"

"Oh, my God! A separation in the Loeb family! My poor dead husband! My daughter Etta, president of the Ladies' Auxiliary! *Grossmutter* ——"

"Sh-h-h, ma, you want *Grossmutter* to hear!"

"My son, the cleanest, finest ——"

"Ma!" There were lines in his face as if a knot at his heart were tightening them. "You mustn't blame her, ma; and, Sadie, you mustn't feel this way toward my mother. Nobody's to blame. I been thinking this thing over more than you think, Sadie, and I—I give in. She's a poor little thing, ma, that's been trapped into something she can't fit into."

"Yes, Herm, that's it."

"It's natural. My fault too. I carried her off like a partridge. Don't cry, little Jingle Bells! To-morrow night we leave for New York, and when I come back you're going to stay on with ——"

"Sylvette says ——"

"With friends, indefinitely. Don't cry, little Jingle Bells, don't! Sh-h-h, ma! There, didn't I tell you you'd rouse *Grossmutter!*"

With her hands stuffed against rising sobs, his mother ceased rocking herself to and fro in her straight chair, her eyes straining through the open door. A thin voice came through, querulous, and then the tap-tap of a cane.

Mr. Herman Loeb answered the voice, standing quiet at the bed end.

"Nothing is the matter, *Grossmutter*."

"Come and get me, Herman."

"Yes, *Grossmutter*."

He hastened out and reëntered almost immediately, leading Mrs. Simon Schulien, her little figure so fragile that the hand directing the cane quavered of palsy, and the sightless face, so full of years and even some of their sweetness, fallen in slightly, in presage of dust to dust.

"Bertha?"

"*Ja, Mutter.*"

"Here, *Grossmutter*, by the window is your chair."

He lowered her to the red velvet arm-chair, placing her cane gently alongside.

"So!"

She moved her sightless face from one to the other, interrogating each presence.

"Sadie?"

"Yes, *Grossmutter*."

"How you holler, children. Everything ain't right?"

"Yes, *Grossmutter*. Ma and Sadie and me been making plans. To-morrow night Sadie goes with me to New York on my trip. A little pleasure trip."

The little face, littler with each year, broke into a smile.

"So, little Sadie-sha, you got good times, not? A good husband and good times! New York! To New York she goes, Bertha?"

"*Ja, Mutter.*"

Mrs. Schulien fell to crooning slightly, redigesting with the senility of years.

"To New York! Nowdays young wives got it good. How long you stay, Hermie?"

"It's just my Pittsburgh-New York trip, *Grossmutter*."

"Sadie, come here by *Grossmutter*."

She approached with the tears drying on her face, her bosom heaving in suppressed jerks.

"Yes, *Grossmutter*." And patted the little clawlike hand, and the bit of white hair beneath the fluted cap, and a bit of old lace fastened with an old ivory cameo and covering the old throat.

"You got good times, not?"

"Yes, *Grossmutter*."

"And you'm a good girl, Sadie. Eh? Eh?"

"Y-yes, *Grossmutter*."

"When you come back from New York, you bring *Grossmutter* a fine present, not?"

"Yes, yes, *Grossmutter*."

"A quilted underjacket wholesale, for when *Grossmutter* rides out in wheel chair."

"Y-yes, *Grossmutter*."

To the saturnine, New York of its spangled nights is like a Scylla of a thousand heads, each head a menace. Glancing from his cab window one such midnight, an inarticulate expression of that fear must have crept over and sickened Mr. Herman Loeb. He reached out and placed his enveloping hand over that of his wife.

"Well, Sadie, you take good care of yourself, girl. No matter how we decide to—to end this thing, remember you're my wife—yet."

"Yes, Herman," said Mrs. Loeb through a gulp.

"Don't stint, and remember how easily you get cold from drafts."

"I won't. I will."

"If you find yourself too crowded in that room with your friend, get a better one farther away from the theaters, where it isn't so noisy—maybe by yourself."

"I'll see."

"You won't be afraid to go back to that room now with Sylvette still at the show?"

"N-no."

"If I was you—now mind, I'm only suggesting it—but if I was you I wouldn't be in such a hurry about getting back in that roof show, Sadie. Maybe in a few days something better may show up or—or you'll change your mind or something."

"I gotta get back to work to keep from thinking. Anyway, I don't want to be sponging on you any longer than I can help."

"You're my wife, aren't you?"

"You have confidence in a man who lives up to his promise."

You like and trust a man who lives up to his promises.

You like and trust a tire that lives up to *and beyond* its promises.

That is why motorists have used United States Tires so consistently that our sales increases the past year on all the five types of tires are simply phenomenal and unprecedented.

Wise motorists have bought and continue to buy only those tires that live up to promises.

(Concluded from Page 43)

She sat, a small cold huddle in the center of the cab seat, toward him, her quivering face flashing out as street lamps bounced past. They were nearing the great marble façade of the Seventh Avenue Terminal.

"Herman I—I hate to see everything bust up like this—you—you such a prince and all—but like Syl says, I—I guess all fools ain't dead yet!"

"You've had time to work this thing out for yourself now, Sadie, but like I was saying before, anybody can play stubborn, but—but it's a wise person who ain't ashamed to change his mind. Eh, Sadie? Eh?"

They were sliding down a runway and drew up now alongside a curb. A redcap, wild for fee, swung open the cab door, immediately confiscating all luggage.

"No, no, not that! You carry that box, Herm. It's the padded underjacket for *Grossmuller*. Tell her I—I sent it to her, Herm—with—with love."

"Yes, Sadie."

She was frankly crying now, edging her way through the crowd, running in little quick-steps to match her pace to his.

At the train side during the business of ticket inspection she stood by, her palm pat against her mouth and tears galumphing down. With a face that stood out whitely in the gaseous fog, Mr. Loeb fumbled for the red slip of his berth reservation.

"Well, Sadie girl, three minutes more and ——"

"Oh—oh, Herm!"

"If you feel as bad as that, it's not too late, Sadie. I—you—it takes a wise little girlie to change her mind. Eh? Eh?"

"No—no, Herm, I ——"

He clenched her arm suddenly and tightly.

"If you want to come, girl, for God's sake now's your time. Sadie, honey, you want to?"

She shook him off through gasps.

"No, no, Herm, I—I can't stand it—it's only that I feel so bad at seeing you—no—no—not—not now."

The all-aboard call rang out like a shout in a cave.

He was fumbling at his luggage for the small pasteboard box, haste fuddling his movements.

"I'll be in Pittsburgh to-morrow till seven, honey. Sleep over it, and if you change your mind catch the eleven-forty-five St. Louis flyer out of here to-morrow morning, and that train'll pick me up at Pittsburgh."

"Oh, I ——"

"You be the one to bring this box home, with your own little hands, to poor *Grossmuller*, honey, and—and if you don't change your mind, why—why, you can send it. You be the one to bring it to her, honey. Remember, it's a wise girlie knows when to change her mind!"

"Oh, Hermie—Hermie!"

"All—aboard!"

With her hands clasped and her uncovered face twisted, she watched the snake-like train crawl into oblivion.

When she reëntered the taxicab she was half swooning of tears.

"Don't cry, baby," said the emboldened chauffeur, placing the small pasteboard box up beside her.

In the great old-fashioned room in Fortieth Street—of two beds and two decades ago—she finally in complete exhaustion slid into her white iron cot against the wall, winding an alarm clock and placing it on the floor beside her.

Long before Miss Sylvette de Long, with her eyelids very dark, tiptoed in and rubbing the calves of her legs in alcohol undressed in the dark, she was asleep, her mouth still moist and quivering like a child's.

At nine-thirty and with dirty daylight cluttering up the cluttered room, the alarm clock, full of heinous vigor, bored like an awl into the morning.

THE LUCK OF A SOURDOUGH

(Continued from Page 12)

"Worth lookin' at, eh—when he draws a salary of a hundred thousand a year?" says a young lad beside me.

"Who? He does?" I says, too miserable to care much; but he had spoke decently.

"Yup! That's Lounsberry. He draws it; and just sticks at that desk with nothing on it. Some salary! He's a managing director for his companies."

After a spell it reached me—a hundred-thousand salary! I leaned on the mail box, looking up. Once the gray man glanced out and I looked away; then back when he was writing on a pad. It came noon, and he was still there; and so was I, thinking mighty bitterly how one year of his pay would make the Group into a producer. Suddenly a spruce chap in blue serge came down the steps and hung round a bit before he asked:

"Did you wish something with the offices?"

"No," I says.

I was too melancholy to leave. I just kept staring. A hundred thousand a year! The Group could make me that, once started. The gray one took up a phone presently and looked out at me; then he got up nervously. About then another fellow came out and asked:

"Was you looking for somebody?"

"Just at a man who can draw a hundred-thousand salary," I says sadly.

Soon the gray guy inside spoke in the phone again, smiled abruptly, and next minute walked forth and says to me:

"Is that really all you wanted?"

"Yes, sir," I says. "It's a lickin' big wage."

"I work for it. I don't get much vacation," he says; and, lower:

"Wish I did. Had your lunch? Then come and eat with me; we'll go to the club and be peaceful."

"All right; I'll go you," I says; for in the North we are friendly quick.

He had pie and tea, and so did I, for I could not eat in the city like when at home; it made my head buzzy. He said it did his too; and he had just been East and the heat laid him out.

"Where you from?" he says. "A long way, I think."

"From the North—Alaska," I says, and I got uncomfortable—I wasn't going to even tell the locality, for fear something about the Group would come out; and I was through feeling like a kicked dog.

He didn't know it was my last day, but I let that out somehow, and he kept asking more—was I in Southeastern or Southwestern Alaska? And to my nodding to the last he said:

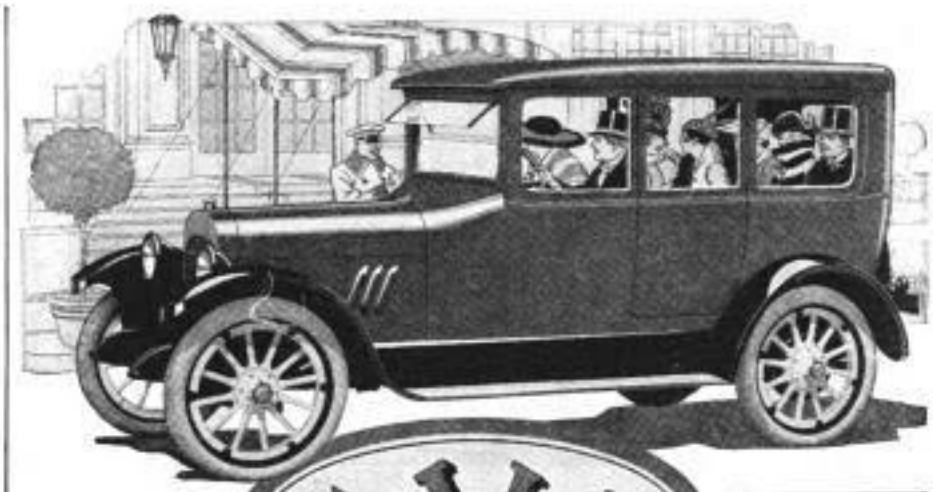
"Come down with something to promote?"

"No," I says.

"Mining man, though? I can nearly always spot 'em."

I ate my pie and the quiet waiter brought a good-smelling smoke, which he lit for me; and we got to speaking of climates, and whether rubber or leather was the best footwear for where I was, and if ladies ever took trips in there. I said sure they could, in the right clothes, with a guy who didn't mush too fast or too far with them. Of course the road-house bunks are pretty hard.

"I got a swell spring and mattress on my bed," I says; "bought from an outfit that was drilling through there and gave up. And I got a camp in the prettiest little valley in that section—water at the door and a fine garden, the hills flamin' with fireweed right now, an' salmonberries ripe. My mine's farther up the hill—a tough climb too; but you can see the whole world when you git there. You ought to see Bingo, my otter—friendly little sport!"



"How tame will they get?" he says, excited. "I had a fox when I was a kid in Dakota. My wife would be crazy over your place; she hates a town!"

"I sure got no cause to like 'em, bein' called a liar and a thief, and more," I says, and heard myself breathing noisy as I thought back. "I was made a mark of by a smilin'-eyed, honest-seemin' girl—six hundred and eighty blowed in two days on her! And then—she was in a show."

"There's others—good ones," he says. "Me and the missus met on a Saturday, and Monday began a wedding trip, with a couple of pack horses, from Denver to Laramie. We had the stock, and she said we'd save the train fares to buy furniture. We been together ever since; I ain't took one trip alone."

After a minute he showed me a little picture, and said that was his boss.

"If I had somebody I could go home and grind along a couple more years, till I open up some more, because capital's comin' into

DAVIS

A Car You Can Trust for Life

For Seven Years Heartily Endorsed by Owners

The Davis has passed the acid test of motor-car worth with flying colors.

For seven years owners have enthused over its performance—its quiet, powerful, sweet running motor, its dependability under all conditions, and its beauty, riding comfort and staunchness.

But by more than enthusiasm have Davis owners here and abroad shown faith in the car that has served them so well. A surprisingly large number still drive the Davis they purchased, not only recently, but as far back as four, five, six and seven years ago.

Our records also show that of those who have bought new models an astonishingly large percentage have re-chosen a Davis in preference to any other make. We believe no car in the country, of whatever class or price, can show such a tremendous proportion of re-sales, the practical endorsement of those who know the car best—the owners themselves.

Built with the utmost care, of the best standard parts on the market, the Davis is a car you can trust under all conditions. There is perfect harmony in its design—absolute honesty in its construction.

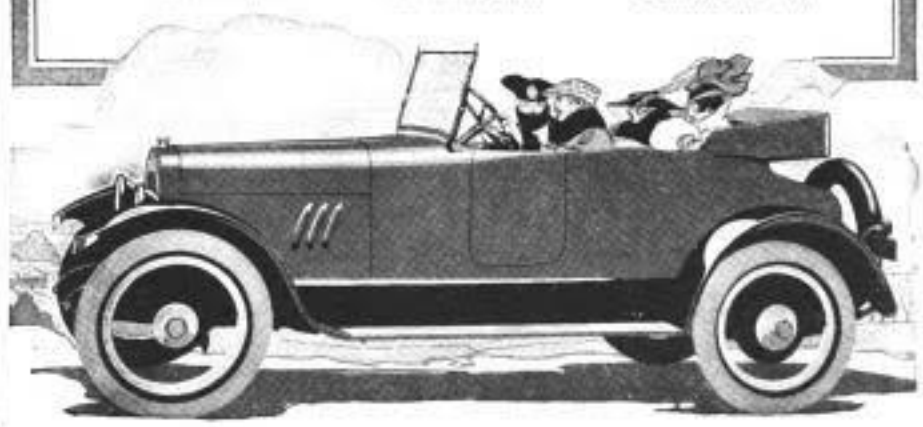
The Davis will give you perfect content and lasting satisfaction—a permanent possession you will be proud of in *any* company. Made in four models.

Model H—Light 6, Seven-passenger Touring Car, $1195.

Model J—Big 6, Seven-passenger Touring Car, $1495.

Model I—Light 6, Five-passenger Club Roadster, $1195.

Model K—Davis-Springfield, Seven-passenger Sedan, $1795.



All models have **Continental** motors, **Delco** starting, lighting, ignition, **Warner** transmission and steering gear, **Columbia** axles, etc.

See it at the New York and Chicago Shows, at any of the long established distributors here listed, or write us for catalog, particulars and the name of your nearest dealer.

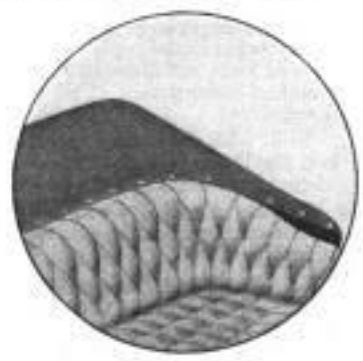
Do your curtains flap and gap? Stop it with "Lift the Dot" Fasteners



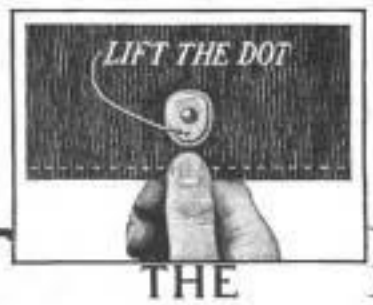
They stay fastened. No gust of wind can pull them loose. No careless push from an elbow can dislodge them. They hold the curtains flat and snug and secure. They are an ornament to the car.

"Lift the Dot" are the only self-locking fasteners made. They are easier to close than any other fastener. Then when you want to unfasten, simply "lift the dot" and the fasteners open more easily than the buttons on your coat.

"Lift the Dot" Fasteners have many uses on the modern car. Not only curtains, but dust covers, slip covers, pockets, floor carpet and extension tops are held more securely and are far neater and better looking when held with "Lift the Dot."

For side and rear curtains, "Lift the Dot" Fasteners are desirable. They simply cannot work loose. They hold the curtains flat and close. They add "tone" and cannot get out of order. They are fastened in a jiffy and open with a single pull when you pull from the end with the dot.

Many makers of cars are fastening dust hoods with "Lift the Dot" Fasteners instead of with straps. This avoids the necessity of lifting the rear seat cushion to buckle straps. It saves time. The dust cover fits closer and more neatly. The upholstery looks better without straps. No unsightly gaps show under the dust cover. The whole appearance of the car is improved.



More than 75 leading American Cars and 29 European Cars use "Lift the Dot" Fasteners regularly, notwithstanding their higher cost. Ask for "'Lift the Dot' Fasteners throughout" when you buy a new car.

If you are troubled with flapping curtains on your old car, it is easy to put on "Lift the Dot" Fasteners and end all bother. Write for booklet and information.

CARR FASTENER COMPANY

CAMBRIDGE, MASS., AND DETROIT

INTERNATIONAL FASTENERS LTD., Leicester, England

"LIFT THE DOT"

our section; but not fast," I says. "I'm goin', anyway, of course, while I got money for a duckit left."

"What was the sticker here? Who was it you took your proposition to?"

"The sticker was them Hemitt & Ross people takin' me for a bunk," I says; and I got hot again. "I mighty near swung on one of those old coots. Why, at an average width of six feet I've got a surface showin' two thousand feet long that carries a hundred and thirty dollars gold to the ton; but it ain't on transportation or I could 'a' got backin' in the coast towns."

"Couldn't you snake an arrastra up the mountain and crush enough ore to pay wages for a small gang of men to keep on developing?"

"No. It ain't a free-millin' ore; too much sulphide. I'll have to build a concentrator down in the valley and tram over a bucket line from the hill."

Then I shut up; for I was not going to trouble a busy guy with something out of his line.

"And Hemitt & Ross wouldn't listen?" he says, reflecting as he signed our check. "You said it takes seven or eight days to your nearest port, eh? That's Seward? Grub pretty fair on the boats?"

"Seems so to us sourdoughs, who got to cook for ourselves at home," I says. "They claim that when the bakers run out of cranberries they paint a red fillin' in the pies. You ought to take your missus North."

It was killing hot when we went into the street. The wind had quit, and even he, who was used to it, rubbed inside his collar with a handkerchief.

"Well, so long!" I says when we had shaken hands at his corner and he had asked what was that name of mine again. I hadn't told it until then.

"I'm goin' home on the Mariposa Saturday night."

"Keep on hoping, pard," he says, and gave me another grip.

I tried to grin. I was on the Seattle train when I thought of not having asked who paid him that hundred-thousand salary; but it didn't matter. There was no lettering on his windows. It was 105 in the car, and full of females, all yap-yapping and ringing for the porter and asking how soon would we see Mount Shasta. It took most of two days and a night; and I was so hot, worn and gloomy that I just set there, dying by inches, hating Lucette, and wishing for Dan and Polo. We wouldn't have got on, with her disliking dogs—that ought to have warned me.

It was useless to peddle the Group in Seattle, where a chap might raise money for small Northern quick-return placer properties, but nothing big. I ought to have gone to the East, but it was too late now, with a hundred and forty left in the poke. I was going to stop off at Juneau and try for a job under Phil Bradley in the big Treadwell—stope bossing, or running a machine or mucking if I had to, so as to get together what I owed Logan.

With my ticket bought, I got a room way down Yesler Way, and went for dinner into a cheap flytrap in Railroad Avenue, where the docks are. It was awful hot and thick-aired in Seattle, with a mist coming from the Sound, and the sun baking the pavements. Inside this lunchroom a big blond girl, in a starched blue dress, showing some of her neck and strong plump arms, was serving and helping to cook. The guy who seemed owner went out as I reached a stool and ordered pork chops.

It was fierce over that range; but she kept spry, collecting from some longshoremen just finishing, doing a great panful of dishes—rinsing 'em very carefully—and washing out the dishtowels later, and jiggling my chops. You could tell she would never have a busted ruffle dragging. As I stared, eyes as blue as the pretty dress looked over the chop smoke at me. I stared more; and suddenly I remembered something that hard luck had drove from my head, and I says:

"You got a wonderful small waist; and I want——"

"Another word—just dare to breathe again—and I'll throw you out!" she cried; and even her soft neck flamed. "You loafing, insulting ——"

"No; I ain't!" I says, and I grabbed at her fist that was coming across the counter, while she hissed:

"Let go! I've seen your kind here, and they just come once!"

Her wavy light hair let loose a cute curl when she angrily jerked her hand free. I jumped myself, for the skillet was in her other hand; and I said that all I meant about the waist was I'd tried to buy a corset for a lady shaped like her and had a lot of trouble.

"Liar!" she says contemptuously. "Coward too! And you looked like a man!"

I tore out of the door then. In six minutes I rushed in with a long, lean box, and yanked out that rose-pink satin thing them women had pretended to dart in, and hadn't touched; but it was the Hemitt & Ross day I measured, and, though I phoned and said it was an outrage, that manager dared me to start a battle, and I had lost my spunk, and kept it.

"They swore to dart it in; but the darned corset'd fit me," I says; and she laughed.

Washing her hands quickly, she set it round herself over the blue dress; then removed it, saying that the styles were sickening this season.

"Your wife?" she says.

"No, ma'am," I says; "Etta Noble—she's cookin' for an outfit; and I think her and the foreman figure to wed when her clothes all come. She trusted me. Would you take a tenner for your time and go buy her a rose-pink satin one that's right for you?"

I put thirty-five on the counter. Her face had cooled; but it got red again, and she says:

"Not the ten till I earn it; then it'll take me out of jail—out of this. I had fifty saved, and sixty'll get me home. I've had enough city!"

"Where do you live?" I says; but she seemed not to hear.

Over in the room I set, sweating and wishing for brains. I could see them blue eyes, no matter what I was thinking. Her teeth were even and very shiny white—not like Lucette's. She would not be asking, the second you set at a restaurant table, if it was one of those provincial places where they didn't let women smoke—like Lucette.

It was about three in the afternoon when I kept hearing sounds in the next room, like a woman and kids crying. After a bit I went and tapped, but the sobbing was so loud they couldn't hear; so I turned the knob, and huddled on a bed were Nadia and the two youngest, looking like the end had come.

"Nadia, woman! Here now, quit, Henry and Tessie! Tell mamma it's Griff," I says; and poor little dark-skinned Henry blubbered and snugged up to me, and Tessie was wailing for some salmon.

"Oh, Griff! Oh, Griff!" the squaw says like she was dying. "Three day Jim go 'way to git one drink a' hooch; don't come no more. Children so hungry, an' I hiyu scare; no grub—three day."

"And left you broke? He ain't himself," I says. "Git ready to eat now."

"We got lots a' money; but hiyu scare—how we know? One time I go to downstairs; too much people—I too scare!"

She like to fainted, being so weak. I sopped cold water on her face and cooled that oven they were in by opening the door for a draft—Jim wouldn't have savvy to take 'em somewhere better. I slicked the kids while Nadia staggered round in her mussed yellow dress. She got her black hair into a nubbin, with a big red ostrich-feathered hat over it; and she took Tessie's hand and then hung to me; and I lugged Henry. All of them screeched and tried to run, at every auto truck—I ain't stuck on feeling they'll nip off at least an ankle, myself; and when a train rolled down the street Nadia stopped and made a Greek Church prayer.

"This is Jim Logan's family, and he hadn't been to a city in thirty years. They ain't fed for three days," I says to Blue Eyes when I got in the lunchroom, Nadia crying and Tessie bawling for her papa. "Go down the line and put all there is before 'em. Will I take 'em back to that box?"

"Gimme the little boy. There, darling! Oh, gracious alive, how terrible!" she says; and she rushed them where it would be private, in the box.

And in a minute she was back at the range. Henry gave her a wan smile, and she kissed him.

"Strong broth from a real chicken I had on for the boss' supper," she says. "Quick! Make 'em drink it. Will we have a doctor?"

"No; the Aleut blood's made to endure," I says. "They can just suffer and not whimper."

I set with them, keeping Henry from slopping; and after steak, potatoes, fresh tomatoes, beans, bread and coffee, the three

Cadillac Prestige is founded upon reason

THE *willingness* of so many thousands of people *to pay the Cadillac price* must, of course, be *founded upon reason.*

The *refusal* of so many other thousands *to pay more* for a car than the Cadillac price—notwithstanding their abundant ability to do so—must likewise be *founded upon reason.*

In one sense, the question of price does not occur to them at all—what they want is the *greater smoothness,* the *greater steadiness,* the *greater constancy* and the *greater comforts* which the Eight-Cylinder Cadillac provides.

They want the wonderfully *swift acceleration;* they want the *luxury of traveling* practically one hundred percent of the time *on high gear.*

They want the *sturdiness* and *dependability;* they want the *day-in-and-day-out, year-in-and-year-out service* and *satisfaction* which have always distinguished Cadillac cars.

They want that *comprehensive efficiency* which manifests itself in the Cadillac, not merely now and then, but at *all speeds and under all conditions.*

Every moment is a more pleasurable moment for them in the Cadillac—every hour an hour of greater ease—every mile a smoother, steadier mile.

Believing that *the Cadillac meets their ideals* of all that a motor car should be, is it not perfectly logical that the Cadillac should enjoy a *larger ownership* than any other *truly high grade car* in the world?

Body Styles

CADILLAC coach-builders have provided eleven styles of bodies from which Cadillac purchasers may choose, as follows:

Seven-Passenger Touring Car
Four-Passenger Phaeton
Two-Passenger Roadster
Four-Passenger Club Roadster
Four-Passenger Convertible Victoria
Seven-Passenger Convertible Touring Car
Four-Passenger Coupé
Five-Passenger Brougham
Seven-Passenger Limousine
Seven-Passenger Imperial
Seven-Passenger Landaulet.

Premier

$1895, Fully Equipped

The Aluminum Six with Magnetic Gear Shift

We ask you to compare this new Premier in every detail with the most expensive cars on the market, and when you have finished, you yourself will echo the question of thousands: "How do they do it at $1895?"

Here are the features of the one car that will make the Shows of 1917—*historic.*

An Aluminum Motor, designed and built in the Premier factory under the personal supervision of Earl G. Gunn, our chief engineer and the original American builder of aluminum motors. With only 300 cubic inches piston displacement, this overhead valve, six-cylinder motor develops upward of 72 horsepower. We question whether any motor in America can climb a difficult hill "in high" as slowly as *Premier*. Ask for a demonstration.

C-H Magnetic Gear Shift, as regular equipment and without extra charge, has been adopted by Premier. In so doing Premier leads the world as the car which first gave motorists this crowning and long-needed convenience as regular equipment. The mechanism which, by means of push buttons, controls Premier's gears, is the product of the world's greatest builders of electrical controlling apparatus, the Cutler-Hammer Manufacturing Company of Milwaukee, Wisconsin. Cutler-Hammer manufacture the electrical controlling apparatus on United States battleships and submarines. The action of the device is simple and positive. Push a button and the gears obey. It keeps the control of your car right under your thumb—you can change gears on an up-hill climb without losing momentum. You can change gears in traffic in one-half the time required by the hand gear shift. It is as great an advance as was the electric starter. This device is unqualifiedly guaranteed by both the Cutler-Hammer and the Premier companies. Ask for a demonstration.

New Premier "Bullet Body Lines" supplant the conventional stream line which has characterized practically all motor cars for years. To this new mode, Premier adds the charm of an exquisite *gun-metal velours* body finish combined with wheels of natural wood. From a standpoint of durability and texture, Premier's finish is unsurpassed by that of any car. Premier's beauty is growing proverbial.

The Turning Radius is so short that the driver of a Premier car can almost spin it on its own axis—this must be seen to be believed. Ask for a demonstration.

An Eight-Inch Bridge Girder Frame, deeper by 50 per cent than the frame in most cars, forms such a solid and rigid foundation that body squeaks and rattles are almost impossible; and the frame's rigidity makes the car hold the road better at sixty miles an hour than most cars do at twenty-five.

More Body Room has been obtained on Premier, through clever and space-economizing design, than has ever been considered possible on a wheel base of 125½ inches—compare it with your present car.

The Driver's Comfort has been carefully studied. The new-type tilting steering wheel, the push-button gear shift, the design of the driving seat, and the easy-reach placement of everything that enters into driving, give him a chance to take a joyous part in the ride.

Points of Luxury are everywhere. The auxiliary seats are roomy and interfere with no one's comfort. The instrument board is solid walnut, finished like a boudoir table, with ammeter, oil gauge, Warner speedometer and a nickeled dash-light which becomes a spot-light on a 15-foot cord by merely pulling it out of its socket. The upholstery is of the finest—Marshall Sanitary cushion springs and real leather. The tonneau rug is of natural undyed wool. The nickeled robe rail can't rattle or sag. The genuine Pantasote top is custom tailored in our own shop and bound with aluminum. There is a tonneau light that illuminates the running board. Not a detail is omitted. All these points conspire to make Premier a car that women will love.

"Rides Like a Liner" is an expression used by a connoisseur who soon found out that you don't have to brace yourself for the bumps in Premier—thanks to the 58-inch semi-elliptic Perfection rear springs, to the perfect balance of the car, impossible without the use of an aluminum motor, and to the ballast of the 8-inch frame. The axles on Premier are Timken. The electrical equipment is Delco—everything is of the best. And on the hills and through traffic the car is a revelation. It has worlds of power and jumps under the gas like a blooded horse hit with a whip. It throttles to almost nothing in high—without bucking or quitting. The car as shipped weighs only 3245 pounds.

Finally, we believe that eventually a car without a magnetic gear shift will be as obsolete as a car without an electric starter. Go to the Premier booth at any of the Shows this year, or to any Premier salesroom and—*ask for a Demonstration.*

(Concluded from Page 46)

livened some, but a glance would have Nadia weepy again. And Blue Eyes, who had Tessie on her lap, told me to beat it out and hunt for Logan.

"Say, you're a mighty fine, kind-hearted girl!" I says as she went to the door with me. "Busy as you are and botherin' with them little critters!"

"Poor babies, with their papa lost!" she says; and her eyes were sure sweet. "I love 'em all."

"And you like dogs, don't you?"

"Had four at home," she says. "We let 'em in the house too. Maybe you don't?"

"My old Dan and Polo got bunks as good as mine!"

"I think you got a pretty kind heart," she says.

And we stood there, talking so a fellow having eggs couldn't hear, while I told her where I had come from, and how I was starting back that night—and being called a bunk by old Hemitt.

"From Alaska!" she says thoughtfully. "If that isn't strange! I presumed you were from east of the mountains. For my part, I thought I'd do some marvelous things in the city—and I'm what they call a hasher!"

"Just so you're on the level, it's no matter. But are you really goin' to give up?"

She nodded, saying she was glad to; and I got my nerve up and says:

"Is there—some guy waitin', back there?"

She shook her head, blushing; and I kept looking and thinking, until I says:

"I want that address, Blue Eyes; and when I've sold my Group —— Do I git it?"

"You wouldn't positively have to sell the Group," she almost whispered.

I grabbed her hand, and the blue eyes looked at me; and Lucette, and such daffy notions, went out of my mind and stayed!

While I was nosing into Second Avenue hotels hunting the bars for Jim, it was like I could still feel her warm strong fingers inside mine.

Falling out of the Louvre Saloon, at eight o'clock, came Jim Logan.

"Hello, Griff! Con-con-gratul-grat'lations!" he says. "Some rustler, ol' kid! Some pro-pr'ter-pro-mo-ter, landin' Group down South!"

"You fat drunk mutt, come on to the folks, or I'll pack you on my back!" I growled, yanking him forward. "I ain't promoted nothin'. Dog-gone you, that woman ain't eaten while you been lushin' round here—nice way to put them kids into a fancy Outside school! Come on, I tell you!"

He mumbled about being sick; but, sick or not, I urged him toward Railroad Avenue, he begging for a slower pace, he was so dizzy.

"Did so pro-promote!" he says, blinking. "Ol' foxy Griff nailed bigges' bug 'f all—heard 'im tellin' in Sea-S'lattle Hotel lobby; goin' straight f'r Griffith—Group!"

"You dope, lay off it! Guess you mean me—I'm goin' back to the Group, though I'll work for wages first to pay my debt to you. I sail to-night."

"Na-naturally," he says with care, and set down in the street until I jerked him up.

Guys ought to glim themselves when boozed. I never had so much as a glass of beer in my life—it is poor truck, all of it. We was near the lunchroom when a heavy whistle roared through the still hot night—the Mariposa's port call, a long and a short. Half hour! I carried him then, for I had a lot to tell my blue-eyed girl. My heart was galloping as I pushed him in and looked for her.

"Where is she?" I says, staring at the owner, who was cooking over the range. "Name? I d'know it! Her in the blue dress—she said she'd wait."

"She quit to-night—went home," he says, grinning. "This is for you, hey? Told me to deliver it sure. Your friends are still in the back."

"There's a message?" I says; and my heart went on again.

I hardly noticed Nadia and the kids come swarming out at Jim, who had gone limp and hung over a stool, mumbling. One corner of the note, stuck under the string of the corset box, was heavy with some coins; and she had written:

"Have darted it in myself; and as it fits me it will her. It was too beautiful to waste and I had little time to shop; so here is your fifteen dollars, and I paid myself that ten. "FLORENCE MARIE STUART."

"Say, you're pale! Want a little shot o' liquor?" says the owner; but I couldn't answer—just leaned on the counter while he went on: "I think she's from prominent people; but she didn't let on where. She was excited to-night."

"You got no notion—her address?" I says faintly; and he says:

"No, old pal, I haven't; but if I had, dogged if you wouldn't get it from me! She had me goin' too; but she wouldn't look at me!"

Jim was hiccuping that he'd take the wife and kids to a grand hotel—ride in autos and elevators; see the big Smith building; and find that school.

"Ah, no, papa; we see hiyu plenty city! Three day no grub! I think I die maybe; an' I don't let my child'en go no school Outside. You want go 'way from mamma, Henry?"

The kids was both sniffling how they didn't like it any more than she.

"Up, papa! Griff, please ketchum road-house bill an' tell all thank you very much. Some day maybe they come our road house; we good to them too. Papa, take Tessie by hand—we goin' with Griff right now!"

"Oh, say! Without the swell clothes or seein' a thing!" I protested.

"I see hiyu plenty," she says, crying again.

The lunchroom man had fried a doughnut man for each kid. Another whistle roared—fifteen minutes! I gave one despairing look at that letter from the girl and ran the Logans to our Yesler Way hotel. I took Henry, my suit case and Jim's big hide warbag. Nadia had a bundle in one mitt and held to my coat with the other, and little Tessie harried the wabbly Jim with shrill orders. Heading through Railroad Avenue, we pushed down the dock.

"That's the five-minute one!" I says as a whistle nearly lifted the dock's roof.

So we was started, and a part of the crowd there was shouting to a bigger crowd on the pier. I was going North, and them hopes that had flared inside me withered into nothing—just ashes! It didn't seem that honest eyes like hers could lie; but she hadn't waited. Her sense must have told her to side-step a big dub she had only knew a day.

"Wha's a' matter, Griff?" says Henry, who set on my shoulder.

"Oh, just misery, kid," I says; and wished I was little like him.

I turned, because Jim was wabbling toward the rail and Nadia was staring.

"Look, mother! That'shim!" says Jim—"him I heard in the Sea-S'lattle Hotel, that's goin' —— Oh, my head!—goin' to the Group with Griff. Lounsberry!"

"Who?" I says; but it was just a whisper.

Up that plank, from which quartermasters were pulling hand ropes and stakes, calmly strode the gray guy from San Francisco. He had on a soft hat and a soft collar, and motioned off a steward who reached for two big grips. A small lady, in a swell plain dark suit and nice but not fussy hat, was with him, carrying a dispatch case and a fishing rod and two guns.

"Jim Logan," I says, "git your wits, if you got any left. Who is that guy?"

"Why, Lounsberry," he says, taking it slowly—"J. J. Lounsberry, managin'—managin' d'rector them great Nevada—Utah an' Ari-Arizona prop'ties. His people's takin' up gold ground now. Tol' reporter goin' up—visit his frien' Griffith; an' crew comin' do ten-day samplin'. Crew next boat. But you know 'im, Griff!"

"I never thought of the copper people," I muttered. "No letterin' on his window! Goin' to my Group!"

They cast off. No more women, now, for me—and I had seen her in the camp in my valley! My mind had been laying out the next fifty years for us.

Because I'm tall, Lounsberry seen me over all the other heads, and he yelled:

"Hey, there! Hello, Griff!"

"Hello, yourself!" I says.

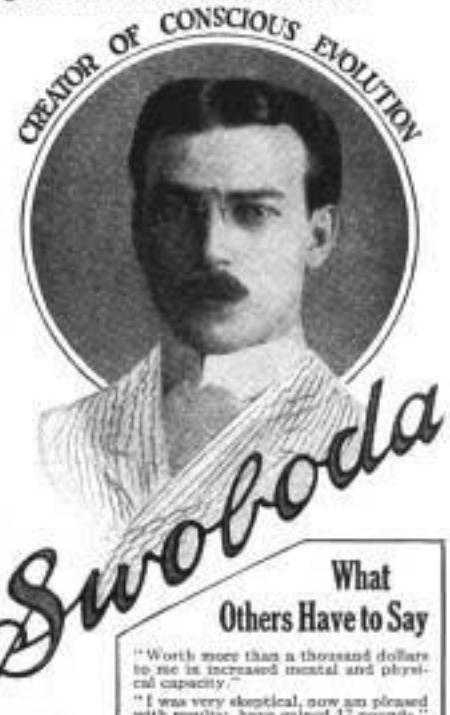
And, seeing him coming, my old heart began to pound; for if his men sampled the Group he'd go South with a Northern property, because he couldn't turn it down! I had a mine up there on the mountain!

"Oh, Nadia!" I says. "Why—why couldn't you begged an' prayed that blue-eyed girl to just wait till I could get back?"

"Come down more," says Nadia; and she was giggling as I bent. "Griff, that girl she live in Afognak, to the westward of us; an' her on this ship, goin' home! What you think of that?"

The lighted hills got black and then grew light again before it got to me. Then I says:

"She won't never get there!" And she didn't.



Why Live An Inferior Life?

I know that I can easily, quickly and positively prove to you that you are only half as alive as you must be to realize the joys and benefits of living in full; and that you are only half as well as you should be, half as vigorous as you can be, half as ambitious as you may be, and only half as well developed as you ought to be.

THE fact is that no matter who you are, whether you are young or old, weak or strong, rich or poor, I can prove to you readily by demonstration that you are leading an inferior life, and I want the opportunity to show you the way in which you may completely and easily, without inconvenience or loss of time, come into possession of new life, vigor, energy, development and a higher realization of life and success.

Become Superior to Other Men

The Swoboda System can make a better human being of you physically, mentally and in every way. The Swoboda System can do more for you than you can imagine. It can so vitalize every organ, tissue and cell of your body as to make the mere act of living a joy. It can give you an intense, thrilling and pulsating nature. It can increase your very life. I not only promise it, I guarantee it. My guarantee is unusual, startling, specific, positive and absolutely fraud-proof.

Why Take Less Than Your Full Share of Life and Pleasure?

Are you living a full and successful life? Why not always be at your best—thoroughly well, virile, energetic? Why not invest in yourself and make the most of your every opportunity? It is easy when you know how. The Swoboda System points the way. It requires no drugs, no appliances, no dieting, no study, no loss of time, no special bathing; there is nothing to worry you. It gives ideal mental and physical conditions without inconvenience or trouble.

Your Earning Power,

your success, depend entirely upon your energy, health, vitality, memory and will power. Without these, all knowledge becomes of small value, for it cannot be put into active use. The Swoboda System can make you tireless, improve your memory, intensify your will power, and make you physically just as you ought to be.

What Others Have to Say

"Worth more than a thousand dollars to me is increased mental and physical capacity."

"I was very skeptical, now am pleased with results; have gained 17 pounds."

"The very first lesson began to work magic. In my gratitude, I am telling my croaking and complaining friends, 'Try Swoboda'."

"Words cannot explain the new life it imparts to both body and brain."

"It reduced my weight 29 pounds, increased my chest expansion 5 inches, reduced my waist 6 inches."

"My reserve force makes me feel that nothing is impossible, my capacity both physically and mentally is increasing daily."

"I think your system is wonderful. I thought I was in the best of physical health before I wrote for your course, but I can now note the greatest improvement even in this short time. I cannot recommend your system too highly. Do not hesitate to refer to me."

"You know more about the human body than any man with whom I have ever come in contact personally or otherwise."

A Few of Swoboda's Prominent Pupils

F. W. Vanderbilt	Charles F. Swift

My New Copyrighted Book is Free

It explains the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION and the human body as it has never been explained before. It will startle, educate and enlighten you.

My book explains my new theory of the mind and body. It tells, in a highly interesting and simple manner, just what, no doubt, you, as an intelligent being, have always wanted to know about yourself.

You will cherish this book for having given you the first real understanding of your body and mind. It shows how you may be able to obtain a superior life; it explains how you may make use of natural laws to your own advantage.

My book will give you a better understanding of yourself than you could obtain from a college course. The information which it imparts cannot be obtained elsewhere at any price. It shows the unlimited possibilities for you through conscious evolution of your cells; it explains my discoveries and what they are doing for men and women. Thousands have advanced themselves in every way through a better realization and conscious use of the principles which I have discovered and which I disclose with my book. It also explains the dangers and after-effects of exercise and excessively deep breathing.

The Swoboda System is as effective for Women as for Men

Why save at the spigot and waste at the bunghole?

Leaky piston rings are the bunghole of your motor, losing at least 25% of the power, gasoline and oil. Why economize in car operation and neglect the biggest waste?

"INLANDS" will save you *two ways*

The "Inland" is the best *piston ring* because it is one-piece *and* absolutely gas-tight. It is the best piston ring *investment* because it saves you in the running cost of your car *and* in the first cost of the rings.

Ask your garage today how little it costs to install "Inlands." At any price you cannot get more perfect gas-tight rings that will stay gas-tight during the whole life of your engine.

Standard equipment on Franklin, KisselKar, Pathfinder, Apperson and other cars; also Weidley Motors. Fully guaranteed, money refunded if you are not satisfied at the end of 3 months' trial.

This one-piece ring is perfectly gas-tight because it is cut spirally for half its circumference, uncoiling in expanding and exerting uniform gas-tight pressure and continual contact with the cylinder wall. Specially treated so that the free ends always hug tightly together.

Strongest and most durable ring; uniform width and thickness all around; no weak or thin places. Made of close-grain, elastic cast iron; easy to install, will not break in handling.

THE GOLD TOKEN

(Concluded from Page 15)

She had touched the wrong string. She marveled at the dexterity of his overlarge spongy hands with the cards, and was silent for a long while.

"Do you mind if I talk?" she asked at length.

"No," he said without looking up.

"Something you said at breakfast this morning has puzzled me greatly. We had been talking of labor waste as the only form of absolute waste in the world, and you said—I think I have it exactly—you said that, as the people who were ultimately to be most benefited by labor-saving devices had always and stubbornly resisted them, so now they were opposed to the gold-money standard. I don't see that."

Before answering her he put down the cards, lighted a terrific cigar, held it at half arm's length, and waved it gently to achieve a certain effect in spiral blue smoke.

"You can see that money at all is a labor-saving device?"

"With a little thought I might," said Helen. "The idea is new to me."

"People," he said slowly, "are continually engaged in producing and exchanging goods. A man who has produced a thousand bushels of wheat more than he needs for his own consumption wishes to exchange it, let us say, for cloth, of which another man has produced a surplus that he will be willing to exchange for wheat. Without money in general use, those two would have to make physical contact. That would entail a needless expenditure of time and labor. It is more complicated. The man who has a surplus of wheat does not wish to exchange all of it for cloth—no more than the other wishes to exchange all of his cloth for wheat. Each produces a surplus of one thing to be exchanged for a variety of other things. Now we invent money. It is simply a labor-saving convenience, universally adopted among civilized people—a thing of small bulk in which the exchange value of all things is instantly expressed."

"Yes; I see it now," said Helen.

"Then, if we admit that money of any kind is a labor-saving device, does it not logically follow that, as between several kinds of money, we should choose the greatest labor saver?"

"That is ——" said Helen.

"A ton of gold will do the work of eighteen tons of silver. The cost of moving a ton of gold from place to place is no greater than the cost of moving a ton of silver."

"I should never have thought of money like that," said Helen.

"It is a simple question of tools. So long as our competitor countries, or most of them, used the silver-money tool, it did not matter; but as all the countries with which we really compete have adopted the more efficient money tool, which is gold, we cannot afford to continue using silver.

"In 1873 the German Empire, having gained command of a large supply of money by extorting a huge war indemnity from France, proceeded to reform her monetary system. She adopted the gold tool. That displaced a large amount of silver from circulation in Germany, which, offered for sale on the world's silver market, caused the price of silver to fall. Then the Latin Union—France, Italy, Belgium, Switzerland and Greece—abandoned the inefficient money tool and ceased to coin the five-franc silver piece. That caused silver to fall more. It is clear that, if we are to hold our own with Europe in the world's trade, we too shall have to work with the money of highest efficiency."

"Yes," said Helen.

"The larger and the more valuable the exchanges that take place between people," he said, "the more important it is. You can judge the capacity and prosperity of a people by the money with which they work. The poorest country in the world is probably Korea. The Koreans produce hardly any more than suffices for their own consumption. An individual income of four or five dollars a month is thought large. For their exchange, as you might suppose, they use the least efficient metal money known in the civilized world. It is nominally copper, but really a kind of spelter—five hundred pieces to the dollar.

"Imagine trying to conduct the exchanges of a great nation with money like that! What a waste of labor and time it would mean! If cheap money could make people prosperous the Koreans ought to be the most prosperous people in the world."

That finished the exposition. Leaving Helen to her digestion of it, he returned to his solitaire.

"People talk emotionally about a thing they imperfectly understand," she said. "That was what impressed me most this evening. Why not give wide publicity to the simple explanation you have made to me? It is very convincing."

"Nobody would believe it," said Cæsar shortly. "It's too obvious. A labor-saving device must win on its sheer utility, as this one will."

"You are sure of the outcome, then?"

"Absolutely! We had only to keep the country gold-solvent until election. That was provided for to-day. Here; look at this! It's probably the finest collection of its kind in the world." He handed to her from the table a beautifully printed foreign catalogue of rare tapestries, and went on with his solitaire.

"It must be almost priceless," said Helen after ten minutes.

His game just then came out successfully. He pushed the card table from him and said:

"It is. I bought it this afternoon."

As they were leaving the library together, the extension telephone instrument on the table sounded an alarm. Helen, being nearest, picked it up at a nod of permission from Cæsar.

"One of your young men wants to speak to you," she said, putting the instrument down and holding out the receiver to him.

Cæsar impatiently put the receiver to his ear. "Who is it?" he asked.

A voice answered:

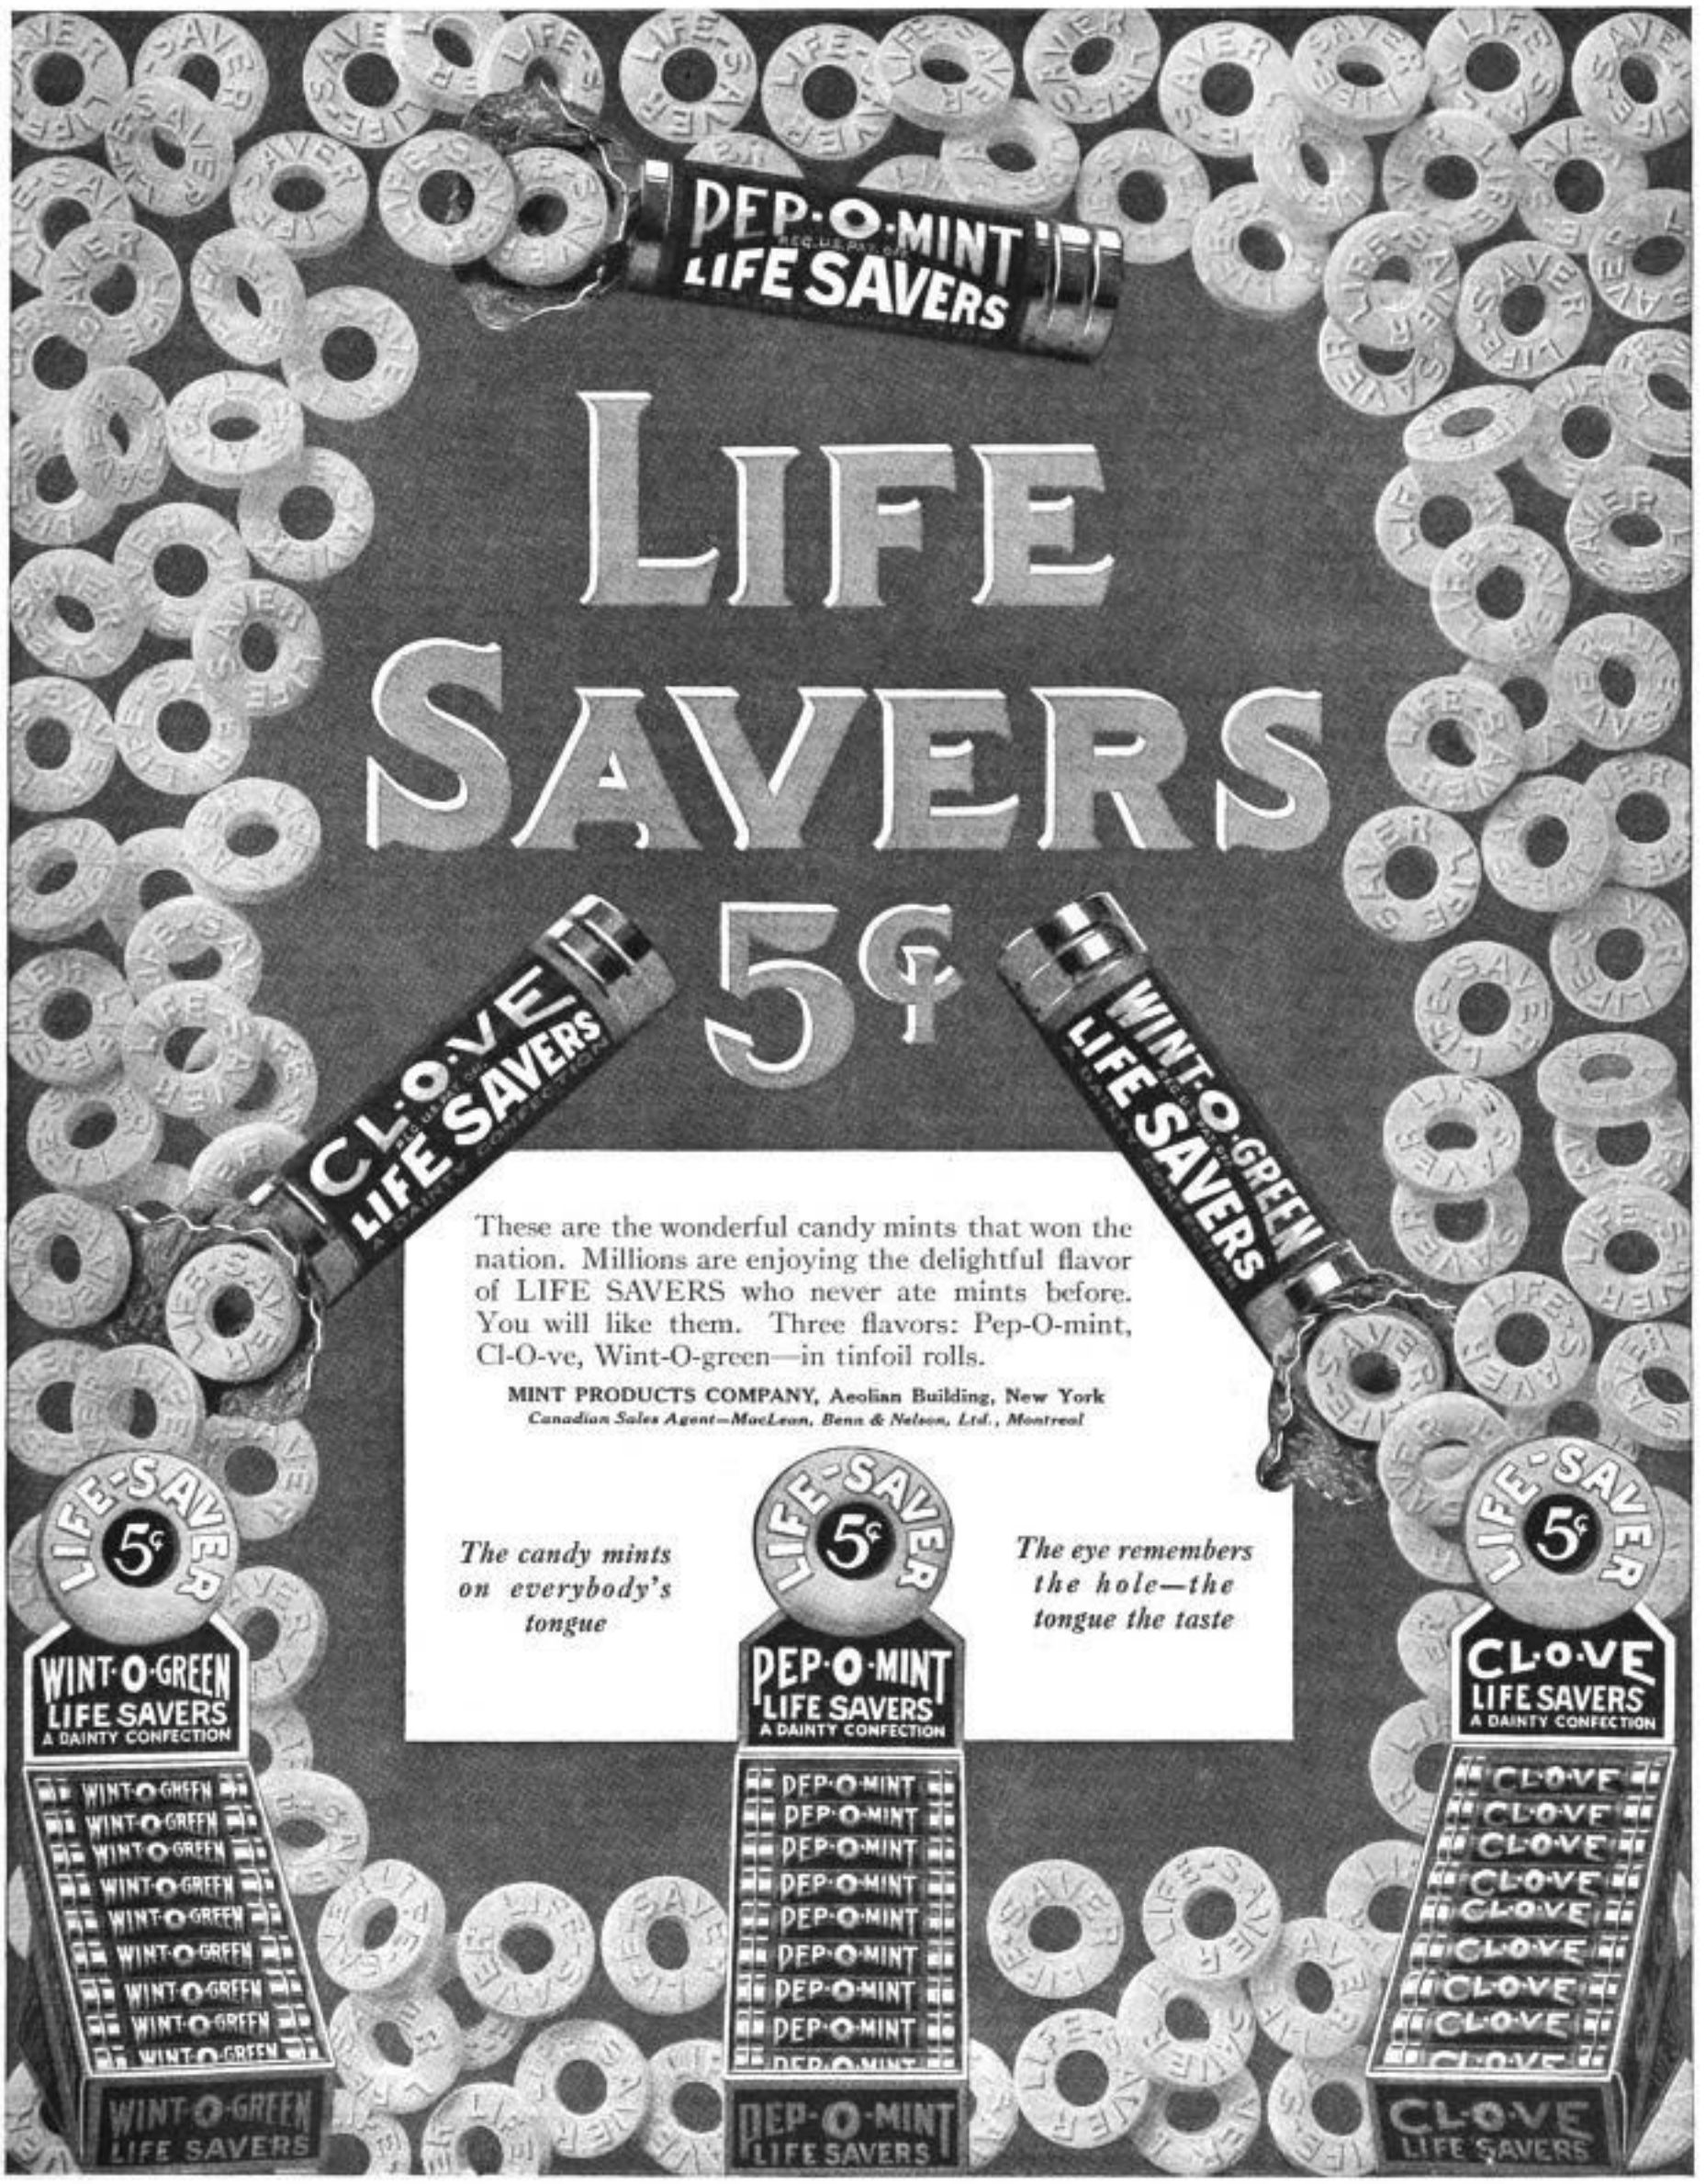
"It is Postgate. I ——"

Cæsar banged the receiver up.

That was the only way in which Sammy could hope ever to reach the ear of Cæsar again. It had failed. Very well! He would show even Cæsar that he could be dangerous. He went early to the bank the next morning and cleared his desk of private papers. Then he went and took a desk in the office of his broker; and at ten o'clock he waited, as everybody else did, to see the stock market fall into a terrible panic.

That did not happen. The market opened weak, rallied, and closed strong. It was rumored again that the house of Cæsar was buying stocks. The broker asked Sammy, who said he didn't care who bought stocks; the country was "busted!"

On the next day Samuel Postgate published a demonstration of the statistical bankruptcy of the United States. It was presented as the work of the foreign-exchange expert of one of the great international banking houses. It produced a sensation and caused speculators to sell a lot of stocks; but they sold them all to Cæsar.



The wall of silver ruin and bankruptcy, thought to be like granite and a thousand feet thick, was only a sheet of brown paper, and Cæsar had poked his finger through it at the psychological moment. The cause of silver was lost on the second Tuesday of the next November, but the cause of gold had already been won on the day he formed a pool to sell one hundred million dollars of foreign credit, to be remitted to Europe in lieu of gold. It was purely psychological.

Nobody wanted gold to hoard if he was sure he could get it, and the line of people, with greenbacks, at the United States Subtreasury dissolved. Cæsar's pool never sold so much as ten million dollars of foreign credit. Confidence was restored by daring. Europe never wanted to be paid off in gold, or at all—provided she could be; she was willing to take dividend and interest bearing securities instead of gold. And she took so many more of these than was necessary to pay our debt abroad, and so many goods besides, that, even before Sammy had lost the whole of his fifty thousand dollars, treasure ships were arriving at New York instead of leaving.

Postgate became, then, a customer's man in a broker's office and received a salary for advising other people how to speculate.

And, otherwise, it was as the old cashier had said: Other physical traces of that crisis have been effaced and people have forgotten how silly they were; but to this day strangers in Wall Street, who notice everything, pass the United States Subtreasury, look at the bronze figure of George Washington, and wonder why the man who started to clean it up, and got as far as the knees, never finished his job.

PUTTING ON PERCIVAL

(Continued from Page 17)

glasses and meek, thick braids, and from these prejudicing attributes Percival's eyes wandered to a little girl with taffy-colored hair and bright china-blue eyes.

In some strange fashion, however, he always had to dance with Becky. And as the frustrated little figure, in its shiny black pumps and white kid gloves, guided the grateful Becky through the waltz the nurses in the hall, peeping through the open doorway—each of the class had, of course, to be brought and taken away by a nurse—whispered among themselves: "I suppose they'll marry when they grow up."

As for parties, both Percival and his sisters gave many of these. On the evening of Percival's eighth birthday, for example, thirty little boys and girls arrived at the Fifth Avenue mansion under convoy of their respective nurses. For the occasion, the gardener of the Oaktops Estate had sent in several hundred dollars' worth of flowers; men in livery served the refreshments to the tiny guests; a small orchestra was there for dancing; and for a fee of one hundred dollars a specialist in children's entertainment devised games and put on a Punch and Judy Show.

From his corner of the room Mr. Agley Rasher viewed with undisguised dismay those thirty small faces, waiting for their amusement to be laid out for them.

"Just like their elders—always have to have a bunch of Metropolitan singers or a few cabaret artists cutting up for them," thought he. "No wonder these rich people never learn to amuse themselves."

Presently he voiced these sentiments to Miss Finch.

"Too much of the shredded stuff," murmured he.

"I beg pardon?" said this lady.

"I mean to say," said the young tutor, "that I don't believe in this elaborate sort of thing for children. Look at Percival now," and his eyes followed the staid, immaculate little figure in its Tuxedo coat; "he'd have a good deal better chance of getting some resources of his own if he were jumping round, saying 'Come on; let's play charades.'"

Miss Finch looked at Mr. Agley Rasher with the equivocal expression of one admiring a sunset from a barbed-wire fence. If only his chin had not been nipped out in exactly the right place these views of his would have been even more uncomfortable.

After he had been in the Fifth Avenue house for several weeks Mr. Rasher laid out a course of reading for his charge. "If he can't meet anybody in real life except his own set, let him meet them in books," was the line on which he moved. And he gave the eight-year-old boy David Copperfield.

Rasher Does His Best

Percival read thirstily of the little boy of Blunderstone Rookery, and it was plain that he considered David's misfortunes almost a privilege. Looking up one day from the chapter that tells of the hero's vicarious meal at Canterbury, Percival said:

"Gee, only my age and doing all those things by himself!" He gazed dreamily into space for a moment and then looked up suddenly. "I say, Mr. Rasher," he asked, "do things ever happen to rich boys?"

Mr. Rasher gazed curiously at his charge. It was the first time he had ever heard him allude to his wealth.

"Who told you that you were rich, Percival?"

"Why, nobody at all; but I must be, you see, because if I weren't I'd be living like boys in books."

Yes; in spite of Miss Finch's care that no reference to money should ever occur, Percival had drawn his own conclusions. How could he otherwise, indeed? Mr. Rasher thought he would have been very stupid not to have done so; in fact, he had always sniffed at the tale of a friend of his who had been tutor to the very richest little boy in America.

"Would you believe it!" had related this friend in support of his contention that rich children of wise parents were brought up in absolute unconsciousness of their surroundings: "That boy smashed his camera one day and came running up to me. 'Oh,' cried he, 'I've broken it, and where shall I ever get enough money to buy a new one?'"

"Humph!" had snorted Mr. Rasher. "His powers of observation must have been limited."

"Well, yes, Percival"—and the tutor turned his tidy profile about—"you are rich—that's true."

"What am I going to do about it, anyway? How am I ever going to get a chance to fight or—or do anything?"

Percival looked at Mr. Rasher appealingly. Already he had commenced to love the tall young man with the chin clipped out in just the right way and the kind hazel eyes. Like Freda, Mr. Rasher was someone with whom you could talk. He hung now on his answer.

"Oh," responded the tutor cheerfully, "there are lots of rich boys who have done things—got famous, you know."

Percival's face lighted up.

"Who are they?" he asked.

Mr. Rasher looked at his watch.

"Five o'clock," said he; "time for you to dress for dinner now. But I'll tell you what I'll do: I'll make out a list of rich boys who have done things, and have it for you to-morrow."

Rich Boys Who Made Good

With this promise, the boy departed for his room. Beyond the studiously draped curtains of red and black he found Tompkins laying out his Tuxedo coat, his dress shirt and his pumps.

"My bath ready, Tompkins?" asked he.

"Yes, Mr. Percival; and I shall wait 'ere to 'elp you get into your things."

Since Grunwald's departure the fourth-floor footman had valeted Percival; and his services for the boy differed in no wise from those he would have performed for a grown-up man. Each morning and evening he drew Percival's bath; each morning and evening he laid out his proper clothes. After a suit was taken off he took it downstairs, cleaned and pressed it. In similar fashion the shoes were gathered up each evening, cleaned, and returned in the morning.

Nor were Tompkins' duties by any means trivial. Percival's wardrobe now cost an annual sum of several thousand dollars. A boy's tailor made him suits costing anywhere from thirty-five to fifty dollars, and overcoats costing seventy-five. His shirts, of specially selected materials, were made to order at twelve dollars each; his neckties were all of the finest silk; and a bootmaker made his various boots and shoes. Then, too, his varied activities had to be met by many types of costume. There were riding togs and tennis togs and sports clothes; there was a lightweight Tuxedo suit for summer and another for winter; there were several long-trousered and short-jacketed Eton suits, and any number of overcoats. The truth of it was, in fact, that the wardrobe of this miniature society man was little less fitful and expensive than that of his father.

The next day Mr. Rasher appeared in the nursery with his reviving list of rich boys. He had half a dozen or so names, ranging from that of Marcus Aurelius to young Van Rensselaer, the last of the Dutch patroons. In between were set Frederick Barbarossa, Henry the Fifth, of England, and that clever de' Medici boy, son of the rich old Lorenzo, who, afterward Pope Leo X, became a cardinal at fourteen. For days the tutor entertained Percival with tales of these youths. To them the boy listened greedily; but to any personal application of their success he constantly demurred.

"But, Mr. Rasher," he protested, "those boys all had countries they could rule over, or something like that; and there were Crusades going on, and all sorts of fights. Look at that Henry the Fifth—how he got into battles when he was only thirteen or so. Miss Finch would never let me get into a battle—now you know she wouldn't!"

The picture of the half-buttoned English lady bundling her charge into a limousine and sending him off to the field of battle with a tutor and a nurse tugged at the corners of Mr. Rasher's mouth.

"Well," said he, "perhaps not. But you can go into politics, you know—be a governor, or something like that."

Meantime Percival's two sisters had gone on their several ways of development. Marian was graduating from school the following year, and Hildegarde was now away at one of those easy-going schools in the country where horseback riding was the main feature of the curriculum.

The wisdom of this last step had been revealed by an examination given Hildegarde.

"Write me," said the teacher, "the twelve things you are sure you know."

In response to this Hildegarde had submitted a list commencing with Longfellow's Psalm of Life and ending in this piece of pure empiricism: A cockroach!

"Whatever can she mean by that?" wondered the teacher.

At last a light dawned on her. The science class had been responsible for it. Here Hildegarde had been asked to give an examination of this insect worthy of his position as a leading orthopterous citizen.

The result of this was that her father and Miss Finch decided to let her follow her natural bent, which was—briefly—a horse.

Yet Hildegarde was not a representative rich girl. She would have been just as likely to happen in any circle of life. The only proof needed of this fact was the high standing of her sister Marian. Marian, who was now sixteen, was, in fact, the kind of pupil who inspired her teachers to say: "The rich girl in our classrooms is just as interested and alert and resourceful as the girl who is brought up in a less guarded atmosphere."

Though, together with her maid and the one remaining governess, Mademoiselle Cauchois, the older Van Hook girl still lived on the fourth floor, she was already being trained for her flights into the outer world. This training came largely in the schoolgirl luncheons, which from time to time she was permitted to give in the big downstairs dining room. Here the girl was intrusted with the privilege of selecting her floral decorations, with the supervision of the menu and the seating of her guests.

In making out her lists for luncheons Marian always had conflicts with Miss Finch.

"What!" said the deputy mother one day, when looking over the list of guests invited to one of these luncheons. "You're not going to invite that Grafter girl, are you? What do you think of that, Mrs. Dulcimer?" And she turned to that militant lady, now staying in the house.

"Grafter!" screamed the old society leader. "Those dreadful people whose grandfather kept a pastry shop! Why, of course Marian can't have her! I declare these schools nowadays are nothing but derricks to pull *nouveau-riche* parents into society. Those Grafters have tried everything else and failed; and now this! Woodticks—just worming themselves in!"

Marian's supreme battle came, however, when she announced her intention of going to college.

"What!" exclaimed her father, looking dazed, as though she had just said she was going to a Tibetan monastery. "Oh, come now, Marian; what do you want to do that for? Well, well; see your grandmother."

The grandmother echoed Mr. Van Hook.

"What put such a notion as this into your head?" asked she.

"Because," said the seventeen-year-old girl, "I want to have an interest in life—not just this empty society round."

"Empty!" ejaculated Mrs. Dulcimer. "My life's been just about as empty as an automobile at a football game."

"But I want it to be filled with other kinds of things."

Grandmotherly Diplomacy

The old lady looked at her with her polished onyx eyes. In her long and successful career of keeping other people from doing what they most wanted to do she had learned one fast principle—always to yield the future. She wrapped it up now and handed it to Marian.

"Very well," said she gently, after a long silence; "I'll let you go to college—— Just wait; there's a condition: I'll let you go if you promise to come out next November."

The girl gave the promise with a light heart—one year was not very long to wait, after all. At eighteen, therefore, Marian made her début, and that same autumn Percival was sent away to school. The two events were about equally significant.

When it came time to leave, Mr. Rasher put out his hand and looked solemnly down into the boy's face.

"Good-by, Percival," said he. "Don't forget me, or what I've told you about those rich boys who made good."

The boy could not speak. He only gave one long look at the well-molded chin and the clear hazel eyes. It was as though he were committing to heart the beloved landmarks of a familiar scene, which he now might merely visit again. Freda, and now Mr. Rasher! It was too much. And the little ten-year-old boy, whose loves had all been salaried, whose communions were scattered like pollen before the wind, went to his room and cried. It was no wonder that already he had a deep conviction of the perishability of all relationships.

The school to which he was sent was one of the most fashionable of such institutions. This meant that it was one of the most simple. Pupils here were not permitted to have either motor or saddle horse. Even the democratic bicycle and canoe were tolerated only by special permission. All the boys were forbidden to leave the school boundaries. They could not go home for Thanksgiving; and even the legendary boxes from home were restricted to fruit.

Taken away from the stimulating curtains, removed from the ministrations of Tompkins, Percival slept now in a tiny room not much larger than a ship's cabin and curtained from that of his neighbor by a mere scrap of most "unimaginative" cretonne. For the first time in his life the boy now dressed himself and drew his own bath. Indeed, the sole relics of past pomp were the tortoise-shell toilet things, crested and initialed, with which Tompkins had stuffed his bag.

Percival Goes to School

Mr. Agley Rasher had cherished some hope of what Simpgelt might do for Percival; and, in a way, the hope was well founded. The school insisted upon a satisfactory scholarship. Its enrollment included a number of boys from families of comparative poverty. And in the classrooms absolutely no discrimination was made between poor boy and rich boy.

Mr. Rasher, however, had not counted on certain subtle discriminations. He had not counted, for one thing, on Mrs. Huckster Bluesang.

This lady, the wife of the head master, was round and dark, and as sweet as a chocolate cream; and she passed herself to only a favored few of the school's pupils.

Percival was doomed to be one of these few. When he was first received in Mrs. Bluesang's apartments she was standing on a handsome Bokhara rug, given to her by the richest member of last year's graduating class, and immediately in front of a vase of orchids, given to her by this year's wealthiest sixth-form man.

"And so this is Percival Dulcimer Van Hook!" dripped the lady, taking the boy's hand. "We are glad to have you, Percival; and I'm sure you are going to like it here."

"Yes, Mrs. Bluesang; I am sure I am," replied the well-bred little rich boy.

"I'll tell you what to do next Sunday—you come over to see me and we'll have a good time. I have a collection of butterflies that all my boys love—you like butterflies, don't you?"

"Oh, yes, Mrs. Bluesang," responded Percival enthusiastically; and the following Sunday he went.

When he got back to his corridor he dropped into the little room adjoining his. This was occupied by Norman Maldoon, an eleven-year-old boy from one of the New England cities. The son of a physician of that place, he had been brought up in comparative poverty; and the tuition at Simpgelt of one thousand dollars a year represented a great deal of pinching on the part of his parents.

"Where have you been?" asked Norman, turning round from his little chiffonier.

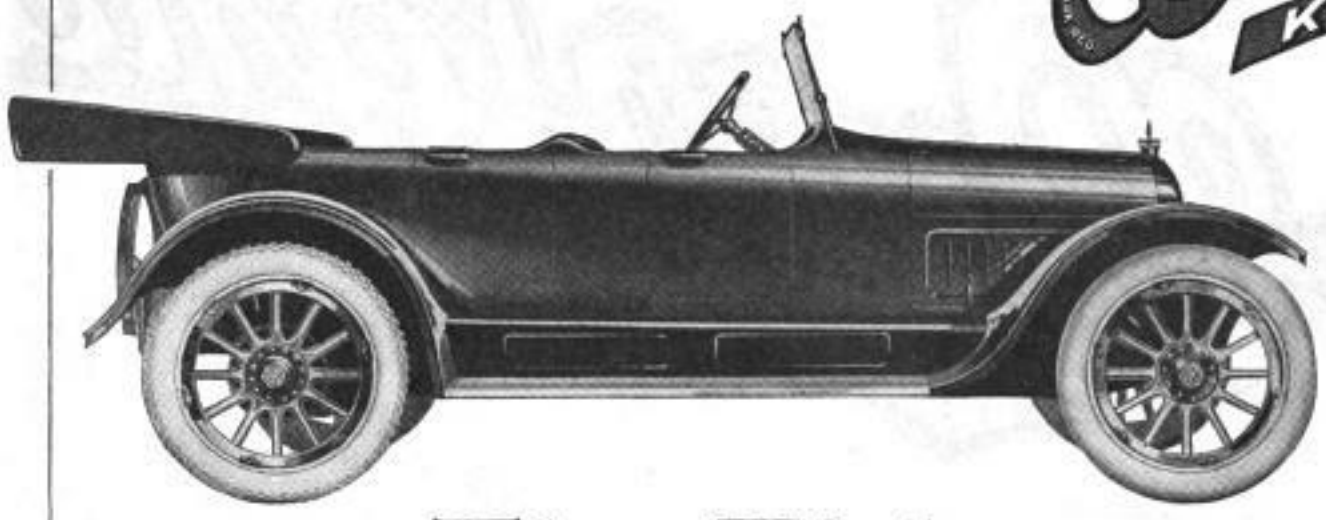
"Over at Mrs. Bluesang's. Why weren't you there? Say, she's got the daisiest collection of butterflies!"

The other boy gave his red hair a savage sleek. Norman's brushes were not real tortoise shell. They were celluloid and shabby.

"Why wasn't I there!" he repeated sneeringly. "Say, who do you think I am? My father isn't worth any fifty millions."

"Is mine?" asked Percival, turning wide-eyed to his neighbor.

"Oh, come now; quit your kidding! Don't tell me you don't know."



"Honest!" said Percival, and he stared in bewilderment at that archipelago of freckles. "Who told you so?" he asked.

"Why, hasn't it been in the newspapers right straight along?—all about your thousand dollar party last Christmas; and the tree that had to be grown for you special,

Willys KNIGHT

The Eight

In offering the public the first complete line of cars ever produced by one manufacturer we take particular pleasure in announcing the luxurious Willys-Knight Eight.

Everyone is now familiar with the epoch-making performance of the Knight motor.

Last year we marketed 12,000 Knights.

This is more Knights than all American manufacturers combined ever before built.

These matchless motors with their silent sliding sleeve-valves are daily growing more and more efficient; are daily making new history and new records for efficiency, power, life and economy.

For several years our engineering staff has been designing, developing and perfecting a Knight Eight.

It is now ready for the market—for you.

For a brand-new sensation in driving luxury this Willys-Knight Eight will give you a decided thrill!

It is super-efficient. Its efficiency is almost uncanny!

Think of eight cylinders free from the noise, wear and tear of valves and cams!

Think of the unlimited and reserve power and flexibility of eight silent sliding sleeve-valve cylinders.

It seems to be propelled by air—so quiet, positive and vibrationless is the smooth motion.

It seems to pick up and dash without hesitation, halt or any noticeable mechanical action. It glides up hill on high with the ease of coasting down.

In it you lose all sense of being driven. At all speeds you move with complete rest and repose.

A Willys-Knight Eight stock model taken right off the show room floor is the smoothest-riding thing on wheels!

After the first 1000 miles it is better; after 1500 miles it is still better; after 2000 miles still better—and so it continues to improve month in and out—indefinitely!

This Eight, we believe, sets a new mark several notches above the best that has heretofore been offered in motor performance.

It is the last word in mechanical development and body refinement.

It is the car for you.

Overland

A Complete Line of Automobiles

All New Values

From your point of view this announcement is most important.

For herein we set forth the achievement toward which this company has aimed for the last eight years.

This achievement, in a word, is the completion of our gigantic organization to a point where we could make and market a complete line of automobiles under one head.

One executive organization,
—*one* factory management,
—*one* purchasing unit,
—*one* sales expense,
—*one* group of dealers plan, produce and sell the entire line.

Buying power is concentrated. Costs are distributed over all these cars. The savings are enormous.

As a result we are producing cars of exceptional quality —and marketing them at unusually low prices.

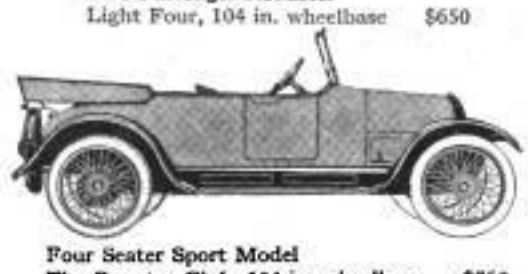
Every car is built to a rigid standard of performance, comfort and appearance.

The new Light Four at $665 is a striking example.

It has good style—built low with harmonious and full sweeping body lines. It is a beautiful car in every sense of the word.

The motor is powerful, quiet and of sturdy construction. The turning radius is short. The car has a quick acceleration and is built to tour safely and comfortably from the Atlantic to the Pacific.

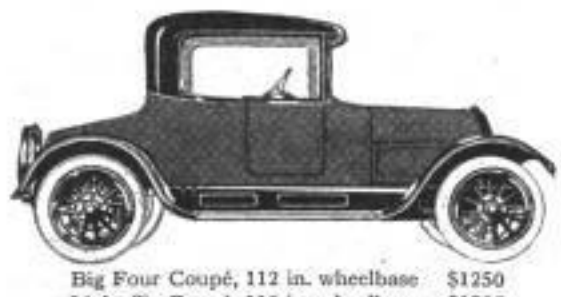
And with all these good qualities *it rides beautifully*. The soft cushions, the long and resilient cantilever rear springs, the large tires (31x 4) and the proper balance in construction absorb all types of jolts—the choppy cobblestone, the cuppy macadam and the heavy ruts and thank-you-ma'ams of the American highways.



Yet this is but one of the new Willys-Overland values.

Never before have the economies of vast production been available for buyers of every class of car.

And the Overland Policy of greater production, higher quality, lower price is exemplified in every model and type.



Two Passenger Roadster
Light Four, 104 in. wheelbase $650

Unable to secure copper to replace the lip of this huge resin retort, a Pensacola, Fla., concern faced a ninety-day shut-down of their plant. It was welded in three days by Prest-O-Lite Process, the portable outfit being brought to the job.

Welding saved this concern 87 days' shut-down

By avoiding a tie-up or delay in production through the quick, permanent repair of some important piece of machinery, one use of this process in your plant may save you many times its cost. You can probably avail yourself of the increased strength, economy and simplicity of welding in the manufacture of metal parts, as thousands of others are doing. It will also pay you to investigate its use in repair work.

Prest-O-Lite PROCESS

Oxy-acetylene welding *fuses* two pieces of metal by intense heat into one piece with the strength of the original metal.

It is easily understood—any workman who understands metals can learn quickly to do efficient work. We furnish high-grade welding apparatus for $60 (Canada, $75); Prest-O-Lite Acetylene Service and special blowpipe for cutting metals at extra cost.

Prest-O-Lite Dissolved Acetylene is furnished in convenient cylinders, making the welding outfit portable for use inside or outside the shop. The Prest-O-Lite system of exchanging empty cylinders for full ones insures universal, perpetual service. Avoids the initial investment and depreciation incurred in making crude acetylene in carbide generators. Insures better welds, quicker work and lower operating costs.

If you use a bolt, rivet or threaded joint in the manufacture of any metal product, it will pay you to learn the savings in time and material, and the added strength and neatness offered you by oxy-acetylene welding.

Our illustrated literature probably describes a profitable use in your business. Write for it.

up in Vermont; and the moving pictures you gave that night, which cost five hundred dollars; and all the expensive things you gave to your guests!" Each item came out with a whack of the brush. Norman was like the *tricoteuses* of the French Revolution, bookkeeping with their needles in aristocratic heads. "And how about that five-thousand-dollar cradle of yours they hunted all over Europe for? Do your six nurses and governesses and tutors still rock you to sleep in that?"

The well-bred little rich boy left the ill-bred little poor boy with an overwhelming bewilderment. They wrote about him in the newspapers! Perhaps boys and girls in Japan and Finland knew about him and his Christmas parties! What was that Mr. Rasher had said about being famous—why, here he was famous already, and without lifting a hand! And through the bewilderment ran a dizzy sensation of triumph. The preëminence all boys love was here, already prepared for him.

The breadth and depth of the triumph were all the greater because of their unexpectedness. Mingling heretofore entirely with children of his own class, he had never been the object of particular attention. At Bailey's Beach and Miss Leapton's everybody else had much the same apportionment as his own. The question of how much he was really worth had never entered his head. It had certainly never occurred to him that mere money could make him a hero.

In the course of the next few weeks, however, he was to be converted more and more to the general impressiveness of millions. One occasion, in particular, stamped him deeply. This was an incident arising from Simpgelt's rule to the effect that boys in the lower forms should not be given more than a quarter a week for spending money.

One Monday morning Percival, in company with Norman Maldoon, walked up to the head master for his allotment. Just in front of them a boy of twelve—Quentin Millrick, whom Percival had known all his life—was in conversation with Mr. Bluesang.

"Here you are, Quentin," said the head master finally; "here's your quarter."

"Oh, don't trouble yourself, Mr. Bluesang," retorted the boy; "keep it for the canary bird's seed. I think I can get by on this." And, pulling from his pocket a thick roll of yellow-backed bills, he walked away.

"Gee!" remarked Norman to Percival some moments later. "Think of having all that money!" It was plain that he was dazzled, and Percival felt that his own prestige was endangered.

"How much is Quentin Millrick's father worth?" asked he suddenly of Norman as they walked over the campus.

The $100,000 Débutante

"Oh, 'bout ninety millions, I guess," said the careful tabulator of figures.

Percival felt, more than ever, that he had been beaten at his own game. He would write home for one of those sheaves of bills to show Norman Maldoon. And that moment there was born in the boy that competition in lavishness which was fostered by all his later associations.

When he arrived home that Christmas his sister Marian had been formally presented to society. This event had been highly endowed. The débutante's clothes, including an eight-thousand-dollar set of furs, a one-thousand-dollar wrap, and six sets of underclothes, made by Docile at two hundred dollars for each set, had cost twenty thousand dollars. Even more than this, too, had been expended on the great Arabian Nights' Ball which marked her entrance into society. This affair, like that of every fashionable and wealthy débutante, was given at Madeira's; and its background was tastefully composed of rugs, tapestries and Metropolitan singers.

For the Christmas celebration the Van Hook family always went to their country place on the Hudson. This year, as Percival sat down to the family dinner he looked curiously at his sister Marian.

"Is it true," asked he, "that father gave you a fifty-thousand-dollar string of pearls when you came out?"

"Why, Percival," cried Miss Finch, "what a vulgar thing to ask! Who told you such a thing?"

"Oh," said he carelessly, "a boy at our school; he read that Marian was called the hundred-thousand-dollar débutante. Tell me, Marian"—and he turned to his sister eagerly—"did you cost more than Quentin Millrick's sister?"

Marian gave a little laugh. She was now a lovely looking girl of eighteen, with the glossy gold and brown tints of a violin. To this resemblance the small head on the long throat, the slender line of the waist and the bounding curve of the body gave a final persuasion. And Marian was like a violin. She could be tuned to any key. Just as she had been absorbed by the life at school, she was plainly vibrating now to her new surroundings. Already the competitions and exhilarations of wealth were claiming her, just as they were claiming Percival. Her old grandmother had risked nothing in giving her the future.

Marian's adaptability was not by any means a chance thing. It was the product of a system of acceptance. All her life she had had education, amusement and travel laid out before her. It was not strange that now, when life offered her an unworthy and trivial program, she should prove just as tractable. In the close-companioned, dependent and weakening childhood of this system was found the reason why Mrs. Van Hook had submitted to her mother's will in giving up the young diplomat with whom she had been in love. It was equally responsible for Percival's easy acceptances.

Money, Money, Everywhere

During the next few years, it is true, Simpgelt showed no records of any failure on the part of the boy. There he was known as a fine, unassuming little chap, who was a good student and entered briskly into all the school activities. In spite of this fact, there was growing up more and more in the boy a consciousness of his separation from the rest of the world. This was particularly emphasized by his association with Norman Maldoon.

One day, when the boy was thirteen and in the third form at Simpgelt, he looked in at his neighbor pounding away at Cæsar's campaigns.

"I say, Norman," he asked curiously, "what are you going to do when you grow up?"

"I'm going to be a lawyer, first of all; but then I'm going into some big business. There's more chance to make money in business, father says."

Percival looked at the freckled face rather enviously.

"You want to make money?" asked he.

"Sure, I do!" He looked up at Percival. "What are you going to do?"

Percival looked rather vague.

"Oh," said he, remembering Mr. Rasher, "I don't know—I guess I'll be a politician."

"Betcha you never do a thing!" And the redhead stared up maliciously.

"Betcha I do!"

"What's the use? If I were as rich as you I'd never turn my hand."

In these first years the rich boy tried hard to keep the memory of Henry the Fifth and Frederick Barbarossa before him. They, too, had been blighted by money. Somehow, though, that was different. In those days people were fighting battles with money for something else. Here at Simpgelt all the poor boys were fighting, like Norman Maldoon, for money, and money alone. There was no Holy Land to restore; no kingdom to extend. And to battle for some vague ideal was much like fighting for a basket ball when everybody else was engaged in a scrimmage for a football. Such solitary aspirations were certainly the last thing for which his whole life—his life of being with somebody—had prepared him.

So, though he still had the desire to make something of himself, the boy somehow felt outside the combat. There was nothing to do but compete in lavishness with those boys whose background was the same as his own. As the result of this, Percival found himself at fifteen in possession of two cars—one closed and the other open—a special chauffeur; a motor boat, with a captain to run it; a sailboat, with a man to sail it; a valet; and some thousands of dollars' worth of clothes.

During the summer that he was fifteen Quentin Millrick, now one of his best friends, came to visit him; and in his honor Percival arranged a party for twenty boys and girls, all of whom were to motor over from neighboring estates.

"What are you going to give them?" asked Quentin when Percival was making the arrangements.

"Why, must I give them something? I hadn't thought of it."

"Oh, I'd give 'em some little trifle—the whole thing oughtn't to cost you more than four hundred. That's about all I spent on a party last week; just gave the girls card-cases and the fellows gold stickpins—that's all."

"But," stammered Percival, "I've overdrawn my allowance something fierce and I don't believe father would stand for it."

"That's easy," said Quentin cheerfully; "just go up to town and order them, and charge them to the office. Your father will never even notice it."

Percival hesitated for a moment.

"Oh, come now, Perc," urged his friend, "don't be such a boob! Say, I pulled a good one off on mother the other day. I asked her for seventy-five dollars, to go into town with Old Beetles, my new tutor; and—say, there wasn't a thing we didn't do, from the roofs down to Marie Doro's eyelashes! Right straight along Old Beetles had been footing the bills, and when we got home he asked me for the seventy-five. 'Not on your life!' says I. 'You'll get that over my dead body—no other way. You can just charge that up to the office.' Wasn't that a good one?"

Before this courageous and crafty Greek, how could the memory of Mr. Rasher prevail, any more than the faded rose in your album against the brand-new June? Mr. Rasher and Freda—both of these affections of the boy were pressed flowers, that was the trouble. They represented only isolated and solitary roses—not the garden of family affection, blooming on from one phase of development to another. And in the lack of that steady and accompanying source of affection and ideals the boy's will tumbled. He pressed the button there in his bedroom. The competition in lavishness was on.

The Grafter Girl Wins

Nobody came in response to the bell. He rang again—furiously, petulantly. At last one of the footmen appeared.

"Order Stiles," said he; "I want to go into town."

"Yes, Mr. Percival," replied the man, in his summer livery of whipcord. "The open car, of course, sir?"

"Of course."

A few moments afterward Miss Finch came into the room where the two boys were talking.

"Percival," said she severely, "I wish you wouldn't ring the bells so furiously. It makes such confusion. I've told you about it often."

The sulky-looking boy stared at her insolently:

"And I've told you often that I think we've got the slowest servants in New York. Why don't you get somebody who hasn't housemaid's knee?".

After that the boys motored into town and charged five hundred dollars' worth of gifts for the party. On their return they found the house in confusion. Even as they drove up to the door, in fact, both of Percival's sisters—now married to wealthy men—ran out between the two footmen.

"Oh, Percival," cried Marian, "we've just had such frightful news—a cablegram from father ——"

"Dead?" asked Percival stolcally.

"Married!" shrieked both sisters; and they drew him into the living room.

"Married!" he gasped. "Who to?"

"That dreadful Grafter girl!" said Marian—"the one I used to go to school with. Grandmother was always fighting me about having her to luncheons; she said she was a dreadful climber."

"If she hadn't been she never would have married father," commented Hildegarde pleasantly. "Past fifty, and with that red face and fat tummy!"

"Why, she's young, then!" Percival's face grew white. "She'll have ——"

"Of course," said Hildegarde; "a warren of them!"

"Tough luck, old man!" said Millrick, grinning from the corner. "Never mind; you'll probably get the most of it—eldest son, you know. They don't generally like to cut the estate up into breakfast food."

"You don't know father, then," said Percival; "he's a regular fool! Anybody can get round him—can't they, Hildegarde?"

"Indeed they can!" chimed in both girls.

"Well," said Percival, "I'm done for!" And, with the tremendous rage of having his competition in lavishness suddenly cut short, he stalked out of the room.

It was for this noble emotion that the Sforza cradle, the careful nurses, the deputy mother, the Persian forms, the numerous lessons and the guarded atmosphere had preserved Percival Dulcimer Van Hook.

THE NEW ENGLISHWOMAN

(Continued from Page 22)

That is one of the reasons why the improvement and care of child life has interested me so much; for infants are the potential citizens upon whom England will have to depend in her period of reconstruction."

Lord Northcliffe, who before the war was looked upon by the suffragists, militant and otherwise, as a living menace to their cause, has been completely won over by the marvelous war work done by England's women.

"The war enthusiasm, which has killed all sorts of social amusement, which has converted young men and maidens who thought that golfing, lawn tennis, lunching and dining were essential to life, has effected what I believe to be a permanent change in the British life outlook," Lord Northcliffe told me. "I do not for one moment believe that when this terrific upheaval is over the frivolous life of hotels and seaside resorts will ever return.

"The war has proved that women are able to accomplish much more than was ever expected of them. I will take one case in point: For many years the London telephone service has been the stock joke of Londoners and visiting foreigners. To-day, by actually timing all calls, it is as good as any I know of, despite the fact that the masculine element has been completely eliminated from its administration.

"War seems to have the faculty of increasing human energy to an extent not hitherto conceived. The young women you see acting as car conductors were probably last year engaged in handing out ribbons; to-day they are taking fares for eight or nine hours a day and seeing to it that they are properly paid. The wages are ten or eleven dollars a week. They are provided with well-managed restaurants for themselves, rest rooms and medical attendance, and have proved to be every bit as efficient as men. To such an extent has this become the case that men are now ashamed to be seen doing this kind of work, and will all explain to you that they have been either wounded or discharged from the army.

"You will find no men—except very old men—acting as floorwalkers in stores, for example. Women are found to be quite as capable. Such work as running the dining cars on railroads is now in the hands of women, and is most effective. These, however, are small tasks compared with those of running the gigantic munitions factories we have established all over the country, which are employing between a million and a million and a half women; and it is interesting to note that there is competition among them to get the dangerous work."

The End of Class Distinctions

"We are not a very demonstrative people. Very little has been said about all these immense and intricate changes; but the fact about the war in its one-hundred-and-tenth week is that, while raising an army of five and a half millions, we have maintained our export trade at almost the highest figure it has ever reached. This is due to two reasons: First, the patriotic rush of women into every sort of occupation which could help the war and thus relieve men for the many tasks for which they are physically unfitted; and second, the command of the sea enables us to sell our goods to any people desirous of buying them.

"The war has broken down class distinctions in a way that nothing else could have done. Who, two years ago, would have imagined that wealthy young Mr. Jones would be serving as a private under a man who at that time was acting as his golf caddie? I know a lieutenant colonel, twice wounded and mentioned in dispatches, who two years ago was the janitor of an apartment house and had no more knowledge or thought of war than the average man has of the management of wild animals. In two years we have created an absolutely democratic army, and one whose obstinacy and tenacity, combined with the intervention of the British fleet, constitutes Germany's most gigantic blunder—that is, the blunder of Von Bethmann-Hollweg, consisting in not realizing that these vast forces would be put into opposition to the German schemes of the acquisition of Belgium, France and Russia.

"A great many people are worrying themselves about after the war, and what is going to happen to all the women now doing men's work. Well, we have found out that a great many men have been doing women's work. Lots of young men in your country who read this would soon find that if they did the sort of work they are doing in the United States in any of the war countries, their existence would be rendered impossible by the attitude of women. A very nice young American soldier, who was in London lately but of course not able to wear uniform, being an officer in the United States Army abroad—told me he simply could not stand the stares and whispered comments of women on the streets.

"All our banks are being run by women clerks. I do not think any young man will be able to take up that sort of work any more. My own bank, which is as old as the United States, has found that women clerks are quite as able as men. Men club servants have had their last day. The whole races of butlers, footmen and flunkies have gone. Each day sees a disappearance of some of John Bull's most cherished institutions. The butler seemed the most firmly intrenched man in the land two years ago. To-day the manservant who has enlisted, and goes home from the trenches on two or three days' leave, expresses very volubly his sentiments that he will 'never do that sort of work any more.'

"What will become of these young soldiers? Many of them will return to the business in which they were, but not in clerical capacities. They want to be higher up or have land of their own. Statistics collected lately as to what the young soldier at the Front wants when he comes home show that he wants land; and that fact I imagine will lead to a complete upheaval of landlords—not only in England but in the whole world. The Canadians and Australians are laying themselves out to catch these lusty young gunners and trenchdiggers; but we do not mean to let too many of them wander from the old country; and I have no doubt that very attractive propositions will be offered to retain them."

The Husbands of the Future

"The war has seen the practical disappearance of the horse as a source of amusement. The war has seen the checking of such games as football and cricket to an immense extent, and I do not believe they will ever be revived on anything like the scale we had them.

"Instead of people disliking soldiering, it has been found that, with all its hazards and horrors, war is a game that young people really like. Those who are now preparing for the struggle are so eager that they fear they may not arrive in France or elsewhere in time for a battle. The war has shown that women can run hospitals quite as well as men. Gardening is essentially a feminine occupation—and why not? Women operate elevators quite as well as men. Women are quite as good chauffeurs as men. Tradesmen's delivery wagons will, I am sure, never again be driven by men in England. A girl of eighteen can do it quite as well as any man.

"When these changes first began, the men did not like it. They felt that they had been robbed of a good deal of their importance. Many a man goes from his suburban home at Newark, Orange and Paterson, leaving his womenfolk in the delusion that he is going forth to do some wonderful task. Many men went forth—for generations, indeed—deceiving Englishwomen in the same way; they know better now. They know there is not much mystery at the end of the ride.

"As for husbands in the future, I imagine that, though there are not enough husbands to go round in Great Britain, there are probably quite enough in the vast areas of the British Empire, such as Australia, New Zealand and Canada. I believe the war will result in a much more speedy development of Canada. I have always thought that Eastern Canada was never sufficiently developed; and when the young people went from Eastern Canada to the West they left behind them ample opportunities for people who prefer ready-made farms to the task of breaking up the new soil of the Far West.

"The terrible depletion of the aristocracy, all of whom have lost numberless of their stock, is akin to the losses they incurred in the Wars of the Roses and the Civil War of 1640; but history has proved

(Concluded on Page 61)

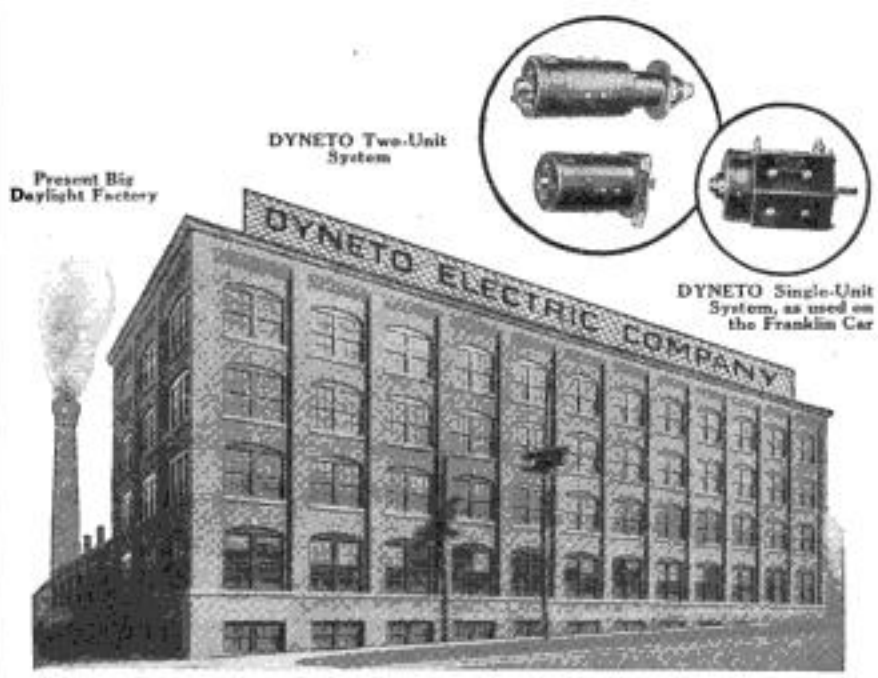
Dyneto Factory in 1896

growth!

TWENTY years ago, the Dyneto "factory" was a little, frame—well, there's a picture of it up in the corner. Not much to look at, perhaps, but nevertheless almost sacred in the memory of those pioneers who pooled their time and talents there in serious, constructive industry.

Nothing succeeds like a successful idea. You can get some notion of the success of the Dyneto idea when you consider that the Dyneto Electric Company has moved five times since 'ninety-six—each time into larger, better quarters.

Dyneto STARTING-LIGHTING SYSTEMS



have become standard equipment on many of America's foremost motor cars. The big, new factory at Syracuse is running night and day on orders in hand for Dyneto Starting-Lighting Systems and Dyneto Electric-Lighting Plants—the simple, compact, make-your-own-light-and-power plants for farm, suburban and isolated places.

A starting-lighting system can make or mar the modern motor car. It is the very *heart* of the whole works. A car equipped with Dyneto Starting-Lighting is pretty sure to be a car that is efficient all around—a safe car to buy.

You cannot be too particular about the starting-lighting equipment. It is very, very important.

BOTH TIRES ARE GOODYEAR CORDS

Contrary to an impression more or less widespread, the Ribbed tread is not an infallible identification of a Cord tire.

The tread, as a matter of fact, has little to do with the separate and peculiar advantages the Cord tire affords—it is the shield upon the warrior, that is all.

We use two types of tread on Goodyear Cord Tires—All-Weather and Ribbed—and the basic tire-structure in both cases is the same. Both types surface a Cord tire affording all Cord tire advantages.

The All-Weather tread, which is our own design, we have found particularly effective on rear wheels.

Studded with big, rugged, clean-cut blocks, it grips the earth like a panther's paw, exerts the maximum tractive effort, and offers obstinate resistance to side-slip or skid.

Its double-thick construction grudges even slow wear to the thrust and drag of starts and stops, and in connection with the powerful carcass, prevents most punctures.

The Ribbed tread we use, of European design, has no pronounced non-skid virtue, and we recommend it rather for use on front wheels.

It is particularly advantageous there, in that its narrow ground contact makes steering easy. Like the All-Weather tread, though not quite to the same extent, it is thicker than is the rule, hence it also wears longer and prevents punctures better.

Both Goodyear treads have a part in the superiority of Goodyear Cord Tires, but the major causes of that incomparable performance which sets them apart from other types, spring from a deeper source—from sharp differences in principle and construction.

Goodyear Cord Tires are made of thousands of tightly-twisted long-fiber cords, densely strong, built up into a carcass layer by layer, without cross-weave.

These cords are surrounded by pure rubber, veritably upholstered with it, and the layers are insulated one from another by a substantial cushion of pure rubber. The cords move freely in the tire without contact, without friction, and their multiplied strength is knit to the unhampered elasticity of the rubber itself.

The result is a tire amazingly strong, surpassingly resilient and astonishingly efficient—a Goodyear Cord Tire.

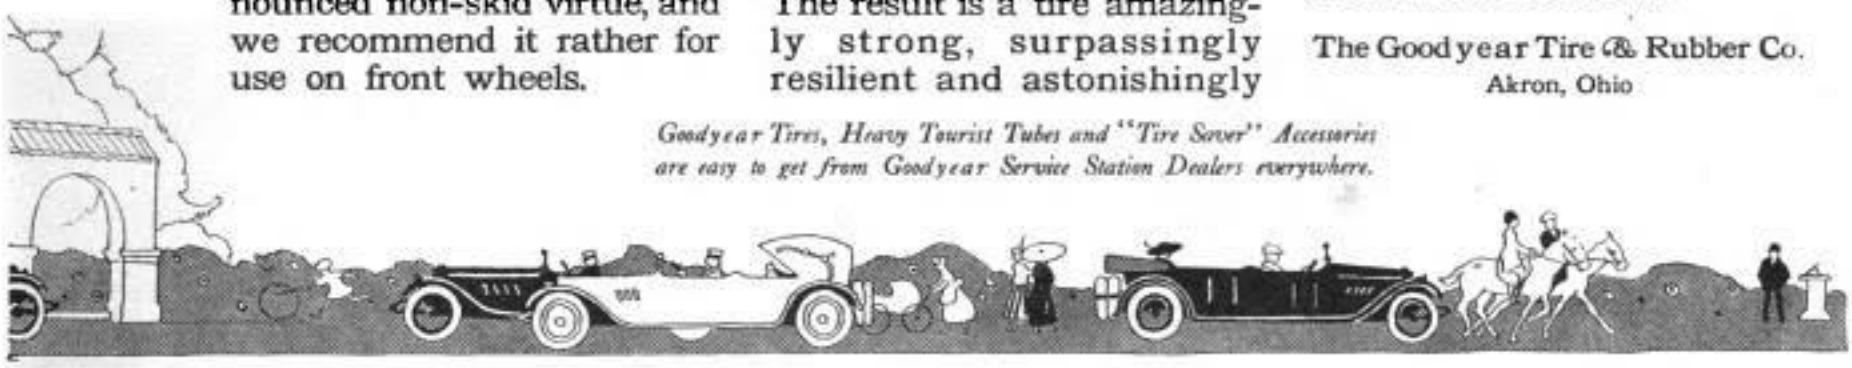
A tire that travels stoutly, exultantly, securely—and in utter comfort.

A tire that serves better, goes farther, and lasts longer.

A tire that, while luxurious, also is economical; while distinctive, also is thoroughly serviceable; while livelier and swifter, also is more enduring.

Goodyear Cord Tires, because of their unusual flexibility, reduce gasoline consumption and engine effort, increase acceleration and car speed, defend car and occupants from strain and road-shock.

Because of their unusual strength they yield more mileage, greater ease of riding, wider freedom from trouble, delay and inconvenience.



They are, in a word, the peak and zenith of tire accomplishment — abler, sounder, worthier than anything that has gone before.

Their quality makes them higher-priced—and *better*.

Goodyear Cord Tires come in No-Hook and Q. D. Clincher types, in both All-Weather and Ribbed Treads, remember; for gasoline and electric cars.

Oakland

The Sensible Six

Sturdy as the Oak

A Great Car from every standpoint — that's the country-wide verdict on the new Oakland *Sensible Six*.

It's a big car — a roomy car — a car of *sensible* operating cost — one that any member of the family may drive with ease, pleasure, comfort and safety.

Its performance is a little short of astonishing. On the hills or in bad going the powerful, valve-in-head motor climbs and pulls in a way that delights even the veteran driver.

And in easy-riding quality, the *Sensible Six* is a revelation. The long, semi-elliptic springs and oversize tires smooth out the roughest going.

From every standpoint the *Sensible Six* is a *great big value* at the price. Send for our new booklet.

The *Oakland Eight* at $1585 is a big, powerful 7-passenger touring car for those who demand the utmost in speed, flexibility, and luxurious appointments.

that strong family strains survive. You have certain dominant family names in your country, and I imagine that our dominant families will regenerate. They were the first to dash into the war, thus showing their virility; and I imagine that the vital forces left in their kinsmen will revive these families, just as I most firmly believe that, with all its tragedies, the war has been a very splendid awakening for the British people."

The Viscountess Wolseley, whose family is one of the oldest and most historic in her land, has already done for the young women of England something of which she is justly proud. It is the establishment of her school of gardening at Glynde, in East Sussex, where young women from the well-to-do middle classes are being taught practical farming and gardening in order to take the places of the men who have been taken away from the land by war.

"My school has proved a great boon already to our country, and the demand for women gardeners is far beyond the supply. Queen Mary only recently sent to me for five gardeners for Buckingham Palace and Windsor, each, as no men are being kept in home service of any sort who can be turned into soldiers. I believe that the land, and its cultivation, is England's best asset, next to munitions, at this time; and no young woman can better serve her country than by becoming a practical gardener. We need food, we must have it, and the land must produce it; so I am using every bit of my time and thought upon getting strong, healthy girls in all parts of England to become interested in truck and other gardening, and in the culture of medicinal herbs, and in fruit growing. There are, to-day," Lady Wolseley says, "fifty thousand women registered already in England as women workers on the land."

New Conditions and New Methods

"A tremendous upheaval in method is ahead of us; and where perhaps we were indifferent before the war to the freedom and practical educational methods employed in the United States, in its woman education, we shall find ourselves glad to profit in our own training by your methods," added the viscountess.

"I believe that such methods will be adopted in England after our war is over. We have been wrong in our training of girls. They—particularly girls of the upper middle class—have been brought up with the ideal of no work, and equipped with an education that means nothing to them, based upon a standard of economic valuations. This war, with its terrific loss of men, and with women becoming of necessity independent of man protection, shows glaringly the faults of an educational system that makes no provision for the vocational and professional training of our own women of the upper classes; and it is to those women that England in the future must look for her best assistance in working out after-war problems. I have been for years imbued with the idea that our upper middle-class girls could be trained to useful occupations, and it was for that reason that, many years ago, I founded The Glynde College for Lady Gardeners. Our work has now come to be recognized; this war has proved the need of special vocational training. I can say that I have had more demands for women gardeners than we have been able to supply; and at excellent wages too."

Many fear the effect of the changed economic status of women of the lower and lower middle classes of England after the return from war of the men left, to again take their places at desks and positions they occupied before they enlisted. It will indeed be a problem, which cannot be arranged either by committees or by Acts of Parliament. Women in the mass have, for the first time in their history in England, proved their power, their efficiency; and they have felt that strength which comes from wages sufficient to give them food, clothing and shelter, without the aid of man. Will they give up these positions and go back to the less-than-living wage that was theirs before war made havoc of all industries operated in all branches by man labor?

After talking, as I have, to representative women in every class in England, I should say no. The war has given woman her opportunity—she has proved her efficiency in places where male prejudice and usurpation have deprived her heretofore; and not only will she demand a higher economic compensation but she will demand better educational advantages, better economic equipment, and more definite understanding of her place in the political, social and economic life of her land. This position, taken by the lower classes, is already making itself felt throughout the web and woof of all English life.

"What are we going to do after the war?" a great English lady asked me, throwing up her hands in dismay. "Why, at the present time, with our maids taking the places of our butlers and footmen gone to war, they have developed an impertinent attitude hitherto unknown in the serving classes. But what can we do? If we are not satisfied with them—why, off they go; and it is no easy matter now, with all the girls looking for lucrative places in munition factories, as conductors, as postwomen and as telephone girls, in our big cities, to get women who will be satisfied with the wages that are given to maids and household servants!" she exclaimed.

"What of it?" another equally great English lady—Lady Henry Somerset—asked. "Why should working girls be satisfied by underpaid positions and by waiting on ladies at a time when ladies' occupations are gone?" By "ladies' occupations" Lady Henry Somerset intends to convey the "empty babbling and remorseless show" of former London fashionable life, with its court presentations, extravagant balls and dinners; its week-end house parties, given over to license and untold luxury; its "shooting" weeks; its Derby week; its annual routine of just one pleasure after another. She, like hundreds of other splendidly poised men and women of England—the clear-visioned scouts, as it were, of the army of social reconstruction—is thinking into the future, but accepting the now with fortitude and philosophy.

Though Lady Somerset once lived in the most fashionable section of London, in a great house, she now lives in a tiny studio, tucked away in Gray's Inn Square, in Holborn, London; and last spring even that little apartment was almost swept away by a Zeppelin raid, when its living room, bedroom and dining room were completely demolished. Her son, heir to the great title, is now at the Somme Front, doing his bit with the rest of them. And yet Lady Somerset works away at the war job with the same beauty and dignity that in other days marked her as one of the great hostesses of London, and of the "Priory," where King Edward was wont to spend his Whitsuntides.

Lady Somerset's Views

Said Lady Somerset: "There have been, in the past, too abrupt distinctions between the classes, which war will in a large measure do away with; and it will be a splendid thing for England that this is so. Women of the protected upper classes will have to face a future which may mean they will have to go out into the economic world. There will be thousands of women left widows, and other thousands whose chances of marriage will be gone. This is a very big problem, with many serious sides. Just what will be done is largely a matter of conjecture; but it is something we shall have to face squarely.

"Our women have it in them to do, as this great war has proved beyond conjecture. They have proved that, thus far, they can be trusted with the vote if their future conduct keeps up to its present high mark. Women must learn discipline. If they do not burst out with demands, if they will only keep quiet and let their works, instead of words, speak, there is no doubt of their recognition in the matter of suffrage after the war, I am convinced. But they must keep themselves well in hand, for otherwise their present conduct will not count for them in after-war decisions."

The question of education is one Lady Somerset believes of vast importance to the women after the war:

"There will be a different attitude, I believe, toward woman's education, to meet the demands of the new conditions. It will be more practical and vocational. To-day a woman of the upper classes and the upper middle classes is in great need of definite vocational training. Whatever talents and capacity she has cannot economically be of the highest value to the war or to the country."

As for after-war England, Lady Somerset believes that much of the pomp and splendor and formality of the present system will vanish.

"The chastening influence of war—the terrific loss of life—will be felt in every circle; and most keenly in the upper classes, where nearly every family has lost or will have lost so many of its men. Social conditions can never revert to the careless, easy footing of former years, for such suffering and loss cannot leave us without a deeper, clearer vision and a more definite idea of the essentials. It is so easy to forgo the routine of pleasures that existed before the war. This has been proved by the past two years of practically suspended social life in this country. All the sorrows and losses will make, in the end, for a finer manhood and womanhood, with the delusions of the non-essentials swept from under. It is from the women of the morrow that England must expect much—and, I believe, can expect much," said Lady Somerset.

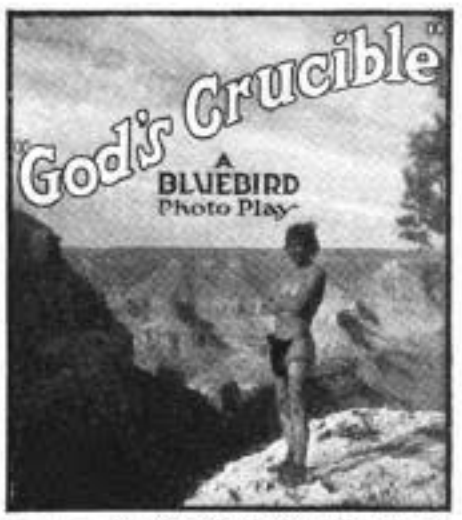
She is firmly convinced that the breaking up of the great land holdings, which will be one of the first radical measures to be dealt with by the government after the war, will be the best thing that can happen:

"Our soldiers must have land; it is wicked—worse than foolish—for us to hold on to these great estates for selfish pleasure; land so rich in future promise to thousands, and which is only enjoyed by the few at the present time. This in itself will remake England socially; and we, with England's best interests at heart and with confidence in her future, hail the day."

Mr. H. G. Wells' Forecast

In summing up the status of Englishwomen after the war, H. G. Wells says:

"In every way the war is accelerating the emancipation of women from sexual specialization. It is facilitating their economic emancipation. It is liberating types that will inevitably destroy both the 'atmosphere of gallantry,' which is such a bar to friendliness between people of the opposite sexes, and that atmosphere of hostile distrust which is the counterpart in the minds of the oversexual suffragettes. It is arresting the change of fashions and simplifying manners.



"Once, to be married was a woman's whole career. Household cares, a dozen children, and she was consumed. Now to be married is an incident in a woman's career, as in a man's. Nor will there be much wealth or superfluity to make levity possible and desirable. Winsome and weak womanhood will be told bluntly, by men and women alike, that it is a bore. The froufrou of skirts, the delicate mysteries of the toilet, will cease to thrill any but the young men.

"Marriage, deprived of its bonds of material necessity, will demand a closer and closer companionship as its justification and excuse. A marriage that does not ripen into a close personal friendship between two equals will be regarded, with increasing definiteness, as an unsatisfactory marriage. It is likely to be an affair of diminishing public and increasing private importance. People who marry are likely to remain, so far as practical ends go, more detached and separable. The essential link will be the love and affection, and not the home.

"And a type of marriage where personal compatibility has come to be esteemed the fundamental thing will be altogether more amenable to divorce than the old union, which was based on the kitchen and the nursery, and the absence of any care, education or security for children beyond the range of the parental household.

"This war is accelerating rather than deflecting the stream of tendency, and is bringing us rapidly to a state of affairs in which women will be much more definitely independent of their sexual status, much less hampered in their self-development, and much more nearly equal to men than has ever been known before in the whole history of mankind."

Staged and Photographed in the Grand Canyon of Arizona

YOU who love the fascination of Nature; who love the charm and grandeur of the great outdoors of the Grand Canyon region; you who believe in smiling courtesy and good will as against crabbedness, sourness and hatred,—will fully appreciate the appealing and unusual BLUEBIRD Photo Play—"GOD'S CRUCIBLE."

This remarkable and typical BLUEBIRD Photo Play will give you the greatest possible dramatic entertainment. It is more than a drama; and its presentation is possible only on a moving picture screen.

It's a
BLUEBIRD
Photo Play

The scenes laid in the Grand Canyon are beyond description; the play itself wonderfully directed, splendidly acted. We urge you to see it. You will enjoy it immensely.

Be sure also to see the following BLUEBIRD Photo Plays—"THE BUGLER OF ALGIERS"—"THE EAGLE'S WINGS"—"THE SIGN OF THE POPPY"—"THE PRICE OF SILENCE"—"THE HONOR OF MARY BLAKE"—"THE RIGHT TO BE HAPPY" (from Dickens' immortal classic, "A Christmas Carol"). Watch for coming BLUEBIRDS announced in this publication each week.

Real Worth

"What is it worth?" is often confused with "What is the price?" by those who do not think deeply.

But worth is a term indicating intrinsic quality, honesty of materials and construction, reliability in performance.

Price is purely relative, depending on temporary considerations—it is low when labor and materials are cheap, high when they are high.

Willard advertising has been first to tell car owners frankly what constitutes real worth in a battery, and why it cannot be cheapened without jeopardizing car owners' satisfaction. Willard Batteries have never been built to meet a price but to preserve that intrinsic quality, no matter what the temporary cost of rubber, lead or labor.

Over a million Willard Batteries in use indicate public approval of that policy.

Proper Care

Batteries must not only be well built, they must be well cared for. Fortunately this care is not difficult, nor does it require much time on the part of the owner.

But it does imply some knowledge of the operating of a starting and lighting system, of the causes of battery troubles and how to avoid them.

Willard advertising has been the first great national campaign of education by which car owners have learned these things.

It has already brought about a better understanding of the storage battery and saved car owners thousands of dollars that might otherwise have been spent for unnecessary repairs and replacements.

Below is one of many Willard advertisements that have given real information to millions of car owners.

Digitized by Google

Expert Help

Even the best of batteries with the best of care will wear out some day.

Even the best of starting and lighting systems will sometimes get out of order and injure the battery.

Even the most careful of car owners may sometimes make unreasonable demands on his battery.

Then he needs expert help, for service by the ignorant or the amateur is often worse than no service at all.

Therefore, Willard maintains Service Stations at which are Willard-trained experts, able to give reliable advice, competent to charge, repair or rebuild a battery.

If every new car owner would visit the nearest Willard Station *as soon as he gets his car*, without waiting till he has trouble, batteries would last longer.

And this is, in fact, becoming common practice.

The Result

Year after year the overwhelming majority of the builders of Electrically Equipped Cars include Willard Batteries in their regular equipment.

THE PIKER'S MARKET

(Concluded from Page 4)

broker's insurance, for whether the order is to buy or to sell, it cannot be executed usually on the Exchange until the odd-lot broker on the floor has sufficient odd lots in hand to make up one 100-share transaction. If he hasn't, the price may change long before he has, thus entailing a loss.

This market has seen the development of the odd-lot margin business. The older, more conservative of the brokerage houses look down on it, but the business is growing rapidly. One house that started in with a single seat on the Exchange and a capital of a few hundred thousands now has seven floor members employed in its trade, while its capital is rated in the millions.

The stories that come out of these places are epic. Nothing illustrates any better the fact that all the country's pikers are piking away in the market—that is, all those who already haven't gone broke. The stories, of course, deal largely with those dabblers who have run a shoestring into a fortune; but if one digs a little deeper, the tragic side of Wall Street gambling develops much more fully. Fortunately, however, there is enough that is humorous to leaven this.

One of the stories is about a man who early last January came down to an odd-lot house in lower Broadway. The man, it developed, was the driver of a beer truck. He was six feet tall, weighed more than two hundred and fifty pounds, and besides his accent, which was so thickly Teutonic you could have cut it with a cheese knife, he brought with him a hundred-dollar bill.

The Philosophical Truck Driver

The bill was ragged and frayed, looking as if it had been hoarded for years in a stocking. He wished to buy stocks, he said. When asked to state what stocks he wished to buy he answered artlessly he didn't know. All he did know was that he'd heard millions were to be made in Wall Street; therefore he wished to make them.

He was advised to buy Crucible Steel. Crucible, at the time, was low for the year at 52¾. Promptly Crucible went up. After it had gone up nearly ten points the beer-truck gentleman came round again. He wished to know about pyramiding, it seemed. The same man who had told him about making millions in Wall Street had revealed also that pyramiding was the way it was done. So by request the brokerage concern not only explained, but it carried the method into effect.

It proved very successful—at any rate, for a time. The truck driver found himself possessed of more money than he'd ever had in his life before; and resigning his job he took quarters for himself at a Broadway hotel, bought a motor, and, since he had himself run a motor for a living, he now hired a chauffeur to run his.

For three months he lived high. Every morning his chauffeur brought him downtown and at night he took him home. Then came the turn—the inevitable. There was a brief, momentary flurry in the market; and as the dabbler had pyramided too closely, paring down his margin to the danger point, the market in an hour cleaned him out. Not only that, he was left owing the brokerage concern something like $1100. However, having discharged his chauffeur, he sold the car for $1400, this paying the brokers as well as his hotel bill and leaving him with just $100 net.

A Shoestring Worn Thin

"Vell," he observed, when one of his fellow dabblers tried to condole with him—"vell, I got my hundred dollars yet, ain't it? And for three months I have a swell time, don't I?"

He is now back at his old job again, driving a brewery truck.

Stories like these, however, are not exactly the favorites in Wall Street. Instead, one hears on every hand tales of men who have made a killing, a knock-out. To be sure, most of these stories, on investigation, prove to be exaggerations; but still there are hundreds, if not thousands, of ordinary persons who have made fortunes in the last two years. Some of these—not a few—have made as much as a hundred thousand dollars on a shoestring. One man, a former clerk, is credited with having cleared $750,000 on a preliminary capital of $350. It can be done, of course; but the fact remains that the $750,000 winner already has dropped two-thirds of his winnings. The game is getting him, you know—getting his money—as in the end it always does. The fact is that for every dabbler who takes a dollar out of Wall Street, another hundred, perhaps a thousand, dabblers leave a dollar behind.

In one of the odd-lot houses there is a curious case. The dabbler in question was formerly a lawyer. The game got him, and giving up his law practice he transferred himself to the brokerage shop. In six months he was cleaned out, all that was left him of a former capital of $3000 being the margin on five shares of Steel Common on which he happened to be short. As also it happened, that he still had this was due to an error on the part of the margin clerk. Instead of having margin enough to cover his trade in reality he owed the firm $25.

"Don't close me out," he pleaded; "give me till to-night to make it up."

The leeway was given him, and that evening he came in looking rueful. He had been able to borrow only $75, and since he owed $25 and the management required a twenty-point margin on Steel, his margin was still shy. The management, however, stretched a point and let the account stand. Since then this dabbler has run his shoestring of $50 close up to $50,000, and there is a fair chance he will get away with it. Why he may is because he has few illusions. He himself will tell you the market always gets the dabbler in the end; and to provide against this, every week he draws out of his brokerage account every cent of profits above the $2000 or so he requires to margin his trades. The profits he gives to his wife. These she salts away in her own name; and as he himself has told her: "If you die in the poorhouse now, it'll be your own fault."

In this same office there is another instance of a dabbler who got away with winnings. The client was a scrubwoman, employed in the building where the broker's office is. She had been there long enough to get a smattering of Wall Street talk and methods; and one day she appeared with a roll of bills—$150 in all. The amount represented her savings for years.

"Scrubwork ain't no business for a lady," she announced. "I want to win enough to open a manicure parlor."

She invested the $150 in International Nickel and won. The winnings she put into Steel Common. She won in that too. "In Harlem," she said, "there's a place I c'n open for $1200. When I get that much I'll quit."

Beginners' Luck

To cut the story short, she made the $1200; and when she quit, as she said she would, she delivered herself of the following terse oration:

"Never again will y' catch me here again! Divvle a night's sleep have I had these three months gone! I'd rather earn me money on me knees next time!"

A doctor from Brooklyn is one of the same firm's clients. He came to the place with a shoestring of less than $500, saying that he wished to speculate and frankly confessing he didn't know one stock from another. Having looked over the board, he gave an order to buy ten shares of Republic Iron & Steel. The reason he chose the stock was because its initials on the quotation board—"R B C"—were the same as his. His guess was lucky. Republic rose, and in time he ran his shoestring into a profit of almost $40,000. Then came the U-boat panic last September; and his account, which at the time was heavily pyramided, was swept away overnight.

In the same flurry a young Cuban, a sugar planter, was among the dozens in this office who were caught. In three weeks this individual had run $30,000 up to $150,000. The day before the crash the manager of the office begged him to cash in. He refused, however, saying that he meant to run his profits up to a quarter of a million. In ten minutes after the opening, the Monday following that Nantucket business, he was wiped out clean.

It may be said, perhaps truthfully, that these stories are exaggerations, that they are only individual experiences. At the same time, grotesque as they are, they are by no means exceptional. Every brokerage office, if it sees fit, can hand out a hundred like them. Even in the bigger, the more conservative houses, where odd-lot marginal trading is frowned upon, the same condition exists. The bulk of the trading is being done by outsiders who have no business in Wall Street. They may trade in hundred-share lots or they may even trade in thousands; but the difference between these and the shoestring odd-lotters is only in the size of their trades. The number of those among them who have any real knowledge of what they are doing is negligible.

There is other evidence of this. To-day, in the financial quarter, most of the big investors, the real people with real money, seem inclined to put the bulk of their wealth into solid, conservative securities. What they fancy most now are the rails. The speculative crowd, however, hoots at this. In one group of accounts totaling 15,000 shares were only 350 shares of railroad stock. The rails, in fact, when contrasted with the industrials, the war brides, war babies and their ilk, seem almost neglected.

When the Ticker Lags

Just what this mass of indiscriminate speculation is doing to the stock market machinery is also evident. On December 4th no less than 264 listed securities were dealt in. The ticker, as a result of this, is often minutes behind the market. On November 6th, for example, it was twenty minutes behind the current quotations on the Exchange. When the market is steadily climbing, this does not matter so much, the truth being, as the Wall Street adage has it, that "the suckers always buy." All that happens is that they pay more for what they buy; but in a feverish market more than one dabbler has been cleaned out because the ticker was behind.

There was a case that illustrates this the day Baldwin Locomotive took to cutting up. The ticker that day was far behind the market; but when Baldwin showed at 120 the dabbler in question ordered the broker to buy. Instantly the stock ticker began to clack and splutter furiously, a mass of quotations showing on the tape. In a few minutes the price soared to 150⅛, when the dabbler gave the order to sell. He figured that his first order, at the worst, must have been filled round 130, and the order to sell anywhere round 145. What actually had happened, though, in the few minutes he hung over the tape, was that he'd bought at 150¼, the extreme high, and sold at 133—a loss of 17 points. He was cleaned out. The brief flurry had swept all his money away.

This fever of speculation, the thirst for money, that just now has the market by the throat, is not confined, however, to the market on the Big Exchange. It also is present on the Curb. Copper stocks have been the favorites, though stocks like Electric Boat, Midvale and Gulf States Steel have also shared in popularity. Where the most money has been made on the Curb—and, incidentally, lost as well—is in the Copper stocks.

As this is written raw copper, the metal, is selling round 33 cents a pound. The result of this has been that a vast number of copper securities, many of them the stock not of mines but of mere prospects, have been handed out to the public. The majority of these are destined to fail, but along with them have come a dozen or more that have proved to be "killings"—that is, the means of making fortunes overnight.

Soldiers Make a Peaceful Killing

United Verde Extension is the most sensational of these. In 1915 this stock sold at 80 cents a share. To-day it is selling round $42 a share and it has sold as high as $46.50. Magma Copper is another. In the same period it has risen from $15.50 a share to $69.50. Butte Copper & Zinc, selling at $5 in 1915, is now held at $21 a share. Tuolumne, issued at 50 cents this year, is now quoted at $2.50; Howe Sound, at $4.50 in 1915, is $9 at the moment; Calaveras, at 75 cents a year ago, is $6 now.

Green Monster is still another. It is said that the soldiers, the militia stationed on the Mexican border, made a killing in this, buying the stock at 70 cents a share. It is now selling round $3. However, all the copper stocks mentioned here have had something back of them. Contrasted with these there are a hundred fly-by-nights buzzing round on which the buyers are bound to lose all they've spent on them. The Curb management has of late been cautious about what stocks it will permit trading in, but even so, just as in the Big Exchange, manipulations and crooked deals sometimes get by.

How long this market will continue rising—any of these Wall Street markets, for that matter—this article does not pretend to forecast. It may last out the war, as some prophesy; or, on the other hand, it may not. Even in brokerage houses, whose biggest business is in margined accounts, the tone of talk is cautious. No one, in fact, seems able to forecast anything. There is so much money already in the country and so much more is in sight, already rolling in, that there is little use in forecasting just what will come about.

"Will the market last out the war?" one broker was asked.

"Don't ask me," he answered, "ask the war."

The general opinion, however, is that the end will come when the war ends. Before that, however, there is likely to be more than one raid made against the market as it now is going.

Already that active inside speculative interest ever present in Wall Street has begun to raid the public. A recent deal in the stock of one of the big industrial companies is an instance of this. There is still another instance in the stock-jobbing deal attempted by the interests in control of another manufacturing concern.

Take the first job: On the market's preliminary bulge, that of 1915, the company's stock rose from round 28 to very nearly par. Part of this was due to healthy prosperity, a part to manipulation. Round par, however, the interests that control the concern sold their stock and bought the company's convertible bonds. These, it should be understood, are convertible at any time into stock, so that the insiders stood in no danger of losing control of the concern. However, what they figured was that once their support was withdrawn, the stock's market value would contract. The bonds, though, even if stock support were withdrawn, would still hold their own. They might go down a few points—say five or so at the most—but then, what difference did that make?

Manipulation by Insiders

It was all as planned. The insiders, all directors in the concern, sold their stock; and once their support was withdrawn, from round par the stock sagged to a low level of 54. At that point the insiders reversed the operation. They sold their bonds and again bought the stock. To-day shares in that particular company are selling round par; and once more the inside coterie is leaking out its holdings and converting them anew into bonds.

The case of the other company is rather different. At the outset of the present market all the stock was held privately by the owners. It was a good stock then; it was earning good dividends; but the trouble was that the owners couldn't stand prosperity. Not satisfied with what they had, by a carefully conducted campaign they run the quoted price to a point above $300 a share. The problem then became how to feed out the inflated issue to the public. As no stock selling as high as 300 and over looks good to the public eye, par value of the security was reduced from $100 a share to $25 a share. The quadrupled issue was then reissued at an arbitrary price.

For some reason the public didn't nibble. Consequently, as a fresh bait to make it bite, the stock being then on a 12 per cent dividend-paying basis and no one wanting it even then, a fresh dividend was declared, this consisting of two stock bonuses of five per cent each. To-day this company is still leaking out its stock. Sad to say, however, it is not doing so well as it expected. From the underwriting price its stock has sagged to about one-half its first price. It should reach, presently, a figure that the public considers represents its true value.

These two instances are each but single cases. A hundred could be cited. However, what alarms Wall Street the most—the real Wall Street, the big interests that control finance—is not the amount of stock-rigging deals that are going on. Instead, the source of their fear is what is going to happen.

A GLIMPSE OF MAXWELL MANUFACTURING EFFICIENCY

MANUFACTURING efficiency consists, not in speeding up the processes to the detriment of the product—but in eliminating all waste of time and expense in manufacturing. The progressive final assembly in the Maxwell factory at Detroit is a demonstration of the efficiency that characterizes the making of Maxwell Cars from raw material to finished product.

The various parts have been made—ready to be composed into a motor car. Each part is so accurately finished that it will fit into its place as well as any other similar part. It must be so or the rapid work of assembling the car, as it passes from one group of workmen to another, would be impeded.

A frame is first placed upon the rack, which moves along a few inches per minute. Paint is sprayed upon the frame before it passes through a drying oven—then it is ready for other parts to be built around it.

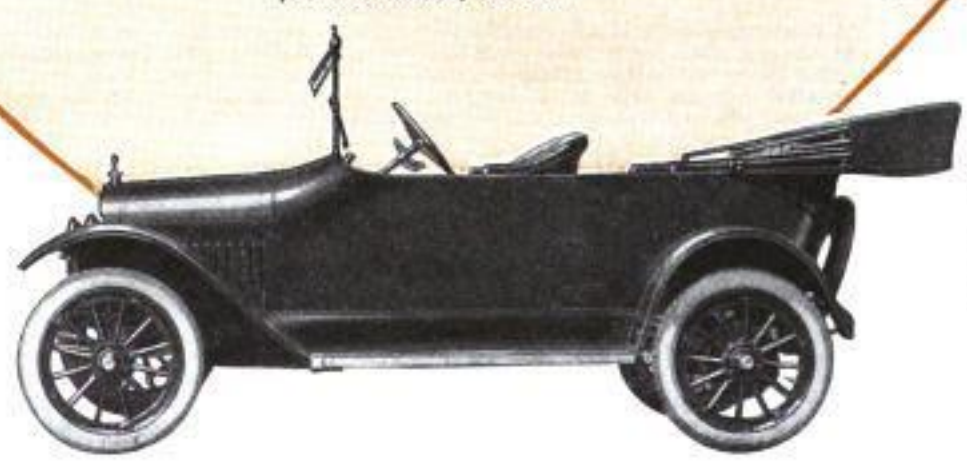
At one station the axles, springs and wheels are added—then the engine swings into place—next the radiator—now the transmission—wiring—steering gear. Soon the chassis is complete—it has taken just 15 minutes.

Meantime, the body has been moving slowly along a similar track. Part by part has been added until it is complete. At a given point bodies and chassis meet and are united, making the complete car ready for testing and shipping.

The Maxwell plan of assembling cars would greatly increase the cost per car to a maker of few cars. But considering the large volume of our business—almost 600 cars a day—it produces enormous savings, insures an almost perfect product and materially aids in making the Maxwell *"The World's Greatest Motor Car Value."*

MAXWELL ENCLOSED CARS: Sedan, $985; Town Car, $915: Cabriolet, $865. All prices f. o. b. Detroit. All models completely equipped, including electric starter and lights.

IN CANADA: Touring Car, $850; Roadster, $830, f. o. b. Windsor, Ontario



Touring Car
$595

Roadster
$580

Business Fashions Change

By FRED C. KELLY

IT USED to be that a man who was a seller of goods was also a buyer—of food and drink and entertainment. To-day the professional buyer is just as likely—maybe a little more so—to buy for the seller, as for the seller to buy for the buyer. The old-fashioned salesman proceeded on the assumption that anybody who bought stuff from him was bestowing a personal favor and should be fussed over accordingly. Yet, when you stop to think about it, if an article is worth having, and the price is right, why is not the buyer of it just as much under obligation to the seller as the seller to the buyer? The man who buys the article prefers it to the money he pays for it, else he wouldn't take it.

I knew a young man once who was a bit of a soldier of fortune. He had a habit of running out of money at inopportune and unexpected places. On one of these occasions he had to choose between eating at cheap restaurants at his own expense and eating at high-priced hotels at the expense of somebody else. He picked the latter course, inasmuch as he felt at home—so he told me—only in an atmosphere of more or less grandeur. The cheap places jarred on his tender sensibilities.

His first step toward having his meals bought by others was to go to the Public Library and read up on the technical points of certain kinds of high-priced machinery manufactured in that city. Equipped with this information, he called up the head salesman of a big machinery concern and asked the salesman to call at his hotel. He gave out the impression that he was representative of a big firm in another city, which was in the market for such machinery.

He contrived to have different salesmen take him to dinner—and even to breakfast—for three or four days, until he got ready to leave town.

The point to all this is that this gracious grafter might have more difficulty in working a game like that at the present writing. He might have to go and get in line and endure a long, irksome wait before he would have a chance to talk with the head salesman. A man selling an article of real merit is often so busy just now in pacifying customers who are complaining about slow delivery that he hasn't any time left for entertaining prospects.

New-Style Motor Selling

A good example of this is in the automobile industry. Only a dozen or so years ago a great many automobile salesmen were somewhat the same type as wine agents. They were affable entertainers, and it was not unusual for them to abandon hope of selling a man a high-priced car unless they could do so when his mind was not altogether clear. To-day, if you buy any of several autos, you will probably try to work a personal pull with the agent in order to get more prompt delivery than some other customer. The chances are that you will not even ask for a very elaborate demonstration, but will buy on hearsay—that is, on the general reputation of the car. A great many autos—even of the higher-priced makes—are sold over the telephone, just like butter and eggs or any other staple commodity. No one expects his grocer to come round and buy him a drink before landing an order.

Just a few weeks ago a friend of mine determined to buy himself a small auto. He thought the thing over a long while before making up his mind, and the proposed purchase was discussed in his family until it naturally took on a lot of importance. It marked an epoch, in a way, such as when he got married and the time he bought his home. The passage from the pedestrian class to the automobile class was no trifling event. So, when he went to the marts to buy, he felt that he had coming to him a great deal of deference.

"I'm thinking," said he to the agent of the car he had selected, "of buying a car."

"All right," agreed the salesman pleasantly. "If you place your order to-day I might be able to get you delivery inside of a month."

He was courteous enough, but he talked in an offhand tone as if he had been saying:

"Will you take it with you or shall we send it round on the afternoon delivery?"

"I should have had a lot more fuss made over me," remarked the customer in telling of the incident, "if I had been buying a lawn mower, or even a good wrench."

When the Buyer Buys

However, the change of attitude is not so much on the part of the seller as on the part of the buyer. There is just as much selling competition as there ever was—probably more; and that is why the buyer has come to look at things from a new angle. A great many lines of goods are bought by professional buyers, and the professional buyer is the fellow who first saw the light. He found that being entertained or palavered over was costing him money—too much money. He decided that he was being played, as the saying is, for a sucker.

The seller entertains the buyer in order to place him in rare good humor and get him to buy at the highest possible price. The buyer awakened to the fact that in the long run he himself was paying for all meals and theater tickets provided by the genial and urbane persons who had things to sell. Inasmuch as he was paying the bill, then, why not appear as the host and get credit for the outlay, and make capital of it for his own purposes?

There was a chairman of the Committee on Foreign Affairs in the House of Representatives at Washington, not so many years ago, who used to give dinners to various dignitaries, sending out invitations in his own name and getting all credit for the entertainment, but assessing the cost among the various members of the committee.

This was, in a way, what used to happen and doubtless still happens between a great many salesmen and buyers. The buyer is entertained until he buys enough goods to pay not only for the goods but also for the entertainment.

John J. Hicks is head buyer for a great retail establishment in a Middle Western city and goes to New York several times a year to buy goods. He got a great deal of pleasure out of these trips East. What with theaters and dinners and automobile rides and one thing and another they formed bright little spots in his busy life. His host at a great many of these nice little parties was Max Izzent, or some such sounding name as that. Somehow or other the store Hicks bought for was never able to make much profit out of the goods it got from Max Izzent. Yet a rival store up the street sold a lot of the same line of goods; and from the way it pushed them, it looked as if it was making a good deal of money out of them.

John J. Hicks tried to buy the goods cheaper, but without success. He became convinced that the buyer from the rival store up the street must be getting them cheaper, else he would not have bought in such large quantities. Hicks also noticed that the rival buyer hardly ever accepted hospitality from Max Izzent. He therefore took a size-up of the situation—and bought some theater tickets. He bought them from a speculator at a fancy price, and they were for a show that was selling out, mostly, two weeks in advance. Then he went to the telephone and called up Max Izzent.

"Max," says he, "a friend of mine from Omaha was called home on account of the serious illness of his old Aunt Ella, and he gave me some tickets he had managed to pick up a week or so ago for The Cerise Nightie, up at the Juckandpudge Theater. I've been wanting to see that show, Max, but I don't want to see it unless I can have some good fellow like you along. Will you join me?"

Now Max had been taking Hicks to theaters, but that was purely a matter of business. Here, on the other hand, so it seemed to Max, was Hicks taking him just because he enjoyed his company. That was really quite flattering. He thought more of Hicks than he ever had before. Hicks was a good old scout, so he declared to himself, to prefer his society to that of anybody else in New York.

Up to that time Hicks had never felt like quibbling over the mere matter of price with Max Izzent after Max had been so hospitable toward him. Now, however, all this was changed. He was doing something for Max, which made him have a rather patronizing feeling toward Max. He could talk to him in fatherly fashion and tell him frankly that his prices were too blamed high! The consequence is that since then he has been buying things from Max for at least thirty-five per cent less than he ever did before.

Hicks Learns Diplomacy

Hicks learned the advantage of making a personal hit with the men from whom he wished to buy and winning their warm regard, instead of merely permitting them to ingratiate themselves upon him. One man with whom he had been dealing had recently built himself a big home over in a bleak section of New Jersey. Hicks found that the man was itching to entertain somebody in this fine new home, but it was so far out that his New York friends were slow to come. So Hicks drew him into conversation about nice places to live, and the man naturally fell to talking about his new house in Jersey.

"Sounds mighty good," remarked Hicks. "Why don't you ever invite me over there? You know how I hate the confusion and bustle of New York."

"Come over to-night!" exclaimed the salesman with enthusiasm, slapping Hicks on the back.

And Hicks went. It paid him to go, not only because he could do business with the man on a much more advantageous basis thereafter but because of the real pleasure it gave his host. In this instance the obligation all went toward Hicks, even though the other man was doing the entertaining. He felt grateful to Hicks for giving him an opportunity to show off his new house, just as a child is pleased when anybody seems to show a genuine interest in his newest toy. Hicks was a man more familiar with the social graces than the salesman himself, and the visit flattered him.

That's a Beautiful Graduation Announcement, Daughter—

and I notice it is made by QUAYLE, the same engravers and jewelers who made my own commencement announcement more than thirty years ago.

College, school and social leaders are usually particular to see that announcements or invitations for occasions of moment are engraved (on QUAYLE paper) by

QUAYLE & SON, Inc.
Steel Engravers & Jewelrymen
Albany, N. Y.

Better be sure that your invitation or announcement is exactly appropriate for the occasion by ordering it direct from QUAYLE.

The QUAYLE stamp has appeared on class day, graduation and wedding announcements, on graduation rings and class pins for some forty years.

QUAYLE quality GREEN GOLD is exclusive and extremely popular this year for Class Emblems of all kinds.

QUAYLE engraving and jewelry is sold only through QUAYLE salesmen direct to the user. Your money back, of course, if you are dissatisfied for any reason.

SHS 17 QUAYLE

The National McKinley Birthplace Memorial Association, Youngstown, Ohio

announces as ready for sale the Souvenir Gold Coins authorized by Act of Congress and passed unanimously in February 1916. The Coins are a beautiful design, containing on one side a fine portrait of President McKinley and on the reverse side a picture of the building.

Remit Three Dollars to The First National Bank of Youngstown, Ohio, and you will receive in return one of these coins by Registered mail.

FACTORY to RIDER

Saves you big money. Buy direct. Get a dependable bicycle and save money. RANGER BICYCLES in 44 styles, colors and sizes. Greatly improved; prices reduced. Other reliable models, $14.75 up. WE DELIVER FREE to you on approval and 30 days' trial and riding test. Our big FREE catalog shows everything new in bicycles and sundries. A cyclopedia of information which every person should have. Write for it. TIRES, lamps, wheels, parts and supplies at half usual prices. A few good second-hand bicycles taken in trade, $3 to $8 to clear. Do not buy a bicycle, tires or sundries until you write and learn our wonderful new offers, low prices and liberal terms. A postal brings everything. Write now.

MEAD CYCLE CO. Dept. H-55 CHICAGO

PATENTABLE IDEAS WANTED. Manufacturers want Owen Patents. Send for 3 free books; inventions wanted, etc. I help you market your invention without charge.

RICHARD B. OWEN, 33 Owen Bldg., Washington, D. C.

A shift in buying and selling practices seems to be taking place slowly. Understand, I do not mean that there has been a complete change—a revolution or anything like that. But there is a difference. There is one class of buyers, however, who still expect to be carried about and fussed over with considerable éclat; and these are the buyers from the smaller towns, who are usually also the owners of the establishments for which they buy. They are a little behind the professional buyers from the big cities in finding out the advantage of entertaining the other fellow instead of letting the other fellow entertain them.

There is another vast advantage the professional buyer has over the small-town merchant who does his own buying: He is so much more concerned with various other details of his business that he gives little thought to whether or not he shall buy a certain lot of stuff until a smart salesman drops in on him.

Then what chance has he? He must match his wits against the salesman, who is a specialist at talking people into buying things, whether needed or not. The salesman has been practicing on his line of argument for weeks. There is scarcely a loophole of possible escape that he hasn't thought about scores of times in advance. The merchant, on the other hand, has to combat these selling arguments with such a line of defense as he can rig up on the spur of the moment. And this is not so easy as one might think. The chances are that the merchant will fall a victim to the salesman's cleverly worked-out conversation—and will overbuy.

I asked an old, experienced salesman once why so many retail enterprises sooner or later fail. Without a second of hesitation he declared:

"It's because they do not buy with sufficient care."

He went on to say that the smaller the town and the smaller the business, the more likely the storekeeper is to overbuy. Go into almost any small country store and you will find a large percentage of goods which are practically worthless—stuff that the proprietor couldn't sell in a hundred years, except at a loss. If you were to investigate, the chances are that you would find this percentage of useless stock growing smaller and smaller as you looked into bigger establishments, until in the case of a great department store there is practically no dead stuff on the shelves at all.

The trouble is that most of the business education has been along the line of selling. There are schools of salesmanship and talks on salesmanship and magazine articles about salesmanship, but right offhand I cannot think of ever having read a treatise on how to resist expert salesmanship.

The Tact of the Hat Clerk

A high-grade salesman was endeavoring one day to obtain an order from the head of one of the leading department stores in Pittsburgh. The two were warm personal friends, yet the salesman could not get his order. He finally gave up, somewhat in disgust, and the two got to talking of other matters.

"What," asked the salesman, "do you regard as the chief secret of your success?"

"Undoubtedly," replied Mr. Boggs, "it is being able to resist a man like you. Here we are, old friends; you're a gifted salesman and your goods are always the very best of their kind. It is always a strong temptation to buy from you. But I don't need anything from you at the present time. So I must say 'No.' Except for my ability to say 'No,' I should have been on the rocks long ago."

A once-successful publisher brought a great magazine to financial ruin a few years ago for that very reason. Every time he saw a clever manuscript he could not resist buying it. Before long he had thousands of dollars tied up in manuscripts stacked away in his safe. He could not have used them all in fifty years.

A big improvement has crept into the selling end of most retail businesses in the past few years. Men who sell goods from behind the counter are vastly more clever salesmen than one used to find. There are a good many obscure-looking men working behind counters who are so efficient in their quiet way that they can earn four thousand or five thousand dollars a year. They do it by selling rapidly.

A poor salesman, working on salary and commission behind a hat counter, for instance, would take so long to sell the average man a hat that his total commissions at the end of the year would be small. But to-day, if you go into a high-grade store to buy a hat or a suit of clothes, the chances are that the first hat or suit the salesman shows you will be the one you finally buy. There will not be any need to look much farther. The salesman, if he is a good one, will size you up and know just about what you want. If you have on a black felt hat he may assume that you want a change and will show you a hat of lighter color. If you have a full, round face he will not show you a hat with the kind of brim that would overemphasize the full-moon effect. And he will be careful not to insult you by showing you a hat much cheaper than the one you have been wearing.

"Let's see," says he, reaching out for the hat you have on; "what size do you wear?"

While you're telling him that you wear a seven-and-an-eighth, he is turning back the sweatband as if looking for the size; but in reality he is looking for a price mark and taking an inventory of the general quality of the hat.

If he showed you too cheap a hat you would not only feel somewhat insulted but would question his ability to find anything in his stock to satisfy you. It would be apparent that he was simply showing you hats at random. Offering you too expensive a hat would also be a mistake, as it would make you feel uncomfortable—as if you had got into a store out of your class. You would decide that they took no interest in the wants of the humbler customers. The smart salesman gives out the impression that the kind of hat you want is the very kind they make a specialty of—the kind they find most pleasure in selling.

Time and again I have gone into a store and bought the first hat the man showed me. I learned by experience that if I took time to look at others I should probably prefer the first one anyhow.

How Sales are Speeded Up

It used to be that buying a suit of clothes was an afternoon's job. First, it took a long time to find a suit that would fit. Then you discovered the suit which satisfied you in that respect was too high-priced or too loud in pattern. To get all the desirable qualities in one suit required a lot of looking and a lot of wearisome trying on. And, from the store viewpoint, it was costly—because it required more salespeople. To-day a good clothing salesman is supposed to have enough intuition to know at a glance just what the customer's wants are, and to know his stock so well that he can go at once and lay his hand on the very suit the customer will buy.

It is the same way with shoes. Instead of hauling out nineteen varieties of shoes and getting you all confused, the clerk guesses about what shape you want. Or perhaps you have told him what number in the window display most appealed to you. And, instead of asking you for your size, the clerk measures your foot.

In the case of a woman customer this is particularly wise, for a woman will often try to make herself think she wants a smaller shoe than she ought to have. Then her feet are uncomfortable and she nurses a feeling of malice toward the shoe store. The clerk knows that the size one's feet can be comfortable in will vary somewhat according to the width. So he goes quietly and picks out what the woman ought to have, while she is quite content in the assumption that he is picking out a much smaller size than he really is, and that her feet are dainty and *chic* to a wonderful degree.

It frequently happens that one can buy the same shoe at a lower price in one store than in another; but nearly always there will be a difference in the service, to offset somewhat the saving in the shoes. In other words, the tendency is that service and value in different stores will average up about alike. You go into a high-priced store and usually a clerk comes at once to wait on you, and stays faithfully with you until the ordeal is over and you have made up your mind which pair of shoes you will make your own. But you enter a store down the street, where you can buy the same shoes for, say, a dollar less, and the chances are that one clerk will be waiting on about six people, hopping from one to another like a Swiss bell ringer. He takes off one of the new customer's shoes at once—so that if the customer gets tired of waiting he won't leave. Then, as soon as he can

Fifty Hazel Brown and Black Taxicabs Arrived at the Entrance of Hotel La Salle to Serve Its Patrons Exclusively.

FIFTY limousine cars in special design, richly upholstered and luxurious in every appointment, manned by trained and courteous chauffeurs, are now ready at your instant need. Here is a typical example of the refinements of service which await you at

Hotel La Salle

Chicago's Finest Hotel

This Taxicab service is maintained solely for the comfort and convenience of Hotel La Salle guests. The charges are among the lowest in Chicago. In every department of Hotel La Salle the highest standard prevails. No matter how many guests demand attention, eleven hundred trained employees give to each the closest personal service.

RATES

One person	*Per day*
Room with detached bath	$2, $2.50 and $3
Room with private bath	$3, $3.50, $4 and $5
Two persons	*Per day*
Room with detached bath	$3, $3.50 and $4
Room with private bath—	
Double room	$5 to $8
Single room with double bed	$4, $4.50 and $5
Two Connecting Rooms with Bath	
Two persons	$5 to $8
Three persons	$6 to $9
Four persons	$7 to $12

1026 rooms—834 with private bath

Built by John W. Bate

Mitchell

$1460 For 7-passenger Six—48 h. p. 127-inch Wheelbase.
$1150 For Mitchell Junior—40 h. p. 120-inch Wheelbase Six.
Both Prices f. o. b. Racine.

Now 100% Over-Strength

Every Part Now Twice as Strong as Need Be

John W. Bate, the great Efficiency Engineer, now announces for the first time double-strength in every Mitchell part

In the new Mitchells we are ready to announce the fulfillment of a three-year ambition.

Three years ago, after one year in Europe, John W. Bate returned to the Mitchell plant.

He said, "I have one more thing to accomplish. And I learned it from the foremost European engineers.

"We build cars too fast in America. We try to build them too cheap. We give too little thought to endurance.

"I want to build you a lifetime car. I want to give every part in the Mitchell at least 100 per cent over-strength."

Now It Is Done

Mr. Bate came back. Since then he has given the Mitchell car 15 hours a day. Far into the night, week after week for three years, he has worked on this problem of strength.

He has worn out fifty cars in making tests to prove the strength requirements. When he found the strength any part required, he doubled it in the car.

He took part by part and brought each to this standard. Then he found a way to test each part to prove that it met the standard.

In last year's Mitchell we claimed 50 per cent over-strength. This work was not then completed. This year we can claim for every part twice the needed strength. And our daily tests prove this claim.

One Example—Springs

Let us cite one example—the Bate cantilever springs. You know how often springs break on the ordinary car.

These Bate springs have now been used for 18 months in Mitchells. Not one leaf in one of them ever has broken.

We have machines in our factory for testing them. These machines apply road action hundreds of thousands of times. We have thus applied months of incessant vibration to one spring. And never one has broken.

Yet these long cantilever springs are the easiest-riding springs in the world. No Mitchell owner ever needs shock absorbers. Mitchell cars have no snubbers or rebound straps. They are utterly unnecessary.

TWO SIZES

Mitchell —a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical 48-horsepower motor. Disappearing extra seats and 31 extra features included.
Price, $1460 f. o. b. Racine

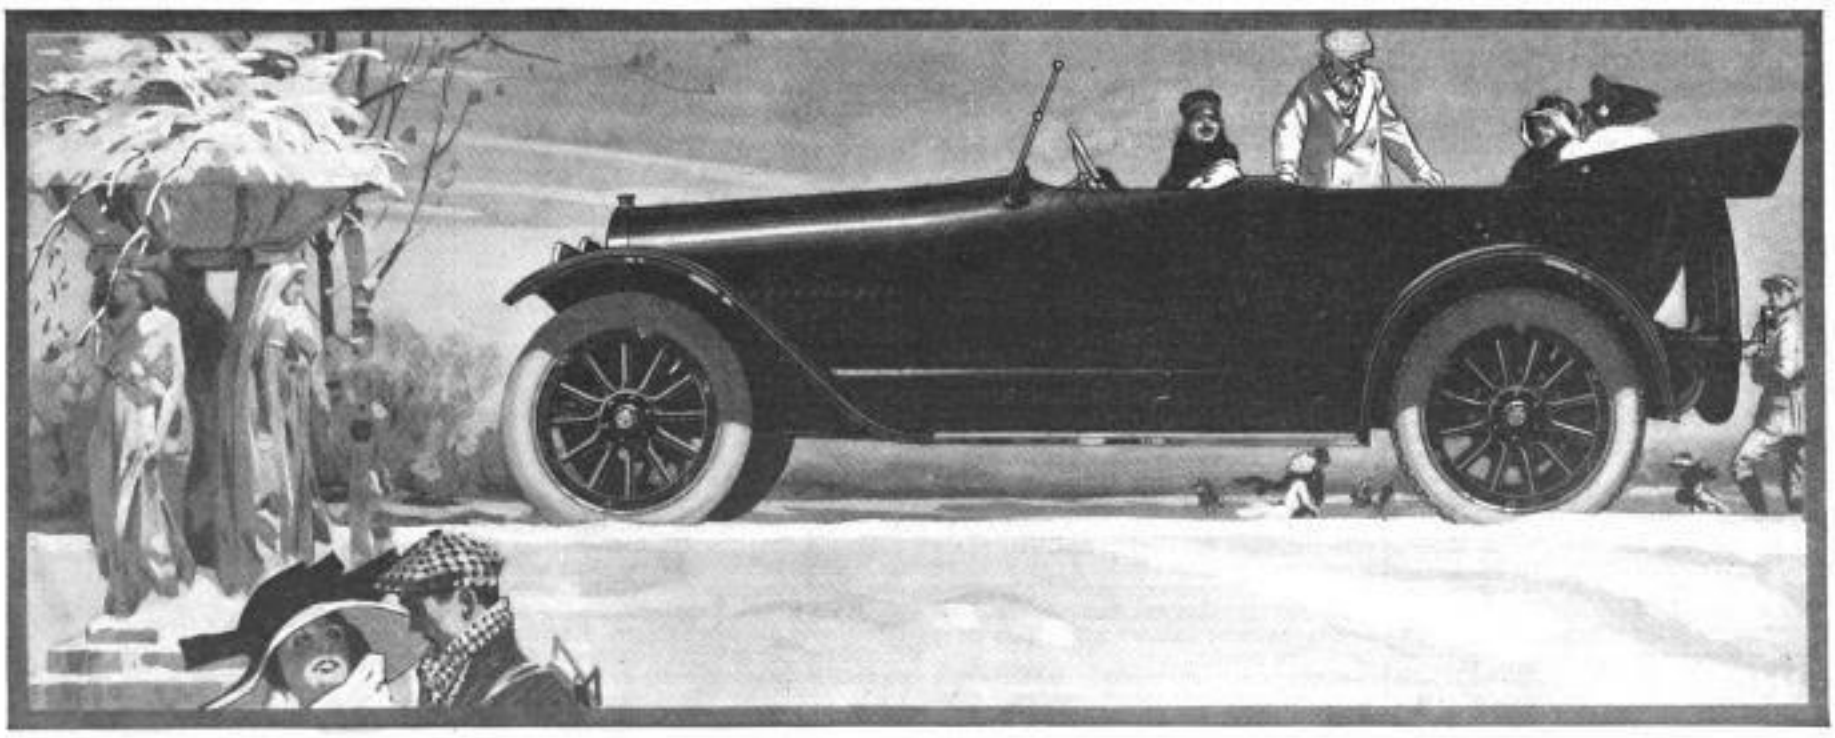
Mitchell Junior —a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.
Price, $1150 f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.

That is simply one part—one well-known weakness. Hundreds of parts have been given equal strength. Now over 440 parts of the Mitchell are built of toughened steel, drop-forged or steel-stamped. The parts which get the major strains are all of Chrome-Vanadium. Many parts on which safety depends are almost double-size.

175,000-Mile Tests

Two Bate-built Mitchells have already run over 200,000 miles apiece. Seven of them have averaged over 175,000 miles each. That is over 30 years of rather active service.



So this new Mitchell, in all probability, is a lifetime car. With proper care, you should never wear it out. Troubles and repairs are as nearly eliminated as can be.

The Lifetime Car

In times past, men bought a new car every year or two. Models were constantly changing. So a car's endurance seemed of less importance. That is why European cars so excelled American.

Now most buyers in the Mitchell class buy their cars to keep. And John W. Bate has rebuilt every Mitchell part to meet these new requirements.

That is the sovereign advantage we offer in Mitchell cars. It is not so visible as other extra features. But we figure it means double life to your car, plus safety and economy. And we know it over-tops every other result of John W. Bate's efficiency.

Both Prices f. o. b. Racine.

Now 24% Extra Luxury

Deeper Finish—Finer Upholstery—31 Extras

In this year's Mitchells, on exhibit at the Shows, we have added 24 per cent to the cost of finish and trimming, attaining the height of luxury.

These new Mitchells will also give you a new idea of beauty.

The lines of the car, in many artists' opinion, are the handsomest ever attained. But our added cost lies in scores of details which are too often skimped.

Last year's Mitchells were luxurious, you know. In every large city they were regarded as models of motor car elegance.

But this year we have added just 24 per cent to the cost of the finish, upholstery and trimming. So the Mitchells you see at the Shows this year will be superb examples of artistic detail.

Our New Body Plant Saves This 24 Per Cent

In the past few months we have equipped ourselves to build all Mitchell bodies, open and enclosed. Our new body plant, with its lumber yards, covers 14 city blocks.

The Mitchell, we believe, is the only plant which builds all the bodies for a high-grade car. The saving we make pays for all this added luxury. Now we are building, under the Bate efficiency methods, 98 per cent of the Mitchell.

But the chief fact is this: We could not buy bodies at a possible price finished and appointed as ours are. Our requirements are too extreme. So this new Mitchell luxury was out of the question until our new body plant was completed.

Heat-Fixed Finish

We have built for one thing enormous ovens which hold many Mitchell bodies. Here our finish coats are fixed by heat. This adds immensely to the lustre. And it gives a finish which endures for years.

We have added 50 per cent to the cost of our leather to give you unusual upholstery. We have added 50 per cent to the cost of our cushion springs to give you better springs.

Those are a few of our conspicuous improvements. You will see scores of others. Every touch and detail reveals an added cost. Yet all this seeming extravagance, like all Mitchell extras, is paid for by factory savings.

31 Extras This Year

In this year's Mitchells you will find 31 extra features. That is, 31 attractions which practically all cars omit. Most of them are exclusive to the Mitchell.

Each is something that you want. They will cost us on this year's output not less than $4,000,000. Yet all of them come to you without extra price, because of our factory savings.

They include a power tire pump, Bate springs, a new-type control, a light in the tonneau, a locked compartment in front, a ball-bearing steering gear, engine primer on instrument board. There are 31 extras like those.

Mitchell Models

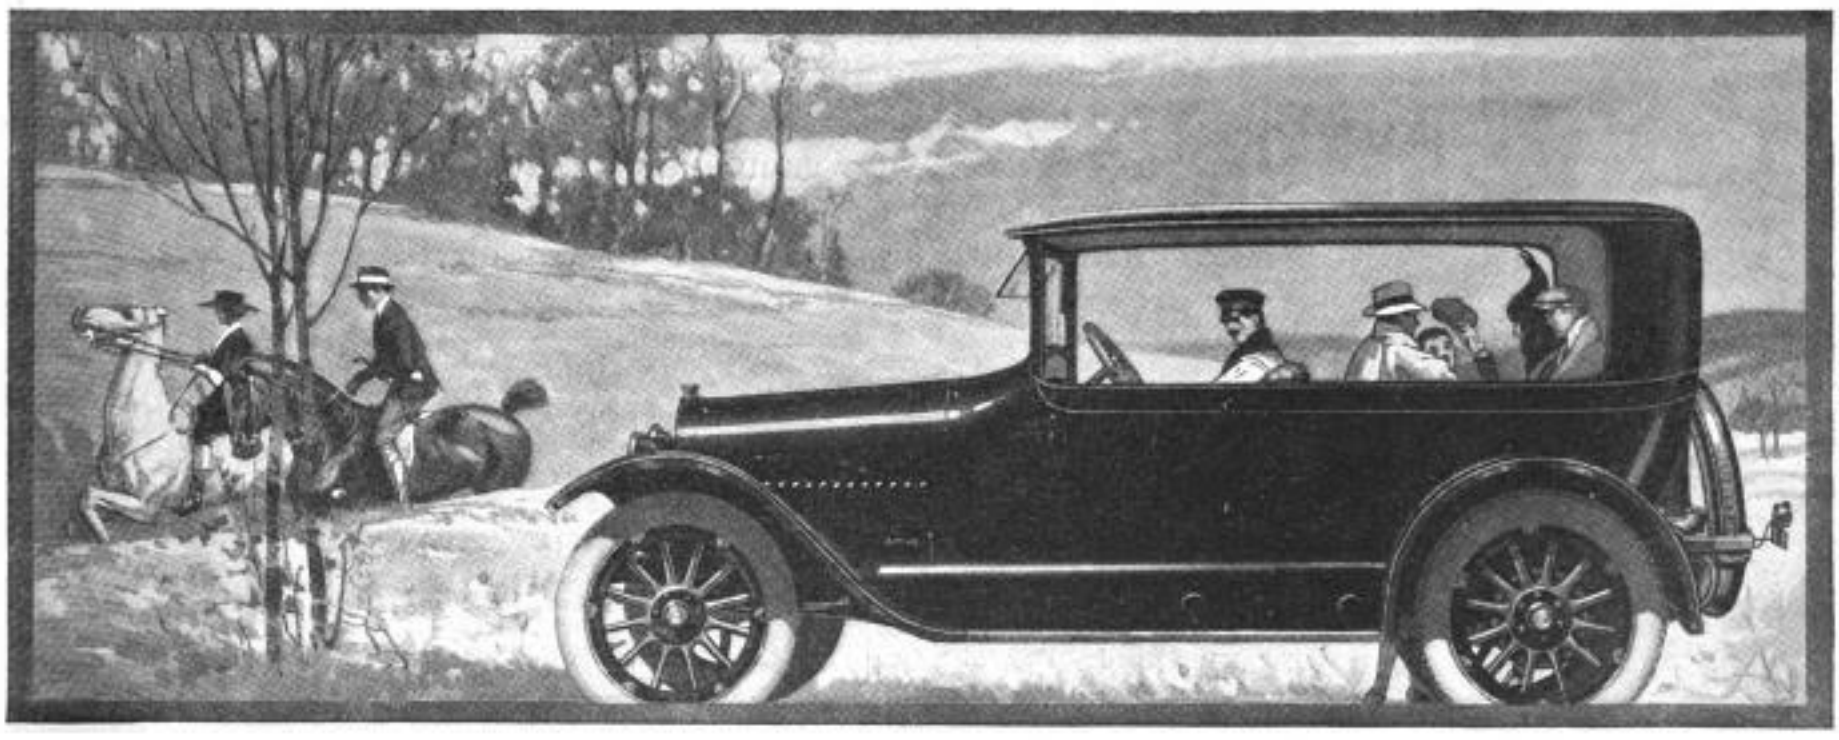
The Mitchell is built with eight styles of bodies—

Touring Car	4-Pass. Cabriolet
Roadster	Convertible Sedan
Coupé	Demountable Top
Limousine	Club Roadster

***Mitchell Junior* is built with Touring Car and Roadster bodies only.**

Quoted prices, of course, apply only to open models.

All Due to Efficiency



All of the Mitchell's unique attractions are paid for by factory efficiency. All this over-strength, all this added luxury, all these extra features. We owe them all to John W. Bate, the famous efficiency expert.

This model plant, which is all of his building, cut our factory costs 50 per cent. Our new body plant, by Bate efficiency methods, pays for this added luxury.

No other smart car offers anywhere near the value you get in the Mitchell. You can prove that in an hour. And that fact is due entirely to the genius of John W. Bate.

See these new cars at our showrooms or at Shows. Pass your own judgment on them. Learn what the extras mean.

The Gambler

The Motorist who does not stop to put on Weed Tire Chains before driving over wet-slippery-skiddy streets gambles with his life and the lives of others.

Some men would gamble with anything, from a counterfeit coin to life and property and all that they or others hold dear.

But at least they gamble for some stake which to them—if to no one else—seems worth the gamble. They do not risk their whole fortunes with only a few dollars to gain.

Why then, if time be precious, should they risk *all the time* allotted them here on earth, for the sake of a *few moments* of it now?

Yet, strange to say, this is just what some motorists do when *they fail to stop to put on Tire Chains before driving over wet-slippery-skiddy streets.* They gamble their automobiles, their limbs, their very lives, and the lives of others on the road—for no more than a little of their time to put on *Weed Chains, the only dependable safeguard against skidding.*

Weed Chains for all Styles and Sizes of Tires are Sold by Dealers Everywhere.

(Concluded from Page 67)

get round to it, he hands the customer a shoe, to keep him interested—a good deal like giving a restless child a toy with which to amuse himself.

This type of salesman is often a real artist in his line, and it is surprising how rapidly he can dispose of a whole benchful of buyers. He does it by giving each customer the shoes he wants with the least possible delay. If he had to yank down half the shoes on the shelf for each person, in the old-fashioned way, there would be chaos.

A smart salesman behind the underwear counter is quite likely not to ask a man what size he wears, but to pull a tape from his pocket and breezily take the measure of the customer's chest and waist. Then, keeping his own counsel, he fetches garments he thinks will meet the customer's requirements.

In the first place, not one customer in ten remembers his underwear size between purchases. If he thinks he wears a thirty-eight undershirt, when he really needs one of size forty, he will either be dissatisfied with the shirt—and the store—as long as he wears the garment, or he will try it on at home and then bring it back to exchange for something else—all of which means a certain amount of effort and annoyance and expense on the part of the seller.

On the other hand, if the customer does remember his size, and the salesman finds that it isn't in stock and offers him something else, the customer is certain something else won't do. Yet often another size would fit equally well. For instance, a man who has been wearing a closely-woven undershirt, size forty, can easily make out with a ribbed shirt of size thirty-eight. Or he may be right in between thirty-eight and forty, and one will do about as well as the other. So the smart clerk knows that frequently it is best to ask no questions and go right ahead in his own way.

However, there are still a great many salesmen who entertain ideas and tastes I should hesitate to adopt for my own use. It has always seemed to me that the world's worst salesmen are sought out and placed behind the shirt counters throughout this broad land.

For instance, it happens that I like to wear negligée shirts of a rather subdued, unobtrusive pattern, so that I may move among people of high or low degree without their being harassed by my shirt's acoustic properties. Yet, whenever I go into a haberdashery to buy shirts I am waited on by a young man who seems to have consecrated his soul to selling me something I do not want. He shows me a lot of shirts with color schemes that seem to have been designed to combine the attractiveness of a horse blanket and a bright new drug-store awning.

Haberdashers always seem not a little vexed when I fail to enthuse over shirts suitable only for minstrel parade and cakewalk wear. With a shirt on like that I should be haunted constantly by the fear that I might meet somebody I know. Frequently a spry young shirt salesman gives me a pitying glance, such as one bestows upon idiots and like people, opens up his vest, and proudly shows me that he himself is wearing one of the very patterns to which I have objected.

Once I went into an antique shop to look at a chair. The clerk was out for the moment and a colored porter kindly undertook to wait on me. The chair I had seen in the window proved to be not quite what I wanted, but the colored man was anxious to please his employer by making a sale. As a clinching argument why I should buy, he said to me in a confidential tone:

"I've got a chair about like that in my own parlor!"

The practice of mentioning a clerk's own preference or fondness for a given article is now considered, as they say in vaudeville, "old stuff." I know of one great department store which carefully instructs its saleswomen in the ready-to-wear departments that they must not, under any circumstances, say to a customer: "I like that on you," "That looks swell," or any such volunteer comments.

The fact that a certain type of salesgirl likes a garment might appeal to some customers as a good reason for not buying it.

This same store insists on just the right phraseology between a clerk and a customer—not only for the sake of courtesy but for greater efficiency. For instance, a clerk must not say to a customer: "Are you being waited on?" but, "Did you find what you wanted?" The latter form of inquiry has the advantage of applying to two different contingencies and the former to only one. It is drilled into clerks in this establishment that customers and possible customers in the store are the company's guests and must be treated as such. Those who look but do not spend must be made to feel that it is perfectly all right to do that very thing.

"We spend thousands of dollars every year in advertising," remarks the head of this concern. "These advertisements are invitations to the public to come in and see us—just as much so as engraved cards are invitations to a reception in one's own home. Having invited a person to see us we must make him feel at home when he comes."

Before the child-labor laws were in such general effect over the country, department stores used to take very young girls and train them gradually so that they absorbed the atmosphere of salesmanship by easy stages. To-day salesmanship is taught to inexperienced employees more by talks and class instruction. It often happens that a person who is not naturally a good salesman will be kept and encouraged because of some qualities which make a good foundation for the actual technic of selling.

A girl whose mental processes are a trifle slow—but who is especially tactful, has a courteous manner or limitless patience—may in time make a high-grade saleswoman.

A few stores of the better class aim not to employ any girl who has blondined her hair, because of a theory that, inasmuch as blondined hair is a faked article, a customer may unconsciously associate the idea of faking with the goods sold over the counter.

Be that as it may, no doubt there is a prejudice against blondined hair on the part of a lot of people, which might tend to detract from a blondined salesgirl's usefulness. I heard a store manager jokingly bewail the fact one day that his best saleslgirl in the cloak department had peroxided her hair.

"I have a notion, after this," says he, "to hire nothing but brunettes."

One of the disheartening things, this same man told me, is that girls whose characters are perhaps not entirely above reproach often make the best saleswomen. They have a kind of *savoir-faire* and an insight into human nature that prove valuable.

The tendency in all lines of selling to-day is away from the so-called "trick stuff." It is dangerous to fool a customer into buying anything, no matter how meritorious the article may be. On the dining cars of a certain well-known railroad the menu cards always carry—or at least always used to carry—both at noon and in the evening, a line, stamped on in red ink: "Special Chicken Dinner To-day, $1.25." Then the dining-car conductor comes round and calls attention to this line, remarking casually:

"We have a special chicken dinner to-day. Very nice!"

Now the idea is to convey to the customer the impression that here is something out of the ordinary. The day before or the day after, or maybe any other day in the year, he might not have an opportunity like this to buy a special chicken dinner on the dining car at a flat rate. Yet that identical special chicken dinner is on the menu of that railroad twice a day—for both dinner and supper—every day in the year, including Sundays and holidays.

I know several persons who will never buy that special dinner, no matter how much of an inward craving they have for chicken, simply because they feel there is trickery in the method of selling it.

Similarly the public dislikes to have a store insist on any business method which is too obviously designed solely for the interest of the store rather than for the customer.

For example, I went one day to a candy and soda-water establishment, accompanied by a beautiful and estimable young woman, intending to buy a round of drinks. I found that none of the salespeople would accept my order as bona fide until I purchased a check representing the amount of my intended purchase. At that moment neither of us had fully determined just what we were going to drink. We were obliged to confer on this point, and then inquire for price quotations on the drinks we had selected; after which it was necessary to go to the cashier and pay twenty cents—I believe it was—for a check. Without this check, paid for in advance, we could not enter into the picture at all.

The whole thing suggested a distrust of its customers on the part of the store—as if there was a fear that, having quenched his thirst, a man would pull his hat on tight and make a quick dash for the door without paying for his drink or his ice cream. It is not my present intention to buy anything at that place in future, and I have found a number of kindred spirits who feel about it much the same as I do.

A big store advertised a special mid-summer fur sale for two weeks in August at greatly reduced prices. There was a set of mink furs for one hundred and twenty-four dollars, which ordinarily sold for one hundred and sixty-five dollars. The day after the sale had closed last summer a woman went to that store and sought to buy the mink fur set at the special-sale price. They told her she could have it only at the regular price of one hundred and sixty-five dollars. She explained that she had been out of town during the sale and did not feel that she ought to pay forty-one dollars additional only one day after.

The salesman admitted that it was tough luck, but was firm. She asked whether they wouldn't compromise and let her have the set for one hundred and fifty dollars. They would not. So she went away and the store lost the sale.

"But," explained the salesman, "she will do us a thousand dollars' worth of advertising by telling her friends of the incident. She knows now, and they will know, that our special sales are really great bargain offers, and on the level."

THE HEART OF THE SYSTEM

By BOZEMAN BULGER

ILLUSTRATED BY F. VAUX WILSON

THE report of the examining board showed five of the new commissioner's pet applicants to be deficient in hearing. Ten more had failed in the eyesight test and, to make it worse, the real Adonis of the lot was charged with having a fallen arch. All had been rejected. And these were the athletic giants that John Ridgewood had personally selected as examples of what policemen really should be.

The new commissioner had been hit from behind, and he knew it. Not unexpectedly the blow had come from the mailed fist of the system—the traditional enemy to all change and progress in the department.

"All right," he said, as a clerk, carrying an armful of official papers, began to arrange them on the big table. "If they want a fight they are going to get it."

"Were you speaking to me, sir?" inquired the surprised office man.

"Not particularly," Ridgewood informed him, "but I'd just as soon you heard it as anybody else. . . . My boy, there is going to be a fight in this department, and your new commissioner is likely to be favorite in the betting."

"I'm not surprised, sir," replied the puzzled clerk noncommittally.

"Well, you may be," the official assured him, "when I tell you that I want an order issued—and issued to-day—shifting every man on the whole force—captains, lieutenants, sergeants and patrolmen. And let me tell you something else—every pair of bad eyes, every pair of flat feet and every fifty-inch stomach—everything that catches on the teeth of my fine-tooth comb—is going on the scrap heap. I'll give this examining board a real job. This is to be a model police force and I won't have a man, not even an inspector, that's not as sound as those picked men of mine the board turned down."

Thereupon the commissioner tore the report on his pet applicants into bits and smiled inwardly as he watched the dazed look on the clerk's heretofore expressionless face.

"An excellent idea, sir," commented the office man, wondering whether he should depart or wait to hear more. To hide his astonishment at such free talk on the part of a commissioner he resumed his arrangement of the letters and reports.

"Never mind being so particular," said Ridgewood. "I can find what I want." His gesture indicated that the clerk should go and, as the commissioner fully intended, spread abroad what he had said. In an hour, the commissioner knew, the town would be buzzing from end to end.

Even as a newspaper man Ridgewood had detested detail, and this morning, in particular, his ruffled feelings rebelled at the idea of wading through a stack of letters a foot high. Petulantly he knocked over the pile, as a child would a house of playing cards. One lone letter skidded over the edge of the table and fell to the floor. The commissioner picked it up and, in preoccupation, toyed with the envelope.

He was a youngish official—this Ridgewood—but his ruddy face, topped off with a brush of reddish hair, was not that of an innocent. As a successful reporter John Ridgewood had frequently tackled the great police system from the outside. Now he was about to hit it a real blow from the inside. The flash of his blue eyes reflected the spirit with which he drew the sword, and the almost forgotten letter was rumpled in his tightening fist. Mechanically he reached for a paper cutter and ripped the envelope open. Inside was a simple request from Capt. Patrick J. Mulvaney, asking that, in the big shift, Patrolman Dennis McCarty be retained at his post on Ft. Jefferson Avenue.

"Huh!" he grunted. "So they are on already, eh?"

Ridgewood read the note again and again and with each perusal an unpleasant smile deepened round the corners of his otherwise good-natured mouth. Luck seemed to have fallen his way. The system unwittingly had tipped its hand. If that letter like the rest had waited a few hours longer he would never have known of this advance knowledge of his plans. Mulvaney had written a day too soon.

Captain Mulvaney, Ridgewood recalled, was one of the officers on the examining board that had just rejected the commissioner's ideal applicants—one of the very men that he had planned to break at the outset of his administration. And the captain's innocent-appearing request now furnished the very chance that the commissioner had been looking for—an opening through which he might shove the probe and by vigorous work reach, perhaps, clear to the very heart.

Ridgewood was entirely too familiar with police workings to attribute any mere kindliness to Captain Mulvaney's request; but, even on the assumption that the captain was after petty graft, the commissioner was puzzled to know just what Mulvaney could expect to gain by keeping McCarty in a quiet, residential street. It was a bit puzzling also to note that the captain—so prompt in his pleas for McCarty—had asked no favors for himself.

Ridgewood pressed a button on his desk. Almost instantly the door leading to an adjoining office opened and William Scanlon, confidential secretary to more commissioners than he could remember, appeared. He was a typical secretary—this Scanlon—and a valuable one. The new commissioner had reason to know that for ten years no newspaper man had been able to wheedle the slightest bit of information from Scanlon that had not been O. K.'d by his superior. To him the secretary needed no better recommendation.

(Continued on Page 75)

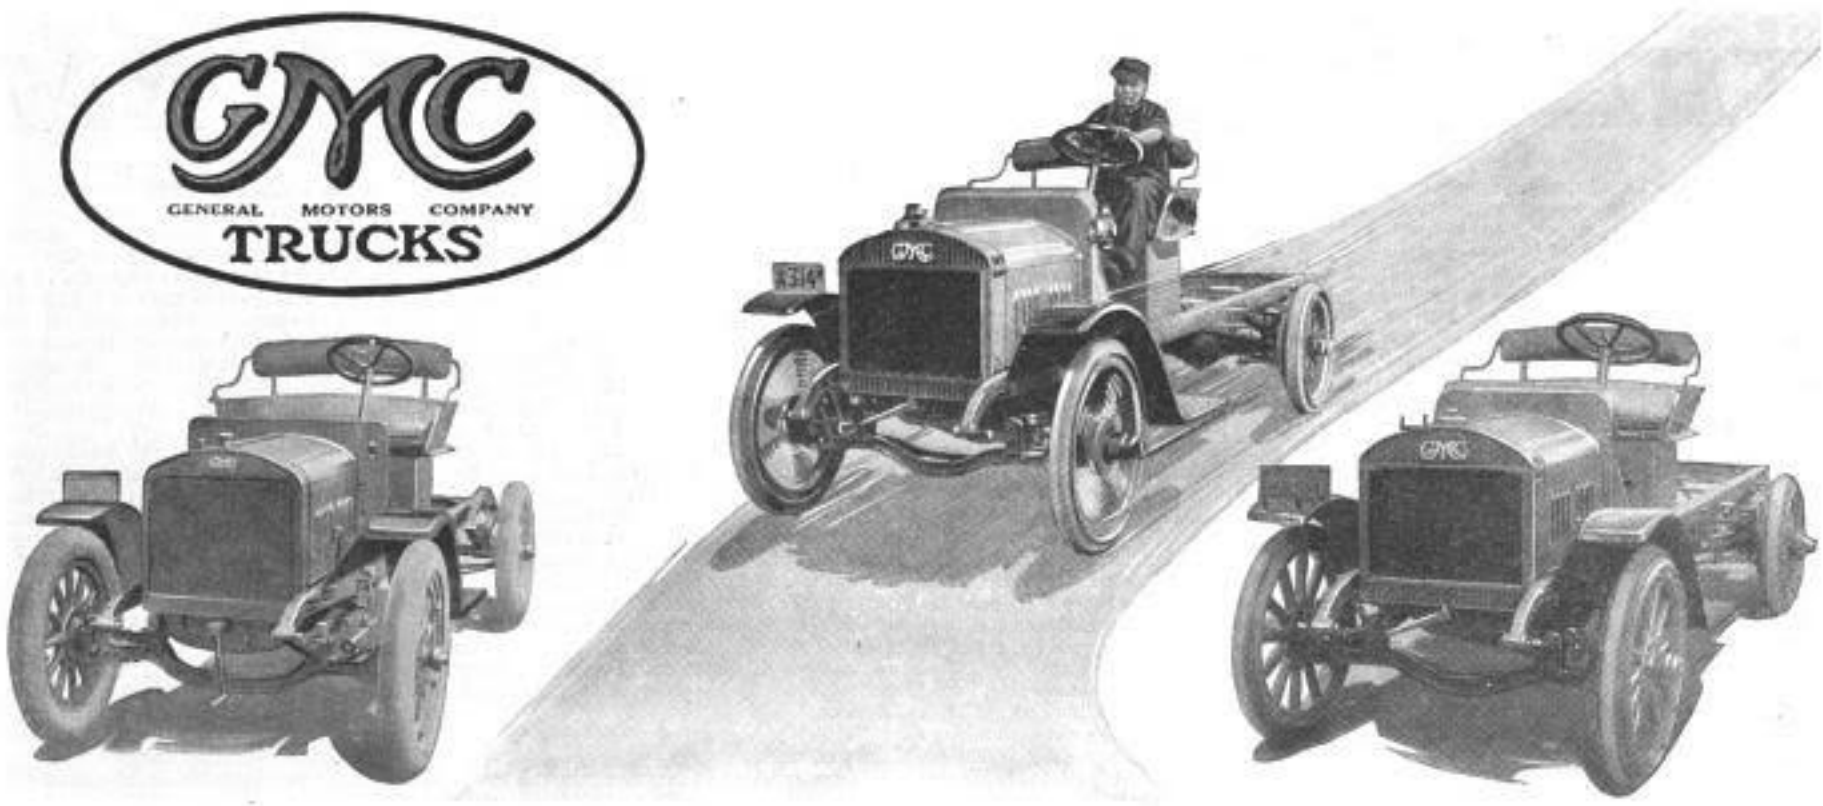
ANSWERING "Give Us A

From all sections of the country came the *urgent* demand—"Give us a *one-ton* GMC." Not that there was a scarcity of one-ton trucks—to the contrary. But buyers who had learned the value of GMC pulling power, dependability and low upkeep, naturally looked to TRUCK HEADQUARTERS for these qualities in a truck of one-ton capacity. Based on past experience they reasoned—if it's built by GMC it's right.

And the new one-ton GMC *is right* in every detail. It's a rugged, powerful truck—a *real* truck in every sense of the word;—sturdy, substantial, heat-treated frame; heavy axles; powerful, economical motor; worm drive;—a truck of full one-ton capacity, with a factor of safety to withstand the hardship a truck *must* endure to be profitable to its owner.



Like all GMC Trucks, it has those qualities of simplicity and accessibility which are the result of years of experience and co-operative effort of practical truck men.

It is, in our belief, the most practical one-ton truck ever built, from the standpoint of the owner, driver and caretaker.

It is built to operate successfully on either pneumatic or solid tires, and is adaptable to a multitude of uses—busses, ambulances, hearses, police patrols, light fire apparatus, etc.

The furniture dealer, the florist, the department store, the wholesaler, the expressman, the fruit grower, as well as scores of businesses requiring a truck of one-ton capacity, will find the new *one-ton* GMC the answer to every need.

the DEMAND

One Ton GMC"

And now the GMC line is complete. There are all needed sizes—from ¾ ton to 5 tons—the one vacant space has been filled. With the addition of the new one-ton truck, any business, industry or individual requiring motor-truck equipment, can come with confidence to TRUCK HEADQUARTERS for trucks of the proper size and type to meet their particular needs.

Words are not needed to tell of the all 'round performance of GMC Trucks. In cities and towns throughout the country, at wharves, docks, railroad platforms, on the busiest thoroughfare or the secluded mountain trail—wherever there are GMC Trucks, their performance furnishes convincing evidence of their worth and ability. The records of their service furnish a dependable guide in determining what GMC Trucks can do for you.

We are ready *at this time* to make deliveries on the new *One-Ton* and on all the other GMC models. If your business needs a motor truck of any size—or a fleet of several sizes—see the nearest GMC dealer or write to "TRUCK HEADQUARTERS".

(Continued from Page 71)

"Billy," Ridgewood addressed the secretary, forgetting for the moment he was no longer a newspaper man, "I'm going after this Captain Mulvaney, and I'm going to get him and his gang if it is the last thing I do."

Scanlon smiled and stood waiting. Ten previous commissioners had said the same thing.

"Get me all the reports—all the dope—you have on him, will you?" Ridgewood added. Scanlon turned to follow instructions.

"Just a minute, Billy. What do you know about Patrolman McCarty—Dennis McCarty?"

"The old fellow up on Ft. Jefferson Avenue?"

"Yes, that McCarty. You may also get me a report on him for the past few years."

In a few minutes Scanlon returned with two large, bulging envelopes; the commissioner noted with surprise that both bore the name of Mulvaney. He looked up inquiringly.

"This is all we have on McCarty," said Scanlon, in answer to the look, laying before the commissioner a single sheet of typewritten paper. It bore nothing of unusual interest. The notations were deadly official.

"Well, then, tell me what you know about him?" requested Ridgewood.

"All I know about McCarty," said the secretary, "is that he is a widower with two children; has been on that post for ten years, and never come to headquarters. Every time there is a shift a request comes from somebody for his retention, and it always has been granted. The record there, you will see, shows that he has not made an arrest in years."

The new commissioner drummed on the table with a pencil.

"Is that all?" he asked.

"All that's official."

"Now you are getting to the point, Scanlon. Tell me what you know that isn't official! Mind you, I'm not asking any information on Mulvaney! I have that!"

"Well," Scanlon proceeded, "I know that old man McCarty's main job is to escort school children across the street, and I've heard that instead of arresting anybody he tells them to go home and have a night's rest."

"Does his method work?" asked Ridgewood, smiling.

"It has so far. I'll bet that old fellow has settled more arguments than any man on the force."

"What did he do years ago, before he got so old?" asked the commissioner. "Why wasn't he ever promoted?"

"They tell me that one time, while off duty, McCarty went into a downtown building where city explosives were stored and kept two policemen, asleep on the job, from being burned alive. He couldn't expect much promotion for that stunt," Scanlon went on, "because if the newspapers got the story it would have shown up the whole police force." At this the new commissioner smiled reminiscently. "The gang paid his expenses in the hospital for six weeks, but I honestly don't believe the old fellow ever did really recover."

Ridgewood averted his face so as not to betray a glint of understanding that had come into his eyes. He had struck oil. Even Scanlon himself was apparently inclined to work for the retention of the veteran.

"All right, Scanlon, that will do," he said sharply. "Have Captain Mulvaney report here as soon as possible! And, say," he added, "no matter what comes up don't let me forget this case of McCarty."

Mulvaney's station was far uptown, and it was after the luncheon hour when he rapped on the commissioner's door. In the meantime Ridgewood had lunched alone, that he might formulate his plan of campaign. As a starter he had decided to try the outspoken and domineering bluff.

Mulvaney was a big, good-natured, cunning Irishman. His very appearance seemed to give sufficient evidence that he had fed well on the smaller graft during his years on the force; but nobody had ever been able to catch him at it. In fact, there was no record of any serious charge having been filed against him. The books, on the other hand, recorded many acts of his physical courage against criminals of the dangerous type. Mulvaney was an officer of the old school—heart and soul a part of the protective system that so often had withstood the attacks of the reformers.

"Captain," said the commissioner, reaching for the crumpled letter, "I don't exactly understand this request of yours for keeping McCarty on his post, but I am going to grant it—for the present, at least."

"You'll be blessed for that, commissioner. Old McCarty is a good soul and I could tell ——"

"Moreover," added Ridgewood, ignoring the interrupted remark, "I am going to retain you in that precinct."

"I didn't ask that, commissioner," replied the surprised officer, "but you will certainly get the well wishes of myself and the wife."

The captain faced about to leave, but caught a glimpse of his name on the bulging envelopes on the commissioner's desk. He hesitated.

"Mulvaney," announced the new commissioner with startling abruptness, as he tapped the two envelopes, "I'm going to break you!"

The captain's amazed expression was not assumed.

"And what do you mean by that—breaking me?"

"I mean that there is a motive behind this McCarty request and I'm going to find out what it is. I am pretty well informed as to your petty grafting in the past. I also know that you are in the gang that has started in to tame me. I have not forgotten that you are on that examining board.

"You think you know a lot, but, believe me, you are not butting against one of those visionary officials who come in here with no real knowledge of cops—not this time."

For a second Mulvaney merely stared at Ridgewood, to whom as a reporter he had given many a good story.

"All I know, commissioner," he said, "is the things I need to know in the performance of my duty."

"Is that so?" said Ridgewood sarcastically. "Well, how did you know that I was going to order a shift in the department?"

"Why—er—why—er—all the new commissioners have done it in the past, sir. Naturally I figured that a man as bright as yourself would change the boys round."

"And you decided to beat me to it by tipping off the rest of the force?"

"I did nothing of the kind, sir, begging your pardon. I simply felt that it was coming, and there was a spot in my heart for Mac, and I thought—well, I figured I'd better write in time. You see, commissioner, old Mac is ——"

"I am not particularly concerned in old Mac," interrupted the commissioner; "you are the man I'm after."

"Well, sir, my record is an open book and it lies right there before you. There's no living man that's got anything on me!"

"But there may be something on you before I am through," Ridgewood assured him. "Let me tell you something, Mulvaney: I came into this department to straighten it up and I am too wise to expect any help. I have looked forward to this chance since I covered my first assignment in Mulberry Street."

"And I can say," said Mulvaney, "that no reporter was ever better liked."

"Never mind the blarney, Mulvaney!" said Ridgewood. "Don't try to fix things that way! And let me tell you something else: I know the workings of your police system, and I am going to get at the heart of it, and when I do something will rip."

The commissioner turned in his chair and, taking this as a cue, Mulvaney saluted and started for the door.

"Don't forget what I said, Mulvaney," was the commissioner's parting shot; "you can go out and pass the word that John Ridgewood is going to get at the heart of this system."

II

IT WAS just after the school hour and the old patrolman stood in the middle of the street, slowing up the cars and wagons that the crowds of laughing children might cross in safety. Two blocks away a small, inexpensive car, driven by a young man attired in motor coat and goggles, approached slowly. John Ridgewood handled the wheel with caution. All his life he had wanted to do just this kind of sleuthing—sleuthing for himself and not for facts that were to be published in a newspaper.

Still moving at a snail's pace, the commissioner saw the old officer walk to the curb and take a youngster with each hand. When the group passed the center of the street the commissioner decided it a good opportunity to make his first test. Speeding up the motor, he crossed the intersecting street at a speed of thirty miles an hour. Apparently the policeman did not see him. At any rate, he paid not the slightest heed.

"Mulvaney," Announced the New Commissioner, "I'm Going to Break You!"

A block away Ridgewood turned round and came back at the same speed, violently sounding his horn. McCarty did not even raise his hand, and paid no attention to the flying automobile until a group of boys on the curb called attention to it by wild waving of arms.

"Go on, ye devil!" the policeman shouted, after the car had shot by. "It's the likes of you that ——"

But that is all Ridgewood could hear. A half block away he slowed up and, at the next corner, deliberately turned his car so that there could be no chance of McCarty not seeing the license plates. Ridgewood made a complete circle, putting both his front and rear numbers in plain view. McCarty did not call him back and, after waiting a minute or two, the young man drove downtown.

The commissioner paid particular attention next morning to reports that came into the traffic department from uptown. In them he found no complaint from McCarty.

He made a memorandum of the incident, withholding his personal connection with it, and instructed Scanlon to see that the slip was turned over to Captain Mulvaney.

Still there was no report, no charge of neglect filed against McCarty. Twice Mulvaney had called at headquarters on what he said was important business; but as it did not concern the case in question, the commissioner sent out word to report to one of the deputies.

Two days later John Ridgewood noted with interest that McCarty was on the night shift, a change that came in the natural course of routine. He smiled at a suddenly conceived opportunity for killing two birds with one stone. He would prowl round Mulvaney's precinct at night, and, at the same time, observe McCarty on his beat. As yet he had failed to find any connection whatever between the captain and the old patrolman.

Leaving his club in upper Fifth Avenue he hailed a nighthawk taxicab and ordered the chauffeur to proceed uptown. First he decided he would stop at a saloon near the station house and pick up what stray bits of information he could about the captain. He was sure of not being recognized. His youngish, man-about-town appearance was not at all in keeping with what the people of that section would naturally expect in a commissioner of police. Walking to the bar he asked a man he judged to be the proprietor to join him in a drink. A pinochle game was being fought out at a near-by table, and on this the commissioner commented jokingly.

"By the way," Ridgewood inquired casually after a time, "this is Pat Mulvaney's district, isn't it?"

"It is," said the saloon man enthusiastically, "and a good man is that Mulvaney. Deserves more notice than he gets too. You don't happen to be a newspaper man?" he suddenly asked.

"Well—yes," replied the commissioner, "but you needn't mention it."

"I thought so when you first come in," declared the saloon man. "Say," and he looked round cautiously, "if I wasn't under promise I could give you something on this Mulvaney that would put you in right. You couldn't stick round until late, could you?"

"No," said Ridgewood, "but I can come back. I'm on something else right now."

"Well," said the saloonkeeper, "you drop in here later and I'll give you a story that will make 'em set up. I can't say anything right now, because some of 'em that's concerned may be settin' round." He glanced at the pinochle players.

"I guess Mulvaney looks after you saloon people pretty well," Ridgewood suggested, now that he had the saloon man in what he thought a confidential mood.

"Oh, he gives us no trouble—just sees that things are orderly."

"And you are not the kind of a fellow—I can see that—who would forget a man like that, especially on Sunday, since the closing law has gone into effect."

"Not us," declared the saloonkeeper emphatically; "why, only last week I got a side of real Irish bacon from a ship steward, and Mulvaney went so crazy about it that I gave him pretty near all of it."

Ridgewood, in view of his intention to return and get the newspaper information, deemed it inadvisable to continue his questioning.

It was plain that the saloonkeeper suspected nothing wrong, which was a good state to keep him in.

"Don't forget about coming back!" the new-found friend whispered to the commissioner as he was going to his taxicab. "It'll be well worth your while. Don't come to anybody but me! Name's Steve Wayburn."

"This is a queer twist," the commissioner meditated, when the saloon man had gone. "He is evidently a friend of Mulvaney's and yet, for some reason, he wants to turn him up!"

At the curb the taxi driver was up to his waist in the hood of the car, tapping and hammering. Getting nothing but mumbled, irritated answers, the commissioner waited until the chauffeur's head came out.

"What's the matter, driver?" he asked. "Can't you get her going?"

The Toursedan

Motoring reaches the highest degree of luxury in the Cole-Springfield Toursedan. The car is about the handsomest thing on wheels. And it secures the comfort and convenience of passengers against all pranks of weather or roads. Yet the Toursedan is quickly and easily convertible into an open touring car. Price $2295.

Cole

We start 1917 with a production three times as great as that of last January.

The rapidly increasing demand for the Cole Eight would allow an even larger expansion.

But we prefer to grow with great care. It tends to a sounder stability.

We prefer to increase by logical and reasonable steps rather than by too spectacular strides. We consider the ultimate consumer *first*. Therefore we always take the utmost care to protect Cole Eight purchasers by painstaking, unhurried workmanship and the use of the best materials it is possible to obtain.

We are building for the future along the lines of established permanence.

Our long experience and our extensive facilities are devoted entirely to one fixed purpose,—to one chassis—America's foremost Eight. We aim to obtain and maintain the highest standard in the manufacture of fine motor cars.

This constant, diligent and persistent effort towards bettering the best has placed us in a very advanced position in the motor-car industry.

As a result, we start January shipping 200 percent more cars than at this period last year.

COLE 8

The Touring Car

The Cole Eight Touring Car exceeds your highest ideals of what a car should be. It has style, beauty, comfort—everything. The 70 horsepower motor is a marvel of power, speed and endurance. It is vitality itself. Its pick-up is swift and easy as the flight of a bird—and just as silent. It is responsive to your will as your hands or feet. Price $1695.

We were the first manufacturers of eight cylinder cars to combine large size and tremendous power with light weight and economy of operation.

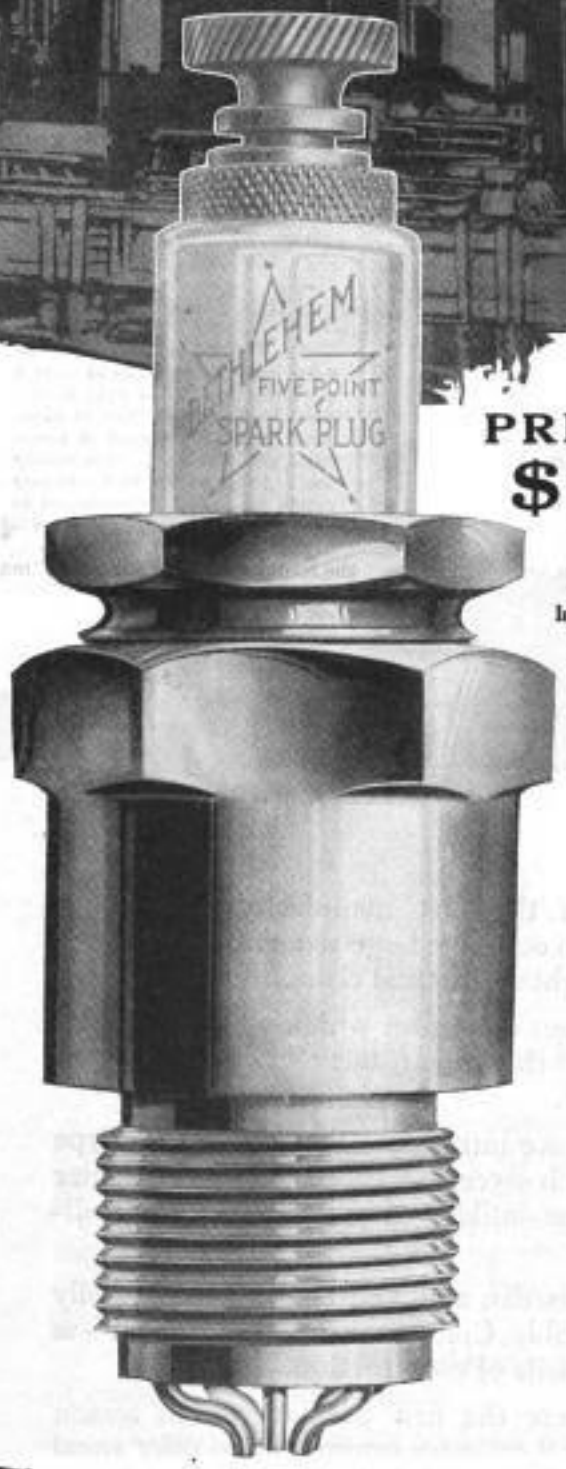
The famous chassis on which all Cole models are mounted is the largest, but relatively the lightest Eight built.

Last year we introduced the Springfield Type Body with such sweeping success that it was later adopted by the builder of practically every well-known car.

The Toursedan and Tourcoupé are essentially and unmistakably Cole, even to their names—as well as the details of construction.

These were the first permanent, all season cars—the first 8 cylinder automobile to offer equal comfort and convenience, both winter and summer, all in one and the same unit, at a single price.

In this as in many other important and fundamental advanced features the Cole leads.



A demonstration of any of our models will show you what the Cole Eight represents in modern motor-car construction and value. Ask the nearest Cole dealer.

BETHLEHEM

FIVE-POINT SPARK PLUG

PRICE $1

In Canada, $1.25

"Made where Steel is King"

BEHIND the Bethlehem Spark Plug is the most efficiently equipped spark-plug factory and organization in the world.

Into every Bethlehem Spark Plug goes the finest material that scientific methods can produce.

That material is formed, under the most exacting conditions, into the precise size, shape and synthetic balance which, through experimenting and service conclusions, have *proved* to be the best.

The steel of which the shell is built—the mica or porcelain cores—the brass mountings—the special alloy electrodes—each one of these has received special attention, each one has some firmly established merit of quality or construction to warrant its incorporation in the Bethlehem Plug.

The importance of the spark plug to the dependable, economic and efficient performance of your engine cannot be overestimated.

If you have been "getting along" with the ordinary spark plug, the Bethlehem with its sure-sparking, non-corroding, long-enduring Five-Point Construction, will be a revelation to you.

Secure a set today at your dealer's—prove to yourself what a *real* spark plug will do for *your* motoring.

THE SILVEX COMPANY
BETHLEHEM PRODUCTS
SOUTH BETHLEHEM, PA.
E. H. SCHWAB, President

If your dealer should happen to be out of Bethlehem Five-Point, write us giving make and model of car; we will forward you a set designed for your particular needs.

(Concluded from Page 75)

"I don't know what's got into the old bus," the man answered sulkily. "I told the boss a week ago to turn her in and dig me up a better one."

"Maybe I can help," suggested Ridgewood, who was a pretty good amateur chauffeur.

Removing his coat, he joined the man; and together they worked, making test after test, until the commissioner discovered the porcelain cracked in one of the spark plugs. The driver found a fairly good one in his tool kit and, putting it in place of the bad one, they finally got the car under way, but only for a few blocks. The motor soon began skipping again and, with a couple of despairing coughs, the old machine came to a dead stop.

"Here," ordered Ridgewood, now thoroughly irritated, "let me get out! I haven't time to fool with you any longer!"

"All right, get out then," came the surly reply.

"How much do I owe you?" inquired Ridgewood, reaching for his roll of bills.

"Four dollars and eighty cents!"

"Four dollars?" exclaimed Ridgewood. "Why, that's robbery! I won't pay it! How do you figure that out?"

"Three dollars for the ride and one-eighty for waiting."

"Why, you only waited half an hour outside the saloon."

"Well, what about the time we took in getting started?" the driver demanded.

"You don't mean to say that I am charged for the time I helped you fix the car, do you?"

"That's what I said, and it goes."

"You even charge for the time you keep me waiting?"

"I've got orders to charge for everything from the time I leave on a job, and there's no use arguing. They make me pay and I make you pay. Get that?"

"It's plain burglary," announced Ridgewood, putting his bills back in his pocket. "I won't pay it! Moreover, I have a good mind to arrest you for extortion."

"You'll pay this bill or take a punch in the jaw," declared the chauffeur, drawing back his fist.

"I'll ——" But the driver interrupted with a blow that grazed the commissioner's ear. Even the head of a police department is human, and John Ridgewood let fly a sudden wallop that struck the taxi driver squarely on the nose. In another moment they were rolling over and over in the street, fighting like cats and dogs.

A few passing pedestrians stopped to cheer, and one more law-abiding than the rest started off to find a policeman.

Ridgewood was rapidly getting the better of the rough-and-tumble fight, when a strong hand took violent hold of his collar and yanked him to his feet.

"You boys'll have to stop this rough-house! Stop it, and stop it quick; d'yer hear me?"

To Ridgewood's complete astonishment—for under present stress he had forgotten the original object of his quest—he found himself facing Dennis McCarty.

"Officer," shouted the commissioner, still trembling with the excitement and indignity of his struggle, "I demand the arrest of this man."

"Yes," added the driver, "and if you don't put that guy in jail I'll report you!"

"Now you cool off," admonished the old policeman, holding them apart. "Go home and get a good night's rest!"

"I insist that you arrest this man," reiterated the commissioner, "on the grounds of extortionate charges and assault."

"I ain't on to them charges," retorted the chauffeur, "but this guy is a deadbeat and I want him locked up!"

"Now listen, me b'ys," ordered the cop: "Yez wouldn't like for yer families to know ye'd been fighting, would yez? Both of yez go home now, and come round here to-morrow when you are cooled off!"

"Look here, officer, we aren't children," began Ridgewood. "If you don't——" He was interrupted by the appearance of the roundsman, on his midnight tour of inspection.

"What's all this about?" inquired the new arrival.

Ridgewood saw that he was not recognized.

"Officer," he said, addressing the roundsman, "I have demanded the arrest of this man for extortion and assault. And ——"

"Yes," the driver interrupted, "and I want my money and I want this guy in jail."

The roundsman looked at McCarty inquiringly.

"I'm just telling the b'ys to cool off and go home," the old man explained, "and when they are cooled off, they can talk it over and shake hands."

"And I am saying to you," chimed in Ridgewood, "that if this man is not arrested right now, I'll see that your case is reported to headquarters."

"You'll do nothing of the sort," retorted the roundsman sharply. "This is McCarty's job and if you want to keep out of trouble you'd better do as he says."

"Oh, if that's the way you feel about it," replied Ridgewood, "I now demand that you, as superior officer, make the arrest.

"Say, if I Wasn't Under Promise I Could Give You Something on This Mulvaney That Would Put You In Right"

I am a citizen of this town and am fully informed as to my rights!"

The commissioner's form of speech convinced the roundsman that he was a man of education and perhaps one of importance. He shook his head in perplexity, as McCarty gradually withdrew from the discussion.

By this time John Ridgewood had calmed down and was in clear possession of his wits. After all, he concluded, there seemed to be some very definite reason for McCarty not making arrests; and realizing that he had accidently hit on a vulnerable point, he concluded to pound it for all it might be worth. Suddenly, too, he recalled Captain Mulvaney's connection with the case.

"Call up your captain and report this at once, or you'll be in wrong yourself," he told the roundsman. "There's either going to be an arrest here or a lot of trouble later."

"No use in calling up," the officer informed Ridgewood. "Mulvaney wouldn't stand for it; and, besides, he ain't there."

"Where could I find him? Quick?"

"I reckon you'd have to go clear to headquarters. He's just cleaned up a gang of mail-box thieves. I met him on my way out starting downtown with Steve Wayburn, the fellow that helped get the dope."

Ridgewood suddenly recalled the saloonkeeper's tip and promise of a story. For a second his mind was diverted from the case at issue. He hesitated.

"Well, there's no use in gabbing round here all night," went on the roundsman, preparing to be on his way. "I tell you right now that there is nothing doing. The only thing for you to do is keep your mouth shut and move along."

The insolence of this was a little too much for the dignity of a department head. Ridgewood flared up and lost his caution.

"Officer," he said, "I'm going to show you something that will persuade you to have McCarty send this man to the station house, even if he has to send me with him."

He reached for the lapel of his buttoned coat. The roundsman was quick to detect the movement.

His long experience made him scent something official. No policeman is immune from a fear of authority.

"And if you do show me," said the roundsman, "I'll tell you something that will change your mind." In the act of drawing the commissioner aside, the officer had caught a glimpse of some kind of gold badge beneath Ridgewood's coat. "And," he added, "you'll listen too—I don't give a damn who you are."

"Well, then, talk quick!"

"I don't know if you have any family," said the roundsman, "but I have and Mulvaney has and old man McCarty has."

"That doesn't interest me in the slightest," said the commissioner, glancing over his shoulder at McCarty and the taxi driver. "Listen, officer; we might as well have this out. McCarty has not made an arrest in ten years and I know it. Mulvaney is mixed up in it somewhere, and if you don't tell me the whole story in two minutes, McCarty will be off the force in two days—and you are likely to go with him."

"You know a lot, young man," agreed the roundsman, with sarcasm; "maybe you know, too, that if McCarty makes this arrest he will have to go into court."

"Well, what of it?" demanded Ridgewood impatiently. "Isn't that part of his job?"

"But you don't know that if old Mac goes before a magistrate he'll lose his job. Every new commissioner makes a holler about policemen not being able to pass the physical examination, and this newest one, they tell me, is a worse crank about it than all the others put together."

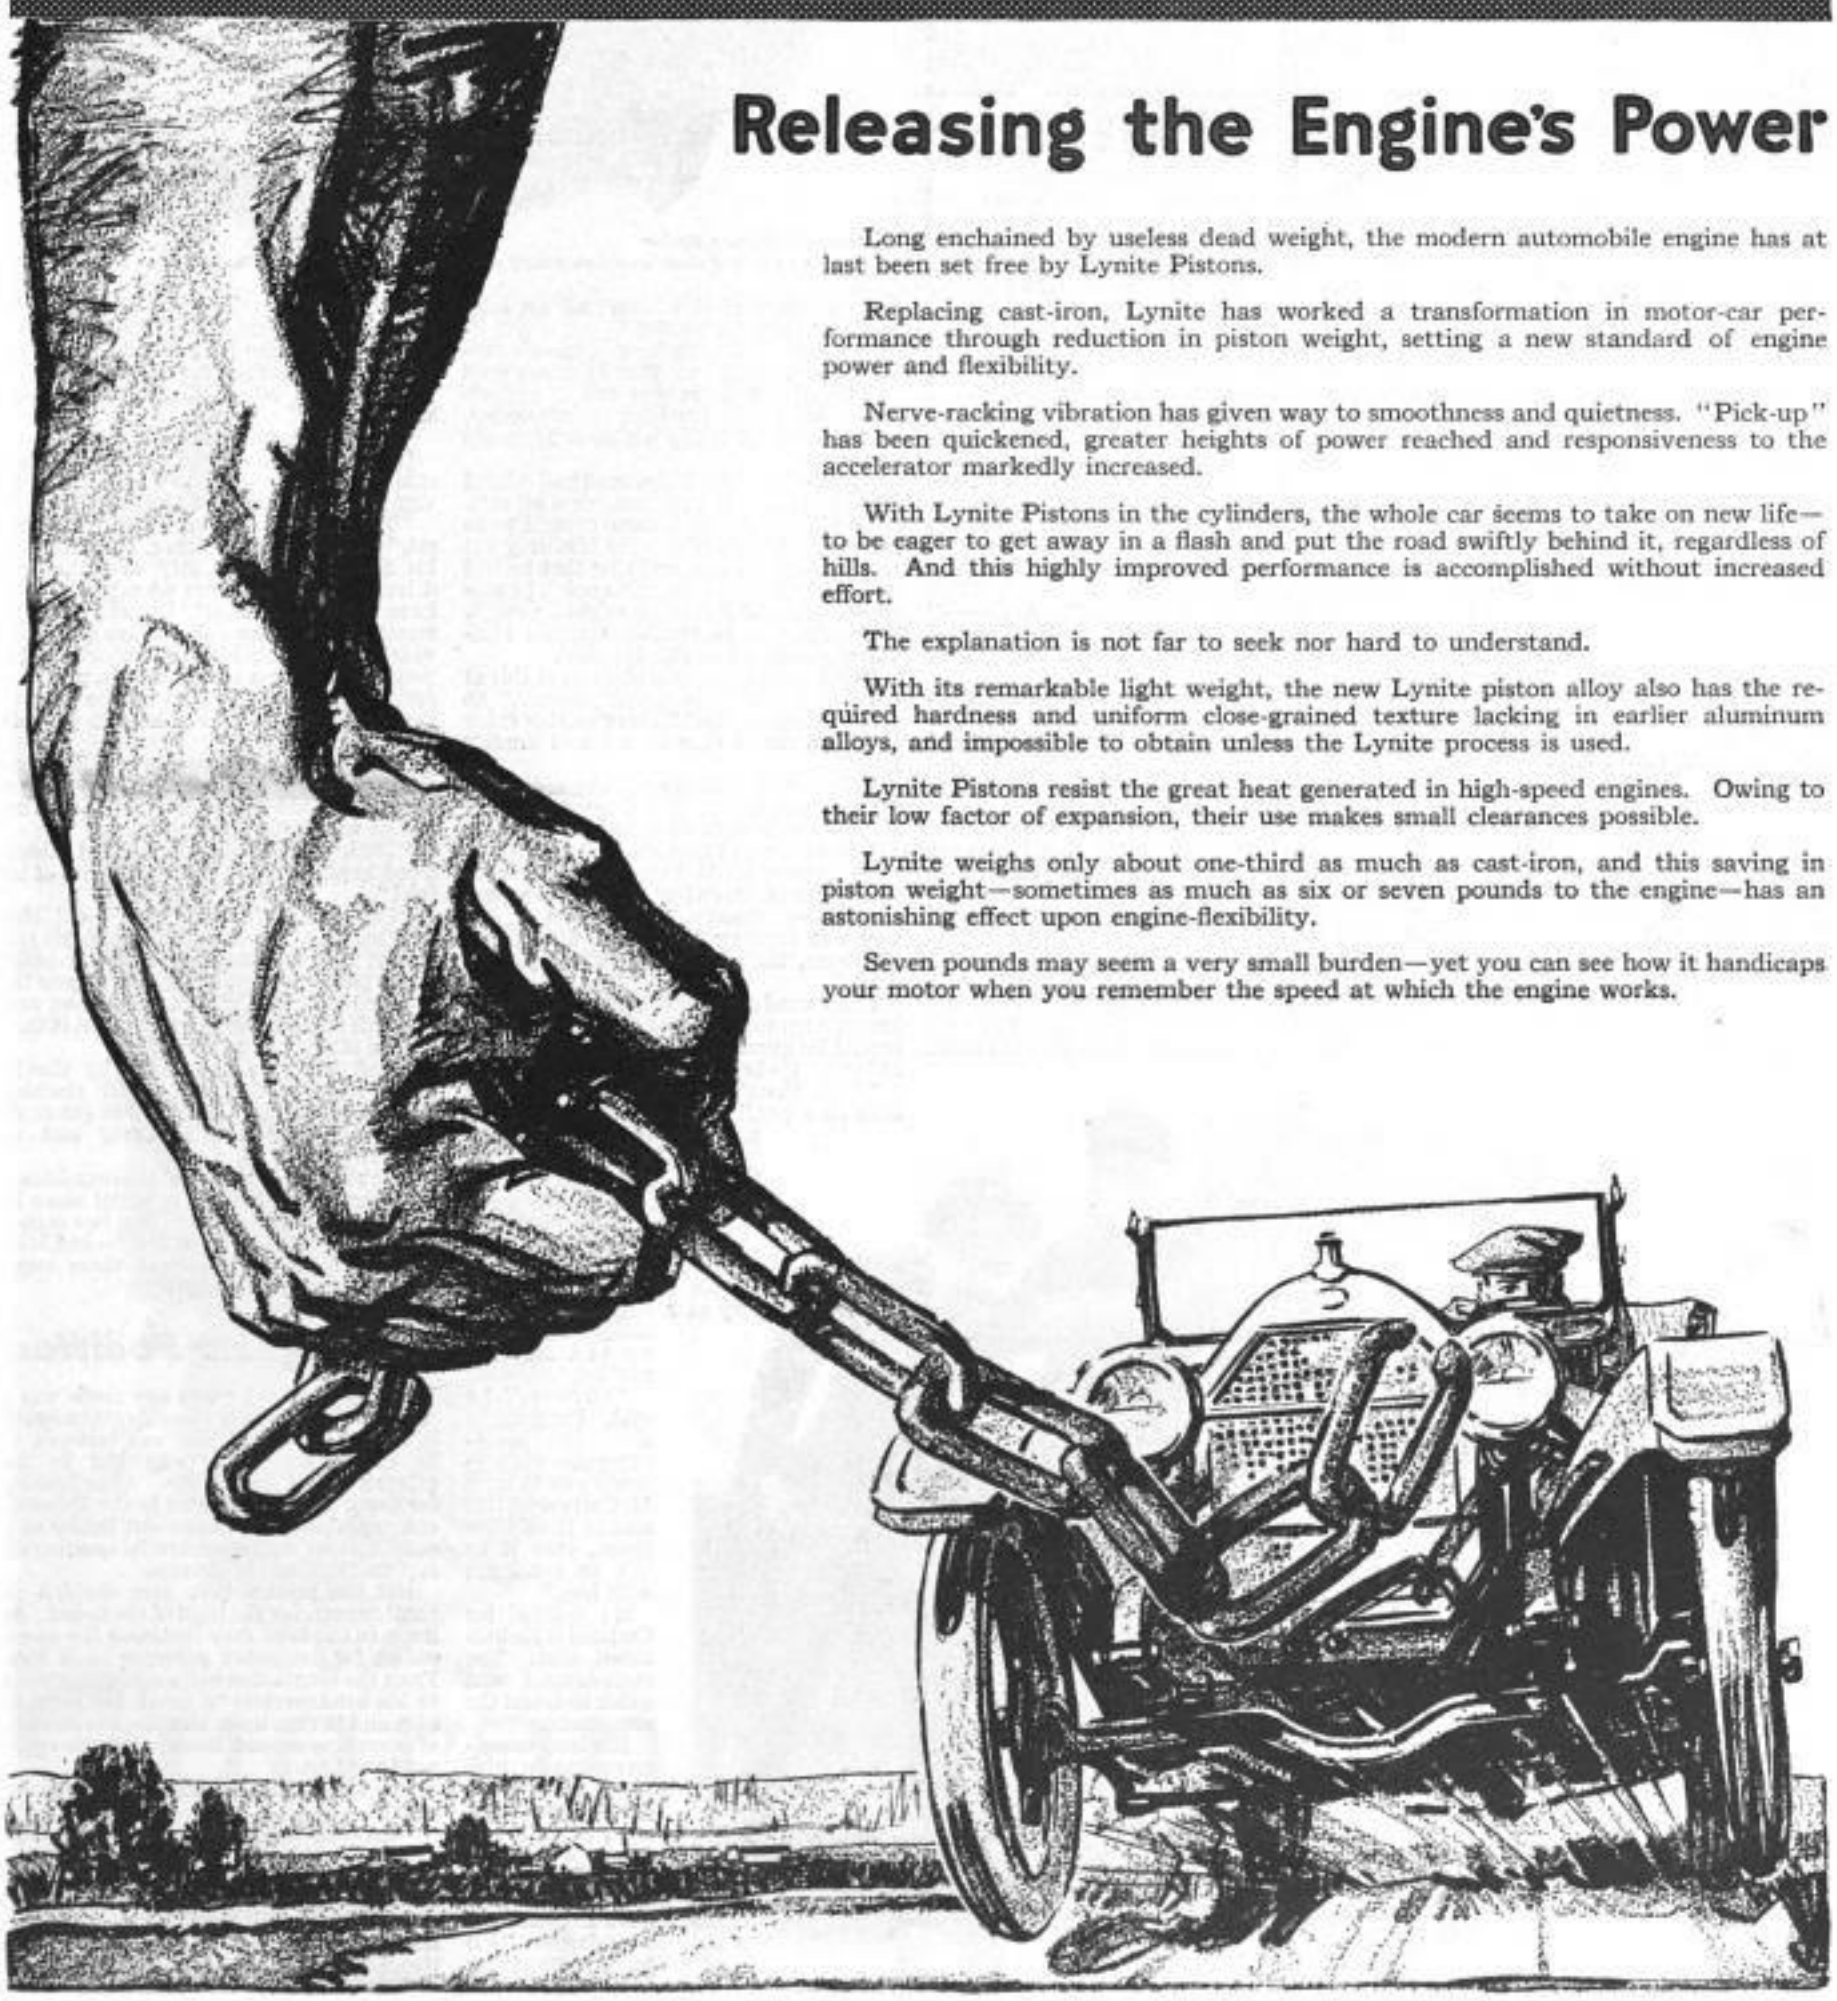
"Just what do you mean by that?" asked Ridgewood, involuntarily reaching for his coat lapel. "What's that got to do with Mulvaney and McCarty and no arrests?"

"Young man," answered the roundsman, "McCarty hasn't heard a sound since he went into the big fire after them two cops—maybe you've heard about that?—and Mulvaney's brother was one of them cops! Now show me your badge!"

"Now You Cool Off," Admonished the Old Policeman. "Go Home and Get a Good Night's Rest!"

His Regular Position

UP IN Vermont years ago there was a prominent citizen who cut quite a swath in state affairs, but who was believed to be quite extensively henpecked in the privacy of his domestic life. After figuring for many years as a factor in the Republican organization, he came out finally as a candidate for the gubernatorial nomination and made an active canvass.



But the powers that were decided on another man for the head of the ticket. As a sop to our hero they bestowed the nomination for lieutenant governor upon him. From the convention hall a committee went to his headquarters to break the news to him, and to urge upon him the advisability of accepting second honor, since he could not have first.

The old gentleman took the tidings very calmly.

"Gentlemen," he said, when their spokesman had concluded, "I had expected something else; but I owe a duty to my party and I will consent to become your lieutenant governor. It is a post for which I deem myself to be peculiarly fitted by long experience. I have been holding down that job at home for thirty-five years!"

LYNITE

Releasing the Engine's Power

Long enchained by useless dead weight, the modern automobile engine has at last been set free by Lynite Pistons.

Replacing cast-iron, Lynite has worked a transformation in motor-car performance through reduction in piston weight, setting a new standard of engine power and flexibility.

Nerve-racking vibration has given way to smoothness and quietness. "Pick-up" has been quickened, greater heights of power reached and responsiveness to the accelerator markedly increased.

With Lynite Pistons in the cylinders, the whole car seems to take on new life—to be eager to get away in a flash and put the road swiftly behind it, regardless of hills. And this highly improved performance is accomplished without increased effort.

The explanation is not far to seek nor hard to understand.

With its remarkable light weight, the new Lynite piston alloy also has the required hardness and uniform close-grained texture lacking in earlier aluminum alloys, and impossible to obtain unless the Lynite process is used.

Lynite Pistons resist the great heat generated in high-speed engines. Owing to their low factor of expansion, their use makes small clearances possible.

Lynite weighs only about one-third as much as cast-iron, and this saving in piston weight—sometimes as much as six or seven pounds to the engine—has an astonishing effect upon engine-flexibility.

Seven pounds may seem a very small burden—yet you can see how it handicaps your motor when you remember the speed at which the engine works.

Digitized by Google

PISTONS

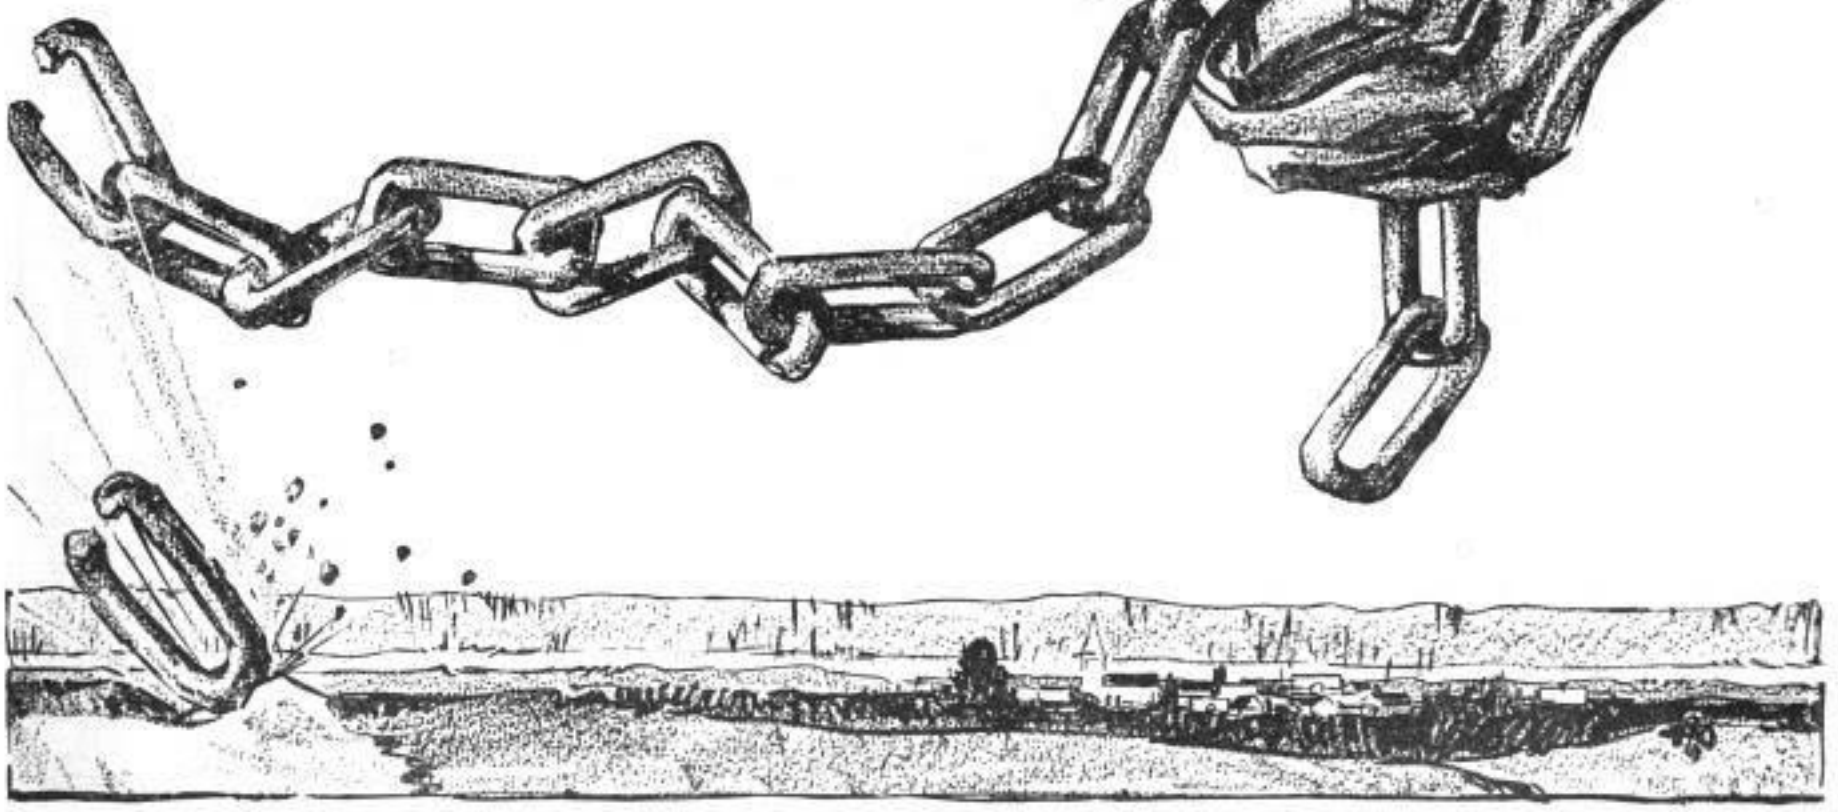
Breaking the Chain of Iron

Up and down the pistons rush—faster, faster, faster—till each makes a full stroke in one three-thousandth of a minute. One hundred times a second the useless weight of cast-iron has to be stopped dead, started again in the opposite direction and raised to full speed in the space of a few inches.

The energy required for these countless stops and starts is virtually wasted—it has no part in moving the car.

The pressure of heavy cast-iron pistons against cylinder walls still further slows up the engine.

Therefore, every ounce stripped from the pistons without sacrifice of strength and other necessary qualities obviously means better engine performance.



Lynite Pistons have been severely tested not only in the laboratory but in thousands of cars on race courses, city streets and mountain roads.

The most recent striking demonstration of their superiority was the winning by Louis Chevrolet, on December 2, at Uniontown, Pa., of the $3000 Universal Trophy. With a motor in which not only the pistons but the cylinder castings were of Lynite, and with Lynite at many other places in the car, Chevrolet won out over fourteen other drivers.

Lynite Pistons have been adopted as standard by the following manufacturers

Peerless Eight

Two Separate Power Ranges Give The Peerless a "Dual Personality"

No real lover of the motor car can sit at the wheel of the Peerless Eight for the first time without enjoying a new thrill of delight in its unequalled range of performance.

It presents those contrasts in performance which heretofore have been possible only in totally different types of cars. It is a car of class and distinction in *every* sense.

A "Loafing" Range For Ordinary Driving

In its "loafing" range it exhibits all the admirable traits you would expect in an eighty horsepower eight of real class.

Quietly, and without apparent effort, it performs in high gear, with velvet smoothness, at any speed from almost imperceptible motion to the fastest clip permissible in town driving.

And you have a pick-up which leaves you nothing to fear from any contender in a fast get-away.

And through all its varied performance in its "loafing" range, it is automatically operating on half fuel rations—in fact it uses fuel so sparingly as to shame many a lesser powered six—even many a four.

A "Sporting" Range For Brute Power and Speed

You have only to open the throttle wider to call upon its "sporting" range.

But instead of the usual response you change the whole character of your car.

You automatically open her double poppets and give her full fuel rations.

You have exchanged the soft purr of your motor for a deep growl of brute power—you have all ordinary contenders at your mercy and with nothing to fear from even the few cars that rightly claim the distinction of real class.

The Peerless dealer will gladly demonstrate this contrasting performance which gives the Peerless Eight the characteristics of totally different types of cars.

Prices: *On orders accepted by the Factory for shipment, until February 28th, 1917, Roadster, $1890; Touring, $1890; Sedan, $2750; Limousine, $3260.*
On orders accepted by the Factory for shipment, after February 28th, 1917, Roadster, $1980; Touring, $1980; Sedan, $2840; Limousine, $3350.
All prices f. o. b. Cleveland and subject to change without notice.

THE WRONG ROAD

(Concluded from Page 20)

"Consider it done."

"You start in five hours for the mountains."

"What! And miss the battle?"

"Miss nothing! You are going after ammunition. Dario Pez is not such a fool as to put all his eggs into one basket, Don Francisco. No; we still have enough sound cartridges cached to drive this scum from the face of the earth. So hurry!"

It did not take me three winks to get the pack train of mules ready for him. That was one thing Dario Pez taught his followers—quick obedience. He taught them, sir, by fear of punishment.

When I reported for orders Dario Pez was seated at the table where he worked, with his secretary; and in front of him was this Juan, with a soldier on each side of him, and an officer in charge.

"Beast of the worst kind!" Dario Pez was saying, and the cords of his neck stood out. "Thou hast betrayed thine own brother. Thou hast stung the hand that raised thee up. For money thou hast sent brave comrades helplessly to death. Better for thee, *hombre*, had thou never been born. But the woeful fact of thy existence shall be remedied, for thou art going to die."

On hearing this Juan began to shake, sir, and his knees would scarcely sustain him. He begged for mercy. Yes; the bold young fellow, who went about in diamonds like a fine gentleman and captivated all the girls, was at heart a miserable coward. He wept; he swore that he had been deceived and imposed upon; he promised to make restitution. In his fear he cast caution to the winds and revealed the secret of a fortune he had stolen. It was in an El Paso bank, sir, whither he had dispatched it for safekeeping.

Instead of appeasing Dario Pez, the confession drove him mad with rage. His temper was always terrible, sir; but never had I seen anything to approach the cold fury that seized him now. He leaned forward, with his hands on the table, and glared at his brother, and I read the death sentence in his eyes.

"So!" he said huskily. "And bone of my bone, flesh of my flesh! Major Orteja, a firing squad of five. And at once!"

That was all he said in answer. This Juan made a last effort: He threw himself on his knees and, crawling in this fashion toward the table, despite the efforts of the guard to hold him, tried to seize the general's hand to mumble it. Dario Pez snatched it away and dealt a blow that sent him sprawling across the room.

"What!" he bellowed, quivering all over. "Thou wouldst shame the mother that bore us both? Take him away! Take him away, major, before I slay him with my own hand and live to regret it."

Thereupon the guard picked up the prisoner and marched him out, Juan begging and beseeching to be heard. It was awful to witness, sir. The sight of a man unmanned sickens the soul and makes one ashamed.

No sooner had his cries died away in the distance than I strode up to the table and saluted.

"Well, Don Francisco? Ready?"

"Yes, *mi general*. But kindly send somebody else in charge of the expedition."

"Why so? What is this? Insubordination?"

"No, general. But I am going to die beside your unfortunate brother."

For a moment he gaped at me, and then his expression hardened.

"Very well, Don Francisco. If you wish to share the fate of a traitor, that is your affair. We will try to spare the needful bullets. Or would you prefer hanging?"

I did not like his tone, sir. Of course I did not seriously believe that he would permit me to be executed for my devotion to his interests, but his temper was so uncertain that such might easily happen. Assuredly Dario Pez would repent immediately afterward and mourn his loyal friend; but that would not bring me back to earth, sir, and I had no desire whatever to leave it.

"Answer me! Would you prefer hanging?"

"No, general. I do not wish to die. But, rather than see you commit a terrible mistake and give your enemies a weapon against you, I would share the fate of this pitiful boy."

"Silence!" he shouted furiously. "Another word like that and I'll give you a pill of my making. Listen to me, Don Francisco—a soldier's first duty is to obey. No excuse relieves him from it. He must execute orders. Were I to command you to go out and shoot your own father, it would be your solemn duty to do so. Would it not, Don Francisco?"

"Yes, general," I answered, my father being comfortably in Paradise; "but that would harm only me and mine. When you attempt to do something that will damage your own cause irretrievably, then I must protest, even though a protest means my death warrant."

"Enough!" exclaimed Dario Pez, banging his clenched fist on the arm of the chair. "Who'll dispute me next? I have said he must die, and he dies. Get out of my presence!"

I saluted and went out. When Dario Pez was in that mood it was as useless to reason with him as with a bleeding bull. Therefore I walked briskly from the house and started to run across the garden. I knew that he must see me from the window.

"Hey! Where're you going so fast, Don Francisco?" he called.

"To die with Juan, Excellency."

And, without slackening my speed, I sped from the garden in pursuit of the firing squad, which was marching up the street, followed by a large crowd.

I did not succeed in overtaking them until they stopped at the ruins of a house on the outskirts of the city. This was the place of execution.

"Wait!" I shouted with all my might. "Wait!"

As I burst through the people, Juan was struggling with a soldier and crying out that he did not desire to have his eyes bandaged, but that he wished to direct the firing squad himself. It was, in my opinion, merely an excuse to gain time, sir. He had not the courage to look into leveled guns, with their cold, cruel mouths.

"What's the matter now?" demanded Major Orteja when I sprang to the prisoner's side.

"I have come to die with him."

"Fine!" said this scoundrel, who seemed very cheerful over the whole proceeding. "Who gets your job?"

By goodness, I took a dislike to Orteja right there! Never since then have I trusted the fellow or favored him with my friendship. But as we thus confronted each other the crowd split apart again, as though a shell had cleaved through its middle, and here came Dario Pez, hot and out of breath.

"What foolishness is this?" he sputtered, and I heard Juan give a little whimper of joy.

He thought the interruption meant respite for himself, sir; and so did I. But we were mistaken; we did not yet know Dario Pez.

"Tie this fool up," he commanded—referring to me, I regret to say, sir—"and give him a sound beating. Now proceed with the execution, major. I myself will superintend it."

Two soldiers held me while the major stood the prisoner up against the wall and blindfolded him in spite of his opposition. That done, Orteja stepped back and lined up his men.

"*Preparen armas!*"

You could have heard a pin drop as the rifles were leveled. I held my breath. Dario Pez was stern and composed.

"*Sobre el reo apunten!*" cried the major; and then a wild scream made me jump, and I saw the rifles waver.

Orteja, he held his sword half raised and glanced uncertainly round him. And as he thus hesitated the front ranks of the crowd split apart once more and a woman rushed into the open space and straight toward this Juan Pez. It was the general's mother.

"Put up your guns!" he bellowed in a terrible voice, and the squad came to attention.

Dario Pez strode forward and tried to remove the mother's arms from round Juan's neck. But, by goodness, sir, the crowd hissed, and the women in the rear shrieked at him to leave her alone, murderer that he was.

"*Madre mia!*" he begged. "Come away! You are wasting the love of an excellent heart on a traitor. Go back! This execution must take place."

But she only clung the tighter. She knew what this Juan had done—but what did that matter? It did not count a grain, sir, with the woman who bore him. She locked her arms round his neck and would not move.

"If you kill him then I shall die, too, Dario. Or, listen—I am old and useless, and have not long to live. See—set me in his place!"

Dario Pez, sir, groaned and beat his breast.

"*Madre mia! Madre mia!*" he cried in a suffocated voice. "Come away! He is not worthy of your love. What nonsense is this? Die for him! You gave him life once. You cannot give it twice."

"Then you must pardon him, Dario," she cried; and the crowd, they huzzaed like anything, sir.

Dario Pez looked at her a while and then at the people assembled, and then at this Juan.

"I believe now," he said grimly, "that there is not a rogue on earth without luck. Take him away; but break his sword."

We had triumphed. There would be no execution. We were feeling mighty jubilant, sir. But it did not last long; for, as his mother stood fondling his hand, and the rest of us just stood there grinning at Juan, and the thoughtless crowd shouted "*viva*," Dario Pez turned and said:

"But I am not through with you yet, *hombre*. Bring him back to my headquarters in an hour."

And with that, sir, he walked off, the assembled people making way for him and yelling approval of his clemency.

What would he do next? I was in the room when this Juan was led up on the carpet, sir, and I heard all that passed. Dario Pez sat at his table and all the Staff were gathered there by special summons. The general was curiously calm.

"My orders," he began, when silence had been obtained, "are that this prisoner be given his life, though it is rightfully forfeited by his baseness. I do this in response to the pleadings of one of my most loyal officers and in token of the great love his mother bears him.

"But to thee, Juan Pez, I say this: Poor and in rags thou camest to me. Poor and in rags thou shalt go. Major Orteja, escort him to the city limits and set him on the road to Baca, according to your orders. And now to work, gentlemen. Take the fellow away!"

They led him out and we went to work. In about an hour a lady was announced.

"Show her in," said Dario Pez at once. "Don Francisco, listen well to what is about to be said. You will learn human nature, *muchachito*, and it may be useful to you in the matter of women. They tell me you need it."

Before I could reply, the Señorita Teresa Jaurequi entered, being announced by the secretary with a fine bow and flourish of words. She came proudly in, sir, all smiles and good humor; and she was dressed in her richest dress.

"Ah, Excellency, it is good of you to send for me!" she said gayly.

"That is as it may be," answered Dario Pez. "Welcome to my poor house, señorita. It is yours. Don Francisco, bring the lady a chair. Have you no manners?"

As for him, he sat there without stirring, sir; and I fetched the Señorita Teresa a nice chair. And then Dario Pez began to talk to her. He spoke gently, sir, with a curious singsong that he always affected when he wanted to be polite to the ladies; but, by goodness, what he said hurt her like a whip.

"And so," he ended, "Juanito has gone. He will be at Baca to-morrow. Love speeds on nimble feet. Doubtless Love will be waiting for him there, with clothes and food and comfort for his wretchedness."

To this, sir, the Señorita Teresa Jaurequi said nothing. First she turned red, then white; and she glanced all about her—at me and the general and the windows—as though she found difficulty in getting her breath. And all the while her toe kept tracing a pattern on the floor.

"And he has gone for—he will never return? Never?"

"Never!"

The young lady drew a deep breath.

"He is, then—no—longer agent for Your Excellency? He does not enjoy your favor?"

"He is Juan Pez, of Baca, seller of goats' milk."

"I—you—thank you, general. I must be going. My parents will be anxious if—do not put yourself out, general ——"

"Good!" cried Dario Pez heartily. "I knew Love would find a way. You will be there waiting for him, will you not, señorita?"

But the Señorita Teresa Jaurequi had fled. And Dario Pez, sir, was laughing.

"Oh, *muchachito*," he said to me, "learn human nature! Learn it and the whole round world is yours. Come! We will go find Lucita. Our little visitor is with her and we will test the truth of Juan's denial."

Well, sir, we found Lucita and the nice young girl from La Ascencion in rocking-chairs near the fountain, and they were busily engaged in sewing. Dario Pez sat down close to the nice young girl, and began to speak with her precisely as he had done with the Señorita Teresa; but now he talked very gravely, sir, and did not employ the singsong.

"And doubtless Love will be waiting for him there," he ended, "with clothes and ——"

"Oh, general," cried the girl, seizing his hand and kissing it, "how can I ever show my gratitude? I will start now—at once. Perhaps I can overtake him."

"No, no," he replied; "you must not do that. My orders are that he shall go hungry and in rags to Baca, and to Baca he goes. But you may make a detour and arrive there before him. Hey, Lucita! Wilt thou instruct this child and give her what she needs?"

Lucita gladly agreed, sir.

"A heart of gold, Don Francisco," said Dario Pez. "The most priceless treasure life can offer. I knew Juan was lying. He does not deserve such good fortune. And now to business. You start immediately for the mountains."

Sir, I did so. But about three hours out I gave my officer his instructions and branched off the trail. It was in my mind to ascertain how this Juan Pez fared and then overtake the pack train by hard riding.

It was almost nightfall when I sighted him on the white road that crosses the big mesa, and approaching him was a line of burros, loaded with firewood for the city. A ragged rascal, armed with a stout staff, was driving them. When he met the burros in the road, this Juan did not give an inch from the middle, which created some confusion. The driver came running from the rear to ascertain the trouble.

"What, you big rascal!" he was shouting as I came up. "You would hog the road from me, would you? Take that, and that!"

I turned to look at the brother of Dario Pez. He was sitting on the ground, nursing his shoulder where the driver had struck him, and he was whining like a child who has been punished. But it was his appearance that amazed me most, sir.

By goodness, he was a fearsome sight! They had placed upon him the filthiest beggar's rags that could be found in the city, giving the beggar one of Juan's fine suits in exchange.

But that was not the worst. The upper portion of his body was entirely nude, and on his back they had printed, in large letters that would not rub out: "This is Judas."

"Don Francisco!" he cried at sight of me, ceasing his lamentations. "Oh, good! You have come to help me? You are a real friend, Don Francisco. Give me something to eat. I am famished. And then, your coat. It is very little to ask from a comrade, Don Francisco."

"Aye; but more than I may give, Juan. I can give you nothing."

"Then why did you come? Why did you follow me?"

"I wanted to see you," I replied; and, sir, try as I would, some of the secret joy his situation afforded me crept into my face.

On hearing my words this Juan jumped to his feet and started to run along the road. I watched him go. Presently he came to a point where the road forked. He hesitated an instant, then turned to the left.

"Hey!" I shouted at him. "That doesn't go to Baca. You're on the wrong road."

"The wrong road!" he wailed, bursting into tears. "Always and always the wrong road!"

After a while he rose and went stumbling forward, talking to himself and making many pauses to rest his feet. And so I left him, sir, whimpering along the road to Baca.

If This Were Our Only Chance to Tell You

If we had just this one chance to talk to *you*—If this were the one Timken-Detroit advertisement *you* would ever read—What message would we give you?

We could not tell you the whole story of motor-car axle importance; but we should certainly emphasize seven facts that every motor-car owner should know and remember:—

1 ***Human safety comes first*** in motor-car construction, and in respect to safety, the axles are beyond question the most important parts of the car.

2 ***A motor-car axle must be better than "good enough."*** It must exceed the stated requirements of the car builder in capacity to carry loads, transmit power, and stand up to the shocks and stresses of travel.

3 ***The axles must fit the car, and the car must fit the axles.*** The axle builder must see to it that his axles are of ample size and capacity to do the work required of them and that they are properly *engineered and built into* the car. The car builder should see to it that no radical increases in weight or horsepower are made after the type and size of the axles have been decided upon. For if radical changes are made it may jeopardize the owner's safety and satisfaction. In other words, axle builder and car builder must work together for a common principle.

4 ***The axle builder must be able to anticipate the future.*** He should not wait for new conditions or for his customers to demand new types and improvements in construction. He should be continually striving for something better than the best he can do today—and be the first to urge its adoption. He should make constant progress toward better design and quality.

5 ***The car owner must have assurance that the axle builder will continue in business.*** Thus, he knows that every part and piece of his axles can be furnished for replacement if the need ever arises. And that assurance can be given only by an old, established and successful organization.

6 ***Building motor-car axles is a task for a specialist;*** for to meet the requirements already mentioned will take all the experience, engineering ability, manufacturing equipment and financial resources of an entire organization, who will give it their exclusive attention. Thus, the axle builder, with his many customers, acts as clearing house for the combined experience of the whole industry.

7 ***Continued use is the test of axle-building leadership.*** It is years of continued use by many of the ablest and most successful of motor-car builders, it is the *high average of satisfactory performance in hundreds of thousands of cars,* that finally tests the soundness of the axle builder's principles and practice.

In all this we have not mentioned Timken-Detroit Axles by name. If this were our one chance to talk to you, we should devote it wholly to explaining what kind of axles we honestly believe you should have, whether made by us or by any other axle builder who can qualify under *all* of the foregoing principles.

What The Velie Shows At The Shows

A Study in Comparisons

You have an exceptional opportunity to compare Velie values at the shows.

Your comparison may be complete; whether you are a part of a large family, or alone in the world, some one model is exactly suited to your needs.

Compare the New 1917 Velie Six by highest standards you know.

Judge by quality only. What better can you find at any price than the powerful Velie-Continental motor—Timken axles front and rear—long, underslung springs—multiple dry disc clutch—Remy automatic ignition—enclosed wiring—vacuum feed—push-button starter—everything in and on?

What could be finer than the Velie's graceful new streamline body—longer—roomier—with genuine deep-tufted leather and real curled-hair upholstery—Velie permanent mirror finish—with Snap and Style and Smartness up to the last minute?

Such features are found only in a car built up to a long-maintained standard, and not down to a price. Built by an organization of the Velie's exceptional facilities—with half a century of manufacturing experience—and a mile of Velie factory—facts worth considering.

Velie cars may be seen on the main floors of the New York and Chicago Shows, or on your dealer's floor any day. See these cars—ride in them, and you'll agree comparison proves Velie values.

PEOPLE AND PENNIES

Links in the Drug-Store Chain—By John Mappelbeck

ALMOST the first day I worked in a drug store, as a boy just from school, the human interest of the business took hold of me. An old lady brought in a prescription yellow with age. Among other ingredients it called for five bumblebees. Even now the druggist is asked for many remedies of bygone generations, such as goose grease and skunk oil. In neighborhoods where foreigners live there is a demand for patent medicines so old that their wrappers and direction circulars give one a fascinating glimpse into the drug stores of past centuries. Bumblebees are an old-folks remedy for rheumatism.

Well, my boss was a conscientious man and a true pharmacist, with his heart in the compounding end of the business. If a prescription called for bumblebees he would put them in, if they could be obtained. We had no bumblebees in stock, so I was sent out to gather them. My knowledge of entomology was rather limited, for I was a town boy, and at the end of an all-afternoon hunt I came back with only a single specimen. Next morning the boss sent me farther into the country, and a florist allowed me to go into his greenhouses, where bees were humming. Up in one corner of the place I saw a little mud nest, with what looked like bees flying in and out. I got a pole and knocked it down, and learned the difference between bees and wasps by getting fearfully stung. By night, however, I had two more genuine bumblebees, and when I returned to the store, with a badly swollen face, the boss said these would do, for he could reduce the other ingredients in proportion, use the three bees, and make up the old lady's prescription three-fifths the quantity.

She was quite pleased when he explained it.

"You are an honest man," was her comment. "The last druggist who filled that prescription put in blowflies!"

I stayed two years with that employer and studied pharmacy under his guidance, to such good purpose that in another year I might have taken my examination and got a certificate. He was the typical druggist of his generation, a dispenser of medicine, absorbed in the technicalities, with no ability at all as a merchant. He made a customer feel that he was doing a favor in coming from behind the prescription desk to wait on him. His stock of sundries was a lot of shopworn stuff that had been on hand for years, purchased originally without any understanding of the needs of people. The boss didn't know people, in fact, and didn't like them, and had no more idea what was going on in his line than has many a small druggist to-day.

Early Cut-Rate Stores

It was fortunate for me that I quit before he made me a pharmacist too. For that might have killed my interest in people, which has been my best possession. Too much knowledge of the technicalities often blinds a man to the human possibilities. We differed over a technicality. I had become such a skillful bottle washer and handy man that he did not want to lose my services in that line by promoting me. So I left and found a new job in a bigger store downtown, and there soon saw opportunities for applying what I had learned of human nature; and I became so interested that I never studied pharmacy again.

I honestly believe that the drug business is the most human business that there is. Just think of the range of merchandise in an up-to-date drug store! There are supposed to be ninety thousand items in our trade—more than in any other line. The variety of things in even a small drug stock is so great that a man may wait on customers all day, and yet never have a call for the same article twice. Even if it is the same article, there will be some variation in its use. People go to the druggist for advice to a far greater extent than in any other line of trade, and they come in emergencies and trouble, so that there is every opportunity to know and help them.

Where all these articles come from, and what they are used for, and how they are used, and the people who buy them and want information about them, make an absorbing study—if your heart is in it—which gives constant suggestions for improving methods and stock. My heart has been in that sort of thing for thirty years. To-day I own an interest in a chain of two dozen retail drug stores, extending over several states, recognized as among the most successful mercantile enterprises in the country. It has all been built up from one store, and I had a share in the building. Our success has been based chiefly on a knowledge of human nature. We have studied people, learned what they wanted—often before they knew what it was themselves—gave it to them quicker and better than the other fellow, and if possible cheaper, kept an eye on to-morrow to see how times would change, and were ready to change our methods with them. Most of the things we have done can be done by other merchants, even the small ones—indeed, some of the small fellows have advantages over us nowadays, as I will show presently.

The Nine-o'Clock Trade

My new job was with the big cut-rate drug establishment downtown, a concern that had been opened up by people who came from some other city. My old boss hated, ridiculed and feared this cut-rate concern, and undoubtedly would have stigmatized it as a trust, had the word gained currency then. Those were the early price-cutting days. My new employers had measured the natural limitations of the drug business, as conducted by men like my old boss, and had set out to make bigger profits by increasing volume. Instead of a modest turnover of from ten to fifteen thousand dollars a year, gross, with a net profit of from ten to twelve per cent, they cut their margin of profit to five or six per cent and went after a hundred-thousand-dollar turnover. Prices were reduced on everything, goods piled to the ceiling, the store plastered with glaring signs, and special sales advertised. The business was run like a circus. Such methods were a novelty then and drew unheard-of patronage. That was the thing to do at that time.

To-day some concerns are still chasing volume with cut rates, in the same spectacular way, believing that the method is as potent as ever, and hundreds of small druggists still hate and fear the price-cutting establishments and regard them as oppressors, and feebly try to imitate their special sales. But we are now doing something entirely different, and in my opinion the days of price-cutting success are over, and the fellow who blindly chases volume is chasing the wrong thing.

We make one division of customers in our stores that throws light on present-day tendencies—nine-o'clock and two-o'clock customers. The nine-o'clock customer comes early, in response to bargain advertising. She has her mind firmly fixed on two or three articles that we are selling that day at cut prices, and will seldom buy anything else, because she wants to get away to some other store and take advantage of other bargains. It is not worth while to try building trade upon her, for she will not center her patronage in one store, and really has little patronage to give. If you advertise aggressively it is possible to clear off quite a volume of cut-price goods to nine-o'clock customers, and some merchants still imagine that this volume represents desirable business. But it cheapens the store, and the following that you might attract would melt away like frost before the sun if bargain tactics were abandoned.

The two-o'clock customer, on the other hand, drifts in placidly after lunch. She doesn't waste her time trying to save a few coppers. She is a liberal spender, seeks advice as well as goods, is open to suggestion, interested in new things, demands service, and when her confidence has been won is loyal to the store. So you can build on her endlessly.

From the customer's standpoint, the bargain is based on a wrong philosophy of buying. Regarding her as the purchasing agent for a family, the customer is matching pennies against her own time, convenience and energy, in return for goods that are seldom worth more than she pays for them. She is pitting her knowledge of merchandise against that of somebody who understands it far better than she does. That the bargain philosophy is wrong for the merchant, too, I can easily demonstrate by figures.

We saw through this bargain fallacy as soon as we began studying the important item of money received from the average customer. This record is kept in every store by the cash register, to which any merchant has recourse. Our average sale was thirty cents when we looked into this phase of the business. To-day we have reached forty-eight cents, building a penny at a time, and I doubt if any other drug store in the country has as high an average. From personal investigations I believe that the general average is not more than thirty cents. Now the merchant who attracts a big crowd of nine-o'clock customers by advertising and cut prices can dispose of an enormous stack of goods. But if he will study the amount spent by the average customer he will probably find it below twenty cents, and his effort in chasing volume has brought him neither profit nor lasting trade.

Now in our chain of stores we sell to fully ten million persons yearly. Suppose we sell each customer only a cent's worth more than last year's average! That is an additional revenue of one hundred thousand dollars. There has been practically no overhead expense in selling this increase, so we can clear from twenty-five to thirty thousand dollars net profit on it. If it were sold to additional customers then overhead expenses, of course, would reduce the percentage of profit. We keep track of the number of separate items sold to each customer, another very important factor. When we started it was just one item. To-day we sell one and a half items to each customer, and the average is steadily being pushed up.

To increase sales per customer, both in amount and items, we have what we call our running-mate system, which is true salesmanship. Every article in a drug store will sell something else if you give it a chance. Our entire stock is classified so that one thing sells another. A woman buys a toothbrush. This suggests dentifrice or dental floss, which are running mates, and to make it easier for clerks to remember and offer such articles together we place them side by side in show cases and on shelves. The clerk who sells a toothbrush is expected to sell some running mate, such as a dentifrice. Sales slips are checked up, and the record of each clerk tabulated. If a third article, such as dental floss, is sold, we give a special credit to the clerk.

Selling Toilet Articles

Name any article in a drug store, and I can instantly name several natural running mates. Hair brushes suggest combs, complexion powder necessitates chamois, an eyecup should go with an eye lotion, and so on. This system can be applied to any retail business. In our own stock we have reduced it to about a dozen broad groups, taking in the whole store. One group includes everything for the hands and feet, another group the things for teeth and mouth, another the hair and scalp, and so on—complexion goods and perfumery, soap and sponges and articles for bodily comfort, shaving supplies, infant and invalid foods, surgical and rubber goods, handy remedies such as digestive tablets, drugs and medicines proper, and the prescription department.

Medicines were the backbone of the drug store a generation ago. The pharmacist made a living as a compounder of prescriptions, with patent medicines next in importance, and a limited stock of toilet conveniences last. But now all this is changed. The keynote of the present-day drug store is bodily comfort and personal pride, and the goods and selling methods are all changed accordingly.

Take the safety razor as an illustration. When men were shaved in barber shops sales of shaving soap, massage cream, and like preparations, were moderate. When men began shaving themselves there was a great demand for new goods from men who paid more attention to personal appearance. Toilet preparations for women have also become a necessity. We sell thousands of orange-wood sticks for manicure purposes, and the sale of a stick creates a demand for emery board, pumice stone, nail polish and a dozen other things for the hands. This demand extends to all classes of people. If wages are advanced twenty-five cents a day by the street-car company in one of the cities where we have a store, we can count absolutely on getting our share of that increase, for the conductor will buy a safety razor and spend more time on personal appearance, and the motorman's wife will feel that now she can afford a fancy toilet soap. The public has changed the drug store to such a degree in these matters that the pharmacist, trying to build business on the old basis, is not likely to get anywhere. And the druggist has changed the public.

Selling from behind the counter is based on an understanding of people. Knowledge of people is picked up by an interest in them, a study of their tastes, whims and individualities. We try to get our clerks interested in people. Any observing man or woman behind the drug-store counter, with the right point of view toward his fellow man, will find each day's experience full of enjoyment.

For instance, women usually shop in pairs, and the clerk who does not understand that he must sell to the other woman will have a hard time of it. The other woman is the friend of the one who buys and has come along as an adviser. If you do not sell to her she will find fault with goods, ask to see something else, and maybe wind up by declaring that they had better look elsewhere. But if you take her into the sale from the first, accord her a position as an authority, and simply ask her to agree with you, she will do it, nine times in ten, and everything will move along pleasantly.

Suiting Blondes and Brunettes

Then that elusive, electric something that makes one woman want what another woman wants is very helpful in selling when you understand and manage it. Many a woman has been at sea in choosing a hat until she saw a particular confection on another woman—a prospective purchaser. That is what she must have, and she will move heaven and earth to get it—and usually does! Not long ago a clerk in one of our stores was showing a woman a handsome toilet set. Another woman blew up like a whirlwind and bought it under the first one's nose, practically without examining it. The clerk on duty is one of our best salesmen. He called an assistant, ostensibly to wrap the goods, but whispered instructions to show the set piece by piece to the customer, so she would be satisfied with her snap purchase. Then, turning to the first woman, he said, "I'm glad you let her have that, because I've got something much finer for you." And then he sold her a set just about like the one she had lost! The salesman does not attempt to explain the psychology of such women; he simply reckons with human nature as it comes to him over the counter.

Blondes differ from brunettes. They like light odors in perfumes—for example, the lilies and violets—whereas brunettes prefer heavy odors, such as rose and lilac. Perfume sells many of the toilet articles bought by women. Complexion powder is made out of materials costing about twenty-five cents a pound, but it retails for from fifty cents to two dollars and a half a box, chiefly on account of the odor. It is a striking fact that each of the famous perfumers has built up his business on a single popular odor, and that he has never been able to make a second odor so popular. When the French perfumer concocts a new odor, he sends small lots to be tried out by the women of New York, London, Petrograd, Rome, Buenos Aires. To the extent

A Tip

JUDGE the accessories on the car you buy by the factory back of them. Analyze its methods of manufacture—its reputation—the service it gives.

THAT'S the safest way to determine the value of a car's equipment. Do that—and you will understand, better than ever, why Stewart Products occupy the commanding position they hold in the automobile industry.

STEWART Products are built by the largest automobile accessory manufacturer in the world. Stewart factories are the biggest—Stewart methods the most advanced—Stewart workmanship the most expert.

STEWART Products are backed by a service that extends into every important motoring center. You get honest advice and expert, courteous attention at any Stewart Service Station. That is the best possible guarantee of satisfaction. No other article you can buy for your person, your home or your car has such a broad, comprehensive service behind it.

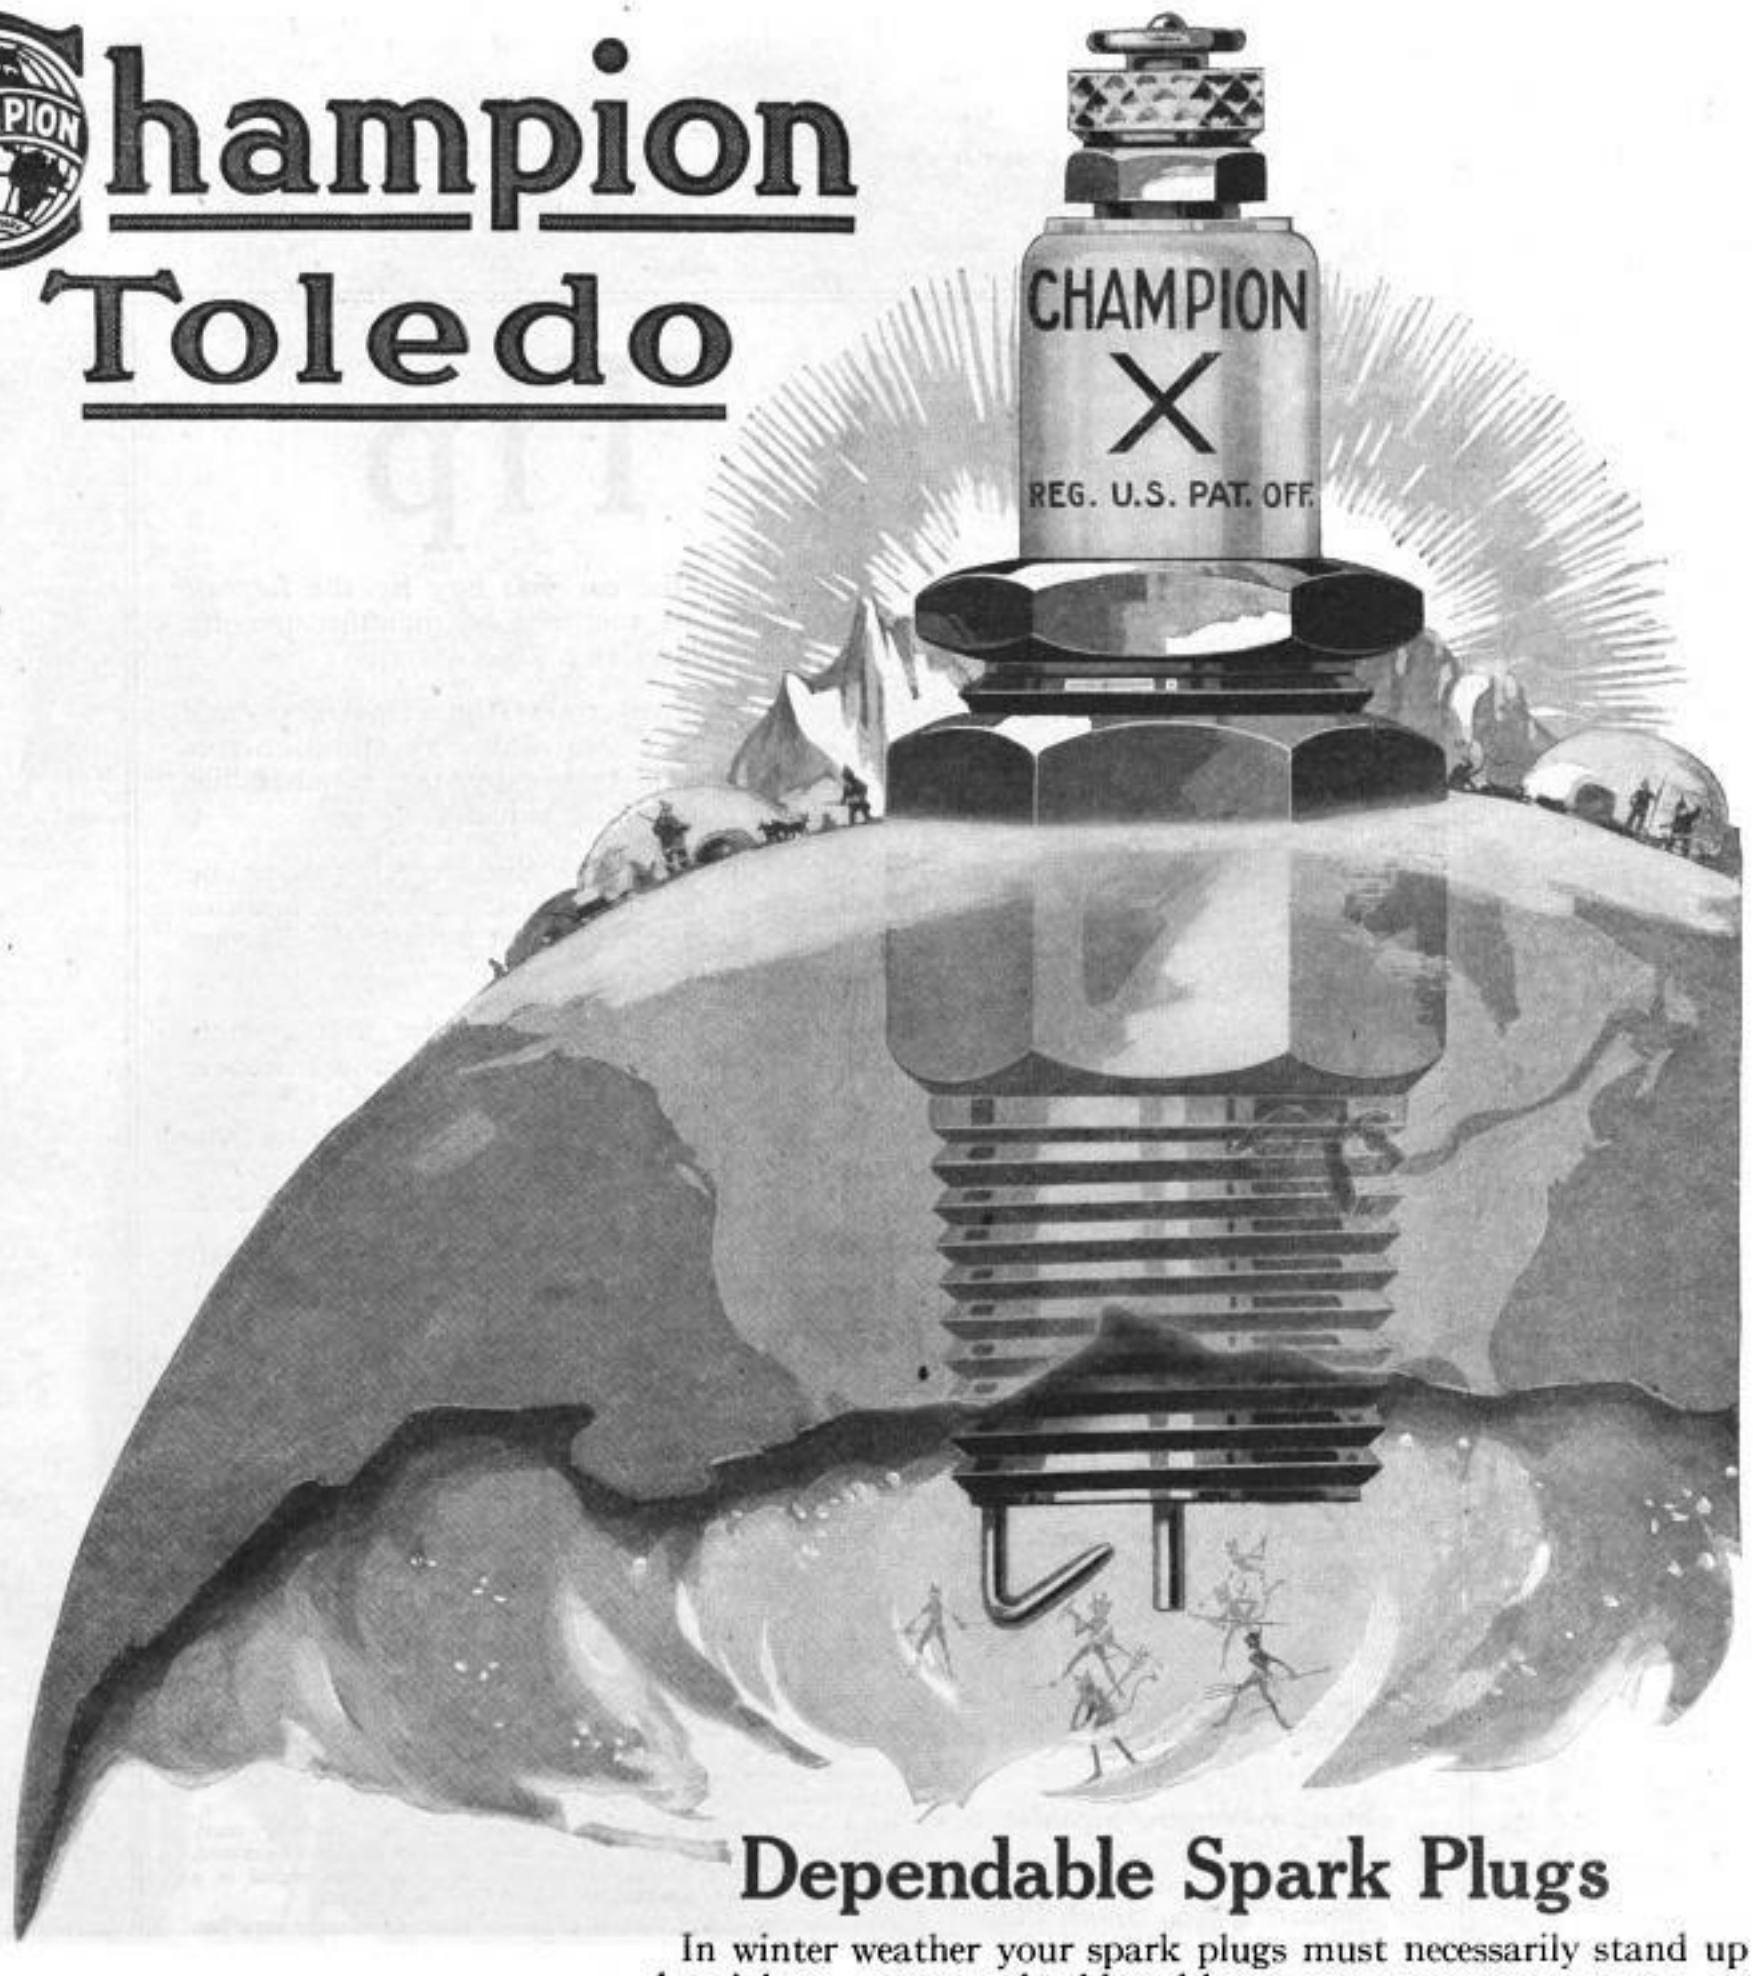
INSIST upon being protected by Stewart mechanical excellence, Stewart workmanship, and Stewart service. Stewart Products are overwhelmingly favored. Practically all experienced motorists demand them. For instance:

The Stewart Speedometer: Costs more—but *over 95% of all American automobile manufacturers willingly pay the extra cost.* It is the best designed—best built—most satisfactory. No other accessory so universally adopted. We shall build 1,500,000 in 1917. Have no other Speedometer on your car.

Stewart Vacuum System: Used by over 70% of all car manufacturers as standard equipment. Has replaced pressure and gravity systems in nearly every instance. Less than 30% of all car manufacturers still use these other systems. Within a very short time we believe practically all car manufacturers will use the established Stewart Vacuum System. It is *the* system that insures an even, positive flow of gasoline under all conditions. See that it comes on your car. Or, bring your old car up-to-date by installing it. Price $10.

Stewart Tire Pump: Saves you the hard, back-breaking work of pumping by hand. Keeps tires properly inflated—stops 90% of all tire troubles, adds much to tire mileage. Regular equipment on many cars, quickly mounted on any car. Don't be without it. Price $12.

Stewart Warning Signals: None better built—none so popular—none so generally used. Thousands built daily. Either motor driven or hand operated. Never fail—absolutely dependable. Be sure your signal is a Stewart. Motor Driven, $6—Hand Operated, $3.50.



Stewart V-Ray Spark Plug: Four sparking points instead of one or two. Absolutely sure fire. Core of Petriflint—heat proof—fracture proof—oil proof. Fits any motor. Adds economy, power and flexibility. Try a set of V-Rays next time you replace your plugs. Price $1.

Special Stewart Speedometer for Fords: Most popular Ford accessory built. Hundreds of thousands now in use. Perfect in construction and workmanship. Price $10—or mounted in handsome enameled steel cowl board—$11.25. Get one if you own a Ford. Can be installed by anyone in a few minutes.

The Stewart-Warner Speedometer Corporation, Chicago, Ill., U. S. A.

Champion Toledo

Dependable Spark Plugs

In winter weather your spark plugs must necessarily stand up under violent extremes of cold and heat.

The porcelain insulators are subjected to most severe strains.

Champion porcelains are a quality product, scientifically constructed and tested, and cushioned against the force of the explosions in your cylinders by specially designed and patented asbestos lined copper gaskets.

Their dependability is proverbial.

Champion spark plugs are unqualifiedly guaranteed and sold by supply dealers and garage men everywhere.

The name "Champion" is on the porcelain of every genuine Champion-Toledo Plug.

Champion Spark Plug Co., Toledo, Ohio

(Concluded from Page 87)

that a novelty pleases women in one capital it will please in all, and will sell about the same in Paris and in Rio.

The man behind the drug counter caters to the four ages of woman. First his customer comes to him as a schoolgirl patron of the soda fountain. A little later he sells her toilet waters and complexion powders, and after that more elaborate toilet preparations, eyebrow pencils and beauty spots. Last of all, a matron, she comes for baby foods and household necessities. At this stage beauty spots are apt no longer to interest her.

Men have just as many peculiarities, and to know their idiosyncrasies is useful in selling. Take those who come for medicine. One customer likes the remedy that cured grandfather, and will try nothing new, while another seeks novelty always. There is the customer who takes medicine regularly because he is afraid of germs and sickness and believes he must ward them off. Another is open to suggestion and can be persuaded that he has almost any symptom. There is the Sunday-morning procession of those who were out too late with John Barleycorn the night before. There is a corresponding class who overeat and who come for digestive tablets the next day.

Pushing Specialties

Even in an article like chewing gum the attentive clerk can soon learn to distinguish the distinct temperaments of the purchasers and be guided accordingly in his sales work. One chews gum because he is of a restless nature. Another chews it for poise—it gives him something to do and puts him at ease with people. Others chew it for the digestive effect, for the sweetness or the flavor. People are very fickle about chewing gum, and will take kindly to suggestions. It is an excellent article with which to learn how to manage customers.

It is the business of the salesmen to gauge the customers and to serve them according to their temperaments, to sell them more goods than they ask for, and at the same time not to overload them. On a Saturday afternoon, by staging a prize contest in all our stores, paying a bonus of fifty dollars to the store that sells the largest quantity of a given article like talcum powder, say, we have often disposed of a thousand dollars' worth of goods; otherwise there would have been no extra turnover. Such a sale must be well staged, however, with the powder in a new odor or in convenient container, and window and counter displays must be effective. In many lines of goods we are scrupulous about having the customer decide how much he wants, even though we try to sell him more. If he asks for an antiseptic mouth wash in the small size, for instance, we show him the large size with the small, explain the difference in price and wait for his decision.

We still do considerable cut-price trade, but the building up of a large volume of profitable business rests on several other things besides bargains. One item is careful stock keeping—having everything for which there is a call. The percentage of sales lost by being short of stock is very large and increases overhead expense on everything sold. The smallest retailer can always be well stocked. Another item that makes for success is knowing what sells and what doesn't. For instance, if we arrange a display of nail brushes on a counter near the door, we slip under the pile a ticket telling the number put there in the morning. A count and comparison at night show whether that display was justified.

We spend a good deal of money on our windows, because they bring in what we call involuntary customers. Voluntary customers are those who were coming in anyway. Involuntary customers are those who were passing the store but, seeing something desirable in the window, stopped to buy. Thus is created a profitable extra business that reduces overhead expenses.

Prices are not the only means of distancing competition. During the past few years we have built up an enormous business in ivory-white toilet goods—hair brushes, mirrors, and the like, with backs of heavy composition that can be washed and engraved like ivory. The demand for this stuff we discerned when the trade was light. Wooden-back goods were the staple then. They had certain defects. They went to pieces when washed, were unclean and lacked daintiness. The public was ready for something better. We took up ivory-white, and made it a fashion and an attraction; and now it is a staple product with us, year in and year out. The average small retailer might not have had the demand or the capital to develop such a specialty, as we had; but, supplied with both market and capital, he would need, moreover, the capacity for looking ahead and sensing future business.

Go into the ordinary drug store to-day and ask for toilet goods, and you will probably be shown the old wooden-back kind, in funereal ebony, quite unsuited to a woman's toilet table—proof that the average retailer does not see the tendencies of trade, even after they have changed.

Another indication that bargain prices are not the backbone of successful retailing was our prescription department. In the cut-rate days we did all our compounding for a very small percentage of profit over the actual cost of the best ingredients, and we fancied that low prices would bring patronage. Not so! Our prescription business never grew until we discovered that the more people pay for medicines—within a reasonable price—the more confidence they have in them. Then we raised our prices. People want service nowadays, and they are not only willing to pay for it but judge service largely by prices.

The other day a customer came into one of our stores and laid down a prescription and a lot of price tickets.

"For several years," he said, "I've been having this medicine put up here, and you've charged me sixty-five cents for fifty tablets. To-day I learned that you sell one hundred such tablets for fifty cents. Here are the price tickets to show how much I've spent with you. Do you call that fair?"

"Those tablets at fifty cents a hundred are shelf goods," explained our manager. "When you have this medicine specially compounded we put our skill and knowledge against a machine-made product. One ingredient comes from South America, another from the Chicago stockyards, a third from Switzerland, a fourth from Formosa, and a fifth is made from the bones of animals. We gather all these things and keep them on hand, though some may be called for only two or three times a year. You can take your choice of the compounded or the shelf goods, but the way you've been buying in the past has given you the best service we know how to render."

The customer left his prescription to be filled again!

In each of our stores we do a year's business averaging close to a quarter-million dollars gross. That is a sum almost unthinkable to the druggist of a generation ago, and not every druggist of to-day can figure on such a turnover even in his imagination—he wouldn't know what the items were, or where to begin laying in stock, or how to take care of the people. He knows that we reach these totals, but he believes that we do it by price cutting, or by larger capital, or by superior purchasing power, or by some other apparent advantage. But we do it mostly by simple methods that he himself might adopt.

Bonuses for Managers

Suppose, for example, that he considered himself one of our store managers and ran his own place next month with the ambition of reducing controllable expense as much as possible. We pay our managers part of all they can save on controllable expense over fifteen per cent. Some store expenses are fixed—rent, taxes, advertising, insurance. But items like light, salaries and breakage can be controlled. Our managers save on these items, not by cutting clerks' salaries or skimping on electric light, but by improving their window and counter displays, pushing goods, helping clerks sell, and watching breakage and loss.

The average small retailer could do this. He could do most of the things we do. We have advantages over him in applying our methods and economies to a greater volume of business, and in offering better positions to high-class salespeople and managers. But he has advantages over us in a lower cost of doing business. Our costs are fully twenty-five per cent, and in some of the department stores it is more. The small retailer's costs run from nineteen to twenty per cent—he pays less rent, keeps open longer hours, and does more of the work himself. Success in retail lines to-day is not a matter of size but of intelligence, and the small man's intelligence will return just as good profits as the big chain-store manager's intelligence.

GUIDES WANTED—By Enos A. Mills

LAST summer a number of mountain climbers assembled in front of an inn in one of the National Parks. They were making ready to climb a fourteen-thousand-foot peak. The first stage of the ascent would be on horseback.

The last to mount was a young college fellow. He roused the contempt of his pony by mounting on the Indian side. He pulled the reins too tightly and threw the party into confusion by causing his horse to back rapidly, first in one direction, then in another. A young woman dashed to his rescue and loosened the reins. This young woman was the guide of the party and she understood her business.

She had the young collegian dismount and then showed him how to mount properly. Taking the reins in her left hand and catching the saddle horn in her right, she reached the left stirrup with her left foot and swung quickly and lightly into the saddle, explaining as she did so that in mounting one should always clasp the horn with the right hand, and never the roll or back part of the saddle, as this would necessitate letting go as one swung into place.

What Guides Should Know

Women guides are something new, but their number is bound to increase. They are likely to set a new and higher standard for the men to follow. This guide was an athlete, a graduate of Wellesley, and had been an outdoor girl all her life. She had a good acquaintance with birds, flowers and trees; could ride, row and swim; give first aid; build and extinguish a camp fire, and cook. She possessed a knowledge of natural history and the ability to impart it. This is an essential qualification. No longer can one be a guide unless one is able to tell others the story of Nature.

A demand exists for intelligent guides in the National Parks. There are sixteen of these and more than thirty National Monuments, all possessing a variety of scenic attractions; bears and birds; vast cañons; towering and icy peaks; glaciers; splendid forests; peaceful lakes and eager streams. Other like reservations will be added early to this list. Each of these is scenic—a magnificent hanging wild garden and, also, a wild-life reservation. All are managed for public recreation and education. People in rapidly increasing numbers want a guide who can tell them of the plant and animal life. Already the demand for such guides exceeds the supply. Thousands will be needed before an equal number of competent ones are likely to develop.

Soldiers are no longer to be used to guard National Parks; but in their place are to be civilians who will be called Park Rangers. A Park Ranger and a guide need similar qualifications and equipment.

Good guides now command from five to fifteen dollars a day. I know of one who has received twenty-five dollars a day. He is, of course, equipped with character, knowledge, tact and years of experience.

To be a real guide one needs to train as for lifework. Many young men have learned the way to the top of a peak or to the bottom of a cañon; then guided for one or two years. But they knew little of natural history, and were ready to drop out to try some other work the instant it appeared attractive or offered even a slight increase of salary.

Swiss guides are justly famed for their courage and climbing skill; also for their faithfulness and willingness to do the hard work necessary for success in their profession. As young men they were thoroughly trained for the lifework before them. But, though they fit well into their work, with rare exceptions they do not possess general outdoor information; hence do not attain the ideal of the American who excels in this occupation.

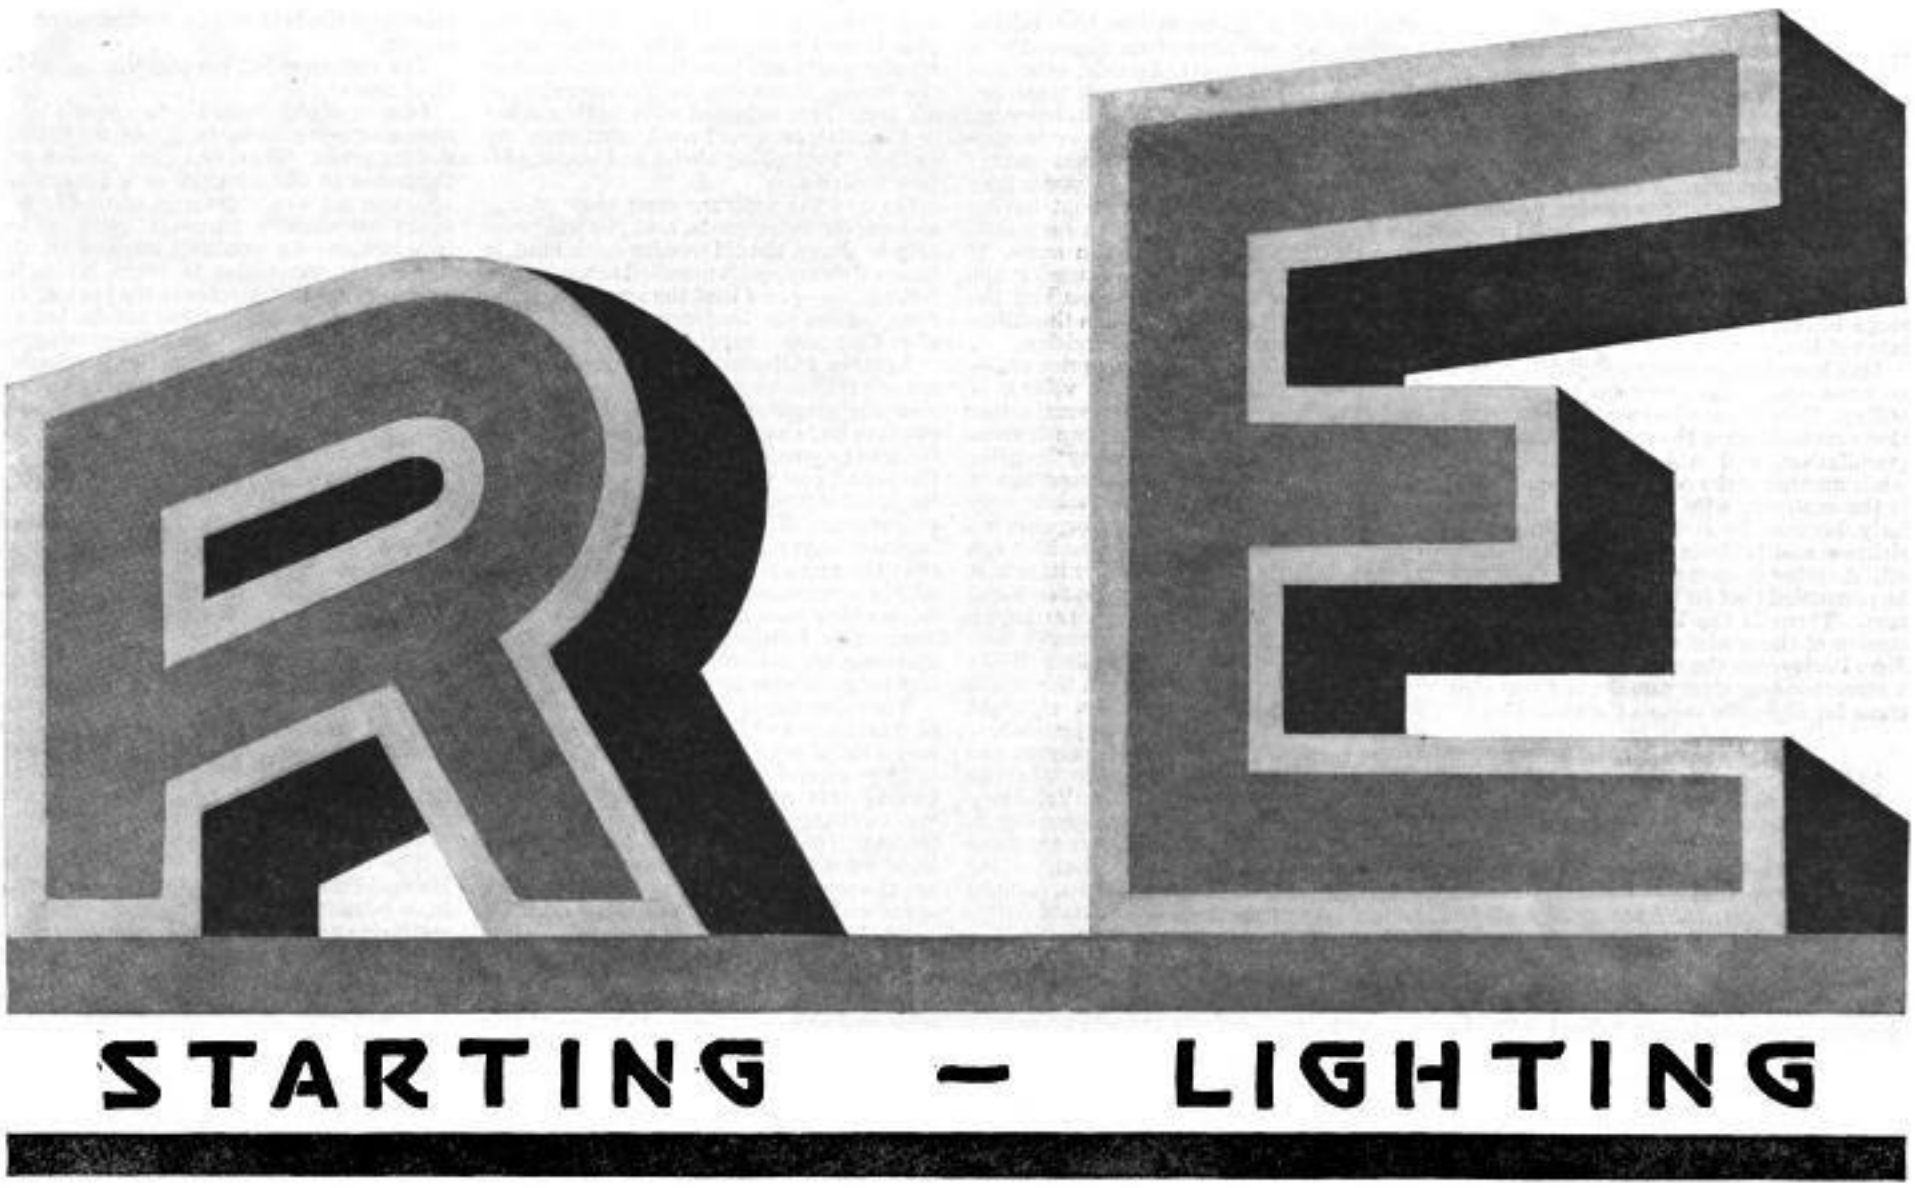
The days of wild and woolly gun-carrying guides are over. Facts about Nature are more romantic than any of the fiction that may be faked concerning it. These parks are for people who wish to hunt with a camera and to seek for animal character—not for hides and horns.

Since everyone who goes into a National Park wants information concerning the objects of interest, each guide should be able to tell concisely the part and place of the glaciers; the life history of the sequoia trees; the pioneering aspen and lodgepole pines; and to describe the grizzly bear, his habits and his neighbors. He should know how to write the biography of a lake; to tell the story of the gentian and of the numerous alpine flowers. He should know intimately the lives of the ouzel, the ptarmigan, the solitaire and the eagle. The guide of to-day needs to be an educator—an instructor.

He needs to have a wide range of information and to be capable of imparting this both directly and indirectly. Knowing the way is now a minor guiding necessity. Mental development and character are the essentials.

A guide, then, should have a fund of interesting information. One day, while some climbers were resting, the guide, a man who was thus equipped, simply called attention to the abundance of paintbrush—variously called the painted cup and Indian paintbrush—which was growing near by. He said that this plant is a parasite, and that in most cases, by digging down, you will find the roots of one specimen clasped over the roots of others. Of course its parasitic habits had given in part the form to its leaves and bracts. Many of the flowers, trees, birds and animals out-of-doors have interesting habits—interesting stories. Facts concerning the character of these are just what mountain visitors like to hear.

The regularity of distribution of plant and animal life, when called to their attention, interests most people. On the eastern slopes of the Rocky Mountains, at a certain level, you will find cedar trees that are not found a thousand feet farther up the slopes; in the middle slopes are tree and flower growths unknown in the foothills; and still farther up, at the limits of tree growth, are trees not seen in the lower slopes. In the cañons that trend east and west the northern walls commonly are covered with spruces, the southern walls with pines; and on the ridges of east-and-west trend the northern slopes carry a spruce growth or a growth of other moisture-loving, cold-enduring trees, while the southern slopes carry trees that need less moisture and require more warmth. Each of these tree species has its peculiar insect enemies and its bird and animal neighbors. Then, too, each individual, pair or flock claims a small bit of territory and commonly lives closely within this; likewise insisting on neighbors' keeping within their own reservation.



Chances to Win Success

As much skill and application, and as much experience, too, will be required henceforth for making an honorable and successful guide as are needed to make one famous as a lawyer, a doctor or an editor. But a guide has opportunities for winning success much more quickly than the others.

The requirements of the guide are many. He is intimately associated with people. One day's companionship in the wilds often better acquaints people with one another than years of ordinary association. With hard work a guide should rise to distinction within a few years. In this time a thousand children, through his guidance, should have acquired a permanent interest in facts and fairies. In this time, too, he

Remy Keeps the Battery Charged In Winter

THE perplexing problem of battery charging, encountered in both winter and summer, with slow, average, and fast car driving, has been solved by the Remy Electric Company through an improvement covered by basic patents.

This improvement is a *thermostatic control* of the generator output. It will be incorporated in all Remy generators in due time.

In winter more electricity is required for starting and lighting than in summer.

This thermostatic control enables the Remy Company to provide car manufacturers with large-capacity generators for producing current at a high rate just when it is most needed.

At the proper moment, in both winter and summer, it reduces the high-charge rate to a safe but ample value, thus positively protecting the battery at all times.

This control is an integral part of the generator. It is entirely automatic. It never requires attention or adjustment.

CONSTANT REMY SERVICE

Remy Asks Only For Your Thoughts

THE purpose of this publicity is to attract your attention to the fine performance of Remy products wherever they are used.

All that we ask is that you will make a mental note of that fine performance whenever it comes under your observation.

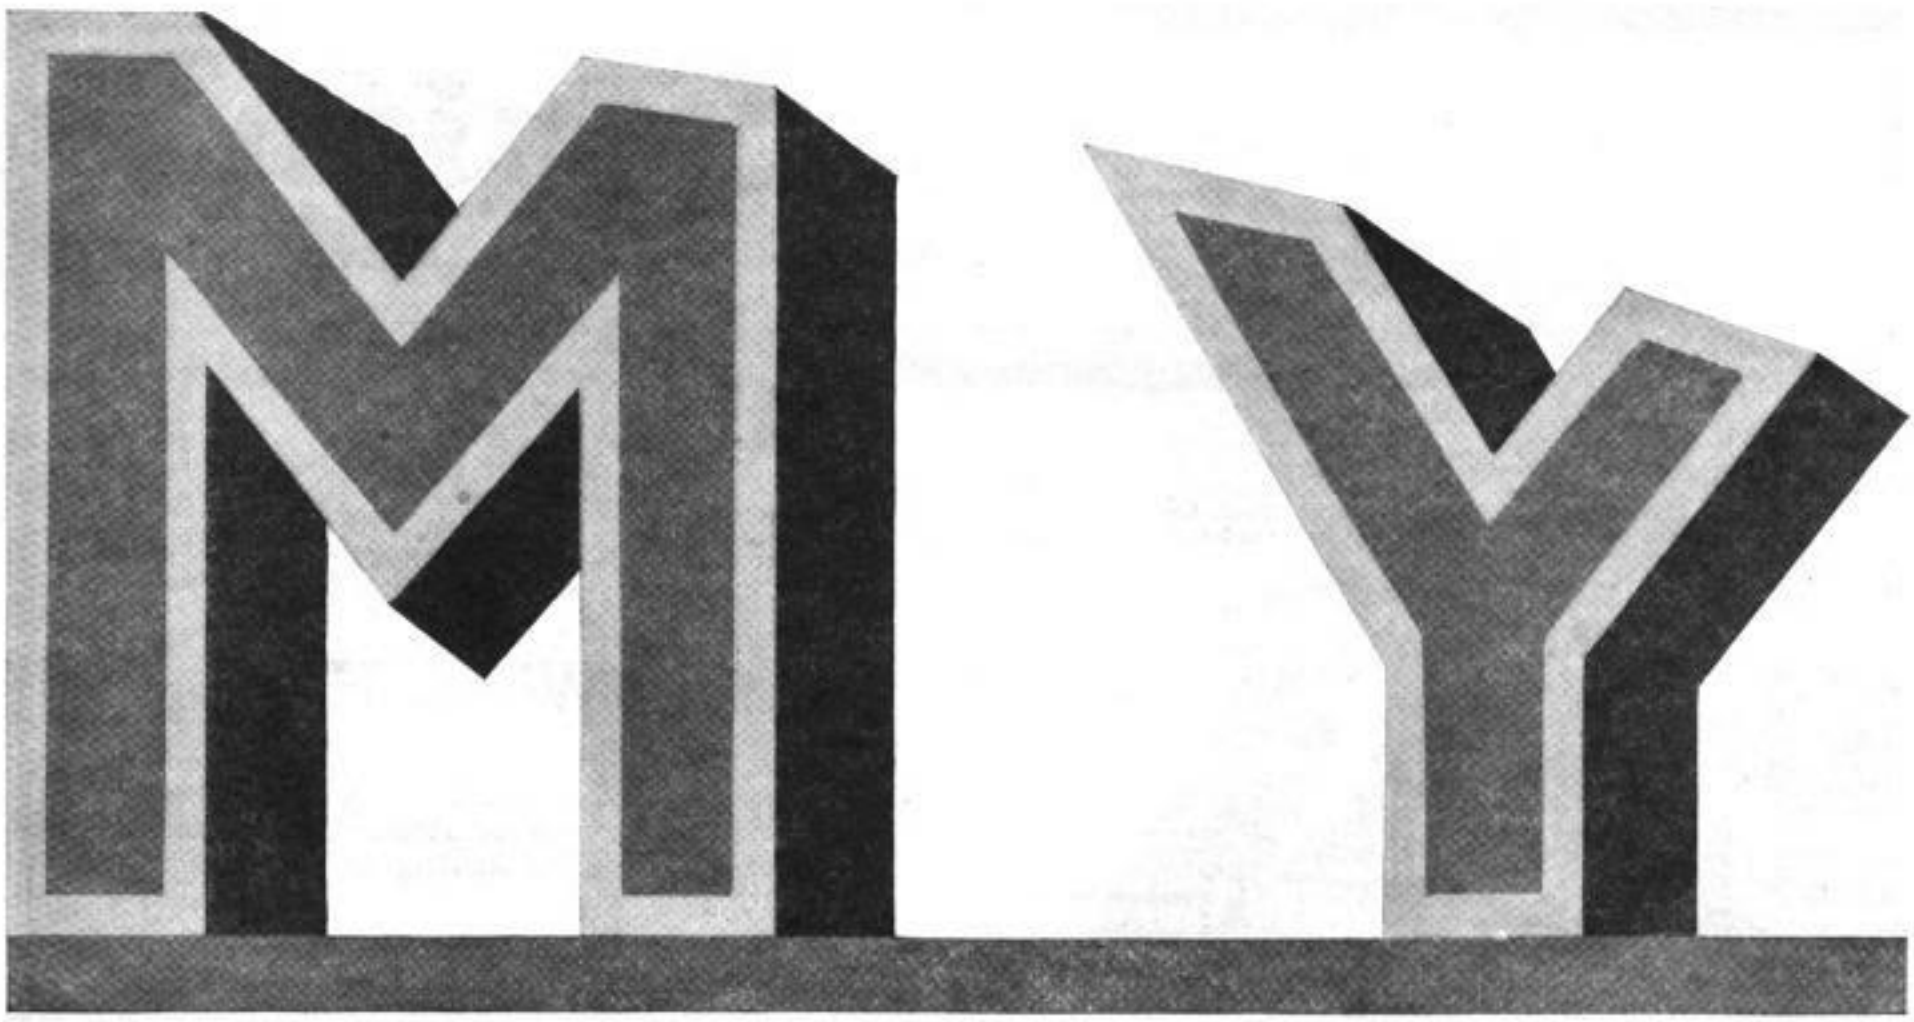
If you will do that much, you are certain to form a favorable opinion of Remy.

If you, and many million other Americans, form that good opinion, more of the foremost manufacturers of motor cars, motor trucks, motorcycles and tractors will feel the pressure of your good opinion in due time.

That is all that we seek to accomplish.

Primarily, we deal almost exclusively with the manufacturer. Actually, we deal with you.

Your approval of Remy products is necessary to our permanent existence—it will be felt by the motor-car maker.



We are confident enough of our own product to feel that there is no motor car so fine but that Remy will confer added prestige upon it.

We ask you to remember Remy.

We ask you to check Remy performance in starting, lighting and ignition.

Remy will reap its reward if you will think pleasant and approving thoughts about it, and occasionally express those thoughts to others.

Digitized by Google

Remy Was Ready When Motor Cars Came

THE name of Remy ranked high in the electrical world, back beyond the earliest days of the automobile industry.

With the advent of that industry, Remy was almost overwhelmed by a flood of prosperity.

Six years ago, it rose to an appreciation of the fact that in automobiles, as in all else, the true test is integrity, not volume.

Ever since, under the direction of new interests, the Remy business has steadfastly adhered to an ideal which subordinates everything else to the prime question of quality.

Remy experience began in 1899, with ignition devices for gas engines.

Without knowing it, Remy engineers were then solving electrical problems in advance for motor-car manufacturers.

They were ready to apply their solutions as soon as the automobile appeared.

They became, actually, automobile-electrical engineers—a combination unique even in this day.

Remy devices—Starting, Lighting, Ignition Distributor Systems and Magnetos—are applicable, singly or in combination, to motor cars, motor trucks, motorcycles and tractors. They are standard equipment on 32 makes of motor vehicles of all types.

Remy Electric Company

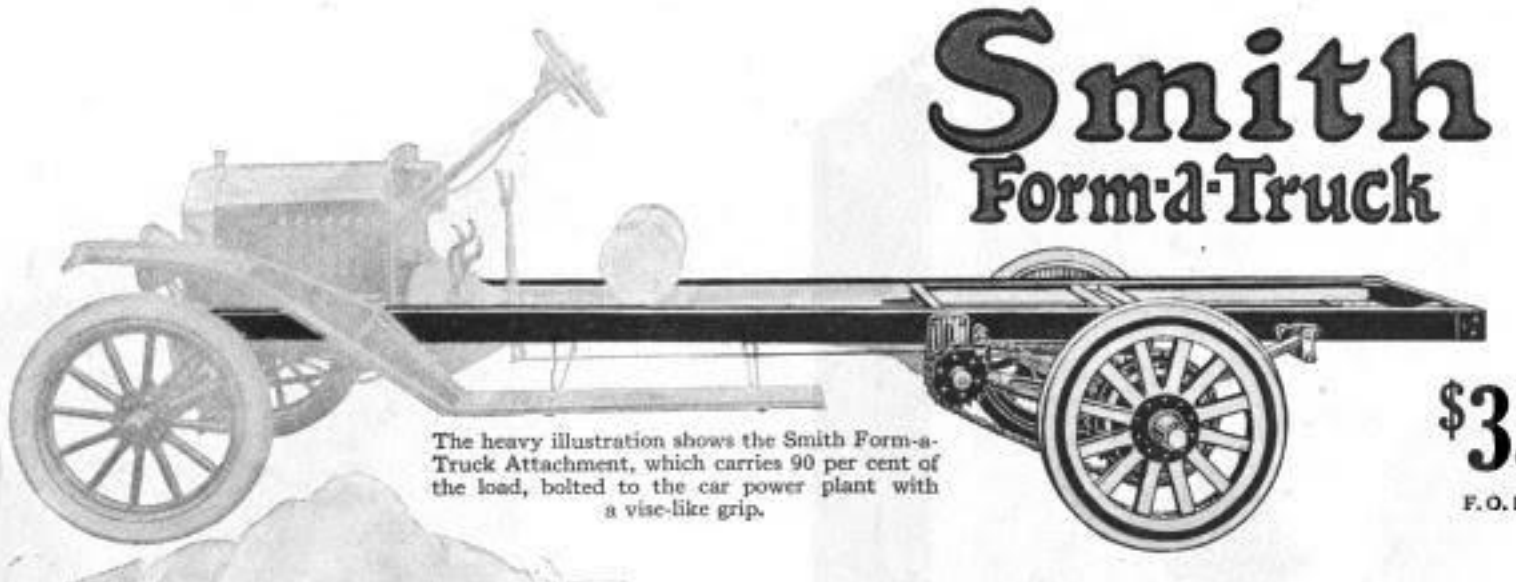
Sales and Engineering Offices, Detroit, Mich.
Factories and General Offices, Anderson, Ind.

Remy Expert Service Wherever You Are

CO-OPERATION with Remy users is the reason for the numerous Remy Branches and Service Stations throughout the country.

Remy's active interest continues beyond the sale to the manufacturer. It extends to the performance of its products in the service of the user.

At each Branch and Service Station are expert mechanics in the direct employ of the Remy Electric Company. They have been given a thorough working knowledge of all Remy products in the training school at the plant.



In addition, each Branch and Service Station has an equipment of special tools and testing apparatus built at the Remy factories.

The application of electricity to automobiles is a specialty. The important work of imparting to owners the special information that is necessary, and of rendering proper care, is carried out on a broad scale by Remy Branches and Service Stations.

Smith Form-a-Truck

The heavy illustration shows the Smith Form-a-Truck Attachment, which carries 90 per cent of the load, bolted to the car power plant with a vise-like grip.

$350
F. O. B. Chicago

Best for Winter Hauling

Over 9,000 Smith Form-a-Trucks are now in use in all parts of the country. Several thousand have been in daily service for a year or more. Thousands now ordered for delivering and hauling are to be placed in service during the winter months.

The enviable reputation established by Smith Form-a-Truck as "best for Winter use" is the result of the remarkable efficiency, sturdy dependability and high economy standards in all kinds of service under the hardest conditions of winter driving. Smith Form-a-Truck is light; with the Ford it weighs about one ton. Frozen roads do not wrack it and the tires stand up without being cut to pieces. The Ford power plant used in Smith Form-a-Trucks now in service is powerful for rough roads and deep snow—is reliable and efficient even on the coldest days.

This applies equally well to power plants of Dodge, Chevrolet, Maxwell, Buick and Overland cars, for which Smith Form-a-Trucks are now made.

The Smith Form-a-Truck dealer organization is built up of many of the biggest men in the motor-trade industry—each is the leader in his vicinity.

Send for your copy of "Delivers the Goods," a booklet crammed with valuable information.

should have mastered his locality and obtained a good knowledge of the whole outdoors. He should have learned a little of human nature, and ought to be able to read and speak clearly and interestingly concerning the grand and lovely objects in Nature's wild gardens.

One of the best guides I have known is a celebrated Yellowstone Park guide, with whom I camped for a few days one summer. He had horse sense, was a genius for being ever vigilant; and the only people I ever heard him denounce were those who mistreated horses. His wilderness etiquette was faultless; he had the utmost consideration for those in his care, and a quick eye for the interesting and the beautiful. Under his direction all camp refuse was burned or buried; no scars, no junk, no remains of mutilation were left in sight. A New York lawyer who gave a picnic dinner by a campfire in the wilds won his hearty approval. The camp site was so carefully cleaned that only an expert trailer could have discovered that it had ever been used. The fire had been made upon a flat outcropping rock. At the close of the feast every scrap was buried, the rock brushed and the ashes also buried. This guide listened courteously to those with him who wanted to display their own information—even to those who indulged in Nature-faking or told stories that were whoppers; but he carefully avoided following their example. Local history he often related; and he was sure of an interested audience, for everyone enjoys local color and is glad to have past incidents brought to life. He was a true guide.

Whenever John Muir accompanied the Sierra Club members on an outing he was closely followed by everyone who could get near. Frequently he stopped to tell the life story of a tree, to describe the manners and customs of a flower. Here he pointed to the vast sculptured work of the ice; there he showed the graveyard of a lake that was born, lived its day, and now was covered with groves and forgotten.

Lessons From a Girl Guide

Think of being personally conducted to woods, lakes and streams by John Burroughs, while he bubbled over with stories about birds, their home life and their travels, chipmunks and their children, and his adventures with Nature-fakers! Who would not be delighted to go with a John Burroughs or a John Muir—with anyone who so charmingly told the stories and secrets of the wilderness?

It is splendid to have thousands of men, women and children coming home each year from their vacations talking merrily of the habits and customs of the animals and plants they learned about on their enjoyable yet purposeful holidays.

People are beginning to realize that outdoor information is a joy and a great advantage to children. One of the most helpful experiences that any child can have is a visit to a National Park with a guide who knows outdoor lore. Many of our great men and women say that Nature gave them the breadth of vision which helped them to succeed.

Each park is a wild-flower reservation, a place in which the flowers bloom in all their wild luxuriance and live their day uneaten and untrampled. Each park is a place in which guide and visitors may revel in botanical lore. Trees, protected from fire and from cutting, may here grow old and picturesque in their untrimmed and delightful individuality.

A National Park is also a wild-life reservation, and in all these parks the birds and animals under protection are becoming numerous and tame. Rare opportunity is thus afforded to study the habits of all wild life. Everyone who visits a park ought to have a camera. Photographing waterfalls, mountain sheep and other natural objects gives a definite purpose to each trip taken; and it also preserves, with startling, delightful fidelity, a picture record of the trip. A guide especially should be a skillful and an artistic photographer.

The young woman guide already mentioned, in addition to conducting her party successfully to the summit of a peak or to the shore of an Alpine lake, and bringing them back in good condition, during each trip imparted to them a great deal of outdoor information and in many ways incited keen and lasting interest in Nature.

Many an evening, round the big fireplace, her mountain climbers were enthusiastic over the incidents of the day. The matchless song of the solitaire had been heard. They had seen a cony, a snowshoe rabbit, a number of mountain sheep, or the track of a bear. With several talking at once, each would try to tell the listeners the difference between a Douglas and an Engelmann spruce. Before bedtime the girl guide was scheduled for other trips.

Once a lady and a party of children took this guide for a day at the forest frontier-timber line. The guide pointed out that the limber pines were growing upon the drier and the windswept slopes, while in the moister places were Engelmann spruce, Arctic willow and black birch. Here many of the more unfavorably situated trees were extremely small. Many of these dwarfed trees, though four or five inches in diameter at the base, and from two hundred to six hundred years of age, were not so high as the children's heads.

Here is her comment concerning a camp bird: "This is the Rocky Mountain gray jay, a confiding and quiet species of the alert, nervous and noisy jay family. Rarely does the most hardened murderer of birds shoot at it; and the woodsmen, miners and prospectors of the West are on exceptionally friendly terms with it. In the United States it is known as the camp bird or the camp robber; while in Canada it is known as the whisky jack or Canada jay." The children naturally gained more from this vividly illustrated lesson than they could gain from a textbook in the schoolroom.

One gray morning fate gave her a party of climbers who were afraid of the rain. Up to that time good fortune had coöperated with her tact and judgment in making every trip an easy success. Off they started, with the clouds drifting low. The sky continued to darken. Presently the deep thunders rolled. Then came a deluge of rain. Many of the party were apprehensive, but her unconcern gave them confidence. With a few stops she led them up the mountainside. By the time the rain came they were upon a crag from which the sun cast their shadows upon the storm-cloud's silver lining. These "folks afraid of the rain" had become so interested by this time that nothing would do for them but to descend into the dark wet clouds for the sensation of being rained upon. Lunch was eaten while all steamed by a blazing campfire.

Resourcefulness is indispensable to the guide—especially, of course, in the little-traveled regions. During one of my Canadian trips with a small party I thought it best to have a guide, and was advised to employ Dan McCloud. He proved himself one of the most companionable of mountaineers. We went on foot, but took along two pack animals. One afternoon we searched for several miles for a crossing over a narrow rock-rimmed turbulent stream. Where we stopped, this stream was confined between rocky vertical walls about eighteen feet apart and rising perhaps four feet above the surface of the water. These walls made it impossible to swim horses across and land them, even if the swift current had allowed this; but my guide was resourceful, and during my absence on a near-by plateau he bridged the place.

First, a small seasoned log was cut and dragged to the bank of the stream. Then, throwing a picket rope round a small tree on the opposite side, with one end of the rope attached to the log, McCloud hitched the other end to his saddle horn. Horsepower dragged the log to the opposite side. Here it was held, cut off the right length, put into place, and then wedged between the tops of the two rocky walls. When I returned McCloud was already busy with his ax flattening the upper surface; and upon this our two wise mountain ponies walked over. Having been a timberman in a mine, I appreciated the skill my guide had thus displayed.

Another afternoon we stopped to make camp, in a violent rain, at a place where we had hoped to spend a few days. Before I realized what was happening, McCloud had felled a spruce tree. From this he cut a short section and split it into thin shakes or boards. Wedging two poles between two trees for roof supports, he placed the shakes upon these poles, each shake overlying another, like shingles. The roof thus formed effectually shed the downpour of rain. An hour after we had stopped in the heavy rain I was writing my notes beneath this roof, while McCloud was busily engaged cooking supper under another shake shelter.

One day a porcupine walked indifferently in front of us along the trail.

"The porcupine is the stupidest animal in the woods," remarked McCloud.

"Why?" asked one of the party.

"I suppose," replied the guide, "he is so well protected, so safe from all harm, that it has ever been the business of the other fellow to keep out of the porcupine's way. Having his life thus shielded and an inexhaustible food supply in the boundless forests, he has not found it necessary to develop his wit."

I once invited a young Harvard man to go camping with me on the Continental Divide of the Rocky Mountains. He possessed an unusual knowledge of woodcraft. As he especially desired to try his skill in keeping track of the points of the compass by consulting the distribution of moss and lichen growths, one day he set off and traveled a few miles from camp. When it was time to return he examined the trees and rocks and correctly determined the points of the compass; but, not recalling the direction in which he had been traveling all day, he realized, like the Indian, that the camp was lost. Was the camp east, west or south? He had not the slightest notion. I did not look for him until the following morning. When I came upon him he simply remarked:

"Determining the points of the compass does not tell the direction to camp."

Mr. S. N. Husted is the oldest and most popular guide in the Rocky Mountain National Park. In nearly all respects he is the most capable guide I have known. He has the faculty of being entertaining, watchful, instructive and commanding, all without his party's realizing what he is doing or suspecting that he is a man with an iron hand. Many small boys and girls have been conducted by him to the summit of rugged Long's Peak. The parents of these children chose him because they realized that he was sympathetic and safe, and that he would give the children a day to be remembered.

The Man Who Could Not See

He skillfully holds a crowd of climbers together, keeping everyone alert and in good humor. Like any good guide, he is eternally vigilant in guarding against accidents, as well as watchful to prevent discord in the party.

He tells a good joke or makes some witty comment, and the next instant he is discussing the life history of the lodgepole pine, forest fires, the habits of the mountain sheep, or local winter climate. He is doing a distinct and honorable work for the world.

"I am disappointed in finding birdlife so rare," said a man one day as we sat upon the rocks. "I have seen only one bird this morning."

He was out with me on a short excursion. I had to tell him that I had seen at least twelve species of birds, and that directly before us at that moment were three species in plain sight. Why had he seen but a single bird? It was because his eyes had not been trained to see. A guide will give this training.

Guides have an excellent opportunity for gathering Nature material that may be worked up into good outdoor books. Daily association with inspiring and evervarying Nature, and the companionship of thoughtful people, mean pleasure and steady development. Few occupations offer equal opportunities for advancement. A guide may become an author, a lecturer, or may enter any field of his choice; but guiding itself is an occupation of amplitude and is a worthy lifework.

And, as before suggested, there is no reason why a number of these guides may not be women. The occupation calls for courage and refinement, for firmness, good humor and tact. There is rarely need for physical prowess or brute force. A Camp Fire Girl or a Boy Scout who has mastered the higher degrees, and who knows natural history, has the necessary guiding qualifications.

Guides who try have a fine chance of becoming distinguished citizens. May their tribe increase!

THE FAT PAY ENVELOPE AND THE THIN

(Continued from Page 9)

"In other words, some of the 'easy money' they have been getting has gone into home luxuries. Of course some of it has been spent in dissipation and reckless living; but I can take you to quite a number of canny old-timers—especially among the toolmakers—who have been consistently salting away their fat earnings. If you mix up with them and hear them talking together you will be impressed with the fact that they are deliberately preparing against a slump in conditions—at least in their own conditions—after the war is over.

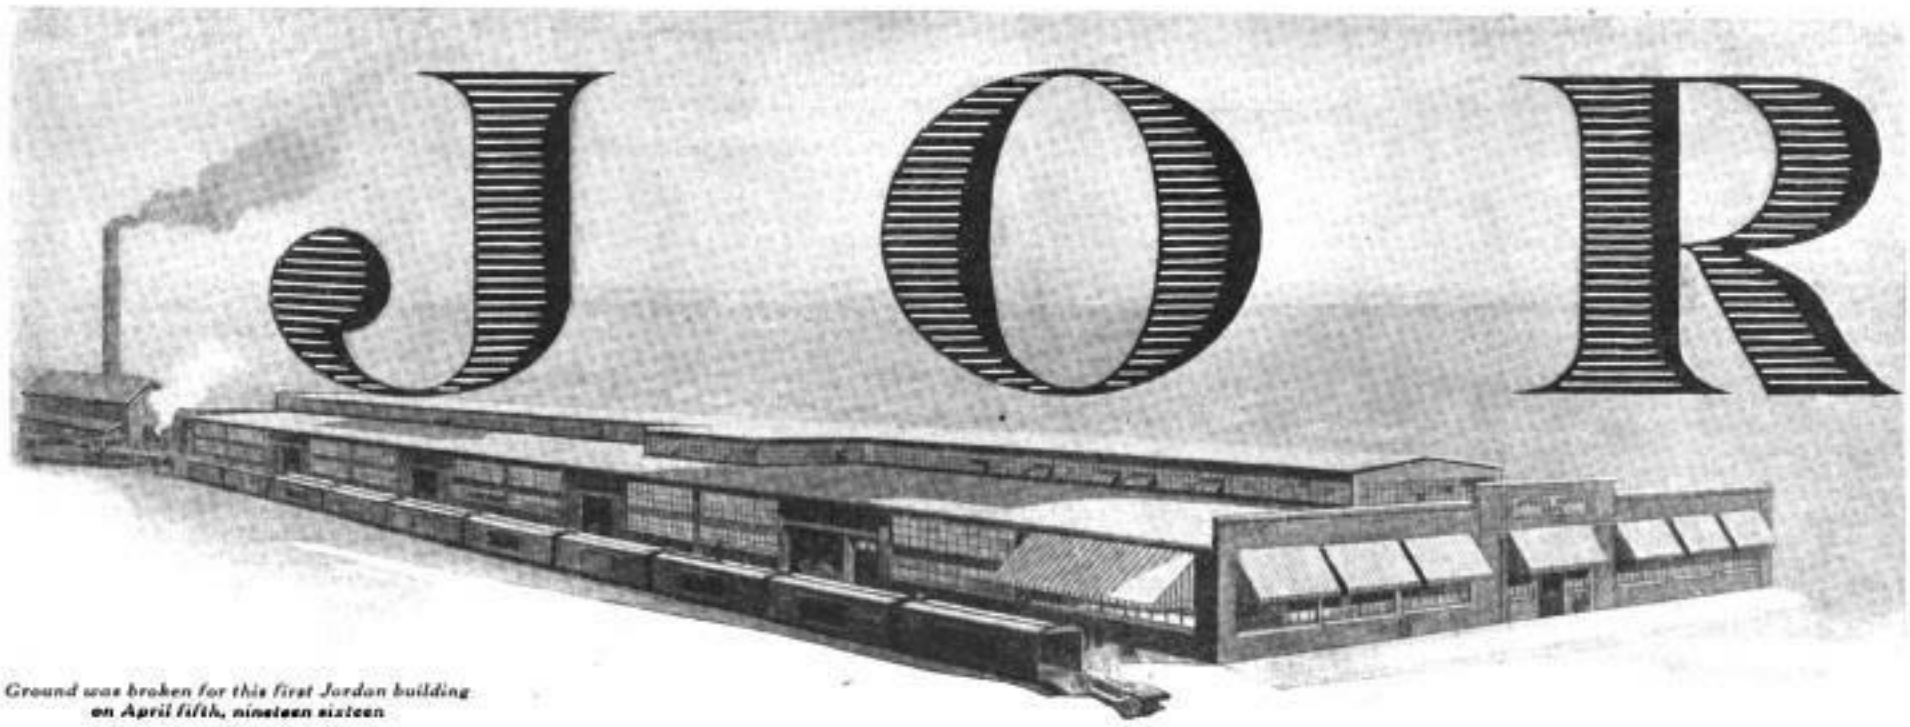
"I only wish that the percentage of our workers showing this hard-headed common sense and keen foresight was not so small as it is.

"Considering the conditions under which the original force of workers was recruited, it is not strange that the men are not so thrifty as could be desired. We threw out a dragnet and had our recruiting stations everywhere. It was inevitable from this method that we should gather anything but a picked force. The process of elimination began almost immediately and about three hundred undesirables to each thousand workers put on the pay roll were fired.

"I am not sure but that the office men who have stuck to their salaries and positions in spite of the temptation to go out into the works and pull down big money have shown good judgment, instead of false pride and lack of nerve. It looks to me as if they will last long after the shopmen working on specialized piecework have gone."

At night Eddystone is a scream of light. The wheels never stop under those red-tiled roofs and within those glass walls; they will not stop until the war is over. By day, and especially at the change of shifts, the place resembles a country town upon which about fifteen big circus crowds have suddenly descended. Normally Eddystone is a town of about eight hundred inhabitants; in these militant days and nights about thirty thousand men and women, girls and boys, toil in the works of its two great munition companies. Seven special trains on three railroads daily drain the surrounding country, from various directions, of its workers, and return them to their homes at the end of their shifts. Hundreds of automobiles and motorcycles supplement the work of the trains and trolleys in moving the labor required in these sleepless plants.

It took a certain automobile half an hour to beat its way through the crowd and pass a trifling distance to the railroad station. The employment chief in an Eddystone plant, who handles thousands of workers, says:



"As a rule we could get boys by hundreds at five dollars a week; now it is absolutely impossible to get them at eight and nine dollars. I don't know what the business houses in the Philadelphia district are doing for delivery boys; it seems to me we must have about all of them out here. They are on the light inspection jobs and work of similar character that brings them about thirteen dollars a week. This is certainly good pay for boys only about eighteen years old.

"Perhaps about the best indication of the extent to which the demand for labor has gone is the fact that four of the best employment offices in Philadelphia, specializing in restaurant labor and serving maids, tell us that it is impossible for them to fill our requisition for five waiting maids for our restaurant here in the plant. Evidently about all the girls in this section of the country who care to work are already in these factories, or others, where they are making at least nine or ten dollars a week, and from that up.

"Probably twenty-five per cent of our girls in this plant are on piecework. Their fingers become very nimble, which is a great consideration in the kind of work in which they are engaged. Plenty of our piecework girls are making eighteen, nineteen and twenty dollars a week. The very best of them are pulling down twenty-five

Ground was broken for this first Jordan building on April fifth, nineteen sixteen

Success

IT is with considerable gratification that we announce the complete success of the Jordan idea in modern motor cars.

The Jordan idea went over from the start. It never wavered for a minute. It went over in the first 24 hours. Jordan success was swift and instantaneous.

To start with the dealer demand was over 1000% greater than all expectations. Over 3000 important, prosperous dealers wanted the Jordan line the minute they heard of the Jordan idea, purpose, plans.

Long had the public tired of the same old common-place lines and finish of every car that passed on the street. Long had they waited for some manufacturer to offer a model well seasoned with a little of the French, Russian, German and English taste in artistic motor-car beauty all blended into a new American being.

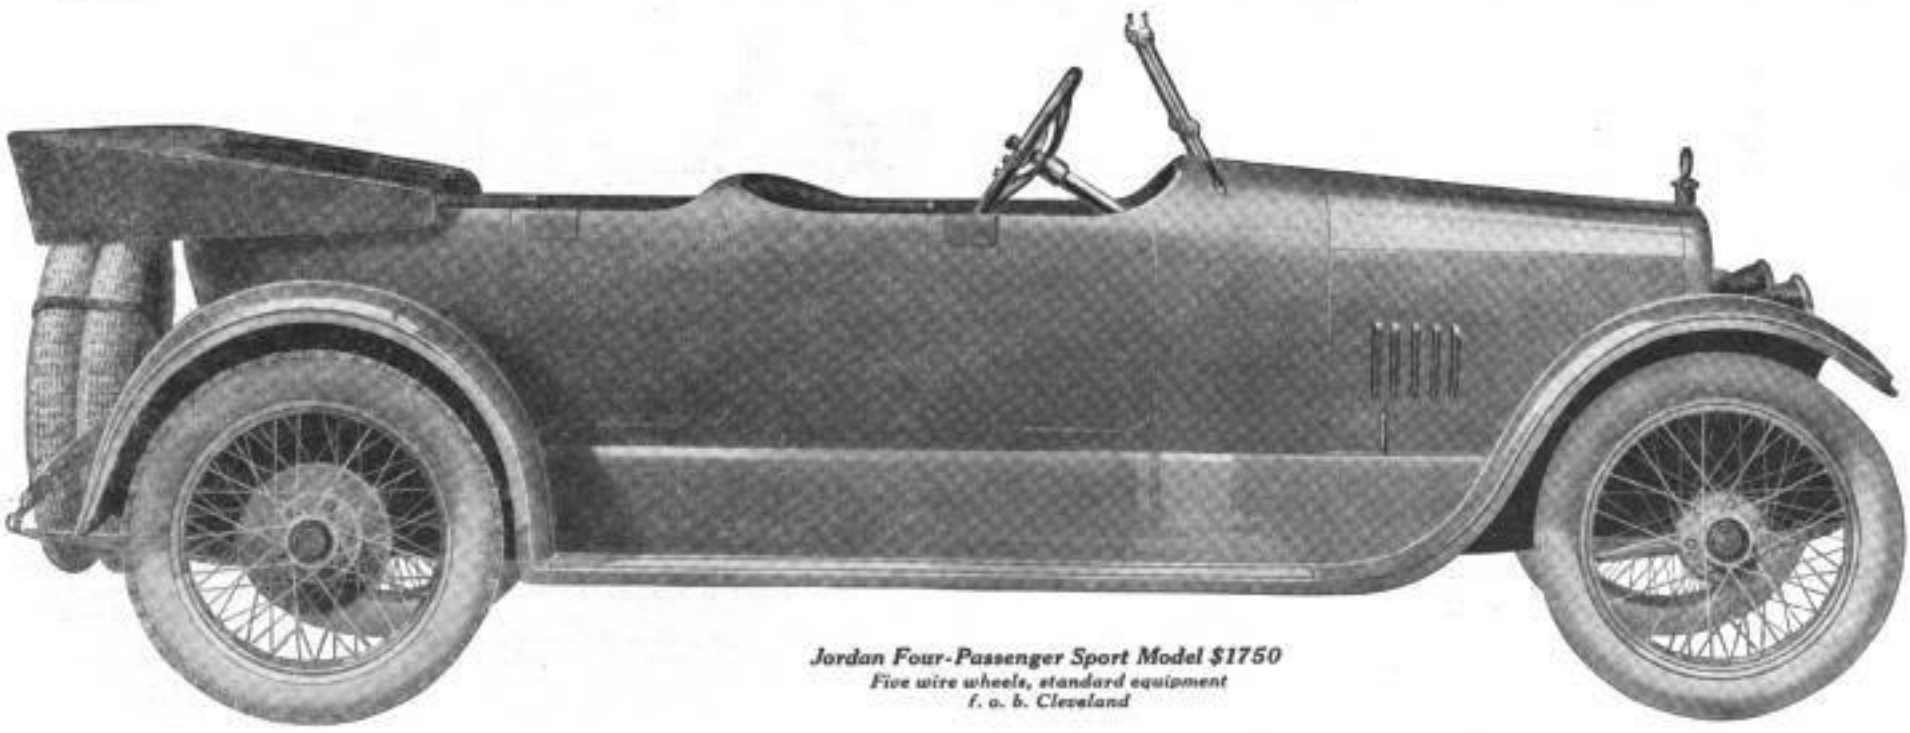
Then appeared the Jordan!

This big beautiful six-cylinder car of mechanical perfection took America by storm. And mind you, it was not its mechanical excellence alone—which is second to none. No. It was the smart, stylish, altogether out-of-the-ordinary custom-made bodies. Their beauty; their odd contrasting and harmonious colors; their long, low lines; the saucy tilt to the windshield; the same angle on the steering column; a new luxury in comfort-giving seat cushions and springs.

It was the new vogue that all Americans had been waiting for!

Below is the now-famous four-passenger sport model. It is a car brim full of pep—a car that instantly appeals to red-blooded young men.

And the pitch of the seat cushions, their height from the floor, the studied distance of the foot rail, the distinctive floor rug all say "custom made." Some car!



To really appreciate it, take another look—fit for a King, yet within the reach of all. $1750 complete—including five wire wheels.

So this year and next and for all time to come drive the car that by virtue of its true character and decided distinctiveness won success in 24 hours—the Jordan!

Standard Jordan Chassis

We outgrew our old quarters September first—and are now doubling our floor space

Progress

SUCCESS is of little value unless properly backed by progress. Nothing in the Jordan plans or plants ever stands still.

Our original plant was planned for a production capacity which we did not think would reach its peak for at least a year. But in several short months we were operating to 100% capacity with orders pouring in at a greater rate than we could keep pace with.

So the Jordan plant is being doubled. Do not misunderstand this. Production will not be heedlessly increased. The Jordan plan to build carefully, slowly and under the most rigid inspection will be followed absolutely. The Jordan ideal has not changed one iota.

The new Jordan factories will simply enable us to build Jordan cars on a larger scale—*but fully up to Jordan standards.* There will be no sacrifice of quality.

That constitutes real progress. Additional factories solely because the public *demands* more Jordan cars—not an effort to increase production for the mere sake of bigness.

The care and caution with which Jordan dealers were selected has become the talk of the industry. Any dealer to get the Jordan line had to qualify. We took a good long look at his past. If he did not measure up to Jordan standards we could not do business.

His character had to be as high as ours.

The more rigidly we enforced our examination of dealers the more we attracted the best caliber of men in the business. And as a result we have gathered together the livest, most honorable, most wide-awake sales organization of important dealers in America.

That's another form of progress.

During January we will appoint a few more dealers. Those desiring full information as to territory, models, etc., communicate at once with Jordan headquarters at Cleveland.

Remember—Jordan is a success.

But Jordan success is only commonsense plus initiative which is always loved by every whole-souled American citizen.

No Glare—Range 500 Ft.

The man behind a pair of Corning Conaphores can read a sign 500 feet from his car, if it is held in the beam of light. Notice ample side-light. A 500-foot range means safety no matter how fast you drive.

Pierces Fog and Dust

See the car with Corning Conaphores speeding along through the fog at 25 miles an hour. Cars with ordinary headlights creep along at 10 to 15 miles an hour behind a blinding blur.

CORNING CONAPHORE

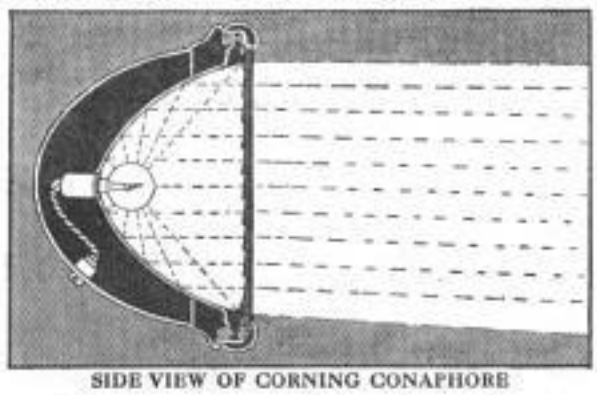
Sets new headlighting standard

Motorists have long felt the need for a scientific headlight. They want a headlight with long range and strong side-light but no glare.

States and cities have emphasized the need for such a headlight by passing strict "anti-glare" laws in an effort to make night driving safe. A vigorous, nation-wide movement is now under way. During 1917, laws requiring the use of a scientific headlight will be enacted and enforced everywhere.

Ordinary Headlights Dangerous

The ordinary headlight is not satisfactory to motorists. It has a bulb to give the light and a reflector to reflect the light, but nothing to control the direction of the rays. The glass merely keeps out dirt and water. Such headlights may have long range, but they also have glare, because a large part of the light is projected at such a level as to dazzle approaching pedestrians and motorists. The driver has to dim continually. Tilting of lamps downward may reduce the glare, but it greatly decreases the range of the light.



Function of the Conaphore

The headlight problem has been scientifically solved by adding to the bulb and reflector a third part, the Corning Conaphore. The function of the Conaphore is to direct the rays of light from the bulb and reflector, so that the beam will have long range, ample side-light, will not glare and will pierce fog and dust. Tests shown on this page prove the efficiency of the Corning Conaphore.

Scientifically Correct

Practically all of the signal glass used on American railroads is manufactured by the Corning Glass Works. This institution is the largest manufacturer of technical glass in the world, and maintains the *only* laboratory devoted to the study of signal glass. For many years these famous research laboratories have led the world in the art of glass making. It was in these laboratories that the Corning Conaphore was developed. This fact is the best guarantee that the Conaphore is scientifically correct in design and manufacture.

The Corning Conaphore has a smooth outer surface and a series of patented, horizontal corrugations on the inner face. This design bends down the light rays and shoots them out in a long, intense beam, never more than 42 inches above the road, which has wonderful range and ample side-light, but no glare.

SIDE VIEW OF CORNING CONAPHORE

Noviol Glass—A New Invention

Corning Conaphores are made of a new patented glass—Noviol Glass. This is a golden-tint glass which gives the Corning Conaphore a distinctive appearance.

Noviol Glass causes the beam of light to pierce fog or dust. It eliminates "back-glare." It makes the green along the roadside stand out. No ordinary headlight glass can have these features. The use of Noviol Glass is controlled by the Corning Glass Works.

Five Major Advantages

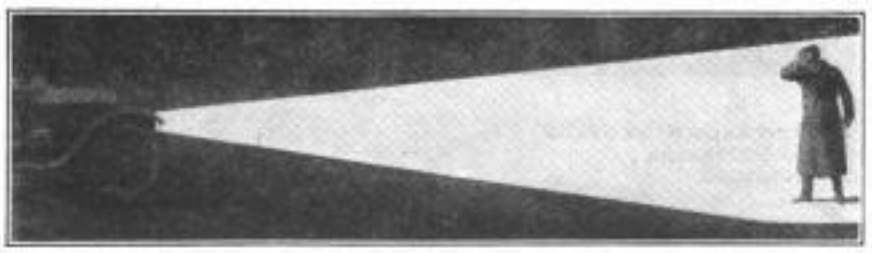
First Four Exclusive

1. Gives headlight range of 500 feet when a standard bulb of 21 candle power or more is properly focused.
2. Cuts out all the glare yet uses *all* the light, thus complying with all city and state "no-glare" laws.
3. Penetrates fog, dust or smoke, so you can easily drive 25 miles an hour under adverse weather conditions.
4. Has strong side-light which illuminates the roadside; the Noviol Beam makes the green stand out so you can distinguish bushes and ditches.
5. Never clogs with dust or mud in summer, or with ice or snow in winter, and is easily put on any car.

Made in Two Kinds of Glass

Corning Conaphores are made of clear glass as well as Noviol Glass. Clear glass Conaphores are equally efficient in giving long range and eliminating glare, but lack the added advantages possessed by the Noviol Glass of eliminating "back-glare" and penetrating fog or dust. We strongly recommend the Noviol.

Easy to Install



You will find the Corning Conaphore easy to install. Simply take out the glass now in your headlight and put the Conaphore in its place. Sizes are made to fit all cars. In ordering give name, model and year of your car, and diameter of your present headlight glass. All progressive dealers now sell Corning Conaphores. Put a pair on your car today.

Price List

Noviol Glass	Per Pair	Clear Glass	Per Pair
3 to 4⅞ inches inclusive . . .	$1.30	3 to 4⅞ inches inclusive . . .	$0.80
5 to 6⅞ inches inclusive . . .	2.40	5 to 6⅞ inches inclusive . . .	1.60
7 to 8⅝ inches inclusive . . .	3.50	7 to 8½ inches inclusive . . .	2.50
8⅝ to 10 inches inclusive . .	4.50	8⅝ to 10 inches inclusive . .	3.00
10⅛ to 11⅝ inches inclusive	6.00	10⅛ to 11⅝ inches inclusive	4.00

Prices 25 cents more per pair West of Rocky Mts.
Sizes vary by steps of ⅛ inch.

(Continued from Page 95)

a week, and the number of those making anywhere between twenty and twenty-five is by no means small.

"At the time when these plants were built, just after the outbreak of the war, we could get white labor at eighteen cents an hour. The price has moved up, until now we are using two hundred negroes at twenty-five cents an hour to do the roughest and cheapest kind of manual labor."

A small factory in Eddystone has published an offer of a premium of five dollars for every weaver sent to their plant, the reward to be paid after the new employee has remained a month. Storekeepers in localities combed by the Eddystone scouts complain that it is practically impossible for them to get clerks at any wage short of what the boys can earn in the munition plants. One of the special trains saps a territory in which is located a large tool factory that employs about seven thousand men. Toolmakers who were getting from thirty to forty cents an hour two years ago can now command anywhere from sixty to ninety cents an hour for a ten-hour day at the munition plants. For overtime they receive time and a half; and the pressure upon them for overtime, in making machine tools and in teaching others how to make and use them, is unrelaxing.

Of course the toolmaking plant referred to has been pushed to meet the offers of the munition makers, in order to hold the men they have trained and developed. The fact that a special train takes workers from that locality to Eddystone in quick time and without a stop, and brings them back, makes this competition decidedly acute.

No Place for Soft Hands

From a broad and industrious inquiry it would seem that the office pay in the Philadelphia district has not generally increased more than fifteen per cent—perhaps ten per cent would be a fair average—since the war started. For bookkeepers, for example, twenty dollars a week seems to be a popular salary. Of course hundreds of them are getting as low as fifteen in the district, though those in the more advanced positions receive considerably more than this. However, it is evident that the bookkeeper drawing more than one hundred dollars a month feels that he is in the upper strata of his vocation.

At Eddystone are many examples of men who have had the courage of their desires and have deserted their soft-handed callings for the fat rewards of the man at the munition lathe. The experience of a former school-teacher illustrates that there are two sides to this game of pulling down big pay as a pieceworker in a munition plant. He was making eighteen dollars a week in a clerical position, keeping output records. When he saw that machine men in greasy overalls were earning double that amount, and even more, he begged for a transfer and finally received it.

Now he is back at his old job, wearing a white shirt and a chastened smile. He declares that he will never again envy a munition-machine worker his bloated wage, and that his two weeks in overalls almost literally broke down his constitution. The munition machine, according to this former school-teacher, is no place for a man with soft hands and soft muscles. He was able to stand the pace for a bare fortnight and then surrendered to save himself from collapse. This man has plenty of company; his case is typical of many others who have left office positions for shell lathes, only to find that they are unable to endure this kind of labor, especially at the high-pressure speed demanded.

Necessarily some forms of munition-machine work are harder and heavier than others, and if the man from the office is fortunate enough to get a light job he is able to pass through the "hardening" process without breaking. One production captain in a munition plant made the interesting observation that an office man with a reasonable amount of education behind him stood an especially good chance of promotion after he had successfully undergone the severe initiation into shopwork that one now gets in the production end of the munition game. These men, he pointed out, quite generally make excellent production captains, and their chances of being retained in the shop organization after the close of the war are better than many of those who had been longer in shopwork.

"The production end of almost any business," says another man in charge of a shop force, "is a good field in which to make use of an education, of a knowledge of figures, and of a knowledge of what goes on in the office. It can be made to count for a whole lot, and some of the young fellows who have chucked their salaried positions in favor of a workman's job in this time of peculiar industrial stress are going to find that it has opened up for them a short cut to desirable and profitable places in the organization. Very likely a good many of them who would have remained clerks and bookkeepers will soon find themselves filling jobs of authority, which carry good pay, in the production force—if they have not already reached such a goal.

"This strange mix-up that we are now in, this period of unprecedented high pressure in turning out products of certain kinds, has already seen some remarkable developments in the way of bringing fresh executive talent to the front; and by the time a period of relaxation comes a whole lot of young men, unknown at the beginning of the war, will be decorated by their organization superiors and marked for big places. Such pressure as we are now passing through has many unwholesome and undesirable features; but it is certainly giving a lot of young men a chance to demonstrate their powers and attract the attention of the big men in industry, who are looking for men of forty-two-centimeter caliber to put into the big positions."

This pressure for munition production is also correcting many human misplacements. In a munition plant in the Philadelphia district is a young man who left a small bookkeeping position, paying less than eighty dollars a month, put on a jumper and took his stand at a machine. His present earnings are at least three times what he received in his position at a desk, and he feels that he has found himself and that he will never go back to his books unless forced to do so. Cases of this kind are common in munition plants, where the lure of big earnings at piecework has tempted young men to sacrifice their genteel positions and white collars for the sake of making sensational wages.

Men Off the Shelf

Another interesting development of the present abnormal labor situation is the fact that it has called back hordes of superannuated men who had come to regard themselves as permanently "shelved" because the light labor they were able to do was monopolized by boys. In the munition centers the messenger boy is almost an extinct race. His place is taken by the messenger man—whose legs are less nimble but whose mind is not so keen for crap shooting, movie shows and other allurements that beset the feet of the messenger boy who is having his first eager fling at the busy and fascinating world. One of these mature messengers, who admits that he will never see sixty-eight again, proudly remarked:

"I can carry a message just as well and just as quickly as any boy. Why not? I know how to use my head! In the long run that counts more than nimble heels. And it seems good to have something to do again—something that is light and does not tire me too much. It occupies my thoughts in a very pleasant way—besides bringing in nine dollars a week, which helps quite a bit in meeting the increased cost of living. I've been told that my work is so satisfactory that I'm to be raised to ten dollars in a few days."

In the financial district of New York dignified men who have passed the prime of life are supplanting boys as runners for the Wall Street firms to a considerable extent. They make stock deliveries mainly—a work that is simple but that calls for responsibility. The men who are filling these positions formerly held by boys are evidently giving general satisfaction. They carry their bulging stock wallets with a dignity that their youthful predecessors did not support, and they are not so speedy on the street; but it is generally admitted that they make as many deliveries in a day and with perhaps less noise and confusion than their nimble competitors of a younger generation.

Some of these venerable Wall Street runners get from eighteen to twenty dollars a week, while few of them receive less than twelve dollars.

Many stores in both Philadelphia and New York are also using old men as messengers and for other work formerly done by boys.

Everywhere in the Philadelphia munition district bankers admit a year of unprecedented deposits; there are few of them, however, who can boast of having raised the salary scale of their employees. Various reasons are assigned for this. Probably the real explanation is that the bank clerk is naturally a stayer and is less tempted to quit or change his occupation than almost any other kind of office help. Perhaps the fact that there is a certain atmosphere of class about bank work may have something to do with holding the bank clerk to his position when he sees the cost of living and the pay of the wageworker climbing to unprecedented levels while the figures on his own salary check remain the same.

A savings-bank official, who admitted that his bank had enjoyed a wonderful year, said that he could not raise his clerks' salaries because his is a mutual institution in which responsibility runs straight back to the depositors.

Another savings bank said that in the past ten months they had added nearly three thousand new accounts as against less than one thousand for the preceding year, but had not advanced salaries.

A street contractor, operating mainly in the suburbs of Philadelphia, was asked what he had to pay for the roughest and cheapest labor that he could find. He replied that he was in great luck if he could pick up a few Dagos or "Hunkies," unable to speak any English or to understand more than a few words of it, at two and a half dollars for an eight-hour day. Two years ago, he explained, he could get all he wished of this grade of workers for one and a quarter dollars a day. In New York the Irish foreman of a street gang tilted his clay pipe at an angle of disgust as he declared that if you were lucky enough to catch a green Hunkie for two dollars and fifty cents you couldn't expect to keep him at that wage for more than a few weeks, at best. Then the demand would come for two eighty-five and three dollars. He proudly confessed that he was receiving five dollars a day, himself.

Mention Wall Street in connection with War Brides, and your hearer will instantly brace himself for an Aladdinlike tale of riches made overnight by means of casting a few marginal crumbs on the tidal wave of speculation that has swept the country. There is, however, quite another side to this feverish activity in the stock market. This is the side of the Wall Street worker. A few days ago the bookkeeper for a brokerage house came out of his glass retreat to greet a friend.

"Bob," he exclaimed, "after the cruel war is over we'll swap apologies for having seen nothing of each other for six months! I'll just cover the whole situation by saying that, aside from Saturday and Sunday nights, I have been home to dinner just three nights in three months. And, even at that, I'm not so badly off as some of the men I know who are on Wall Street books. A few of the fellows have to work all night now and then—literally all night! It has been the most wonderful speculative period that ever struck the Street. Nothing to compare with it in many respects—in length of duration, for example, and in the fact that it has been almost a steady boom. We practically eat and sleep at our desks."

How Bookkeepers Fare

"What do we get out of it? That all depends on the individual. I could show you a young chap in a position about parallel to mine who is taking in about four hundred dollars a month earnings as an accountant. Of course we are forbidden to speculate to the extent of a dollar. Whatever we get must come from our bookkeeping efforts. First, there is our overtime work, and then there are many chances to do a little extra bookkeeping on the side and get good pay for it.

"The Street is full of commission brokers, men of the society type, who have a few special customers. These men are not disposed to do anything in the way of clerical work. Therefore, they are the natural meat of the experienced bookkeeper in times when trading is brisk. Men of this sort generally have desk room in the houses through which their trades are handled, and naturally the bookkeeper of the concern finds his services in demand by these commission brokers. Perhaps his own work is so hard that he can scarcely keep up with it; but the fiercer the trading, the more the commission broker is willing to pay to have his accounts kept in shape.

"The pay is so good for the time taken that the bookkeeper hasn't the nerve to refuse this side money—that is, until he has reached the limit of his capacity. When we see men by hundreds all round us who are making fortunes, it is hardly to be expected that we fellows who handle the figures should be able wholly to suppress our appetites for a little of this candy. We are shut out from going after it in a speculative way; and so it seems that we're all the more entitled to a taste of it in the form of increased salary.

"Some of the Wall Street houses have boosted salaries under this pressure; but you can bet that the advance has not been anything like the raise in the wageworkers' pay or the jump in the price of living. I'm not complaining, personally. My employer has been quite fair with me and perhaps most of the others are to their men.

"You see, I can't forget that this house carried me right along on the salary list in the dark days before the boom, when the gross commissions were almost nothing, net—and the rent went right along at the old Wall Street rate! If I'm inclined to feel dissatisfied now I remember those times and try to strike a general average. Lots of others look at it the same way.

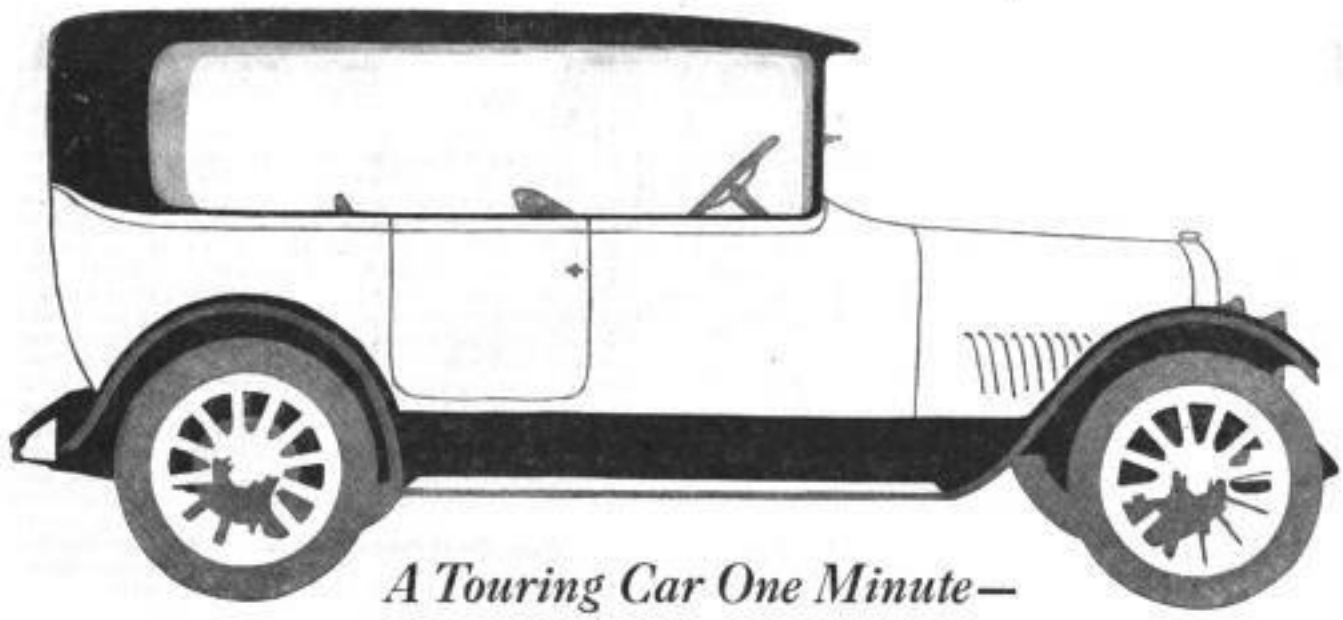
"However, the fact remains that bookkeepers getting from twenty-five to fifty dollars a week—as many of them are in this city—can tell you that their little salary check is standing a mighty stiff strain right at the present time. I know one clerk, for example, in the stock department of a house here on the Street who gets sixty dollars a week. He is neither dissipated nor extravagant; but he finds that he has to do some rather close figuring in order to make that meet the reasonable demands of a family in these days when you cannot buy a pound of good creamery butter and a dozen strictly fresh eggs with a dollar."

The Shanghai Bus

In point of recognizing the strained situation in which the salary check of ordinary size finds itself, the action of a certain New York banking house deserves conspicuous mention. After a careful investigation into the increased cost of living this bank, according to common report on the Street, will distribute to its salaried men an emergency fund equivalent to thirty per cent of each employee's salary for the year. It is understood that other large banks will announce a somewhat similar emergency plan in recognition of the rights and necessities of the salaried men who have stuck at their posts in spite of strong temptations to quit.

The New York situation in the matter of domestic help is suggested by the experience of a certain resident of Glen Ridge, New Jersey, who offered a househelper forty-five dollars to induce her to remain with his family. She declined the offer on the ground that she could do better at one of the munition plants.

In the eyes of the established manufacturer of the Atlantic seaboard, about the most efficient engine of industrial destruction thus far devised is the Sunday shanghai motorbus which fares forth from a munition center to the mill towns of New England and the other down-East states, seeking whom it may impress. The owner of a textile mill located perhaps a little less than one hundred miles from Bridgeport, Connecticut, entered this complaint to the writer:



"The general public has no idea what the War Brides and their shanghai busses have been doing to manufacturers in established lines. Take it in our own case: We were far enough away from any large munition factory to feel reasonably safe about our workers; but we took the precaution to give them a substantial raise of rates, just the same. Things had begun to get into full swing down at Bridgeport when, one Sunday, two big automobiles stopped in our town. Its occupants approached a group of young men. They offered the boys cigars and then inquired where they were working. The lads answered that they were in the local textile mill. Then came an inquiry as to the wages they were getting. One of our boys replied that he was pulling down eighteen dollars a week and his partner was getting sixteen—which he allowed was a lot better than the twelve and fourteen which they drew when the war broke out. The visiting stranger laughed loudly at this and exclaimed:

"'Say, do you call that wages—sixteen and eighteen dollars a week? Lads, wake

WORLD RECOGNITION of what Springfield TYPE MEANS

A Touring Car One Minute—

This is The Springfield-Type Body Design
(PATENTED)
Originally designed, developed and marketed by the Springfield Body Company.

Digitized by Google

SPRINGFIELD LEADERSHIP

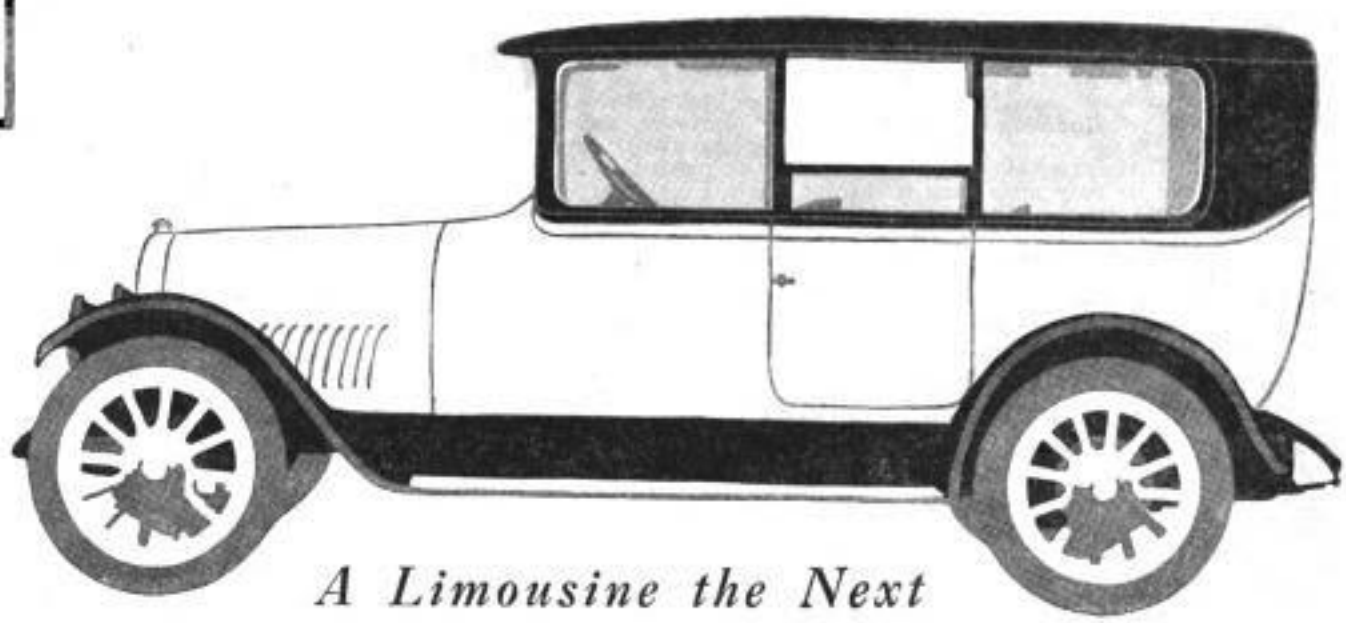
THE Springfield-Type Body is a universal necessity—a Touring Car and Limousine in one unit, providing the very thing all America has been waiting for—a body that is both a closed car and an open car, all in one.

The Springfield-Type Body is instantly adaptable for winter or summer—rain or shine—day or night service—combining all the protection, luxury and appearance of the finest limousine as well as the freedom and advantages of the open touring car.

Springfield Ideas and Springfield Types have continuously established precedent in body designs in America.

The *first* metal body was a Springfield.

The *first* convertible body in America was a Springfield.



The *first* permanent-roof convertible body was a Springfield.

We are building in Detroit the most modern and most completely equipped body-building plant in the world—permitting a tremendous production—making Springfield Bodies cheaper and better than ever.

The Springfield-Type Body is a complete body—not a detachable or put-on top.

(Continued from Page 99)

up! How would you like to earn eight dollars a day?'

"Our boy from the finishing room granted that such a wage was beyond his dreams of avarice, and intimated that there was no such animal. Then the visitor displayed his credentials for the munition plant, and told the young men to get together a few of their friends from the mill and he would take them all down together to where munition money was falling in showers. He was in a hurry and there was no chance to fuss about giving notice to their boss. Opportunity was knocking at their town, and if they wished to get aboard there was just time for them to grab their clothes and be off. This is precisely what they did! On the way down the man explained to them that they would have to put in a lot of overtime in order to make their wages average eight dollars a day; but they were in for it then and eager for the change and excitement.

"Next morning the superintendent of our mill found that several men from the dyehouse and the finishing room had been shanghaied by the press gang from the munition plant. This set the output of the mill back a week, at least. More than that, it disrupted the whole working organization, and we knew it was the beginning of a constant drain. What could we do about it? We had already given two voluntary raises in wages or rates, and we made another advance; but, of course, it was impossible fully to meet such competition. All we could do was to show our disposition along the line of an advance and try to convince our hands—and especially the older ones—that it would be more profitable to them in the long run to stick with us, even if it did make rather a strong demand on their loyalty at the moment.

"An intimate friend in the textile business said to me a few days ago that if he could get labor enough to put through the orders now on hand he could clear five hundred dollars a day; but that, as this was impossible without paying prohibitive rates which would demoralize the business for perhaps years to come, he was going to get out what product he could without paying war prices for labor, and let the rest go. Textile millowners all over the East will declare that this is a true picture of their own situation, and that the Sunday shanghai bus from the munition plant is about the most dreaded and destructive thing they know."

Robbing the Kitchen

The influence of the Sunday shanghai bus and its busy press gang is sharply illustrated by the experience of a maker of automobile parts in the New Haven district. He must meet competition for labor, because of contracts for his product. This man declares that the Monday on which he does not have to go through his plant and hand out a line of raises is a red-letter day. He is now paying six dollars a day to mechanics of the handy-man class, who would normally be glad to get two or three dollars a day.

The startling fashions that War Brides have introduced into the field of female labor is encountered in a graphic way in this same field. A large corset manufacturer there suddenly found that hundreds of his girls were flocking to the local ammunition plant, which employs about eighteen thousand hands and has much light work to which women are specially adapted. Instead of trying to stem the tide by offering fully competitive wages, these shrewd corset manufacturers decided to meet the situation by doing something decidedly original. Though they have done what they could within reason to keep a force of their trained employees with them, they have introduced a novelty stunt in the labor struggle by starting a new factory in which all the hands will be negro girls drawn from domestic service in that district.

This clever move is the latest development in a chain of interesting circumstances that have not added to the gayety of the housewives of that locality.

First, the establishment of the original corset factory drew white working girls from domestic service and left the field very largely to the girls from the growing negro quarter of that section. These colored girls soon demonstrated their cleverness as household servants, and the adjustment of the domestic situation was supposed to be permanent and complete. Then came the call for girl munition makers, and the corset factory saw its organization of workers raided for the benefit of the War Brides. Once more it has turned to the kitchens of the community to stop the gaps and refill its trenches, with the result that the housewife of this classic district who is able to retain the services of a negro girl at a wage of less than thirty dollars a month and "found" may consider herself decidedly fortunate.

A New York business man who owns a small farm not far out gives this glimpse of what the gentleman farmer is up against in these munition days:

"I saw something of what was coming; so I made a contract with my man that, for 1916, he would be given fifty dollars a month and ten per cent on everything sold from the place—this in addition, of course, to all the perquisites and findings usually given a man in his position. Naturally he grew a lot of stuff on the place and has sold a heap of it. Of course he has been pressed by the munition-plant scouts to throw up his contract; but he has stuck faithfully. On the other hand my good neighbors have been having their troubles. One rented his house to a man at a low consideration so that the tenant would help him out over the busy season with the farmwork. The man had scarcely moved in when the scouts came along and carried him off to the munition plant, where he has worked ever since. Another neighbor had a splendid crop of peaches which he allowed to remain unpicked because he could not get help—at least at a price that was not, in his opinion, prohibitive."

Why Traffic is Tied Up

The head traffic man of a big New York concern was told by the president of his company to go out and find why shipments were from fifteen days to a month late. At one point a freight manager made this statement:

"Right there in the yards are forty cars of miscellaneous goods, and one hundred and fifty more cars of the same sort are waiting outside. If you can lead me to anybody who'll get me the men to unload those cars I'll do 'most anything for you!"

Then the New Yorker had a bright idea and asked the freight man why the road didn't bring a few trainloads of negroes up from the South to do this sort of work. This suggestion was met with the classic story that is being told everywhere in traffic circles. It relates that a big railroad system, suffering from acute traffic congestion, thought of this plan and started to put it into effect on a big scale. They assembled negroes and started North with them.

When they pulled into one of the big munition centers these hundreds of freight handlers, who were going to relieve the traffic congestion, suddenly faded. They had been met down on the road by the industrious scouts from the munition makers. The frequency with which this story is heard wherever labor and traffic troubles are discussed—whether at the Atlantic seaboard or in Chicago—almost compels the hearer to believe that it has happened—not once but repeatedly.

The manufacturer's traffic manager also investigated the question of delayed express deliveries. When he complained to a local express manager in Chicago that his goods were allowed to stand round five or six days without delivery he was told:

"Come to the stables with me, please."

After they arrived there the express man pointed to a line of twenty horses and ten wagons.

"See 'em?" he asked.

"Well," responded the New Yorker, "why don't you get them out?"

"You get me the men—men who are fit to handle horses—and I'll get them out P. D. Q.! But, remember, it is impossible to use men in this work who are not used to handling horses and who do not know Chicago. We simply can't man those teams, and that's all there is to it!"

The industrial traffic man says:

"I have about twenty carloads of stuff packed here waiting for lighter service, and cannot get it. Ship traffic is also blocked for lack of men to do the unloading. The same condition exists at every railroad transfer point. It is and has been one long series of embargoes and blockades for every class of material in every form of shipment. The price that carriers are willing to pay for labor to break the congestion seems to have little effect on the situation."

The superintendent of New York City's Public Employment Bureau puts the situation in these terse words:

"As late as the spring of 1915 you could get plenty of rough, common labor at seventeen and a half cents an hour; but by this time the rate has gone up to twenty-eight cents, thirty-three cents and thirty-five cents for this cheapest form of labor. Boys can still be had for ten dollars a week—in some localities for even eight dollars; but these boys are less interested in the futures of their jobs and more in the immediate pay than previously. Now they want cash in hand rather than promotion promises. Of course this may not always be as shrewd a policy as it might seem, but it simply indicates the mental effect of the present labor situation on the boys.

"As to the clerks and lower-grade bookkeepers, this class of workers was most in evidence during the recent period of depression. Evidently the man of this type is the first to be fired and the last to be taken on here. I attribute this somewhat to the fact that New York is greater as a commercial city than as an industrial city. The wages of this class have remained fairly constant; they are getting just about what they were when the war started—just about enough to dress respectably but not enough to permit them to marry. It is true, of course, that you can find examples of where the salaries of this immense class of workers have been raised slightly. On the other hand, those raises are the exception rather than the rule.

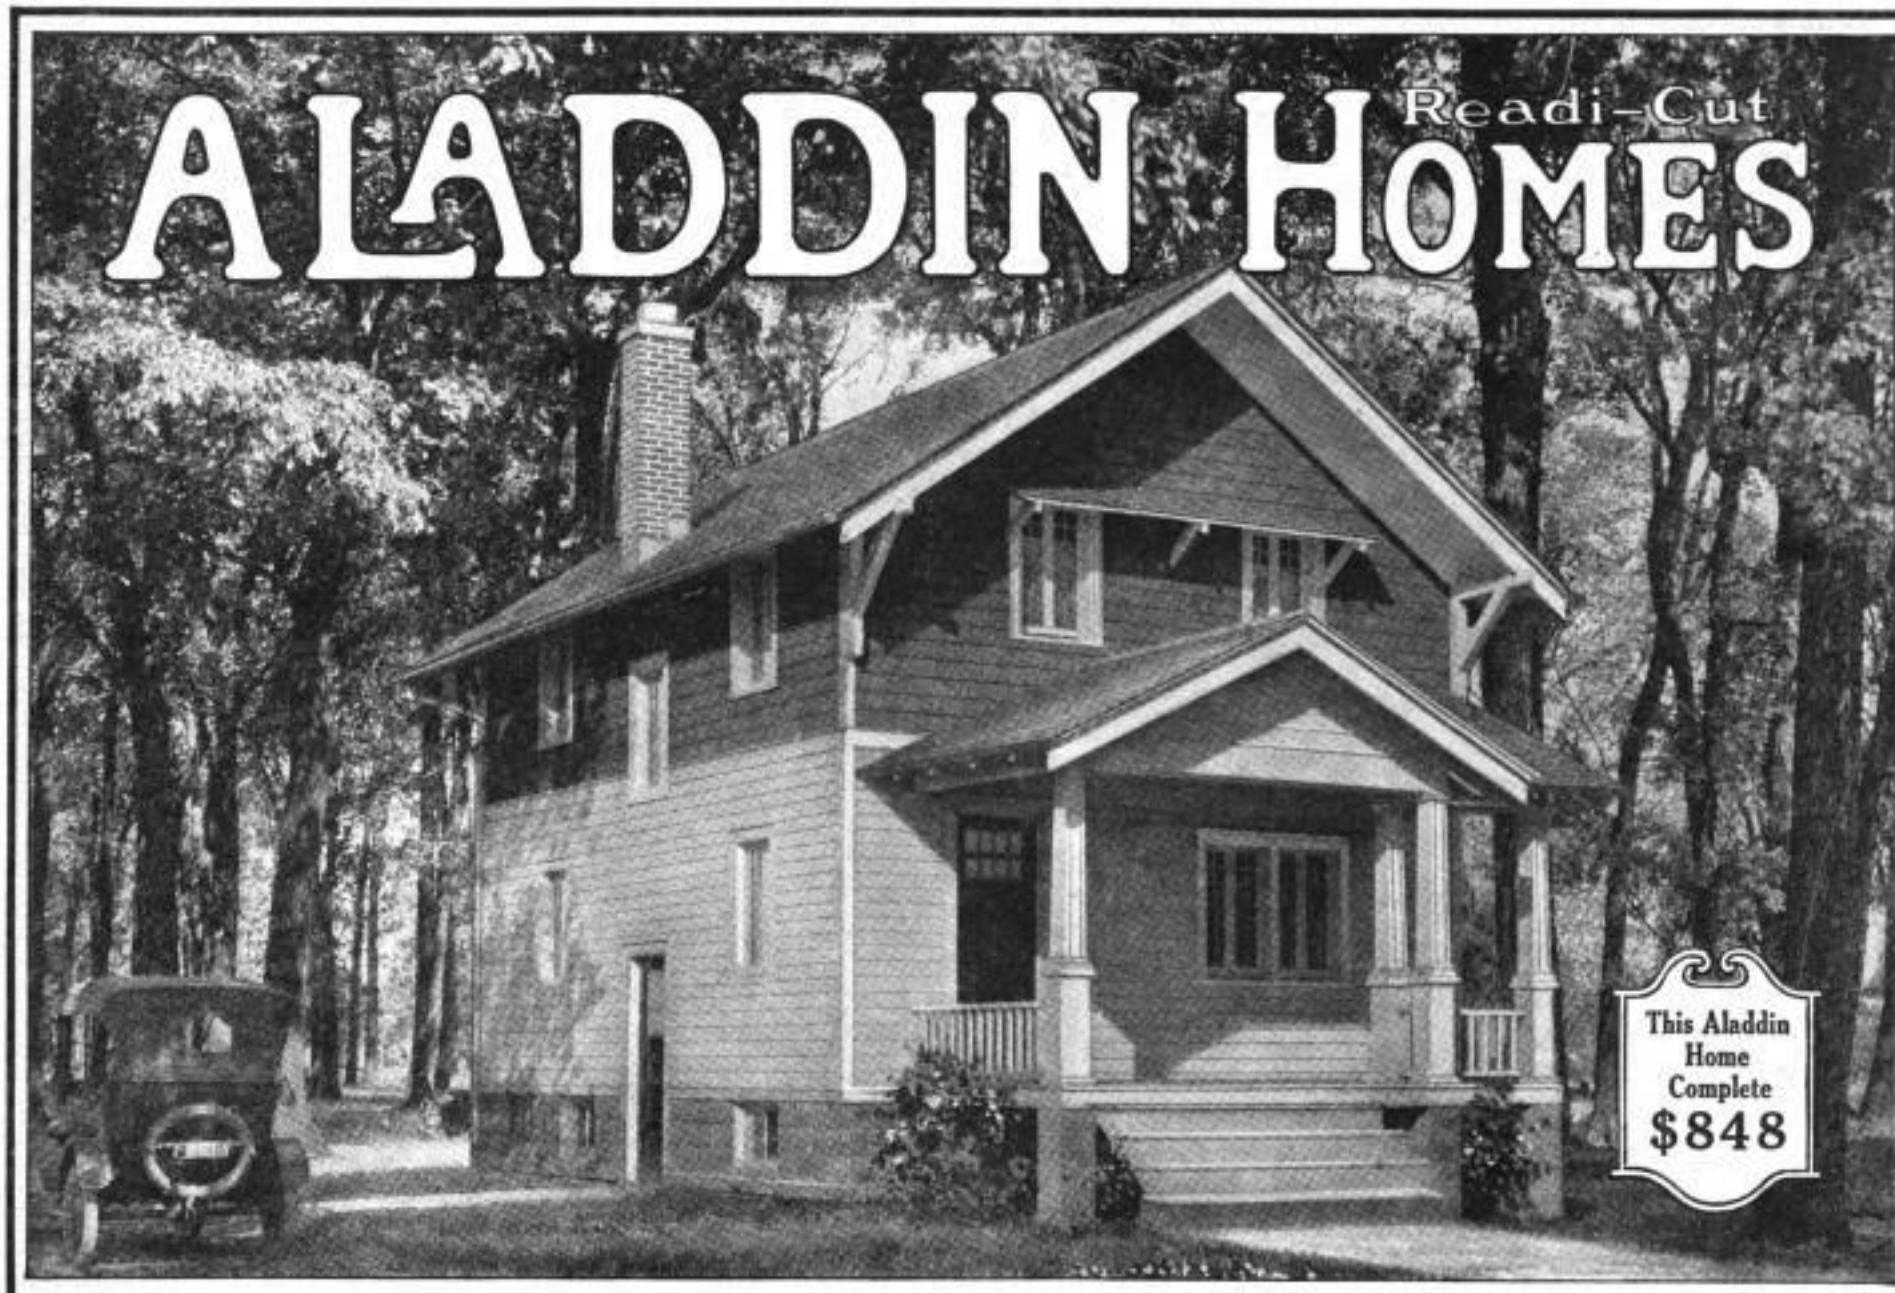
"One curious effect of the war is that it has not only made a place for men who were thought to be too old for work but has actually revitalized a whole lot of them. Only yesterday a man of sixty or more walked in here with his shoulders squared, his eyes bright and his voice full of confidence as he asked for a job in competition with the young fellows just out of college; and he got it, too. The fact is, this happens right along. A few months ago a man well along in years came in here for a position and told this story, which was later verified: He had been in business for himself, made a very comfortable little fortune, and retired. He lived with his son; and the son lost everything, including his own health and practically all of the father's fortune. The father secured a good position through this bureau and is now earning a fair salary and giving satisfaction."

Men of Sixty-Five Make Good

"I recall another man, of sixty-five, who is making good as a superintendent of construction work on a big breakwater project. He had large interests in Mexico, but when chaos broke loose down there he was lucky to escape with his life.

"It seems to me that all along the line there is a reaction against the efficiency theories that have, in hundreds of concerns, eliminated experienced men of middle age and put in their places sprightly youths. Evidently the heads of these houses are to some extent swinging back to the conclusion that in times of great prosperity pressure, like the present, these newcomers of the efficiency school are out after the immediate coin and will go where they can get it, where men of more mature years and longer service will remain."

What is happening all through the Pittsburgh district is suggested by the personal story of a certain man who, just before the outbreak of the war, was working two days a week and receiving a total of six dollars. He had just lost one child and his wife was in the hospital. One of the terrors before him was the prospect that he was likely to lose all the payments he had made on the home he was buying. Then the "shell game" opened, and he went into it to the limit of his endurance.



As a result in his best weeks his pay check on piecework amounted to an average of fifteen dollars a day, and his earnings were seldom less than twelve dollars a day after he had become thoroughly accustomed to the new work.

His home is now paid for and comfortably furnished, and he has a very nice nest egg stowed away in the bank. If he desired he could keep on earning at this rate until the end of the war; and, with his increased facility in the work, he could probably touch the twenty-dollar-a-day point at which so many shell workers are aiming. Instead, however, he has quit the lathe and taken a job as foreman at much less than he could make at the machine. This action

ALADDIN Readi-Cut HOMES

Avoid Rising Homebuilding Costs

You can cut 18% off present homebuilding costs. This means saving $18 in every $100. It means avoiding present rising prices on building materials. The one way to accomplish this is to *eliminate waste!* The Aladdin Readi-Cut System of Construction reduces the usual 18% waste in lumber to less than 2%. You won't need to postpone your home building if you build the Aladdin way. The truly wonderful Book of Aladdin Homes tells all the facts, with pictures, floor plans, specifications and prices. Shall we send you a copy?

How Aladdin Helps You Build

First, the plan: A hundred homes to choose from, and each as interesting, as charming and as practical as the one shown above. Next, the material: As clear and free from blemish as was ever taken from the forest. Read the great Dollar-a-Knot Guaranty. And last, the service: A knowledge and experience gathered from twelve years working with thousands of home builders—everywhere—a service that assists you in every step of your home building.

One of Your Neighbors is an Aladdin Customer

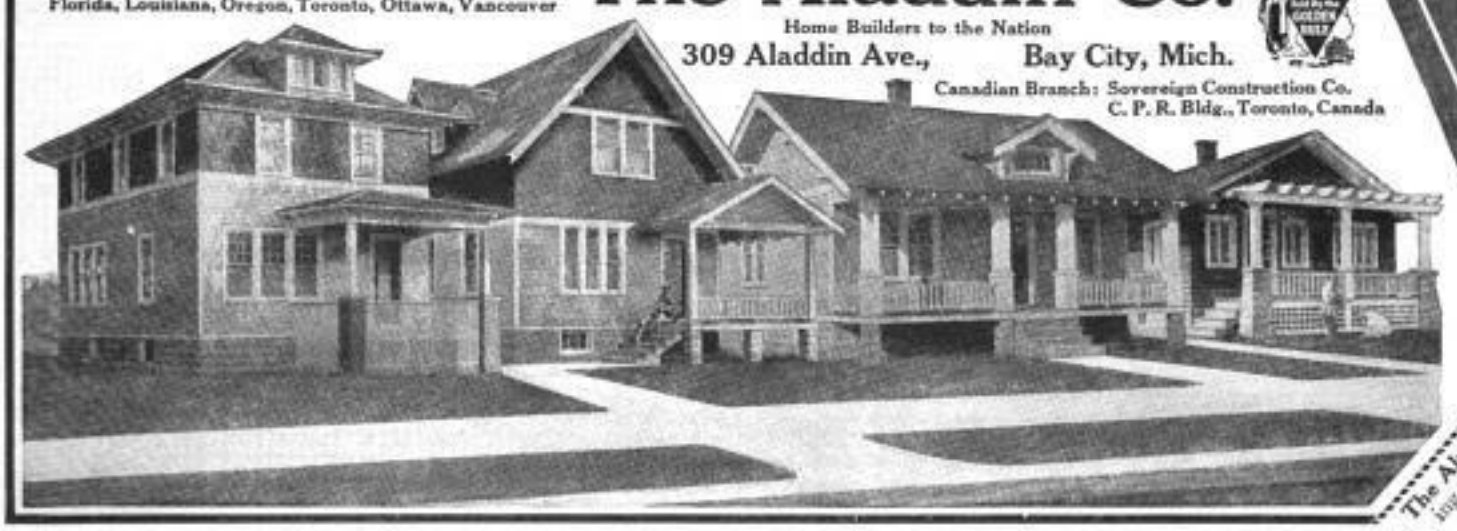
There is an Aladdin house near you wherever you live. Let us direct you to it. Look it over, inside and outside. Talk with the owner. Let him tell you about Aladdin Golden Rule Service. Let him tell you about the quality of material—about the big saving in money, the big saving in time and the saving in waste. Ask us for names of Aladdin home owners.

Shipments Made Direct from Our Mills in Michigan, Florida, Louisiana, Oregon, Toronto, Ottawa, Vancouver

Aladdin's Famous Dollar-a-Knot Guaranty

The famous guaranty of $1 per knot paid for every knot found in Aladdin Red Cedar Siding is continued for 1917, *AND* we have swept the last knot from Aladdin lumber inside and out. Every Aladdin House in 1917 will be furnished with knotless siding, knotless shingles, knotless outside finish, knotless porch work, knotless flooring, knotless inside finish, knotless door casings, stairwork—knotless inside and outside. Where else can you buy as good a home?

What is An Aladdin House?



Aladdin Houses are erected the same as other houses. Aladdin Houses are cut-to-fit—no waste of lumber or labor. The Aladdin price includes all materials cut-to-fit as follows: Lumber, millwork, flooring, outside and inside finish, doors, windows, shingles, lath and plaster, hardware, locks, nails, paint, varnishes. The complete material is shipped to you in a sealed box car, complete, ready to erect. Safe arrival of the complete material in perfect condition is guaranteed. Send stamps today for a copy of "Aladdin Homes," No. 300.

The Aladdin Co.

Home Builders to the Nation

309 Aladdin Ave., Bay City, Mich.

Canadian Branch: Sovereign Construction Co. C. P. R. Bldg., Toronto, Canada

Send for this Book of Aladdin Homes

It tells you what your home will cost. It shows photographs, floor plans, specifications and prices for every house.

The Aladdin Co., 309 Aladdin Ave., Bay City, Michigan—I am enclosing stamps for a copy of your book No. 300, "Aladdin Homes."

$60 f. o. b. Lancaster

Easily saved in tire adjustments alone

Speed, 1 to 75 miles an hour
Trip mileage to 1,000 miles
Total mileage to 100,000 miles
Warning at each 500 miles
Warning at each 1,000 miles
Single flexible cable drive

Hamilton Multometer

Tire mileage for each tire and two extra tires
Gasoline mileage for trip or season
Oil consumption
Lock to prevent tampering with records

Check Service Figures against Guarantees with the Hamilton Multometer

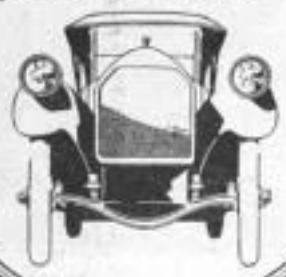
What does the tire manufacturer claim for the tires you are using—what does the manufacturer say is the average service?

Look these figures up—then check them with the record on the Hamilton Multometer. Are you getting full service—maximum economy—or are the tires giving out too soon?

Look up the average claimed mileage per gallon of gasoline—and oil—the car manufacturer's average service figures are based on a car's running perfectly. Check gasoline and oil consumption on the Hamilton Multometer. With it you can determine gasoline and oil mileage with absolute accuracy. Know what adjustments should be made at the end of 500 miles—1,000 miles of running—the Hamilton Multometer automatically gives you a warning of these necessary attentions.

Car and tire makers' guarantees and statements of average service take on a new meaning when checked by the Hamilton Multometer.

And the Hamilton Multometer registers car speed from 1 mile to 75 miles an hour—trip mileage up to 1,000 miles—total mileage up to 100,000 miles.



The Hamilton Multometer is easily adaptable to any motor car or motor truck—displaces ordinary speedometer—and is operated by single flexible cable drive either from transmission or front wheel driving gears.

The value of this accurate service recording instrument to motor truck users cannot be over estimated. It is the first positive check of ton-mile operating cost.

Write for full details regarding equipment for your motor car

The Hamilton Corporation, Lancaster, Pa., U.S.A.

(Continued from Page 102)

has been taken because he has been long-headed enough to look out for the future and shrewd enough to realize that he has developed to a higher plane of shopwork; in short, he has put himself up into the supervising class.

When surprise was shown at the fact that a person in authority in the shop, holding a supervising position and working with his head instead of his hands, should draw less money than the men under him, I was met with the statement that this is common.

How high the wage scale can climb in Pittsburgh under war pressure and the piecework plan is indicated by the admission, on the part of the active head of one of the great steel companies, that rollers in some of the Pittsburgh mills are making an average of twenty-five dollars a day, and that puddlers are doing practically as well.

This official declares that a very satisfactory proportion of these men are saving their money. He regards this thrift as the result, in a large measure, of the plan of encouraging employees to invest in the stock of the company, and making it possible for them to do so on very advantageous terms.

When the man earning a modest salary looks with envy upon the bloated pay envelope of the munition-machine operator, he is likely to overlook several interesting facts which it would be well for him to consider before deciding to swap his white-shirt position for a place at the shell lathe.

For example, there is the plain muscular strain incident to lifting the shells into place in the machine and taking them out again. A production captain in one of the smaller munition shops of the Pittsburgh district, who knows the weight of every shell handled, figured that a lathe man in the twenty-dollar-a-day class handled twenty-six thousand pounds a day in and out of his machine. He also declared that the hands of many of these men who are pulling down the big money and working at top speed for as many hours a day as they can stand up to the job are often so stiff when they come to work that they resemble set claws, and about half an hour of slow work is required to limber them up into good working shape.

The Pressure of Production

In this connection a certain supervisor of shell production in a large plant, where boys of seventeen and eighteen years of age are averaging twelve dollars a day and many men are keeping their daily earnings to a point above eighteen dollars, makes the interesting observation that if the experienced mechanics now working on shells had worked as hard—as many hours and at as intense a pressure—on the tasks with which they were engaged before America went into the munition business, their earnings would have been about eighty per cent of what they are now.

Of course this statement is made for the purpose of comparison and does not at all imply that these mechanics had the opportunity to work overtime at that period. They did not. On every hand, in every munition district visited in this investigation, the same spirit of wage greed was found driving men to their utmost powers. In many cases this appeared to be almost as much a matter of personal pride in the high figure on the pay envelope as a desire for the money itself.

One foreman described the situation in these words:

"The game here is something fierce! Our crack men are driving the spurs into themselves in a way that is absolutely merciless. Sometimes it seems to me they are simply wage-crazy. They are no longer content to touch the twenty-dollar-a-day point for about half the time, but they wish to put their daily average up to that figure—and a whole lot of them are doing it too. Of course the men over them are putting on all the pressure they can, because they are being pushed by the chief executives of their various companies. Again, the bonus they get is dependent upon what the workers under them do in the way of production miracles.

"No one outside the game can in the least appreciate how tremendous this production pressure is. There are shops in this district where output has been screwed up to a point that has given the supervising force a bonus of a hundred per cent; and even at that rate the crack men at the machines pulled down more money than all save one or two of the men over them. In other words, only the two men at the top of the shop's executive force drew salaries for the month larger than the pay of the best class of mechanics at the lathes."

How freely easy money is flowing in Pittsburgh is suggested by the experience of a salesman in a leading retail music store. Because of his ability in demonstrating disk machines he had been brought from a point outside the munition zone and was, therefore, unacquainted with the appearance and habits of the industrious shell-worker. He had hardly been in his new position a day when a request was received by telephone to have three of the best machines of as many different makes sent to a certain address in the afternoon, so that they could be demonstrated that evening. The person making the request explained that an evening demonstration would be necessary, because that was the only time when the head of the house could be present and that it was impossible for him to call at the store in person.

When the demonstrator found his way that evening to the cottage designated in the order he was sure a mistake had been made, and almost decided not to call and make an inquiry as a matter of form. The cottage was one of a row that he classed in his own mind as laborers' shacks. There was nothing in his past experience as a salesman to suggest to him the possibility that a family living in such surroundings could purchase the most expensive type of talking machine.

Contentment Everywhere

A knock at the door, however, brought the command: "Come in!" And he found himself in the presence of a middle-aged man, in shirt sleeves, smoking a clay pipe, who pointed in the direction of the disk machines and said:

"Shoot!"

From that instant the wife and daughter of the household took charge of the ceremonies until the grizzled smoker removed his pipe and remarked:

"That's the one for us. But, while we're about it, we may as well keep the one that was played just before this, and send it over to Mary. Then we'll want that outfit of records. Now figure up what the whole thing comes to and I'll write you a check."

The closing statement from "father" saved the salesman from extreme embarrassment, not to say heart failure; for he had been unable to bring himself to believe that he should be justified in leaving two expensive instruments in such a home without "something to show for them." The check was for a little less than six hundred dollars.

An indication of the wage strides made by the common laborer is afforded by the fact that it is easy to find huskies, who were glad to get a dollar and a half a day at the outbreak of the war, who now receive from three-fifty to four-fifty a day for rolling shells from one point of the shop floor to another. There are many cases where common labor not engaged in shell production gets five dollars and seventy cents for a twelve-hour day in the munition plants.

One of the happiest takers of War Bride money in the Pittsburgh district is an ex-janitor, who was getting seventeen and a half cents an hour when the war started and a little later secured twenty-four cents for sweeping floors. He used his acquaintance with one of the young college men who had been made a production captain in a munition shop to enter his plea for a chance at a lathe. The young man interceded for him, and for the last ten months the humble graduate from the janitor's department has made an average earning of thirteen dollars a day.

Perhaps his closest competitor, in point of satisfaction secured from the munition wage, is an ex-cigar clerk working in the same shop. Though he is not getting quite so much money as the former floor sweeper, he frankly declares that, for the first time in his life, he is making a living; and that he is also "salting down something for the day when the Dove of Peace throws the power off the shell lathes."

A shop neighbor to this greasy but contented graduate from the cigar counter is an ex-bank clerk from a Western State, who decided that a white collar, a salary of about sixteen dollars a week, and the privilege of talking to depositors through a grated window were all right for those who were either too proud or too soft of body to go up against the hard work of the munition plant; but that, as he was decidedly husky,

More Than One Million Three Hundred Thousand (1,300,000) Discriminating Women Every Month Turn to McCALL'S MAGAZINE

We suggest that you send your subscription now to start with April (printed in March), our great Annual Spring Fashion Number.

February and March numbers may sell out before your order reaches us—buy them at 10c each at any News-stand or McCall Pattern Agency.

McCALL'S MAGAZINE

Announces a Change in Price

The pages of McCALL'S for 1916, end on end, would reach from New York to San Francisco forty-five (45) times, and weigh over ten million (10,000,000) pounds.

In 1917, raw paper, of the high grade we use (one of the biggest items of expense in publishing a magazine of large circulation), will cost nearly twice as much as we paid last year. Besides, ink, type metal, engravings, labor—in fact, everything that goes into making McCALL'S—has nearly doubled in cost.

To lower McCALL standards, or cheapen McCALL quality, is unthinkable. The one and only thing to do is to increase our subscription price and keep on improving our magazine.

McCALL'S is now ten cents (10c) a copy, seventy-five cents (75c) a year, ($1.00 Canada; $1.50 foreign), beginning with the February, 1917, number, on sale this month. However, *for a short time only*, this opportunity is given to subscribe at the old low rates.

A RECOGNIZED FASHION AUTHORITY FOR NEARLY 50 YEARS

How often you hear, "She hasn't a bit of style." You know women possessing extravagant wardrobes, yet who are never stylishly dressed. You also know women who spend a very modest sum on their clothes and you wonder how they manage to dress so charmingly. Our Fashion Editor says, "*STYLE is a matter of TASTE rather than money.*"

Taste, you will agree, however excellent, must have a reliable guide. THE McCALL COMPANY of New York, founded 1870, makers of McCALL patterns (so favorably known for their style, fit, simplicity, and economy) and publishers of McCALL'S MAGAZINE (monthly), THE McCALL BOOK OF FASHIONS (Quarterly), McCALL'S EMBROIDERY AND NEEDLEWORK, etc., enjoys a prestige of nearly 50 years' success as Fashion Publishers and offers just such a guide in its monthly style news (recognized as authority), richly illustrated in black and white and in colors, by the choicest new, approved designs, and patterns that faithfully reproduce those designs.

1917 EDITORIAL PROGRAM

You and all your family will surely enjoy these February and March features:

"The Nameless Man," big new serial story of love, mystery and surprising climaxes, just starting, by Natalie Lincoln; "Keeping House for Presidents," Helen Hamlodge; "The Strongest Pleaders," powerful love story, Mary Lerner; "The Long Way 'Round," middle-aged romance, Ruth N. Tuthill; "Mary Pickford's Movie Children," William Armstrong; "Providing for the Lean Years," practical article; "Compensation," love story, Lilian Ducey; "Latch-Strings Ajar," story of a young girl misunderstood, Katherine Kingsley Crosby; "The Church that Waked Up," Montanye Perry; etc. Stories and articles follow later from these popular writers: Helen Christine Bennett, Anne Gunter Boykin, Mariel Brady, Helen Topping Miller, William Hamby, and many others.

DEPARTMENTS THAT HELP

Many home-loving women have come to look upon McCALL'S as a "household necessity" because of these practical service departments:

Common-sense Beauty Talks, Annette Beacon; Correct Social Usage—What Priscilla Learned at Boarding-School, Mary Marshall Duffee; Words—How to Use Them, Emma M. Bolenius, text book Author; Home Millinery, Evelyn Tobey, Millinery Director Columbia University; Paris Fashion Letter, Paris Correspondent; Home Dressmaking, Margaret Whitney; Embroidery, Genevieve Sterling and Helen Thomas; Children's Page, Frederick White; Baby Welfare, Mary L. Read, Director School of Mothercraft; Foods and Food Values, Isobel Brands; Gardens, F. F. Rockwell; Household Decoration, Mary H. Northend; Parties and Entertainments, Martha Grossman; Housekeeping Exchange, Helen Hopkins.

Wheelbase 122" *45 Horse power*

WHY I SHALL DRIVE AN AMERICAN SIX THIS YEAR

Because it is a GOOD-RUNNING car, staunchly built and smooth in operation—a *perfect piece of mechanism* that will run the way I want it to run as long as I have a use for it.

Because it is a GOOD-SIZED car, big enough for all my needs, with ample legroom in front where you seldom get it and space aplenty in back for riding comfort.

Because it is a GOOD-LOOKING car—graceful and pleasing to the eye, with a real air of distinction about it—a car that I shall not be ashamed of when it is lined up alongside my friends' *costlier* cars.

Because, finally, it is built by LOUIS CHEVROLET and a group of engineering and manufacturing experts whose skill and ability are recognized wherever automobiles are made, and therefore I know that in the AMERICAN SIX I am getting a car that is planned and built as it should be and so will perform according to the most exacting standards.

For These and other good and sufficient reasons I am satisfied that I *should* drive an AMERICAN SIX this year—*and I WILL!*

Brief Particulars of the AMERICAN SIX

Power Plant—45 H.P. 3"x5" motor, cast *en bloc*, upper half crankcase aluminum, three-point suspension, water around each cylinder, valves 1⅝", helical gears, Zenith carburetor, Gray & Davis ignition, six-volt 100-ampere-hour Willard battery. *Clutch*—Three dry-plate discs. *Transmission*—Selective sliding gear, three speeds and reverse. *Axles*—front, one-piece drop-forged I-beam; rear, three-quarter floating, spiral bevel gears, gear ratio 4⅝ to 1. *Springs*—Semi-elliptic, front, 38" x 2", rear, 52" x 2"; Hotchkiss drive. *Wheelbase*—122", tread 56", wheels 32" x 4".

The AMERICAN SIX is on display at the New York and Chicago Automobile Shows

(Concluded from Page 105)

he would go after his share of War-Bride money. And he is getting it too. As he bends over a boring mill he does not cut quite so genteel a figure as he did at the counter of the country bank, but his daily wage is seldom less than twelve dollars, and sometimes more than that. He takes no small satisfaction in the reflection that his wages are at least equal to the salary of the president of the little bank "out home" in the Western town.

Within fifteen minutes' walk from the munition shops in which these young men are making such startling wages you can find thousands of clerks who are receiving salaries ranging from sixty-five to one hundred dollars a month. In fact the clerk in this district whose salary check is above eighty dollars a month feels that he is "good"—or, at least, he has felt so until the bloated pay envelope of the munition worker finally disturbed his peace.

A bookkeeper in the Pittsburgh district admits that a man in his calling who gets above one hundred and twenty-five dollars a month is not ashamed to show his salary check to anybody. It is apparently true that clerks, bookkeepers and office men—the white-collar crowd—in the employ of munition-making companies are faring rather better, as a rule, than their compatriots working in parallel positions for concerns not engaged in munition production. At the same time there is no denying the fact that the rank and file of these men are not on a compensation basis which balances with the wage of the shopworkers at the present time. I have not found a single executive who was willing to say that such a balance does exist.

On the other hand, they admit that the salaried man as a rule must, at least to some extent, look to considerations other than the size of his salary check for consolation when his living expenses, on the one hand, and the wages of his friends in overalls in the plant depress him. There is, for one thing, the hope that he may be handsomely remembered at Christmas. Again, he is encouraged to consider the likelihood that his salary will continue at the same old rate after munition making has gone out of fashion in the United States.

"The Mysterious Dutchman"

The moment you enter the munition field known as the Automobile District you are made to realize that the War Brides have saved their most unstinted dispensations for the West. If you happen to reach Detroit at just the right time, and are posted so that you may wait at the proper place, you will see the figure of "the mysterious Dutchman," who is the center of more speculation than perhaps any other individual munition maker in America. This watchmaker came from Holland about twenty years ago and started a little shop where the cleaning and repairing of fine watches became his specialty. He struggled along, making a meager living until the guns of Europe began to roar.

Then his shop was suddenly visited by one of his customers who had become a scout for a big manufacturing plant that had taken on an immense munition contract. The next day the old watchmaker was missing from his bench. Though he occasionally reappears, the keenest newspaper men in Detroit have been unable to find out where he is concealed. But they do know that when the genial old Dutchman returns to his familiar haunts he leaves a trail of gold behind him—in the hands of the poor of his old neighborhood. "Poor," however, is only a relative term in Detroit at the present time, and indicates merely the minimum of prosperity.

The largess the genial Hollander dispenses is on a scale scarcely possible to any person with an income of less than from five to six hundred dollars a week. Those who are nearest to this man of mystery in the munition world stoutly assert the belief that his earnings are not less than a hundred dollars a day, and that he is engaged in the making of delicate mechanism for use in connection with certain types of high-explosive bombs or shells.

Though the exact size of the old watchmaker's earnings cannot be verified, there can be no doubt that they fully justify his title of King of Munition Makers. His sensational success in his new field serves to emphasize the keenness with which the scouts for the munition plants have combed the field of highly skilled labor as well as the lower ranks of workers.

A conductor on a trolley car running between Detroit and Toledo one day heard three negroes arguing loudly on the rear platform. Two of them were scoring the third for quitting his job in a machine shop—where he was working as fireman with a chance of early promotion to the position of engineer—to go into common labor. The one under criticism instantly retorted:

"You-all kin done keep right on learnin' t' be engineers—heavin' coal an' sweatin' yore clothes at three dollahs a day. Dat's what you-all's gittin'. Me? I's pullin' down ten bones every time de sun draps out o' sight. If you don't believe what I's tellin' you, just come roun' to de big boss at dat minution plant an' he'll put you on fer what I's drawin'."

This statement settled the dispute and the critics decided to desert their posts as stokers.

The case of a certain lathe man in a Detroit munition plant may be a little out of the ordinary, but not enough so to be wholly out of perspective as indicating how high an unskilled mechanic can push the pay-roll figures. In 1915 he was plying the uncertain calling of train butcher on an Eastern road and making, as a rule, from twelve to eighteen dollars a week. Now his pay envelope never contains less than sixty dollars, and sometimes more than seventy. He does a special task of lining or striping shell bodies.

Prosperity in Detroit

Conditions among the more skilled workers in munition plants are suggested by the experience of a man who was employed in an automobile plant, where he did fine work and earned about thirty dollars a week. Now his pay envelope, as a maker of fuse caps, or points, contains an average of about eighty-five dollars a week—and this with very little overtime to his credit. According to one of his superiors in the shop, who knows something of his family life, he lives on an extremely generous scale—"right up to the Detroit pitch"; but carries an extremely heavy line of life and accident insurance, considering the fact that he is described in his application as a mechanic.

According to the superintendent of the plant this man is typical, both in his earnings and in his use of them, of a large class of really skilled workmen in the munition plants of that district.

Detroit may be said to be almost literally staggering under its load of prosperity. One shrewd workman, who has been through several munition plants in other districts, declares that nowhere in this country are the War Brides and their followers cutting quite such high jinks as here. Here even salaries have been compelled to respond—at least to a degree—to the pressure. A high banking official in Detroit is frank enough to admit that banks in that city have been forced to raise the salaries of their employees or else see them absorbed by industrial concerns needing a greatly increased volume of office help.

Naturally this means that competition has boosted salaries in practically all offices in that city. But, again, it must be said there would be extreme difficulty in demonstrating that those salaries are on a par with the war wages which are filling the banks there with deposits and heaping the cash registers of merchants and business houses to overflowing.

A certain banker illustrates the condition with the statement that scores of new manufacturing concerns which have started business in Detroit since the beginning of the war have scouted everywhere for competent clerks, bookkeepers, and office help of every kind; and in their search they have not neglected the banks. The competition thus established has been met, according to this authority, in order to hold their experienced men instead of getting recruits from outside the city—or, at least, outside the immediate district—at pre-war prices. This, he declares, could be done without difficulty.

The tune to which the War Brides are dancing in the Calumet or Chicago-Gary district is suggested by the story of a laborer who will be here mentioned under the fictitious name of Mike Murphy. In 1914 Mike was working in a machine shop in that territory for the modest but respectable wage of seventeen cents an hour. When the War Brides beckoned, Mike responded, and proved to be fairly nimble at piecework. Not long ago, however, Mike and some of his associates struck, because it was decided that the rate then received was too low. For the week before Mike went out his pay check was only ninety dollars! Some preceding weeks, however, brought his pay up to a considerably larger sum, on account of overtime. About a month after Mike disappeared from the pay roll of the munition plant his family applied for charity.

In this same district a merchant declares that women who have never had more than a few dollars to spend at a time are now buying silks and furs.

"We do the best we can to give them true value for their money," he says, "and restrain their reckless extravagance; but it is apparent that what they are after is merely something expensive and showy. We have actually sold silk dresses and seven-dollar corsets to women who have before been utter strangers to anything that a refined woman would class under the name of lingerie."

Bankers throughout this district assert, however, that only the most common and unskilled labor is wasting its money in this way, and that the more skilled workmen, accustomed to earning fair wages under normal conditions, are saving their money to an extent which has immensely increased the deposits of the banks in that territory.

About fifty miles from Chicago is a town, of little more than four thousand inhabitants, surrounded by a rich farming country. A manufacturing concern already established there took a munition contract. The superintendent said he would continue only under the condition that he should be permitted to pick his own men and be allowed time in which to train them. He hired young men from the farms within a radius of twelve or fifteen miles. These husky boys had been used to receiving only a little more than a dollar a day, when they "worked out" at all.

Now they are earning from three-fifty to seven dollars a day and are saving a large percentage of their wages. One of these workers, who is representative of his class, started a savings account at a local bank while working on a near-by farm. In five years his balance in the bank was sixty dollars. At the beginning of 1916 he went into the munition plant and was soon earning six dollars a day, and overtime. In November last, after having withdrawn two hundred dollars with which to buy land, his balance stood at eight hundred and forty dollars.

What Mr. Ripley Says

It is interesting to contrast the wages and conditions just described with those in a large wholesale establishment in the same district, employing unskilled labor. This house has raised its packers' wages from eighteen to twenty dollars a week; its drivers' from sixteen and eighteen to twenty dollars; its boxmakers' from forty to forty-five cents an hour; its loaders' from thirteen and fourteen to sixteen and seventeen dollars a week; its checkers' from sixteen to nineteen dollars; and its truckers' from fifteen to eighteen dollars.

There has not, however, been a general raise in the salaries paid to the office help of this concern. In the factory of this house are employed a large number of girls, doing light work. Their wages have been increased from ten to twelve dollars a week.

With regard to the question of railroad salaries and wages Mr. E. P. Ripley, president of the Santa Fé, was asked whether he felt that there is an equitable balance between the wages and the salaries paid by his company. He said:

"If that question had been put to me, say, two years ago I could have given an affirmative answer and felt that it was a fair generalization of the situation. That is not now the case. Lately, organized labor has gone after an increase and secured it. Unorganized labor, especially in the broad field of what may be called middle salaries, has had little advance in pay since the great European war began. At the same time the cost of the necessities of life has increased immensely. This means, of course, that the man on a small salary or even a medium salary is the one who is feeling the pinch of increasing expenses most keenly.

"It is in recognition of these facts that this company will, on Christmas Day or at the end of the year, give to its salaried employees, and to all those who have not secured the advance referred to, a sum amounting to somewhere in the neighborhood of two and a half million dollars. Men drawing top-notch salaries in the organization will not participate in this gift."

Planning for Power!

Production—production, and more production!! That is the efficiency-gauge of the modern plant. Of all else, "production" is ever the master word.

It calls for uninterrupted operation—for a plant dependable day in and day out—no shut-downs through equipment weaknesses.

Thus, in planning for efficient, reliable power, business heads demand Robbins & Myers Motors for the twenty-one years' record of successful performance behind them.

Whatever the size—1/40 or 25 horsepower; whatever the service—large machine or small; whatever the circuit—direct or alternating current—there is a particular Robbins & Myers Motor for the purpose.

Makers of the best motor-driven equipment also prefer Robbins & Myers Motors for their dependable qualities. Whenever you see any electrical device equipped with a Robbins & Myers Motor, whether it be a vacuum cleaner for the home, an adding machine for the office, or a drill press for the machine shop, be assured that it is a high-grade product throughout.

You will rarely find a Robbins & Myers Motor on any appliance that does not measure up to the Robbins & Myers standard.

If you are a motor user planning for more and better power, write for data on motors to suit your particular needs.

If a manufacturer of motor-driven equipment, let us submit sample motors for testing. No obligation involved.

If a dealer, more facts await you regarding Robbins & Myers service.

MICHELIN

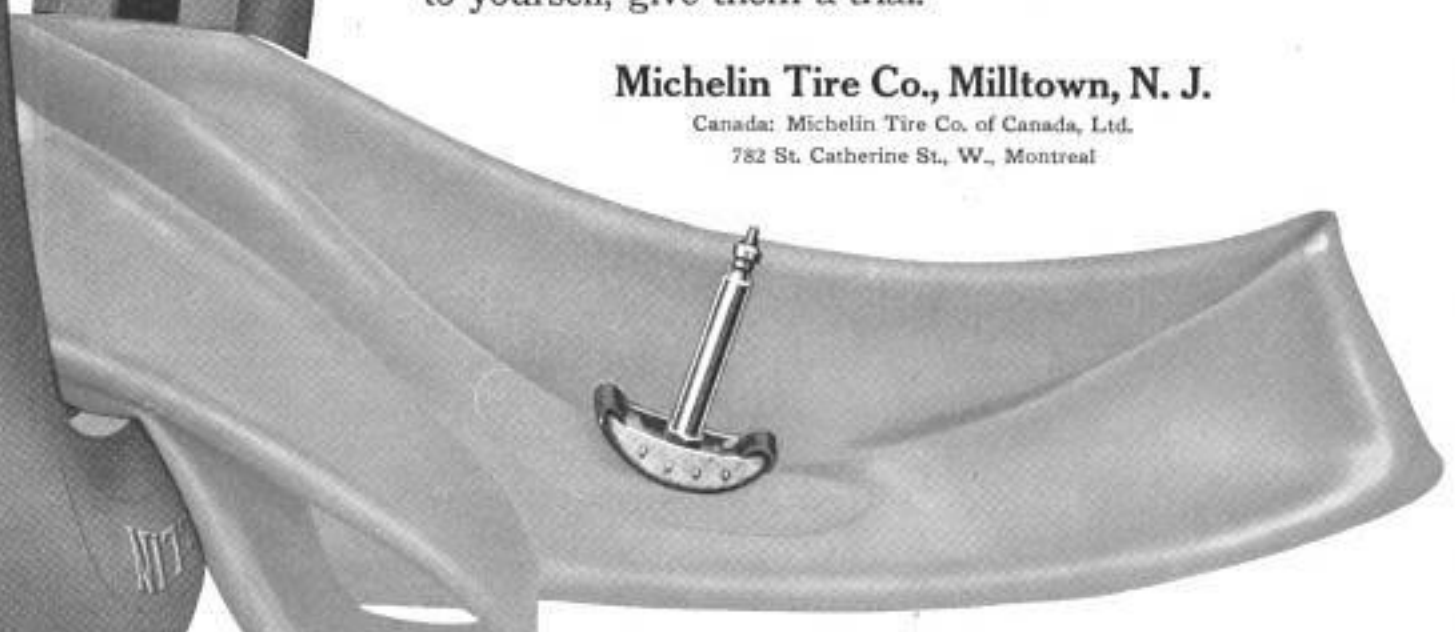
The Combination that Means Tire Satisfaction

Michelin Universal Treads

The Michelin Universal Tread Non-Skid is as good a tire as money can make or buy.

It not only contains the very ***best*** *rubber and fabric, but so much* ***more*** *of each of them that it weighs from 12 to 15% heavier than the average non-skid.*

Michelin Red Inner Tubes



Ever since Michelin invented the pneumatic automobile tire and tube 22 years ago, Michelin Tubes have been recognized as the world's standard of quality.

Michelin Tubes do not grow brittle or porous with age. The exclusive process by which they are made on a ***circular*** *mandrel produces a truly ring-shaped tube which fits the casing perfectly without stretching or wrinkling. Consequently, the Michelin Tube possesses greater strength and durability, and does not puncture through pinching.*

Remember that, although of superior quality, Michelin Casings and Tubes are moderate in price. In justice to yourself, give them a trial.

Michelin Tire Co., Milltown, N. J.

STOP
and consider

the supreme importance of the brakes on *your* car. In traffic, down the hills, when emergencies arise — safety and prompt action depend largely upon the brakes, particularly the lining. Brake-lining that *wears* is always dependable. It responds immediately when you press the pedal or pull the lever. Where safety is concerned, why not pay a few cents more and get ——

Raybestos
BRAKE LINING

Longest Wear

RAYBESTOS wears to the last strand. Other linings may "grip" when first placed in the brakes, but they haven't that peculiar hardness which is so much a part of Raybestos. Raybestos is solidly woven of real asbestos, treated by a special process which *insures* continuous service. Guaranteed to wear one year. Otherwise, lining will be replaced. Security, economy, added convenience are valuable features woven into every foot of Raybestos.

The Silver Edge

THERE are many clever imitations of Raybestos. Some of these look like Raybestos. Very often the supply dealer makes greater profit selling the imitation. But reliable dealers prefer to handle genuine Raybestos because it gives real service to their customers. To prevent substitution, we place a Silver Edge along each foot of Raybestos. The Silver Edge protects you from inferior substitutes. Look for it!

Studebaker

Established 1852

The new Auxiliary Seat, exclusively Studebaker, is as comfortable as an arm-chair. *(Patent Applied For.)* These large, roomy and comfortable chairs fold up and disappear under the tonneau seat when not in use, leaving the tonneau unobstructed and the carpet free from cuts or gashes.

50 Horsepower 7 passenger SIX $1180

IN comfort, roominess, convenience and easy-riding qualities, Studebaker cars are the finest cars on the market within hundreds of dollars of their prices. The upholstery is in high-grade, semi-glazed, straight-grained genuine leather—long, genuine curled hair is used in the cushions and seat backs. The seats are form-fitting, thus giving restful comfort for long trips and tours.

In finish, appointment and equipment, Studebaker cars are distinctly *fine* cars. The silk-mohair top is bound with leather edging, carpets are bound with leather instead of the cheap, raveling thread-stitch, and aluminum binding finishes the "battleship" linoleum in the front compartments of the touring cars—these, and other little details, have all been observed. Doors are provided with roomy pockets.

The exterior is finished in a beautiful gun-metal dark gray, put on with twenty-five hand-applied paint and varnish operations.

Studebakers are pre-eminently the *power* cars of 1917. The SIX at $1180 gives *full* fifty horse-power and the FOUR at $940 *full* forty horse-power—the *most powerful* cars of their weight on the market.

Studebaker cars are truly designed to satisfy persons accustomed to paying from $2000 to $3000 for automobiles, and upon examination you can easily see that any Studebaker car, in quality of material, design, workmanship and finish, is distinctly high-grade. See the car—ride in it—and be convinced that the day of high prices for fine cars has passed.

Studebaker offers a complete line of high-grade pleasure and commercial cars from $900 to $2600. Write for handsomely illustrated catalog picturing the cars and giving complete list of prices. All prices F. O. B. Detroit.

Thousands of Prominent People Throughout the United States Purchased Studebakers on Prominent Buyers' Day, December 4th.

THE SPENDTHRIFT INVASION

PHOTO, FROM BROWN BROTHERS, NEW YORK CITY

The Arts of Wining and Dining Have Been Developed to a New Point of Sophistication

By Cameron Mackenzie

NEW YORK'S winter season—always a period of many significances—gets under way about the middle of October. Shortly before then that tribe of astute and heroic gamblers, the proprietors of the great hotels, restaurants, cabarets, and the like, compose themselves as best they can and prepare for their annual agony. It is always a ticklish time for them. One has lavished, perhaps, fifty thousand dollars upon a new open-air skating rink; another has plunged a hundred thousand upon some novel idea to draw the dancing throngs; a third, maybe, has a princely fortune locked up in a music hall. Through the summer they have been scheming and working and disbursing, and the time has arrived when they will be able to form fairly accurate guesses whether New York will have a flush, riotous, spendthrift winter to make them rich, or a dull, cautious, home-staying winter to leave them feeling poor.

This year these providers of luxury and pleasure began as usual to sniff the air when the opening of the season was due. At that time—mid-October—the city was full; even a casual observer could not have helped noticing the throngs in all of the public places where money is spent on a more or less lavish scale. The anxious, waiting watchers took heart and declared that the metropolis was in for at least a good winter. Mid-October advanced toward the first of November. The crowds increased; the hotels became comfortably filled; the theaters and shops did a brisk business. Our friends, the gamblers in appetites, took still more heart.

But they are not a hasty crew, and they adjured themselves to pause at conclusions. It was possible that the horde which overran the town was nothing more than a crowd drawn by the election and the celebration which the city has come to make of that occasion. Daily, however, the jam increased. Election night with its *furore* passed, and then the thing began to manifest itself in its full strength and abandon. Within a week the proprietors of the city's glittering palaces, to a man, realized jubilantly that New York was in for the fattest winter that it has ever had. Election, which it turned out had held as many persons at home as it had brought out, the definite passing of the infantile-paralysis scare, the stock-market boom, other causes, had loosed a pent-up flood, and a tidal wave beyond the pleasure venders' boldest dreams was upon the town.

The dreaded thinning out and quieting down after election never came. Instead, it seemed that the thousands upon thousands who had come to New York for that event had decided to remain, and it was certain that hourly fresh thousands were rushing in. Day by day the army swelled. Hotels comfortably accommodating eight or nine hundred guests began, by dint of many strange expedients, sleeping from twelve to fifteen hundred; cabarets, which had earlier trembled lest patronage should fail them and had hesitated at imposing admission fees, posted notices announcing unheard-of charges; great sections of theaters began to sell out at extortionate prices. Thanksgiving came, and there was a brief lull during which jaded hotel clerks caught a little sleep, and dance-floor managers were able to find a few moments between midnight and dawn to rest their tired feet. But then the carnival recommenced in its full volume and violence, and gives no sign of slacking down. There has never been anything equal to it before. The nearest approach to this winter's extravagance and excitement seeking was last winter's; but this far overtops that. Last winter there were certain definite types of spenders: There were those who had acquired sudden wealth, either through munitions stocks or munitions contracts; there was a large class of millionaire South Americans and of the idle rich, who found themselves more or less barred by the war from their former haunts abroad; there was the New York broker crowd, exultant that the stock market had revived and eager to celebrate. Together these various groups made New York, particularly in its night life, a town of much mad disbursing and unguarded living, and the winter was a lush one indeed.

But there was in the city last year still another class, a well-to-do, substantial class who, with the evidences of returning prosperity, had come to the city, perhaps for a holiday, perhaps for business, most likely for both. These people filled hotels and restaurants, but they kept their hands tight round their rolls of bills and scrutinized the checks the waiters brought. The great mass of last winter's throng seemed to think twice of the cost of theater tickets and of the price of admission to the cabarets, and so on. The difference this year is that not only are all those incautious spenders still spending incautiously, but their spirit of "Pooh, what's a hundred dollars!" has apparently seeped into that army which last year had not caught the virus of scattering gold about. Also, and most importantly, that army has swelled to incredible proportions.

This last fact is one of the most distinguishing features of the present New York winter. The number of persons, all of them with seemingly bulging purses, who have suddenly rushed upon the city from all parts of the country is astonishing. New York this winter is literally invaded, crushed, trampled down by thousands upon thousands of people from other communities of the United States. It is reliably stated that during the last week in November there were more strangers in the metropolis than during any other week in the history of Manhattan Island. Various estimates of the number of visitors during that time have been made. Those estimates range from half a million to seven hundred thousand, whereas a careful calculation made last winter placed the average number of nonresidents daily in New York at three hundred and fifty thousand.

In November the city's hotel and restaurant facilities all but collapsed. There are in the city now twenty-two hotels which may be rated as first-class. Some of these have normal facilities for as few as four hundred guests; others for as many as fifteen hundred. There are, perhaps, one hundred other actual hotels of various grades of excellence, the gross capacity of which probably exceeds the gross capacity of those of the more luxurious type. To say that in not one of these establishments, great or small, was a room to be had for a king's ransom during most of the week would be well-nigh

Digitized by Google

Every One of These New Wonder Rooms is Nightly Jammed to Its Utmost Capacity

meaningless. The problem with the hotel proprietors then was to find a nook or cranny in Newark or Yonkers or Brooklyn to which they felt that they could decently send old and valued patrons who had failed to make reservations.

Literally that was what happened. For some days any establishment within a radius of thirty miles of New York which could in any sense pass muster as a hotel, was filled with the overflow from the city itself, and it was not an unusual occurrence for a man in a white shirt front and his wife in a low-cut evening gown, perhaps wearing expensive jewelry, to rise from a gay supper party, costing someone eight, ten, twelve dollars a plate, in order to make their way to a small, doubtless dingy hotel in a dark street of Hoboken or Long Island City.

Meanwhile, within the city's great caravansaries themselves strange conditions reigned. One morning a man who was a guest at one of the most sumptuous of the hotels walked to the cashier's desk and presented a check to be cashed.

"Your room number, please?" the cashier requested.

"Bathroom J," the guest told him.

In that particular hotel, and in nearly all the others, the public bathrooms on every floor were converted into bedrooms by placing mattresses in the tubs, and in tubs merchants, bankers, leading citizens from all parts of the country, and sometimes their wives, slept, because it was a choice of that or sitting up all night in a lobby.

Hotels Full to Overflowing

IN ANOTHER of the large hotels a solid and very dignified citizen from a Western town, who with his wife was occupying a double room, appeared one morning at the clerk's desk and said quite seriously that he had a complaint to make. He was a known patron of the house and immediately he received solicitous attention.

"Your floors are too hard," he said.

The clerk looked bewildered; the management had not been reduced to sleeping their guests upon the floor.

"But ——" began the clerk anxiously, and then the man explained that the evening before his wife had encountered two women friends of hers who were wandering from one hotel to another in a dazed and distrait condition. They had tried, or hotel clerks had tried for them, twenty-three hostelries in search of accommodations for the night, but to no avail. Both of the women were utterly exhausted and the man's wife had offered to take them in. The three women had piled into the double bed which was in the room, and the man had made such disposition as he could of his none too lithe form upon the floor.

Ballrooms and banquet rooms in many of the hotels were converted into temporary dormitories. Proprietors, managers and their staffs in several instances surrendered their rooms. Cots were sometimes placed behind curtains at the ends of halls. Any number of establishments, which in the past have not enjoyed reputations to attract a careful clientele, have suddenly commenced housing as conservative and irreproachable citizens as there are in the land. Many of these places have jettisoned their old followings, and under the stress of this winter's rush upon New York have assumed overnight entirely new characters.

Another manner in which to show the magnitude of this onslaught upon the city is through the figures of advance hotel reservations. The reservation book of one hotel, which until this season usually contained only twenty pages of advance reservations at any one time, contained on December first forty-nine pages. The manager of another splendid palace asserted that there was not a room of any description, out of the eight hundred odd that he had to dispose of, unengaged for fifty-six days ahead. In addition to this all the more desirable and high-priced of the hotels report that they are compelled to turn away from twenty-five to thirty-five per cent of all of those who apply for accommodations. One manager sent one hundred and seventy-five telegrams in one day notifying applicants that his house was full. That same manager upon a day in the same week served meals to eight thousand and nine persons, and his is by no means among the largest establishments of the city. Last season at the same time he served approximately half that number.

To the multitude which has descended upon the city, that first commandment of the New York hotel keeper, that prices shall not be boosted temporarily during a rush, has been a godsend. Had that fixed practice not been followed, there would, especially at the end of November, have been no limit to what accommodations might have cost. But the practice was followed, and the room which cost ten dollars a day in the slackness of summer also cost ten dollars a day even when there were fifty persons clamoring for it at any figure. However, a bathtub with a mattress in it fetched, in many of the first-class establishments, four dollars a night!

New York is Literally Invaded by Thousands Upon Thousands From Other Communities of the United States

Also, although the hotels adhered to their announced rates, the public often paid exorbitantly. For example, there was a man spending a considerable time in the city who had a friend coming on for a single night ten days later. He had tried vainly to make a comfortable reservation for him; nothing was available. One morning he chanced to be loitering near the clerk's desk and overheard someone surrender a room which the other guest had previously notified the management he would want for two weeks longer. The first man promptly took it at eight dollars a day for the intervening ten days until the arrival of his friend. Eighty dollars for one night's lodging! There is any amount of such evidence. Certain it is that, at least for any continuous period of time, New York has never been so full.

In the main the people who compose this multitude are the well-to-do people of nearly every community in the country. Two years ago they came scarcely at all; last year the man came alone and stayed a week; this year he has brought his wife and is staying a month. By day the woman shops while her husband either does a little desultory business or plays the market or visits a tailor. By night they dine and attend the theaters and cabarets. Widespread, general prosperity has given these people cash and a sense of security, and most especially has imbued them with a holiday spirit. During the periods of their visits they appear entirely unconcerned over the cost of anything they want and quibble at nothing. In short, New York has this winter a tremendous army of free-handed spenders and pleasure seekers, recruited by flush times, that it did not have before. That fact has worked out variously, but in no way more strikingly than in the extent and scale upon which white-shirt-front dissipation is being conducted in the city this year.

If one could get up above New York, between midnight and one o'clock of any week-day, and were able to look down into all the great cabarets and the restaurants, a visual impression of this strange, overwhelming phenomenon of American life might be gained. One would see, through a dazzle of light, vast rooms, every room so filled with revelers that waiters would be edging sidewise round chair backs in order to make their way. In some of the larger hotels there would be two or even three such rooms. Streams of people would be flowing out; fresh streams would be flowing in. The spaces in the centers of the rooms would be walled and wedged with thick masses of humanity.

Leaving out of the reckoning all but the really sumptuously appointed places, there are operating in New York this season approximately sixty of these new wonder rooms of pleasure called cabarets. Practically without exception every one of them is nightly jammed to its utmost capacity. In many of them every table for two weeks ahead has been reserved. But that is a matter of the smallest moment to the managements, because for every table not claimed by midnight eager applicants in abundance are pressed against the plush ropes. Any one of several of the larger establishments passes in as many as seven hundred and fifty persons every evening to sup and dance and spend. The enormity of the thing is amazing; so also is its lavishness.

How New York Amuses the Spenders

TO REGALE the crowds which have come to them the cabaret managers have outdone themselves this winter. Not only have the arts of wining and dining been developed to a new point of sophistication, but forms of entertainment more costly than ever have been introduced. One hotel pays a team of exhibition dancers fifteen hundred dollars a week, and its nightly expense for music is two hundred and fifty dollars. Several of the cabarets offer musical shows with large, marvelously costumed choruses and some of the highest-priced comedians of the stage. Three or four skating troupes, representing outlays of from five hundred to a thousand dollars a week, are performing in different of the night resorts. At one establishment an old-world marionette show has been introduced with great success; it is only one feature in a long program, but it costs two hundred dollars a week. One of the very largest of the hotels has begun the transformation of the entire acreage of its roof into three vast connecting rooms with glass partitions between: in one room there will be general and exhibition dancing, in another ice skating, in a third roller skating. More than a hundred thousand dollars will have been spent upon this project. If the proprietor of any one of these places was convinced that his particular pleasure-hungry throng wanted all-night grand opera, he would hire the most expensive singers in the world.

All of this is made possible not alone by the size of the crowds but by their prodigality. White-light prices have reached a staggering level. It has become perfectly

DOUBTFUL DOLLARS

By Meredith Nicholson

ILLUSTRATED BY WILL GREFÉ

HAROLD looked at Reggie; Reggie looked at Harold; both fidgeted and turned their eyes to the blank wall. They sat side by side, in one of the cabinets reserved for the patrons of the safety vault of the White River National Bank, with a large tin box before them. A copy of the will of their father lay beside it. Harold seized this document and turned over the few typewritten sheets that recorded in strictly formal phraseology the testamentary wishes and intentions of George B. Raymond, deceased. The rustle of papers in a neighboring cabinet, the remote tinkle of a telephone, and light footfalls in the corridor floated across the partitions in a blur of sound. Reggie played nervously with his watch chain and waited for his brother to speak. Suddenly a grin crossed Harold's face, and he bent his gaze quizzically upon his brother.

"It's a sell; it's one of dad's jokes!"

Reggie swallowed, a process attended with so much difficulty that he tugged at his collar to gain greater freedom for his throat.

"You mean," he whispered, glancing at the door, "that there is nothing—nothing!"

Harold tapped the box and nodded significantly.

"You have said it, Reggie," he replied nonchalantly. "His will divides a million among his four children, but as a matter of fact he didn't have a cent. The humor is a little grim, but dad was capable of it."

He smiled at the remembrance of his father, who two days earlier had been buried with all the honors that may be paid a man of George B. Raymond's professional and social prominence. Raymond's legal ability had never been questioned. He numbered among his clients the biggest bank in town, the traction company and half a dozen other corporations that paid generously to be kept out of trouble. He was not only a lawyer of the first rank, a familiar figure in the courts of all the Mid-Western capitals, but a man of broad cultivation, a student of general literature and by general consent one of the best fellows in the world. Any public dinner over which Raymond presided—the most charming and witty of toastmasters—was bound to be a success, and his many admirers were in the habit of calling him the Joe Choate of the Ohio Valley. Money with Raymond was only a means to an end, and he distributed it lavishly for his own pleasure and that of his family and friends. Ladies with subscription papers always saw Raymond first; he never failed to lead off with something substantial to shame other citizens into equal generosity.

His identification through years with the legal affairs of big capitalists encouraged the belief that he had been let in on the ground floor of many schemes that had prospered mightily. His family's scale of living lent color to the idea that he was rich—very rich indeed, by the local standards.

"But that million—two hundred and fifty thousand apiece!" gasped Reggie. "He wouldn't have put a million in his will if he didn't have it! That wouldn't have been straight! And dad was the straightest man alive!"

Harold nodded his acquiescence.

There was no question of their parent's integrity. He bent toward his brother and laid his hand on his knee affectionately.

"There's no doubt about that, Reggie. But dad liked a practical joke. His sense of humor's what made him the good fellow he was; that's why he was the most popular man in the state!"

Reggie frowned and shook his head impatiently. It was not their father's humor or good fellowship that they had to determine, but the nature and extent of his assets, which the will implied were of the value of one million dollars. But Box 437, carried on the records of the safety-vault manager as belonging to George B. Raymond and opening readily to his key, contained only these items:

One copy of Lowell's Fable for Critics—first edition.
One copy—leaves uncut—of John Hay's Castilian Days—first edition.
One autograph letter, Washington to Hamilton, 1776.
One autograph letter of Abraham Lincoln, Springfield, 1859.
A recipe for Rum Punch in the handwriting and over the signature of Aaron Burr, 1829.
One autograph letter, William McKinley to George B. Raymond, 1899, on White House stationery, expressing regret that Raymond had declined the post of minister to Austria-Hungary.

In the collecting of such trifles as these, the late George B. Raymond had amused himself, though with characteristic generosity he had usually given away the rare books and autograph letters he acquired from time to time. The items that remained in the box had been retained more by chance than by intention.

"There may be another box somewhere," Reggie suggested. "We'd better go through his office safe again."

He grabbed a book from the box and ran the leaves under his thumb feverishly. Harold took the Fable for Critics from him and tossed it into the box.

"You needn't expect to find Government bonds stuck away in dad's books, and you needn't waste time looking for secret drawers and panels at the house or in the office. I tell you I've been into all that. Dad hadn't a thing but the old home, which is mortgaged for five thousand dollars, his law library, and about a thousand dollars in bank he got as a retainer the morning of the day he died and didn't have a chance to spend. I tell you," he went on earnestly, pronouncing the words slowly to be sure they were sinking into the consciousness of his awed and befuddled brother, "I tell you there are no assets. Maybe he meant to destroy this will or say something to us about it, but the end came too quick. He has a sixty-day note in bank for five thousand dollars—money he borrowed to pay for that limousine the girls were hollering for. We may as well face it right here and now—dad died busted—worse than busted!"

"But he made a lot of money—something like fifty thousand a year. He did that for years."

"And we spent it!" replied Harold grimly. "We spent it and more. He used to carry a lot of life insurance, but he cashed in all the policies and blew the proceeds. And for the last five years he couldn't get any more—the doctor told me that. The fact is that for five years dad has been doomed. He worked like a Trojan and never took any care of himself, and after mother died there was nobody to check up the family expenses, and we all got what we pleased and cried for more. Why, that house the girls had at Kennebunkport last summer cost a fortune to run! Mildred and Dottie are the most accomplished spenders in town.

"And you and I haven't been exactly thrifty, Reggie; nobody's ever complained of our penuriousness."

Mr. Reginald Raymond twisted uncomfortably in his chair. He had been expensively educated as an architect, but had thus far reared no monument to his genius save the Faraway Country Club house from which he had carelessly omitted the kitchen flue, until reminded by his chums on the board of directors that chimneys were usually considered essential to the utility and beauty of country-club kitchens. Reggie hung his head guiltily.

"And when it comes to that I don't know that I have much to say for myself," Harold continued. "Dad gave me every chance to get on at the law, and I'll never stop hating myself for not working at it instead of chasing golf cups. Father didn't pass his charms, graces and talents on to us, Reggie; we'll have to work to get anywhere, and the sooner we begin the digging the less likely we are to die in the poorhouse! The fact is we're two pretty sad pills. You can almost hear people saying: 'It's too bad George Raymond's sons are so worthless.' I'm not going to rub it in on you; I'm two years older and, with the running start I got, I ought to be ready to step right into father's practice. As it is I've got to fight to hold any of it. But I'm going to make the fight. And see here, Reggie, it's possible—it's possible—that dad willed us this stage money to give us a little breathing time. He made me executor and—and"—he lowered his voice to a whisper—"that puts it all in my hands, and I have sixty days to file an inventory and appraisement—two months for us to pose as having a quarter of a million apiece! Do you get the idea?"

Reggie stared at him dully and then shrugged his shoulders impatiently.

"Don't be an ass!" he blurted. "If we're a busted family the sooner we face the situation the better. Dad oughtn't to have done such a thing; it makes monkeys of all of us; and when the thing leaks out it's going to be a reflection on him. Great Lord, we can't ever live it down!"

"Listen to me; we're not going to live it down; we're going to live up to it!" said Harold patiently. "We've got sixty days' leeway. The newspapers have screamed our million in big headlines; in this town two hundred and fifty thousand apiece for the four of us sounds mighty big. We are not going to weaken on it; we're going to bluff it out and play up to the million.

"The public thinks we've got the money; even the judge of the probate court has no reason to question it. Those old boys that run this bank won't dare be fussy with me for fear of losing my account as executor. Instead of sneaking up and begging for a slight advance to help us pay the grocery bills, I'm going to go in and remark casually that I want ten thousand dollars to carry the estate until the January dividends come in."

"Thirty Thousand Shares! Thirty Thousand! Dot, Lock the Door—Lock All the Doors!"

Digitized by Google

"You can't put it over!" moaned Reggie. "You'll go to jail! This is the last bank on earth to try such a trick on!"

"The White River National," Harold resumed musingly, "judges by appearances, like all the rest of the world. I'm not only going to borrow ten thousand dollars, but I'm going to do it with a slightly bored air, as though ashamed to be asking for so trifling a sum. And then, with all the hauteur I can command, I'm going to intimate that I'm prepared to succeed father as attorney for the bank. Of course I shan't pretend to be father's equal as a lawyer, but I'll remark shyly that I'm somewhat familiar with the bank's run of legal business and that there are some matters pending that I'd like to go through with—a matter of professional pride, you know—and before I leave I'm going to have them sign the kind of contract father had with them, for ten thousand a year as a general retainer. And I mean to put it over."

"His Will Divided a Million, But as a Matter of Fact He Didn't Have a Cent"

Reggie took a cigarette from a silver case, eyed it absently and then flung it on the floor.

"You're crazy—plumb crazy!" he ejaculated.

"Don't be silly! Dad stipulated that I wasn't to be required to give bond as executor—which was thoughtful of him—and if we play the game right we can live on this million till we plant ourselves and the girls. I tell you I've thought of everything!"

"It's rotten; it's criminal!" faltered Reggie, twisting his cane in his hands. "You can't take such a responsibility; it's going to ruin you. Father always said if anything happened to him he wanted us to feel that we could rely on Uncle Walter, but it may be months before we can reach him."

"We've got to act right away and, as Uncle Walter is somewhere round the sources of the Amazon looking for freak plants, his advice isn't worth considering."

Their father's only brother, a much younger man, had been a broker in New York until a lucky investment in a Nevada gold mine made possible the indulgence of a passion for orchid hunting.

"If he'd fall off a mountain sometime," said Reggie hopefully, "we might get some of his money."

"He isn't going to die and leave us any money. Dad told me once that Uncle Walter's worldly goods are all destined to endow a botanical garden for their dear *alma mater*. Nothing doing there, Reggie!"

"From the way you talk anybody might imagine you were glad we're busted!" said Reggie bitterly.

"I'm as cut up as you are," Harold protested, "but I'm going to make a front—a grand marble façade, to borrow a term from your profession—and I want you to take the cue from me. I want you to stop carrying a cane in daylight, and make a rustling sound as of a young man about to touch off a pile of kindling right under old Mother Earth. Just now you're the best tennis player in this township, but you're going to bloom out as the most prosperous architect! You're smart enough, Reggie; all you need is to look busy and prosperous. The plans you made for Robertson's new house were nice plans; he hasn't closed with that Philadelphia chap yet. You want to call on Fanny Robertson and mildly suggest the new house and, if you work it right, you can play her to persuade Robertson to adopt your plans. If you were poor and struggling you wouldn't have a look-in; but you're rich—you've got a quarter of a million dollars, remember that! And Fanny's a mighty nice girl who would look well in our family circle.

"There's nothing, Reggie, that impresses the human mind like the idea you've got money. Any man's as rich as he thinks he is; it's all purely psychological. By the way, you lost out on the competition for plans for a courthouse last year—in Oklahoma somewhere, wasn't it? Well, dust 'em off and shoot 'em in to the county commissioners here right away. To-morrow's the last day for submitting plans for a new building, and I always liked those drawings of yours, except those fancy terraces, which were more appropriate for an art museum than a law foundry. And now begin looking quietly, elegantly rich but very busy, and keep your mouth shut. The girls? Well, you leave all that to me. We've got to find a couple of rich husbands for our sisters while the million lasts, and we've got to be quick about it. Mildred has kept Hornbrook, that wealthy furniture chap from upstate somewhere, dancing for a year, and it's about time she was stopping her foolishness. She seems to be inclining to Fleming, the young assistant at St. Timothy's—salary twelve hundred dollars, gross—but we can't stand for that. The girls have got to marry money while we're rich! And now let's put the estate back in the steel cave and go out and see what we can do to fool all the people most of the time!"

II

HAROLD and his two sisters were at the dinner table one evening two weeks later when Reginald came in hurriedly. The effect of their father's death had been to bind them more closely together, but now that the shock of his abrupt ending had passed, their intercourse had lost its subdued tone. Reggie's cheery salutation as he apologized for his tardiness caused them to eye him expectantly.

"Robertson's taken my plans! Contract signed and I've got a check for the first installment of my fee in my pocket!" he announced jubilantly.

Mildred and Dorothy chorused congratulations.

Harold rose and shook his brother warmly by the hand.

"It's in you, my boy; it's in you! They can't keep a good man down!"

"I suppose," remarked Dorothy, "you may live in the new house one of these days. You and Fanny have always hit it off nicely together, and I do hope ——"

"This is purely a business matter," protested Reggie, the blushes showing through his tan. "That Philadelphia architect couldn't figure in four bathrooms on the second floor, and my plans had five; and Mrs. Robertson kicked on the living room in the other chap's scheme, because you couldn't get out of it into the conservatory without going through the dining room. They're talking about building a summer home on an island in Lake Huron they've owned for years, and I'm after that job too."

"I guess Robertson has a pretty good opinion of the family," remarked Harold casually. "He's hired me to pass on a new issue of traction bonds. He and Tarleton have had a row about something, and he virtually said he was going to throw me part of his business."

"I know, Harold, that you've been terribly busy," Mildred began, "and I haven't wanted to trouble you, but there are some things we ought to talk over. Mrs. Merriam was here this afternoon about the new children's hospital. She says one day at the country club—she described the meeting and everything about it—papa promised her five thousand dollars for the building fund. She hasn't anything in writing, of course, but just as a matter of honor, boys, I really think we ought to pay it."

"Five thousand dollars!" gasped Reggie. "The woman must be insane!"

"I hope," said Harold calmly, ignoring the wild look in his brother's eyes, "that you told her it would be all right. Any promises of that kind father made must be respected. I'll call on Mrs. Merriam and assure her that the five thousand will be paid. The Merriam Manufacturing Company was one of father's oldest clients and we certainly shouldn't want to appear mean to the Merriams. It's possible—barely possible—I may be able to hold the business."

"And while we're talking family matters," continued Mildred, "there's something I want to tell you. You know I've been seeing a good deal of Mr. Fleming, Doctor Cable's assistant at St. Timothy's, and though his salary is small he's bound to succeed; he's devoted to his work and he's certainly doing wonders with the choir."

She paused, and in the silence Reggie kicked Harold's legs viciously. "What's the matter with Hornbrook?" asked Harold calmly. "I've been training myself to salute *him* as brother. As to Fleming, all I can say is that he plays rotten golf."

"He's the most beautiful character—a fine manly man," declared Mildred. "He isn't really like a minister—he's ever so sensible and broad-minded."

"He's a dear," cried Dorothy, "and sings wonderfully!"

"So do the nightingales, but they don't make any money at it," suggested Reggie.

"I don't mind saying," said Mildred pensively, "that I do like Bob Hornbrook pretty well, and if I were just a poor girl I might marry him. But now that dear papa has left us so much more than I ever dreamed of I feel free—free to marry a man I deeply love and reverence in spite of his poverty. My money will be of real help to Edgar in his work."

Reggie, choking on a macaroon, drank a glass of water at a gulp. It was a relief to his feelings to find that at last his brother was staggered.

"But, Mildred," Harold remarked with a fine affectation of brotherly tolerance of a sister's weakness, "it's hardly fair, after keeping Hornbrook on the string so long, to drop him this way. It's not playing the game! He's a splendid fellow—far and away ahead of that anæmic little Fleming. We've all got to stand together now that father's gone—one for all and all for one; that's the ticket; and a connection with the Hornbrooks would be a big thing for Reggie and me. Why, the Hornbrooks are one of the most influential families in the state—pioneer stock, social prestige and all that sort of thing, to say nothing of their boodle. You have another guess coming, Mildred! Think it over!"

Mildred was a stubborn young person, as Harold well knew, and if she had determined to marry a potential bishop, there was little likelihood of his being able to thwart her. He had not taken the rather timid approaches of the young minister seriously, but had assumed that, of course, Hornbrook, who came to town frequently for the very obvious purpose of wooing Mildred, would sooner or later declare himself. It was more than annoying, it was a downright calamity that threatened the family in case Mildred persisted; and there was nothing in the past history of his tall, fair, blue-eyed sister to encourage the hope that she would change her mind. Reggie, glaring at him, covertly signaled that the time had come for plain speech with Mildred. The mere announcement that her quarter of a million was all in the air would very likely change her ideas of marriage.

"I mean," Mildred was saying solemnly, "to hold my money as a sacred trust; and I've been thinking of all the good I can do with it. You know I've always been interested in charities and that sort of thing, and I've been thinking of the long future and of all the noble use I can make of my income—with Edgar to help me."

A heartbreaking groan from Reggie caused his sisters to glance at him apprehensively. He began coughing furiously and explained, between paroxysms, that a piece of salted almond had stuck in his windpipe. As there had been no salted almonds on the table, this explanation was somewhat lacking in plausibility. Harold thumped him on the back with unnecessary violence.

"You needn't murder me," Reggie roared, rising wrathfully.

"If that's what I get for giving you first aid you can perish the next time," said Harold, who, having relieved his feelings by the chastisement of his brother, was restored to something approximating his usual equanimity.

"About young Fleming," he remarked, as he resumed his seat and lighted a cigarette, "all we ask is that you do nothing precipitate. You girls should remember that the income on two hundred and fifty thousand dollars isn't much—not really. We've all flung money to the birds and, with your tastes and love of luxurious ease, you'd find it pretty hard going with a paltry twelve or fifteen thousand a year and a clerical handicap."

"Money isn't everything, Harold," Mildred protested.

"It is if you haven't got it," remarked Harold. "Suppose we drop this for the present. Dot, what's on your mind?"

"Oh, there aren't any men in my landscape," Dorothy replied easily.

It was said of Dorothy, who was dark, that she was the most interesting of the Raymond children. She was far more independent and venturesome than Mildred. It was Dorothy who had, on a wager, driven into town and through Main Street on a loaded hay wagon commandeered at a farm adjacent to the country club. Dorothy's Airedales were a nuisance to the neighborhood; her runabout was a terror to pedestrians, but the neighbors and the general public were very tolerant of Dot Raymond. She had been shipped home from two boarding schools, owing to her careless habit of ignoring the rules, but nobody thought the less of her. Dot didn't know much, but a girl as pretty as Dorothy Raymond doesn't have to know much. With her brothers she had always been a good comrade, and Harold smiled indulgently, and Reggie sat up hopefully, as she pushed away the bonbon dish and folded her arms on the table.

"Prepare for a jar, all of you! I've got about enough of society and I've decided to do something different for a year or two, just for a change!"

"Good for you, Dot!" cried Reggie. "If you'd sprung another preacher on us I'd most certainly have screamed!"

"I'd come to this conclusion before papa died," Dorothy began seriously, "but didn't get a chance to talk to him. You see running a tea room and doing slumming and things like that are played out for girls like me. I want to do something interesting—something that hasn't been worked to death. And now that it's all understood about the money,

Digitized by Google

and we're really never going to suffer, I'm disposed to take a shot at business with Nellie Cummings. When her father died last winter he didn't leave a thing—not a thing! And you know a girl brought up as she was, and led to think there would always be plenty, finds it pretty hard to be left with absolutely nothing. We ought to be so grateful to dear papa for providing for all of us so beautifully."

Reggie cringed. Harold, who had steeled himself for any blow, nodded encouragingly.

"Cummings kept a broker's shop, as I remember," he remarked, "but he wasn't satisfied with dealing in gilt-edge securities—his original line—tried to launch a bunch of local fakes. An alliance with Nellie doesn't sound highly promising, Dot; but what's the rest of it?"

"Well, Mr. Cummings had a partner, and Nellie and I have decided to buy him out. The firm's name, you know, is worth something!"

Reggie showed signs of exploding.

"Cummings & Parker, Investment Securities, White River Trust Building," murmured Harold musingly. "I know the office; the furniture is worth about four dollars providing there are no liens on it. If there are any securities in the safe, I advise you to burn them, to avoid getting mixed up with the grand jury. That man Parker is a wonder for thinking up schemes. He and Cummings actually organized a company to buy a lake in Indiana, with the idea of salting the water and raising oysters—the only inland oysters in the world! I hope, Dot, that you and Nellie won't feel that you've got to play all the Cummings & Parker tricks, simply because you've taken over the office furniture."

"Oh, about the furniture," said Dorothy, "Nellie and I have picked a new set—everything the latest, in mahogany, and each of us is to have a desk telephone—and we're fitting up a lovely room for lady customers."

Reggie burst into idiotic laughter that brought the colored butler, an aged retainer, gaping to the pantry door.

"It's nothing, Thomas," called Harold reassuringly. "Mr. Reginald is a little nervous, that's all. Now, Dot, if I understand you correctly, you are considering paying some merely nominal sum to Parker for his interest in the furniture, fixtures and goodwill of the old unreliable firm of Cummings & Parker. Is that right?"

"We're not considering it any more," replied Dorothy; "we've already bought him out and the new furniture will be moved in to-morrow. I was up there this afternoon, watching the sign man change the name on the door to read Cummings & Raymond, and we're going to advertise in all the papers. Nellie knows a lot about the business, just from hearing her father talk, you know. All you have to do is to buy a bond for nine hundred and ninety-nine dollars and sell it to a customer at a thousand and ten.

"Of course it's volume of business that counts, Nellie says. And you know this town is full of widows with money to invest, and it's perfectly silly to think they have to make their investments through men brokers, when women could do it just as well."

"Absurd, perfectly absurd," Harold assented. "But do you mind telling me just how much you're putting into the firm?"

"Well, I knew you were awfully busy with all papa's affairs to settle, and I didn't want to bother you, so I went ahead and fixed things all up with Mr. Parker. We paid him ten thousand dollars for his interest and——"

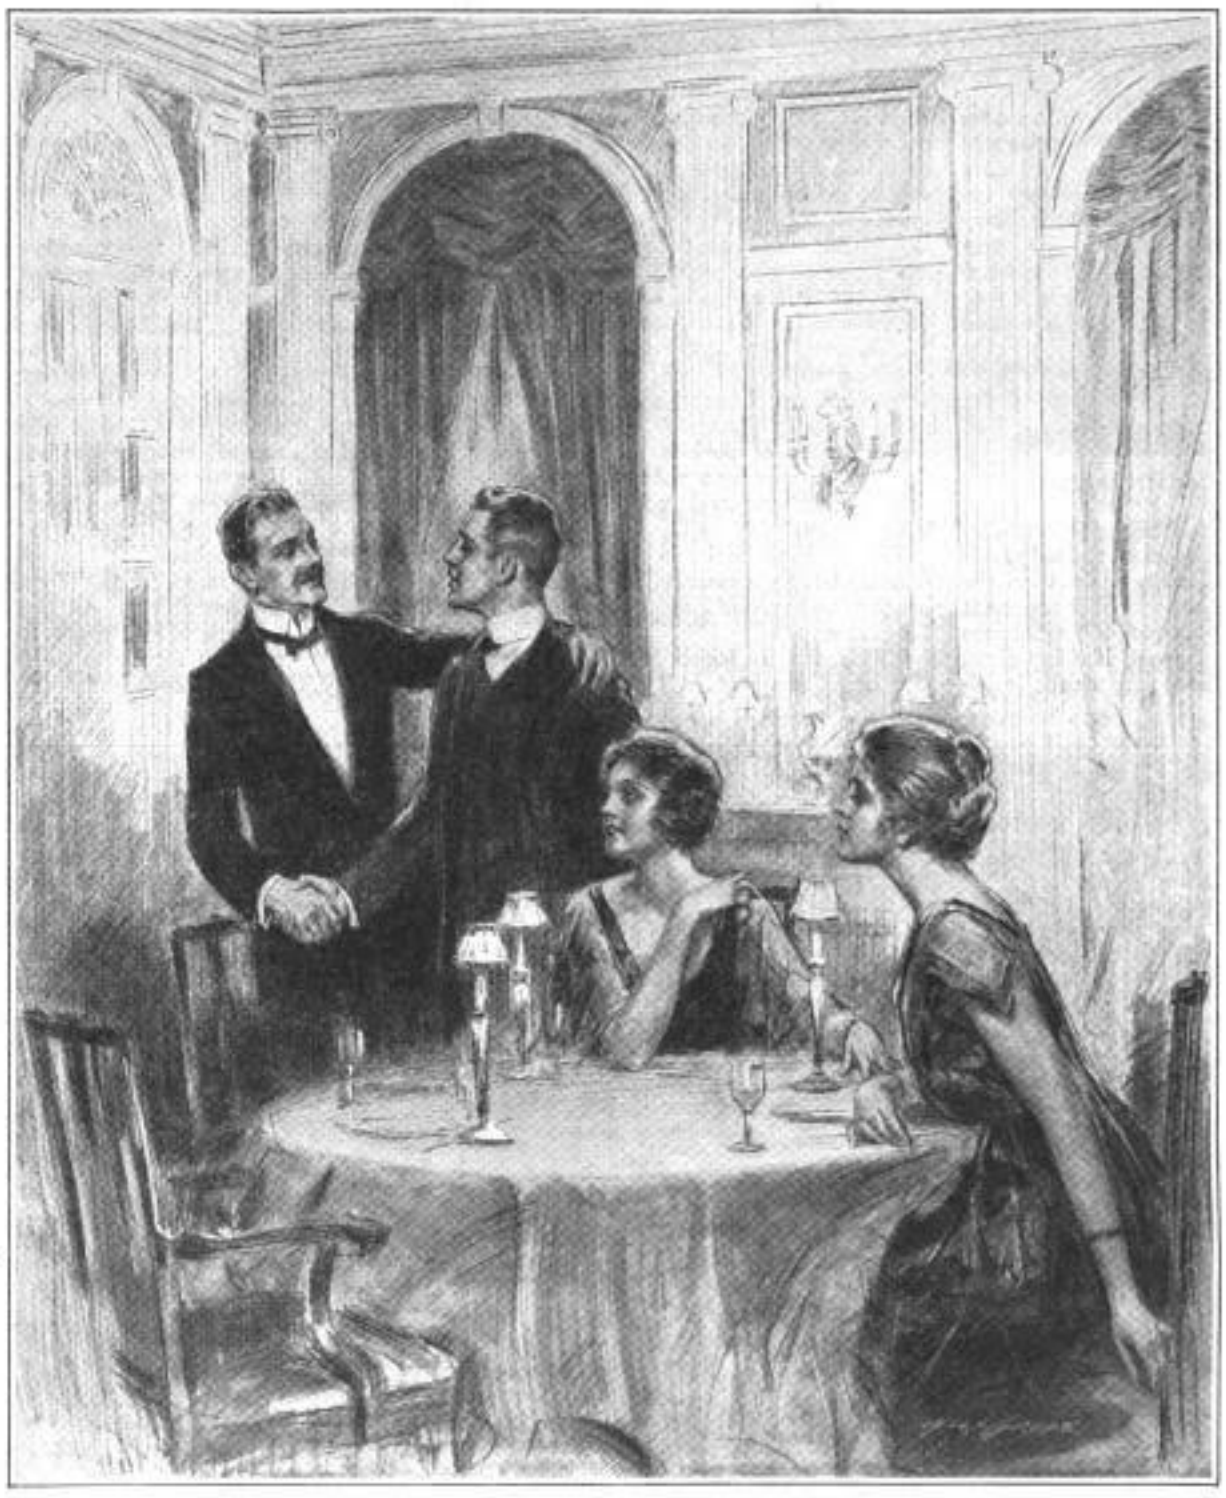
"For what?" Reggie squeaked.

"Please don't interrupt, Reggie," admonished his brother severely. "I'm sure we should all be glad that Dot is so enterprising. Now go on, Dot. You are to furnish half and Nellie half—is that right?"

"Certainly," said Dot, assured by Harold's kindness. "Mr. Parker was ever so helpful and nice. He got his lawyer to draw up the partnership papers, and then he said he wouldn't trouble us for the money now, but would be perfectly satisfied to take our notes. So we gave him the firm note for ten thousand dollars. Poor Nellie hasn't any money, of course, but she'll pay me back out of the profits. Mr. Parker said the legal way was for us to sign the firm's name and then we both could endorse the note just for good luck.

"Reggie, don't let your mouth hang open that way! It makes me nervous."

Harold, unmindful of this appeal to the doddering Reggie, frowned, but only as one who is concentrating upon a subject of absorbing interest.



"You were twenty-one last July, as I remember, Dot?"

"Yes; Mr. Parker asked me about that. He said I was of legal age to sign papers and that it was perfectly all right."

"Dot talked to me about it," said Mildred defensively, "and I thought it would be fine for her to go ahead and arrange everything without worrying you. It seemed to me splendid for a girl to go ahead and do things without boring everybody about it. And Nellie is a lovely girl—a perfect dear—and they can't help having a lot of fun, and it seems to me fine, when we have so much, to help a girl who has nothing!"

"Bully! Perfectly bully!" ejaculated Harold, striking the table smartly to emphasize his pleasure at the whole arrangement. "Your note falls due—when did you say, Dot?"

"Oh, not till the end of the year. You see, Mr. Parker said papa's estate couldn't be settled—it's some kink in the law—until the end of a year, and he wanted to make everything convenient for me."

"It's in You, My Boy: it's in You! They Can't Keep a Good Man Down!"

"Right! Parker seems to have given you good advice right through," exclaimed Harold joyously.

"But we must have a little working capital, Nellie says, so we can buy some stocks and bonds to show people when they come in——"

"Yes; you can't sell goods without samples," chirruped Reggie, running his hands through his hair. "A few little pink bonds in the show case——"

"Keep quiet or leave the room," said Harold sternly. "Go ahead, Dot."

"Well, Nellie only has two hundred dollars—that's absolutely all the dear child has in the world—so I'm going to put in five thousand right away."

"Certainly," said Harold, feeling in his pocket and drawing out a check book and fountain pen. "I'll give you this as an advance on your share of the estate; you're entitled to it. It will be charged against you, of course. You've got a real head on you, Dot, and I'll back you for all I'm worth. Now, Reggie, if you want me to go with you to see the little boss of the big machine about your adaptation of the Parthenon for the new Jackson County courthouse, I'm ready. I've got a date with Connor at Pat Foley's saloon. Kindly give hints of returning animation by ordering the limousine!"

III

IF REGGIE hadn't been too busy to worry, the strain of Harold's high-handed deception would have killed him. But Reggie was so busy that he had been obliged to double his office space and employ six draftsmen. Ripley, who held sway as the town's leading architect, had permitted a friend to sound Reggie as to the advisability of a partnership. Harold scouted the idea.

"Old Rip is scared, that's all," said Harold. "He sees that you're the coming man in these parts and wants to attach himself to your boom. In a couple of weeks, after the commissioners formally accept your plans for the courthouse, you'll have to hire an assistant just to meet your callers and explain that you can't accept any more work. There's bound to be some sore spots, but we've got to get used to that. Envious critics will be saying that it was our money, the Raymond million, that got you the courthouse job; I've already heard that I was bribing the commissioners. Perfect rot! Connor is anxious to do me a favor, as he wants me to consider running for Congress next year. This district hasn't elected a Democratic congressman in fifty years, and they're trying to snare somebody to tackle it next fall. They want a man of character and wealth who can appeal to the business interests, and they're willing to spend the people's money on you just to put me in good humor for making a sacrifice hit."

"When this bubble breaks——" began Reggie.

"When that time comes we won't need to blow bubbles any more! You've got all the work you can do for a couple of years; I've enlarged father's office and hired two real lawyers—men who can write a sound brief but without the knack of getting business on their own account—and they're doing the heavy work for me. That gives me more time to think."

"If I did much thinking I'd go crazy," mourned Reggie. "You know it's a sin and a crime to put over my courthouse plans just because we can; it's crooked! It ain't right! I don't know anything about a public building; that's a specialist's job! And Bob Arlington's been round to talk about a new flat his real-estate firm's going to build, and I hadn't the nerve to tell him it wasn't in my line!"

ENGLAND AND LABOR

By WILL IRWIN

WHEN the trades-unions of Great Britain met last autumn for their third congress since the war I went to Birmingham, expecting events of historic importance. Since the last congress Britain had leaped a gulf, cleared a hurdle. Conscription, from an ominous possibility, had become a fact. The working brawn of the nation was in the trenches of Flanders, or training for the trenches. The end of the war seemed then a little more distant than it seems now—in December—considering Germany's avowed willingness to discuss peace terms. People talked of a settlement late in 1917. The best directing brains of England were thinking on the reorganization after the war. What would Labor do? In England, more than in any other European country, Labor—with her direct representation in Parliament—holds the keys of the future. The Trades-Union Congress of 1916 looked extremely important.

They met; and virtually they did nothing. They faced not one of the pressing problems which capital and labor must settle between themselves after the war. Never have I seen an assemblage that so gave the appearance of not knowing where it stood. For example, the change in "restrictive trades-union practices" is going to be a vital question to British industry. In many, if not most, trades exists what Americans consider a pernicious deadlock—a set of customs that greatly restrict output. The employer says: "Come what may, I will not raise wages beyond a certain sum." The workman, through his trades-union, replies: "Then I will not produce beyond a certain maximum."

Lloyd George, when the munitions question grew acute, gained from both sides a promise to relax these rules and practices during the war. The situation has changed since then: more and more plainly British industry sees the industrial war with Germany that will follow the military war, and more and more plainly the real leaders of thought on both sides see that capitalist restriction on wages and labor restriction on output must be relaxed if Britain is to hold the pace. Now, despite hidebound ideas in certain quarters, despite religious and social prejudices, labor is the true progressive element in England. We expected some vital pronouncement on either side of this question—for the maintenance of trades practices or against them.

Hundreds of Ship-Building Employees in Belfast Have Offered Their Services to the Government

Legislators Without Constituents

HERE they were, if not exactly the brains of the trades-union movement in England, at least its elected representatives. They averaged considerably older than the delegates of our own Federation of Labor. This is the result of that fine old British loyalty which makes Englishmen hesitate to put out an old public servant who has given faithful services, even when an abler young man is trying for the position. They did not have the apparent force and energy of our own labor delegates; but, being older and more experienced men, they appeared more finished parliamentarians—more statesmanlike. They must, one and all, have held opinions on this vital matter. Yet they evaded the issue. They did bring up the matter—it was on the order of business—but the resolutions finally adopted were uncertain and ambiguous. As on this, so they were on every other vital matter. The liveliest debates were over minor questions, as when the energetic Ben Tillett brought up the religious issue by declaring that the clergy should be mobilized with the rest of England.

Woll and Mahon, our American delegates, introduced the resolutions of our American Federation, calling for a conference of labor at the same time and place as the Peace Conference. There followed a hot and lively debate, which was a measure of strength between the war party and the party inclined to peace. The war party, which repudiated the idea that a crushed Germany would be granted a Peace Conference, won by a vote of two to one. Still, this had nothing whatever to do with the burning issue of British labor.

This waiting attitude puzzled me at first; and I remarked it to a certain Englishwoman, a leader in the progressive forces of England, who watched with me from the platform.

"Why, they're legislators without constituents—don't you see?" she said. "Their people are in the army. They're not thinking of their jobs now, but of the war. These delegates have no instructions. They don't know how labor feels about these questions now. More than that, they don't know how it will feel after the war. If any of us"—and she sighed—"could foresee what the mind of the army will be!"

That is where labor stands—labor, the keystone of the British political and social system before the war, and its puzzle now. Some five or six million men, rising gradually toward seven or eight millions, have put on the king's khaki; and the great majority of these, in the nature of things, are workingmen.

What Will Labor Say?

THE journeyman plumber or weaver took the most intense interest in the industrial struggle before the war; his interest might be strained through prejudices and preconceived notions; but, at any rate, it was his supreme practical interest. He is thinking on something else now—an issue of life and death, horrible but fascinating. He is not the same man as the one who volunteered for "King and Country" in 1914, attested in 1915, or was drafted by law in 1916. He has enlarged his views by contact with all sorts and conditions of men who never touched his narrow life in old days. He has traveled, as he never dreamed of traveling—to France, to Egypt, to Mesopotamia. He has had intimate contacts with other people—like the French and the British colonials, who do many things differently. He has found, by long trench conversations, that New Zealand has a labor government; that every French farmer owns his little bit of the land. He has enlarged his horizon as the horizon of a people was never enlarged before this war.

Again: In districts like the dock region of London, the laborer, under the old conditions, which such men as Lloyd George—the pre-war Lloyd George—were working to improve, lived always below the poverty line. Since he entered the army he has been well fed, well dressed, clean, for the first time in his life. So, also, his wife, with the separation allowance, with employment on liberal terms open to her everywhere, has tasted for the first time the joy of comfort, and even of luxury. Will he submit meekly, numbly, to the old conditions when this war is over? Some two or three million British workingmen—with more millions to follow—have fought down fear and faced the issue of life and death. From now on they may be more ready to risk their all for what they believe or are led to think they believe.

So much for the liberalizing tendencies. But there is a countercurrent. All the strength of the nation, for the first time in British history, has been living under a military régime made by policy so strict that to obey, even in the face of death, becomes instinctive. Never was

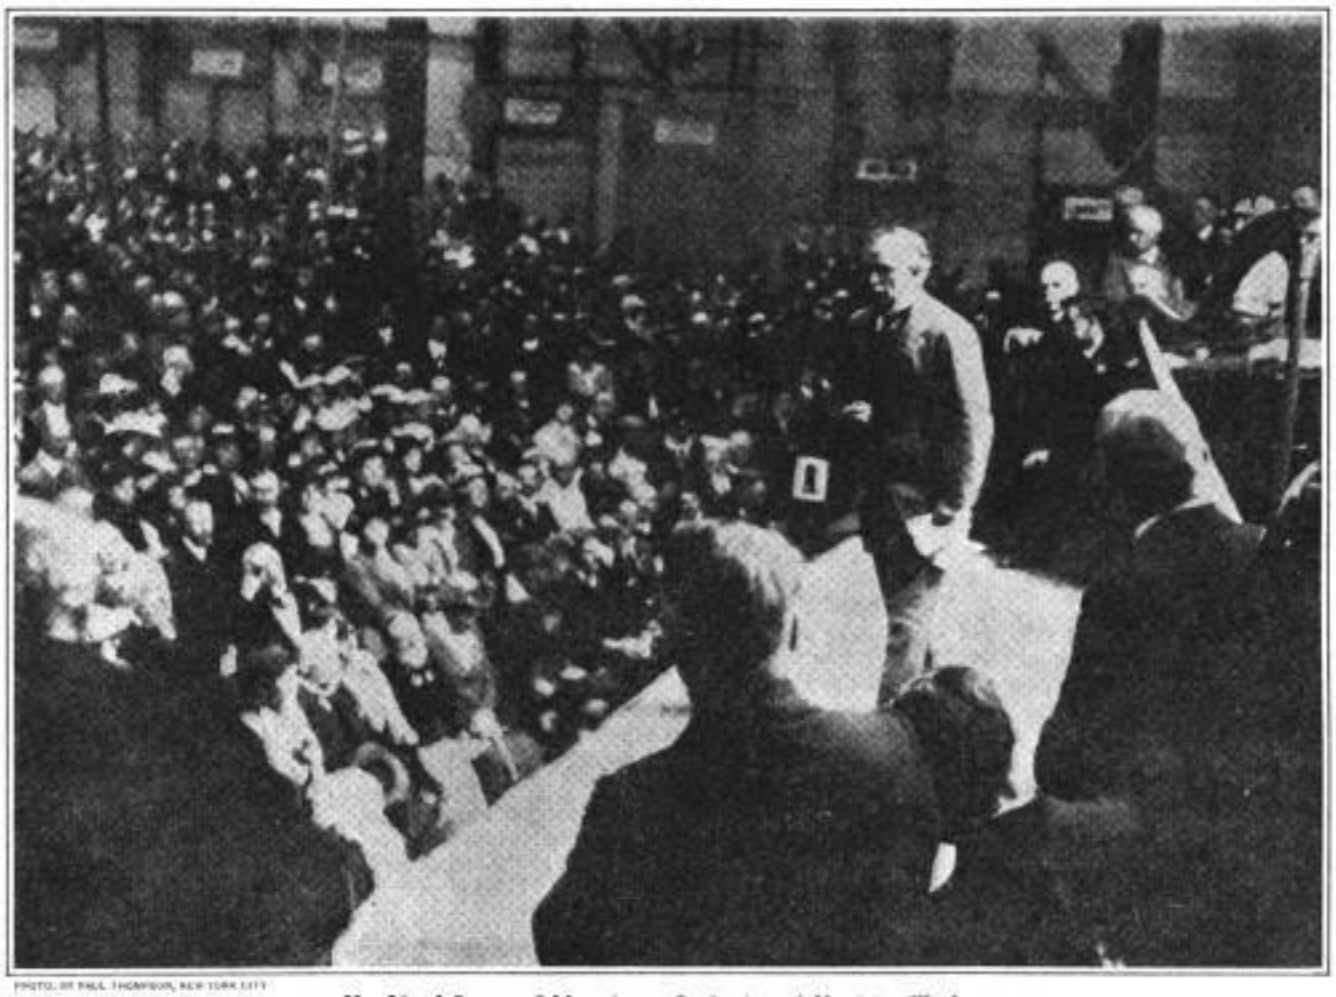
Six Hundred Labor Delegates Listen to Mr. Asquith's Speech

Digitized by Google

a discipline so strict as that of this war. Will the British workingman put off the habit of obedience to that upper class—which still furnishes most of the officers—when he puts off his khaki?

None can venture an answer to that question, because there is no precedent for a guide. Our Civil War was not a parallel case. We had no "class system" in 1865; our army, like the modern French Army, was officered by men of all social classes, chosen on the basis of their abilities. Nor did our legions return to a close industrial life; they set themselves to the free task of breaking a continent. The most we can say, by way of parallel, is that the Grand Army of the Republic formed almost a close political corporation after the war, making of old comradeship the main fact in their political lives.

Common in England now, I find, is a soft kind of upper-class person, viewing the old England as the only possible England, who drops his head sentimentally on one side, and says:



"Ah, this war has been a great lesson to our working classes. They have met gentlemen intimately and learned to obey them and love them. Disobedience was our national vice. They have begun to see that they have misunderstood us. After the war they will be deaf to the pleadings of demagogues. We shall have no more trouble with the demands of labor unions!"

This view is, of course, ridiculously biased and sentimental; but it does illustrate a tendency that may quite possibly affect the coming England.

Now if the very leaders of union labor, who have passed their lives studying the ways and tendencies of the British workingman, stand bewildered before the future, it does not befit an alien, who scarcely knew England at all before the war, to indulge in prophecy. I do not pretend to guess how the army will feel, or which way the cat will jump. All England is guessing at that, and guessing most diversely.

"We shall have the people docile, so that they will let us administer affairs for their own good as well as for ours," a Conservative of great ability said to me. "You Americans have appropriated the phrase New England! After the war we are going to have a new England—the newest nation that exists!" said Lloyd George. "I expect a Conservative reaction, due to military discipline, in the period just after the war," said one of the ablest labor leaders in the kingdom. "But we'll work out of it, fast. Then we'll have the social revolution. It won't be a revolution of blood, mind you. We don't do it that way. We'll roar about blood and downfall, and then go ahead and do what has to be done." "Labor must know its place; we can't afford agitation," said one employer. "We'll have a labor representative sitting on our board of directors within two years after peace," said another.

Between these diverse opinions I shall not presume to judge; I can only state the elements of the problem.

Mr. Lloyd George Addressing a Gathering of Munition Workers

The Natural Monopoly Possessed by France

THERE must be a fierce industrial struggle after the war. With taxes, made necessary by the war debts, running as high as thirty or thirty-five per cent, each nation is going to put its best brain on the problem of recuperating at the expense of the others and of the neutral world. Willy-nilly, we shall be forced into it; and the main fight will be three-cornered—between Germany, England and the United States. Russia is not yet ready to become a factor, and neither is Italy, though she is coming fast. As for France, she occupies just now a position the others may come to envy.

France, alone among nations, knows how to combine art and industry. When the Central Powers were cut off they tried to invent their own fashion designs, supplanting those of "the degenerate French." The results were to laugh. Twenty years ago the Italians, taking advantage of cheap Alpine water power and certain tariff conditions, started to get the silk-weaving business away from France. They succeeded admirably in the cheaper grades; but in the finer grades, where the art of design enters, they have never been able to compete for a moment. French art sense, French taste, give them a natural monopoly of the kind enjoyed by a great actor or a great singer. France, doubtless, will find after the war, as before, that her natural monopoly is her best natural line of development; she will stand aside from the current.

Germany, England and the United States, on the other hand, have no natural monopolies except those of resources and position; they will come into direct competition. In this enumeration I count the Germanic element of Austria-Hungary as part of Germany.

Now each of the three competitors enters the lists with certain advantages. We have the positive benefit of our capital accumulation, and the negative benefit of a nation undrained of blood and property by this unprecedented slaughter and destruction. Further, in what I may call the tactics of industry, as distinguished from its strategy, we are very strong. Since we took to factory management, we seem able to get more out of an establishment, with equal strain on the workers, than any other people.

The Germans are almost our equals in the tactics of industrial competition; but in its strategy we are as children compared to them. The art of coördinating all industry to the end of national supremacy is a German invention we have not learned to apply. This is the one great practical merit of the German, the method that has raised Germany in fifteen or twenty years from the fourth producing nation to the second. Perhaps they overworked their system; perhaps too heavy a draft on their industrial future made it necessary for them to force this war. I do not know.

Long before the war, one of the greatest international employers in the world, a man of great, cool, philosophical judgment, arranged the nations for me on the scale of individual efficiency. He was not giving a mere opinion, but the result of figures and experiments covering many years. He put the American down at ten, and the Englishman at just a shade below ten—better than nine and a half.

"The factor which raises the American above the Englishman is his adaptability; his way of rising to emergencies," he said.

The German, to my surprise, he ranked only a little better than eight; and so the list went on down to the Chinaman, at four.

"But why the German success at this rate?" I asked.

"Teamwork—nothing else," he replied. "They understand method, system and coöperation better than any other people."

Now England, in opening the new era, has over her great European rival two advantages—inherited momentum and this same individual efficiency. In spite of the German strides, she was still the greatest producing and trading nation. If the war turns out even a draw she will have increased that momentum, since she has been trafficking, trading, extending her commerce, while Germany has lain locked up behind the North Sea Fleet. In the strategy of industry she was not so bad, either—if inferior to Germany, infinitely superior to us. Where she lagged far, far behind was in those tactics of industry at which we are so good.

A superficial military education has been forced on most of us by the war; and everyone, I suppose, knows the difference between tactics and strategy, and will understand my figure of speech when I say that a Napoleon, laying out the strategy of a battle, cannot hope to win, however brilliant that strategy may be, unless his corps and regimental commanders understand tactics—are able to take this height or pass this road at the time demanded by the general plan.

So, in industry, you may lay out and apply a great general scheme of national industrial expansion, such as that which the Germans have followed; you cannot make it succeed unless your individual factories are producing, dollar for dollar and man for man, nearly as much as your competitor. Now in this phase of industry England was lagging behind her rivals to east and west; and she must lag still farther unless there are some drastic changes. Upon those changes the leaders of capital and labor are thinking now, while they wait to see what the army will be thinking when it exchanges khaki for blue jeans and tweeds.

Old Friends

THERE is in the average Englishman a sterling quality of loyalty that makes him the best-wearing friend in the world. This personal virtue has its practical defect. He is loyal to his friends; he is just as loyal, often, to outworn ways and antiquated machinery. An American company, manufacturers of what we shall call the Perfection Typewriter, bought out the business of what we shall call the Marvel Typewriter. The Marvel was an old-line machine, which had grown so hopelessly behind the times that it had not been manufactured for ten years. The Perfection people got, with the deal, a set of spare parts to keep in repair those Marvels that still existed. The London office of the Perfection had almost forgotten about this deal when, last winter, they received a letter from a Midlands town asking for parts to repair a worn-out Marvel. They wrote back, stating that they had the parts, but urging their correspondent to replace his Marvel by the new, up-to-date, improved Perfection.

"Sorry," replied the British customer in the Midlands, "but we do not feel like putting out an old friend, which has served us well for twenty-five years."

Now this little deal in typewriters, though an extreme example, served to illustrate a tendency. There was a distrust of the new thing, be it coördination of machinery, improved machinery, or modern factory method—distrust on both sides of the industrial gulf. True, the war, with its searching demands on production, has changed much of this. In the munitions factories, at least, industry has taken to continuous and timesaving processes, copied from their enemies or from us, or devised with that inventiveness so strong in the English when circumstances shake them out of their apathy. I am writing now of the England before the war.

Out of this loyal conservatism, and out of England's curious industrial history, had grown the situation at which I hinted in beginning this article—the pernicious deadlock between the manufacturer and his laborer. England was the pioneer of modern industry. In the early years of the nineteenth century, when the factory system rose, the horrible old *laissez-faire* doctrine ran riot: Leave everything alone and it will right itself. So, before the day of Trades-Unionism, the British operative had his blood drawn and his vitality killed by fourteen and fifteen hours' work a day. Trades-Unionism, formed to correct this situation, was born in a spirit of intense antagonism. As for

Digitized by Google

the employing class, it resented the changes the unions demanded; it made a sanctified creed out of self-interest.

The overworking of the industrial class, "speeding-up" in its worst form, was the abuse Trades-Unionism was formed to correct, and the fight centered on this issue. Piecework is more general in British industry than in our own. The employers, in their war with the unions, adopted a process with which we have been troubled at times in our own land. They would take the work of the fastest and most expert workman, set that as a standard, so arrange the piecework schedule as to give him a fair weekly wage—and expect the workmen of lesser ability to conform to his standard. Of course most of them could not; it amounted to a device for lowering wages. In certain lines of employment the workman who set a high standard in piecework figured as a traitor to his class.

So, as the struggle went on, the employers seemed to fix their minds on a maximum wage. He who paid more than that wage, even though it be to his own interest, was a traitor to that class, as the workman who set a high piece-rate standard was a traitor to the other. The unions met this with a policy of their own: "Very well; if you restrict wages we shall restrict output." There rose, too, the custom known in British labor slang as "Ca' canny." We should call it "Soldiering on the job." It was the response of labor to injustices of capital they could fight in no other way. Restriction of output became a fetish with a certain wing of the labor party. Let me cite one example, extreme but illuminating:

In a certain Midlands town is a factory manufacturing bobbins for weavers. The employers enforced a maximum wage; the union enforced a maximum output. Almost any workman in the factory could turn out the week's maximum in three working days; they had nothing to do between Thursday morning and Sunday night.

Along with this, and working to the same end, went another policy of organized labor—or, at least, a section of organized labor. Up to seven or eight years ago, when the new Liberal government took hold, England knew as little about the general coördination of industry as the United States—and here I am stating the irreducible minimum. The tight, close conditions of British industry, the fact that England was the dumping ground for an empire, made her need even greater than ours. The chief phenomenon of badly coördinated industry is unemployment. Those long periods of idleness consequent upon a slight industrial depression were the curse of British industry. It was quite natural for the men in any given trade to believe that the less they produced the greater would be the demand for help, and the less, therefore, the unemployment. Restriction of output became a matter of altruism, of class loyalty.

Government for the Benefit of the Few

"OF COURSE it's unsound," said a certain enlightened labor leader. "You can easily reduce it to an absurdity. If to halve the product of any trade increases the prosperity of the workman, stopping production altogether should bring the millennium, shouldn't it?"

From the point of view of the trading class, with its motto of Business over Everything, the process is damnable. In the ultimate interests of the workmen themselves it was bad. But this must be said in justice: The lives of such working-class people as these proceed on a narrow margin above poverty. Loss of work means the loss of everything. They cannot afford to take broad views on their jobs; least of any class can they afford sacrifice to the greater national interests.

There stood the problem eight years ago, when a new spirit began to stir in England; when the Liberal government, against the fulminations of the Tories, tackled the problem of poverty and introduced, as a beginning, its "socialistic" measures, borrowed from the Continent.

It must be said, in justice and fairness, that this custom of restricting wages and output was not universal.

Wherever capital and labor had abolished it, British industry produced with the best. It had been abolished in the cloth trades; and neither Georgia nor New England could equal the scale of the Northern English mills. It was passing fast in coal mining; and the Cornish mines were only second to the Pennsylvania mines in the output for each miner. It lingered still in what the British call the "engineering trades," which include nearly everything that has to do with manufacturing machinery and metal goods; and there the British industries, for the most part, would not stand comparison with their American or Continental rivals.

We have revised, since the war, many of our opinions—even those based on fact. For example, we took it for granted—having heard it from the English—that poverty in England was a growing tendency; and that it was worse than poverty in Germany, the nation whose social teamwork we so much admired. Indeed, the situation, when the English began to study it, was distressing enough. British students of sociology have worked out what they call "the poverty line": the income below which an average family cannot live and keep its strength.

Before the war, this was set at twenty-four shillings, or six dollars, a week. In some districts, a quarter of the working class lived below that line. The average wage of agricultural laborers was only from fifteen to twenty shillings a week. That, however, brings in the land question, which is a little aside from the present topic. Yet it remains to be shown whether poverty was on the increase; or whether, in the decade just past, the Liberal element of England had, for the first time, awakened to its extent and begun to study it scientifically.

Another accepted idea may have to be revised: Germany had gone farther than any other European nation in social teamwork. Accident and unemployment insurance, old-age pensions, government employment agencies—all the measures which the Asquith government forced through in the face of the Tory batteries—were copied from that nation so soon to be England's enemy. Doubtless the British Liberal in those days rather overpraised the German system, as he underpraises it now. It remains to be proved whether Germany had abolished poverty.

Two great measures of poverty are the infantile mortality rate and the tuberculosis rate. As the British are now fond of telling you, both these rates were higher in Germany than in England. We have had proof of the true Prussian spirit since this war; and the English view deserves consideration. They say that Germany, as administered by her autocracy, had seized on some of the apparatus of Socialism, and especially its collective economies, while totally repudiating its spirit. The end and aim of the Socialist state, as conceived by magnificent German dreamers of the nineteenth century, was democratic. It was for the good of the individuals in the state.

The end and aim of the Prussian system is first the glory of the state as a whole, without regard to the happiness of the individuals who compose it—a hellish doctrine that we owe to the philosopher Kant; and then the welfare of the oligarchy. Those measures of social teamwork were intended not primarily for the good of the working class or any other class outside of the oligarchy, but for the efficiency of the state.

The oligarchy looked upon the working class somewhat as a scientific farmer looks upon his stock! Give them just enough food and comfort to bring them to the shambles in fair, fat, salable condition—and no more. I do not pretend to say whether this view is sound or is tainted by war prejudice. However, the statistics of tuberculosis and infant mortality remain. This Prussian spirit was not the spirit in which England attacked her problem.

The Kantian doctrine of a state with a soul, whose glory is the supreme duty of citizenship, had gained little currency in England, except perhaps among a limited class of the old aristocracy. The changes in England proceeded from a class of scientific humanitarians working for the happiness of all, as befits the spirit of a race that has given more martyrs to civic and political creeds than any other in the world. The ideal of the new British system was mostly kindness, as that of the Prussian system was mostly efficiency.

Before the war these constructive critics of industrial ways had their eyes set on a better distribution of the rewards of industry; national efficiency was with them only a secondary object. Germany was doing well—yes; but was not England still the greatest producing nation in Europe, the greatest trading nation in the world? The war, along with other shocks, revealed how fast Germany was growing; what a rival she had already become.

It revealed, also, the German capacity for organization and the German intentions on world trade. The British leaders of industry had their veil of preconceived notions torn in a dozen places; they saw through it to something like actuality. Industrial reorganization became a topic only a little less absorbing than the war itself. The leaders of the labor party and of liberal thought in general were forced to take this into all their plans.

One who knew the English before the war, or in its early stages, can scarcely believe them now, so open-minded have they grown; so amenable to new ideas. In July, 1912, I witnessed an episode of the London dock strike—Ben Tillett's famous speech, which started a small riot. Fresh from the sight of these men, with their dead eyes, their pinched faces, their hopeless expressions, I went among a group of genuine English Conservatives. It turned me a little sick to find them howling like scalded dogs because they had to pay a slight insurance tax for their servants. This was a plain violation of British rights, they said; besides, it was so hard to make the proper change! Those Liberal anarchists were ruining England! Now in October, 1916, I met one of these men again.

Wage Conditions After the War

"WELL," he said in the course of a general discussion, "we're ready to do what's just and right. If we have to put in a labor government like Australia, after the war, we can stand that, too, I suppose."

The thought of England, a current always so powerful but once confined in such narrow channels, has burst many and many a bank and is flowing already in channels vastly wider. To disturb, to change the good old British system of education, compounded of classics and sport—that was unthinkable three years ago. Now behold a research committee of dozens of great names, whose first task is a study of English education to see how classics may be replaced by science all along the line, and how board-school education for the working class may be supplemented by technical education. Invention, factory method, teamwork in foreign trade—the intelligence of England is studying them all, with what energy it has left.

That the heads of British industry, the prosperous and governing class, should look far beyond their own interests is to expect them to be more than human—which they are not. The most they manifest, and the most that can be expected, is enlightened self-interest. As a matter of fact, some of them are preparing to whipsaw labor in the same old way, hoping that the "discipline" ground into "the lower class" by two or three years in the army will render their employees more docile.

For a cold-blooded statement of intentions, commend me to a circular letter, passed round among a certain group of employers in the engineering trades, whereof a copy passed into the possession of a labor leader. Attention was called to the reduced labor cost brought about by employment of women. Still further reductions might be accomplished by careful management. Meantime the employers were urged to prepare for new conditions after the war, when male employees would be asking for their old jobs. A little careful organization, the encouragement of a sex spirit among the women workers, might forestall this. Against this, and as an example of enlightened self-interest, I may set the remarks of a certain large employer in the electrical business. He was speaking of the new women employees in his shops.

"They're doing good work," he said. "We have many small processes in our branch of the industry, and at these the women have proved, if anything, better than men. We're paying them liberally now. I only hope our fellows have the good sense not to try to reduce wages after the war."

Employers in general say that the old restrictive trades-union practices cannot continue in force if England is to meet Continental and American competition. Yet not all the employers can be got to see the other side of the shield, and admit that arbitrary limitation of wages must go into the discard along

THREE WITHOUT, DOUBLED

By Ring W. Lardner

ILLUSTRATED BY F. VAUX WILSON

THEY ain't no immediate chance o' you gettin' ast out to our house to dinner—not w'ile round steak and General Motors is sellin' at the same price and common dog biscuit's ten cents a loaf. But you might have nothin' decent to do some evenin' and happen to drop in on the Missus and I for a call; so I feel like I ought to give you a little warnin' in case that comes off.

You know they's lots o' words that's called fightin' words. Some o' them starts a brawl, no matter who they're spoke to. You can't call nobody a liar without expectin' to lose a couple o' milk teeth—that is, if the party addressed has got somethin' besides lemon juice in his veins and ain't had the misfortune to fall asleep on the Panhandle tracks and be separated from his most prominent legs and arms. Then they's terms that don't hit you so much yourself, but reflects on your ancestors and prodigies, and you're supposed to resent 'em for the sake of honor and fix the speaker's map so as when he goes home his wife'll say: "Oh, kiddies! Come and look at the rainbow!"

The Hired Girl Brought in Some Half Sandwiches With Somethin' on 'em That Looked Like BB Shot

Then they's other words and terms that you can call 'em to somebody and not get no rise; but call 'em to somebody else and the insurance companies could hold out on your widow by claimin' it was suicide. For instance, they's young Harold Greiner, one o' the bookkeepers down to the office. I could tell him he was an A. P. A., with a few adjectives, and he'd just smile and say: "Quit your flirtin'!" But I wouldn't never try that expression on Dan Cahill, the elevator starter, without bein' well out of his earshots. And I don't know what it means at that.

Well, if you do come out to the house they's a term that you want to lay off of when the Missus is in the room. Don't say: "San Susie."

It sounds harmless enough, don't it? They ain't nothin' to it even when it's transferred over from the Latin, "Without no cares." But just leave her hear it mentioned and watch her grab the two deadliest weapons that's within reach, one to use on you or whoever said it, and the other on me, on general principles.

You think I'm stringin' you and I admit you got cause—that is, till you've heard the details of our latest plunge in the cesspools o' Society.

II

IT WAS a Friday evenin' about three weeks ago when I come home and found the Wife quaverin' with excitement.

"Who do you think called up?" she ast me.

"I got no idear," I says.

"Guess!" says she.

So I had to guess.

"Josephus Daniels," I says. "Or Henry Ford. Or maybe it was that guy with the scar on his lip that you thought was smilin' at you the other day."

"You couldn't never guess," she says. "It was Mrs. Messenger."

"Which one?" I ast her. "You can't mean Mrs. A. D. T. Messenger."

"If you're so cute I won't tell you nothin' about it," says she.

"Don't make no rash threats," I says. "You're goin' to tell me sometime and they's no use makin' yourself sick by tryin' to hold it in."

"You know very well what Mrs. Messenger I mean," she says. "It was Mrs. Robert Messenger that's husband owns this buildin' and the one at the corner, where they live at."

"Haven't you paid the rent?" I says.

"Do you think a woman like Mrs. Messenger would be buttin' into her husband's business?" says the Missus.

"I don't know what kind of a woman Mrs. Messenger is," I says. "But if I owned these here apartments and somebody fell behind in their rent, I wouldn't be surprised to see the owner's wife goin' right over to their flat and takin' it out o' their trousers pocket."

"Well," says the Wife, "we don't owe them no rent and that wasn't what she called up about. It wasn't no business call."

"Go ahead and spill it," I says. "My heart's weak."

"Well," she says, "I was just gettin' through with the lunch dishes and the phone rung."

"I bet you wondered who it was," says I.

"I thought it was Mrs. Hatch or somebody," says the Wife. "So I run to the phone and it was Mrs. Messenger. So the first thing she says was to explain who she was—just like I didn't know. And the next thing she ast was did I play bridge."

"And what did you tell her?" says I.

"What do you think I'd tell her?" says the Missus. "I told her yes."

"Wasn't you triflin' a little with the truth?" I ast her.

"Certainly not!" she says. "Haven't I played twice over to Hatches'? So then she ast if my husband played bridge too. And I told her yes, he did."

"What was the idear?" I says. "You know I didn't never play it in my life."

"I don't know no such a thing," she says. "For all as I know, you may play all day down to the office."

"No," I says; "we spend all our time down there playin' post office with the scrubwomen."

"Well, anyway, I told her you did," says the Missus. "Don't you see they wasn't nothin' else I could tell her, because if I told her you didn't, that would of ended it."

"Ended what?" I says.

"We wouldn't of been ast to the party," says the Missus.

"Who told you they was goin' to be a party?" I says.

"I don't have to be told everything," says the Missus. "I got brains enough to know that Mrs. Messenger ain't callin' me up and askin' me do we play bridge just because she's got a headache or feels lonesome or somethin'. But it ain't only one party after all, and that's the best part of it. She ast us if we'd care to join the club."

"What club?" says I.

"Mrs. Messenger's club, the San Susie Club," says the Missus. "You've heard me speak about it a hundred times, and it's been mentioned in the papers once or twice too—once, anyway, when the members give away them Christmas dinners last year."

"We can get into the papers," I says, "without givin' away no Christmas dinners."

"Who wants to get into the papers?" says the Wife. "I don't care nothin' about that."

"No," I says; "I suppose if a reporter come out here and ast for your pitcher to stick in the society columns, you'd pick up the carvin' knife and run him ragged."

"I'd certainly be polite to him, at least," she says.

"Yes," says I; "it wouldn't pay to treat him rude; it'd even be justifiable to lock him in w'ile you was lookin' for the pitcher."

"If you'll kindly leave me talk you may find out what I got to say," she says. "I've told you about this club, but I don't suppose you ever paid any attention. It's a club that's made up from people that lives just in this block, twenty o' them altogether; and all but one couple either lives in this buildin' or in the buildin' the Messengers lives in. And they're all nice people, people with real class to them; not no tramps like most o' the ones we been runnin' round with. One o' them's Mr. and Mrs. Arthur Collins that used to live on Sheridan Road and still goes over to parties at some o' the most exclusive homes on the North Side. And they don't have nobody in the club that isn't congenial with each other, but all just a nice crowd o' real people that gets together once a week at one o' the members' houses and have a good time."

"How did these pillows o' Society happen to light onto us?" I ast her.

"Well," she says, "it seems like the Baileys, who belonged to the club, went to California last week to spend the winter. And they had to have a couple to take their place in the club. And Mrs. Messenger says they wouldn't take nobody that didn't live in our block, and her and her husband looked over the list and we was the ones they picked out."

"Probably," I says, "that's because we was the only eligibles that can go out nights on account o' not havin' no children."

"The Hatches ain't ast," she says, "and they ain't got no children."

"Well," I says, "what's the dues?"

"They ain't no dues," says the Missus. "But once in a w'ile, instead o' playin' bridge, everybody puts in two dollars apiece and have a theater party. But the regular program is for an evenin' o' bridge every Tuesday night, at different members' houses, somebody different actin' as hosts every week. And each couple puts up two dollars, makin' ten dollars for a gent's prize and ten dollars for a lady's. And the prizes is picked out by the lady that happens to be the hostess."

"That's a swell proposition for me," I says. "In the first place they wouldn't be a chance in the world for me to win a prize because I don't know nothin' about the game. And, in the second place, suppose I had a whole lot o' luck and did win the prize, and come to find out it was a silver mustache cup that I wouldn't have no more use for than another Adam's apple! If they paid in cash they might be somethin' to it."

"If you win a prize you can sell it, can't you?" says the Missus. "Besides, the prizes don't count. It's gettin' in with the right kind o' people that makes the difference."

"Another thing," I says: "When it come our turn to have the party, where would we stick 'em all? We'd have to spread a sheet over the bathtub for one table, and have one couple set on the edges and the other couple toss up for the washbasin and the clothes-hamper. And another two couple'd have to kneel round the bed, and another bunch could stand up round the bureau. That'd leave the dinin'-room table for the fourth set; and for a special treat the remainin' four could play in the parlor."

"We could hire chairs and tables," says the Missus. "We're goin' to have to sometime, anyway, when you or I die."

"You don't need to hire no tables for my funeral," I says. "If the pallbearers or the quartet insists on shootin' craps they can use the kitchen floor; or if they want beer and sandwiches you can slip 'em the money to go down to the corner."

"They's no use worryin' about our end of it yet," says the Wife. "We'll be new members and they won't expect us to give no party till everybody else has had their turn."

Digitized by Google

"I only got one objection left," I says. "How am I goin' to get by at a bridge party when I haven't no idear how many cards to deal?"

"I guess you can learn if I learnt," she says. "You're always talkin' about what a swell card player you are. And besides, you've played w'ist, and they ain't hardly any difference."

"And the next party is next Tuesday night?" I says.

"Yes," says the Missus, "at Mrs. Garrett's, the best player in the club, and one o' the smartest women in Chicago, Mrs. Messenger says. She lives in the same buildin' with the Messengers. And they's dinner first and then we play bridge all evenin'."

"And maybe," I says, "before the evenin's over, I'll find out what's trumps."

"You'll know all about the game before that," she says. "Right after supper we'll get out the cards and I'll show you."

So right after supper she got out the cards and begun to show me. But about all as I learnt was one thing, and that was that if I died without no insurance the Missus would stand a better show o' supportin' herself by umpirin' baseball in the National League than by teachin' in a bridge-w'ist university. She knew everything except how much the different suits counted, and how many points was in a game, and what honors meant, and who done the first biddin', and how much to bid on what.

After about an hour of it I says:

"I can see you got this thing mastered, but you're like a whole lot of other people that knows somethin' perfect themselves but can't learn it to nobody else."

"No," she says; "I got to admit that I don't know as much as I thought I did. I didn't have no trouble when I was playin' with Mrs. Hatch and Mrs. Perkins and Mrs. Kramer; but it seems like I forgot all they learnt me."

"It's a crime," I says, "that we should have to pass up this chance to get in right just because we can't play a fool game o' cards. Why don't you call up Mrs. Messenger and suggest that the San Susies switches to pedro or five hundred or rhummy, or somethin' that you don't need to take no college course in?"

"You're full o' brilliant idears," says the Missus. "They's only just the one game that Society plays, and that's bridge. Them other games is jokes."

"I've noticed you always treated 'em that way," I says. "But they wasn't so funny to me when it come time to settle."

"I'll tell you what we'll do," says the Missus: "We'll call up Mr. and Mrs. Hatch and tell 'em to come over here to-morrow night and give us a lesson."

"That'd be sweet," I says, "askin' them to learn us a game so as we could join a club that's right here in their neighborhood, but they ain't even been ast to join it!"

"Why, you rummy!" she says. "We don't have to tell 'em why we want to learn. We'll just say that my two attempts over to their house has got me interested and I and you want to master the game so as we can spend many pleasant evenin's with them; because Mrs. Hatch has told me a hundred times that her and her husband would rather play bridge than eat."

So she called up Mrs. Hatch and sprung it on her; but it seemed like the Hatches had an engagement for Saturday night, but would be tickled to death to come over Monday evenin' and give us a work-out. After that was fixed we both felt kind of ashamed of ourselves, deceivin' people that was supposed to be our best friends.

"But, anyway," the Missus says, "the Hatches wouldn't never fit in with that crowd. Jim always looks like he'd dressed on the elevated and Mrs. Hatch can't talk about nothin' only shiropody."

On the Saturday I tried to slip one over by buyin' a book called Auction Bridge, and I read it all the way home from town and then left it on the car. It was a great book for a man that had learnt the rudderments and wanted to find out how to play the game right. But for me to try and get somethin' out of it was just like as though some kid'd learn the baseball guide by heart in kindeygarden and then ask Hugh Jennin's for the job in centerfield. I did find out one thing from it though: It says that in every deal one o' the players was a dummy and just laid his cards down and left somebody else play 'em. So, when I got home I says:

"We won't need no help from Jim Hatch and his wife. We can just be dummies all the evenin' and they won't nobody know if we're ignorant or not."

"That's impossible, to be dummy all the time," says the Missus.

"Not for me," I says. "I know it'll be tough for you, but you can chew a lot o' gum and you won't mind it so much."

"You don't understand," she says. "The dummy is the pardner o' the party that gets the bid. Suppose one o' the people that was playin' against you got the bid; then the other one'd be dummy and you'd have to play your hand."

"But I don't need to leave 'em have the bid," I says. "I can take it away from 'em."

"And if you take it away from 'em," she says, "then you got the bid yourself, and your pardner's dummy, not you."

Well, the Hatches breezed in Monday night, and Mrs. Hatch remarked how tickled she was that we was goin' to learn, and what good times we four'd have playin' together. And the Missus and I pretended like we shared her raptures.

"Ain't you never played at all?" she ast me; and I told her no.

"The first thing," she says, "is how much the different suits counts; and then they's the bids. And you got to pay attention to the conventions."

"I'm through with 'em forever," I says, "since they turned down Roosevelt."

Well, we started in, and Hatch and the Missus played Mrs. Hatch and I. We kept at it till pretty near midnight, with three or four intermissions so as Hatch could relieve the strain on the ice box. My w'ist education kept me from bein' much of a flivver when it come to playin' the cards; but I don't care how bright a guy is, you can't learn everything about biddin' in one evenin', and you can't remember half what you learnt. I don't know what the score was when we got through, but the Hatches done most o' the execution and held most o' the cards, which is their regular habit.

"You'll get along all right," says Mrs. Hatch when they was ready to go. "But, o' course, you can't expect to master a game like bridge in a few hours. You want to keep at it."

"We're goin' to," says the Missus.

"Maybe it'd be a good idear," says Mrs. Hatch, "to play again soon before you forget what we learnt you. Why don't you come over to our house for another session to-morrow night?"

"Let's see; to-morrow night?" says the Missus, stallin'. "Why, no, we can't. We got an engagement."

So Mrs. Hatch stood there like she was expectin' to hear what it was.

"We're goin' to a party," says the Wife.

"Oh, tell me about it!" says Mrs. Hatch.

"Well," says the Missus, "it ain't really a party; it's just a kind of a party: some old friends that's visitin' in town for a day or two."

"Maybe they'll play bridge with you," says Mrs. Hatch.

"Oh, no," says the Missus, blushin'. "It'll probably be rhummy or pedro; or maybe we'll just go to the pitchers."

"Why don't you go over to the Acme?" says Mrs. Hatch. "They got Chaplin in The Street Sweeper. We're goin', and we could meet you and all go together."

"N-no," says the Wife. "You see, one of our friends has just lost his wife and I know he wouldn't feel like goin' to see somethin' funny."

"He's already laughed himself sick," I says.

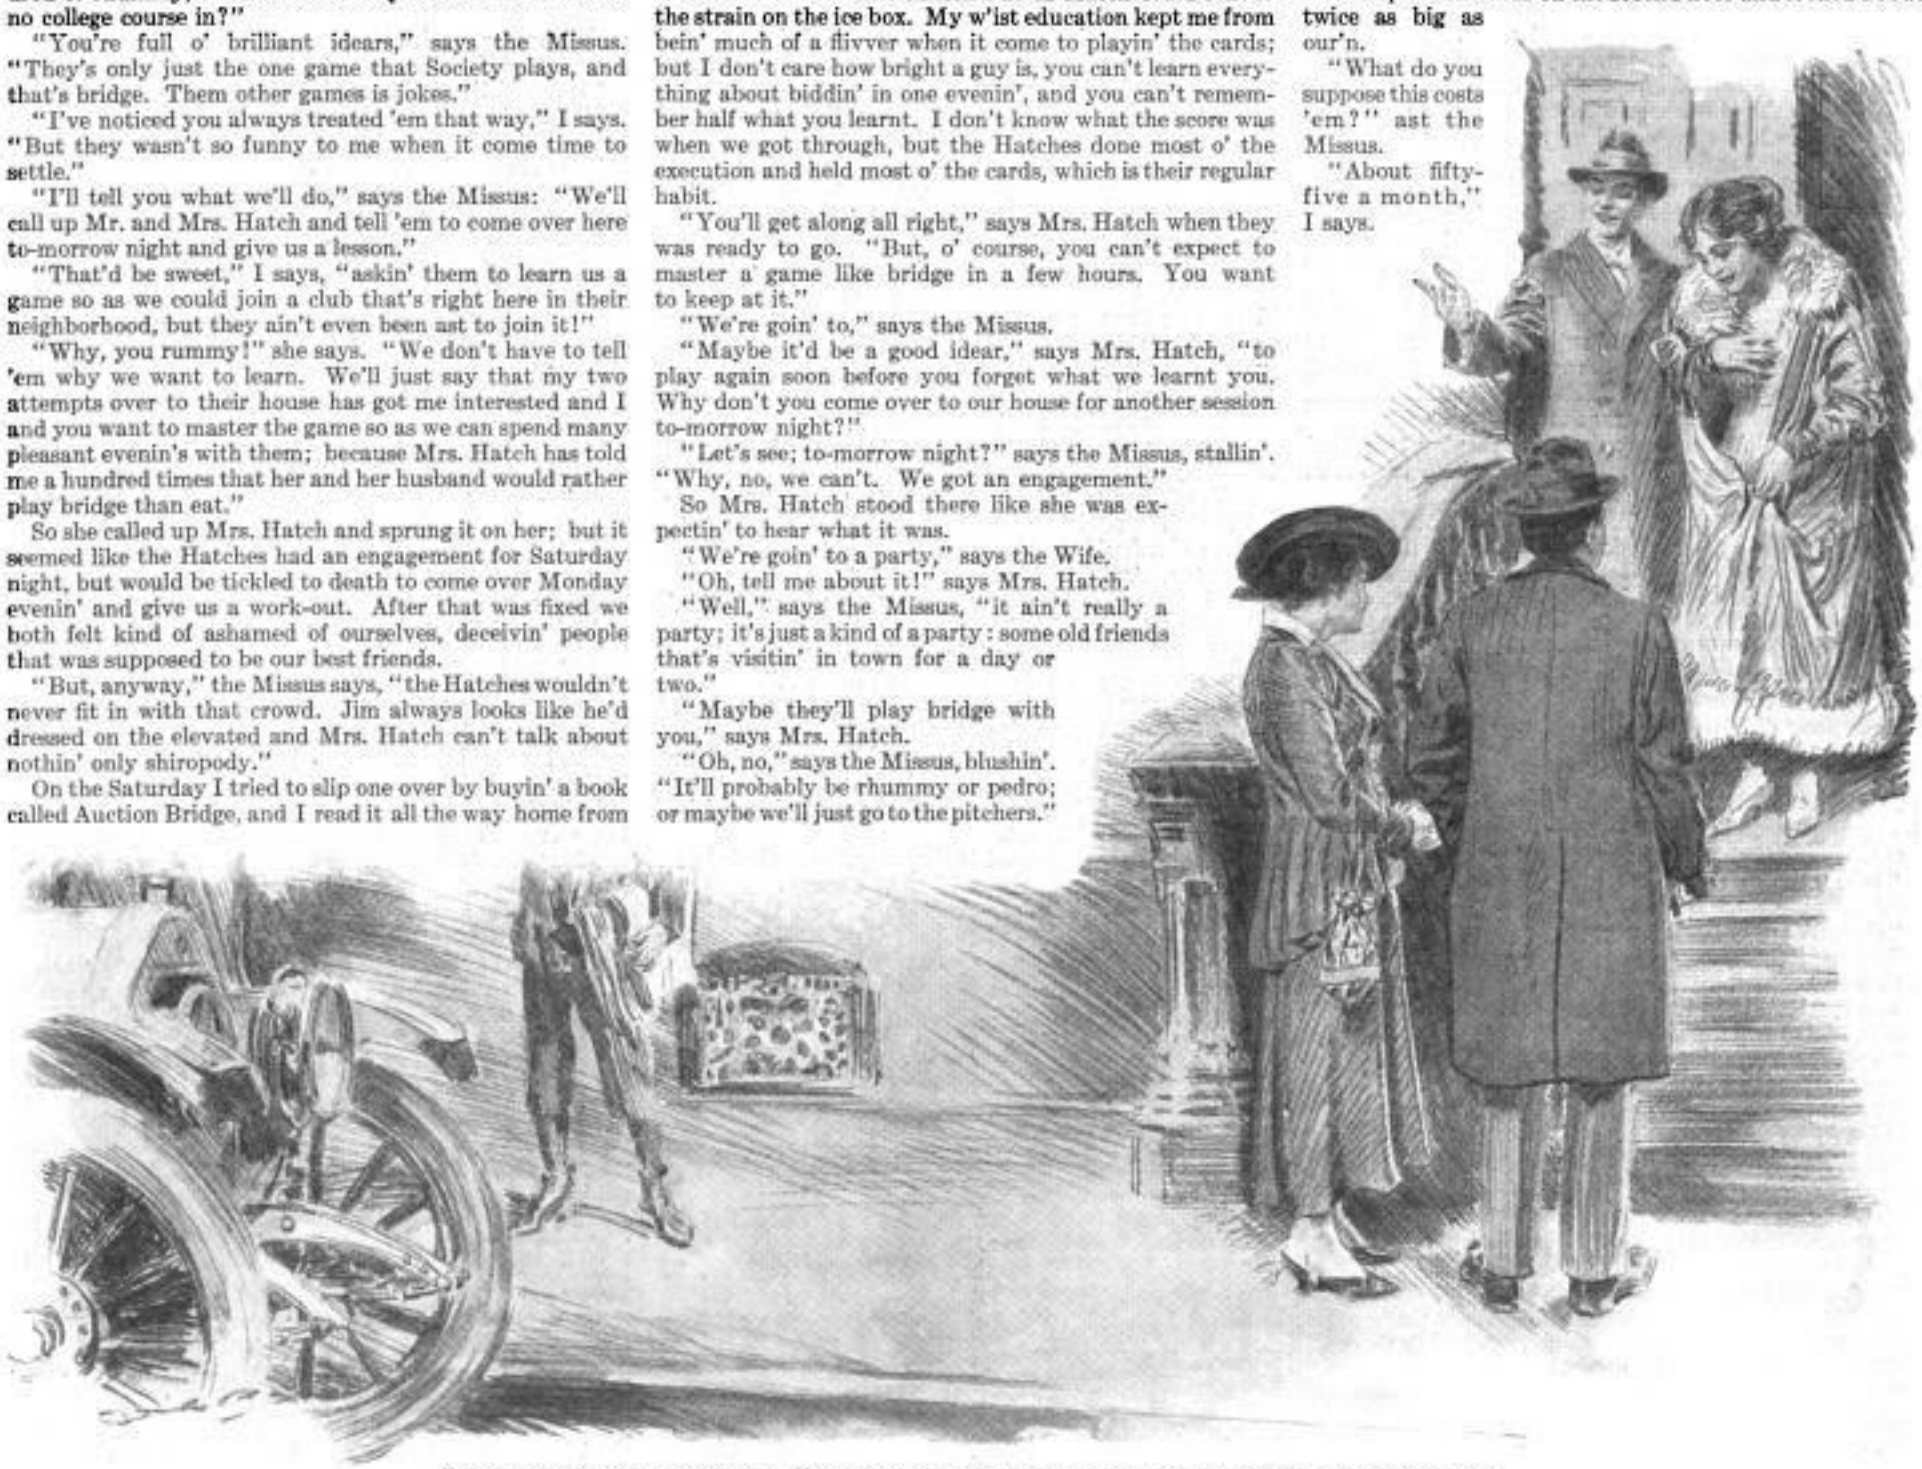
Well, we wouldn't make no date with 'em, and they finally blew with the understandin' that we was to go to their house and play some night soon. When they'd went the Missus says:

"I feel like a criminal, deceivin' 'em like that. But I just couldn't tell 'em the truth. Bertha Hatch is the most jealous thing in the world and it would just about kill her to know that we was in on somethin' good without she and Jim."

"If you hadn't ast 'em over," I says, "we'd of been just as well off and you wouldn't of had to make a perjure out o' yourself."

"What do you mean, we'd of been just as well off?" she says. "They done what we expected of 'em: learnt us the game."

"Yes," I says; "and you could take all I remember o' the lesson and feed it to a gnat and he'd say, 'Hurry up with the soup course!'"



III

WELL, Mrs. Garrett had called up to say that the feed before the game would begin at seven bells; so I and the Missus figured on bein' on hand at half past six, so as to get acquainted with some of our fellow club members and know what to call 'em when we wanted the gravy passed or somethin'. But I had trouble with my studs and it wasn't till pretty near twenty minutes to seven that we rung the Garretts' bell. The hired girl let us in and left us standin' in the hall w'ile she went to tell Mrs. Garrett we was there. Pretty soon the girl come back and says she would take our wraps and that Mrs. Garrett would be with us in a few minutes. So we was showed into the livin' room.

The apartment was on the second floor and looked about twice as big as our'n.

"What do you suppose this costs 'em?" ast the Missus.

"About fifty-five a month," I says.

"That Don't Tempt Me," I Says. "I'd Just as Soon Try and Eat a Raw Muskrat as a Welsh Rabbit"

Digitized by Google

"You're crazy!" says she. "They got this big livin' room and two big bedrooms, and a maid's room and a sun parlor, besides their dinin' room and kitchen and bath. They're lucky if they ain't stuck for seventy."

"I'll bet you!" I says. "I'll bet you it's nearer fifty-five than seventy."

"How much'll you bet?" she says.

"Anything you say," says I.

"Well," she says, "I've got a cinch, and I need a pair o' black silk stockin's. My others has begun to run."

"All right," I says. "A pair o' black silk stockin's to fifty cents cash."

"You're on," she says, "and I'll call up the agent to-morrow and find out."

Well, it must of been pretty near seven o'clock when Mrs. Garrett finally showed up. "Good evenin'," she says. "I suppose this must be our new members. I'm awfully glad you could come and I'm sorry I wasn't quite ready."

"That's all right," I says. "I'm glad to know they's others has trouble gettin' into their evenin' clo'es. I suppose people that does it often enough finally get to be experts."

"I didn't have no trouble," says Mrs. Garrett; "only I didn't expect nobody till seven o'clock. You must of misunderstood me and thought I said half past six."

Then Mr. Garrett come in and shook hands with us, and then the rest o' the folks begun to arrive and we was introduced to them all. I didn't catch all their names, only Mr. and Mrs. Messenger and Mr. and Mrs. Collins and a Mr. and Mrs. Sparks. Mrs. Garrett says dinner was ready and I was glad to hear it.

They set me down between Mrs. Messenger and a lady that I didn't get her name.

"Well," I says to Mrs. Messenger, "now we know you personally we can pay the rent direct without botherin' to go to the real-estate office."

"I'm afraid that wouldn't do," she says. "Our agent's entitled to his commissions. And besides, I wouldn't know how much to take or nothin' about it."

"We pay thirty-five," I says, "and that's all as you could ast for, seein' we only got the four rooms and no sun parlor. Thirty-two and a half would be about the right price."

"You'll have to argue that out with the agent," she says.

I was kind of expectin' a cocktail; but nothin' doin'. The hired girl brought in some half sandwiches, made o' toast, with somethin' on 'em that looked like BB shot and tasted like New Year's mornin'.

"Don't we get no liquid refreshments?" I ast Mrs. Messenger.

"No, indeed," she says. "The San Susie's a dry club."

"You should ought to call it the San Sousy, then," says I.

The Missus was settin' next to Mr. Garrett and I could hear 'em talkin' about what a nice neighborhood it was and how they liked their flats. I thought I and the Missus might as well settle our bet then and there, so I spoke to Mr. Garrett acrost the table.

"Mr. Garrett," I says, "w'ile we was waitin' for you and your wife to get dressed, I and the Missus made a little bet, a pair o' silk stockin's against half a buck. I got to pay out two dollars here for the prize and the Missus claims her other stockin's has begun to run; so you might say we're both a little anxious."

"Is it somethin' I can settle?" ast Mr. Garrett.

"Yes, sir," I says, "because we was bettin' on the rent you paid for this apartment. The Missus says seventy a month and I says fifty-five."

"I never decide against a lady," he says. "You better buy the stockin's before the others run so far that they can't find their way home."

"If I lose, I lose," says I. "But if you're stuck sixty-five or better, the Missus must of steered me wrong about the number o' rooms you got. I'll pay, though, because I don't never welsh on a bet. So this party's really costin' me two and a half instead o' two."

"Maybe you'll win the prize," says Mr. Garrett.

"They ain't much chance," I says. "I ain't played this game for a long w'ile."

"Why, your wife was just tellin' me you played last night," he says.

"I mean," says I, "that I didn't play for a long w'ile before last night; not for thirty-six years," I says.

Well, when everybody's got through chokin' down the shot, they brought in some drowned toadstools, and then some little pieces o' beef about the size of a checker, and seven Saratoga chips apiece, and half a dozen string beans. Those that was still able to set up under this load finished up on sliced tomatoes that was caught too young and a nickel's worth of ice cream and cake and an eyedropper full o' coffee.

"Before I forget it," says Mrs. Collins, w'ile we was staggerin' out o' the dinin' room, "you're all comin' to my house next Tuesday night."

I was walkin' right behind her.

"And I got a suggestion for you," I says, low enough so as they couldn't nobody else hear: "Throw some o' the prize money into the dinner; and if they's any skimpin' to be done, do it on the prizes."

"What Seems to be the Trouble?" He Says. "This Ain't No Barroom"

She didn't say nothin' back, because Mrs. Garrett had started to hand us the little cards that showed where we was to play.

"I suppose I better tell you our rules," she says to me: "Each table plays four deals. Then the winners moves w'ile the losers sets still, except at the first table, where the winners sets still and the losers moves. You change pardners after every four deals. You count fifty for a game and a hundred and fifty for a rubber."

"The way I been playin'," I says, "it was thirty for a game."

"I never heard o' that," she says; but I noticed when we got to playin' that everybody that made thirty points called it a game.

"Don't we see the prizes before we start?" I ast her. "I want to know whether to play my best or not."

"If you win the prize and don't like it," she says, "I guess you can get it exchanged."

"They tell me you're the shark amongst the womenfolks," says I; "so it's a safe bet that you didn't pick out no lady's prize that isn't O. K."

I noticed some o' the other men was slippin' her their ante; so I parted with a two-spot. Then I found where I was to set at. It was Table Number Three, Couple Number One. My pardner was a strappin' big woman with a name somethin' like Rowley or Phillips. Our opponents was Mrs. Garrett and Mr. Messenger. Mrs. Garrett looked like she'd been livin' on the kind of a meal she'd gave us, and Mr. Messenger could of set in the back seat of a flivver with two regular people without crowdin' nobody. So I says to my pardner:

"Well, pardner, we got 'em outweighed, anyway."

They was two decks o' cards on the table. I grabbed one o' them and begun to deal 'em face up.

"First jack," I says.

"If you don't mind we'll cut for deal," says Mrs. Garrett.

So we cut, and it seemed like the low cut got the deal and that was Mrs. Garrett herself.

"Which deck'll we play with?" I ast.

"Both o' them," says Mrs. Garrett. "Mr. Messenger'll make them red ones for you."

"Make 'em!" I says. "Well, Messenger, I didn't know you was a card factory."

Messenger laughed; but the two ladies didn't get it. Mrs. Garrett dealt and it was her turn to bid.

"One without," she says.

"I'd feel better if I had one within," says I.

"Are you goin' to bid or not?" she ast me.

"I thought it was the dealer's turn first," I says.

"I've made my bid," she says. "I bid one without."

"One without lookin', or what?" I says.

"One no trump, if I got to explain it," she says.

"Oh, that's different," I says; but I found out that most all o' them said "One without" when they meant one no trump.

I looked at my hand; but about all as I had was four hearts, with the king and jack high.

"Pardner," I says, "I don't see nothin' I can bid, unless it'd be one heart. Does that hit you?"

"No talkin' acrost the boards," says Mrs. Garrett. "And besides, one heart ain't over my bid."

So I passed and Mr. Messenger bid two spades. Then my pardner passed and Mrs. Garrett thought it over a w'ile and then bid two without.

So I passed again and all the rest o' them passed, and it was my first lead.

Well, I didn't have only one spade—the eight-spot—and I knew it wouldn't do my hand no good as long as I couldn't trump in with it; so I led it out. Messenger was dummy, and he laid his hand down. He had about eight spades, with the ace and queen high.

"I might as well take a chance," says Mrs. Garrett, and she throwed on Messenger's ten-spot.

Out come my pardner with the king, and it was our trick.

"What kind of a lead was that?" says Mrs. Garrett to me.

"Pretty good one, I guess," says I. "It fooled you anyway."

And she acted like she was sore as a boil. Come to find out, she'd thought I was leadin' from the king and was goin' to catch it later on.

Well, her and Messenger took all the rest o' the tricks except my king o' hearts, and they had a game on us, besides forty for their four aces.

"I could of made a little slam as well as not," she says when it was over. "But I misunderstood our friend's lead. It's the first time I ever seen a man lead from a sneak in no trump."

"I'll do a whole lot o' things you never seen before."

"I don't doubt it," says she, still actin' like I'd spilled salad dressin' on her skirt.

It was my first bid next time and hearts was my only suit again. I had the ace, queen and three others.

"Pardner," I says, "I'm goin' to bid one heart and if you got somethin' to help me out with, don't let 'em take it away from me."

"I'll double a heart," says Messenger.

"Oh, somebody else is gettin' cute!" says I. "Well, I'll double right back at you."

"Will you just wait till it comes your turn?" says Mrs. Garrett. "And besides, you can't redouble."

"I guess I can," says I. "I got five o' them."

"It's against our rules," she says.

So my pardner done nothin', as usual, and Mrs. Garrett bid one without again.

"I guess you want to play 'em all," I says; "but you'll have to come higher'n that. I'm goin' to bid two hearts."

"Two no trump," says Messenger, and my pardner says "Pass" once more.

"You'll get a sore throat sayin' that," I told her. "Don't you never hold nothin'?"

"It don't look like it," she says.

"Maybe you don't know what's worth biddin' on," I says.

"Maybe she'd better take a few lessons from you," says Mrs. Garrett.

"No," I says, kiddin' her. "You don't want no more female experts in the club or you might have to buy some cut glass once in a w'ile instead o' winnin' it."

WARD EIGHTY-THREE

By ELIZABETH FRAZER

Decoration Ceremonies in Ward Eighty-Three. This Soldier Received the Cross of War and the Military Medal

IT WAS my first morning at the hospital. The clock in the *vestiaire* stood at five minutes to eight. At eight I was to begin work. "Report for duty" was the way the formal summons ran. I was to report to Ward Eighty-three, the biggest, the heaviest and the most interesting ward in the entire hospital. Mrs. Monroe, who had charge of the untrained and unpaid volunteer nurses—or *auxiliaires*, as they are termed—had told me to await her in the *vestiaire*. Accordingly I waited, feeling awkward and strange and timid, like a Freshman on his first day at college.

To say that I was nervous would be considerably understating the case. Ever since entering the stone portal of the big American war hospital that morning, I had been smitten with a deadly ague of fear—fear lest in my abysmal ignorance I should do the wrong thing at the wrong time, or fail to do the right thing at the right time, and a man should die as the consequence—a man; a real, live, breathing man—one of those gay, muscular, bright-eyed little boy soldiers of France, with cigarettes perched rakishly behind their ears, that I had seen crowding the streets of Paris on their brief *permissions* from the Front!

Suddenly it came to me that fastening a handkerchief round the eyes of a blinking but obliging friend was a vastly different affair from fastening a firm, nonslippable bandage across the sockets of a man whose eyes have been torn out by a ball. And how did one stop a hemorrhage? You tied something somewhere. That was the extent of my knowledge on that point. In the confusion of my mind, I had even forgotten how to rescue a drowning man, a formula which has always fascinated me and which I have memorized at intervals ever since the age of ten, thinking that some day in such a fashion I might rescue my future husband. In short, all the carefully acquired artificial knowledge I had been able to absorb in a three-months' First Aid Course in New York, all the data, the neat lists of questions and answers, had faded clean out of me, like a cheap dye, now that I was faced up with the immediate and grim reality.

Volunteer Nurses of the American Ambulance

THAT course, and the light-heartedness with which I had pursued it, seemed all at once to me very remote, irrelevant to the present situation, and somehow like a joke in bad taste. I perceived, or I believed I perceived, that I was in a false situation. I had no business in that *vestiaire*, in that white uniform and coif. If at that moment there had been a train waiting outside the *vestiaire* door bound for the Grand Central Station, I should have taken it without a second's hesitation. There being none, I consoled myself with the reflection that, after all, I had not asked to come; that, on the contrary, I had been sent for and urged to begin without delay, as the hospital was undermanned at this summer-vacation season, and the wounded were pouring in, a great steady stream, from the base hospitals.

Moreover, I should not be alone, like a sentinel on his post. Over me, the *auxiliaire*, was the trained nurse; over the trained nurse was the head nurse; over the head nurse was the doctor of the ward; over the doctor was the assistant surgeon; over the assistant surgeon was the chief surgeon, or *médecin chef;* and over all of us, interlocking us together, was the French military system and the invisible but potent Papa Joffre. So that if I, alone, could not stop a hemorrhage, I could call my trained nurse; if she could not stop it, she could call the head nurse; if the two of them could not stop it, they could call the ward doctor; and if he could not stop it—but at this point I felt myself on safe ground. The affair was out of my hands!

"Have you ever had to stop a hemorrhage?" I voiced my secret fear to a young Englishwoman beside me, who was rapidly changing from her civilian costume into the crisp white linen *infirmière*'s blouse of the wards.

"*Mon Dieu*, no!" She laughed as she pinned on her coif. "Not a chance, with so many nurses round. You'll have plenty of chance, though, to wash their feet—those that still have feet," she added soberly. "Is this your first day?"

I nodded.

"And did you have any training—I mean any real training—before you entered?" I asked.

"No," she said. "I took an examination in London; but the examiner was so weary by the time he got to me that he merely said 'Have you had the usual course?' And when I replied 'Yes,' he simply passed me through. But it doesn't matter. You soon pick things up. What's your ward?"

"Eighty-three."

She raised her brows at that and glanced at my feet.

"I hope you have comfortable shoes! That ward is the hardest in the hospital—nothing but big primary cases; every single *blessé* in bed. You'll have no chance to go to sleep at the switch," she added with a smile. "If your feet hurt to-night, rub them with cold cream, then alcohol; and lie with them up on the footboard of your bed. It takes the swelling out. Have you read the rules?" She waved her hand toward a printed sheet tacked up on the wall, nodded and hurried off.

I faced round, feeling more than ever like a Freshman on his first day, and read the following:

AMERICAN AMBULANCE

CONDITIONS FOR AUXILIARY SERVICE

The *auxiliaires* work under the trained nurses. They do not, as a rule, attend at operations; nor do they do the dressings, although they might be called upon to do a minor dressing, should the nurse consider them sufficiently experienced. The hours are from eight A. M. to six P. M. daily, with one whole day free one week, and one afternoon free the following week. *Auxiliaires* are asked to stay three months at least; six months if possible. The service is entirely voluntary, and *auxiliaires* must meet all their own expenses. Luncheon is provided at the Ambulance at a cost of 1.50 francs a meal ——

At this juncture the *vestiaire* door opened again. I wheeled—I had been wheeling every time it opened for the last ten minutes!—and Mrs. Monroe's brisk voice said:

"Ah, there you are! Sorry to have kept you waiting. I'll just take you to Miss Brooks, the head nurse of Salle Eighty-three, and she'll tell you where to begin."

Five minutes later introductions had been effected. Miss Brooks, who, together with the doctor, two other nurses and an orderly, was bending over a bed from which proceeded loud screams of "*Oh, là là! Oh, là là!! Oh, là là!!! Bon Dieu! Doucement! Oh, là là!*" turned to the nurse beside her and said briefly:

"Here's your auxiliary, Miss Ransome. Is there anything she can start on?"

Miss Ransome did not even glance up. She was holding, firmly grasped in both hands, a man's leg, stiffly extended, while the doctor lifted pieces of gauze from what appeared to be a deep bloody and suppurating crater in the thigh.

"One moment, please," she murmured.

The dressing of the wound continued. The man renewed his high agonized cries: "*Oh, là là! Oh, Nom d'un Nom! Doucement!* — Gently there!"

I stood aside and drew a deep breath. The quality of anguish in those tones had already turned me pale. Later I was to learn to discriminate between sounds of pain. There is the loud outcry of the man who is not in extreme pain, but whose nerves have been so battered by shock, exposure and continued strain that he is no longer master of himself. Second, there is the scream of the man, also suffering from shock and abnormally sensitive, who howls at the mere approach of the doctor.

The Morning Rounds in Eighty-Three

AND finally, there is the cry of the plucky soul, strong to endure, but whose agony has passed the limit of human endurance. Such a cry, bursting out across the ward, simply stampedes the nerves; heard suddenly in the middle of the night it would fetch one out of bed in a single leap, panic-stricken with horror; and even in a big hospital, where innumerable sounds of pain blunt the ear, it still takes the right of way, momentarily stilling the air. As the days went on I was to learn these fine discriminations; but at present all screams were alike to me. I gave each one full value, one hundred per cent of anguish.

While the dressing proceeded I looked about me. Salle Eighty-three was a spacious airy room, lofty-ceiled, with tessellated stone floors, and long French windows on two sides. One set of windows gave upon the rear of the building, and the other side opened on a charming French garden round which the huge structure is built, one room deep, in the shape of a hollow square. Inside the salle the beds were ranged round the four sides and came halfway down the center, forming thus two passages that were none too wide for the busy morning traffic.

Everyone, I perceived, was already working under a full head of steam. Two doctors were in the ward, one on each side, and the dressings were progressing steadily from bed to bed. A nurse preceded the doctors, cutting down the bandages. The air was thick with cries and groans, the cry of "*Doucement!* Easy there!" prevailing high above all others like a monotonous refrain. French military orderlies were hurrying about, their arms piled high with stained linen; two blowzy-cheeked little *femmes de chambre* were down on their knees scrubbing the stone floor, their tongues and their *sabots* clattering together. Ahead of them a bent old woman, with a great red hooked nose and a wide toothless smile, hideous as one of Shakspere's witches, was passing from bed to bed, gathering up the cigarette butts, chaffing the men and exchanging with them jests as broad as they were good-natured.

It was evident she was a prime favorite, for it was "*Grand'mère!*" "*Grand'mère!*" straight down the line, and chuckles followed in the wake of her sallies like bubbles

Digitized by Google

on a stream. Here and there patients able to sit up in bed had removed their *chemises* and were soaping their chests with gusto. These *Grand'mères* favored with take-offs on their manly beauty. Bursts of laughter punctuated her hits.

"Here are your men," said Miss Ransome, joining me—"these twelve. You're not responsible for the others. Suppose you begin with Claudius there. Wash him. Rub his back with alcohol. Then make his bed. Watch out for his broken leg!" she cautioned.

And she nodded toward that unfortunate member, which, swathed as stiff as that of a mummy and dotted with numerous little rubber tubes that sprouted up through the bandages like unnatural flowers, was swung out upon an extension and held taut by a jungle of pulleys and bags and weights.

"He's had a hard time," she continued in a lowered voice. "What with losing his eye and getting his leg infected—you see, he lay wounded four days and four nights on the battlefield, without water, before he was finally rescued—he's had a tough pull. For weeks we thought he would die. But he fooled us all—didn't you, Claudius?"

As she spoke English, the boy did not understand. He lay regarding her with a bright dark eye, all the brighter for the black patch which covered its companion; and finally he asked in tones of weary politeness:

"You said, mees?"

"Change all his linen," she pursued unheeding. "He can raise himself an inch or two. When he's finished, go straight down the line and do the same to the others. I can't help you much this morning."

And she hurried away, leaving me with my first task—to wash the back and change the entire bed linen of a man who could not stir more than an inch or two without exquisite pain!

"*Bonjour*," I said by way of commencement. "*Comment ça va?*—How goes it?"

"Bad. Very bad. That imbecile pig of a leg! Not a moment's rest did it give me last night. Cramp, cramp, cramp!" He clenched and unclenched his fist with nervous irritability to indicate the nature of the pain, while the flare of crimson in his thin cheeks testified to a heightened temperature. "I wish you'd cut it off to-night," he growled, "and stand it over in the corner."

"I will—with my scissors," I promised. "And to-morrow, if it's been good, we'll fasten it back on with safety pins."

"You needn't bother," he grinned.

The Philosophy of Claudius

WITH many gaspings and painful grimaces he got hold of an overhead hand grip, dug his head deep into the pillow and managed to raise himself until his back described a parabola perhaps two inches above the bed. "Quick! Quick!" he commanded breathlessly. I washed him as best I could. Afterward I glanced up at the chart hanging behind his bed and read there: "Simondon, Claudius. Age, 21. Wounded May 25, 1916. Admitted June 7, 1916." Claudius, aged twenty-one, had already white hairs in his head, and his slight figure was shrunken and yellow and dry, like that of a little old man. At the same time there was about him something unquenchably boyish and debonair, which made one wish to weep.

"Have you ever been in a charge?" I asked, to divert his attention.

Serving a Community of Fifty a Three-Course Meal—Soup, Meat and Vegetables, and Dessert—is a Man-Size Proposition

"Yes; ten of them. Not interesting! Not interesting at all! You stand there in a trench, water up to your knees, holding your gun and waiting for the order. You are cold, and still you perspire. You tremble with agitation. Maybe you stand thus for hours. Or you climb over the parapet and run. If the Boches retreat, yes, then it is interesting. If they come on, no, not interesting. Not interesting at all!" And he looked up at me with his sardonic grin. "War," he added, "is the stupidest game that a fellow with wits can play at."

A minute later he confided to me that he was to receive a decoration. He was to receive the Croix de Guerre.

"But that is fine!" I exclaimed.

"Ah, you think so?" jeered Claudius. "It's very fine, without doubt; but as for me, I'd rather have my eye than that pretty little medal hung on my chest. Can I see the world with that little medal? *Zut!* I prefer my eye—thanks."

For the moment his nonchalance completely deceived me. It was not until several days later when I came upon him unobserved, poring over the official notice of his decoration, and caught the look of pride, of emotion in the young face, that I really got the matter straight. Twenty-one is twenty-one the world over, and always hides its loves.

After washing Claudius and rubbing his back with alcohol, I made his bed. In France the bed is a sacred institution and the making of one is not a proper subject for jest. But I am not jesting when I say that the ordinary, casually made American bed, with its opportunities for ventilation and its light loose covers which one may kick joyously down to the foot in the morning, would fill the average Frenchwoman with amazement and scorn.

A French bed is something in the nature of a cocoon, with a hole in the upper right-hand corner, into which one artfully insinuates oneself at night, and from which one artfully disengages oneself in the morning. All apertures, save the small one at the top, are hermetically sealed—so tightly are the sheets drawn under the mattress, so smoothly are the covers laid on, so exquisitely are the corners mitered. One is all but sewed into bed.

To make such a bed is to produce a work of art, a creation. Thus, Jean and Marie make my bed every morning at the hotel, folding on each layer as close as the successive skins of an onion, while I watch them with respectful admiration. Once, feeling too warm in the middle of the night, I tried to remove a blanket. I struggled until four o'clock the next morning. Next time I am going to send for professional wreckers.

But the making of such a bed is, after all, a comparatively simple affair—for I am not in it! Let us denominate it Class C in order of difficulty. Class B is the making of such a bed with an occupant, but an occupant who can help himself—stir about. Class A is the making of such a bed with an immovable man in it; a man, moreover, attached to a network of apparatus—cords, pulleys, overhead weights and drains—all in such delicate adjustment that to jar any of them will wrench a cry of torture from the occupant.

To this last class belonged the bed of Claudius. When, after three-quarters of an hour's labor, punctuated by many exclamations of "*Doucement! Doucement!*" I straightened myself, Claudius was rather white and I was perspiring freely. Still, that bed was made—it really should be written Made!—and I surveyed it proudly. The lower sheet in particular had been difficult to dispose properly. To me it appeared at least twice too long for the mattress, and in the end I had simply wadded up the extra yards of length and tucked them under the pillows.

An Object-Lesson in Bed-Making

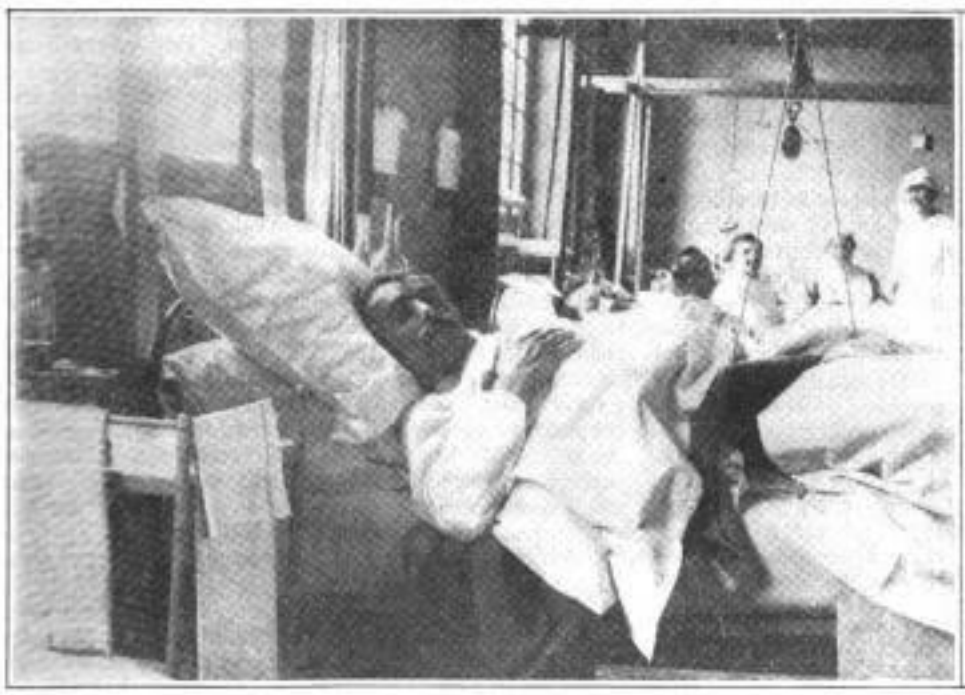
IT WAS during this latter operation when Justin, the orderly, came upon me. Justin is a squat, grotesque little old man, with the head of a gargoyle set on powerful Atlas-like shoulders. Being an orderly is his *métier*. He has been one in a French military hospital for twenty years, which is to say that Justin is a very wise man. I believe he could give points to Solomon, for Solomon was not a Frenchman. He regarded my bungling efforts for a moment in silence, and then said in tones of grave reproach:

"Ah, mademoiselle, it is not thus we make a bed in France! Permit me."

Saying which, he stripped the bed bare to the mattress and made it afresh, with the subtle perfection of Jean and Marie. My crumpled undersheet was drawn taut as a drumhead. Followed in swift succession the drawsheet, the top sheet and the blankets, smooth as rose petals and as firmly fixed.

Where, meantime, was Claudius, with his weak back, his smashed leg and his jungle of apparatus? Not a single cry had escaped him. A glance showed his thin dark face alight with amusement as he watched old Justin teach the strange "mees" how to make a bed with a live Frenchman in it.

"*V'là!*" said Justin, straightening himself. "That's the way we make a bed in France!" And he padded noiselessly off in his battered blue list slippers; it had taken him exactly six minutes by the ward clock.



The next bed, when I turned down the covers, revealed a patient whose linen was saturated and stiff with blood. Another undersheet to manipulate!

"Don't touch me! Don't touch me!" came a faint moan from the pillows.

"Where are you wounded?" I inquired, for this is the first fact a maker of beds must determine.

"Both legs broken below the knees," was the feeble reply.

THE POMEGRANATE COAT

By Mary Brecht Pulver

ILLUSTRATED BY H. J. SOULEN

In Ping Yee's Dingy Window a Mandarin Coat Blazed Like a Flaming Eastern Sun

WHENEVER the time hung too heavily young Dr. Thomas Seton sterilized afresh his small private stock of instruments to their usual celestial state of asepsis. The pun is intentional and not undeserving, considering conditions where one purified one's drinking water with lumps of alum thrown into the great wicker cooler and drank with eyes closed—unless one was a clever young medico from the States and insisted on boiling—where the water, so to speak, might stop at *aqua* as against the variety known as *aqua pura*. Doctor Seton boiled his over a charcoal brazier—whether for drinking or washing or sterilizing—and tried not to think whence it was piped, nor to look out at the turgid yellow stream of sewage that ran less than five hundred yards from his window.

If he did not use up his recreation hours on his instruments he arranged his little brand-new pill cases for the thousandth time, or did any of a dozen absurd and puttering jobs—anything to keep him from thinking.

He had come to this little educational outpost of Central China a year ago with his mind aflame. Not, it is to be regretted, because of a holy missionary zeal to impart the science of physiology or anatomy to bland young Celestials, or to revolutionize their sanitation—though his conscience behaved well on both counts—but because his young blood had thrilled to the tune of adventure, because he had craved color—Oriental color.

He knew now that color was mostly yellow—a dirty range of it from muddy chrome to gamboge. He had seen it a thousand times from his little window here in the college. But he hadn't known it then, back in Pennsylvania when he had scorned partnership with Uncle Doc Chalmers and a comfortable berth in prosaic America.

"To go out to China for a few years!" It had caused spinal thrills throughout the community—had set him apart from the common run of fellows. As the papers had had it: "Our young fellow townsman is departing to occupy the chair of anatomy and biology in the University of Tien-Sheng." And it had sounded good.

The sensation had lasted fairly long: through the torturing tortuous inland journey in the wretched, foul little river boat—even for a while after he had come to the queer, shabby, cheap little university struggling bravely to set a firm foot in the East. Perhaps the gamut of feeling he had run was best expressed by the little room he lodged in.

In the first fever and passion for the Orient, he had let it into his room—masks, embroideries, weapons, suns and dragons had flowered on his wall. He even wore a mandarin coat to smoke in; had discarded his fork for chopsticks. Then came the day when he pitched these into the yellow river and, looting in his trunk, filled his wall with girls. Yes, girls! For one cannot be twenty-four, and tall and blue-eyed and comely in a nice, boyish, honest fashion, without having had a fair number of heart concussions and their attendant trophies. Young Seton had had perhaps more than his share. He had bundled up his scalps carelessly back home, but here—all together and spread over his whitewashed walls—their numbers shocked him slightly.

True, they were very inclusive. There were some cousins, who never do count, and some kept for old times' sake out of the dark ages of the past—at least ten years old, when he had first gone into long trousers and had beaued his first lady. Several of the names had slipped his memory and several cabalistic references in the inscriptions baffled him, but he had known them once. They had been his girl at one time and another; he had looked into their several eyes and held their respective hands, and now their presence sustained and comforted him in a desert of Mongolian masculinity.

For the dozen associates on the little college faculty awoke no responsive echo in his breast. The men were mostly too old, and the women ——! There wasn't one that roused even the most languid interest. Ladies no longer quite young, who wore broad, flat-soled shoes and tweed skirts and Chinamen's coats and European straw sailors for comfort and convenience, who spoke freely about their souls and discussed wet feet and removable dentistry, made scant impression on young Doctor Tommy, whose beauty-loving soul writhed before them. Small wonder he fled to his old sweethearts.

But after a while even they failed. His walls showed bare again—bare as a hospital. For his room was become a shrine to Prophylaxis and Asepsis. Only one picture was left—Eloise's. She had been the third to the last girl he had said good-by to on the night he left. But he knew now she was the one and only girl. There was that much to be said for Interior China. It had helped him to know the truth!

Gray-eyed, laughing Eloise, whose sweet, teasing face smiled out of the eight-by-ten platinotype on his dresser! He realized the sweet, teasing face was probably smiling from several other dressers—for Eloise, like himself, was an inheritor of the moonlight nook and the mistletoe bough—but it made no difference. Just as soon as he had the right—as soon as Uncle Jim Chalmers finished arrangements back home and his year's contract in this deadly pestilential hole was finished—and he had something to hang to, a chance at a nice brisk practice in God's country, he would put it up plain to Eloise. There had been reams of letters with pretty plain hints, and he guessed the other fellows didn't have much chance! He closed his eyes a hundred times and thought of Eloise's pouting lips and the kissable dimple in her cheek.

In the meantime he sat, this gray-and-yellow afternoon, re-reading a three-weeks-old letter from her:

So you see I miss you terribly, Tommy. It's so dull here without you. Last week the Gays had another dance. There were two fellows from Harvard. They brought that new maxixe step we've been so crazy about. I had every dance taken, and we danced terribly late—until four, just like a big city. Then Mrs. Lennard had another dance. And next week the Parkers have a house party. This week hasn't been so bad. The Harvard men are terribly good-looking, and one of them, Mrs. Gay says, has an awful crush—but you know I don't care at all for Harvard anyhow. Oh, Tommy, I wish you were home. It's dreadfully lonesome sometimes. But of course it's perfectly stunning to be way out there in China. You must be having such heavenly experiences. Harry West—he's taking me to the Bellaire Club series—asked after you. He called you the professor of bugs and bugology. It does seem terribly clever for you to be a professor. I must stop. Blanche Carey and Roger are coming for me in the motor.

The professor of bugs got no farther. He folded the letter carefully and replaced it. He looked gloomily about the cell-like purity of his room. He had a sudden nostalgic pang that embraced floating impressions of a shady small-town street, a brown old sitting room full of folks—home folks—and bright, flower-decked parlors full of the happy young people he knew. Then he set his jaw. He was no quitter. He'd stick it through. By gosh, life wasn't all fun and dancing! Meantime he'd tramp up to old Iki and walk off some of his disgust.

II

OLD Iki, a single knob of yellow earth terraced for rice fields, towered—the single elevation in the plain—three miles to the east. Seton had tramped to it a dozen times, had climbed to its summit and its short crooked pine, and scowled over the vista fully as often. Everybody did it. It was a sort of safety valve, when the longing for Europe and the outer world threatened to break bounds. For of course the ailment he endured attacked the rest at intervals, though in less degree.

Frequently his walks were marred by the presence of several others of the faculty making the same journey, but to-day, to his misanthropic delight, he had things his own way.

There was nobody on old Iki and no one going or coming. But on his way back he found someone.

There was a point on the river bank where the path wound close; where a flat shale of rock jutted and the muddy current under it flowed a shade less filthily. Here, sitting on the rock, back turned to him, he discerned a figure. A woman's figure in the usual hideous habiliments—straw sailor, blue Chinese coat, black cloth skirt. He could not see her feet, but he did not need to—they would be the wide spatulate shoes of the university's ladies. Then he saw her hands move and got the flash of a knitting needle. His spirit groaned. It was Miss Wheeler or Miss Hagner, Miss Bayer being addicted to tatting. He had learned to discriminate. He spoke rudely, with violence, easing his soul.

"All you need," he said, "is a queue, and you'd pass for Sam Lee, who keeps the laundry in Flint Street, back home."

The figure turned and looked at him, and his heart missed a beat. He was addressing a perfect stranger.

"I beg your pardon," he said, reddening; "I mistook you for someone else—someone I knew."

"I'm not anyone you know—yet. But you will, of course. I think you must be Doctor Seton. I am Margaret Irby. I came yesterday to teach in the English department. Won't you sit down?"

She waved the thick black sock she was knitting toward the flat rock, and Doctor Thomas lowered himself to it deliberately. In spite of the needles and the uniform, she differed from type. She wore no eyeglasses, and her teeth—even in a brief glance—he discerned were neither removable nor like a set of assayer's samples.

He thought her young—moderately—say twenty-eight to thirty, and her eyes were rather stunning and thickly lashed. It was impossible to discover anything more, for the stolelike coat and the hideous straw hat tilted over her tightly drawn-back hair. No woman, he concluded, could get away with such a rig. He had tried to imagine someone beautiful—like Eloise—in it, but imagination balked. A woman with any regard for charm, who had any charm, would draw the line at it.

The stranger apparently read his thought.

"You were referring to my clothes, weren't you—a minute ago?"

Doctor Tommy blushed, but confessed.

"I was. I think the women in this college wear the ugliest things I ever saw. I don't see why they don't wear clothes that make them look like women—I don't see anyway why you put them on so soon."

Digitized by Google

"These clothes," she said gravely, "belong to Miss Bayer. She loaned them. That's one of their virtues—they're so adaptable. Besides, as you say, they all wear them. So even when mine are unpacked, I hardly think . . . as Miss Wheeler says, they're both decent and comfortable, and there's nobody here to dress for anyway."

"There's me," suggested Doctor Tommy.

Miss Irby raised her eyes and studied him thoughtfully, but did not reply. They were fine eyes, he thought, and when she had lowered them he noticed the unusual length of her eyelashes against her cheek. Still eyes alone do not make a woman charming. Her cheek, the young doctor thought, was too pale and, now that he noticed, the lashes themselves had a certain suspiciously moist look. Could it be possible that this dignified new member of the faculty had been crying before he came?

If so, it was probably because of homesickness, so Tommy abstained from the usual questions. He had no wish to bring on another attack. Perhaps she was not so old as he had first thought.

"May I ask whether the knitting needles and the wool are Miss Bayer's also?" he inquired.

She looked up at him again, but this time she laughed—and Tommy subtracted five years from his original verdict.

"Mine," she said, spreading out the sock—a gigantic black one. She hesitated a moment, then added gravely: "I knit for the Canadian Society for the Alleviation of Suffering Among Lumbermen."

"Good heavens!" said young Doctor Seton faintly. "I never heard of such a thing!"

"It's a very noble charity," she said thoughtfully; then she smiled. "Do you happen by any chance to knit yourself? Some men do—sailors, you know. I was thinking if you did ——"

"I do not," cried Doctor Tommy hastily. "I knew a fellow in college who made his own neckties, but I can't do a thing. If I did anything I'd rather it would be one of those white doily affairs. I have come pretty close to making a set out of surgical gauze, to fill in odd moments."

"Yes," said the girl, "they told me down at the school about you. You—you don't care for it here."

"I haven't said much, but anyone could guess. Wait till you've been here three months! Lord, how anyone can stand it ——"

"You are encouraging. I was thinking something like that before you came, and I hoped you could make me feel differently."

"Oh, well, you've only been here since yesterday. Perhaps—you—you—may be ——"

He floundered feebly, looking at her furtively.

"Women—girls are more adaptable—and then you can knit socks, you know ——"

"It isn't a joke, really." She sat looking out at the muddy river. "I didn't quite expect it would be like this."

"Lord, the food you know and all that ——"

"There's just one thing to do," she bent quickly low over her sock, "one simply has to look on the—the bright side and not think—and take whatever offers—in the way of amusement."

"Exactly—but you'll find precious little of the last."

"There's you," suggested the girl.

"Why—yes." The young doctor stared, then added a shade stiffly: "I didn't realize I was in the amusement class."

"For me," she nodded gravely, "it would be very amusing to have you to talk to. I've never known any young men—that is, any young and good-looking men—well enough to talk to. I've known some to look at—some very nice ones—but none of them ever cared—very much—I think—to talk to me," she added meekly. Tommy looked at her with mingled pity and embarrassment.

"I'll talk to you whenever you like—if it will help," he offered generously. "We can talk about the States and our respective homes—and it may ease things a bit."

"That won't help me," she sighed; "you can't be homesick when you haven't had a home. I've always lived round in colleges with my mother. She was a professor, you know, Latin and Greek. But I've been going round alone now for three years. She was the greatest authority of her time on the ablative absolute." He looked at her blankly. "You've heard of the ablative absolute, haven't you?" she added tolerantly.

"Once or twice—but if you're interested in a thing like that I'm not surprised that men won't talk to you," he said feelingly.

"Oh, I'm not—myself. That was mother's line."

"My mother is not at all like that." There was a note of commiseration in young Seton's voice. "Her waist measures thirty-one inches, and she put up two hundred and eighteen jars of preserves and jam last summer. She bakes the flakiest pastry I ever ate, and her roast turkey and brown sauce, her pumpkin pies and baked beans ——"

He stopped. A faint sob broke from Miss Irby. She dabbed fiercely at her eyes with the black sock.

"If you utter another word like that I'll go raving mad," she announced tensely.

"But good heavens, why should you—if you've always boarded round ——"

"That's just it," she said; "you can be homesick with good reason. But think—think of being homesick without any right to be, without having anything to be homesick for, except secondhand things done by the college cooks, even on Christmas and Easter vacations."

"Jiminy!" said the young doctor thoughtfully. "That is exciting!"

The girl was silent a moment.

"Professor Teevey tells me it may be more than exciting here," she said presently. "There's a man called Wee Singh ——"

"Shucks! Old Teevey has Wee Singh on the brain. He's a bad lot, mixed up with the Boxer troubles; but there hasn't been anything in years—that is, except for local talent. They carve each other up now and then among the tongs.

"I've been looking after a grandson of Wee Singh's who's had typhoid, and two of his nephews are coaching up to go to an American College next year. I know more about old Wee than Teevey does. Don't let him feed you his Wee Singh stuff!"

Miss Irby gave a little feminine shiver. She began to fold up her knitting.

"I must go back; I have advanced English at four. They're reading Tennyson's Princess. Fancy it! 'A Plince was I, blue-eyed, and fail in face.'" She laughed, then sighed. "I've just come from six months of it in Shanghai."

Doctor Tommy cavaliered her back. He made an unwontedly careful supper toilet that evening—not with the heart he would have put into it if he had expected to meet Eloise or one of the girls from home, but—well, she was a new girl, at least, and he might as well show her that a little dressing up for his sake might be worth while. Moreover, he had a very decided feeling that at this particular moment there was some dressing up going on.

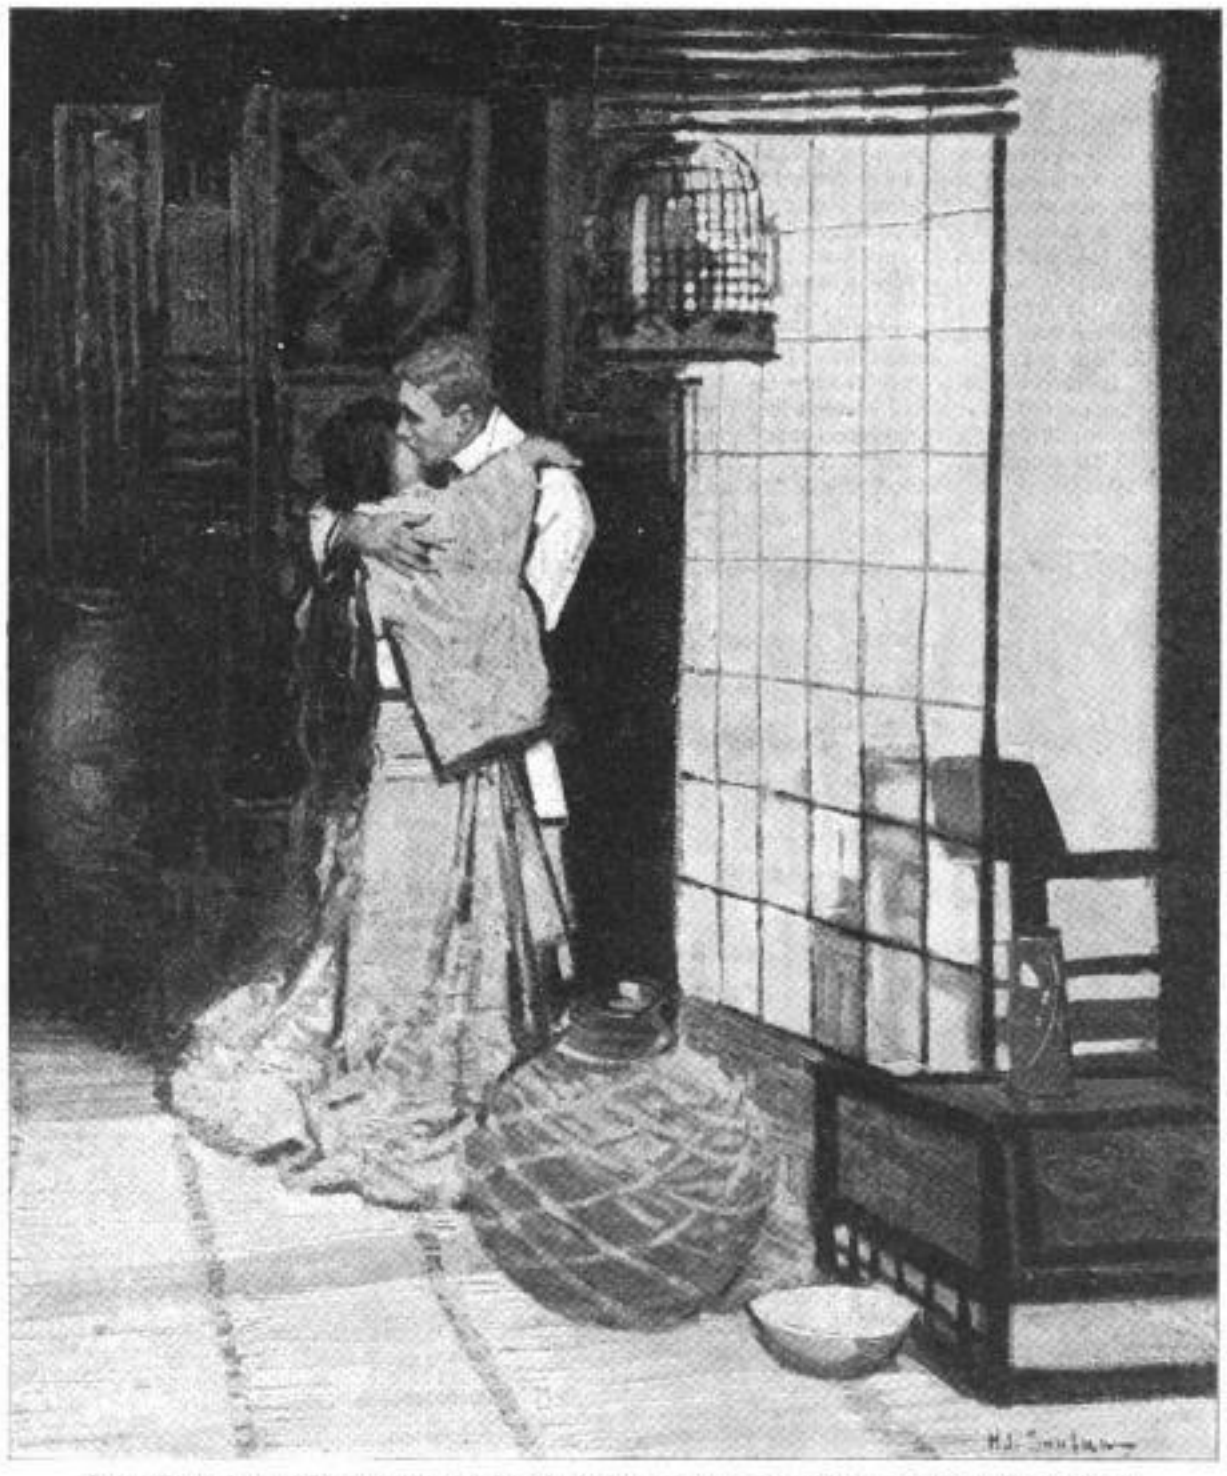
He was mistaken. When he went into supper he perceived with utter disgust that Miss Irby was still wearing the loose-coat costume like the rest. More, she outheroded Herod. Her brown hair was drawn back even tighter and plainer than any other woman present, and bound into a sleek, hard-looking knot on her neck. Minus the sailor hat she seemed startlingly young to Doctor Seton—not a day over twenty-one, he concluded in some surprise, and her profile was rather pretty he thought, in a wistful, girlish way. But it was only her profile he got after her first bow.

She listened all through the meal, and even afterward in the hall, to the elderly Professor Teevey, and Tommy indulged in little private snorts of impatience. They would be just the kind, those two, he thought with covert glances, to have lots in common—a girl who fixed her head like a billiard ball, and Teevey, with his eight-inch forehead and his double lenses.

The youngest male member of the faculty retired that night in a pretty dudgeon with his world.

He had no word with Miss Irby until two days later. Walking back from Iki, he found her on the flat rock, knitting in hand, looking out across the river.

"Your sock," said he, "does not appear to have increased in length since I last saw it. I hope your new impressions, especially those Teevey is giving you, are not going to interfere with your knitting."



"You do not admire Professor Teevey?" smiled the girl.

"I've nothing against old Teevey," he answered in an injured tone, "but I thought you were going to talk to me. You said as much."

"I am perfectly willing to let you talk now," laughed the girl, and Doctor Tommy, in his absorption, never noticed the shift in pronouns.

He accepted her invitation. For fifteen minutes he talked eloquently—of things back home, of people he knew, of Eloise and other girls, of college, and so on. He would have sworn he did not mention Eloise's name six times, yet when he paused Margaret Irby looked up from her work and challenged him directly:

"Eloise is the girl you love, isn't she?"

Below Them Came a Battering Rush at the Outer Door, a Strenuous Bombardment of the Last Barrier

Digitized by Google

Doctor Tommy blushed, but answered gravely: "Eloise is the girl I intend to marry."

"Is she . . . has she?" Miss Irby seemed to hesitate.

"She hasn't and she isn't," confessed Tommy, "but I'm sure she will when I ask her!"

"Dear me," said Miss Irby pensively, "it must be a wonderful thing to have a man planning a thing about one behind one's back like that, you know. It sounds so masterful. Are you always like that?"

Tommy felt that he was. To prove it, he ordered Miss Irby to put up her sock and go with him to see the view from Iki.

"Walking is what you need here, rather than knitting," he said in his most physicianly voice.

"I am not fond of walking alone," objected Miss Irby.

"I was not suggesting it."

He himself assisted her without delay in securing a good view from the hill top, and he offered to renew the opportunity for her every afternoon. Miss Irby accepted the invitation. They formed the habit of sharing Doctor Tommy's daily recreation hour and, in spite of all good intentions, the warmed-over letters in his trunk suffered.

Yet Tommy's conscience did not disapprove. So unworldly and unsophisticated a girl—there was much that he could do for her—so many little attentions that offered in a brotherly fashion would make her stay pleasanter. She seemed to like them.

She was always willing to go tramping, to make one of an impromptu picnic, to stroll in the bazaars and go with him to see the moon-faced Chinese babies. Presently—her own offer—she was assisting him in the occasional surgical case that called for his care. She was a cool, nervy little beggar he thought, ready with gauze or bandage; nice, likable—a regular pal, for all her shortcomings; a girl who was a bit of a tease, who liked jokes—even his; a girl with a pretty hand, a pretty laugh; in short, his ideal of a little sister in all things save two. He could not cure her of her obsession for talking to Teevey, or of her hideous habit of dress. Save on Sundays, when she changed to stiff collar and mannish shirtwaist, she clung resolutely to her laundryman's clothes—and a doubt presently arose as to whether she knew how to look girly and pretty.

Perhaps a life in the shadow of the ablative absolute had quenched that, perhaps she had no other clothes. Perhaps she hadn't the money to buy them. He knew she was being economical. She had told him very little of her early life. There had been mention of school in America, of a winter with relatives in Minnesota, of a succession of schools in Hindustan and Shanghai, all chasing the ablative, he judged. She probably knew nothing of the things of girls. One day he remonstrated.

"What makes you do it?" he asked, while they sat under Iki's pine tree. "I think you have stunning hair—you must have a ton of it—and yet you strain back your eyebrows and paste it to your head like that. It sticks out on your head like a wen behind, and way up on top your sailor sits like a lid. I believe," growled Tommy, "if you'd let your hair out you'd actually be pretty!" He stumbled.

"Do you mean to tell me," demanded Miss Irby, "that you don't think I am pretty?"

"It's all very well to joke," said Tommy gloomily, "but I'm perfectly serious. I'd give heaven knows what to see a girl's head all fixed out."

"Like Eloise's?" suggested Miss Irby with a ripple of laughter, "soft flowing masses of gold, parted softly over her little ears, and dressed high with a shower of tiny curls."

"Oh, if you will tease," said Tommy, "I've told you before Eloise's hair is black; and she hasn't half so much as you have. But she does fix it beautifully. I'd give——"

"I know," comforted the girl, "and I'm awfully sorry. But you know even if I did all that, just to please you, I could never take Eloise's place, could I?"

She faced him, her gray eyes full of laughter. Tommy's blue eyes met hers steadily—so steadily that the mirth suddenly faded from hers, and she drew a queer, quick little breath.

The young doctor himself scarcely realized how long the look lasted. It seemed to him that he had never looked so far into eyes before, nor realized how soft and velvety gray eyes can be. Then he pulled himself up and spoke indignantly.

"I don't think anything it meant to me would make any difference to you. You don't care to please me the least little bit, just as the merest act of friendship," he blustered.

The girl rose, laughing again.

"No," she said, "I'd rather not. Not even to please a 'Plince, blue-eyed, and fail of face,'" she rippled. "You see I love these clothes. I've gotten used to simplicity."

Doctor Tommy followed her with a sigh. Nice, thoroughly, but absolutely unfeminine!

But on the way back they passed through the Street of the Seven Suns and came to the shop of Ping Yee, the curio dealer. Before Ping Yee's window the girl stopped, with a strange little cry and a quick rush of color. Doctor Seton followed her eyes and saw it.

It was a mandarin coat, splendid beyond any mandarin coat of Tommy's experience or belief. It was made of some sort of dully shimmering gold stuff, splashed over with blossoms of the pomegranate, in rich scarlet and yellows, all cunningly wrought by hand. It blazed in Yee's dingy window like a flaming eastern sun.

But the young doctor was more amazed by the flame in the girl's face. In that swift admiring moment she was as femininely rapturous and entranced by the lovely gaud as any girl he knew would have been.

"I expect he asks a ton of money for it," she said.

"I'll just run in and ask," suggested Tommy, but Margaret Irby held him back.

"No, he's an old robber, Ping Yee, and it would be silly anyhow. What would anyone want of it? It's a museum piece really, or a Darling-of-the-Gods costume."

But by the time Tommy reached the college he found he disagreed with her about anyone's wanting a thing like that. A line from an old letter of Eloise's came into his mind. It referred to the "lovely Oriental embroideries" he had access to. Not a hint! Merciful heavens, a girl like Eloise didn't need to hint! But it was a suggestion Tommy warmed to now—if the truth be told—a little remorsefully. Only yesterday he had found a film of dust on that precious packet from Eloise, and he remembered, with a sort of horrified disgust, that her last letter had been neglected a whole day while he went with Margaret Irby to inspect a ruined temple at L'Bwang.

So he hurried back to the shop of Ping Yee. If a girl, as uninterested in clothes as Margaret Irby, could rave about a dud like that, a real girl, the fluffy sort like Eloise —— But the mandarin coat was gone from Ping Yee's window. Ping Yee was uncommunicative. It was a gentleman who had secured it, Tommy gathered—a large, fat, red-faced gentleman wearing brass buttons, according to the shopkeeper. A German captain of one of the little river steamers, Tommy concluded, since there were no tourists.

He went out disappointed. Though he did not admit it, he would have bought the thing as an offering to his conscience, but at the end of the street he heard something that drove all thought of his errand from his mind.

That afternoon a feud of long standing had been reopened between Wee Singh and the family of Afoos, after a peace of thirty years. A son of Wee's had been stabbed. It meant a fight of complex nature. For one thing, the Afoos had been influential in introducing the college there, and, though Wee Singh was a patron, in view of his old record his slight garment of civility was generally believed to be a mask. There was always the undercurrent of Mongolian animosity for aliens to consider, the swiftly seized opportunity to make a different issue.

Tommy was distinctly worried as he passed a group of whispering Celestials or came to a closed and empty bazaar. Old Teevey might not be so far wrong after all. For himself he did not care. He'd rather fancy a fling at the business—but the women!

He came in sight of the little college, its low rambling buildings inclosed by a stockade-like fence. Fences nor clumsy wooden gates would avail greatly, if this yellow, muttering Oriental tide surged against them. And if it did? Like a good soldier Tommy heartened his soul and strengthened his arm. A fellow had to stand up for his womenfolk, he thought with a little thrill. Noble unselfish women who carried the torch to the dark places of earth and, in particular, little fearless persons who went to outlandish places to teach the Anglo-Saxon.

In the gateway the young doctor looked back at the market place and bazaars and shook his fist. Let them come on! But, of course, it was quite likely Teevey was wrong.

III

BUT old Teevey wasn't. For a fortnight now life was changed in the little university. Classes were no longer held, nor rolls called. At first the mutterings in the town had kept to their sources. It was only after some days that they had rolled in a threatening wave against the university. That was the day Professor Teevey had gone out and dispersed a small demonstration of Orientals at the gate. After that the student body had fallen away rapidly, until there remained only a few negligible resident pupils.

The gates were locked now, and one morning all but one of the servants had disappeared. The faculty took it calmly. Miss Hagner tatted and Miss Bayer crocheted. The ladies performed the necessary tasks and the faculty exchanged joint bulletins daily on the usual small matters. Several of them had weathered through affairs of this nature before, and were cheerful, optimistic and patient. But every evening the men went round on a tour of inspection, and after a second demonstration they reënforced the planking of the gates and told off a guard for each gate.

"I will send a protest to the mandarin of the district this morning," said the president, Doctor Ames, "if there be any of our number who will carry it to the river boat. It goes out this evening. There will not be another for a fortnight, unless a special envoy be sent." He was a precise little man, the president, and beamed at his flock through his pince-nez.

Tommy spoke first, and gritted his teeth to realize that Teevey raced him neck and neck. But Tommy won.

"One is sufficient." The president spoke quietly. "We cannot spare any more from here in case of trouble. And above all" — impaling Tommy through his pince-nez — "there must be no show of resistance, doctor, unless in defense of life. The safety of your comrades here demands that no spark be thrown on the waiting powder."

Tommy took the message. Margaret Irby went to the gate to see him off.

"For a cent I'd go with you myself," she suggested; "they wouldn't dare hurt me."

The Mission Yard Was Suddenly Filled With a Devil's Dance of Yellow Furies

Digitized by Google

A SCRAP OF PAPER

XII

By Arthur Somers Roche

ILLUSTRATED BY WILL FOSTER

IN HIS sanctum in the Citizen office Lindley Jackson, the editor, read the morning papers and such afternoon editions as were already off the press. And all save his own paper treated the universal transfer story in the same fashion. Corporations Have Souls! Consolidated Car Lines Confer Benefit on Public! Big-Hearted Corporation Puts Public Above Dividends! Of this sort were the headings above the editorials, and the matter below the headings was full of praise for Masterman and his associates. Martin Masterman had struck a giant blow at the theory of government ownership. He had shown that privately owned monopolies held the public's interests close to their hearts. When a whole city had uncomplainingly been paying two fares for a ride in Subway and surface cars, or three fares if they also rode in the Elevated, Martin Masterman had freely and cheerfully ordered the Consolidated Companies to issue transfers from one line to the other or others. All hail to Martin Masterman, the man who put the soul in corporations!

Thus spoke the sheets owned by the men who, with Jackson, had conferred with the three millionaires the previous night. But not so the Citizen, owned by Lindley Jackson, yellow journalist, genius and champion of the people. Jackson turned to his own paper and reread his own editorial, hastily written the previous night. It was headed, A Gambler's Underhandedness, and was about as savage a roast as Masterman had ever suffered.

Without mincing words, Jackson charged Masterman with having organized a conspiracy to sell stock short, and then granted universal transfers in order that the market value of the Consolidated Car Lines stock might be depressed, affording Masterman an opportunity to buy in at about fifty what he had sold round ninety. Masterman's greed was too well known for the Citizen to have any faith in his sudden altruism. Martin Masterman did nothing without a reason; money was his only reason; therefore, to enrich his private pocket he had mulcted his stockholders by depressing the value of their holdings. Not that the Citizen was against universal transfers; it had always fought for them. But this sudden granting of the right to the people savored of crookedness toward the innocent stockholders. Masterman could have announced the plan months ago and given the market time to readjust itself; as it was, the innocent and ignorant stockholders would be impoverished and Masterman and his clique would be enriched. The announcement was another argument in favor of the people's control of the things which they had made valuable by their patronage. For under Government ownership men like Masterman could not rob a thousand Peters to pay a dozen Pauls.

There was more along the same line, and the editorial was written to give the impression that the editor could say a whole lot more if he chose, and undoubtedly would when he considered the time opportune. Frowning, Jackson reread his own editorial. In it he had not abused the confidence of last evening. The word of Lindley Jackson was good. But Masterman had admitted that there was a chance that the mysterious paper of which he spoke might find its way into the hands of the publisher, in which case, of course, Jackson would use it as he saw fit. And there is such a thing as compelling chance. The publisher of the Citizen gloomed at his desk.

What was the nature of the paper—the real nature—and how might it be obtained? He thought he knew the answer to the first half of this question. Certain gentlemen, Masterman had said, had agreed in that paper to follow a given course of action. His own logic told him what that course of action must be—to sell Consolidated Car Lines short. What Masterman had said about ruining business was tommyrot. Masterman was afraid that the contents of that paper would become known to Jackson; hence he had tried to tie up the publisher to an agreement to keep quiet about the paper. He had talked mysteriously of vague calamities which would result from publication of the paper, in order to obtain that withheld promise of suppression. That was all. Masterman feared that publication of such an agreement would mean jail for himself, and probably was sincere in his statements about black ruin to follow publication. For Masterman undoubtedly believed that if anything happened to himself the country would go at once to destruction.

"I Shut the Door in His Face, and—Tom, I Don't Understand It"

That was the solution of Masterman's mysterious attitude and his request of Lindley Jackson. Jackson smiled grimly. He would like nothing better than to put Masterman behind the bars. But now as to the other half of the question—how the paper might be obtained?

Abstractedly he turned over the pages of the Citizen. On the last page was a story whose heading, Martin Masterman Made a Monkey, attracted him. He read it. It was Tom Hanrahan's account of the swindle that had been perpetrated on the financier when he bought, for one hundred and forty thousand dollars, a painting purporting to be by the late Mr. Botticelli.

It was cleverly written; it avoided stating that the painting was a fake, but pointed to the fact that Harry Mack, notorious international crook, had been arrested on a charge of obtaining money by false pretenses; that the charge had been lodged by the Greenhams, well-known agents of the Masterman interests; and contained an interview with the crook in which the latter refused to deny that the painting was a fraud. Also it told of Harry's midnight release, of the attempted trailing of him by the Greenhams, and the crook's escape in a high-powered car, the name of the driver of which Hanrahan had neglected to state.

Jackson pressed a bell; a red-headed office boy answered.

"Ask Mr. Lyden who wrote the story about the Masterman painting," ordered the publisher, "and have him send the reporter in to see me."

Hanrahan had sauntered into the office half an hour ago, and was patiently waiting for an assignment when the city editor told him that Jackson wished to see him. He went at once to Jackson's private office.

"Sit down, Tom. Have a cigar."

Jackson respected the men who gave him their brains and hearts, and he did not pose before them. He passed a panetela to the reporter.

"How'd you drop on to that story about the Masterman Botticelli? Too busy to talk with you last night, and didn't suppose there was any need. You didn't report to me that you'd learned anything about the meaning of the conference at Masterman's—I mean, nothing suspicious happened that I couldn't have seen myself, I suppose. Eh?"

"Nothing," said Hanrahan. "And when I got into the office the other boys told me that you'd called the sleuthing off, so——"

"Sure. But about this Mack person? How did you tumble to it?"

"Greenham led me to it," grinned Hanrahan.

Jackson tilted back in his swivel chair.

"Tell me about it," he requested.

The reporter told him.

"I saw Terence Greenham at Masterman's," said the publisher thoughtfully, when Hanrahan had finished recounting his experiences of the night before. "I've never met him, but I recognized him. I wondered then why he should be there. I wondered more after Masterman had talked a while. I'm wondering now."

"Doesn't what I've told you make it clear?" asked Hanrahan.

"It would," said Jackson, "but for one thing."

"And that?"

"Is that I've seen Masterman's Botticelli. It was on exhibition at the Plaza last fall, and if old James B. Botticelli himself didn't paint that picture I never wrote an editorial. That painting is no fake. I know a little about art, and the day I saw the painting I was with Ralph Reid, who's the greatest little expert on Old Masters that ever breathed. Ralph pronounced it original. That's enough for me. It's a corking good story and it isn't libelous, and it makes a joke of Martin Masterman, which is very fine in our business; but just the same this Harry Mack was stringing you. He never sold a fake picture to Masterman; and Greenham's men never arrested him on that charge. It was for something else. What?"

"You can search me," said the bewildered Hanrahan.

"Me too," admitted Jackson. "But that something else has to do with Martin Masterman's reasons for asking me to be present at his house last night. I gave my word that I'd not divulge certain things that were said last night; but I can give you a hint, Tom. The governorship of this state is pretty enticing bait, isn't it?"

"It most certainly is!"

"And I'm about the last man on earth that Martin Masterman would want to see at Albany, eh?"

"I should think so," chuckled Hanrahan, thinking of the multitude of attacks the publisher had made on the financier.

"And yet, Tom, it wouldn't be the hardest thing in the world for me to become governor of New York!"

The reporter stared at his employer in silence. Jackson leaned forward until his face was close to the countenance of his reporter.

"Tom," he said, "it would take something pretty big to make Martin Masterman willing to see me governor, eh? Something big! So big that we want to know what it is. I can't tell you more; even a confidence given to a Masterman is inviolate. But this much I can tell you: Martin Masterman wasn't thinking of pretty pictures, whatever

Digitized by Google

their value, last night; he was thinking of mighty big things. And Terence Greenham wasn't at Masterman's to pay a social call. He was there on business—he must have been—business so big that even if Mack had defrauded Masterman it would have been dropped for the time being. But—and mind this—the Botticelli is not a fraud, as a dozen experts will probably announce in the late afternoon papers. Why, then, did Terence Greenham leave Martin Masterman at a time when Martin Masterman was scared—I can tell you that much, Tom—within an inch of his life, to go to headquarters to release a crook named Mack? And why did his men trail Mack, or try to, after his release? Because, Tom, this Mack has something to do with a thing so big that Martin Masterman, under certain conditions, would gladly see me, me the man who hates him, in the governor's chair at Albany! And what Mack has to do with this something big we must find out. Tom, it's up to you to locate Mack and—make him talk! Can you do it?"

"Maybe," said Hanrahan slowly. "I can try."

"You'll have to do more than that, my boy, if you want to be managing editor of the Citizen."

"Is that the reward?"

"If Mack talks the way I think he can, that's the reward. Now then, how're you going about it?"

Hanrahan arose and flecked cigar ashes from his coat. Like every other good reporter he would take an assignment to interview Satan without, after his first start, showing any surprise.

"I'll look up some of the hang-outs where his kind resort," he answered. "I ought to be able to find him unless he's keeping almighty close."

"Good!" said Jackson. "And if you want any money drop in on the cashier. I'll phone him to be nice to you."

"Thanks," grinned Hanrahan. "G'-by, chief."

Jackson grunted. He was already pressing a button, and the office boy entered almost as Hanrahan left.

"Tell Mr. Lovett I want him," said Jackson.

Within a minute Lovett, the blackmail man of the Citizen, entered the private office; but Jackson did not offer him the seat Hanrahan had vacated, nor did he invite him to smoke. There was a limit to Jackson's friendliness with his men, and Lovett was the limit. Not that Lovett was treated with discourtesy. On the contrary, Jackson treated him with courtesy, albeit frigidity. One does not insult the man to whom one pays one hundred and fifty dollars a week for bringing in more news stories than any other two men on the staff. And that's what Lovett did. But no one, least of all Lindley Jackson, who used him, respected him.

The blackmail man is one of the by-products of yellow journalism. It is his job to approach politicians suspected of being venal and try to bribe them, that their corruptibility and consequent shame may furnish reading matter for the public. It is the blackmail man who bribes chambermaids to steal the contents of wastepaper baskets that torn-up letters may be pieced together and printed for the edification of the readers of the yellows. It is the blackmail man who performs all the dirty work of the yellows, who rarely writes his stories, but furnishes the news which cleaner men must transcribe into print.

Lovett was a master of his art. There was nothing he would disdain to do for money. Such a man is mighty handy round a yellow journal, although his fellows never invite him into their poker games or to split a pint with them. Lindley Jackson despised the man. Yet it was his belief that the public had a right to know something of the private affairs of its political and financial leaders. Such knowledge could be obtained only by the use of men like Lovett. Men high in place and shamefully unfaithful to the public trust had been exposed in the Citizen through the medium of Lovett, and good had been accomplished. So Jackson justified his employment of Lovett; but he was not friendly to him.

"Lovett," he said tersely, "that man who gave you the tip last winter about Masterman's being behind that water-power bill—is he still in Masterman's employ?"

Lovett shook his head.

"Couldn't keep away from the drink," he said. "Talked. Masterman learned of it. Fired." Lovett never wasted anything, even words. It was commonly said of him that the only thing he ever spent was the evening.

Hanrahan Turned Pale; He Managed to Place His Glass Back on the Table, but That Was All

"I see," said Jackson. "Is there anyone else in Masterman's office that can be reached?" He would not use the word "bribe."

Lovett smirked.

"I've been quite friendly with the telephone clerk," he answered. "That's the only one I know in that office."

"Hm-m. Well, see him. Find out if—if anything's been lost in the Masterman office. If there was any particular fuss raised about it. Get all the gossip you can. And stop at the cashier's for money. Report as soon as possible."

When Lovett had left the office Jackson tossed his cigar away in disgust. He had gone dangerously close to breaking his word when he told Lovett to ask if anything had been lost. Still he had observed the letter of the confidence. Indeed, it might be argued that he had observed its spirit.

"Anyway, Masterman never fought fair in his life," he told himself. "I'm for the people and against him. If I stick to the letter of fairness ——" So he soothed his conscience.

Hanrahan, meantime, with a curl of his lips and a shrug of his shoulders, saw Lovett start in the direction of the private office. He was able to guess that the blackmail man was to be used to ferret information from someone near to Masterman—for he knew by his chief's seriousness that something big was in the air and that he would not be permitted to handle the case alone—and, glad that his reputation was such that no publisher dared ask him to deviate from the strictest newspaper ethics, closed his typewriter into his desk and started for the street. An office boy caught him waiting for the elevator.

"Someone on the phone for you, Mr. Hanrahan. Happened to see you going out and I chased after you. Lady too. Bet she's a queen!"

He grinned cheerfully at the reporter. Everyone loved Tom Hanrahan.

"I'll bet she is," smiled the reporter, and his change pocket was immediately minus one dime, and the boy was enriched by exactly that sum.

Hanrahan stepped into the booth the boy indicated.

"Hello! This is Hanrahan."

"Oh, Tom! I'm so glad I caught you. This is Jessie."

"And the top o' the mornin' to ye, Jessie mavourneen," he laughed.

He heard his laugh echoed nervously, as though the girl at the other end of the wire were a little overwrought.

"Why, what's wrong, Jessie girl?" he asked quickly.

"Oh, Tom, I'm a bit frightened. I don't know just how to—I can't tell you over the phone—I don't want to—something's happened ——"

"Well," gasped Hanrahan, "if that something is happening in fifteen minutes it's liable to get a swift punch on the jaw, for I'm coming up that fast to see you!"

"Do," she said. And again he caught that note of strain in her voice.

He started again for the street, this time on the run. If anyone had been bothering Jessie Sigmund —— It happened that Jessie's parents were rather strict and old-fashioned. They loved their daughter and she loved them; but they did not approve of a young woman's painting for money. They only tolerated the idea because they loved her too well to make her unhappy by refusing their assent to her coming to New York. It also happened that they did not approve of newspaper reporters—thought them wild, carousing youths. So it further happened that Jessie Sigmund and Tom Hanrahan kept their engagement very much of a secret, waiting for the day when Tom should become a managing editor, or at least a city editor, before shocking Jessie's folks with the announcement. No wonder Tom hurried! He was closer to-day, he felt, to his goal than ever before. He'd find Mack, become a managing editor, and marry Jessie. Meantime, something was bothering his girl. He bumped into a man and knocked him down, so great was his hurry to reach the Elevated.

XIII

A MAN should never put love before duty; but inasmuch as it happened that Hanrahan's first place of inquiry for Handsome Harry Mack was a rather low resort not very far from Jessie Sigmund's apartments, he did not feel that he was neglecting his duty in calling first on her. Moreover, duty is comparative. A man doesn't owe the same duty to his boss that he does to his country. Private business duties may well be set aside in favor of love. Anyway, Tom Hanrahan made a bee line for the home of Jessie Sigmund. Arriving there he found her in a state of alarm which, though quite a distance away from hysteria, nevertheless gave him concern. He put his arm round her, led her to a couch and made her sit down.

"Now then, Jessie, tell me what's happened to you."

"It's not happened to me, Tom, it's happened to Kirby."

"Miss Rowland, the miniature painter?"

"Yes, Tom, and I don't understand at all. Th-the telegram, the man watching the house ——"

"What's that?" he demanded truculently. "Where?"

She drew him to the window and pointed at a man lounging with careful carelessness down the street a bit.

"He's been here this morning, and he asked for Kirby. When I said that she wasn't here he said that she had been here, and if I knew where she was I'd better tell him quick or it would be worse for me. I shut the door in his face, and—Tom, I don't understand it."

Hanrahan cast a menacing glance at the unconscious watcher down the street. Then he drew the girl once more to the couch.

"Now then, Jessie, tell me all about it—from the beginning."

His strength communicated itself to her; his firm clasp steadied her nerves. She even essayed a smile.

"Maybe I'm making a mountain out of a molehill," she began. "Last night, or rather quite early in the evening, Kirby phoned me. She said that she wanted to spend the night with me. Her voice seemed kind of—I don't know, not exactly frightened, but—worked up, I guess. I told her to come right over, that I had a dinner-dance engagement, but that I'd gladly break it and stay home if she wished. She said not to do that; merely to leave the key with the elevator boy, which I did. You know, Tom, Kirby is my dearest girl friend. We studied together, and she'll be bridesmaid at our wedding, if she doesn't do it first—then she'll be matron of honor. You haven't met her, for things have always come up to prevent, as you know; but she's the dearest, truest ——"

"If you say so, that's guaranty enough," said Tom stoutly. "Go on."

"Well, I left the key and went off. I came back about midnight. I was at the Morrisons' dance, as you know, an I

Digitized by Google

Freeland Morrison brought me home. Well, the night boy gave me my key. I was surprised, but supposed that Kirby had decided not to stay, and went to the apartment here. On the table I found a note from Kirby asking me not to say anything about her having been here, and telling me that she'd borrowed a suitcase and some things of mine, which she'd return soon. Here's the note."

She handed it to Tom and he read it, returning it without comment.

"Well," continued Jessie, "I found a letter on my bureau that I'd forgotten to mail, and I rang for the elevator boy. When he came I gave him the letter and, out of pure idle curiosity, asked him what time Miss Rowland had left. He replied that she and the gentleman had gone out about nine or ten, he couldn't remember just when. He described the 'gentleman,' because I was curious, and it seems to have been Dixon Grant, whom I know only slightly, but who seems to have been paying lots of attention to Kirby lately."

"You girls don't confide in each other much, for all your chumminess, do you?" grinned Hanrahan.

"Well," retorted Jessie, "I can't talk about you without letting people know where my heart is, and that's a secret, isn't it? Possibly Kirby has her own reasons for not having told me much about Grant. Perhaps he hasn't asked her yet, and she hopes he will—girls keep quiet when things are at that stage, you know."

"All right," he smiled. "What next?"

"Well, just as I was beginning to wonder if Kirby had eloped with Dixon Grant, and was puzzled why she should take my clothing and not her own, the bell rang and a man insisted on talking with me. He said that he wanted to know where Kirby was. Not the man outside now, but another one. They both reminded me of policemen, somehow or other ——"

Tom whistled softly.

"Plain-clothes men or private detectives, eh? What did you tell him?"

"I told him I knew nothing about her, and got rid of him; but my own curiosity was aroused then, and I lay awake half the night puzzling. And this morning a message came to me from the telegraph office. It said that there had been an error in the transmission of a telegram to me; it said that in the message sent me last night the word 'three' had been written instead of 'two.' The corrected message was to the effect that Adele Rohan—who's been commissioned to paint the portrait of little Laurel Masterman—is going on a camping trip, won't leave Denver for two weeks, and wants me to inform the Mastermans."

"Well? I don't get the connection."

"You will in a moment," she answered. "I didn't at first, because I had not received the original telegram. But I had noticed a piece of yellow paper in the fireplace. I must be a born detective, Tom, or else I've imbibed detection from hearing you talk about some of your stories. I picked that piece of paper out of a little mass of ashes. It was the corner of a message blank. It had not been there when I left the apartment last night, I'm sure, so it's obvious that Kirby received and opened a message addressed to me. I made it certain by going right to the telegraph office and asking to see the book in which was the signature for the telegram. It was my name, all right, but Kirby's handwriting."

She paused and looked at him a moment before continuing: "Tom, what on earth does it mean?"

"You may search me," he answered slowly. "Is Kirby—er—all there?"

"The sanest girl I ever knew," she answered indignantly.

"H'm! Then why on earth should she act so queerly?"

"That's what I want you to find out, Tom. I think a lot of Kirby. I'm worried; I've phoned the Greenwich Studios, where she lives, and they tell me there that she is not at home. I don't understand it, and—Tom, this is a bad city for a girl alone."

"Seems to me she wasn't alone. Looks as though she had her best-beloved with her, doesn't it?"

"But not going home; borrowing my clothes; destroying a telegram addressed to me—it isn't like Kirby. I don't understand ——"

The doorbell rang. Jessie stopped short her speech, smoothed her hair and opened the door. A messenger boy handed her a telegram. She signed for it and closed the door.

"Maybe this explains it," she said. She opened the message, and her eyes expressed surprise.

"It's not from Kirby," she said; "it's from Adele. She announces that she has changed her mind once again, and will leave Denver to-day; she hopes I have not told the Mastermans that she wouldn't be here." She laughed. "That's the flighty, brilliant Adele always. But she is a genius and can afford to do things that poor plodding grubs like myself—oh, well, I have you; let Adele have her genius!"

She flashed a smile on Tom, but she sobered again at once.

"Tom, you're the best reporter in New York; the best amateur detective, too, and that means, with all the newspapermen in this town, as good as the best professional. Tell me, can you find Kirby? Can you find out what's happened to her?"

"I'll try," he said. "Know anything about this Grant?"

"I've heard her say he was with some brokers. Bryant, Manners & Co., I think."

"Brokers nothing! Bucketshoppers, she means. Well, I'll try them." He did, on the telephone, only to learn from the careful telephone clerk—cautioned by his employers, as had been his employers by Terence Greenham, against letting slip any information whatsoever as to Mr. Dixon Grant—that Mr. Grant was no longer with the firm.

"Well, My Dear, I Was a Little Afraid. I Thought You'd be Angry at My Slipping in Here"

"Maybe he's lost his job," suggested Hanrahan. "That might have upset Miss Rowland."

But Jessie shook her head.

"Kirby has plenty for both, I happen to know," was her objection to this offered solution. "But that isn't all you can do."

Hanrahan laughed. "Indeed not! I'll tip off the police and have them keep their eyes ——"

"Police!" Jessie was scornful. "Indeed you won't, Tom Hanrahan! Have the police looking for Kirby Rowland! Absurd! Why, Kirby would never speak to me again. Is that as clever as you are, Tom? For if you can't think of anything better than the police or the newspapers—look here, Tom, after all, Kirby is of age and probably knows what she is doing. That I am worried is no reason that her private business should be known to police and public. You promise me that you won't have her name mentioned in the papers, or told to the police, or—Tom, I couldn't forgive you if you did."

"Of course I won't, dear," he promised. "But, as you must see, that limits me. But I'll go to her apartment—Greenwich Studios, you said? All right. And don't worry; she's probably O. K. If she isn't—well, bad news comes soon enough. Myself, I think that she's eloped with Grant."

"I hope so," said Jessie fervently. "Then we'd know she was all right. You'll try to find her, though?"

"I surely will," he said. "And speaking of finding people reminds me that I've got to find someone for the paper and I'm not doing it. Don't worry. By-by, dear." He kissed her and was swiftly gone.

Comforted by his assurance that he would find Kirby, Jessie went to her mirror with deft fingers to repair the damage to her coiffure done by his parting embrace, and so did not witness the little drama enacted a few rods down the street. The worthy Greenham agent who had relieved the man who had questioned both Jessie and Kirby the previous night—this latter had been clever enough to avoid rebuke from his employers by concealing the fact that he had met Kirby face to face; a fact he discovered shortly after the real Miss Sigmund came home—leaned against an iron railing, trying to seem as though he were just a simple-minded gentleman taking the air. Hanrahan walked up to him.

"The air," said the reporter abruptly, "is very bad on this street. Do you grasp my meaning?"

The man stared.

"Who you kiddin'?" he demanded.

"No one," said Hanrahan; "I'm in deadly earnest. To-day you threatened a young lady by the name of Sigmund. You're watching her place now. Undoubtedly you intended to keep an eye on me. You don't need to; here's my card—Hanrahan, of the Citizen."

The man took the card dazedly.

"What's all this about?" he asked.

"Just this—I want you to beat it. Understand? Move, vanish, git!"

"Who you orderin' round?" demanded the detective truculently.

"You," said Hanrahan. "If you aren't on your way in just two seconds, I'm going to hand you something that won't taste a bit nice. Furthermore, I'm coming back here later, and if I find you here I'll clean house with you. For your information and edification I'll inform you that when it comes to licking cheap detectives I am the one and only, blown-in-the-bottle, original White Hope. Your two seconds are up. Are you going?"

"Well, I like your nerve!" began the detective. He didn't speak again for a moment, for Hanrahan's fist, colliding with his mouth, cut short his words. The reporter bent over the prostrate detective.

"Are you going?"

"I'll have you pinched," mumbled the man.

"And I'll get you thirty days for annoying a lady! Are you going?"

The law is even less kind to annoyers of women than Tom Hanrahan had shown himself. Also it had been impressed upon the Greenham operatives that secrecy was essential in this present mysterious case. The man shambled off, nursing a bleeding jaw.

"I'll get you!" he mumbled. "I'll get you yet!"

"So will the goblins, if I don't watch out," laughed Hanrahan. He watched the man out of sight, then continued

PHILADELPHIA, JANUARY 13, 1917

A Bit of Mere Gossip

AT THE beginning of this fiscal year there was a balance in the Treasury of some two hundred million dollars, and the Secretary calculates that by the end of the next fiscal year this will be turned into a deficit of nearly two hundred millions, which would seem to imply that, in spite of heavy additional taxation last year, the Government is going in the hole to the extent of about four hundred millions in two years.

Not, of course, that it matters at all. In reporting the figures the press, so far as we have observed, treats them as quite inconsequential. Figuring it out exactly would not be worth while, because a hundred million dollars, or two hundred millions, more or less, is so obviously unimportant. There is a perfunctory suggestion that the cost of preparedness accounts for whatever deficit may occur.

There is only a suggestion, official or otherwise, that this matter of spending a billion—or a billion and a half, as the case may chance to be—of public money is worth serious consideration for the purpose of determining how much of it the Government really needs to spend.

All talk about preparedness, in the face of continued indifference to economy and efficiency in the Government, may be taken in a jocular spirit; for it is clear that in looking over the state of the Union, with a view to heightened preparedness for either peace or war, an economical and efficient government would be the first item an intelligent outsider would insist upon.

A Legend for Bankers

BANKERS would have told you in July, 1914, that the supply of capital in Europe was strictly limited; that it increased through the difficult process of saving something each year out of income; and thus, that England, much the richest country, produced capital at the rate of about two billion dollars annually, Germany and France at a decidedly lower rate, and all other countries much below Germany and France. In May, 1914, a famous economist calculated the growth of capital in the United States, England, Germany and France, combined, at not much over ten billion dollars a year, of which about two-thirds was credited to the United States.

Since then England, Germany and France have raised over thirty billion dollars of capital for prosecution of the war. If they could do that the United States, under similar conditions, could probably raise twenty billions a year. Ask any banker what that would come to in the way of increased production of all the necessaries, comforts and luxuries of life.

There is no legerdemain about it. England, Germany and France did that by uniting the energy and enthusiasm of the people under capable direction. That is all there is to it. Set the people of this country to working and saving, with like unity and zest, under as efficient an organization, and capital would flow in torrents.

We are not united or organized. Leaders of business and leaders of politics are chronically at loggerheads. Capital and labor perpetually bristle at each other. Farmers are suspicious of railroads and of Wall Street generally. Behind a diplomatic front, Wall Street is pretty often contemptuous and indifferent to farmers.

Bankers occupy a peculiar position in the business structure. They are the medium by which the people's money is turned into industry. In proportion as they do not candidly and earnestly try, with a sympathetic and open mind, to understand politics, to understand labor, to harmonize and unify all round, they are not up to their jobs.

The Case of Gold

IN THE midst of afflictions that are natural to a sensitive mind which is misunderstood, Mr. Bryan may derive consolation from the fact that his celebrated cross of gold is already wabbling a bit, and another year of war might very likely fetch it down. Taking England, France, Russia and Italy together, government bank notes and deposits—payable in metal—have increased within a year by more than three and a half billion dollars, while stocks of gold have increased roughly only a hundred million dollars.

The Imperial Bank of Germany makes a better showing, with an increase of more than a quarter of a billion dollars in gold against an increase of about a billion dollars in notes and deposits, payable in gold. Some other paper money has been issued in Germany, however. That all the Allies, or all Europe, will be forced to abandon the gold basis is entirely probable. The United States would then be the only big commercial nation whose currency was redeemable in gold.

It is only in the last seventeen years that United States currency has been specifically redeemable in gold. A generation ago our currency was at a heavy discount for gold. England abandoned the gold basis during the Napoleonic wars, and France did so during the Franco-Prussian War. It was only at the end of the last century that Russia established gold payments. In comparison with Europe's other troubles, a paper currency which was not redeemable in gold, but which circulated at home with tolerable stability, would be merely an inconvenience.

And it is doubtful that the United States would derive any lasting advantage from being the only big country which remained on a gold basis. The presumption is that if Europe is poor and we are rich at the end of the war she will buy little from us and sell us much; she will bid high for our surplus capital and presently get enough gold to resume specie payments. Meantime, for some years, Mr. Bryan could point with pride to a prostrate ancient foe.

Speaking of Indoor Sports

BELOW are the rules for playing the greatest indoor game ever invented. Persons of either sex and of any age from six to ninety may engage in it with slight variations. It may be played at any hour of the day and in any season of the year; but it is especially appropriate for cold and stormy winter evenings.

The player first removes his shoes and puts on a pair of loose slippers. He then places a comfortable chair two feet and eight inches due south of a good lamp. Next—if a gentleman—he places a footstool or a smaller chair two feet and three inches due east of the first chair. He then places himself in the larger chair and elevates his feet to the smaller one—or the footstool, as the case may be. His next move—if a gentleman—is to fill a good brier pipe with prime tobacco, apply a match, and draw in his breath with a prolonged, unhasty action. He then takes up a good book, settles himself in the chair, and informs whatever members of his household may be present that anybody who speaks to him or otherwise disturbs him before eleven o'clock will be hit over the bean. Lady players and children should vary the above rules in detail, according to taste and the dictates of their elders. The joy of this game will be sensibly enhanced by a nice open-grate fire, located anywhere from ten to fifteen feet northwest of the player.

For cold winter evenings this game—measured by the yield of solid satisfaction in proportion to the outlay of money and effort involved—beats any other pastime ever invented by man. If you are not already addicted to it get the habit this winter.

Farm Yields

THE quantity of farm land under cultivation pretty nearly keeps pace with the growth of population. An equal division would give every inhabitant of the United States pretty nearly the same quantity of cultivated land as twenty-five years ago, when the prices of farm products were low. But no doubt it costs more to farm now than it did then. Up to about thirty years ago the land brought under cultivation was mainly rich and, with a dependable rainfall, required neither fertilization nor irrigation. Since then agriculture has pushed into regions less favored by Nature.

Dry farming requires more labor; irrigation and the reclamation of swamps require a considerable investment, which must be compensated out of the products of the soil. In spite of improved methods of cultivation, yields per acre have increased comparatively little in fifty years. Taking the ten-year average for 1866–1875, and the average for the five years preceding 1916, when crops were generally poor, the gain for the three chief cereals, taken together, is about ten per cent. Corn, which takes by far the biggest area, shows no gain at all.

As compared with thirty years ago, farming will continue to cost more effort. The celebrated business of tickling the land with a plow and making it laugh with a harvest will not answer. Land that has been farmed for a generation, land without rainfall and land that tends to slip back into the swamp are going to give the mere tickler another sort of laugh. To increase or even maintain the yield per acre requires more care and skill. Farming is a more difficult business than it was thirty years ago. Probably it will be increasingly a more difficult business. Compared with thirty years ago, probably food will always cost more.

Transportation Cost

MR. CARNEGIE used to sell pig iron at forty dollars a ton and steel rails at one hundred and thirty dollars a ton. For some years before this war boom the former ruled about fifteen dollars a ton and the latter twenty-eight dollars. Improved methods of production brought that drop in prices.

No doubt nearly everybody is more or less familiar with the fact that improved methods and large-scale production, from the close of the Civil War down to the beginning of the present war, brought a great decline in the price of various manufactured articles. The same causes brought a decline quite as great in the cost of transportation.

Thus it is calculated that for government in all its divisions the people of the United States paid in 1910 six times as much as in 1870, for manufacturing over five times as much, for mining seven times as much, and for transportation less than four times as much—the latter absorbing a steadily declining proportion of the national income. Comparing our costs with those of other peoples, probably transportation is the cheapest thing in the United States to-day.

Peace Terms

GERRYMANDERING the boundaries of Europe is not a matter of the first importance to this country. For us, for every neutral country and for every belligerent, the grand consideration—in comparison with which all others are decidedly secondary—is whether the terms of settlement definitely lessen the probability of another war.

There is only one possible way to accomplish that—namely, by a sweeping reduction of armaments and setting up some sort of international authority to which disputes between states shall be referred.

The old scheme of competitive armaments, and every nation the final judge of its own acts, will produce the old results. That is international anarchy, with no law that anybody is really bound to respect. A régime of international law must replace it or the probability of war will remain just what it was before, no matter how boundaries are rearranged or how much, for the time being, any nation is humbled. It was from the utter humiliation and helplessness of the Napoleonic era that aggressive modern Prussia emerged.

The old scheme has been very thoroughly tried out. Returning to it with a mere shifting of the weights and counterweights will not change its nature or effect. There must be complete recognition of a common European interest that is superior to any particular national interest.

This country's vital interest in peace terms centers there.

The Continuous Melodrama

FOOD prices are very high. Millions of people are injuriously affected thereby and complain about it. So the Federal Government seeks to discharge its duty in the premises by sending out flocks of detectives, special agents and district attorneys to see whom it can put in jail.

Such is our inveterate habit. No matter what unpleasant condition afflicts us, the first thought is that some malevolent combination must be responsible for it. If food prices are very low, producers of food blame speculators and want them arrested. The country seems to have a firmly rooted opinion that nothing untoward can happen except as some sinister individuals deliberately will it. If wages are low it must be because ruthless employers are determined to grind the face of labor. If labor is rebellious it must be because unscrupulous agitators stir it up for their individual gain.

Like devotees of good old melodrama, we demand a villain in every play. Adequate detective talent and a vigorous application of the policeman's club would cure all the ills of mankind. Run down the rascals and the problem is solved, no matter what the problem may be.

This produces a good deal of excitement; but, taking it in a large way, that is about all it does produce. If the energy spent in looking for a villain were devoted to looking for better methods of food distribution it would get better long-run results; but there would be fewer thrills.

Roughing It From London to Paris

By Eleanor Franklin Egan

IT REALLY began by my being turned back in the office of my hotel in London after I had paid my bill, handed out all my tips and had my baggage on top of a taxicab at the door. It was the manager who caught me.

"Starting for France?" he asked, grinning like a Cheshire cat.

"Yes, finally." And I refrained from adding "Thank heaven!"

"Well, I'm very sorry, but I'm afraid you can't go."

"Why not?"

"No ship."

"What, again?" I had already waited three days with my engine started and my hand on the clutch lever, so to speak. "Why didn't you let me know?"

"Just got word."

"Do they say anything about the prospects?"

"No, nothing."

"Or about the reasons for such a delay?"

"They wouldn't, of course—would they? But we know there are submarines about again, don't we? There could be no other reason, could there? And they won't send a boat across until they think it is fairly safe; you may be sure of that."

"Well, there is nothing for me to do but to gather up my luggage and go back to my room and wait, is there?" One gets that already-answered-question habit in England.

"'Fraid not. Sorry!"

"Go back and wait some more." This to myself in dolefulness of spirit.

And then came that night's thrilling experience up under the clouds.

It was not in any way a part of my extraordinary trip; but I was just waiting, and there it was. I was glad afterward that I had not missed it. I never like to miss a narrow squeak, so long as it is a squeak—and not too narrow. This really was not a squeak at all, but it was a good imitation while it lasted. About half past two in the morning I was jarred out of a sound sleep and rolled out of bed, all tangled up with the blankets, and with my heart pounding ten to the second.

"Well, there they are!" said I. "Zeppelins!"

A Good View of a Zeppelin Raid

THEN I suddenly remembered that I was on the top floor, where I had insisted on being placed for the sake of air. Horrible thought! Horrible thinness of roof! A terrified wail and a bell-ringing from every part of the hotel sang a sort of Hadean obbligato to a boom of big guns and a screech of shells that would have been unnerving if one had been in a state to be definitely conscious of everything. But one was not.

I heard next morning that it had taken the combined efforts of three men to keep a wild American from walking off in mid-air from a fifth-floor balcony of the same hotel in his mad eagerness not to miss anything; and his rescuers were cursing him roundly and wishing they had let him do it, because he had made them miss everything. I know just how he felt, though considering that he was at a party perhaps his feelings were assisted by something of which I was wholly innocent.

I could not get far enough out of my window to see what was going on directly above me, and I had to resist a desperate impulse to try a hand-over-hand trip to a better viewpoint down a telegraph cable that swung close at hand and out across a wide open space to a tower beyond. All the time I was perfectly certain that a bomb was descending on a direct line with my upturned forehead, and I was bracing myself against the window to meet it. I was used to the searchlights. They do a nightly search of the London overhead, be it clouds or starshine; but they do it ordinarily in a leisurely, long-sweeping, majestic kind of way. This night they were in a hurry; they were agitated, and were swinging and darting hither and thither with a nervous swiftness that fairly yelled of excitement. They would focus together on a spot and instantly from every quarter would come the boom of guns, and round that spot a dozen shells would spectacularly explode. Then they would swing away like a pack of foxhounds seeking the right scent, while the roar of the guns from far and near was continuous.

Zeppelins? No; no signs of Zeppelins. The clouds hung low, and they were above them; and it was not until the great flare of light came that one realized—many things! Everybody saw the great flare; saw the monster flaming torch plunging earthward in its own unearthly aura; saw the dense blackness which followed it downward and down, and felt the hideous silence that settled behind the last echoes of the battle—which ceased almost immediately after that awful light went out.

I had been standing at my window in the dark, and not until that black silence fell did I turn and let terror really take possession of me. I groped my way to the door and flung it open. Outside, in the hallway, were half a dozen maids, leaning against the wall whimpering—all but one; she was standing, with a sputtering candle in her hand, giving the Germans a piece of her mind and wondering how many babies they would succeed in killing this time.

It was a refreshing bit of diatribe and brought me up smiling. Guests in pyjamas and kimonos were hobnobbing at the head of the stairway, and one determined-looking woman was standing with her finger pressed resolutely against the elevator-bell button, which she no doubt had been doing from the first instant.

"Well, cheer up! It's all over," I said to the maids.

"Not likely, ma'am," the garrulous one answered; "they're sure to come back."

"Oh, no; they won't. And did you know they got one of them?"

"Not likely," was the answer from the same person again; "our chaps don't do nothin'. Them Zeps can keep on comin' over here, and that's all there is to it!" Then she muttered to herself: "Who'd 'a' thought you got war right on the top o' yer own 'ead!"

"But they got one, I tell you!" I protested. "I saw it come down."

"If ye seen anything a-comin' down, ma'am, it was an English chap; make sure o' that!" said the same female. And that restored me completely. She has had occasion to change her mind about the English chaps since then, has she not? I turned back into my room, smiling, shut the door, and groped the way to my bed in the dark; though I will admit that I felt inclined to seek further rest under it, like a scared pup, instead of on it, like a Christian.

Other days I waited; and my permissions to travel had to be renewed, with considerable bother, long waiting at consulates and excessive taxi fares, no such permission being good for more than two days ever, no matter what happens. Then came a certain Wednesday when I was told that the boat train would leave for Southampton on schedule time at ten of the clock in the evening; and that presumably the boat for Le Havre would leave next morning at daybreak. Some influential friends had reserved a cabin for me on the boat for Tuesday night; but on Tuesday night there was no boat. Thinking, however, that such a reservation would hold good for the first boat leaving, I went on my way rejoicing and landed in Southampton at clammy, cold, curdling midnight.

Cold Comfort From the Purser

HAVING a special passport, I was shunted along with the army officers and the Red Cross crowd, ahead of much of the English and a large section of the European population that happened to be traveling in the same direction, and got inside with the baggage inspectors in good time. And now I am not going to exaggerate one little bit. I don't have to; the simple truth is horrible enough. I paid a man an exorbitant fee to get myself and my baggage aboard as quickly as possible, though he kept saying to me:

"They ain't no hurry, ma'am; you've plenty of time."

"Well, I want to get to bed; everybody has to be up at daybreak, you know, and ready for the danger zone."

"Yes, I know; but you don't need to hurry none."

"What time do we sail?"

"I really couldn't say."

I started straight for the purser's office, ready to produce my little reservation ticket and get to my cabin forthwith. But about midway down the deck I was stopped by a line of people ahead of me, a line which snaked along the bulkhead, through the door and down two companionways to the purser's window. And you had to stand in line or lose your place. I stood. The line moved not so slowly and I soon learned why.

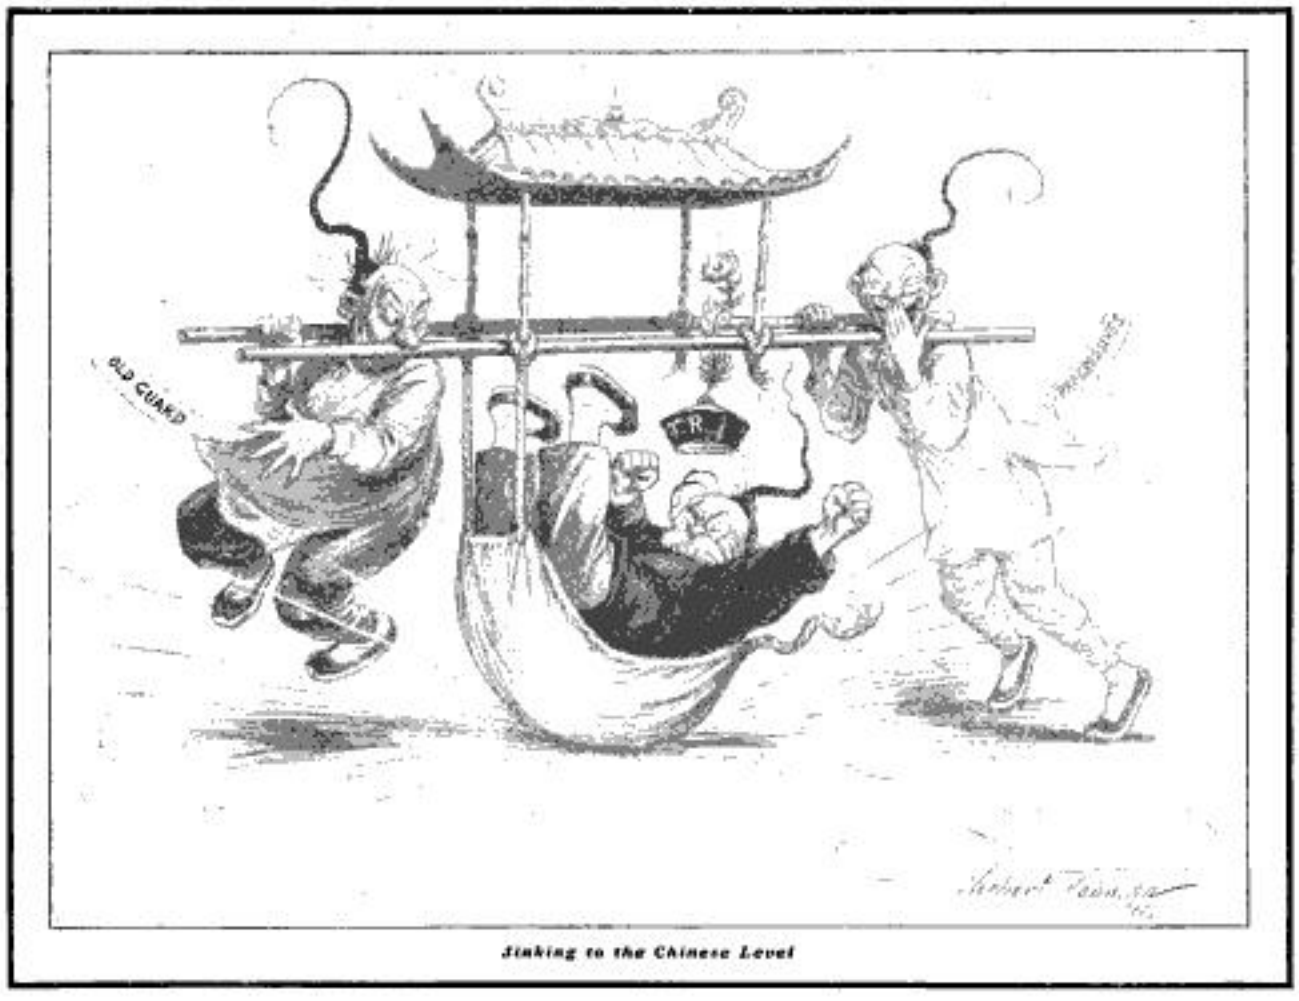
"Ain't got nothin'!" was the purser's brief answer to everybody. "Ain't got nothin'!" was finally the purser's brief answer to me.

"But I have a reservation," I replied—"cabin 50–52."

"Le's see." I handed over my tickets. "Oh, that was for last night's boat!"

"But last night's boat didn't go."

"Don't I know it?"



"Well, isn't this the same boat?"

"Same boat, yes; but different date. Sorry; but there is nothing left." And he ran his finger down his chart as though to make sure.

"Not a berth in another cabin?" I smiled encouragingly at his moving finger, as much as to say "I know an unusual situation when I see one and I'm disposed to be pleasant about it."

"Not a berth," he replied; and he added: "They're waitin' behind you, madam."

So they were. I drew to one side and looked them over. They were all that is conveyed to one's mind by the word mob. They were flushed and annoyed and nervous and ill-controlled; more French than English and almost as many women and children as men. I thought to myself: "Well, they had better

Sinking to the Chinese Level

Digitized by Google

be fairly certain that it is safe before they send this ship across the Channel." Then I sought a steward.

"Steward, can you get me a deck chair?"

"No, madam."

"Why not?"

"They are all gone."

"How does that happen?"

"Well, they's been people waitin' in Southampton for days for this boat and they let 'em come aboard early. Everything's taken."

"Oh, well," I thought, "it's only until to-morrow noon. I can stand it all right." And I went on deck.

It was bitter cold and people were lying everywhere, huddled in blankets and coats, while other people tramped up and down in the narrow space by the rail, trying to keep warm. There were more than five hundred passengers on the little boat and more than half of them were without a place to lay their heads. I thought I must find somewhere to sit down, anyhow; so I turned and went back down the companionway to the ladies' saloon. It was packed. Women had even stretched themselves out in the middle of the floor and were slumbering away as matter-of-factly as they might do in their own beds. Again I sought a steward.

"You can at least get me a blanket, can't you?" I asked.

"Well, I might manage that," he replied in a meaningful tone, a meaning nobody could possibly mistake.

I dug down and brought up a bribe, and got a blanket so promptly that I was certain sure there were plenty more where it came from.

"Another one," I said.

"Couldn't do it, ma'am. Sorry not to oblige you, but it would not be fair—now would it? Just look at all these here people here ——"

He was going on to another shilling climax; but I turned away in deep disgust, went back on deck, and began to search like a homeless hound for a corner in which to curl myself up. Amidships, near the funnels, I found a French officer and a beautiful girl locked in a close embrace and sitting upright on a bench that would have exactly fitted the uncomfortablest four-fifths of me; and I felt like asking them to get up and go on over and lean against the rail and look at the moonlight—as they should. But I only stopped to regard them for a second, and then turned, myself, to the deck rail.

Moonlight it was—glorious, glittering, cold, chilling moonlight; and a band of lit ripples lay out through the harbor entrance and across to the dark shore of the Isle of Wight. I sat down finally on the far end of the lovers' bench and gave myself up to moonlit melancholy. "Only the English could do it," said I to myself, trying to make myself believe that only the English could do it. But I suddenly thought—war!—and had visions of submarine terrors out there—out there! I wondered what dear mothers' sons were surrendering their lives out there.

Dreams and Nightmares

I turned to lay my weary head on the back of the bench and my heart lifted with a sudden discovery. Right behind the beautiful sweethearts was an open skylight, and nothing at all was lying along its ridge-pole—if that is what it should be called. Me for that! I spread my lone short blanket—and I suppose I should explain that my own steamer rugs and heavy coats had been left behind, with everything unnecessary, on instructions to "travel light." I spread my too short blanket on the ridgy center of the skylight and carefully stretched myself upon it.

By that time it was three o'clock in the morning and I was almost asleep standing up. The skylight was great! I heaved a sigh of relief and fell almost immediately into sleep—and incidentally into the nethermost depths of slumberous horrors. I had adventures that the really adventurous would envy. I fought a valiant fight with the prickly fiends of the outer dark; I was thrust into icy caves and swept with needle brooms to the blue icy edges of icy deeps. I struggled bravely, slipping and freezing, and clutching at blue icy gleams that bit into my fingertips.

And then I gave up. One always gives up. With a strangling sob I went over and started down—swiftly—down; but, midway in a long, long drop into abysmal depths, I was caught in the sharp talons of a flock of cold, snake-tailed, cooing doves, and was carried upward and up, and—oh, well, of course—into the dawn!

The dawn it was, and the cooing doves were the lovers murmuring of murmursome things on the benchback above me. I was glad they were there and awake, because the dawn in its just gray glimmering is a fearful thing. I struggled rather feebly at first, but I finally found one of my hands. It was tucked away under my lifeless body, and in its thin glove was all crumpled and blue and funny. Then I found I could wriggle a little, and after moments of tingling torture I was able to push the weight of my large aching head down against the inert mass of me and to slide off my skylight. But I set my feet squarely on the chest of a slumbering stranger, and he brushed at me in a way to make me know that I was figuring as something awful in his nightmare.

I write all this because, without knowing how it began, there is no realizing the rest of it. I would have bartered all the hopes that were in me for a cup of hot coffee somewhere—out of the dawn; but nowhere could anyone be found who might by any chance be able to administer to my wants. I carried my blanket and my misery round and round the deck, treading warily for fear of stepping on somebody, and finally I went inside and slid down on a step of the companionway, where I leaned against a nice rail and went to sleep again. I waked up every few minutes, but only just enough to hug myself closer to my own discomfort.

Food at Last

It was the hubbub that eventually brought me round, and I found that the people were packed, standing all the way down my companionway and the one below it to the dining saloon—or the purser's window; I didn't know which.

"What are you all waiting for?" I asked an English Red Cross nurse, who stood beside me.

"Breakfast, of course," she answered briskly; and she was kind enough to add: "If you want any you'd better stop right where you are and slip in with this relay. There are hundreds outside waiting to get in and they can feed only forty at one time."

"Only forty?" I yawned; and I peeked over the stair rail at the crowd below. "But there are a good many more than that ahead of us."

"Yes, of course; and one lot just went in."

"How long does it take for a lot to get through?" I yawned again.

"Well, this is the second, and the first took nearly three-quarters of an hour."

"That seems a long time."

"Oh, not very. They tell me we get ham and eggs and coffee and marmalade."

She looked bedraggled and she sounded hungry.

"What time is it, please?"

"About half past eight."

"Not really!" I looked at my watch to prove it; then I got solicitous. "Did you have a cabin?" I asked.

"Cabin? Well, rather not! I didn't have anything—not even a blanket."

"Isn't it awful! Where did you sleep?"

"Call it sleep if you like. I spent the night up on the forward deck."

And it did not occur to me until that instant that we were standing still.

"What are we stopping for, I wonder?" said I.

"We haven't started yet!"

"Oh, dear! That will make us late in landing, won't it?"

"We shall be lucky if we get off at all."

"Any prospects of not doing so?"

"All the prospects in the world."

But that is the sort of thing one does not believe on the instant. It sounded pessimistic and disgruntled, and I am nothing if not habitually hopeful. I sat where I was for another half hour; then went down with the crowd as the second breakfast relay gave way to the third. And I was right about there being more than forty ahead of us—there were more than eighty. One lot went in and we waited for them; then, when I thought our lot was really getting in, my Red Cross friend and I were stopped on the bottom step leading into the saloon, and a rope was swung across in front of us, as though there was some chance of its being difficult to control us. Only the English, however ——

If I could but describe that day! Breakfast was over about half past eleven and luncheon began at twelve. Luncheon was over about five o'clock and the tea relays began to pour down the companionways immediately. The tea drinkers were English mostly, and they were driven forth from the dining room in time for the commencement of dinner, about half past six. I gave up trying to get three square meals, because it practically meant moving from the table to the end of the line, moving with the line to the table, and back again to the end of the line—not quite, but nearly—a hideous rotation in an atmosphere of sweating stewards, unbathed humanity, bilge water and burning grease.

Considering the odors, I really was glad when the hot food ran out, or they decided not to serve any more, as they did before dinner was over; and we were reduced to cold ham, boiled eggs and warm soda water. I got that about half past nine that night, after a day I should remember as miserable even in the midst of the worst miseries that could be meted out to me, for my sins, in the Kingdom Come.

After wandering round and trying to maintain a little dignity for two or three hours I sat down flat on the deck, where I had to be stepped over, leaned up against a bulkhead and went to sleep again. The sun came round and scorched me; a cold wind blew off the water and froze me; and a continuous hubbub of conversation in all languages buzzed at the door of my consciousness like a million torturing blue-bottle flies.

Everybody else was as uncomfortable as myself, and underlying the discomfort there was a nervous thrilling fear, which set marks on men's faces and made women's voices high and hysterical. Outside the purser's window a placard had been put up early in the day instructing all those who wished to "abandon the voyage" to present their tickets and passports to such and such a port officer at such and such a time and place. The very phrase "abandon the voyage" sounded ominous; but everybody waited for everybody else to do it, and doubtless wondered, as I did, why they were so slow about it.

The second night passed as the first had done, except that I found a vacated chair and appropriated it, without a "By your leave" to anybody. I hauled it up close against the rail, where I could turn my back on the crowd; and in the first sweet comfort of sinking into it I decided to sit right there until we landed at Le Havre, if it took a week. But, of course, it would not take a week. We should be leaving by daybreak without a doubt, and it was just six hours across. Counting on slow running, we ought to be in by early afternoon of the next day anyhow, and I could go to bed in a civilized hotel and sleep the clock round! Oh, the world was not such a bad place after all!

French Deck Passengers

If they knew we would not sail, why should they not send us ashore and let us get a night's rest at a hotel in Southampton? Would they? They would not! Our passports were viséed at London or other points of departure, and they were good for nothing but a continuous passage from that point to Le Havre or Paris. Staying on the boat was by way of making a continuous trip and there was authority vested in no one to modify the regulations in any particular. Nobody could go ashore.

It was not until the second day that I really began to take an interest in people and things, and by that time bedlessness and bathlessness and foodlessness and discomfort in general had become a normal state. Out in the Near East, in the Ægean Sea and down Egypt way, one gets used to nomadic tribes infesting steamships; and they are one of the sights to write about in one's letters home to the folks. They litter all the decks in picturesque array and in blissful disregard of the deck rights of other people; but they carry with them many blankets and thick quilts, and even small stoves and cooking utensils, and plenty of good food—according to their lights—and their general comfort in comparison with what we were enjoying would be as the comfort of a palatial sleeping car compared with a tramp's ease in the place he bestows himself for a stolen ride, somewhere under a freight car. Yet we look down on these Eastern brothers and refer to them in a superior way as "The inevitable mob of deck passengers."

Deck passengers indeed! It was an amazing thing to me to see how quickly a civilized crowd could crack off its veneer of civilization against the sharp corners of an unusual situation and become the same kind of "mob of deck passengers," but without any of the nicenesses of Eastern habit to take the place of the habits they were forced to abandon. I looked round at the people sprawling on the littered decks and made some such remarks to my Red Cross friend.

"Oh, I don't know," she said; "though we are a little messy, are we not? I've never been in the East. Do they have bananas there? There is a perfectly good deep bay right over the rail. Does seem as though they might throw the peels and their cigarette ends over, doesn't it? But never mind!"

She was standing at the forward rail tossing cigarettes one by one to a crowd of French sailors on the well deck below.

"Who are they?" I asked.

"Oh, don't you know?" she replied, as though she thought little of my intelligence.

"No; I've been shutting my eyes and ears to everything as much as possible, and trying to gather up a little sleep. Who are they?"

"French sailors picked up out in the Channel. Their ship was submarined and some of them were drowned."

I knew what she meant, of course.

"When were they submarined?"

"This ship picked them up on its way over; and they haven't a thing with them—poor things!—not even tobacco. That's why I am giving them cigarettes."

Change for Egypt and India

It was a nice little game, but I can hardly ever keep from asking questions. Why were they not provided with tobacco and all the usual comforts, instead of having to play doggy and "speak" for single cigarettes tossed down to them from the passenger deck? I was quite serious about it, and was sending down a few packages, to which they might help themselves like men. But my English friend scorned the suggestion and advised me not to be foolish.

"They are only French sailors."

"Yes, I know; but there ought to be ample provision made for them by the authorities. Think of lying in a friendly port after going through what they have, and not getting everything they want! Can't they go ashore?"

"Certainly not. Nobody can go ashore. And besides, they have no money. I quite agree with you that provision should be made for such cases, but it is not; so ——" She shrugged her shoulders and continued in Anglo-French: "*Dites donc! Soldat! Ici!*"—and threw down more cigarettes.

There was another ship like ours, and packed as ours was, lying in the harbor; and, besides, there were transports, freight ships, battle cruisers, torpedo boats and other craft. An occasional flare of excitement was caused by the sudden buzz of a seaplane darting away and cutting a shining spray-wake as it skimmed across the bay, preparatory to lifting itself into the air. Then a burst of song from one of the close-lying neighbor ships would break the monotony for a short space.

The second day was passing and I was looking forward to the mercilessness of the chilling night—the third—when suddenly something galvanized the crowd into strained interest. It was a port officer going from point to point on the decks and below decks and calling out:

"Any passengers desiring to connect with the P. & O. steamer at Marseilles for Egypt, Malta and India will please return to London this afternoon at five o'clock. They will be met in London by an officer who will arrange about tickets and passports, and a boat will take such passengers to-morrow morning at daybreak to Boulogne. The extra fare will be nine pounds!"

"The extra what will be what?"

This was the first remark I heard, and it was uttered by a woman who declared, for the benefit of all and sundry, that she did not have, or, as she would express it, had not got nine pounds; that she was going to Malta to join her husband; that she had two children in school; and that it was all a pitiful outrage! She had bought her ticket, and now she must either give up altogether or stay where she was and take a chance on missing the steamer at Marseilles. Some Red Cross nurses for Egypt were in the same predicament, because they were traveling on arrangements made for them, and there would be no time to go through the red tape necessary to get a larger traveling allowance.

See your dealer's exhibit *of Simmons Beds*

A MAN FEELS THE SAME ABOUT THE BED HE SLEEPS IN AS ABOUT THE CLOTHES HE WEARS

He wants style and comfort—and he wants it to *fit*. A bed that looks as if it belongs, and was built to be slept in, may be the most satisfying piece of furniture in the room.

A Simmons bed is just that.

The building of thousands of beds every day in the year is a colossal manufacturing job.

But it represents more than volume alone.

It represents skill and forethought and care, which play their part in the making of every individual Simmons bed.

Above all, it represents an understanding of the needs of the American home.

Years of leadership in the metal bed industry have given the makers of Simmons beds a national vision.

They have made it possible to produce handsome, comfortable beds for every type of room, for every family—at a lower price.

"There Goes Another Fuse!"

That means that I am again forced to wait for a new fuse while my machine stands idle. In the job before this, I had a couple of Economy renewable Fuses and a handful of Drop Out Renewal Links. When a fuse blew I could renew it in a jiffy, stick it back in the circuit and speed up again,—making money for my boss and for myself. I know how safe and saving Economy renewable Fuses are because I use them in every electrical circuit at home to protect my house and my family against the fire hazards of overloads, short circuits and the effect of lightning discharges on electrical circuits."

"Glad you called this to my attention. Tell the superintendent to write out a requisition for Economy Fuses and bring it to me. I think I'll try them at home, too."

ECONOMY renewable FUSES

Sectional View, Ferrule Type

are made in all commercial capacities, ferrule and knife blade types. The cut shows a sectional view of a ferrule type Economy renewable Fuse.

When an Economy Fuse operates, these inexpensive "Drop Out" Renewal Links, inserted by any one in a moment or two, restore the fuse to its original efficiency.

ECONOMY FUSES

should be installed wherever electricity is used for power, light and heat.

The renewable feature cuts annual fuse maintenance expense 80 per cent. Safety is assured under all service conditions.

Economy Fuses have been carefully investigated by the United States Government Bureau of Standards.

Write for details. See our liberal sample offer, last published in The Saturday Evening Post of December 30.

Economy Fuse & Manufacturing Co.

Kinzie & Orleans Sts., Chicago

(Continued from Page 24)

However, there was nobody to give ear to any such troubles, and these people stayed aboard and took their chances, while a number of officers, and women going out to join officer husbands in the East, got instantly excited and began to add confusion to confusion in their hurry to get their baggage ashore. The crowd was so thick that my quick determination to try for some berth which might by chance be vacated only served to agitate me and to emphasize my helplessness. But a twenty-franc note, offered smilingly to a worn-out stewardess, got me a smile in return and a promise that she would do her best.

"And don't you do nothin' about it; I'll attend to it," she said.

The Mediterranean passengers got away, about twenty of them—not enough to thin the crowd to any marked extent; twilight came down and the chill of night began to creep into the air, and still my stewardess made no sign. I got impatient at last and went to look for her, only to find that she was looking for me, and that she had a berth all ready and freshly made up for me. I could have wept from sheer relief. If you think sixty-odd hours in your clothes under such circumstances is a joke, you have a curious sense of humor.

The stewardess led the way down the narrow corridor to—of all things!—my own reserved cabin, 50–52, explaining as she went that I was going in with "the English lady with the little white dog." Neither the lady nor the dog was there to receive me, for which I was duly thankful. For a moment, at least, I could renew my acquaintance with a sense of decency and privacy. I found water in the tank, and the stewardess gave me a clean towel and told me to be careful with it, because it would be the only one I could have. I could open my dressing bag and refresh myself; and this I was proceeding to do with almost normal cheerfulness when the lady and the dog breezed in—that is, the lady breezed; the dog seemed rather dejected.

The Lady With the Dog

Did anybody ever say just "Oh!" to you in a way that made you want to commit murder? Well, that was what the English lady said to me, and that was exactly the way she said it. She probably thought that, having lost one roommate, she would be permitted to occupy my cabin all by herself. And I rather sympathized with her, in a way.

Her white dog was very woolly and very fat, and must have been a most uncomfortable sort of sleeping companion in a narrow berth. They really needed a stateroom all to themselves. She got pleasanter right away, however, probably because, after all, a dog under such circumstances would do with a bit of explaining—as the English would express it.

"You won't mind my little dog, will you?" she said; he really was not so very little, though he was meant to be.

"Oh, not at all!"

"He is a nice little person—aren't you, Pettikins? He never makes the slightest bother."

And it just happens that I do like dogs, even fat, white, woolly ones, if they must be like that; so it really did not matter. Then—strange thing for an Englishwoman to do—she volunteered the information that her husband, an army man, had been in India for a year, and that she could not live in India on account of the climate. But he had been transferred to Egypt and she was now going out to join him. The English always go "out," you know; never up or down or across. They even go "out" to the United States, which implies a center of a world circle not to be mistaken by anyone who knows the English. She was not going on a P. & O. ship, but on a Dutch liner from Genoa, because it was safer.

"But how splendid!" I said. "How glad your husband will be to see you! These war separations are pretty dreadful, aren't they?"

"Yes, rather! And he will be so glad to see Pettikins too. I just couldn't bear to go to his fazzer wizout ums, could I?"

She stooped to caress Pettikins; but at that moment Pettikins was making strange curlicue motions, as though he was trying to make up his mind about something particularly important; and she picked him up by the very scruffy scruff of his neck and tossed him into the upper berth—which was hers, because of its superior advantages in the way of light and air. Then she fluffed away, up on deck again—a sweet-scented sample of real femininity in blue, with a coquettishly patterned veil drawn close about her little hat and her rather well-preserved and delicately tinted face.

I didn't care. I didn't care for any mortal thing. I wanted to go to sleep. No dinner for me—no anything—just bed. And I lost no time. The linen was new and glacial, the mattress was lumpy, and the pillow was stuffed with sawdust as tight as a Christmas pincushion; but of all the beds I ever slept in that was the most comfortable. I would have made an even bet with anybody that nothing short of a torpedo through the ship could wake me, once I got to sleep; but along about nine o'clock I came up out of the depths on the strains, in close male-quartet harmony, of I want to be—I want to be—I want to be down South in Dixie! Now what do you suppose that meant on an English Channel boat in wartime? I did not find out until next morning.

Barber-Shop Harmonies

The berthless passengers had discovered an American negro vaudeville troupe on the lower deck and a couple of other artists in the first cabin, and they were amusing themselves by having a concert for the benefit of the British Red Cross. There was a soprano, devoted to long, high notes and ragged cadenzas, which really needed an orchestral accompaniment to cover their deficiencies; but the gashes she cut in the atmosphere got healing balm from soft negro voices in Mah Ole Kaintucky Home! and Honey on Mah Lips! and were completely filled up by the wild applause that greeted even them from everything afloat in the harbor. It was a noisy hour; but I finally slipped back into the deeps, accompanied by the soothing of God Save the King!—and that finished that day.

Next day about noon an announcement got itself circulated through the crowd—it was posted, as a matter of fact, on the purser's window, but only a few could have read it; it just got itself circulated—that any British citizens, British citizens only, who desired to do so might go ashore until four o'clock. All others must remain on board. Whereupon a large company of smiling and greatly relieved British citizens hustled into their hats and got away as promptly as possible. That left the French people, some Belgians, some Latins from the south countries, and a nondescript assortment of humanity in which I figured as a unit.

I had read everything I had with me and a few things I had picked up where they had been too carelessly left by their owners; but I found somebody's short-story magazine—which I had not yet seen—in somebody's sheltered corner, along with somebody's rugs and things; and I proceeded to make myself comfortable, trusting to luck that it was a British cache and that I should have until four o'clock to enjoy myself. By that time food venders from the town, accompanied by a port officer, of course, had been allowed to come aboard, which was cheaper than feeding the mob; so all one had to do was to reach out and buy a ham sandwich occasionally and a bottle of warm soda water or beer, which one drank in a free-and-easy way, without troubling about such an unnecessary thing as a glass.

I was engaged in this kind of pleasing performance, and reading a tale of thrilling South Sea adventure, when a tinkling stringed instrument struck up on the other side of the deck and a gay boyish voice began to sing something about My Hooaloo-a-Hono-lulu Ba-a-a-by! And I just could not stand it. I got up and went over. There were other songs and I softly hummed what is known as a second for a little while, greatly enjoying myself. Then came She Wore a Tulip! when I and half a dozen others frankly joined up; and the first thing you know we had some close harmony that must have filled our colored compatriots on the deck below with professional jealousy.

We sang everything we could think of, from Robin Adair to Rosey O'Grady, with occasional flights into what our accompanist called "good stuff," such as Beauty's Eyes, Jerusalem, and Love Me and the World is Mine! But the ukulele, which the tinkling stringed instrument turned out to be, was better adapted to the Honolulu-lu-lu variety of endeavor; and, among us, we produced more hula melodies than I thought had ever been written.

(Continued on Page 29)

This little "Eagle Brand" girl wants her "Daddy."

Last August he left home and has not returned.

But if he sees this picture, little Jean thinks that he will come back and she wants him to know that she and her mother want him very much and will be very happy when he comes.

Jean's mother wrote a letter to Borden's in which she said that inasmuch as Jean was a splendid example of what

Gail Borden EAGLE BRAND CONDENSED MILK THE ORIGINAL

would do in the way of raising healthy, robust babies, Borden's might use her picture in an advertisement, coupled with an appeal to her absent "Daddy" to come home. She said that "Daddy" looked at the advertisements in magazines and would be sure to see Jean's picture. She further wanted "Daddy" to know that matters at home have been fixed up so that he now has no reason to remain away.

So here is Jean's picture and if "Daddy" sees it, please go home at once.

$815

F. O. B. Flint
for the Sedanet.
$1065 for the Sedan.
$695 for the Touring Car and Fleur-de-Lys Roadster.

The Sedanet

HERE is another Dort innovation—the Sedanet. It fills a need not heretofore satisfied in enclosed or open car types.

The Sedanet is smart, handsome—and as comfortable as a limousine for winter driving. The plate glass windows and side panels are quickly removable, making an equally fine open car for summer. Quick acting storm curtains are conveniently placed for use when needed.

Each top is built and fitted individually to the body of the car in our own shops. The finish throughout is beautiful, the construction solid and substantial—different, in short, from the ordinary "winter top."

The Sedanet is built on the famous Dort chassis—mechanically supreme.

With all its additional advantages the Sedanet is priced only slightly higher than the Touring Car.

(Continued from Page 27)

Meantime everybody left on board had gathered round. They were sitting perched on the rail in a long row and flat on the deck in a close circle, while the rails of the neighboring ships were crowded with people, who proved their eagerness for any kind of diversion by vociferous applause and yells for more.

I found a seat—or, rather, a place was vacated for me, I having become one of the "artists"—on a bench beside an American woman, who would have been a puzzle to me if I had been puzzling about anything, which I was not. She was just a nice, comfortable sort of person, who spoke my language as anybody can hear it spoken any day at Coney Island or any similar haunt of innocent American joy. She had sleek black hair, was rather smart in her get-up, and sang in a tone that made me homesick for a Broadway cabaret. Some polite Frenchman complimented her on her singing; and then she spoke. She was a pure delight.

"Say," she said, "don't talk to me! I know I can't sing for scorched prunes; but if I could sing as well as I can shoot—well!—say, they'd have to enlarge the Metropolitan Opera House on my account, and Geraldine Farrar would have to begin to play leads for her husband in her natural speakin' voice! And to think I have to set here waitin' for 'em to ketch submarines in nets! Say, I could pick the nip off a periscope, as far as I could see it, with an ordinary rifle!"

I took a deep breath first, and then I said:

"Why, what do you mean?"

"Don't you know who I am?"

"No."

"Well, I'm the crack lady rifle shot of the world, and I'm sittin' here losin' sixty dollars a day! That's what I'm doin'!"

"Why, how's that?"

"Me and Lon"—indicating the nice boy who played the ukulele—"were due to open in Paris two days ago, and we get paid by the performance." She was evidently worried about it; but she added with a whimsical little twist of her upper lip: "The only comfort I get out of it is that our manager, who had the nerve to send us over here—darn 'im!—loses too. Every sixty dollars we lose, he loses fifteen per cent of it; and the fifteen'll hurt him a whole lot more than the sixty'll ever hurt us."

"What do you do?" I asked.

Shooting for a Living

"What do we do? Oh, the usual stunt. Though it ain't so usual, either, because it's good. We've got a sketch with a lot of songs and some bully lines. The lines sure are gettin' good! Lon fakes some new ones every day of his life. He's good at that. Then I do a lot of fancy shootin', of course." I noticed how she gave her "fancy shootin'" second place, and I knew by that she was in love with Lon. "I ketch lead nickels in the air with rifle balls," she added, "and snuff out a row of candles as fast as you can think—and that sort of thing."

"Do you speak French?"

"Good Lord, no!" It was a slight explosion and I was afraid for a moment that I had offended her; but not at all.

"If you don't speak French what do you do about your lines for a French audience?"

"Well, we've had 'em translated; and, say, we're boning 'em hard. The only thing is, I'm a little bit afraid of our pronunciation. But it don't matter, really. If the lines don't get across we can cut 'em; and Lon'll do an extra song, and I'll put in some shootin' specialties. Say, I can do enough fancy gun stunts to hold an audience for an hour!"

"But, how wonderful! It must take a tremendous amount of skill."

"Betcher life it does! And yet, I don't know. It ain't a thing you can learn to do. It's all in your eye and you've got to be born with it. That's why it's valuable. I can't remember when I couldn't shoot; but I couldn't tell you how I do it to save me. There's no fake about it—that's one thing sure. I never use a sight and I really never take aim except in front of an audience, once in a while, in a delicate bit, to make it look harder. Say, the thing that's worryin' me is that if this ship gets it from a submarine or somethin' I'll lose all my stuff, my rifles and my costumes. And, say, I got some peaches too!"

"Well, I wouldn't bother much about that if I were you. If this ship goes down, with this mob on it, you are not likely to have much further use for your outfit, are you?"

"Say, I guess that's right, all right! Ain't it the limit? Well, thank Gawd, our manager's losin' his fifteen per! Come on, let's sing."

But for the moment we could not break up what was going on; in fact, it had been dividing my attention with my interesting compatriot all the time. There was a little French girl, as chic and as cunning as she could be, who had every unattached man on board interested, to say the least. She spoke English with a charming accent, and had a way of pushing her shaggy mane back off her forehead suddenly with a graceful swing of her arm, and looking up into the faces above her with very wide-open, inquiring blue eyes.

An American had engaged her in a little game of matching coins for the benefit of the British Red Cross, in whose sacred name anybody anywhere seems to be able to do anything. They were sitting flat on the deck in the midst of a tremendously interested group.

"Now," he would say, "heads, I win—tails, you lose!"

"Yes," she would answer prettily. "Aw ri'—go!"

Up would go the coin, and down it would come into his palm. Of course whatever turned up she lost; and while she cheerfully paid, the crowd shrieked with merriment.

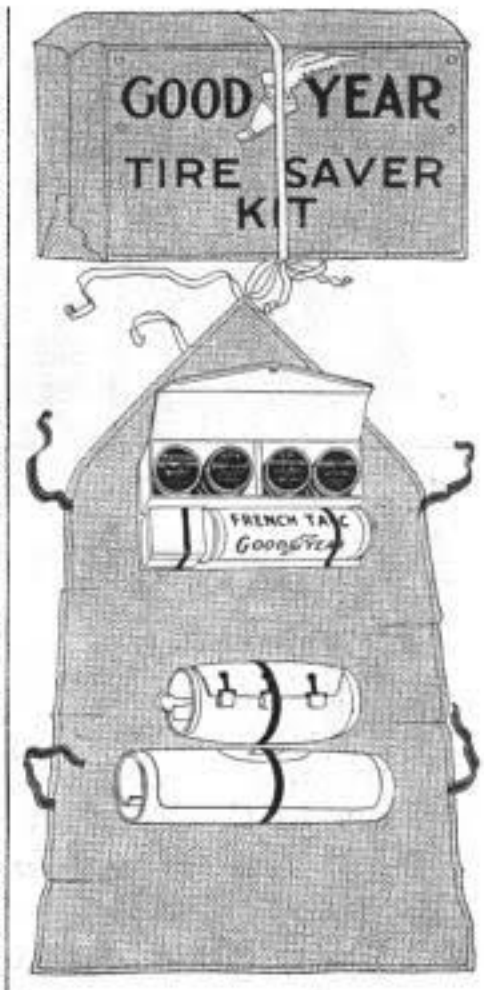
"Heads, I win—tails, you lose!"

"Aw ri'—go!"

Games of Chance for Charity

It was a sweet little game and she lost one shilling after another. After a while a shrewd look came into her eyes, which indicated that she began to realize something was not quite right; but she did not accept an invitation to be the spokesman herself, with the same formula—to change her luck. The American was perfectly fair about that. Whether she got the joke or not I do not know, but she said finally:

"Now we stop that—eh? You play my game—*n'est-ce pas?* And ev' time you lose you pay to me one shillin'—*n'est-ce pas? Voild!*"



And she spread out a little row of coins and told him to change them, end for end, beginning at the middle, moving two coins at a time and never leaving a space—or something like that. She could do it with dizzying swiftness, and it looked so easy when she did it that everybody had to have a try at it. It was not long before she had a pile of money on her outspread skirt that the Red Cross might well accept with gratitude. And the Red Cross got it too. Make no mistake about that. She went straight inside and chucked it all into a tin contribution box that was nailed on the wall of the corridor.

It really was funny, most of it; though, underlying all the combination of grouchiness and lightsomeness, there was that curious nervous tension which expressed itself occasionally in some such remark as: "Well, never mind; we can't drown so long as they keep us tied up here, can we?" If I heard that once, I heard it twenty times. One felt that the interminable delay was a necessary precaution for one's own tremendous benefit, and it was all right.

But all the time I kept thinking about the operations out there in the Channel, wondering what they were doing, and how they were getting the submarines, if they were getting them, and what tragedies were being enacted.

There is no vision of horror on earth more horrible to me than the vision of men in a submarine under the sea, caught in a pitiless, strangling steel net. It is no way to make men fight, and I wish all the inventors and improvers of the submarine had been drowned in their infancy. However——

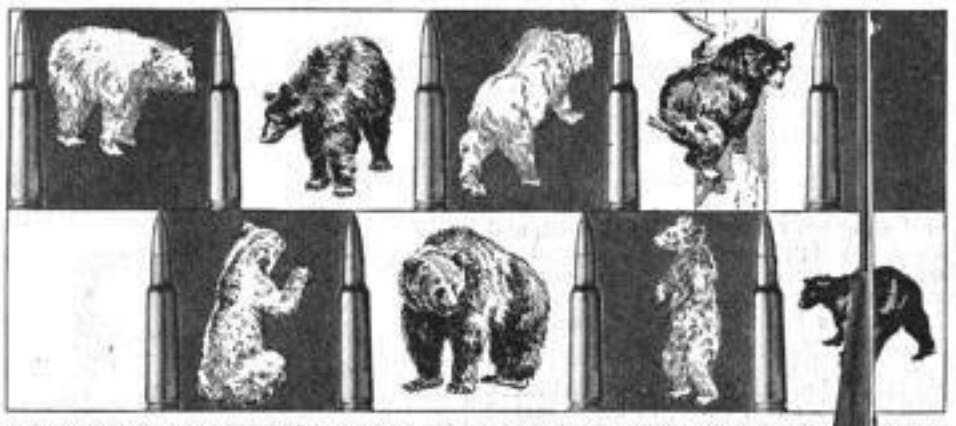
One game of chance followed another until pure boredom drove the crowd back to a fresh demand on the ukulele, and we were in the midst of a sort of half-hearted repetition of the old songs when the English crowd came back aboard and put new enthusiasm into the artist soul of Lon by their eager appreciation. The fire he is going through has already done one splendid thing for the Englishman: It has melted his icy reserve and made him almost like other people. He will actually smile and speak to a perfect stranger without an introduction! And he will do it cheerfully, even almost heartily, and not as though it hurt him, as it used to do like anything. Lon went from one Honolulu song to another until he came to one which a small company of young English officers wanted to learn, so that they might introduce it in

Preparedness and Its Virtue

Not every motorist who travels with a Goodyear Tire-Saver Kit in his car expects immediate trouble. But, in the knowledge that trouble *may* come, he feels it well to be ready for it. He holds security and peace of mind above price.

Of course, in the case of the Goodyear Tire-Saver Kit, the price is trifling—$3.50, $3.75, and $4.00, according to size—but the peace of mind it affords is none-the-less invaluable.

You should have this Kit in your car. You may not need it this week, or this month—but if you *do* need it, it's *there*. You'll want it there when trouble comes—it cannot serve you in the showcase of the dealer several miles away.



You'll find in its compact package an inside protection patch, outside protection patch, self-cure tube patches, cement, tire putty, talc, friction tape, valve parts and pressure gauge—everything you are likely to need. Get one, the next time you buy gasoline.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

the trenches. And everybody knows what that means—over and over; over and over!

Meantime I had gone on talking quietly with the champion lady rifle shot of the world, and she was telling me how she and Lon were planning to settle down. They had as cute a little bungalow, near a certain live Western town, as you ever clapped your eyes on; and she was going in for a swell hairdressing parlor in town while Lon raisad chickens. They had it all planned.

"No more of this for mine!" she said. "I've had enough. They ain't nothin' in it—except money. Say, ain't it funny the way they'll pay you good money for the sort of thing me and Lon do? But, he's good. I will say that. He bought me that ukulele for a birthday present last year and he's never given me a chance to touch it. Not that it makes any difference; it was just the same as it would be for me to give him some kind of a fancy new rifle. He can't shoot and I can't play. He can play any old instrument he ever saw. His specialty used to be the xylophone. A xylophone is too awkward to pack round nowadays; but, say, that kid sure can play a xylophone!

"He was doin' a fancy, all-round musical turn with a team that called themselves the M—— Family when I married him. And maybe you think we didn't take a tumble to the kind of thing we was up against! We started right in to savin' money and we've got nearly enough now to begin to do somethin' real with. Just one thing more we want: We are goin' to do a movie with a lot o' crack shootin' in it. We got the scenario and the contract; and that's goin' to be where we quit.

"Then us for the chicken ranch and the hairdressin' parlor! I'm goin' to take some hair lessons in Paris—though I really know enough already from havin' my own hair done so much. But I like to be honest. I don't want to claim to be a Parisian hairdresser when I ain't. And, say, I've got the plans and everything. I'm goin' to have my waitin' room in old rose ——"

The Scotchman's Repertory

And she went on to describe her dear honest dream, which goodness knows I hope may come true in its rosiest detail. Think of submarining such innocents!

Meantime Lon was sitting on the bench beside us teaching the young English officers My Honolulu Ba-a-aby! And a nice old Frenchwoman, sitting on the hard brass sill of the doorway on the other side of me, took occasion to get my attention for the purpose of saying:

"You Americans really are too extraordinary! I wonder what it is about you! Wherever you are there is always cheerfulness. It seems to me that all the Americans I have ever known have carried happiness round with them. Can you think what this ship would be like if you Americans were not on board? Not anybody else has uttered a sound."

Which was not quite accurate, but I knew what she meant. I was disposed to talk with the nice old thing and tell her just how we happen to be just what we are, but at that moment a Scotchman reeled up and leaned over Bill and me—Bill was what Lon called the shootin' lady, his wife—leaned over Bill and me to lay a hand lovingly on Lon's shoulder.

"Meestr-r-r Amer-ri-can," he said, "yer-r gr-reat! I thank you fer-r yer-r music." I cannot possibly roll his r's the way he did, nor can I describe the soft-lipped, watery smile on his flushed, sandy face. He spoke very, very slowly. He swayed gently back and forth, and continued: "But is it posseeble now that y'u could play My Hame is in the Heather-r-r?"

"No," said Lon shortly; "I can't."

He was a decent, sober, right-minded lad, and he was associating at the moment on rather nice terms with proud British officers. He did not like the intrusion.

"Weel, thot's bad!" said the Scot. "If y'u could only play My Hame is in the Heather-r, now—I'd seeng it fer-r y'u. I've got juist three songs: My Hame is in the Heather-r; Scots Wha Hae Wi' Wallace Bled; and Seelver Threads Amang the Gold. Y'u must know thot now. It's an Amer-r-ican song."

"No, I don't."

"Weel, thot's bad! Was y'u at the concert last night?"

"Yes."

"An' why didn't y'u seeng?"

"Nobody asked me to."

World's Largest Makers of Surgical Dressings
— HOME OF RED CROSS COTTON —

Zonas Adhesive Plaster

Golf hands are just like all other hands; they get sore—and they all like Zonas. So do heels, ankles and wrists. Zonas prevents chafing, blisters and lameness.

Zonas Mends Everything

Every time you turn around you find a new use for Zonas Adhesive Plaster: winding electric wires and connections, golf clubs and tool handles; stopping leaks in rubber boots, bicycle tires, ice bags, fountain syringes, tubing and garden hose; mending raincoats, clothing, shoes, furniture, table legs, trunk trays, fancy boxes, window shades, window panes and glassware; repairing leather purses, hand bags, pocketbooks, gloves, belts, motor coats, caps, slickers and sneakers; bandaging weak wrists, ankles and knees; fixing corsets to prevent stays and whalebones from punching through and wearing out underwear and dresses; excluding light and air from photographic material; keeping wind, rain, and cold from cracks, windows and doors—and a thousand more uses. Two sizes, 10c and 25c. If you need a wider and longer strip varying from ¼ inch to 4 inches wide and either 5 or 10 yards long, ask for Z O Adhesive Plaster, regarded by surgeons as the most perfect.

Zonas is one of many hundred Red Cross Products, such as Red Cross Absorbent Cotton, Red Cross Gauze, Synol Soap, Camphenol (disinfectant), Lister's Formaldehyd Fumigator, Johnson's Toilet and Baby Powder, Johnson's Shaving Cream, etc.

Johnson's **Handbook of First Aid.** Based on modern surgical practice, as applied in recent wars and used by First Aid Societies all over the world. Regular 10c paper-cover edition **mailed free on request.**

By the way, do you realize that your druggist is rendering a valuable service to your neighborhood? What would you do in time of emergency and sickness if your druggist were not prepared to supply you with medicines, surgical dressings and sick-room supplies? Every drug store is, in a large measure, a public institution deserving the loyal support of its locality.

(Continued from Page 30)

"Now thot's juist it—juist it! Y'u shouldn't wait to be asked. I was seetin' there theenkin' to mysel' all the time—now it's yer duty to git up an' seeng an' put hairt into th' ithers. But I'm a teemid mon; thot's what I am—a teemid mon. But I juist sot there and thocht that if now y'u'd juist git up an' seeng y'u'd put hairt into th' ithers. Thot's what y' ought to do when y'u c'n do it—put hairt into th' ithers."

Lon had stood up at once in order to relieve Bill and me of the threatened burden of the chap, and he was getting rather impatient.

"You've been ashore, haven't you?" he said.

"Yes; a lot of us been ashore."

That was evident, for one must admit that he was not entirely alone in his blissful state.

"Time, too," he continued; "th' way some of these her-r-e offeecials ——"

"You went a long way, didn't you?"

"Not me! Juist up the hill yonder-r. I wouldn't git far-r fr-rom the dock, y'u know. Or-rder-rs to be back at four-r o'clock. Always obey or-rder-rs. 'Sneces-sar-ry. 'Squod if y'u don't."

"Where are you going?" Lon asked—not that he cared, but he had to say something.

By this time the man had a firm grip on his shoulder and they were the center of an interested group.

"I'm goin' to Leghorn to join my ship. I'm an engineer-r in the Royal Navy. An' y'u can't play My Hame is in the Heather-r, now? It's a gr-r-and song!"

"Say," said Lon, "if you don't mind taking a friendly tip from a stranger, your hame is not in the heather just now; your hame is in the hay. And if I were you I'd beat it."

"Well, I juist thocht thot the theeng fer-r a mon to do thot c'n do it was to put hairt into th' ithers; an' if it wasn't thot I'm a teemid mon ——" But, at that, Lon led him gently away.

A Rummy Lot

He reminded me of a Scotchman I encountered once out in the China Sea. He was older than this lad, but otherwise he was his twin brother—though at the moment sober. It was on a ship bound from Hong-Kong up to Shanghai, and the few passengers aboard were at luncheon at one of the long tables in the middle of the dining saloon. There was a very sick American from Manila sitting next to me, a tall, smooth-faced young man, with deep-set gray eyes, who had evidently just been through a siege of some kind of tropic fever, which still had its grip upon him; in fact, I learned afterward that he was merely trying to climb back into life by the usual route up sea to a cooler climate.

The Scotchman, who sat opposite us, across the narrow table, was the mumbling sort, and with a bur in his tongue that would have been delightful if there had been anything else delightful about him to go with it. All at once, apropos of nothing at all, he said:

"These Amer-r-icans out in thees pairt of the world are a rummy lot!"

He rolled his r's outrageously and what he called us sounded more like roomy than rummy. Instantly the American laid down his fork and straightened up:

"I beg your pardon—what did you say?"

"I said the Amer-r-icans out thees way are a r-r-roomy lot!"

It was just like touching a match to a fuse. The fuse sputters lazily at first; but pretty soon, as the fire runs up the length of it, it begins to throw out crackles and sparks, and at the point where it connects with the main works there is an explosion. The sick American began very gently. He was polite; he was almost suave; but as he went on enumerating Scottish characteristics he grew earnest. His command of choice English was a joy to hear, and he finished with a vivid description of Glasgow on a Saturday night as he himself had seen it, when he had to walk warily in the streets to keep from stepping on the recumbent forms of inebriated Scotchmen.

He got up in the midst of this description, laid his napkin gently but firmly beside his plate, by way of emphasizing a telling point, and when he concluded, in a low sweet voice that you could have heard a mile, he turned and walked, as resolutely as his weakness would permit, toward the companionway. But before he got out of hearing

Could You Earn Your Own Living?

MRS. M. A. CHANDLER

MRS. CHANDLER does. Years ago she was thrown upon her own resources, unprepared. For a time she tried various ways of making money, but without any great success.

Then she found a surer, more pleasant, more modern way. She secured a position as local representative of The Curtis Publishing Company.

Her earnings at once began to climb. The problem was solved! Today, after twenty years, she still supports herself on profits from the renewals and new subscriptions for *The Saturday Evening Post, The Ladies' Home Journal* and *The Country Gentleman*, often earning as much as $15.00 a week.

BEGIN NOW

Could *you earn your* own living? Why not begin now to build up a local Curtis business which will provide you with plenty of spending money for the present, and which may prove an anchor to windward later on? The work is pleasant; it requires only spare time; you assume no obligation by asking about it. Address

the Scotchman, who had sat quite calmly through it all, raised his bristling red head in a funny, half timidly defiant kind of way, and said, loud enough for everybody to hear:

"Weel, I still theenk so!"

This relieved the tension, and everybody, even the American, laughed.

The Britishers brought back from shore a rumor that we were to sail that night at ten o'clock; but nobody believed it. They do not send passenger boats across the Channel in the night. They prefer to take their chances in daylight, because a night tragedy is a too fearful thing. However, the rumor persisted—we were to sail that night at ten o'clock.

I must go back and record that along about the second day a noticeable trend in the mental processes of the crowd began to make itself manifest, and that I was highly entertained by the way in which everybody began eying everybody else. Eying is the word, and it implies a curious kind of squint, which seemed usually to say: "Now who on earth are you, and what possible business can you have in a situation like this?"

Really, though, in looking at such a mixed lot of apparently free agents, an Englishman might well congratulate himself that his government has caused to be posted in all public conveyances a warning to all British subjects to guard their tongues. They were all over this ship, and "Your enemies may be listening!" is what they say. Sure enough, you never can tell! A majority of the men on board were in uniform, but the women were not so easily distinguishable as to race and their reasons for being there.

For instance, there was the stout one with very blondined hair. She was a human curio if ever there was one. She had a stiff straight-up-and-down chair, and so far as I could discover she sat straight up in it for four straight days and nights. I never saw her anywhere except right there in that chair, with her large blue eyes fixed on vacancy. I think maybe she imagined she was suggesting tragic history, the perfidy of men, and the tense emotions of life, which, being burnt out, leave a woman's eyes so very sad. Her hair was perfectly waved and dressed, and she wore, perched on top of it—four days, mind you—a little hat made of some kind of white birds' breasts. Her face was beautifully enameled, and the only motion I ever saw her make was with a small vanity box containing rouge sticks and a powderpuff. She wore high-heeled patent-leather shoes with white kid tops, and her black cloth gown fitted her ample figure so snugly that it made me ache.

The Mona Lisa Girl

Then there was the mysterious Mona Lisa American girl. She wore her hair in a Mona Lisa fashion and her black taffeta gown was cut square in the neck. Also, she affected a Mona Lisa smile—not unsuccessfully—and moved her brown eyes slowly and deliberately. She was one of the berthless mob; and, because she was an American girl, she rather worried me. She said she was seventeen years old and a student on her way to school in France; but she vouchsafed no information with regard to a family that would allow her to travel alone under such unexampled circumstances.

My twittering roommate twittered mostly to British officers, while I, in the end, took care of her dog. There were French groups, who stood or sat about on deck quietly talking together; and there was one little company of Spaniards, who *no-habla*-ed anything at all except their own staccato language. And then there was the long, lithe smoking lady, who appropriated the lounge at the head of the companionway and, with an imitation leopard-skin rug and a green veil wound round her head, made herself look like an advertisement of Egyptian cigarettes.

After all, if I had been looking for somebody to tie to in the crowd I think I should have selected Lon and Bill. They were as wholesome as green hickory. Vaudeville artists? Betcher life!—as Bill would say. But they were teetotalers and right livers, both of them. Incidentally they went to bed that night like Christians. They had a cabin!

It was after ten o'clock when red and green lights aloft on a tall staff at the entrance of the harbor announced that a ship was going out. Then came the rattle of an anchor chain from the Channel boat lying at the dock just ahead of us, and a long cheer rose from the crowds on the decks of everything within hearing. A troopship followed; then a cargo steamer, a great black hulk with just a few lonely sailors leaning against her rails. After that our anchor came up, a tug caught us by the bow, and we warped out into the path of moonlight, while in our wake came other craft, seeming as vibrant with relief as we were.

"Well, I'm glad we didn't have to lead the way," someone remarked, and there was a general assent.

We were glad we did not have to lead the way, but we found that each ship had to go her own way, just the same. We were not all bound for the same port. There were those that turned westward and made out through the Solent to the open sea, and we were to all intents and purposes alone with our own chances by the time we had run Spithead and rounded the east end of the Isle of Wight. There began the danger zone.

The Dutch say that a majority of the mines washed ashore on the coast of Holland have been British—more than thirteen hundred of them; but this seems rather strange when one reflects upon the fact that England employs more than one hundred thousand men on mine sweepers and auxiliary naval craft just to keep the Channel clear.

"To bed or not to bed?" That seemed to be the question occupying the minds of many persons; and "Not to bed" seemed to be the general answer.

And So to Bed

The ship was as dark as it possibly could be under such a moon, not a light being shown anywhere except at the masthead and presumably on each side of the bow.

About midnight, when we were all the way out in the Channel, I carefully picked my way through the silent crowd down the full length of the deck on one side and back on the other. I think I have not said that most of the people seemed to be traveling in pairs, and that many new pairs had achieved themselves during our long wait in Southampton. The beautiful French lovers were my first encounter, you know, and they afterward sort of adopted me. Wherever I sat on deck they would usually come and sit near me; and when they went for a walk or to look for food—the dears!—they would leave their belongings with me and ask me prettily whether I would please watch them while they were away. Whatever and whoever they were, they were adorable humans.

I walked up and down the deck; and in the shadow of the aft funnel I saw something to take my mind off myself for a moment. Say!—as Bill would say—Naughty! Naughty! There sat my sweet-scented roommate with the handsomest British officer on board. And he looked as though he was saying to her: "Cling to me, little one, I will save you!" And she looked as though she was saying to him: "Oh, you great, big, woo-underful man!" And she had never seen him in her life before she came aboard that boat! I know, because I happened to be with her when she exchanged her first remarks with him.

Having no officer and no bench and no blanket and no anything, I decided to go down and take my chances in my cabin.

When I got down below I found Pettikins asleep in the upper berth. I took the life preservers down from the rack overhead; placed them and my overcoat where I could get hold of them instantly. Then I stretched myself in my berth, with my clothes on, and almost instantly fell into a deep sleep.

I was wakened by a cuddling little voice, saying: "Well, tum to its mumsey—b'ess it!" And I knew the danger was all over. My roommate had come down to get "itsy b'essed sugarp'um!"—and we were lying, in the early morning sunlight, in the roadstead at Le Havre.

And that is crossing the English Channel in wartime. I have crossed several times during the past two years, never without the thrills and the unusualness, but only once before with such a long delay—and that was at Boulogne after a big storm had torn loose a number of British mines.

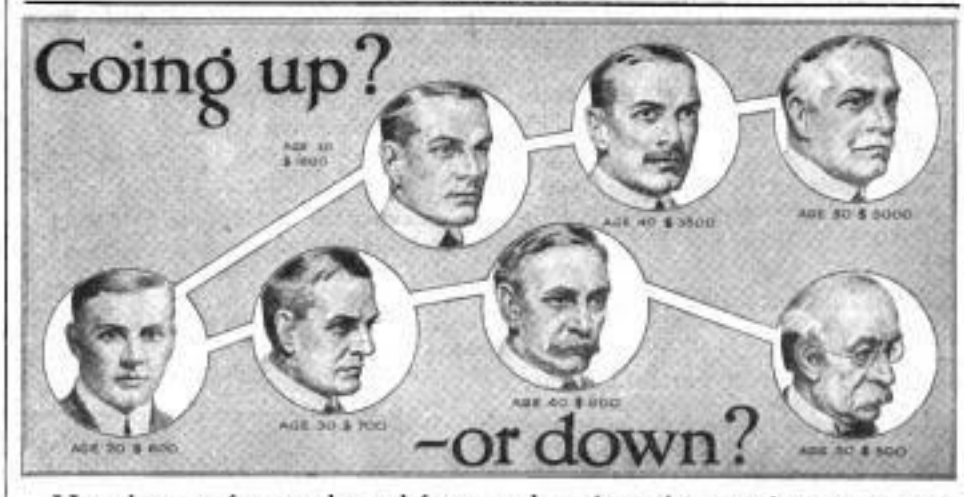
The British may not take one's temporary comfort into such consideration as one might desire on all occasions; but when you think of the thousands—not thousands: millions—of people they have sent in safety across that waterway during the past two years you just must take off your hat and make a low salaam.

BLUE STREAKS

These Tires Bear a Jealously Guarded Name

Superiority shall not go unrecognized.

That is the reason why you will see more Goodyear Blue Streak Motorcycle Tires in use than any other tire made.



That is the reason why Uncle Sam selected them to carry the heavy machine guns on the Mexican border.

That is the reason you will find them on racing motorcycles, and on pleasure and commercial vehicles, where speed, freedom from tire trouble and low cost per mile are considerations.

Goodyear Blue Streaks will render you the same good service. They are built to do credit to the name of Goodyear—a name so jealously guarded that no unworthy product may bear it.

The Goodyear Tire & Rubber Company, Akron, Ohio

Here is your future charted for you, based on the actual average earnings of trained and untrained men.

Which way will you go? You'll either go *up*, through *training*, to a position that means good money and more comforts as the years go by, or you'll go *down*, through *lack* of training, into the ranks of the poorly paid.

It rests entirely with you which way you go. You can make or break your own future. And *now* is the time to decide. Not next year, not next month, but *now*. You *can* go up if you want to. You can *get* the training that will command a trained man's salary. The International Correspondence Schools have helped hundreds of thousands of men to qualify for advancement. Let them show *you* how *you* can prepare yourself, in your own home, for the position you want in the work you like best.

At least, *find out* what the I. C. S. can do for you, by marking and mailing this coupon. It will be the first step upward. Choose your future from this list, then get this coupon into the mail today.

The Story of ASBESTOS

Asbestos

—secret of earth's dawn
—source of age-old fable
—wonder tale of voyagers
—curio of kings

—even today, still Nature's paradox, riddle of science—yet one of man's most useful servants.

* * *

MILLIONS of years ago, Mother Earth drew closer her mantle—and in countless fissures of the folded rock, through untold ages of flame, a marvelous mineral slowly formed. Nature's gift—Man's armor against fire—Asbestos.

Millions of years later an audience faces a theatre curtain—on it this word, Asbestos, spelling safety. Around are brilliant lights, energized from distant generators through a system safeguarded by this same Asbestos. Many here live or work in buildings roofed with Asbestos; here, too, are many housewives whose dining tables it protects. Even the motor cars, waiting without, have brakes lined with this same Asbestos—mineral of many marvels, fashioned to meet Man's needs.

Think of a rock, heavy and dense as marble, yet a nugget of silky fibres, a floss like thistle-down. Each fibre so light it floats on water—yet so rugged that these million years 'mid the chaos of earth's change have neither broken its slender thread nor marred its silken sheen. Like wool or flax, yet a mineral; both crystalline and fibrous, brittle and pliable—this is Asbestos—Nature's paradox.

The Ancients Held it in Awe

and wonderful tales grew with each telling. Legend made it the hair of the Great Salamander, the lizard that lived in fire; or again a wonderful plant immune to flame. Small wonder that Asbestos became the stage property of Magi, the costly curio of kings and their shroud on the funeral pyre.

Charlemagne astounded his warrior guests by flinging the cloth of Asbestos from the table into the fire, only to withdraw it unburned—even bleached and cleansed by the flame.

Marco Polo was the first to set his little world to rights. Returning from Tartary, he wrote, "In this same mountain there is a vein of the material from which Salamander is made. For the real truth is that the Salamander is no beast, as they allege in our part of the world, but is a substance found in the earth." And he tells how the rock was mined, pounded into wool in great copper mortars, and woven into napkins for the Great Khan.

But for centuries after, Asbestos remained merely a curiosity.

Unique Combination of Properties

Compared with other materials, its aggregation of properties is unparalleled. Wood burns—Asbestos is unchanged by flame or by a temperature of 1500° F. Stone disintegrates—Asbestos defies erosion. Steel rusts—Asbestos is immune. Asbestos resists wear and the action of oxygen and acids, is a non-conductor of electricity, and insulates against heat or cold. The old Greeks named it ἄσβεστος—"inconsumable." And nothing was ever better named.

Its Service to Man But Begun

Had someone championed Asbestos earlier, the world today would be further along. The Chicago fire might never have happened—indeed, it is probable that 50 years hence the community fire will be a finished page, as the Asbestos roof gains ever wider acceptance.

Steam pipes, once plastered with mud, are now being insulated by Asbestos to prevent waste of heat; engines improve their economy by Asbestos packings. Modern chemistry, too, requires this marvelous mineral for its filters. At every turn, in the homes or work-shops of the nation, we find Asbestos, converted into useful form.

How It Was Made Useful

Natural products are usually developed by necessity. But it was left to the vision and foresight of a business institution to realize the possibilities of Asbestos—and to supply the effort, the courage and resources to make Asbestos what it is today.

To really appreciate the task so successfully mastered by Johns-Manville requires a trip through one of their ten great factories. One must see giant machinery transform rock into felts—see paper pressed from pulp—see fibre and wire pressed back into rock-hardness for the brake blocks of some great lift or dredge.

In another section a complete textile mill, where this same rock of Asbestos is spun or woven—spun into thread so fine that a hundred yards weigh but an ounce—woven into cloth like linen or into heavier fabrics as thick as your finger.

On one side a tailor making clothes of flameproof cloth; on another this same Asbestos combined with rubber for engine, pump, or compressor packings,—again into cements to withstand fierce furnace heats.

So it is made into Shingles, Roofings, Brake Linings, Insulations, Cements, Electrical Devices, Tapes, Clothes, Yarns—hundreds of products that enter every avenue of science and the useful arts.

Through Asbestos Johns-Manville has made industrial history—has contributed to progress—has made life safer and more complete. It has taken the mystic mineral, the curio, the paradox of the ages, and made it serve Man. A task for any fifty years, and surely an achievement which justifies the linking of Asbestos with Johns-Manville.

ENGLAND AND LABOR

(Continued from Page 10)

with limitation of output—that capital as well as labor must make concessions. Some do; these are the very men who adhere to the fairly revolutionary doctrine that labor should be represented in the directorates of the large companies.

The British workman, like the British employer, has a special psychology; and neither German methods nor American methods wholly go down with him. Your Briton of any class does not like to work so much as the German or the American. He sets value—and I think sensibly—on leisure. He wants time for a little sport and a little talk in his club or his bar. It may be this racial tendency, it may be an inheritance of the restriction-on-output system, but the English laborer seems often indifferent to high wages, while vitally interested in keeping the employer from loading him with too much work.

The munitions factories in this period of national stress have been importing American efficiency experts schooled in one or another system of scientific management. I find that the British Trades-Unionist looks upon them with general suspicion, believing their "premium bonus systems" are only excuses for "speeding up"—as in some hands they are; in fact, American speeding-up seems a kind of bogy with British workingmen. Again and again labor leaders told me, as a matter of common axiomatic knowledge, that the American workman is short-lived. And this anecdote was told twice in my hearing from the platforms of labor meetings:

"An Englishman inspected an American factory near New York. The superintendent showed him the plant, with great pride, and boasted of their tremendous output.

"'Your operatives are all young men, I notice,' said the Englishman; 'where are your old men?'

"'Outside,' said the superintendent; and he took him out and showed him a graveyard!"

However, the war may start a countercurrent; this is one of the decisions which must wait on the mood of that demobilized army. In these first three years of the war, the condition of the working class has been immeasurably improved by the demand for munitions workers. It is true that the prosperity is not universal; go down any block of lower-middle-class or working-class London, and you will find some families much better off because of the war, and a few much worse off.

The Munitions Agreement

Then, too, certain employers have not been roused to such a pitch of patriotism as to forget the main chance. When, in the celebrated Munitions Agreement, the Trades-Unions agreed to suspend restrictive practices, the government agreed, on behalf of the employers, that no one should be paid less than a pound—twenty shillings—a week. In October, 1916, certain factories were paying fifteen or eighteen shillings to some of their girls.

It was agreed, further, that there should be no cutting of the scale on piecework unless improved machinery was introduced. Certain employers were caught adding some inconsiderable or useless attachments to their machines and making this an excuse to readjust the scale. Labor is now, under this Munitions Agreement, deprived of its great weapon—the strike; labor courts adjust these things, and generally with justice. It has been noticed, however, that even in these times the workmen who complain most loudly get the most.

These are the exceptions. In some cases of very expert workmen, wages have risen to a point beyond the dream of avarice. Fifteen pounds, or seventy-five dollars, a week is not an uncommon wage in the Clyde works. Yet snap statistics, gathered by some of the labor leaders, go to prove that wages, as a whole, have not gone up so fast as the cost of living—the poverty line, which was twenty-four shillings a week in 1914, is now thirty-six shillings.

On the other hand, unemployment is unknown; the wife, the daughters, the boys can get continuous work. For this reason, most families, despite the rise in the cost of living, are well above the poverty line. The rise of standards is most noticeable in the very districts where poverty was most distressing, like the dock regions of London.

As I have said before, the mobilized British workman from the slum districts of London has known in this war—despite its dangers, its pain, its occasional great hardships—the blessings of ample food and clothing; known them often for the first time. His wife has bought new clothes for herself and the children; has been to the theater; has installed a phonograph. It is not in human nature to give up without a struggle a luxury once known; much less a comfort. When the British workman puts off khaki wages may appear to him a greater consideration than leisure.

Finally, there is the question of the women, too great and wide for thorough treatment in a general article. One of the superb things about this war is the force and fineness with which British women of all classes have risen to the emergency. Women of all the European nations are at war work; but the British woman is distinguished above all others for the spirit she brings to the task. She goes at it like a free soul. A large proportion of them are genuinely interested in the job; genuinely trying to get ahead.

Women in Men's Places

The rush of women to gainful occupations in England has been rather exaggerated. Not much more than three-quarters of a million have been added to industry since the war began. As a matter of fact, England had greater proportions of women workers than any other European nation; the labor market was already feminized almost to saturation. More significant than mere numbers has been the general rise of the women workers to higher, better-paid, and more specialized occupations, as when a domestic servant has entered a machine shop.

Some general statements about female labor have gone into the discard of abandoned theories, along with many other economic generalities. Where physical strength enters into labor women cannot compete with men, of course. But with every improvement in machinery, physical strength cuts a smaller figure in labor calculations.

The war has killed its hundreds of thousands of the best workers in England; it may—alas!—kill its millions. If, in the new spirit of English industry, the industrial lords of England succeed in raising production and extending markets to a point beyond the possibilities of Germany, that pathetic figure of post-bellum days—the unmated and unmateable woman—will retain her place in the factory system. War conditions have shown the leaders of England how many things done formerly by men can be done as well by women.

On most European railways the tickets are taken up not on the train but at the gate as the passenger alights. The ticket collectors, who simply sit on a stool, receiving and punching the tickets, used to be men; now they are women. Why employ a man for this work when a woman will do as well? Women are making good elevator operators, subway-train and omnibus conductors, department-store floor-walkers and clerks. Why not keep them in these occupations, releasing thereby some men for the higher processes of production?

The answer depends on the efficiency and intelligence the industrial lords of England display in their campaign for increased production and more equitable distribution. If they virtually abolish unemployment, if they stimulate markets to a point where the demand for labor exceeds the supply, well and good. If England settles back into the old conditions the industrial situation will be complicated by a sex issue.

In fact, signs appear that some of the gentlemen who still hold profits higher than patriotism are hoping to use that sex issue for their own ends—to replace male labor by female labor, always in the nature of things cheaper—and to fortify themselves by stirring up what the feminist argot calls "sex solidarity." If they can organize women against men they may achieve all they desire. Behold here a paradox of this war: the Conservative used to deplore "the war of the sexes"; now he prepares to encourage it!

It seems doubtful that this effort can succeed, even partially—whether the movement can be anything more than a slight

(Continued on Page 38)

The Heater with the Glowing Heart

THE "heart" makes the *Lawson* different, absolutely *odorless* and astonishingly economical. This glowing heart is an iron combustion chamber, within the heater: red hot, consuming the gas completely; and giving out a cheerful, cozy ruddiness.

Only pure, heated air can issue through the perforations in the steel protecting jacket.

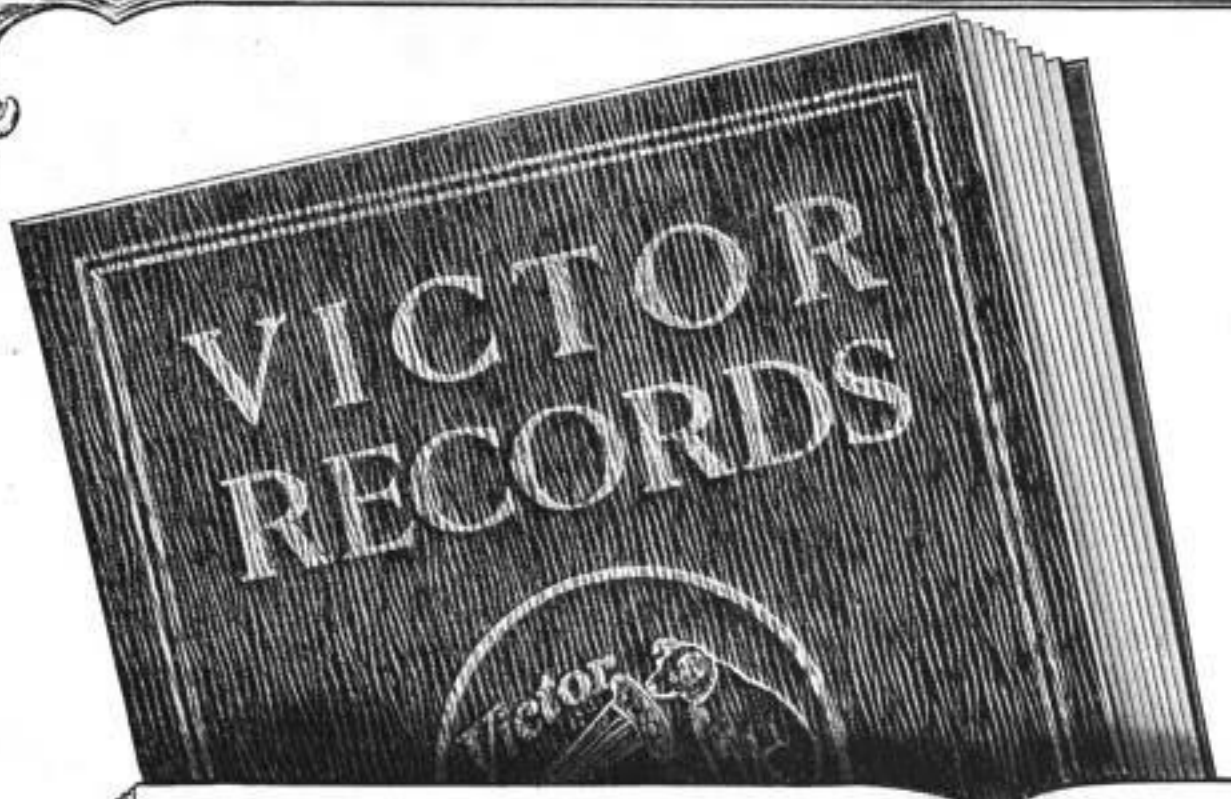
The Lawson, small and compact, gives more warmth than heaters twice the size, and is much more economical.

Cold halls and chilly bath rooms and nurseries become cozily comfortable in a jiffy, when you once start the Lawson going.

For baby's bath or when hot water is wanted quickly for shaving or any other purpose, there is a flat, open top where you can boil water in a few minutes.

Lawson
Odorless Gas Heater

The Lawson is carefully finished in heavy nickel plate and is ornamental and attractive. Thousands in use today in satisfied homes.



Price $4.00, at Dealers

Ten days' free trial. If dealer can't supply you, we deliver Heater, prepaid. Send $4.00 and dealer's name. Satisfaction Guaranteed or money refunded after ten days' trial. WRITE for leaflet on Odorless Gas Heating Stoves. Dealers: Write for open territory.

VICTOR RED SEAL RECORDS

CALVE, EMMA, Soprano (*Kahl-vā'*)

Ca

CALVÉ

Emma Calvé, half French, half Spanish, is descended from a prosperous and cultured family. She was born in 1864, at Madrid. The premature death of her father was followed by reverses, and the young girl knew that she must face a world in a more serious rôle than that of a society belle, so it was not long before the dark-eyed beauty found herself studying with Rosina Laborde, and afterward with Marchesi and Puget. As a pupil the young girl endeared herself from the first to her teachers, and made rapid progress. Although her début was made at Nice, her first important appearance was at the *Théâtre de la Monnaie*, in Brussels, in 1882, as *Marguerite* in *Faust*. Her Paris début occurred in 1885 at the *Opéra Comique*, in *Chevalier de Jean*, but her first real triumphs came in Italy, where she made several tours, and when she reappeared in Paris as *Carmen* and *Santuzza* the Parisians made her their idol. She appeared in London in 1892, and Americans first heard her at the Metropolitan Opera House in New York, where she made her début in 1894, and her fame spread rapidly. Her beautiful voice, her remarkable gifts as an actress, her beauty and magnetic personality, united in presenting a picture at once alluring and fascinating. The singer's further triumphs in America are familiar to all, and although she spends most of her time in Europe, her admirers may find consolation in her Victor records.

Mme. Calvé's exquisitely trained voice, always remarkable for its beautiful timbre and emotional quality, was at its best when her Victor records were made. This great artist has recorded *exclusively* for the Victor the list of records catalogued here.

THE CALVÉ RECORDS (*Sung in French unless noted*)		No.	Size

CAMPANARI, GIUSEPPE, Baritone

CAMPANARI

Giuseppe Campanari, one of the most famous baritones e modern operatic stage, was born in Venice, and in ldle played the 'cello at La Scala. Young Campanari mbitious, however, and endeavored to improve his lly good voice at every opportunity. In 1884 he was ged by the Boston Symphony Orchestra, and after rving in America took up vocal studies in earnest, making his first appearance as a singer in 1890, at a concert under the direction of Walter Damrosch. A season with Hinrich's Philadelphia Opera Company brought him to the attention of Mr. Abbey, and he was promptly engaged for the Metropolitan, where he remained for many years. The record of the favorite Toreador Song he has made for the Victor exhibits well his splendid voice, intelligent phrasing and good enunciation.

VICTOR RED SEAL RECORDS

CARUSO, ENRICO, Tenor (*Kah-roo'-zoh*)

Ca

CARUSO

Caruso's success is the greatest ever attained by an artist in this country. His American engagements have been a continuous ovation, the great audiences being held spellbound by the exquisite refinement, beauty and power of his voice.

Caruso is a native of Naples and was born in 1873. When he was a mere boy he sang in the churches of Naples, and the beauty of his voice arrested the attention of all who heard it. His father did not encourage the boy at first, but a few years later was persuaded to allow him to take a few lessons in singing. The family was very poor, however, and Caruso was forced to work as a mechanic. This work not being very profitable, he began to seriously consider whether he could not make more by singing.

He was eighteen years old when he met a distinguished baritone singer, who, after hearing his voice, decided that he would give Caruso substantial assistance. He therefore took him to Maestro Vergine, who was captivated by the beauty and purity of his voice, and began to give him vocal instructions.

Caruso made his début in 1894 in Naples, in a now forgotten opera, L'amico Francesco, afterward singing in various Italian cities and in Cairo. A South American engagement followed, and on his return, after a season in Milan, it was clear that here was one of the most promising young tenors ever heard in Italy. Caruso had made a success in various countries of Europe before coming to America in 1903, but it was his performance of the *Duke* at the Metropolitan on November 23d of that year which convinced opera-goers that the greatest of all tenors had arrived.

Caruso has made records *exclusively* for the Victor since 1903, and as the present contract with the tenor does not expire until 1933, the public is assured perfect reproductions of his voice for many years to come.

Victor Record catalog

st complete catalog of music in all the world

It has required 19 years of constant research, of steady application, of tireless effort, and the expenditure of more than Eleven Million Dollars to place this catalog in your hands

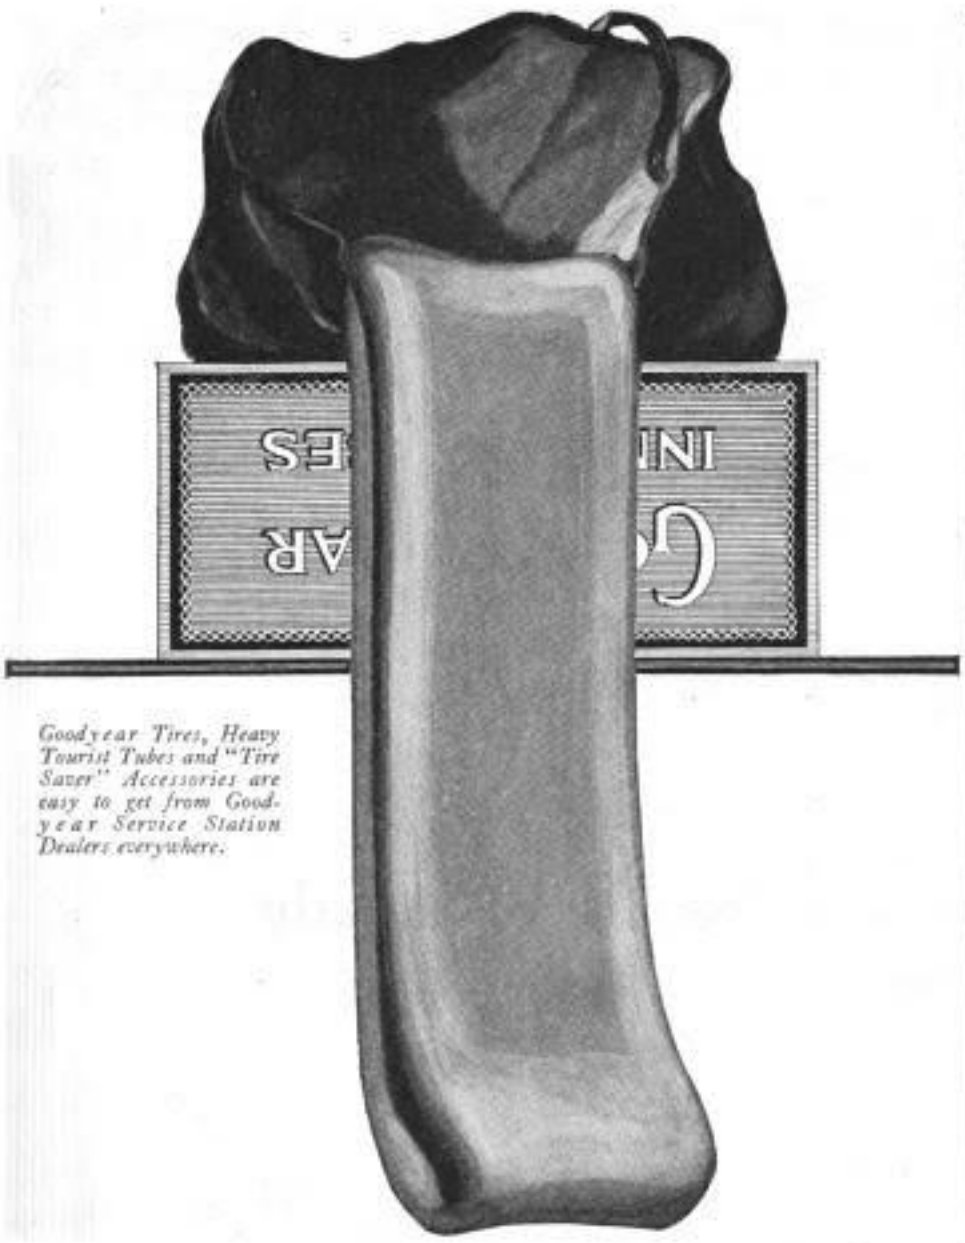
This great book of 506 pages is the recognized authoritative index to the world's best music; to the greatest musical achievements of all time.

Its pages are living tributes to the years of unceasing vigil spent in gathering the best music from every portion of the globe. They reflect the hours upon hours which the greatest artists have devoted to recording their superb art for the delight of all generations. They attest to the enormous amount of time and millions of dollars spent in developing the art of recording to its present state of perfection. And through each and every page runs the story and proof of Victor Supremacy.

Every music-lover will want a copy of this great Victor catalog of music

Everybody should have this book, whether or not they have a Victrola. All will appreciate it because of the information about artists, operas and composers, and the numerous portraits and illustrations it contains.

Any Victor dealer will gladly give you a copy of this great catalog of music, or we will mail you a copy free, postage paid.



Victor Talking Machine Co., Camden, N. J., U. S. A.
Berliner Gramophone Co., Montreal, Canadian Distributors

Important warning. Victor Records can be safely and satisfactorily played only with *Victor Needles or Tungs-tone Styles* on Victors or Victrolas. Victor Records cannot be safely played on machines with jeweled or other reproducing points.

New Victor Records demonstrated at all dealers' on the 28th of each month

To insure Victor quality, always look for the famous trademark, "His Master's Voice." It is on every Victrola and every Victor Record. It is the identifying label on all genuine Victrolas and Victor Records.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

A Tube to Mate the Finest Casing

The sorriest witness to the folly of using a poor inner tube in a good casing is the casing itself.

Caught between the hardship of the road and the press of the rim, robbed of the needed air that alone can safely cushion the strain and shock of travel—it testifies by premature wear and early ruin to the extravagance and unwisdom of such a course.

Its story is repeated to you again and again in the same discouraging form—in tire trouble needlessly often, in tire bills needlessly large.

The inner tube best for your casings, and best for you in all ways, is the Goodyear Tube—a tube built to hold air and keep on holding it, designed to keep pressure to the mark, and able to support the casing in all its work.

This tube is built of paper-thin layers of rubber, laid sheet upon sheet and vulcanized together. It will not seep, leak or creep.

It is thicker than most tubes, serves better, and lasts longer. Its valve-patch is made integral with the tube itself—vulcanized in, not stuck on—and here is eliminated one of the commonest causes of tube trouble.

Goodyear Tubes are unusually efficient. The Heavy Tourist type is particularly recommended for sustained and severe service.

Containing more material, it naturally is a little higher-priced—and *better*.

GOODYEAR
AKRON

(Continued from Page 35)

complication. After all, only abnormal people hold the sex tie to be stronger than the personal tie; most of us have at least one person of the other sex who is dearer than opinion, or even principle.

Experience, British labor leaders tell me, has shown that, in a pinch, the women workers stand by their unions rather than their sex. This question has come up again and again in the past ten years, when employers tried to "dilute" certain trades by the introduction of low-paid women. It was found almost invariably that the women already employed in the trade resisted the innovation, along with the men.

"They don't think of it abstractly, as we do," said a woman labor leader. "They look at it in the light of some concrete case. Maggie says: 'Ere's Bill, my brother-in-law, gettin' his thirty shillings. What's poor Nellie goin' to do if they begin to put in girls at twenty bob and get him out of his job? Not if I have to starve!'"

The future of the feminine element in labor is, however, even more complex than that. The necessities of the times have given employment at fair wages to thousands and hundreds of thousands of women with no real technical or trade training—mere stop-gaps, doing the work as best they can, but doing it badly. They will not relinquish their jobs without a struggle; and on this point I can do no better than quote the general remarks of a woman who keeps a large stenographic and typewriting establishment in the city.

I had great difficulty in getting stenography and typewriting done in London. Once, wishing to have a manuscript manifolded for the military censor, I found that not a single agency would promise me the work in less than a week. Stenography has never been so distinctively a woman's occupation with the British as with us, and probably nine-tenths of the male shorthand writers have been mobilized.

"We daren't let girls go out of the office to do work," said the manager, "for fear people will steal them from us. We had eight or ten girls—good ones—at the beginning of the war. In the early days, when no one knew what was going to happen, we made up our minds that we'd all stand and fall together. We didn't lay off the girls or reduce their salaries. And I must say they've been very loyal—they've stayed, even when offered big wages to leave. We've advanced their wages as the labor rates went up; but they've never once struck for a raise."

Complex Labor Problems

"But when the great demand came we had to increase our force—take anyone we could get. A lot of girls, without much general education and with four or five months' hasty instruction in a business school, came in. Some of them will never make good, with all the education in the world—they haven't the brains. We do the best we can with them. We have a list of instructions that we make them learn by heart—mostly answers to the questions which people are likely to ask them.

"One of these girls goes out. She comes back with her notes, and tries to transcribe them. She makes a dreadful mess of the letter—badly punctuated, misspelled, long or unusual words all wrong—that sort of thing, you know. I take the copy, puzzle out the real meaning, correct the spelling and punctuation, and have it all retyped. When the customer sees this workmanlike letter and remembers how intelligently the girl answered the questions, he sends for her, as like as not, and offers her a job at once and a half her salary with us. I laugh when I think what happens when the girl tries to work on her own!

"These girls will go, after the war, of course. But they won't be contented to go. They won't see any reason why they shouldn't have employment at the old high wages. They'll have the vote, or most of them will, by that time; and you're going to see them marching down the Strand with banners, demanding that the government shall give them back their jobs."

Against this class must be put the hundreds of thousands of women who have made good and shown their ability to compete with men. Nevertheless, the incompetent woman will be a problem.

Complexities grow even more complex when you consider that the question of the land will enter into the reconstruction of England, as it entered into the Liberal program before the war. France, with a

GOODELL-PRATT
1500 GOOD TOOLS

Mr. Punch is an automatic drill. You push—he twists.

The handle rebounds after each stroke. Just a few downward pushes will drive the drill point an inch into solid oak. Compare that to a hand-cramping, wood-splitting gimlet.

In the handle are eight tool-steel drill points of various sizes, seen through numbered holes and released through a hole in revolving cap.

This is the handiest tool ever made for the home—curtain and bathroom fixtures, shelves, cup-hooks, broom handles—wherever you need a hole.

What 15c Will Bring You From the Nation's Capital

The little matter of 15c in stamps or coin will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 23d year. This paper fits the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send it on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address

Announcing

The final perfection in hearing devices

The PORT-O-PHONE For the DEAF

At last there has been perfected a NEW hearing device—not "just another instrument for the deaf"—founded on absolutely new principles—as superior to other hearing appliances as the electric light is to the kerosene lamp.

If you have tried all other devices and have not been helped—if you are thoroughly discouraged—then you *are the sort of person* who, in justice to yourself, should *try* the Port-O-Phone.

Write today for your copy of our intensely interesting

FREE BOOK

which explains the many remarkable features of the Port-O-Phone; the FIVE YEAR Guarantee; the easiest easy-payment plan yet offered; and full details of our exceptional

15 Days' FREE TRIAL Offer

Our new Book explains that if at the end of 15 days you are not thoroughly convinced that the Port-O-Phone is the most wonderful instrument of its kind to be had—superior to any other hearing device—that it does all that we claim for it—it may be returned at *OUR* expense. We ask for no money in advance, nor do we obligate you to any promises. Could anything be fairer?

Give yourself a chance to hear—write *NOW* for the Port-O-Phone Book, a complete book on deafness; or, if you prefer not to wait, we will send the Port-O-Phone to you by return mail for 15 Days' Free Trial at your home. Treat yourself to a new experience.

Write for FREE BOOK for the Deaf

slightly smaller population than England, has four million landholdings. England has less than three hundred thousand. An undue amount of the best English land is in parks and unproductive. The men who tilled the soil of England are typically renters or day laborers; whereas the French farmer is typically a landed proprietor. That, if the advanced program goes through, must change also.

Heavy taxation, through a graduated income tax, which must keep up for a generation after the war, will in itself return much land to peasant ownership.

A certain rich and titled Englishman, strolling across his private hunting park to play golf on his private links, made a gesture that included the whole gentle landscape, and remarked in the casual tone with which your Briton advances his most tragic statements:

"I enjoy it while I may; my class won't have this sort of thing for long."

Even the lords of the land see a new era dawning.

And, as if this were not all complex enough, there remains another factor: The British are not all one people: they are two or three peoples. Norman and Anglo-Saxon have more or less mixed, and have learned how to get along together. But there is the "Celtic fringe," in Ireland and Scotland. Their ways and habits of thought are not English ways and habits—least of all in Ireland. What would suit the English will not suit them.

A New Order of Things

Yet England is approaching this problem with the same sturdy pluck with which she approached the problem of turning a peaceful nation, generally ignorant of military affairs, into a militant nation. "We'll muddle through somehow," they said in 1914, showing a kind of ingenuous pride in their own national faults that slightly irritated the friendly alien. "We'll muddle through somehow," they still say, but more apologetically. One who saw the ridiculous blundering of 1914 found it hard to believe that they could reach national efficiency in war.

Within two years they have achieved that miracle. In military affairs they muddle no more. That new British Army, raised for the most part by a volunteer effort which makes ours of the Civil War look slight—that army, trained, coördinated, instructed, purged of its old stupidities—stands as the future hope of the Entente, as the French was its past hope.

Whatever needs to be done they will probably do, after a series of those apoplectic rages that characterize British public affairs. If their new industrial state resembles Socialism—that word which used to make the Conservative shiver!—they will not condemn it for the name.

Only one thing will I venture in the way of prophecy: The system will not be German in spirit—there will be no Germanization of England. The Briton can be made to stand for discipline, for self-effacement as part of a machine, when that becomes really necessary; but he does not like it, as does the German. He is an individual; he prefers to give that individuality all possible play.

Now to illustrate the greater by means of the smaller: Everyone who knows factory management, and views it broadly, is acquainted with certain establishments that work well, return profits, give a due share to labor, under one or another of the modern systems of scientific management, wherein everything fits as in a complicated machine. Yet he knows of others which laugh at such systems, yet which profit just as much.

Probably there are as many roads to efficiency as there are ways to heaven or stars in the sky. The British will find their own way—one which gives their individuality its play and still yields results.

"Mailing Done In One-tenth the Time"

Read the Letter

"We have been using one of your addressing machines for the past three (3) years; the results are entirely satisfactory in every way. We find that we can address our mailing list in one-tenth the time that it formerly took. We have no trouble of any kind with the machine."

(Signed) Emanuel Blanc,
Distributer of Victor Talking Machine Company's Product,
2795-2799 Broadway,
New York, N. Y.

If you have a mailing list, large or small, be sure to read the letter shown at the left.

It shows how *you*, too, can reduce time and expense by using a DIREX-ALL for addressing, billing, listing, and all similar work now done by hand.

And we can show you hundreds of other letters just as interesting—some from concerns in your own line of business.

With every DIREX-ALL goes our guarantee of time and money saved through its use. The DIREX-ALL does all that any other addressing machine will do—has advantages that no other has. It is the addressing machine with the typewriter ribbon principle, and one-piece metal plates.

Wonderfully easy to operate. A boy or girl can do it all. The plates that do the imprinting serve as index cards.

Whatever your business, whatever your line, whatever your location, write today for free book "Doing the Day's Work *Better*." It shows the particular DIREX-ALL made for your use, and tells how it will save time and money for you—guaranteed!

For grown-ups and children

For new shoes—for new soles

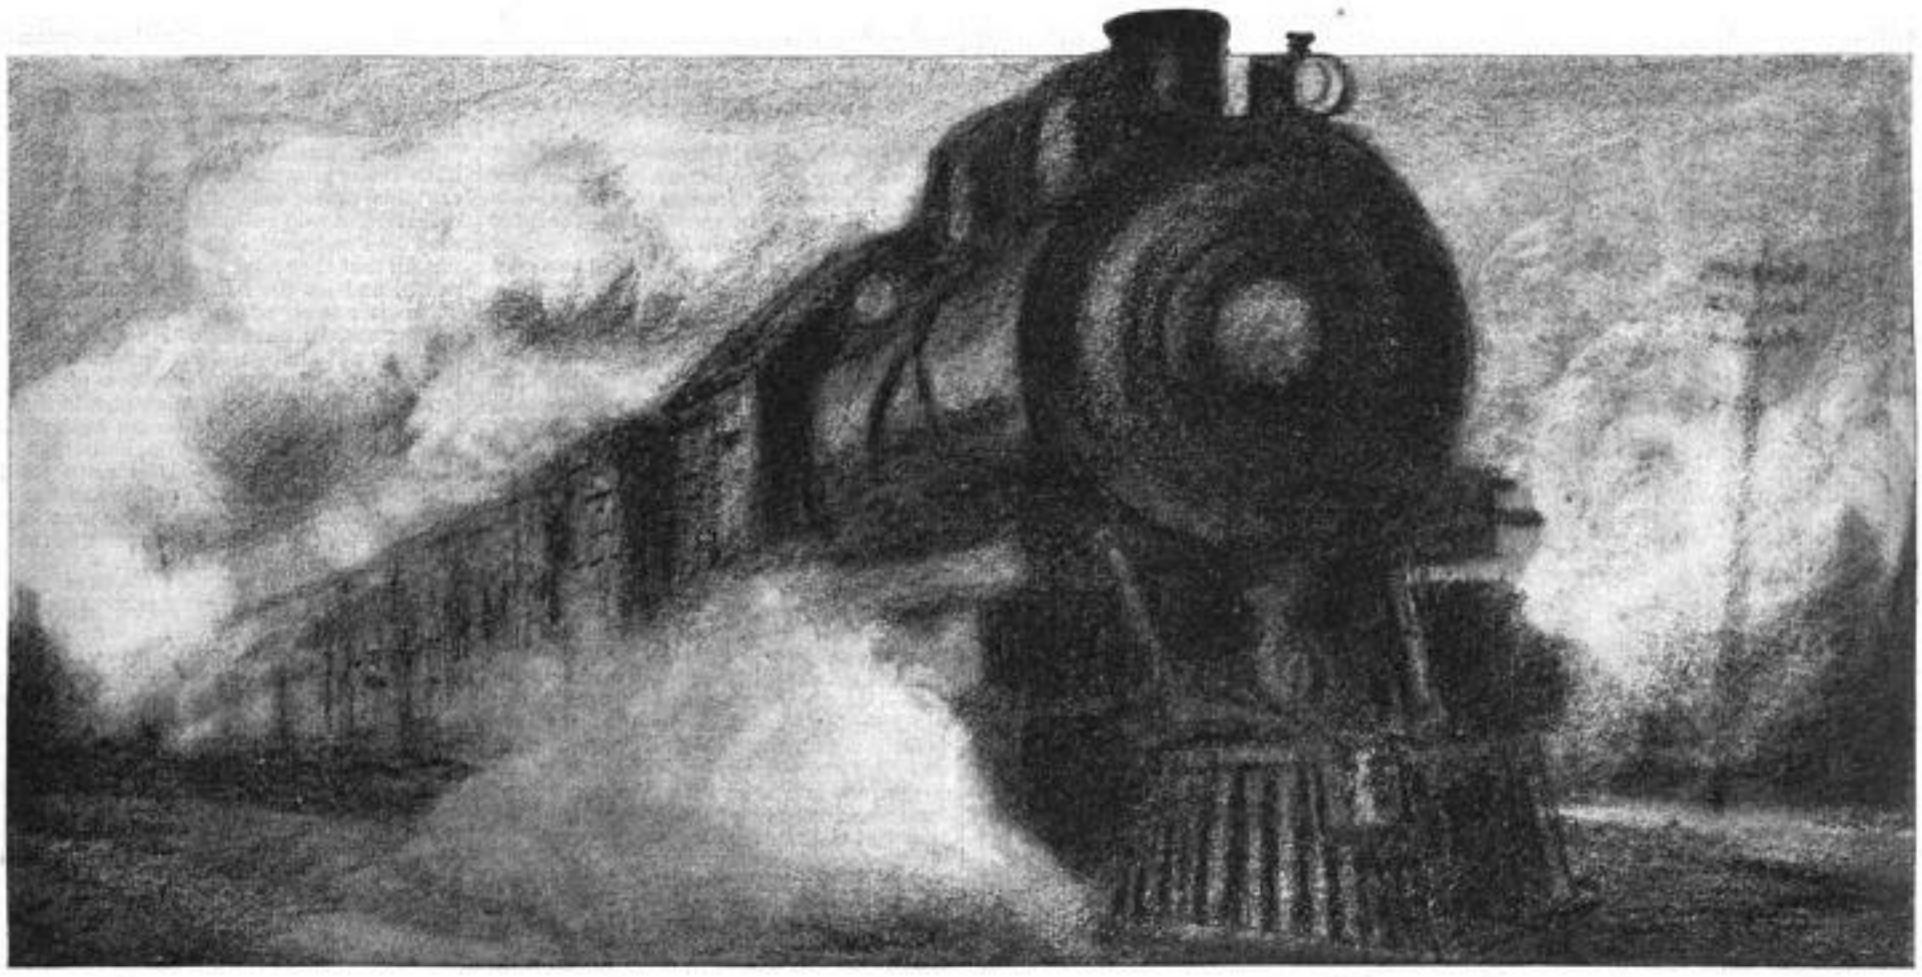
As the Transcontinental Express is to the Old Prairie Schooner

THERE are two travel methods. One is old. Once it was prized, but its day is done. There is another, and it is new. It was born in the living time—today—born of the necessities of today for the modern men and women who live today.

There are two shoe-soles. One is of leather and is the product of an older time. It is not healthy for it is not waterproof; not foot-easy for it is not flexible; not economical for it will not wear.

There is another shoe-sole. It is not leather for it is the product of a generation that demands better than leather. It perfects every virtue leather has and possesses every virtue leather lacks.

That modern shoe-sole is called Neōlin—Neōlin, that scientific marvel balanced to a universal need.



* * *

Does *your* shoe-leather meet the problem of wear?

Neōlin has met it—yielding grim, invincible wear which has revolutionized men's conceptions of what sole-wear means.

Does your sole-leather meet the problem of foot comfort?

Digitized by Google

So is Neōlin to the Leather Sole

Neōlin has met it with a flexibility that captains buoyancy and is soothing as chamois or the touch of a well-worn glove.

Does your shoe-leather meet the problem of foot health?

Neōlin has met it with a waterproof, snug-foot tread, secure against wet as a cocoon and winter-proof as waterproof.

But how can any material be all these things, you ask, and yet light and ground-gripping and fitting even for the highest grades of shoes?

Modern science has given Neōlin all these qualities—has given it *every* quality you can ask of a sole. And it is always the same on any price of shoe, whether for man, woman or child.

Ask for Neōlin with the accent on the "O." Ask for Neōlin of your dealer, who should have it, or will next time if you tell him you *must* have Neōlin. Also have it soled on old shoes in black, tan or white—it costs no more. And to avoid imitations—*mark* that mark; stamp it on your memory: Neōlin—

Neōlin

Lemons are Economical

Every Part of a Sunkist Lemon has Scores of Valuable Uses. Learn What Lemons Do—See What They Save

The Meat
of the lemon in slices or quarters makes hot tea more delicious and healthful. It is also an attractive garnish for meats, game and fish.

The Juice
of the lemon is an important ingredient in scores of dainty recipes. It is an excellent cleaner of pots and pans, glass, brass and silverware. Lemon juice and milk generously applied to ink stains on white goods will remove the stains completely. And lemon juice whitens and softens the skin.

The Rind
Use the rind of the lemon in making sauces and lemon catsup to serve with fish. Try delicious candied lemon peel. Also use the grated rind in lemon pie.

We are issuing an interesting illustrated booklet which tells how lemons lighten the labors of housekeeping, and we are sending copies without charge to those who answer this announcement. The book contains recipes for charming lemon dishes as well as labor-saving ideas.

Thousands of housewives, who have already received these booklets, now know new ways of short-cutting old methods and reducing household expense. They have found lemons to be the most economical as well as the most useful fruit.

Every housewife should learn all the facts about lemons. Just say "send your book," on a postal card, giving your name and address—also the name and address of your dealer.

Sunkist

Uniformly Good Lemons

Lemons are healthful. Sunkist Lemons are juicy, tart and practically seedless. They are mechanically washed until bright and waxy and are sent to your dealer in clean, crisp tissue wrappers.

Sunkist come in several different sizes at the same prices asked for ordinary lemons. Write today for the Sunkist Lemon booklet.

California Fruit Growers Exchange
A Co-operative, Non-Profit Organization of 8,000 Growers
Dept. M 46 Los Angeles, California

Even The Wrapper
in which Sunkist Lemons are sold is valuable because of the recipe printed thereon. Ask your dealer to send your Sunkist Lemons wrapped. The Sunkist wrapper is an assurance of receiving uniformly good lemons.

"Lemons for Usefulness"

THE SPENDTHRIFT INVASION

(Continued from Page 4)

ridiculous for anyone even to consider entering most of the cabarets this winter without leaving all thought of expense behind. Only a flushed carnival crowd that had cast away every consideration but a good time would permit the imposition which the horde in the metropolis accepts with a careless grin.

Practically all of the big cabarets now levy in one form or another an admission fee. These charges vary from seventy-five cents to two dollars. In some cases the sum is paid at the door; in others it is merely added to the patron's check. Thus two men and a woman, upon entering one of these places upon an evening not long since, were led to a table by the head waiter. The party all ordered horse's necks—ginger ale and lemon peel. Not a word was said about the "cover" charge, as it is termed. The check in due course came and it was precisely seven-fifty—two dollars per person to start with and fifty cents apiece for the drinks. The guests inquired if the cover fee would be omitted in case food or wine had been ordered.

"No," replied the head waiter, "not if your check were a hundred dollars."

But the admission fees are only the beginnings. Once within any of the great cabarets of New York, one encounters a scale of prices which only a demand vastly exceeding supply could make possible. For example, eggs, which in various forms have become the almost universal supper dish of the city, are invariably at least a dollar a portion, and a portion is never served for more than one. Cocktails range from twenty-five to forty cents, champagne from six-fifty to seven-fifty a bottle. Rolls and butter are commonly twenty-five cents a person and small cups of black coffee a quarter each. There are plenty of fat purses to stand this sort of thing, and the cabarets can this season successfully take the position that those who object to their charges may stay away.

One marvels not so much that the public accepts cheerfully the unprecedented prices, but that it unmurmuringly puts up with some of the palpable tricks of the night-life conductors to extract in addition other forms of toll. There is one establishment, enormously patronized, which early in the season hit upon an expedient which has brought a rich return. This establishment is conducted upon two different floors. Upon the lower floor is a sort of combination lounge and supper room; upon the upper floor the dancing takes place. Shortly before eleven in the evening the lower floor is thrown open; the upper floor remains rigidly closed until the stroke of twelve.

The Check-Room Nuisance

At a little after eleven the theaters are out and the lower room begins to fill with people awaiting midnight; and during the forty-five minutes or an hour before the opening of the upper room the management assures itself a very tidy extra profit by a cover charge of seventy-five cents a person unless food, at the usual extravagant rates, is ordered. If one does have supper there in the lower room before midnight, it is only a preliminary to the real supper festivities of the night, which will come between two and four o'clock above. If one remembers the fact that stomachs are not indestructible, here is an entirely typical New York tax upon prudence.

The check-room nuisance manifests itself more flagrantly than ever. The dodge of separate coatrooms or ladies' room for everyone in the party has been resorted to everywhere and amounts to nothing more nor less than an added admission fee of twenty-five cents per person; for you will be made to feel that you do not belong if your tip, upon presentation of the individual check you have received, is not a quarter at the minimum. Then, too, there is that threadbare old device of the flower girl, who with her best smile brazenly plants a *boutonnière* on a man's coat lapel and holds out a cluster of two or three roses to the woman he has with him. The trick, when it works, generally brings two or three dollars. However, such is the spirit of New York's stranger horde that the very establishments which are the boldest in their extortions are also the ones to which the vast nightly throngs most eagerly flock. Thousands of close-fisted business men who have never paid a grocer's bill without adding it twice seem in a mad rush to offer themselves victims to various forms of the big city's cupidity.

The practice of tipping head waiters and captains in addition to the ordinary waiters has, like everything else, also run riot this year. Again it is the stranger who is primarily responsible. Not being known, he ingratiates himself at the plush ropes with a bill. It has grown so that head waiters and captains expect solid tips as a matter of course. They do not maneuver for them as they used to, because it is unnecessary to do so. All that they have to do is to stand still, smirk, and let their bank accounts grow. There is not so much of the sensational tipping as there once was. Hundred-dollar bills are not slipped often any more, but there is an almost unbroken flow of fives, tens and twenties. Far more people than formerly tip, but they tip more modestly. The other night a head waiter, standing by the door of a cabaret, bowed out ten parties; something passed into his palm from some one member of six of them. It is a practical certainty that in not one instance was that something less than five dollars.

Yellow-Backed Tips Preferred

There is a tipping story current in New York this year which concerns a gentleman and a checkroom boy. The man, who has greeted his share of tardy sunrises this season in cabarets, had completed one particular evening's festivities, and flushed with wine, prosperity and dancing, discovered, upon presenting his hat and coat check, that he had nothing left in his clothes save some large bills.

"Boy," he said to the attendant—who really was not a boy at all but a thoroughly astute young business man with a wife, several children and a small car of his own up somewhere in the Bronx—"I'm short in change to-night. But never mind, I tell you what you do: Buy ——" And he whispered the name of a copper stock. Any number of those nimble youths who ease luxurious individuals out of and into overcoats can slip into the market at any time with four or five thousand dollars. This one could. He plunged, and the proceeds of the happy accident of the missing quarter or half dollar, or whatever it might have been, were sufficient to set the young man up in a business on his own account.

Of course stock-market tips are no new form of compensating head waiters, waiters, and the like. There was a time when nearly one guest in ten had some bit of confidential information that he was willing to impart to his favorites among those who served him. There are many such now; but, generally speaking, speculative advice in lieu of cash is at a discount among the shrewdest employees of hotels and restaurants. In the past too many "good things" have gone astray for the canny servitors to gamble their takings on every hint that is offered on how to make a fortune. As a class they now prefer a yellowback every time, and, as has been observed, expect to get it, which adds to the general expense of the gay life in New York.

But it is not alone in the charges of restaurants and cabarets that the roistering thousands have raised havoc. Theater tickets, for example, have become a prohibitive luxury for the average man, and in New York may cost almost anything this winter. Upon one occasion, after the season had got well under way, an attempt was made on a Friday to buy orchestra seats for the next Saturday night for any one of the ten best-drawing attractions in the city. To begin with, it seemed that all tickets had got into the hands of speculators; also that the speculators had already disposed of the bulk of their supplies; and, thirdly, that such left-over, none-too-good seats as they still had could not be obtained for less than fifteen dollars apiece. There was a particular rush at the time this attempt was made; but, nevertheless, under conditions normal to this year the good seats for successful productions cannot prevallingly be secured for less than five dollars apiece, and the best seats are usually half as much again, mounting higher toward the end of any week.

What it all comes to is that people from all over America have this winter swarmed to New York in such numbers, with such fat purses and so bent upon pleasure, that a not inordinate evening—an evening in

Digitized by Google

which little, or perhaps no, wine is purchased—now means an expenditure for three or four persons of from fifty to a hundred dollars, and night after night thousands of persons are spending such sums and more for their gayeties. However, it is not these people, composing the affluent army of invasion, who are doing, except in the aggregate, the sensational disbursing of the winter. As always, the excesses of individual extravagance are committed, not by a great mass made carefree and jubilant by general prosperity, but for the most part by that group, relatively small, to which boom times have brought large, sudden wealth. Seemingly there has never been so great a contingent of overnight millionaires as there are now and, exploring round the city, one gathers many tales of their feats of spending.

One man, a munitions millionaire who had come to the city for the winter, became bored with the congested conditions of his hotel and decided that he would fit himself up a city apartment. Accordingly he secured one at an annual rental of eighteen thousand dollars, and then proceeded to spend eighteen thousand more in having the interior woodwork altered to suit his taste. The changes which he made, such as the erecting of a carved mantelpiece, all became a part of the building, and hence improvements to which he could have no claim at the expiration of the lease.

A fond mother from the Middle West, whose husband not many years ago wore overalls but whose income has recently become troublesomely large, arrived in the city to do her fall shopping for three small children. Among what she conceived to be their requirements was an outfit of linen for each. She visited one of the smart linen shops on Fifth Avenue, and in a single afternoon her purchases of linen for her three children amounted to more than seventeen thousand dollars. Each child was equipped with bibs that cost twenty-five dollars apiece. Whether or not that is extravagance is a question which everyone may settle individually. The man's income is computed at one hundred thousand dollars a week, and, incidentally, you would not recognize his name if it were given.

Early in the season a music hall, built upon a new scale of magnificence and representing a huge investment, was opened. The initial performance was a big event to a certain class. Speculators got hold of many of the best seats and played them very close to the chest until the first night was almost upon them. A new munitions millionaire, whose evident ambition is to become a Broadway figure, arrived in the city only the day before the première. There was nothing to it but that he and a party of friends must witness the next evening's production, and he started upon a hunt for six seats "down front." He finally secured them at one hundred dollars apiece.

A Simple Way to Shop

Last year those incredibly rich South Americans, who before the war had always made an annual pilgrimage for several months to Paris, became a definite factor in New York life. Added to this group there are this year a large number of Cubans who have grown fabulously rich through the rise in price of sugar. Like the South Americans, they arrive with their wives and relatives and troops of children and nurses and maids, hire vast suites at a hundred dollars a day, buy automobiles for use during the period of their visits, and roam the shops, paying prodigious sums for enormous quantities of everything that takes their eyes.

The manager of one of the city's Babylonian ten-million-dollar hotels told of a woman who had set a new high point for that particular establishment in the matter of credits. She had come on from the West to do a week's shopping. The management had had her as a guest before and had known her for some years as a trustworthy person of moderate means but not of conspicuous wealth. The day after her arrival bills to the amount of a thousand dollars for C.O.D. purchases by the woman were presented at the cashier's desk. The woman had made no deposit and had not requested the management to make payments for her. Nevertheless, the bills were met.

Upon the following day goods to the value of several thousand dollars more were delivered. Although it was an unusual proceeding, the hotel believed that the guest realized what she was doing, and paid. The third day brought another heavy consignment, and there began to be anxiety. Meanwhile the woman was going about her affairs in the most ordinary manner, apparently entirely unconscious that some sort of explanation might be in order. The third lot was paid for, but when a fourth lot arrived the manager began telegraphing West for information. Word came back that the woman's husband was practically unlimitedly good, that during the last year he had become many times a millionaire, and that there was no reason why the guest should not have all the credit she wanted. Before her departure the hotel had paid for C.O.D. packages to the amount of fifteen thousand dollars.

As a simple matter of course and convenience the woman had adopted that method of doing her shopping.

The present writer was in the office of another manager when the telephone rang.

"Yes—yes, sir," said the manager over the wire, and there was a pause until: "Sixteen covers, you say, for dinner, and a quart of champagne at each place when the party arrives. Very good, sir."

The manager hung up his receiver, and after he had scribbled a memorandum turned about with a smile.

"The man who gave that order," he said, "is a broker. Three years ago he was so hard up that he got a job here in the city as a professional cabaret dancer. He kept himself alive in that way until the market came back. He's making up for lost time now. That champagne he's having served is seven-fifty a quart, and it's not unlikely that there'll be another sixteen bottles opened before the dinner's over."

What Can a Poor New Yorker Do?

There is any amount of that kind of thing going on in New York this winter; but, nevertheless, it is not the man or woman gone mad with sudden riches, but the stupendous crowd, drunk with prosperity, that is giving the city its present essential character. And this crowd has done much more than make the night life more riotous and costly than it has ever been. It has given the shops the heaviest season that they have ever had; it has forced upon the town, to the exclusion of many legitimate plays, an unparalleled number of musical comedies of the kind that are rarely seen in the smaller cities—gigantic productions, with marvelous processions of scantily clad choruses, and comedians and dancers without count; it has impelled a sudden rush of capital into the hotel business so that New York will have next year, among other new hotel structures, a fifteen-million-dollar, thousand-room hostelry. But most of all, this crowd has made the New York spectacle of this winter possible.

New York, in its glitter and noise and movement, is more a spectacle than it has ever been. No one picture can sum it up or adequately epitomize the spirit of the town.

None of the episodes related penetrates to the gist of the matter. Somehow it seems that, if one is in search of true significances, there is nothing more noteworthy than a picture of what the evening of the average, every-day New Yorker has come to be. By the average New Yorker is meant the man who would be affluent, even rich, in any other community in the world. Where is he while this mad, riotous, moneyed whirl is in progress all about him? Jostled to one side by the crowds, left gasping by the cost of town pleasure conducted upon a spendthrift carnival scale, he has been reduced to that for which he has long chided his provincial cousin.

The rest of America has seized New York. It is theirs and they are turning it to their own uses, and the proud resident of the metropolis is the real stranger in the strange land.

He no longer either dares or has a chance to approach his own fleshpots. And so take as a final picture the ordinary New Yorker, the gay, ever-diverted person whom he has so long boasted of being, and observe him at nine o'clock of any evening stretch himself, yawn and creep to bed. That's what the invasion has done to him.

Manning-Bowman Electrics

Means MB Best

NO household is complete without one or more of these electrical appliances. For everyday use or on special occasions they add pleasure as well as convenience.

Their utility and durability are guaranteed by the name "Manning-Bowman"—your reminder of the high reputation for quality which has always been attached to the many household articles bearing the name "Manning-Bowman."

Look for Manning-Bowman Ware in jewelry, hardware, housefurnishing and department stores.

No. 1210 Toaster $5.50. Others $4 up

You can make — in one minute — the pancakes that made me *famous*

Fifty-five years ago—'way down in Dixie, Aunt Jemima first made the brown, fluffy, delicious pancakes that became famous.

She had a secret recipe—the envy of all the mammy cooks on near and far plantations.

Today not only her recipe is yours—but the *complete* flour, ready-mixed.

You have nothing to add but water—nothing to do but bake!

No fuss, no bother, no depending on cook's luck—but perfect batter made in a minute.

AUNT JEMIMA'S PANCAKE FLOUR
WITH
POWDERED SWEET MILK

Copyright 1916, by Aunt Jemima Mills Company

Everything needed is in the flour—even to sweet milk in *powder* form. It's just like getting a bottle of milk free with every package.

There is the right amount of wheat flour—ground to just the fineness best for pancakes.

There is especially ground corn flour, scientifically prepared baking powder, powdered sweet milk, salt, and just a dash of rice flour to make the cakes brown beautifully.

You can also get Aunt Jemima's Buckwheat Flour—containing all the necessary ingredients ready-mixed—milk and all.

"The sweet milk makes them perfect"

Look on the tops of the packages for the coupon telling how to get the funny Aunt Jemima Rag Doll family for the little ones

WARD EIGHTY-THREE

(Continued from Page 15)

"Don't stop to do him now," said Miss Ransome, approaching the bed. "He's just been brought in and is going up for operation. You can make his bed while he is away. Look at those feet!" she exclaimed, pointing.

I looked. Beneath the caked and dried blood from his wounds the mud of the Somme was ground into his skin until it was blackened as if from powder.

"Some of them are worse than that!" said she. "Last week there came in to us a little *poilu*, straight from the first-line trenches of Verdun. How long he had been without a wash even he himself did not know. The doctor gave one long-range sniff and said hastily: 'Send him to the baths!' It seemed, however, that he was not acquainted with baths—at least not in the 'all-together' and in an American bathtub; for the attendants said that he fought like a wild cat—and when he came back he was crying! He had faced the cannon at Verdun; he had been smashed to pieces by a shell, and had his leg cut off up to his thigh with only a local anæsthetic without flinching; but he wept with fear at sight of an American bath and demanded to be sent back to the trenches!"

The bedmaking went on, somewhat raggedly to be sure, for on those first days I was obsessed by an absurd and fantastic fear that sometime when I pulled away the drawsheet I should pull away also a mangled leg upon it. There was one bed, however, which I grew to enjoy making, and that was the bed of Grandpère—fat, dirty, profane, cross-grained, whimsical old Grandpère. He was notorious in the ward as a grouch. Claudius declared that he had been jilted in love and had had the "black butterflies" ever since. He was what is known as an endless-chain smoker. He lighted one cigarette from the end of another and kept going the entire day through, with the result that his *chemise* front was always full of little burnt holes and powdered thick with ashes.

Nor was his bed much better. One swept out of it each morning aluminum filings, chunks of bread, apple parings, handkerchiefs, books, nutshells, letters, as well as innumerable little pillows and pads with which Grandpère combated the hated "currents of air" from the open windows. The fact was, he got no peace day or night from a badly infected leg, and sometimes he was hard driven for diversion.

Grandpa and the Old Machine Gun

Between him and a certain substitute nurse in the ward there existed a violent and mutual antipathy. She was an excellent nurse professionally, but hard, brusque in manner, and without a single word of French to build a bridge of sympathy between herself and her patients, among whom she was known as the old *mitrailleuse*. Between her and Grandpère was waged a fierce battle each morning over the making of his bed. She lectured him roundly in English for his untidiness, and Grandpère retorted volubly in French, with a vocabulary that would have enchanted a cowpuncher. She was displeased with the state of his *chemises*, and Grandpère was highly displeased with her displeasure.

"What is she saying, the old *mitrailleuse?*" he would whisper to me, his little gray eyes gleaming with mischievous humor. "Why has she always the great anger?"

"She says you smoke too much—that your bed is full of trash."

"But, *mon Dieu*, that is my sole distraction! And what else?"

"She says you burn holes in your *chemise* and that it is always covered with ashes."

"But—my word!—does she know nothing, then, of the laws of Nature—the old Anglaise!—that ashes always tumble downward, not upward; and that fire always burns? Can I make the ashes go upward into the air? I am not God. I am only a Frenchman."

An hour later he would beckon me secretly over to his side, point to a fresh perforation of his *chemise*, a fresh sprinkling of ashes, and whisper gleefully:

"Tell the old *mitrailleuse* to come and sweep me out again!"

He enjoyed the encounters! And as they were, indeed, his sole distraction through weary days, I sometimes humored him.

The dressings, meantime, continued, with their unceasing accompaniment of groans and cries of "*Doucement!*" A young surgeon told me that *doucement* was the first French word he acquired; and undeniably it is the word oftenest heard during the dressings period. This does not signify that the patients are, as a rule, given to outcry. On the contrary, these young Frenchmen endure the intensest pain with a kind of smiling white fortitude that brings a furtive tear to the eye.

Let me take, for example, the demeanors of the three whose beds are on a little sleeping porch on the terrace—Claudius, François, Emile. Their being on the terrace carries its own significant hint of special weakness. Of these three, Claudius, when under extreme stress, shuts tightly his one eye, thrusts his knuckles into his mouth and bites them until they bleed. If the pain has shaken him unendurably, when the doctor and the nurses depart he puts a pillow over his face and weeps into it silently.

François, on the other hand, an idyllically handsome aristocratic youth of twenty-one, with a smashed arm and leg, takes an opposite course. He looks his pain squarely in the face, as if it were an adversary, with an assumption of nonchalant scorn. Under a particularly painful dressing or probe his eyes grow steely and narrow, while his lips under the little golden mustache begin to smile sternly. As the pain increases, that smile becomes more distinct, more contemptuous and challenging. I have a notion that secretly François loves pain for the opportunity it affords him to test the fine unblunted steel of his young courage.

French Views of Germans

Emile, a Breton lad of twenty-two, with a ball through his lungs, has a different reaction. He hoists himself painfully up in bed, stares out upon the garden with his mystical blue eyes, coughs, winces; and at the end he lays himself down again, gasping, and says gently, "Sank you, mees!" That is all, a soft "Sank you, mees!" spoken in English to please me! Of those three reactions Emile's is the hardest to bear.

In lively contrast to these is the conduct of Grandpère. Grandpère no longer has any romantic illusions to sustain, no youthful reticences. The first article in his creed is that if you suffer pain you should yell. If it makes you feel better, begin to yell beforehand. And curse! Use all the powers of protest the good God has given you. Accordingly from the first to the last moment of a dressing he lets himself out, so to speak, and the entire ward chuckles over his choice list of epithets.

But, despite the amount of concentrated pain that it holds, the big airy ward is much more a place of laughter than of depression and gloom. When the dressings are finished, and the aftermath of painful throbbing has died down, the natural life and vivacity of fifty Frenchmen reassert themselves. They banter and chaff each other and discuss every discussible or undiscussible subject under the sun. Naturally the present struggle comes in for the lion's share of debate; nor is the feeling concerning it by any means unanimous. In that small bedfast community are ardent imperialists, conservatives, radicals, syndicalists and philosophic anarchists; and each one of them takes a hack at the great conflict from his own angle of vision. Nor have they within them the hate for the German that seems to animate some of the spectators on the side lines. At any rate he is not a monster; in fact, one was forced to believe from their many stories of good will that the average German was really almost human!

"What do you think of the Germans?" a young soldier asked me suddenly one day as I was taking his temperature.

"Their methods, you mean? I thought there were no two opinions on that."

"Very well!" he retorted. "Then you take the French side and I'll take the German side, and we'll discuss the subject. Begin, if you please."

"No; you begin!" I said, rather curious to hear what a wounded Frenchman would have to say in defense of his foe.

He talked for ten minutes, brilliantly, earnestly, caustically, holding the thermometer like a cigarette in one corner of his mouth; and at the end of that time he had proved not indeed that the Germans were right, but that war itself was so intrinsically degrading and hellish—despite what

For Over Half a Century

Since 1856, ESTERBROOK Pens have been the standard of pen quality in office, home and school. That's why the Esterbrook Plant has grown to the position of the largest of its kind in America. That's why more Esterbrook Pens are sold every year than the combined output of all other pen factories in the United States.

There is an Esterbrook Quality Pen for every hand, for every use. Each is the best it is possible to produce. Every Esterbrook Pen is thoroughly inspected before leaving the factory—to make *sure* that the careful work of making it is just as carefully checked. That's why Esterbrook Pens are so *uniformly* good and *always* dependable.

Send 10 cents for box containing samples of the twelve most popular Esterbrook Pens, including the famous 048 Falcon—the most popular pen in the world.

THE OLDEST MAKERS of check-protecting devices now bring check protection within the reach of all.

THIS is DIMUNETTE, two-thirds actual size. Fully protected by patents, extremely light in weight, of handsome brushed bronze effect and solid construction. It gives all the protection of high-priced machines and will last a lifetime.

$7.50

IN CANADA $10.

GUARANTEE

WE HEREBY guarantee that the user of the Dimunette shall not be liable in event that one of his checks is raised or altered, and that the use of the Dimunette is in conformity with the most exacting legal obligations in the matter of care devolving upon the maker of a check.

DEFIANCE CHECK WRITER CORPORATION

Defiance Check Writer Corporation
299 State Street
Rochester, N.Y.

Gentlemen:
Please send me your free book, "How Crooks Make Millions," and give me name of dealer from whom I can buy the Dimunette.

Name_____

Address_____

S. E. P. 1-13

The easiest crime to commit—and the hardest to detect

EVERY time you send out an unprotected check, you might as well make it out to "Bearer"—and leave the amount blank. It's a direct invitation to the check-raiser.

In 1915 alone, it has been estimated that over $15,000,000 was lost in raised checks. Who lost it? The firms and individuals—like you—who drew the checks.

What is effectual protection? It's Standard Protection—the kind of protection which, in all the history of check-raising, has never failed: A process which limits the amount by breaking the paper and forcing an acid-proof ink into the fibre.

That's the protection which the Dimunette gives you—for $7.50. Think of it! Perhaps you believed you couldn't afford to have check protection. But at $7.50 you can't afford *not* to have it.

The Dimunette now gives you this Standard Protection—and for $7.50. *It is made by the oldest makers of check-protecting devices in the United States and sold by leading stationers and office supply houses everywhere.* If you have difficulty in securing the Dimunette, send us check, money order or draft and we will supply you direct, delivery free.

ROCHESTER NEW YORK

romanticists might say to the contrary of its elevating spiritual effect on the soul—that it exerted a debasing influence on whoever engaged in it, be he German, French, English, Russian or American.

"War is a rotten business for the individual," he wound up soberly. "And don't let them sidetrack you by saying it's the Germans. They're not monsters. It's war itself that's the monster. It's a bad microbe. A mean little soul it poisons, and a big soul it poisons also. The physical wounds—like this," he touched his bandaged shoulder—"you can see. The wounds on the soul are invisible. But, believe me, they exist just the same, and are even more ghastly. I know!" And he handed back the thermometer with a smile.

The real word-battles, however, take place between themselves. Sometimes an argument lasts for weeks, and they have a go at it every fine afternoon, wrestling with each other like the conversational experts they are. Sometimes it is only a brief but hot dispute. It was one of the latter that took place about a month after my arrival, between François and Claudius. That particular afternoon a concert was impending. It was to be given in the garden by a crack Belgian military band, and programs had just been handed round.

Claudius looked over his card and I saw his expressive face darken.

"The Marseillaise isn't down!" he exclaimed. "If they haven't the courtesy to play the French national air to wounded French soldiers in a French military hospital, I, for one, shall not listen to their old concert. I shall sleep!"

Saying which, he scornfully tossed the program over into the garden and composed himself for slumber. But François, who was feeling gay that day, could not permit such a remark to pass.

"I don't think so highly of that Marseillaise!" he remarked languidly, but with the light of battle in his eyes. "It's not a good song. On the contrary, it's a very bad song."

Claudius' one eye popped wide open. He fairly leaped into the combat.

"What!" he exclaimed, flushing with anger. "You say the Marseillaise is not a good song? You say this is not good?" And, propping himself up on one elbow, his eye still blazing, he chanted the immortal battle cry:

"'Aux armes, citoyens!
Formez vos bataillons!
Marchons! Marchons!
Qu'un sang impur,
Abreuve nos sillons.'

"Voilà!" cried Claudius, his voice shaky with emotion. "You dare to say that is not a good song?"

"Ah, the music's all right," admitted François loftily. "It's the words."

"And what's the matter with the words? Why aren't they good?"

"Why?" said François coolly. "Because they incite to carnage! *'Formez vos bataillons!'* But what for? To kill somebody! No, no; such words are not good."

The irrefutable logic of this, Claudius chose to ignore.

"You are not a true Frenchman," he declared scornfully.

The Admirable Clarice

François began to smile—the cold distinct smile of the dressings hour. He glanced round for a weapon. A cup of wine stood on his bedside table. His fingers closed round it.

"Say that again!" he remarked pleasantly.

Claudius' hand had likewise gripped his wineglass. Of the two he was much more passionate. He glared hardily and began:

"You're not a ——"

The head nurse appeared opportunely on the threshold.

"François," she said severely, "you know you mustn't drink that wine when you're going up for operation!"

François looked at the nurse, at me, at the wine in his cup, and from thence to Claudius, who by now was grinning broadly.

"I wasn't going to drink it," he observed mildly. "I was going to give it to the *camarade*, there!"

And he proffered it gravely to Claudius, who drank it down with equal politeness; then suddenly both of them tumbled back on their pillows and went off into boyish little yips of laughter under the startled eyes of the nurse. And, to finish off the episode, the Belgian band really played the Marseillaise after all.

The first few weeks I was in the ward we were enlivened each morning by the performance of Clarice. Clarice was a hen; and every day, at precisely ten o'clock, she laid an egg. It happened in this way: There was a young one-armed soldier, an opera singer before the war, who, for the amusement of his companions, would lie upon his bed and with his voice conjure all the animals of the farmyard into lively existence. The deep growl of the watchdog, the grunting of a pig, the whickering of horses down in the meadow, the lordly crow of the cock, the busy cackling of the hen—he reproduced them all with startling realism. The hen, in particular, he loved to delineate.

The sound would start suddenly under one of the hospital beds—the low Tuck-tuck, tuck-a-tuck! of a hen talking softly to herself as she scratched in the hay.

"Sh! It's Clarice! She's going to lay an egg!" somebody would cry; and all the ward held its breath during the operation.

After a period of soft clucking—Tuck-tuck, tuck-tuck, tuck, tuck, tuck, tuck!—which Clarice required to dispose herself suitably and discreetly upon her nest, a profound silence ensued. Clarice was laying her egg! The men lay perfectly still, smiling expectantly, glancing now and again at the clock. The hush was absolute. It was Clarice's moment.

Presently a loud, triumphant cackle issued forth: Tuck-tuck, tuck-a-tuck, tuck-tuck, tuck-a-tuck! The egg was an accomplished fact. And Clarice, her proud duty done, flew straight to her lord and master, who added his crow of patronizing approbation. The illusion of the performance was perfect, and little Clarice was a source of great delight to the men, who built round her all sorts of romances.

"That's our little Clarice!" Emile explained to me the first time I heard her. "But she is admirable, that Clarice! She lays an egg each morning; and we give it to a sick *camarade* for his *déjeuner!*"

When the Post Arrives

By the time the beds are made, clean bandages adjusted, vacant beds disinfected, the individual tables scrubbed and hot drinks fetched from the diet kitchen, the day is well under way. The dressings, meantime, proceed steadily down the ward. Sometimes, after a new offensive, when the big war hospital has received a fresh influx of the wounded, and every bed contains a battered wreck, these dressings fill the entire morning and continue straight through the afternoon.

Those are trying days for heart and head and feet. Through all the hours the busy stream of traffic flows constantly through this, the heaviest ward. There are men going up to operations on stretchers; men coming down from operations, unconscious, on stretchers; men being discharged, with their meager little sack of possessions, also on stretchers. Good-bys are shouted—"*Bon voyage!*" "All aboard!" "*En voiture!*" Or the orderly enters with a batch of letters—letters from home.

"Simondon!" he bawls cheerily.

"Present!"

"Girod!"

"Present!"

"Coussin!"

"Discharged!" a voice volunteers.

"Morel! . . . Morel! . . . Morel?"

"Give me that letter," says the head nurse quietly, for Morel cannot receive it; Morel is dead.

At about half past ten, when the ward is in fair order, and the *blessés* under their fresh linen look like rows of good children in bed, the *médecin chef*, or chief surgeon, makes his rounds. As he approaches a bed its occupant salutes, and then listens with intense concentration to the strange English jargon of the ward doctor, who is making his daily report. Perhaps he catches the word "operation"—which every soldier knows. After the surgeon has passed he beckons and whispers eagerly:

"What did he say? What did the *médecin chef* say? Operation?"

I nod.

"Only a little one. But no lunch to-day. No good *pinard!*"

Pinard is the trench slang for wine, corresponding to the English "booze." That word, upon my lips, will nearly bring a laugh from a *poilu*. But no laugh greets me this time. He sinks back upon his pillow, a little white and very quiet. The day has suddenly lost its color for him.

A GOOD PERFORMING CAR

That quickly describes the Chalmers. It accelerates with a speed that surprises. It runs smoothly way down at 3 miles and maintains the "velvety action" at 50 miles an hour. Gears shift with the slightest effort. It steers simply. The front wheels cling to the crown of the road. The rear are right down on the ground. There is no sway and it drives with the directness of an arrow. Why? Because the Chalmers is a sound automobile, sound in design and sound in construction.

Home Made Bread

is better, more nutritious than any you can buy—and less expensive. Try this easy recipe for white bread, using

"Wear-Ever"
SEAMLESS
Aluminum Bread Pans

In 1 quart of water dissolve 2 cakes compressed yeast, 2 tablespoons salt and 2 of sugar. Stir in sifted flour (about 3 qts.) until a stiff dough is formed. Add 2 tablespoons lard and knead dough, adding a little flour from time to time, until smooth and elastic. Cover and set in a warm place for two hours or until light. Form dough into loaves, place in "Wear-Ever" bread pans and let rise again until light. Brush lightly with milk and place in oven.

"Wear-Ever" Bread Pans take the heat quickly and hold it so that your bread will be baked evenly and thoroughly all the way through—delicious, crusty, whole loaves that the entire family will enjoy.

"Wear-Ever" Bread Pans require no grease. To remove bread, simply invert the Pan.

"Wear-Ever" utensils are made without seams from thick, hard sheet metal—they cannot break, chip, or rust—are pure and safe.

Replace utensils that wear out with utensils that "Wear-Ever"

If you have never used "Wear-Ever," we will send you the sample 1-qt. Stewpan pictured below.

FOR ONLY 30c if coupon is mailed on or before Feb. 20th, 1917.

Send for your Stewpan today!

The Aluminum Cooking Utensil Co.
New Kensington, Pa., Dept. 18, or (If you live in Canada) Northern Aluminum Co., Ltd., Toronto, Ont.
Send prepaid, 1-qt. "Wear-Ever" Stewpan. Enclosed is 30c in stamps or coin—to be refunded if not satisfied. Offer good until February 20th, 1917, only.

Address_____

(Concluded from Page 46)

After the great *médecin chef*—or God, as he is irreverently termed in the ward—has departed, with his halo of dread, *déjeuner* is the next important feature of the day. Serving a community of fifty a three-course meal—soup, meat and vegetables, and dessert—is a man-size proposition. Serving it on bed tables, often cutting up the food and feeding the armless patients, further complicates the task. The first day I completely lost my head. My clamorous young brood, nine of whom were under twenty-two, reminded me of nothing so much as a nestful of yawping baby robins waiting to be fed.

It was: "Look out for my leg, mees!" "More bread, mees!" "My *serviette*, mees!" "Have you forgotten me, mees?" "My God, my soup's tipped into my bed! I'm afloat, mees!" And all in a rapid bubble of French that made my head spin. At last, in sheer desperation, I addressed them in the American language: "You darned kids—shut up!" As was usual in those first days, it was old Justin who came to my aid and disentangled me.

The patients' *déjeuner* over, the *auxiliaires* have three-quarters of an hour off for their own, which they may get at the hospital or at some of the neighboring *pâtisseries*. As for me, that first day I choked down a few mouthfuls and then retired to the *vestiaire* to rest my feet.

The afternoon was cut off the same piece of cloth as the morning—more beds, more dressings, more bandages, more high shrill cries, more gayety and laughter. But about four o'clock in the afternoon something began to happen. It began to happen in bed Number Ten. Its occupant, a handsome dark lad of eighteen, had a gangrenous arm, the sight of which, with its deep gashes to let out the poison, turned one faint with horror. All the morning, at intervals, I had held a basin while he retched, or fetched hot-water bottles.

About four o'clock he began to babble of his mother, his brothers and sisters, and his home in the country. He laughed, chatted, cried out "*Maman!*" repeatedly, and tried to rise to go to her. Presently it was found necessary to strap his supple, strong young body to the mattress. At this time I had not the faintest notion that he was already in the antechamber of death, so alive he was, so palpitant with restless energy.

Suddenly he lay still. I had turned to get another hot-water bottle. "Never mind!" said the nurse, and at some quality in her voice I paused, startled, and looked again. He was gone. His passing had been as light and unpretentious as a breath of air through the open window.

After he was carried out I disinfected his bed and made it afresh, in a strange confusion of soul. Thus I had my first glimpse of that vast, interminable procession which must haunt the dreams of ambitious kings.

The Charge of Sergeant Girod

As yet, I have been to no battlefronts. I have letters, to be sure, which if presented in the proper quarters, I am told, would result in personally conducted trips to lines not engaged in an actual offensive. But those letters still lie, unsent, in my trunk. I may use them some day. But at present there is within me a reluctance to visiting ruins and battlefields. Perhaps it is because I have seen so many ruins who have returned from those battlefields.

Moreover, I have already been to the Front and I have made a charge. It was a hand-grenade charge, under the leadership of one Sergeant Girod, who since then has been awarded the Croix de Guerre. The announcement of the award reads, "For conspicuous bravery in leading a brilliant hand-grenade attack against the enemy while under fire from our own *mitrailleuses*." I know it was a brilliant attack, for I made it with him. It happened in this way:

It was six o'clock in the evening, and the big *salle*, with its forest of overhead apparatus, was wrapped in warm darkness, through which the bright, glowing ends of cigarettes bloomed like tiny stars. The electricity was out of order and the sole lights—two tall candles on the head nurse's desk in the middle of the room, with their straight still flames—lent an air of enchantment to the place. The men, their suppers over, lay smoking tranquilly, or chatted in undertones. To me it was the pleasantest hour of the day. I had lingered to make up another bed, the occupant for which, a fresh arrival, had not yet come down from the operating room.

"Can you stay a few minutes?" called the head nurse as she hurried past me. "I am called away; the nurses are down at first supper, and someone should be here when your man arrives."

I promised to remain. A few minutes later the big double rear doors were flung open and a dark jumbled mass appeared. The same instant a loud shout shattered the quiet gloom:

"*En avant, mes enfants! Vive la France! En avant! Toujours en avant! Ils approchent! Les Boches! Les infidels! Les brigands! Ils approchent à gauche! Regardez à gauche! A gauche!*—They're approaching on the left! Look out on the left!—*En avant, mes enfants! Toujours en avant!*"

It was a shout that would send a thrill along a dead man's spine. A ripple of laughter went round the room. Raised heads peered eagerly. The *brancardiers* came forward, two wheeling the stretcher and two more holding down the occupant, who was struggling convulsively to raise himself and shouting hoarse commands in a voice that could be heard a block away.

"Where does he go, mees?" came Justin's steady tones.

"Here—Bed Eight."

"*En avant! En avant, mes enfants! Regardez à gauche! A gauche! Ils approchent à gauche! Les Boches, ils approchent!*" The hoarse shouts did not cease for an instant.

The Night Attack

"He's leading a charge," said Justin, grimly pleased, as they paused beside me. "Hand grenades! He's a terrible fellow. He killed ten Boches coming down the stairs!"

Then, all together, with a "*Un, deux, trois—Allez!*" the four lifted him from the stretcher into bed.

He was a powerfully built man, fair, with blue eyes and a blond mustache, and his *chemise*, torn away in the struggle, revealed a torso that gleamed like ivory. Suddenly he looked up and gripped me with a hand of iron.

"*Criez avec moi: 'Vive la France!'*"

"*Vive la France!*" I repeated in a low voice, to soothe him.

"Louder! Shout louder: *Vive la France!*"

"*Vive la France!*" I said more loudly. "Lie still now. It's over. The attack is finished."

"And the Boches?" he queried eagerly. "They are gone?"

"All gone."

"No, no!" he cried violently, trying to rise. "They're not gone! They're still coming on! My God, see them! Wave on wave! *Regardez à gauche, mes enfants! Les Boches! Les brigands!* Ah, my poor comrades!" he murmured. "See them fall!" He turned to me, whom evidently he took for one of his grenadiers: "Citronne went down just then. Did you see him? Was he killed?"

"No; only wounded. Be quiet now. It's done."

"But not well done," he retorted impatiently. "We hadn't enough balls. Tonight we attack again. Listen well!"

And then he gave me my orders. It appeared that on each side of us were Moroccan troops who were to follow our attack with a charge. For a few minutes Girod was silent. Suddenly he broke out:

"Boom! *Soixante-quinze!*"—the French seventy-fives. "Boom! *Les canons!*" He appeared to be listening to the bombardment. Presently he sighed. "Ah, my poor wife! My poor Cécile! You know, I have a wife and three children—two boys and a girl."

It was evident to me that the sergeant had a presentiment that he was going to fall in the attack. After a long silence his voice came to me abruptly out of the dark:

"What time is it?"

I named the hour.

"Well then, my friend, we have still ten minutes. Let us smoke a cigarette before we part." A second later he was shouting at the top of his powerful voice:

"*En avant, mes enfants! Ils approchent! Les Boches! Regardez à gauche! A gauche!*"

Over and over he issued his commands to his grenadiers; over and over he shouted his warning cry, calling frantically for bombs that were not forthcoming; and always he was driven back, despairing, by the tide of Germans on his left. His brain, like a talking-machine record, had recorded faithfully every detail of that last wild, brilliant attack, terminating so disastrously because of the shortage of balls; and in his delirium he played that one record ceaselessly, with no thought, action or sensation omitted. But as the hours went by the record played slowly and more slowly, with gaps of silence in between. Finally he slept.

There is another chapter to add to this episode concerning Girod. It happened some three weeks later. And as this is not fiction, but a plain reporting of facts, I hasten to add that Girod did not die.

Passing his bed, however, one afternoon, I laid my hand casually on the iron bedframe. It was trembling. The entire bed was vibrating steadily, gently, as if to the oscillation of some remote earthquake. Astonished, I looked at Girod. And Girod was trembling too. It was he who caused the tremor of the bed. Beneath the white coverlet his big body shook with a ceaseless, mysterious agitation.

"What is the matter?" I cried. "Why are you trembling like that?"

He gave a faint, apologetic smile.

"I'm afraid!" he said simply. "I'm afraid of that operation this afternoon."

"But it's nothing," I assured him—"really nothing at all. Only a slight incision in the shoulder."

"I know. But—I'm afraid! You see——" He broke off, knitting his brows. "It was not always thus. Once I did not know what fear was—before —— That's why they made me leader of the bombing squad. I was reckless. But now—I'm afraid. I'm afraid of that little operation!"

"You've been under a strain," I said.

I recalled Girod's history. He had narrated it to me one rainy afternoon. From his wife, Cécile, and his three children, he had not heard a word since the war opened, as they lived in the invaded territory. For the last six weeks before he was wounded he and his comrades had been in the first-line trenches, unrelieved, without food save for their reserve stores; and without water, unless one crawled on one's belly at night to a spring in the dangerous strip of No Man's Land between them and the enemy's trenches.

A Letter From Claudius

Each night he crawled to the spring, filled his canteen and crawled back to his wounded companions. And then came one night when the spring failed.

"I crawled out there, as usual," Girod related, "and found it full of cadavers!"

"And after that?" I persisted.

But Girod made no reply.

"It's the strain, the heavy strain," I said again.

A nurse—the one known as the *mitrailleuse*—at that instant passed his bed.

"What's the matter with him?" she demanded brusquely. "What's he shaking for?"

"The operation," I said. "He fears it. It's the strain he's been under so long——"

"Pooh!" she broke out impatiently. "Some of these men can't stand pain any better than a baby!"

As the days and the weeks go by, the ward changes. Men recover or die, or are discharged to convalescent hospitals; and fresh wrecks appear in their places, sleep in their beds, and smile up to one from the pillow. The big *salle* is an antechamber, with exits leading both ways—out into the great adventure of life and out into the still greater adventure of death. At the end of three months scarcely a single familiar face remains. But the exit leading back into life is always open. The recovered men return.

An aviator, whose leg had been amputated at the hospital, comes to announce that he is to have the honor of returning to the Front. He is the last of his class of eight—and he must fly with a wooden leg.

Even Claudius has been discharged. He has gone home to his mother and sister, of whom he is the sole support. A letter from him lies before me.

"My leg is no good," he writes, "and I never shall be able to use it to work. What shall I do? I shall have to ride that leg all day in a carriage! But where am I to get the carriage? I shall go to America! Do you think some rich—and pretty—young American mees would marry me and let me ride in her carriage?"

That, indeed, would be a solution for Claudius! And I am making his modest wants known, with the hopes that some pretty—and rich—young American "mees" may wish to take a flyer on a young Frenchman, considerably smashed but with his sense of humor intact. If she should, and can guarantee the carriage, I will send her Claudius' address.

Mother

MOTHER goes into the kitchen. She selects this; she selects that. She sees to it that her cooking utensils are spotless. She is cleanly; she is careful; she is *particular*. And the dish she prepares is the *event* of the day for the whole family.

Why? Because mother *thinks* of you, and you know it. You know her sole interest is in the home and the family, and she wants what you eat to be choice, and good, and wholesome, and of the very best quality. And you *enjoy* it all the more, because she is thinking of all this for *you*.

Because *we* believe food products should be handled and prepared with the *respect* due that which you are asked to buy and eat, we actually insist upon that same sort of *home influence* in this big institution of ours.

WE select; we choose; we are *particular*. This rule applies to *every* Wilson product, whatever label it receives.

For the very choicest, the *finest* quality, we reserve Wilson's Majestic label. This means that Wilson's Majestic Bacon is really the *heart* of the finest bacon-sides.

It means that Wilson's Majestic Hams are so rigidly selected that only an average of four out of ten can earn Wilson's Majestic label.

WITH meats of such surpassing quality, it naturally follows that our *particular* curing and smoking gives them their old-time flavor and "deliciously different" taste, which you will appreciate.

Order Wilson's Majestic Ham and Bacon today. Be *particular*—look for Wilson's Majestic label on the meat food products you buy.

All Wilson and Co. food products are prepared under U. S. Government supervision.

Your Grandfather Knew These Rubber Footwear Trade Marks

WHEN he bought a new pair of rubber boots, the thing he was most particular about was to see that one of these trade-marks was plainly stamped on each boot.

Their names are names to conjure with; each one of them represents a modest beginning, a remarkable growth, a continuous record of quality production, coupled with honorable tradition.

The thought of making any article in any way or from any materials that were not the very best for the purpose would never have occurred to any of these great manufacturers.

To-day, these same trade-marks are on good rubber footwear for *your* guidance in buying. Only an expert can distinguish good from poor rubber footwear by external appearance and touch. Thus it becomes a matter of self-interest and self-protection for you to make certain that any rubber footwear you buy is marked with one of these famous brands.

Seventy-four years of successful manufacturing and the experience of forty-seven great factories are back of every pair of rubber shoes, overshoes, arctics, boots, etc., produced by the United States Rubber Company, the largest rubber manufacturer in the world.

Rubbers that fit wear twice as long as rubbers that do not fit

A SCRAP OF PAPER

(Continued from Page 21)

toward the Greenwich Studios. He felt much better. Be he ever so civilized, there is nothing so gratifying to a man as the discovery that he still "packs a punch." Humanity is very human, after all.

XIV

MOSE, the colored elevator boy at the Greenwich Studios, glared at Tom Hanrahan.

"What you askin' me questions for? You another one of dem bulls? Believe me, mister, I hopes you chokes if you is. Miss Rowland she had plenty annoyance from you people yesterday, and if I knowed where she was I wouldn't tell you. I just wisht I'd seen dem men lay a hand on her; I'd just about busted dem. Go long outa here, white man! I got nothin' to say."

The reporter pulled a bill from his pocket. It had a V on it, and would have been able ordinarily to purchase the soul of Mose. But not to-day.

"Put your money away," he growled. "Ain't got nothin' to say; don't know nothin'. And just you listen to me! Miss Rowland, when my wife was sick, she got de doctor and hired de nurse, and—what you take me for? Git along, git along!"

Hanrahan smiled in his friendliest fashion. The most uncommunicative persons had thawed before that smile, and given the reporter valuable information. The decent, clean soul of the man showed in that smile.

"Look here," said he, "I'm a friend of Miss Rowland. I'm afraid something has happened to her. You talk as though something did happen to her yesterday. What was it? I give you my word that I'm her friend.

The colored boy shuffled his feet.

"Dat sounds all right, boss, and I believe you. But dere's one of 'em upstairs now, and de owner of dis house give me orders to keep my mouf closed, and—you're dead sure you're a friend of Miss Rowland?"

"Do you know Miss Sigmund?"

"De lady what's chummy with Miss Rowland? Sure I do."

"Call her up and ask her if it's all right to trust me. Hanrahan's my name."

Mose looked the reporter over. If ever a man looked honest Hanrahan was the man.

"I ain't got such a awful lot to tell anyway," said the negro. "What dere is I'll tell you, boss. But I dassent do it here. De man upstairs might come down and see me, and he'd tell de owner, and de owner would fire me—just like dat!" And he snapped his fingers.

"But I'll be off for de afternoon in ten minutes. De other boy'll be here den. You jus' wait round de corner, will you?"

Considerably puzzled, Hanrahan assented. In less than the specified time Mose met him.

"Here's what happened," he began. "First, a gemman calls on Miss Rowland. Real swell. He stays about a minute. Then another gemman calls on her. 'Pears like they're ol' friends, and 'pears like they ain't. For they both looks in the letter box as though to find out if she lives here, but neither of dem phones up to her first. Jus' tells me to take 'em up. Well, Miss Rowland comes down about two seconds after de second gemman calls. She's in a hurry. About three minutes after dat I hears a banging upstairs. I shoot de cyar up in time to see de second gemman comin' through her door, what he'd busted wid a chair. I grab him, but he flashed a badge on me, an' I know he's a bull. He outs of the buildin' like a flash, an' I start after him, wonderin' what's up. But the elevator bell rings, an' I has to go back.

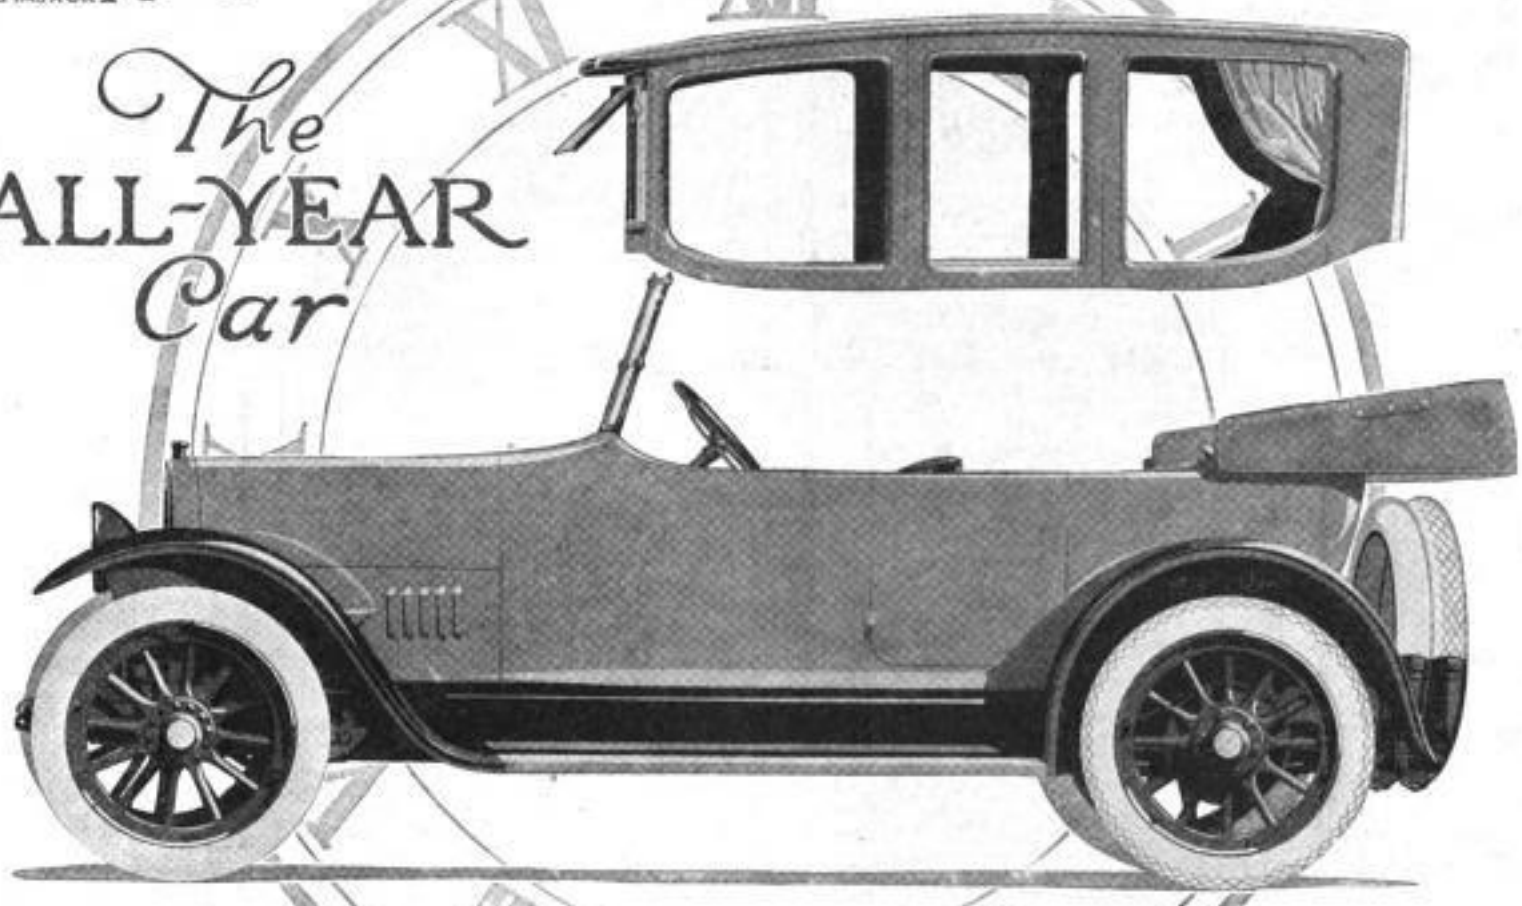
"It's five minutes before I'm free to look out, an' den, before I gits to de door, de first gemman and de second gemman—an' anodder gemman, dey all comes in. An' de first one—de swell gemman—an' de third gemman, is all mussed up like dey been scrappin'. And it looks like de first gemman is pinched by de odder two. Well, I'm puzzled by all dis, an' refuses to let 'em go upstairs. But de owner lives here, you know. Dey ask for him, and dey buzz him in a corner, an' it's all right. I has to take 'em upstairs. Well, little while passes, and de first gemman and de second gemman comes out arm in arm, but lookin' like de swell one is prisoner of de other. And de third gemman stay in Miss Rowland's apartment, and de owner tells me dat if she gets any phone calls to connect de third gemman. She only gits one, and I hears him tell the party what calls dat he's Miss Rowland's brother. Dat call came jus' as I'd taken de two gemmen downstairs. But de gemman what phones he don't come down here, and after awhile de gemman upstairs has a visitor who's upstairs now—been dere all night, takin' de place of de gemman what answered de phone, I guess. He's got a badge, too, for he showed it to me, and says if I talks he'll put me in de cooler for eighty years.

"An' dat ain't all! For when I gets through las' night de fruit man on de corner tells me what happened in de street. 'Pears dat when Miss Rowland ran outa the building a man grabs her. He's got her by de arm when anodder man jumps on him an bats his jaw. While dey're scrappin' Miss Rowland ducks through a tenement, and she's gone. Den de second gemman what busted the door open comes down with a gun, and—well, dey comes back here, like I tol' you. But dey ain't got Miss Rowland, cuss 'em! and I hopes dey don't, no matter what she done. I'll bet she ain't done nothing either, a nice li'l' lady like her. And dat's all, and for de Lawd's sake, don't tell no one I told you, for I'd lose my job, mister."

Hanrahan promised. He cross-questioned the boy; got him to describe the three gentlemen. Though he did not recognize two of them, he did recognize the "first gemman." For that person wore exactly the clothes, had the same colored hair, and was the same general build as Harry Mack, whom he had left at a Tenderloin restaurant at one o'clock that morning!

Harry Mack! What connection had he with Kirby Rowland? And who were these other two? The description of one of them might fit Terence Greenham; but Mack's raiment had absorbed Mose's attention to the neglect of the other two. If only he could be sure that the others had been Greenham men. But why not be sure? It was not so very long after this fracas, according to the record of Mack's arrest which he had scanned the previous night, that Greenham had brought the crook to headquarters. Could there be anything in Mack's tale of the faked portrait after all? Miss Rowland was an artist. Was it conceivable that she was in league with Harry Mack to palm off fraudulent old masters on unsuspecting financiers, using her knowledge of art in combination with Mack's knowledge of ways that were evil?

It seemed a good theory. But Lindley Jackson had stated positively that the Botticelli was an original! The suddenly evolved theory was smashed to smithereens! Hanrahan gave the colored boy the five-dollar bill and assured him that Miss Rowland was guilty of nothing, and that the people who were pursuing her would land in trouble. Then, cautioning him to say nothing about their talk, if he really were grateful to Miss Rowland for her many kindnesses, he left the boy and started for Village Hall. But neither in that dive nor in any of a dozen that he visited that afternoon could he find anyone who knew of Harry Mack other than by reputation as a big gun. Harry Mack, he decided, though a famous crook, was not the sort who traveled with the cheap gangsters who make up the cream of the city's admitted underworld. Mack went with only the highest-class crooks, and such crooks were more apt to live abroad, preying on their fellow Americans in a foreign land. The Americans on a vacation, or purchasing art works, were the victims of Harry Mack and his kind.



He soon decided it was hopeless to attempt to find Mack in these haunts of the underworld. But in certain hotels of the Tenderloin, at night, a man of Mack's vocation might be reasonably expected to be found, unless he were strictly under cover. Hanrahan returned to his office. It would do no harm to look up Mack in the office files; there might be some record of the man's life there that would tell him who were his criminal friends, if he had any in the city. And to these Hanrahan could apply for information as to the present address of the crook. It was his only chance anyway. There were now two reasons why Mack must be located. He had rescued Kirby Rowland from the Greenhams. Undoubtedly, therefore, he knew where Kirby was. And Kirby was Jessie's friend. On his

(Continued from Page 50)

way downtown to the office Hanrahan reviewed what he had learned. He weighed all of Kirby's actions as related to him by Jessie. The girl was crazy, or else a bad character. No question about that. Only a person mentally or morally unsound would have destroyed the telegram addressed to Jessie. And yet Jessie Sigmund was no fool. It didn't seem reasonable that Jessie could have chummed with a girl and never even suspected that that girl was not all right in every way. Still, the two hadn't been so intimate in the past few months, and people change in a mighty short time.

Puzzling thus he reached the office. He went at once to the morgue and looked up the clippings about Harry Mack. There was a record of Mack's recent arrival in this country and his departure therefrom. Also his name was mentioned several times as having been arrested—always abroad—charged with various offenses of which later, it seemed, he had been proved innocent. But there was nothing to indicate who, if any, were his pals in this country. The reporter decided to make a round of the uptown hotels in the hope of locating his man by chance; but as he started to leave the office a boy brought a note to him.

"Mr. Jackson left this for you. Said he'd be back at midnight—gone to some banquet, I think—and that even if you didn't have anything, to wait for him."

"Thanks," said Hanrahan.

He opened the note. It read:

"*Dear Tom:* Sent Lovett out on this Masterman matter. He reports that telephone clerk at M.'s office told him that there was quite a to-do in M.'s office yesterday about some paper that had been lost. Later a woman called up M. Evidently a stranger, for she didn't know M.'s private number but called up office. When told M. was busy, as is always done when calls come over listed wires, said to tell M. that she wished to speak about a paper signed by M. and certain other gentlemen. That's all clerk got. None of this is for publication—yet! I must observe a confidence. But that confidence applies merely to publication, I take it. Therefore, get busy. For Lovett also learned that after paper was lost Masterman offered ten thousand to clerk who would recover it. It had blown out a window. Also the Greenhams are busy on the case, as you know. I'm certain this paper has something to do with universal transfers. Take my word for it, but not to be used in your story. But I'm not divulging any confidence in what I'm writing, because what Lovett learned was caused by our putting two and one together—Masterman and Greenham, and Mack. Get hold of Mack if you haven't done so already. If we can make him talk I think we've got the biggest story of the decade. JACKSON."

Hanrahan leaned back in his chair and thought over the situation. A woman had called up Masterman in words that might be construed to hold a threat. Later the Greenhams tried to arrest a woman, but she was rescued by Harry Mack. Later Greenham, after a conference with Masterman, went to police headquarters and released Mack. Mack then was followed until he, Hanrahan, aided him to elude his pursuers. What was the answer?

The answer was this, clear as day: In some scheme that affected the Masterman interests, Kirby Rowland and Harry Mack were partners. Kirby had fled to Jessie's for refuge, not daring to return to her own studio. Then Dixon Grant had located her, and they had decided to seek some safer spot. That was clear. Suddenly Hanrahan thought of the burned telegram of whose existence Jessie had learned only by accident. Why had Kirby done this? What possible reason could she have for withholding from Jessie the information contained in the telegram?

And then, lightning-like, came the answer to that.

Kirby Rowland was not withholding information from Jessie nearly so much as she was withholding it from Masterman! Another link; another evidence that Miss Rowland was inimical to the financier. But what petty spirit actuated her enmity? Why hide from the financier information about such a trifle? But was it a trifle? Kirby Rowland was an artist. It seemed certain that, with Harry Mack, she was scheming something inimical to the Masterman interests; also that the Masterman agents knew of her part in the plot against their employer, were seeking her, and she had chosen a hiding-place where Masterman would never look for her—in the Masterman house itself, impersonating Adele Rohan!

It was clever reasoning and it held no flaw! Straight up to the Masterman mansion he would go, ask for Miss Adele Rohan —— But Jessie had insisted that what she had told him was for his ears alone. Without her first aid he could never have deduced what he had. It was up to him to see Jessie first, explain as much as he could—hang confidences anyway! He and Jackson were tied up with them! However, he could explain to Jessie all that he had learned, and she would, of course, tell him to go to Kirby. But he must see her first! He must play absolutely fair with the girl he loved. He jammed his hat on his head and started for the door.

"Oh, Tom!"

It was Lyden, the city editor, calling.

"In an awful rush, boss! Chief has me working on a special assignment ——"

"Well, stick round a second," grinned Lyden. "The business office thought there might be a story in this 'ad,' and they're stalling the man downstairs until I get a slant at it and send someone down. Read it."

"Oh, all right," snapped Hanrahan. He grabbed the "personal" which had been handed in at the business office, and which that department had promptly rushed upstairs by automatic tube. This was the advertisement:

"K. R. and D. G. If don't hear from you by Thursday at six P. M. will tell all to newspapers. Address this office. H. M."

The name of Kirby Rowland was buzzing in Hanrahan's brain. Almost unconsciously he fitted it to the first initials. Having done that it was obvious that he should fit Dixon Grant and Harry Mack to the other initials. He crumpled the paper in his fingers and ran for the door.

"I'll tend to this, Lyden," he called over his shoulder, and the city editor, amazed, watched him disappear through the door, and heard him wildly ordering the elevator boy to return and get him.

Harry Mack was in the business office downstairs, wondering why newspapers were so fussy about accepting advertisements, when Hanrahan touched him on the shoulder. He wheeled, to meet a smile.

"Nice work last night, Mack. You fooled me to the queen's taste. However, I got a readable yarn, even if it wasn't true. But now I want a more readable yarn that is true. I want you to tell me just what your little game is; what you've been trying to do to Masterman; and how Miss Kirby Rowland figures in it. Going to talk?"

Over the face of Handsome Harry spread a smile of admiration.

"Hanrahan, you certainly are there! How on earth—sure, I'll talk. I'm always willing to talk when the game is up. I know when I'm licked. Will your paper treat me right?"

"Have to ask the boss about that," said Hanrahan, elated at his easy victory, "but he's always mighty generous to whoever hands the paper a tip. Spill it."

"It's a long story. Let's go somewhere and sit down," suggested Mack.

"All right," agreed the reporter. "Right across the street is a good place."

He led the way to a well-known resort of the downtown thirsty. They sat down in a booth and ordered high balls, for which Mack insisted on paying.

"Now, then," said the international crook, "how much do you know? Ask me questions if you like; that's the quickest way."

"How much do I know?" echoed Hanrahan. "Well, I know that you and Miss Rowland have some club you're holding over Masterman's head. I know that you rescued her from the Greenhams yesterday; I know that she's shaken you, she and Dixon Grant—am I right? Yes—and that you're threatening to tell all unless they communicate with you at this office. I know—and this is no breach of confidence, Mack, though I learned it in confidence, for you know it yourself—that Masterman lost a paper which you evidently have found. Judging by your 'ad,' I should say that Miss Rowland has double-crossed you in some way. Now then, talk."

"You know a lot," commented Mack admiringly. "You're certainly one clever newspaperman! I suppose you even know where Miss Rowland is now?"

Despite himself he could not keep eagerness out of his tones; and Hanrahan felt that if he told Mack where he believed

Cut Your Own Hair At Home

As Easily as You Shave—With an

American Safety Hair Cutter

(McDonough Patent)

Here is a new, practical article for men, one of the most useful and economical since the invention of the safety razor. What the latter does for shaving, the American Safety Hair Cutter does for hair-cutting.

With it you can cut your own hair—quickly and cheaply—*and you can do it yourself at home.* It is easy to operate, the same motion being employed as is used when combing your hair. It cuts closely or trims lightly, just as you desire. There is no gouging or "cat-stepping," no clipping or "chopping."

This Man Hasn't Had a Barber Cut His Hair for 18 Months

We have an affidavit on file that the man pictured above has not had a barber cut his hair or shave the back of his neck since May, 1915, and that his hair has been cut all the time between May, 1915, to date, with an American Safety Hair Cutter.

A—Highest Grade Hard Rubber Comb
B—Screw to loosen slip cap over blades
C—Blades Holder
D—Removable Hair-cutting Blade

Makes Hair Cuts Cost as Low as 2c

Perhaps its greatest appeal to men is its extreme economy. Figuring hair-cuts at the prevailing price of 35c each, this cutter will pay for itself in nine hair-cuts. After that, considering the fact that the blades which it uses cost little and last for more than one hair-cut, your hair-cutting cost should not exceed from 2c to 5c. *What can you buy that will give you a greater saving?*

Requires Little Attention

Two American Safety Hair-cutting Blades are used, one on each side of the comb. With the exception of their occasional renewal, the cutter requires little attention. American Safety Blades, specially ground and tempered for hair-cutting, can be bought from drug and hardware stores or direct from us in packets of a dozen for 60c.

Ideal for Cutting Children's Hair or as a Gift for Men

Women will find it particularly valuable and a great time and money saver when using the American for cutting children's hair. It makes an ideal gift for men, combining as it does the seven cardinal features of a perfect gift—sentiment, novelty, durability, price, convenience, sanitation and economy.

Complete outfit, including cutter, comb, and six blades, with complete instructions, costs only $3. If your hardware dealer or druggist doesn't have it, write us direct and we'll send postpaid $3

American Safety Hair Cutter Corp'n, 967 Liberty Ave., Room 232, Pittsburgh, Pa.

In Big Homes and Little Coal Bills Cut ½ to ⅔

Guaranteed With the Williamson Underfeed

ALL houses look alike to the Williamson UNDERFEED. Big or little, in town or country, whether heated with warm air, hot water, steam or vapor, the same thing holds true—*coal bills reduced ½ to ⅔, guaranteed with the UNDERFEED.* That guarantee hits right at your pocketbook. As evidence of this sure UNDERFEED saving read the following letters:

Coal Bills Less Than One-Half

"The UNDERFEED has given me the results I anticipated when I purchased it. My coal bills compare very favorably, being less than one-half. I use Carterville Wash nut coal. The cost per ton is $3.75, delivered. I am using about 8 tons. I am heating five rooms and three upstairs. The furnace has been in use since 1911."

(Signed) ROBERT CLARK, Janesville, Wis.

Another Saving of One-Half

"I like the UNDERFEED fine; I heat five rooms in the coldest weather with but little effort. It has been as cold as 20 below zero here this winter. I am going to get thru the winter with about half the expense for fuel that I did with my base burner and have kept warmer and quite a bit more space heated. I have been using mixed coal, Iowa with some slack and some Illinois lump coal."

(Signed) D. E. WILSON,
Sec'y and Mgr. of Milton Independent Telephone Co., Milton, Iowa

Heats seven Rooms for 16 dollars

"I heat seven rooms both night and day with the UNDERFEED, using Virginia Splint slack, costing me less than sixteen dollars. I started the furnace early last fall and kept it until late this spring. My house sits on a hill exposed to the winter winds on all sides. A number of my friends and neighbors have looked at my furnace and talk of changing from top-feed to UNDERFEED as it costs so much less."

(Signed) ARCHIE HIMBECK, R. R. No. 2, Sparta, Mich.

And we can show you hundreds of other letters just as interesting, telling of coal bills cut ½ to ⅔—*guaranteed with the Underfeed.*

WILLIAMSON UNDERFEED Furnaces Boilers

Cut Coal Bills ½ to ⅔ Guaranteed

This great saving is due to the UNDERFEED'S scientific principle of combustion. New coal is fed from below. The hot clean fire is always on top—never disturbed by fresh coal being dumped on, or chilled by the opening of top-feed doors. Heat never wasted by fire having to fight its way up against dead coals.

Smoke, soot and gas—valuable heat elements—are consumed as they pass up through the fire.

And the UNDERFEED burns the cheaper grades of coal as effectively as others burn the costlier grades. That's a first big saving you're always sure of!

Get this Book now—FREE!

It is called "From Overfed to UNDERFEED." Pictures and describes it all. Shows how easily a boy of 12 can operate the UNDERFEED. No stooping—everything done from a standing position. This book will be the means of saving you many good coal dollars sometime—*guaranteed!* So, send for it today—no charge—no obligation. Simply use the coupon—NOW!

HEATING CONTRACTORS: Let us tell you about the Williamson UNDERFEED and our proposition—both are winners.

Kirby Rowland to be he would get no information from the crook. He had no reason for thinking this, but instinct is sometimes stronger than reason. Somehow he felt that Mack's complaisance was a blind; that perhaps the international crook was not quite so ready to tell everything as he appeared to be.

"Would I be asking you questions if I could locate Miss Rowland and ask her? She'd be easier than you, Mack."

"Maybe," said Mack grimly. "Then that's all you know?"

"All I intend telling you," smiled Hanrahan.

"Then I guess I haven't any conversation to waste on you," said Mack.

He pushed back his chair as though to leave. Hanrahan smiled. A mighty good poker player was Tom Hanrahan, as his fellows on the Citizen would vouch.

"So? Very well, then. How's it going to affect your game when I publish in the morning's Citizen that the paper lost by Masterman is a signed agreement between Masterman and ——"

It was a most artistic pause; a wonderful bluff. It worked. The face of Mack went dead white. Then he forced his lips to curl a smile.

"You win, I guess. If I tell the whole story I get something, eh?"

"A generous something," promised Hanrahan.

"And my name won't come out? You won't tell a soul who gave it to you? But how can I be sure? Other people know now in your office, and they may give me away."

"Not a soul knows what I do about the matter," said Hanrahan eagerly.

A faint flicker showed in Mack's eyes. He was a good poker player too.

"That right? Well, drink up! Here's success to me in my line and to you in your line." He held out his glass and Hanrahan permitted his own to touch it. There was an almost invisible flick of Handsome Harry's little finger.

"How!" said the international crook.

They drank. Hanrahan turned pale; he managed to place his glass back on the table, but that was all. He slid from his chair to the floor. Handsome Harry Mack smiled.

"There's one guy that's honest; you can tell it in his eyes. He said no one knew about the stuff he mentioned but himself; he said no one would learn about my part in it. Well, I guess he told the truth in the first part of that; I'm dead certain about the last part. For he won't talk to anyone for a while yet."

Quietly he left the booth. No one noticed that he left his companion lying on the floor. Hanrahan was not discovered for fifteen minutes, and by that time Handsome Harry Mack was far from Park Row.

XV

MRS. MASTERMAN stood timidly on the threshold. Kirby dug at her eyes with her small fists and yawned. Then she sat bolt upright in bed and stared at the unfamiliar surroundings. She swept windows, walls, table and bureau with an uncomprehending eye. When she saw Mrs. Masterman she remembered. She smiled, and the nervousness and timidity of the financier's wife melted away before the charm of those curved lips and crinkled eyes. She advanced boldly into the room.

"Well, my dear, I was a little afraid. I thought you'd be angry at my slipping in here; but a girl who smiles like that isn't one to be afraid of, is she?"

Kirby's smile deepened.

"I don't think I'm very awesome," she confessed.

"You didn't look it as you lay there sleeping," said Mrs. Masterman. Her eyes clouded with tears. "You looked so like our first child, the one that we lost when she was sixteen, that —— Did you rest well? Did I wake you up? I hope not. But Laurel is wild to see the lady who's to paint her, and I was as quiet as possible ——"

"Waked up of my own sweet will," laughed Kirby. "And now I'll get up."

Mrs. Masterman backed away.

"Will you breakfast here? Or would you care to join Laurel in the breakfast room? She isn't well, and she doesn't rise as early as my husband or myself. It would give you a chance to begin studying her, and ——"

"I'd be delighted," said Kirby. "In half an hour."

And in just that time, radiant from her toilet, Kirby entered the breakfast room, where the nervous wife of the master of transportation, whose health had been wrecked by giving birth to a child in middle life, and whose child was as delicate as the plant for which she was named was not, awaited her. The introductions were speedily accomplished, and Laurel Masterman, a gentle little girl of an exquisite beauty rendered pathetic by its delicacy, gave her heart at once to the brown-haired painter. Indeed, before the breakfast was half over she announced that she loved Miss Rohan, and that the artist must write her name in the little girl's birthday book.

Only the feeling that the end justified the means, and that the work in which she was engaged, to which she had dedicated herself, as it were, held so tremendous a good as to condone a little bad, forced Kirby to inscribe the name of Adele Rohan in the book. And as she did so, she prayed fervently that the Mastermans did not, by any mishap, know the age of Adele Rohan. For Kirby had written the other woman's name on the page given over to March sixteenth, her own birthday, and gave the date of her own birth.

"And it isn't just for show—I won't forget you," promised Laurel.

At which Kirby tried to smile, but would have found it easier to weep. For, cruel though Masterman was, his wife and daughter were gentle. It was necessary for Kirby to conjure up an image of the tough little messenger boy of the previous evening, to remember the conditions which poverty created, and which bred hundreds of thousands, boys and girls, like that little tough, to corrupt the generations unborn. It was hard to have to strike at Mrs. Masterman, gentle, thoughtful, considerate; it was hard to launch a blow that would in any way at all injure little Laurel. Only the thought of what she believed to be the greater good, in whose accomplishment the innocent must suffer, prevented Kirby from seeking immediate excuses for withdrawal from her great plan.

It had been easy to picture Masterman as a sort of human devil grinding down the poor. But the way in which his little girl spoke of him, lovingly, tenderly, the pride and affection evidenced by Mrs. Masterman every time she mentioned his name—these created another Masterman, a husband and father, tender, true and strong. And if an hour of conversation with the wife and daughter of the man whom she sincerely believed to be the worst enemy to enlightened progress in the world could make her resolution waver, what would two weeks do? She must steel her heart; she must nerve herself to go ahead with what she had planned.

"And though ignorant and jealous people try to decry him, he's one of the greatest men that ever lived," Mrs. Masterman was saying.

"Think what he's done for the country; how he's labored that transportation might be better, that businesses might be combined, that waste might be avoided. And how generous! Millions he's given to different charities and institutions of learning. And to-day—why, he's caused his road to issue universal transfers! I shouldn't wonder if the city lines all over the country were forced to follow his lead. It's a great thing. The papers—would you like to see what they say about him?"

Kirby would; and a servant brought sheafs of the morning editions. She glanced at them all, and learned enough to know that Martin Masterman, by many editors at least, was considered a great public benefactor. The public would probably praise Masterman. She hid a smile as she thought of how unwelcome all this praise must be to Masterman; how at this moment his detectives were scouring the city for her, who had forced him to pose as a public benefactor. She read the Citizen, and smiled again to see how far astray the shrewd reasoning of Jackson was. But it gave her food for thought. She must be careful not to give Masterman a chance to further enrich himself by short selling. He'd not had opportunity to do it this time, but he might next. And now she asked herself what her next demand should be. Whatever it might be, it must be made quickly. She had eluded the financier's detectives, but Adele Rohan would be here in a few weeks. Before that time she must have compelled the financier to do many things.

A servant entered.

"A telephone for Miss Rohan."

She followed him to the hall, where, in a little room partitioned off for privacy, was the telephone.

HUDSON SUPER-SIX

Swung the Pendulum

BACK TO SIXES

Up to showtime last year it seemed to most insiders that the Six was doomed. It had too great a limitation. It retained too much vibration. It seemed that all Six makers must follow the makers who adopted multi-cylinder types. But mark how that trend has changed. The Super-Six dominates now.

Again and again motor engineers have arrived at what seemed to them a permanent type.

Again and again some added efficiency has thrown their favorite type into the background.

Thus motors progressed from one cylinder to Six. And then to the light-weight Six. That held supremacy so long that it seemed to many the permanent type.

But It Wasn't The Ultimate

Hudson stood foremost in the Light Six field. So we, better than others, knew that type's limitations. We knew that vibration was far from eliminated. That friction and wear sacrificed too much endurance.

And we, among the first, sought a way to betterment in V-type Eights and Twelves.

But, during our experiments, Hudson engineers found a way to correct the Six. They evolved an invention, now controlled by our patents, which added 80 per cent to the Six-type efficiency. That is, to its power and especially endurance.

Tests made in our factory proved that no other type compared with this Super-Six. So we abandoned all others—Sixes, Eights and Twelves—and committed the Hudson to this.

The Showtime Sensation

At last year's Shows the Super-Six was the center of attraction. Our Claims—based on shop and laboratory tests and on speedway tests—then seemed too good to be true. But the records were official. And from that day to this the Super-Six has held the ruling place.

Proof Upon Proof

In the past year, in a hundred tests, the Super-Six has proved its supremacy. It has won all the worthwhile records. Again and again it broke all stock-car records for speed, for hill-climbing, for quick pick-up.

And above all it showed an endurance never before thought possible in a motor car. In the 24-hour test it broke all records by 52 per cent. It twice broke all trans-continental records in one round trip from San Francisco to New York and back. It won the Pike's Peak hill-climb record against 20 competitors—the world's greatest event of its kind.

In one year it won 25,000 enthusiastic owners. It became the largest selling front-rank car. And numerous makers, finding V-type motors so far outmatched, quit them and went back to Sixes.

The Super-Six Will Stay

All evidence now marks the Super-Six as the true permanent type. It comes very close to perfection.

The Super-Six is not like old-type Sixes. The Six limitations are what forced this invention. The vital feature which redeemed the Six is controlled by Hudson patents.

Many men, delayed in getting a Super-Six, have turned to other Sixes. Many have since regretted they did not wait for the Super-Six. There is no relation between the Super-Six and other Sixes. Its performance, and especially endurance and smoothness, is greater even than that between a four and an ordinary Six.

Now we have added a gasoline saver which means to the Hudson owner tremendous economy. And now we have brought all Hudson bodies up to the Super-Six standard. You never have seen more exquisite creations.

If you want the greatest car built, regardless of price, it must be a Super-Six. Any Hudson display—and a half-hour's test—will convince you of that fact.

BRASCOLITE

TRADE MARK REGISTERED

WHEN you buy the Brascolite you're buying better illumination—not just fixtures. The fixture designs are there—beauty, variety and adaptability to all tastes and decorative schemes; but primarily the Brascolite is designed to answer your *real* object in putting in a lighting system—the dissemination of maximum illumination with a minimum consumption of current. And the light itself is *right*—broadly diffused, soft and white. As closely as the phonograph reproduces the human voice the Brascolite simulates the light of day.

Best Suited to Eye Health and Comfort—Because

the design is scientifically correct. The glass bowl softens and diffuses the lamp rays and disposes of glare. The flat, depolished reflector dispenses the lamp rays which are reflected upward from the bowl and softens and deflects them to the broad area to be illuminated.

Maximum Illumination for Minimum Current Consumption—Because

there's practically no waste. There is a minimum amount of lamp ray absorbed by either bowl or reflector—practically all rays produce illumination *in the right place*. Also—as the Brascolite carries its own ceiling (the flat, depolished reflecting plane) it is independent of the height, finish, smoothness and color of the natural ceiling and walls of the room to be lighted. Other systems must depend upon these factors for furnishing their reflecting planes.

This all means that to light a given area fewer units (or lamps) are required. Fewer lamps mean lessened current consumption. Therefore,

We Guarantee You Better Illumination and Greater Economy in Current and Maintenance

Another point in economy—Brascolite is adapted to the use of gas-filled, high candle power lamps of low watt consumption. Watts measure current—that's what you pay for.

Ask your local dealer to demonstrate Brascolite efficiency to you. Make sure of getting the genuine. Do not be deceived by fixtures designed to look, at a glance, like Brascolites. Being unable to duplicate the Brascolite constructive principle, they've tried to imitate its appearance—but *none* can duplicate its efficiency. Look for the name stamped on edge of bowl and inner surface of the fixture.

Write us for portfolio containing photographic reproductions of many kinds of installations—explains the Brascolite principle and illustrates the infinite variety of designs.

(Continued from Page 54)

"Miss Rohan?" It was Grant's voice.

"Yes."

She could almost hear him sigh with relief.

"All right?"

"All right. And you?"

"Same here. When can I see you?"

She thought a moment.

"I'll have to do some shopping. The art department of Lacy's in an hour. And be careful," she added softly.

"I understand. Good-by."

He rang off. Trembling a little, Kirby rejoined Mrs. Masterman and Laurel in the breakfast room.

"Your friends, I suppose, will make so many demands upon you," said Mrs. Masterman with a tinge of regret in her voice, "that I don't suppose we'll see much of you outside of business hours?"

"And I want Miss Rohan lots," announced Laurel. "I want her to begin painting me to-day."

"Oh, but I didn't bring anything with me," smiled Kirby. "I have to shop for brushes, palettes, paints ——"

"When you accepted my husband's offer he commissioned an art dealer to turn the playroom into a studio," said Mrs. Masterman. "There is everything there—everything an artist could possibly need. My husband said so."

"That was kind of him," said Kirby. "But still, you don't understand artists, I'm afraid, Mrs. Masterman. Not my kind, anyway. Before I paint a portrait I must study my subject; it's character, not mere feature, that I try to place on the canvas. I won't start painting for several days."

"Oh," said Laurel disappointedly. "But you're going to study me? How lovely! And I'll be my goodest good for you. Won't you come now and see the studio?"

Kirby naturally was in a fever of impatience to see Dick. Finally she convinced the mother and daughter, against their reluctant wills, that she was not only in lack of certain things which she could not permit their courtesy to supply, but was also a bit worn out.

"Of course! Three days on a train. You simply mustn't work for several days."

She ordered a car for the girl and, shortly before the time agreed upon, Kirby entered the art department of Lacy's. She had refused the proffered services of Mrs. Masterman's maid, and so was alone. Dick was waiting for her. Their hands met, and they sat down on a seat near the door.

"Well," he asked excitedly, "have you seen the papers?"

"I have. We've won!"

"The first battle. And you're perfectly safe, you feel?"

"So safe that I'm ashamed! Dick, it doesn't seem fair or right! Mrs. Masterman and her dear little girl—why should we have to strike the innocent with the guilty?" He smiled.

"I hardly think we'll deprive them of a single automobile, Kirby. We aren't going to make Masterman restore his fortune to the people, you know. We're simply going to cinch things so that other fortunes like his can't spring into existence again. What's the matter—weakening?"

"Not at all," she answered; "but I hate deceit. And I'm playing a deceitful part, that's all. But still—where did you spend the night, Dick?"

"A hotel off the Square. Easy for me, hard for you. You're certain that there's no suspicion? You haven't been followed?"

"That's why I hate it. They accept me so trustfully for what I profess to be."

"Has Masterman seen you?"

"Not yet; but he's to dine at home to-night, and—but I'm not afraid of him. It's the deceiving his wife, poor, nervous little woman. And his daughter; I almost love her already, Dick. To think that she'll learn ——" Her mouth hardened. "War isn't a path of roses, is it? But we must decide what to do next. I don't know enough about conditions. I can see things that are wrong and should be righted, but I want to right them right! Have you made any plans?"

"You haven't commented on my haggard appearance," he said aggrievedly.

"You are tired," she said quickly. "Poor Dick!" She squeezed his hand surreptitiously, and a smile chased away the lines of weariness on his face.

"Perfectly well now," he said. "Planned? Well, rather! I've been up all night planning. I'm more eager than you know, I fear, Kirby. Do you realize, girl? Yesterday we were excited. We said and did things in a haphazard fashion. But now I've a night of thought behind me, a night of planning, a night of work! Kirby, we're going to make Masterman, Blaisdell, Cardigan, and those allied with them, restore to the people that which they have taken. We've begun a little on transportation; we'll go further. And we'll start on foodstuffs; on coal. Listen!"

He drew a piece of foolscap from his pocket.

"Typewrote it in a hotel before you were up," he said. "Here are the demands we make of Masterman: First, a flat passenger rate of one cent a mile on every road he controls. Of course, where commutation tickets are less than that, the commutation rate to stand. A reduction of twenty-five per cent on every freight schedule. An increase of wages of thirty per cent to every man employed on those railroads. That will do for Masterman—for the present.

"Cardigan: Coal to be reduced to four dollars a ton to the householder—at once! Wages in the mines to be increased one hundred per cent—at once!

"Blaisdell: The price of all meats and of other foodstuffs prepared by concerns under his control to be reduced one-half. Wages paid by him to be increased forty per cent—at once! There, what do you think of that?"

She frowned.

"Isn't it a bit too radical, Dick? Won't their businesses fail?"

"Exactly! And then the Government can buy them in. The Government isn't going to have its eyes closed while these things are happening. The Government will step in when these great concerns show signs of bankruptcy. We'll give the Government the tip; we'll—Kirby, a government is as successful as its citizens, and no more so. And a government can't be successful when its citizens are hungry, ill clothed, badly housed, as hundreds of thousands are to-day in this country. We're going to make anew this country. We've started already. Early this morning I mailed this list of first things to Masterman; this is a carbon I have here. I gave him forty-eight hours in which to put these plans into effect. If he doesn't ——"

"Dick, would we really, do you think, publish this paper?"

"I haven't thought of that contingency," he said. "The rich are cowards; wealth makes them so. Fear of what we can do will drive Masterman and his gang. Kirby, we've won! For as soon as these things go into effect the war is over. Masterman and his crowd will never go back to the old order. The people will never let them."

"But you gave them forty-eight hours. The Citizen this morning claims that Masterman has been selling short. You and I know differently; but can't they sell short now and reap colossal profits?"

"It's too big a thing," said Dick. "If the stockholders of all the concerns to be affected by our demands learned that Masterman and his associates had been selling short, they would think the whole change a mere gambler's trick, and murder would follow. It surely would, Kirby, and Masterman has sense enough to know it. He'll take no chances of that. He would dare trim a thousand people, twenty thousand, but not half a million. He'll reap no profit."

Kirby rose.

"You'll call me up on the telephone each day, Dick? And how long shall I have to play this hateful part?"

"A couple of days, that's all. It's only that you may be safe. For Kirby, if you are found and your safety threatened, I'd give up the whole business."

"And I too," she confessed. "It's wrong to place one above the many; but that's love, isn't it, Dick?"

"It surely is—with me, at any rate," he told her. "But the whole thing will be over soon. Then with Masterman involved so that he cannot retreat, we won't care if he knows our identity."

"I will," said Kirby. "His wife and child—oh, well, good-by, Dick. And phone me."

There was not even opportunity for a stolen kiss. They dared not be seen on the street together. They were not really safe even here. Someone might see them. Some Greenham operative might be buying a present for his wife. They separated and went in opposite directions.

Downtown Martin Masterman, Cardigan and Blaisdell looked into the grinning face of ruin.

Best and Cheapest Service in the World

Here are some comparisons of telephone conditions in Europe and the United States just before the war.

Here we have:

Continuous service in practically all exchanges, so that the telephone is available day and night.

A telephone to one person in ten.

3,000,000 miles of interurban or long-distance wires.

Prompt connections, the speed of answer in principal cities averaging about 3½ seconds.

Lines provided to give immediate toll and long-distance service.

In Europe:

Nine-tenths of the exchanges are closed at night, and in many cases, at mealtime.

Not one person in a hundred has a telephone.

Not one-eighth as many miles in proportion to population and territory.

In the principal cities, it takes more than twice as long for the operator to answer.

No such provision made. Telephone users are expected to await their turn.

As to cost, long-distance service such as we have here was not to be had in Europe, even before the war, at any price. And exchange service in Europe, despite its inferior quality, costs more in actual money than here.

Bell Service is the criterion for all the world, and the Bell organization is the most economical as well as the most efficient servant of the people.

DOUBTFUL DOLLARS

(Continued from Page 7)

"Well, I should hope not!" Harold ejaculated. "To one of your artistic temperament it is only with the greatest condescension that you tackle flats and public buildings; but of course you've got to make 'em pay a whopping big fee to soothe your feelings. I wish you'd cut out the sob stuff. Everything's going better than I expected. If we'd confessed at once that dad's million was all a pipe dream, you and I would be borrowing money to pay our office rent; as it is, people think we don't need business and are simply throwing jobs at us. I kept the general counsel for the W. K. & S. cooling his heels in my outer office for an hour this morning. He dropped down from Chicago to persuade me to undertake a condemnation proceeding to get more switching room for their yards. Father always represented them here when they had anything too big for the local attorneys they keep busy fighting damage suits. That job will be worth five—maybe ten thousand dollars. If we were paupers, do you think he'd have come to me? Not on your life!"

Darting into the club for a hurried luncheon, Reggie was appalled, a week later, to find Harold there, with the Reverend Edgar Paulding Fleming. The two were seated at a table in the bay window of the dining room. Reggie saw at a glance that they were lingering over a luncheon which had taxed the resources of the club kitchen. If he had needed further proof of his brother's insanity it was amply provided by this wholly unnecessary social attention to the penniless clergyman Mildred had threatened to marry. He stole into one of the card rooms, had a glass of milk and a sandwich brought to him there, and sent a card to Harold demanding an interview at the earliest moment possible. Thereafter he paced the floor, and as Harold seemed in no haste to leave his guest, Reggie covered several miles before his brother appeared.

"This can't go on; it's got to stop right here!" Reggie declared as he locked the door. "I tell you we're headed for the penitentiary if the lunatic asylum doesn't get us first. If you're going to encourage that young pauper to marry Mildred, so that we'll have to support 'em both for the rest of our days, I'm done! I quit right now! I'm going over to the bank and tell what you're doing; I'm going to ——"

His mind was evidently not clear as to the alternative terminus, for he ceased abruptly as Harold yawned and picked up a pack of cards which he began to shuffle languidly.

"If you're out of gas, sonny, I'll bring you up to date in the matter of Mildred's suitor. I don't want you to think I've been asleep. The Hornbrooks are not doing as well as I thought they were. In fact, their company's about to issue some preferred stock, which doesn't have a healthy look in so old a concern. With only a million dollars in our family, I don't think we want to take on a brother-in-law whose financial soundness is at all questionable. Much as I like Bob Hornbrook, we simply mustn't take a chance on him. As soon as Mildred sprang Fleming on us I got busy looking up his family connections and previous condition of servitude. A little Sherlocking brought me the cheering information that he has a rich uncle in Boston. This old boy put Fleming through college, then chucked him because he wanted to tackle the ministry; the aforesaid uncle wanted to put him in a stocking factory—less spiritual but more profitable. It's certainly to Fleming's credit that he carried himself without help through the theological seminary. I sounded our bishop yesterday and he told me Fleming's sure to go to the top. Delegation from a big Pittsburgh church has been here taking a look at Fleming and were most favorably impressed. So it doesn't look so bad, brother."

Reggie snatched the cards which Harold was laying out for a game of solitaire and flung them across the room.

"You fool!" he shouted, pointing a quivering finger at Harold. "You have the nerve to tote that fellow to the club and throw expensive food into him, just to encourage his attentions? Look here, Harold, I've stood a good deal, but this is too much. It's all off. I'm done with this whole business. But I want you to remember ——"

"Cut the long farewell stuff, Reggie. I tell you I know what I'm doing. Fleming came to me like a man and said he wanted to marry Mildred—I being the older brother and the head of the house. That was at the office yesterday. A straightforward, manly chap; I've taken a real shine to him. He told me all about himself, his break with his uncle and his own hopes, and so on. He said he knew a poor man in his profession oughtn't to marry a girl who had been brought up in luxury; he felt a delicacy about asking a rich girl to marry him. He was mighty humble before Mildred's quarter of a million."

Reggie groaned and buried his face in his hands.

"But Fleming had written to Uncle Ellery to ask his advice and incidentally his forgiveness. Fleming is a much cleverer man than we've given him credit for, Reggie. Well, he showed me the old man's letter. It confirmed the opinion I had formed of him from letters I got from people I know at the home of the sacred cod. A rather tart, cynical, old party—the type of Bostonian you see in exclusive Boston clubs; nothing to do but complain of the club ventilation and sneak down to a bank every little while and clip the merry coupon for exercise. Otherwise they fight the gout and read Thackeray—nothing later unless somebody writes a new life of John Quincy Adams. An interesting type, Reggie. I know Fleming's uncle as intimately as though I'd gone to school with him. Well, when Fleming came to me yesterday like the good chap he is, to ask our sister's hand in marriage, he showed me a letter he had just got from Uncle Ellery. What he wrote was this—I committed it to memory while Fleming was bragging about Mildred:

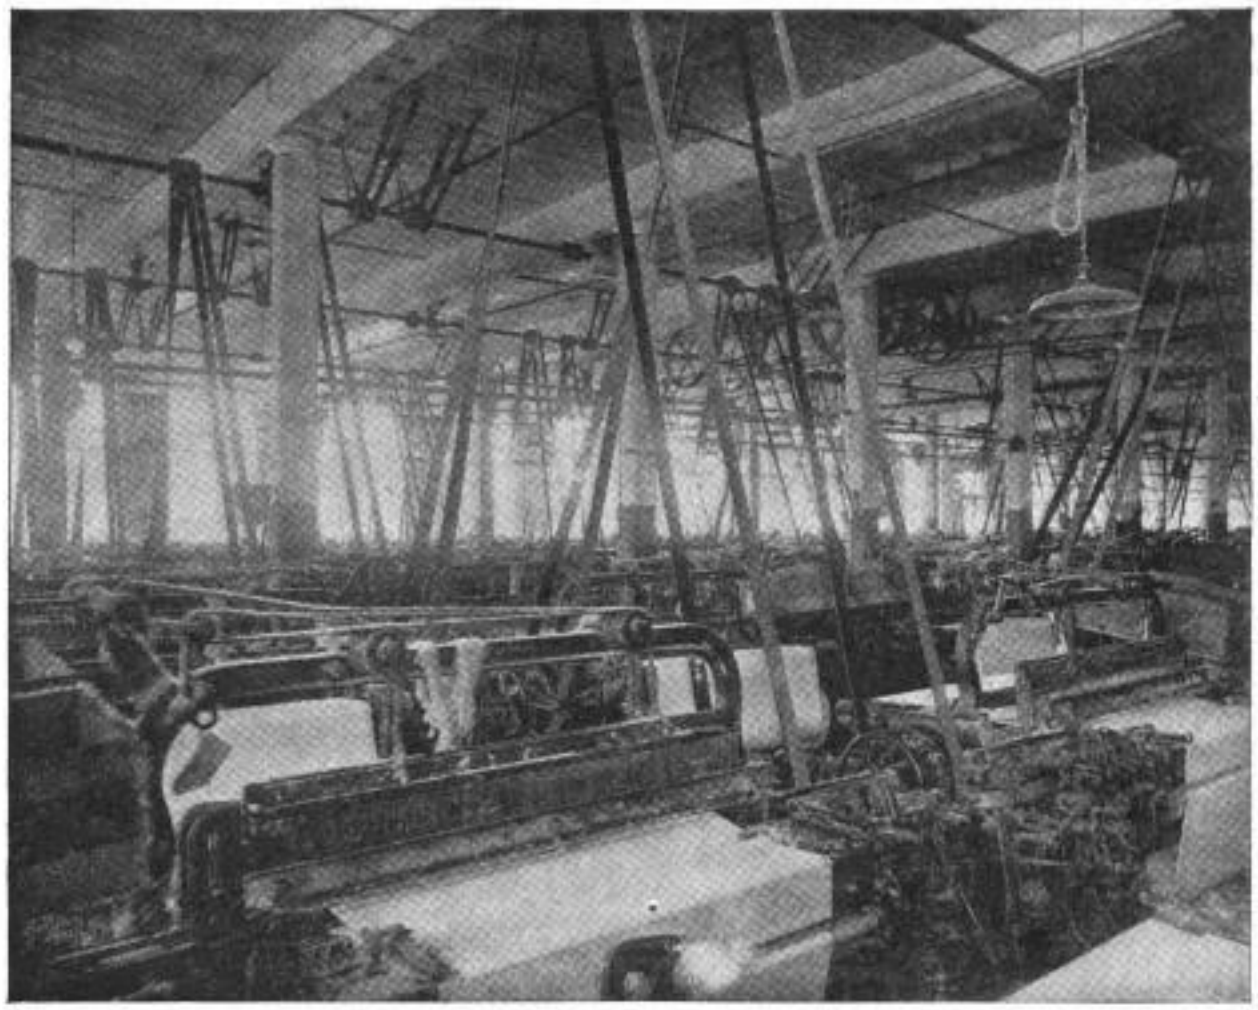
"'*My dear Nephew:* If you've found a girl with a quarter of a million dollars who's willing to marry you, you must have improved a good deal since our last meeting. I'm getting on in years, and while you've been a sad disappointment to me I'm not unmindful of the fact that you are the son of my only sister and the last of the line. Pray convey my compliments to Miss Raymond! I remember a speech her father made at a dinner of the Puritan Club here ten years ago. It was admirable in every way. I have deposited one hundred thousand dollars in securities to your account with Briggs, Marin & Co., and am inclosing a draft for one thousand dollars, as a further token of my regard.

"'Affectionately yours,
"'ELLERY E. WAYBURN.'

"What do you think of that, my dear, doubting brother? You'll go on talking about my insanity and lack of moral sense, will you? I tell you the position I took the day we found father had died broke was unassailable. We never stood to lose! There's just one little rift in the lute and I'm hoping to patch that up. They've sprung father's subscription for stock in that Murtrie gasoline engine the papers were full of a couple of years ago. The engine was good, but not what was claimed for it, and dad refused to pay. Parker sold some of the stock, but, like everything else he and Cummings handled, it came to nothing, though it made a neat approach shot to the grand jury. A chap named Anderson came to see me a week ago with the subscription paper, and tried to convince me that he had a valid claim against the estate."

"Don't tell me—don't tell me you're going to recognize any claim of that sort!" moaned Reggie. "It was bad enough paying five thousand you didn't have for that hospital, just as a matter of protecting father's honor; but this, really this ——"

Harold snapped his cigarette case, dropped it carelessly into his pocket, and smiled patronizingly at his brother.



"I've compromised with Anderson and paid him fifty cents a share for a block of twenty thousand, giving my personal note for it. It never rains but it pours, Reggie. About a week before Anderson tackled me, Murtrie, the inventor of the engine, came to see me. It seems that this man Anderson organized the company, with every ignoble intention of freezing Murtrie out of it as soon as he got it going. Murtrie is a nice old chap and not as big a fool as he looks. By a stroke of inspiration he's got a new twist on his engine, which puts the original on the scrap heap. He didn't know about dad's subscription—just came to me on the strength of my growing reputation, and wanted my advice about getting hold of his original patents, which Anderson got him to

Why has it taken some manufacturers thirty years to discover that the best Belting Material does *not* grow on a cow?

An outlay of Ten Dollars on scientific belting often shows the way to the saving of Hundreds!

Two thousand belts in this plant. Suppose they should all quit at once!

ALEXANDER T. STEWART used to say that the average merchant is just *average* because the *little things* mean nothing to him. He must have a fire or a strike or a war to jolt him out of the habit of letting well enough alone.

* * * *

There are over eighty thousand manufacturers in the United States and Canada whose machinery is dependent upon belting for power transmission.

Single plants use anywhere from ten to ten thousand belts.

Eighty per cent. of these belts cost on an average less than ten dollars apiece.

Slipshod performance and short life in an *individual belt* seem of small importance—but if each belt cost one thousand dollars or if all the belts in the plant should give out at once, there would long ago have been a great cry from manufacturers for a belt at once *scientifically constructed* and at a *cost relative to its service* and not based on the market price of hides.

* * * *

For thirty-five years Leviathan-Anaconda has had *built* into it the things which practical men have recognized as needful to make belting a *dependable* and *scientific success*.

Leviathan-Anaconda belts are made in various ply of solid fabric, impregnated with special compound, so treated, stretched and aged as to produce a strong pliable belting, well nigh indestructible.

The *processing* of Leviathan-Anaconda is not a matter of surface only—it is *through and through*. Leviathan-Anaconda performance is dependable down to the *last ply of fabric*.

* * * *

More money will be paid out in dividends in January, 1917, than in any previous month in American history.

In eight thousand plants now using Leviathan-Anaconda, a proportion of such dividends will be directly due to the savings effected by the use of these belts because of their *low cost* and the quality of their *performance*.

Many business concerns think they can solve their belting problem by signing a contract with somebody. That is on a par with the idea that you can give a community morals by legislation—or that a man pays his bills when he signs a note for the amount of them.

The way to settle the belt question for your factory, whether it be large or small, is to *select one position and try a Leviathan or Anaconda belt on it*. Then watch it work. Many factories have tried this plan. In over ninety per cent. of them the *test cost less than ten dollars*.

* * * *

Leviathan-Anaconda is not sold by the yard—it is sold as a cost-reducing service. Therefore it is sold direct to the user.

The men who represent it are specialists in laying out scientific transmission. Their services are available to the engineer of any factory in the United States or Canada.

You must *know conditions* in order to meet them. Our special charts show how to keep transmission, conveying and elevating costs in your own plant. We send these without charge. Our book about belts is a valuable addition to any engineer's library.

Discard Every Wasteful Carbon Lamp for Sunlight's Only Rival

THE Power House can give you *all* the light you want, but the socket *only* as much as the lamp you put in it.

If, in your sockets you have old-style carbon lamps, replace them with EDISON MAZDA and enjoy *three times as much light*, and a finer, brighter, whiter light too, without increasing your current bills one cent.

Because carbon lamps can only give a limited amount of light; —because if you want MORE light with them you must use MORE of them and spend MORE for current; it is both to your pleasure and your *profit* to put in every socket the modern lamps of bright white brilliance, the lamps of economy, EDISON MAZDA.

In usual household and office sizes, EDISON MAZDA Lamps cost 27c. each: for convenience they come packed five-in-a-row in handy cartons. You can get them individually if you wish, of your lighting company or nearest MAZDA Agent.

TOP NOTCH
BEACON FALLS
RUBBER FOOTWEAR

Top Notch rubbers and arctics are different from any other rubbers made. Not only are they remarkably stylish, fine-fitting and beautifully finished—but they combine lightness and beauty of line with exceptionally long wear.

Most rubbers break through at the heel long before the rest of the rubber is worn out. But the patent Clincher Cushion heels of Top Notch rubbers, upon which Uncle Sam gave us a patent, **wear as long as the soles.** They are balanced rubbers—reinforced and strengthened at every point of wear to give long service.

WOMEN'S CUPID
A very stylish rubber for high heel shoes.

Try on a pair of Top Notch rubbers and see how snug they fit—how small they make your feet look. Their style and fit, combined with their great durability, make them the most economical and satisfying rubbers you can buy.

Write for our money-saving illustrated booklet "L" and the name of the Top Notch dealer in your town.

assign to the corporation. The assignment covered all future improvements in strictly legal form.

"Anderson thinks the scheme's dead and is chortling over blackmailing me out of ten thousand dollars. He doesn't know about Murtrie's improvements, or that he's been down to New York and had a firm of engineering experts pass on the new idea. It's a big thing, brother, a mighty big thing. The engineers wired the old man to-day that they've started West with one of the biggest men in the automobile game. They're on the train right now headed this way." Harold leaned forward and patted Reggie's knee. "My dear boy, things are simply blowing into the window for us. We're not going to lose a chance of planting ourselves firmly on the bed rock of prosperity while the million lasts. And now I want you to run back to your office and figure a few thousand feet of additional radiation into the specifications for heating the courthouse."

"More radiation! There's enough provided for now to keep that building red hot at the North Pole."

"But that isn't enough!" replied Harold from the door. "Connor's got a steamfitter friend he's going to throw the heating contract to, and he wants to sugar it for all it's worth. Don't look at me that way, Reggie! It isn't your morality that's involved; it's the low tone of our politics that puts power into the hands of Connor and his rotten commissioners. It's the apathy of the electorate, our dear fellow citizens, that's responsible for a condition that makes it possible for Connor to adopt your oft-rejected plans and hand the contracts to the highest bidder. You are perfectly innocent in the matter, my boy. You'll have to excuse me now, as I've got to go over and see what sister Dot is doing to aid the family fortunes."

When Harold reached the offices of Cummings & Raymond, dealers in investment securities, he found the firm engaged in the pleasant pastime of cleaning out the safe.

"You know," said Dorothy, rising to greet her brother, "we're going to make a specialty of serving tea in the ladies' room, and we haven't any place to keep the tea service, so we thought we'd clean out the rubbish and use the safe."

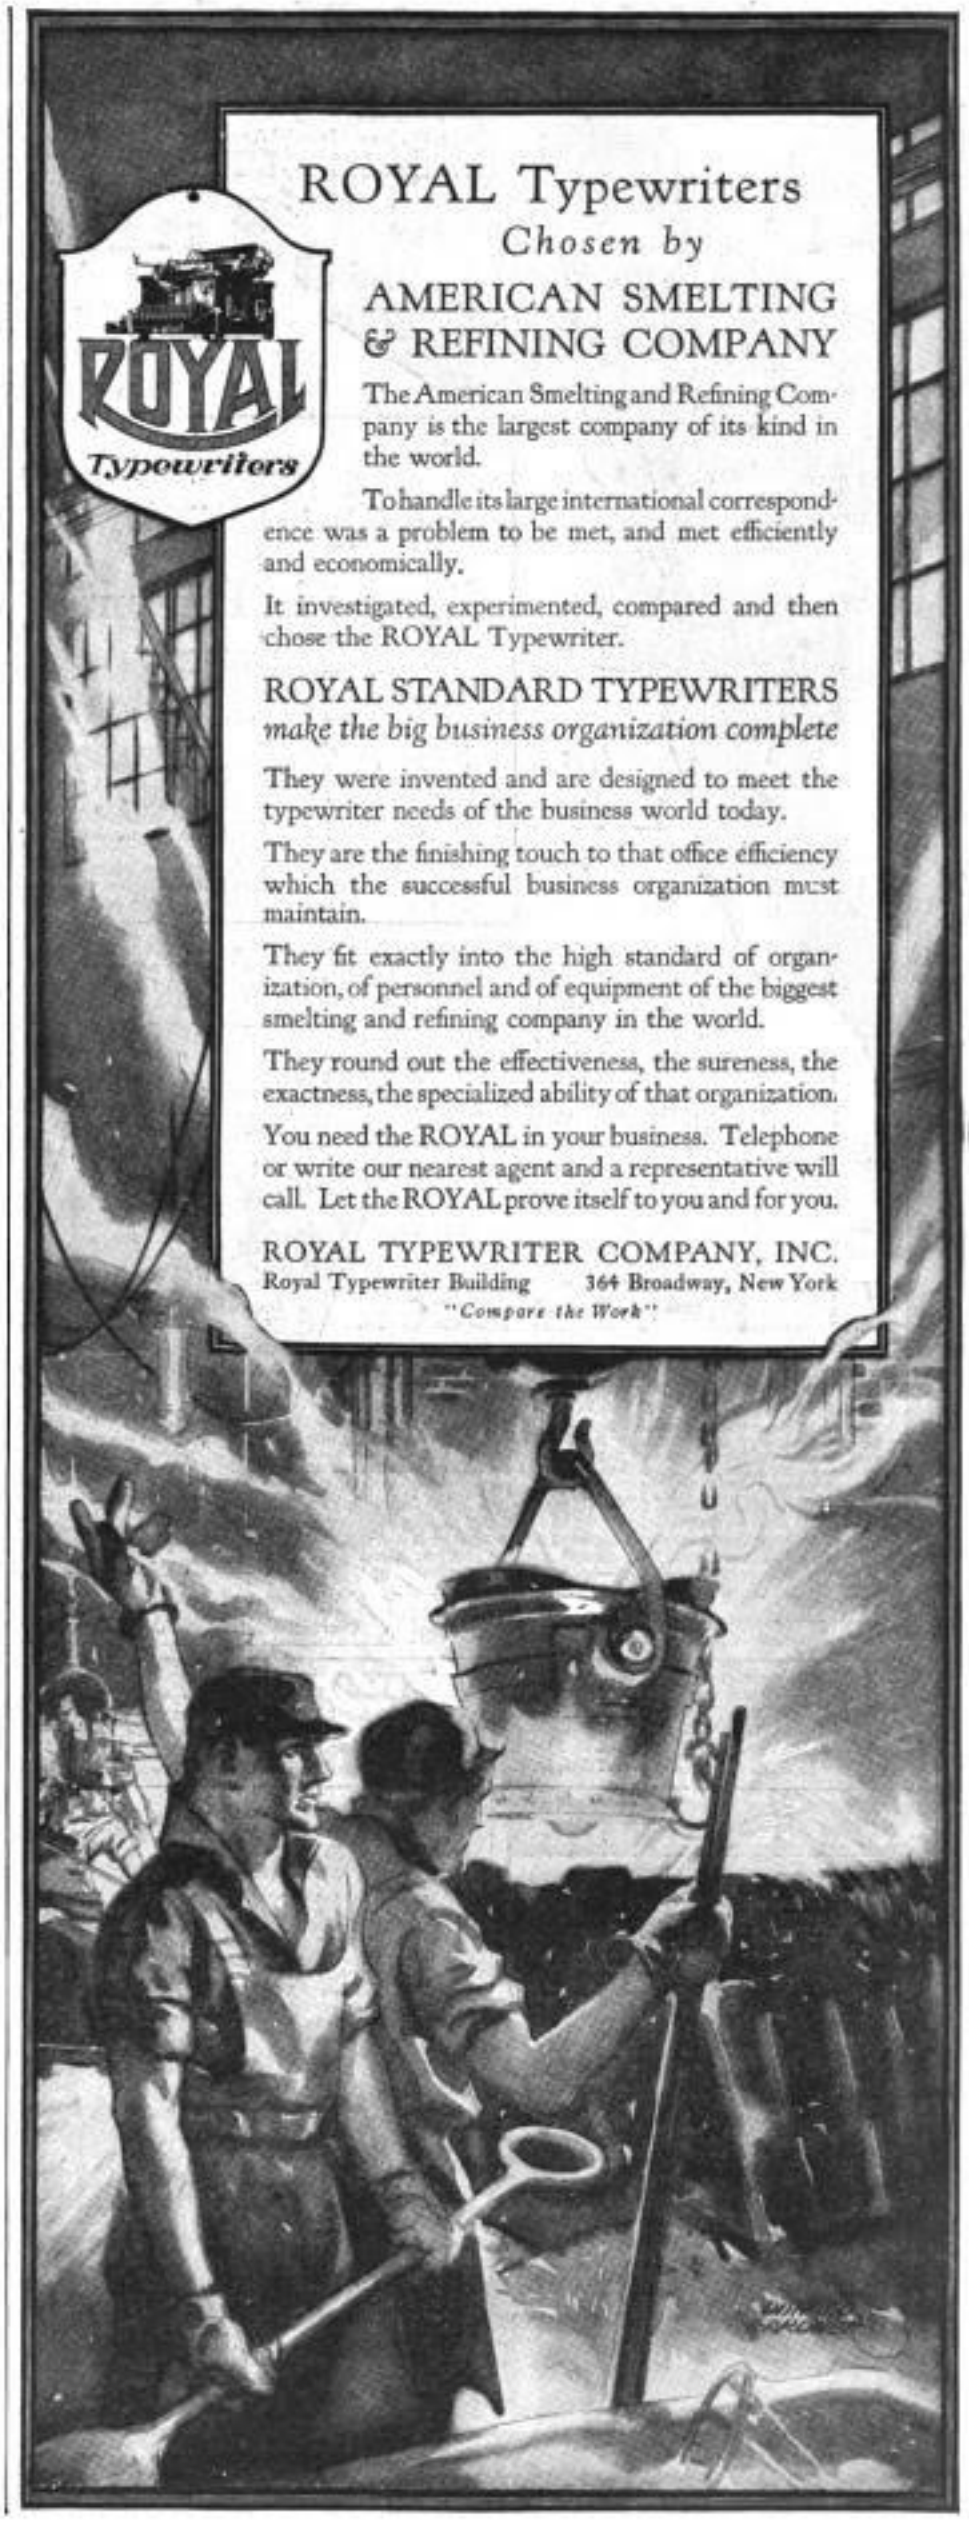
"Admirable!" cried Harold approvingly as he surveyed an array of papers and account books heaped on the floor. "I was going to suggest that you keep the office canary in the safe, but it's much better to use it for the tea service. How's the firm coming on?"

"Oh, we've sold a bond! Esther White came in this morning with a thousand dollars her father had given her for a birthday present, and we sold her a traction bond. We lost ten dollars on it, but Nellie thought we'd better sell it a little below the market. Didn't you, Nellie?"

"Well," Miss Cummings explained, "Esther's father has heaps of money to invest, and if she tells him that we're selling cheaper than other brokers he's likely to bring his business to us."

"That's perfectly sound," Harold acquiesced. "If you trim the market price a trifle, you can't fail to get the accounts of cautious investors like White, who are always looking for bargains. The only trouble is you may start a bear movement in traction and precipitate a panic. Let's see what you're chucking here."

He bent down and began poking over the litter from the safe. There were stock books of half a dozen defunct corporations, which had been promoted by the late firm of Parker & Cummings, and detached shares in all manner of organizations that had died in their incipiency.



"Girls, you mustn't let the janitor have this stuff; at the present price of paper you must not overlook the rag man. Well, well, well!"

He sank upon the floor, inspecting with deep absorption a packet of certificates fastened together by a rubber band.

"Thirty thousand shares! Thirty thousand! Girls, run and make the kettle boil! Dot, lock the door—lock all the doors!"

"Of course, if those things are of any use we'll have to tell Mr. Parker about it," remarked Dorothy as Harold began folding up the certificates. "That would only be fair!"

"Not at all," remarked Harold with an indulgent smile. "Parker thought he'd sold you a solid gold brick when you bought him out, and his bill of sale covered everything in the office. And, besides, he's

Stop Hitting at Nothing!

Some men are like a shotgun that scatters without much force in any one spot. Others are like the rifle that sends the bullet straight to the bull's-eye. How about you?

Herbert P. Mee, Material Accountant of the Southern Pacific Railroad, aimed at nothing and hit it—*until*—but let him tell his story himself:

His Letter

"Like most people, I was a drifter, admiring success, weakly wishing for better things to come, with no conception of what those better things were or how to proceed to get them.

"I aimed at nothing and hit it.

"I performed each task that presented itself, did it fairly well and then lay back awaiting the next task, using the spare time to build castles in Spain.

"Paragraph One, Lesson One, of your

Course in Personal Efficiency

started me to thinking. If the Course had done nothing else for me than this it was well worth the price paid. But it did more.

"As an immediate benefit, I have an increased capacity for work which my superiors were not slow to recognize, so that for the most part I am relieved of my old duties and assigned to much more important work.

"Young people who wish to get ahead, but don't know the why, the how or the way, can get the information very cheaply through this Course.

"Old people, given over to pessimism, loss of interest, and with apparently weakened vitality and enthusiasm, will get the jolt of their life reading the Course through but once."

Is it Skill you want? Efficiency taught the U. S. Navy to shoot 1200 times as well today as at Santiago. Is it Money? Efficiency brought a great western railroad a million and a half in one year. Is it Economy? A California state official saved $2100 on one job after he had his third lesson of this course. Is it Education? A prominent man of Louisville, Ky., got his first big step that way from the first lesson of this course.

Harrington Emerson acquired in practical work with many corporations the knowledge and experience that enabled him to write this course. He is still the president of an Efficiency Company directing efficiency work in a number of corporations. In his week he had to teach and train many young men, some of whom today hold highly paid positions. He has thought efficiency for forty years; he has taught it for thirty years; during twenty years he slowly collected the data for this course. You can learn from the lessons of this course how you can save an hour, two hours, a dollar, two dollars, out of each day and how you can make the day a better day at the same time. You can study this course and make yourself efficient in your own life in 15 minutes a day and for little more than a dollar a lesson.

FREE—This Book

14 Chapters—In Colors—Illustrated

Send for this book. It contains the answer to the ever-present question of "Where's the money coming from?" Some of the chapters:

What is Efficiency? For whom is Efficiency? How you are taught Efficiency. Are you ear-minded or eye-minded? Find out what you are actually doing with your time. Most failures are due to guesswork. You use only half your power. To what do some men owe their success? Health culture. Personal finances. Mr. Emerson's message to you.

There is no standing still in life. If you're not going forward, you are going backward. If Efficiency doesn't grow on you, inefficiency will. This course will send you forward to your goal—it will put you on the shortest, quickest, easiest road to success. Send the coupon for information now—today. It costs you nothing and may be the biggest thing you ever did in your life.

discounted your note and left for parts unknown and a thousand sleuths couldn't find him. He shrewdly surmised that, as soon as you found out you'd been stung, you'd be terribly peeved and ring up the police. These shares of the Murtrie Manufacturing Company are going to par—they'll go away above par. Look through all the books in the office and see who the suckers were your predecessors in business snared on that stock! We want to get all there is in sight. The Murtrie engine is going to be the only one you'll hear about for the rest of your lives. We'll make that engine right here in town and double the population. Yes, lemon, Nellie; I never cared much for canned cream. By the way, your idea of running your advertisement on the woman's page of the Journal strikes me as admirable. They ran it right next to Antoinette's Beauty Hints this morning."

"Don't you think we ought to have a private wire?" asked Nellie as he took his cup. "All the big brokers have one."

"Well, I'm rather against it," replied Harold after an instant's pause. "It would give a vulgar commercial tone to your office. You need a smart boy to guard the door and you can have him sneak into Billings & Carter's and copy any quotations from their board that you're particularly interested in. I'd keep a domestic finish on this shop and not litter it up with telegraph instruments. Of course, as business grows and your customers bring their crocheting here on rainy afternoons, it might be well to arrange for a service covering the winter races, but you'll have to consider the moral aspects of mingling the ponies with premium bonds. Just now Murtrie is your big card. These shares are going to climb like a frightened squirrel and you're right in on the noncombustible concrete floor. This is real stuff, girls; there's no fake about it."

"Mr. Murtrie used to come to our house at all hours to see father, and nearly drove him crazy," said Nellie. "He had funny whiskers and never wore any collar."

"Thank you for mentioning that," said Harold. "I'm going to doll him up so he'll take an impressive photograph. I want to have that all ready when we begin our publicity work. His name is going down in history with Bell and Edison—one of the world's greatest mechanical geniuses. By the way, if a chap named Anderson comes here asking if you know anything about this stock, remember that you are hard of hearing and don't tell him anything."

IV

HAROLD and Reggie rarely met. Harold was reorganizing the Murtrie Company, a task of magnitude, and had no time for family affairs. Reggie, finding his brother inaccessible, abandoned his rôle of prophet of evil and plunged into work up to his eyes. Success had exercised an exhilarating effect upon him; his ambition was aroused and he was anxious to make the most of the opportunity created by Harold's daring.

A few days before the expiration of the period for filing the inventory, he was at work on plans for the Robertson country house when Harold summoned him to his office. As he entered his brother's private room he saw at once that something was amiss. Harold sat crumpled in a chair by the window.

"Turn the bolt," he ordered gloomily.

"What's happened?" asked Reggie doggedly, placing his back against the wall.

"Uncle Walter landed in New York yesterday, got his first news of father's death, and sent a night letter of condolence which I found waiting for me here this morning. And an hour ago this blew in." He tossed Reggie a telegram that read as follows:

"Who has charge of brother's estate? Wire full information at once, as I wish to make report of securities I hold for him. Market value to-day about nine hundred thousand but properly handled will reach a million. These were investments I made for him in rubber and copper and half interest in Tin Cup Gold property in Nevada. Will come out and discuss matters with you next week."

Reggie read the telegram through twice and then lifted his eyes guardedly.

"It isn't possible—it's some kind of a fake," he whispered, turning the message over as though expecting to find support for his doubts in the printed matter on the back.

"I've been through a private letter book of dad's I'd overlooked, and it's true enough," said Harold dejectedly. "Dad kept the stuff in New York, so Uncle Walter could manage it for him. The original capital was only twenty-five thousand and dad never told us about it, knowing our capacity for blowing money."

"Then what the devil's the matter? You look as though you'd lost a million instead of finding it!"

Harold pulled his feet from the window sill and swung round upon his brother.

"It's rotten—rotten! After the start we've got, after all we've done to play up to that fake million, here's this real money coming along and spoiling it all! You and I have gone to the top in our professions in sixty days, not because we wanted to or cared, but because we had to or take the count, and now —— I tell you we can't take this money; we're ruined if we take it!"

"But it's ours—we can't just shake it," suggested Reggie.

"We're going to shake it; we've got to put it out of sight! I've thought it all out since I called you up. We'll put it through the estate in due form and give the girls their share; that's only square; but you and I, Reggie, are going to have careers! We're going to be a credit to dad! We're going to pool our two quarters and forget all about it and bone to our jobs, as though we didn't have a cent. But it's going to be hard to keep poor—that's the hell of it, Reggie. Why, we stand to make a fortune out of that Murtrie stock, to say nothing of my legitimate law practice that I'm going to freeze to like a January night. And everybody's bragging about you—you've arrived with both feet! Being rich isn't anything to being a success, Reggie. You're beginning to feel that; I can see it in your eye!"

"You're dead right," Reggie assented. "I'd hate to let go of my work now. It wouldn't be fair to the people who've trusted me with jobs!"

"Certainly not," remarked Harold. "And now that I'm up against it, with more law business than I can handle, I'm not going to let any of my clients suffer. I mean to be honest, too, Reggie; I could have skinned old man Murtrie alive, without violating professional ethics, but I'm making a rich man of him. I'm going to live up to father's reputation if it's in me to do it."

"I'm glad you feel that way," said Reggie with traces of tears in his eyes. "You'll forgive me for saying it, old man, but if you'd go in for con games—blue-sky finance and that sort of thing—you'd be a wonder. You could fool kings and emperors; money would roll uphill to meet you coming down."

"Thank you for the compliment," Harold replied, flicking a thread from his sleeve, "but there wouldn't be any fun in being a professional crook; it's too easy!"

This Test Proves RED WING is the GRAPE JUICE With the Better Flavor

EIGHTEEN women who were under the impression that there was no difference in Grape Juices, were selected to make a comparative test of Red Wing and four other leading brands.

All labels and identifying marks were removed from the bottles. Then each woman tasted the Grape Juice poured from each of the five bottles and signified which one she thought best in flavor, richness and color.

Every one of them chose Red Wing.

BUT to make the test even more conclusive, water was then added to the samples—*25 per cent more water was added to Red Wing than to the others.* Again the women were asked to signify their preference. *And again Red Wing was the choice of these eighteen women!*

Some people have the same idea regarding Grape Juice that these eighteen women had *before* making the above test. They buy Grape Juice as they buy beans. They ask for Grape Juice—that's all.

MANY haven't learned yet that Red Wing is as far superior to some grape juice as ripe grapes are to green.

Now here's another test—very, very simple—which will set anybody right on the grape-juice question:

Merely try Red Wing.

You will instantly recognize the distinctive excellence in flavor and purity.

AND besides the unquestionable quality of Red Wing, consider the economy. Red Wing will go 25 per cent farther. You can serve one-fourth more people with Red Wing and still retain the delicious flavor, the rich body and sparkling color. You'll notice the difference when you make Sherbet, Punch, Pudding or any of the many dainty Red Wing dishes.

Try Red Wing. You will appreciate the fresh-grape flavor and attractive color.

THERE is a reason for Red Wing's wonderful flavor. It is the pure, free juice—the first, light crush of the finest, select grapes grown in the famous Chautauqua Belt. It is *real* Grape Juice—unadulterated, unfermented.

Next time you buy Grape Juice remember to ask for Red Wing. Try it once and you'll buy it always.

We have a booklet of Red Wing recipes we'll be glad to send you.

It is the object of this advertisement to differentiate Mr. Edison's recent invention from any and all talking machines. There are nearly one hundred different makes or talking machines on the market. The New Edison is not a talking machine.

The pictures on this page were taken while these twenty different artists were actually singing or playing in direct comparison with the New Edison's Re-Creation of their work.

These astonishing tests are chronicled in three hundred of America's leading newspapers, which concede that an artist's performance cannot be distinguished from the New Edison's Re-Creation of it.

The NEW EDISON

is positively the only instrument which has successfully sustained the test of direct comparison with living artists. May we send you the brochure "Music's Re-Creation," and the booklet "What the Critics Say"?

THE POMEGRANATE COAT

(Continued from Page 18)

Sheer horror deprived Tommy of speech for a second.

"If you so much as set a foot—the toe of your shoe—outside this stockade, you little fool ——" he gulped.

"Oh, well, don't call me names. I won't. But, Tommy, you—you've got to come back." She was very white as she spoke.

It was only when he was well started that he remembered she had called him Tommy. Well, why not? Conventions didn't matter in a time of emotional stress like this.

It was an uneventful trip. Some young hooligans dogged him to the boat and followed him homeward, throwing refuse on his coat and offering him jibes and lewd gestures, which, remembering the president's counsel, Tommy bore, though his hand was taut on the revolver in his pocket. He panted with rage about it afterward, walking in the college yard with Margaret Irby.

"Gad, to knuckle down and swallow it all—things like that—when I could have rushed 'em down the line and cracked a few heads!"

"And what about our chances and your own? All your fine schemes—and Eloise?"

"I'm not thinking of Eloise just now," snapped Tommy, and never noticed. "I'm thinking what a fool and quitter I've been. By the Lord Harry, if we pull out of this I'm going to stick it out here—full contract—and pound some sense into their heads. I'll teach 'em if they can trifle with an American. Look at all we've done for 'em! Look at Miss Bayer and Miss Wheeler! Miss Wheeler herself nursed a lot of these cursed Afocs through the smallpox a year ago, and now every mother's son would stick us if they had the chance!"

It was the waiting that Tommy found the hardest. The settling down with an appearance of stoicism to a semblance of peaceful occupation, when the storm might break at any time. He wanted to rush out impetuously against all this Oriental stealth and indirection and strike good honest blows for independence. It galled him to wait the Oriental pleasure, to lie passive before threats, to make the rounds of their fortifications with Teevey and the other professors, and to work up their scanty sources of defense.

Perhaps he could not have borne it but for Margaret Irby. She was like a bright flame, these days—a steady, clear-headed, brave little spirit, like no one Tommy had ever known.

"Aren't you afraid?" he asked one day. "I never knew a girl like you. You know ——"

"Oh, I'm a poor sort, really," she said. "When—when the time comes—if it does—I shan't be any better than any girl. I just don't realize—and then—we've got you."

They were walking in the college yard again and the light of the gate lantern fell on her face. And Tommy saw how little and white it was for all her fine spirit, and a great wave of tenderness rose in his throat.

"Yes," he repeated, "you've got me." And he said it a second time a little unsteadily, and for a little space they were silent. Yes, those days were the worst of all. Not easy for a man of blood to attend prayers and Bible class quietly, to wind wool for Miss Bayer, to play checkers with Professor Maxwell or discuss English politics with little Doctor Ames. The only antidotes he knew were the cleansing and oiling of his automatic, recalling those bouts in the orchard back home when he and Dan Crandall had "wiped the eye" out of a postage-stamp at forty feet—it was thirty-five from the stockade gate to the college door—and eternally walking and talking with Margaret Irby in the compound.

Their taste in conversation was catholic, and Tommy never quite remembered the subjects afterward, but they were the only really peaceful moments he knew.

And one evening the waiting was ended. The jingo Teevey came into the dining room and reported that he had sneaked out as far as the Bazaar of the Purple Moon and got the latest.

Some more of the Wee Singhs had been killed and the south quarter of the town was burning. The faculty went up to a balcony and verified this. The whole sky was a lurid crimson. Teevey was almost indecent in his triumph.

"I will give ourselves just two hours," he said, looking at his gun-metal watch.

He underestimated it slightly. It was eleven when the cracked college bell sent a wailing note through the halls.

The ladies had retired to their dormitory, but now they assembled in the main corridor as instructed. They were very quiet, and at Miss Wheeler's suggestion they knelt here and Miss Bayer began to read from her Bible. Tommy caught the clear, steady drone of her voice as he went to his station.

"'The Lord is my Shepherd; I shall not want,'" he heard her reading quietly.

The gates were already guarded—Doctor Ames, Professor Teevey, and little Professor Wilson at the north gate, Professors Ralph, Van Twiller and Maxwell at the east gate. Tommy, Professor Burt and Professor Wallace took stations at upper windows, where they could look over the stockade fences and cover the approach to the gates.

The redness in the sky had been creeping nearer, and suddenly from the Bazaar of the Purple Moon a hideous stream of sound issued; a yelling, diabolic mass of human bodies. It bore straight upon them and, according to the watchers' several natures, turned their blood to flame or ice.

A shower of stones struck the north gate; a squealing, screaming cacophony rose on the air. Then came a steady thud, thud on the timbers of the gate; a flare of torches in the air. A revolver spoke from within, its cracking note snapping against the thicker sounds as little Doctor Ames fired a warning high into the air. Tommy at his station above the east gate, peeping at the orgy, felt himself go cold.

"They'll be round here in a minute," he thought. He could get the reek of the burning torches, the fat smell of pine wood; the wind brought stray sparks, like gold butterflies of the night, the odors of burning wreckage. "They'll try to fire us out," he thought; "it's going to be hell."

There was no time for further thought, for the assault swerved suddenly round to his gate, and he heard the crack of revolvers again on the north side. They came against the east gate with a scattering rush, and he fired straight into the mob; there was a moment's pause before they rallied. He saw two men creeping low along the wall. They had burning torches. He shot again, and one went down.

"Fire us—would you? Rats!" he yelled, and sent another volley.

He thought of the women kneeling below and their calm trust in the Lord who was their Shepherd, and a burning exaltation filled him. He was the Shepherd's assistant, and they should not trust in vain. He remembered Doctor Ames' last counsel:

"We are a Christian colony, my friends, and we bear the light of civilization. Not unless in actual defense of life ——"

In defense of life! Well, at last—at last!

He fired his revolver again and again, and for a time lost all count. Yet for every pause there came a rally; the devils seemed to be legion, a squealing, pig-tailed hell band that seemed to be born anew every moment out of the body of the night. Suddenly a voice spoke in his ear:

"They have twice fired the north stockade—the women are drawing water and assisting. But I think we can hold them, doctor!"

Yet even as he spoke, this hope failed. There came a sudden thickening of smoke and glare in the yard; they saw the little guard running in retreat from the north side, and the east post join them. Firearms spoke; but the mission yard was suddenly filled with a devil's dance of yellow furies. The guard made the central building with a hairbreadth margin. Behind bolted doors they stationed themselves afresh. They could see the yellow glare of the burning barrier and the newly fired refectory coming bright against the night.

"Our turn next," thought Tommy as he recharged his revolver.

It was then that Miss Bayer spoke at his elbow:

"Doctor, Margaret Irby's not with us. She's in the women's building—saw her run when the gate went down."

The women's building! It stood on the other side of the refectory—a matter of a few minutes before it, too, blazed.

"I can shoot!" said Miss Bayer. "I have brought my pistol!"

"Take my place!" directed Tommy.

A man was creeping up along the veranda roof! His eyes caught the fire and

"I See Where My Puffed Wheat Goes"

But the More That Goes the Better

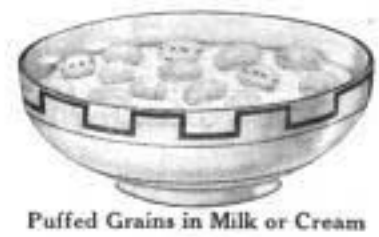
The last thing to restrict is a child's love of Puffed Grains. And these are the reasons:

Puffed Wheat and Puffed Rice are whole grains. They contain what every child must have. Much they contain—phosphorus, minerals, gluten and vitamines—is discarded in flour-making.

And Puffed Grains completely and easily digest. Every food cell is exploded. So at any hour and in any form Puffed Grains are ideal foods.

They Don't Last—That Is True

People eat Puffed Grains for breakfast—with sugar and cream or mixed with fruit.



In the forenoon, perhaps, the girl of the house uses them in candy making. In the afternoon, the boy, perhaps, eats them like peanuts, buttered or salted. For supper they are floated in bowls of milk.

Thus Puffed Grains are always the most popular foods in the house. But they are all-food, remember. Every food cell is blasted. Every granule digests.

They don't tax the stomach. And they supply what most foods lack, and what every person needs.

Don't limit the use of Puffed Grains. Keep all three on hand to supply a variety, and tempt a still larger consumption. For these are the perfect foods.

Puffed Wheat
Puffed Rice
and Corn Puffs
Each 15c Except in Far West

Puffed Grains in Milk or Cream

Puffed Grains Mixed with Fruit

These are Prof. Anderson's scientific foods. They are steam-exploded—puffed to eight times normal size. Every food element is fitted to feed.

They seem like confections—thin, airy bubbles, with a taste like toasted nuts. That's why folks so enjoy them. But their purpose is to supply whole grains in a form which the body can utilize. In no other way known can that be accomplished.

Eat Puffed Grains in some way daily.

Keep your protecting arm about them—even when you're sick!

WHILE you are well and strong they lay their troubles and their joys in your hands. But a fearful day may come when you're sick, when an attack of pneumonia or rheumatism may lay you low, and then **—what will you have to give them?**

Those loving faces hold a plea to you to

ÆTNA-IZE

Guard against the day when you will be ill and your income stopped. It costs so little—it means so much to protect yourself. The little money you spend for an Ætna Disability Policy, covering both accident and sickness, makes no difference to you now, but it will make a tremendous difference to you if the bad day should come.

It costs only $60 a year if you are in a "Preferred" occupation and under 51 years of age, and brings you:

$25 a week up to 52 weeks while you are ill. $25 a week for 100 weeks—nearly two years—if you lose the sight of both eyes by disease, or the use of both hands or feet or one hand and one foot by paralysis. Also payment of hospital charges, up to $12.50 per week, for ten weeks, or for a surgical operation.

$50 a week as long as you are disabled by a railway, steamship or burning building accident. $25 a week if disabled by an ordinary accident. If you are killed in an accident, or lose two limbs or both eyes, you will get from $5,000 to $15,000, depending on the character of the accident and on the number of years you have carried the insurance. Half as much for loss of one hand, foot or eye.

Send this coupon today, and then whatever misfortune comes you will be ready for it.

shone like jet beads. Miss Bayer pointed the gun at him, her lips moved in prayer, and she closed her eyes as she pulled the trigger. When she opened them he was not there.

Down this same veranda pole Tommy slid; his feet in landing touched something soft and wriggling and squealing. He spurned it and ran, head low, across the yard. It was dark as yet on this side—a path of shadow running straight to the dormitory door. He made it untouched, unseen. Bolting the door behind him, he took the stairs at two leaps. There was a long corridor at the top and another door. This, too, he locked. At the end of the hall he saw her!

She was standing just inside a small upper window, looking down at the smoking havoc. At his voice she turned and looked at him, and his heart caught. It was the girl he knew, yet someone different. Her dark hair was tossed and had fallen loose; it rippled, beautifully luxuriant, round the pale oval of her little face; her eyes were like stars; two spots of rose glowed in her cheeks, and from head to foot she shimmered in a robe of riotously golden cloth, splashed with the splendor of rich embroideries. She wore the pomegranate coat, and she was like the spirit of fire herself—rose and silver and gold.

She smiled at Tommy, her eyes wide.

"It's death—isn't it, Tommy?" she asked bravely. "That's why I came back here. I wanted you to see me just once—this way. Foolish, wasn't it?" Her voice broke suddenly. "Just—vanity—and I couldn't get away."

He went up close to her and took her in his arms.

"Margaret," he whispered, "did you think I wouldn't come to find you? Why, I love you."

"I hoped so," she nodded.

They were silent a moment, then:

"It's just you and I now—isn't it?" she whispered against the riot of sound without.

"Just you and I," he said, "but we're going to have our chance." And his arm tightened about her.

"I've—some protection too," she whispered, and she showed him a little pearl-handled knife in her hand. "For me," she whispered, and Tommy kissed her.

"You've still got me," he said.

"Yes—you!" She nestled close into his arm.

There seemed to be a sudden lull in the riot outside; the flame shadows danced bright as ever, but the noises seemed to have receded, as though the attack had fallen away to gather fresh strength. In the lull, to the two behind the barred door a strange calm fell.

"Tommy," whispered the girl, "tell me—you loved me—even as I was—in those dreadful things I wore."

"I didn't want to," said Tommy, "but—you're my girl!"

"I—I wanted to be—but I didn't want it—propinquity stuff, Tommy—I wasn't going to do a thing to show you that I—I can be—pretty."

"Pretty!" said Tommy. "You're beautiful—always! And in that coat you're the loveliest thing I ever looked at."

The lull outside had grown sinister and the girl shivered.

"Tommy—I'm frightened—I want to live—now," she sobbed suddenly, "and I have so many things to tell you—to confess—about—about the lies I told you. You may not care so much for me when you know. I did it just for silly amusement. I mean about Hindustan and my mother and the ablative absolute—and all those colleges we lived in. My mother's like yours—the real home kind—and if she knew this ——" She sobbed again. "I—I just was foolish—and spun those yarns to keep me from being so miserable and homesick. She's on a farm—mother—in Minnesota, and Ole Nansen, our Swede, runs it; those socks were for him. And, well—I thought it was fun at first—saying all that nonsense—and partly to punish you for not remembering me, when I knew you right away down there on that rock. You see, you had forgotten me ——"

"Forgotten you!" gasped Tommy.

"I have the picture you gave me yet," she went on, "a snapshot. You have a pipe in your mouth—a terrible pipe, though Ralph Seward told us you never really smoked it because you got so sick. You have a rakish cap over one ear and your trousers pulled fearfully high—to show your socks, I think. There was something wrong with the focus, for your feet are

(Concluded on Page 69)

Prize Competition

IN order to demonstrate the artistic possibilities of pencil sketches the makers of the

VENUS 10¢ PENCIL

offer seven prizes for drawings on any *American* subject.

All drawings become the property of the American Lead Pencil Co. None will be returned. Contest closes Feb. 15, 1917. On back of drawing, which must be not larger than 8" x 10", write clearly your name, address, and make and hardness of whatever pencil you use.

For the Best Drawings
First Prize $50 **Second Prize $20**
Third Prize $10 **Fourth to Seventh Prizes $5 each**

In case of a tie, prizes will be duplicated.

The judge of the drawings will be Mr. Dexter W. Hewitt, publisher of "Arts & Decorations." The names of the winners will be published.

American Lead Pencil Co.
221 Fifth Avenue, New York

MAKERS of the world-famous VENUS 10c pencil—17 degrees for every purpose, from 6B softest to 9H hardest—and also hard and medium copying. Look for the distinctive water-mark finish when you buy.

Poultry Book Latest and best yet; 144 pages, 315 beautiful pictures; hatching, rearing, feeding and disease information. Describes busy Poultry Farm handling 53 pure-bred varieties. Tells how to choose fowls, eggs, incubators, brooders. This book worth dollars mailed for 10 cents. **Berry's Poultry Farm, Box 69, Clarinda, Iowa**

Cheney Cravats

MEN of mark like a Cheney Cravat for its air of distinctive worth and unobtrusive good taste. They find it so exceptional in texture, so fresh in appearance after much use that neckwear buying is robbed of all uncertainty. They simply purchase ties which have this quality mark in the neckband:

JUST write that order *once* in the sales book—carry forward the total from the last charge—strike your footing—pass the carbon copy to your customer—file the original—

—your bookkeeping is done.

And you have a cleaner, neater, more orderly and much more useful set of records than any bookkeeper could keep in the old-fashioned way.

That's the McCaskey method of keeping charge accounts. That's the method that protects your charge accounts with the same security as that with which your bank protects your cash.

It's a method that makes it hard to make mistakes.

It prevents forgotten charges. Saves time. Saves expense.

And it pays for itself in almost any business in the money it saves—not considering the better business system it provides.

The thing your customers like about the McCaskey Service is that they, too, know from day to day exactly what they owe. There are no unpleasant surprises at the end of the month. There are no monthly statements—no need for any. The account is always posted, ready to be paid. Every bill is also a statement.

If you want it proved that it costs less to have McCaskey Service in your business than to do without it—mail the coupon.

It doesn't matter how large or how small or how different the business may be. There's a McCaskey system to fit. Easy payments.

For Physicians and Surgeons

The McCaskey professional system of case records and accounting combined, offers great time and money saving advantages to the busy doctor. The coupon will bring full details.

For Manufacturers

Cost, production and stock records can be kept by the McCaskey method with a material saving of time and labor. The Industrial Systems Department specializes in individual installations to meet specific requirements. Mail coupon for particulars.

Five good tobaccos in One

FIVE good tobaccos *blended*—that's Harmony! Of course a skillful blend of several tobaccos is bound to make a better pipe-smoke than any *one* tobacco alone. And in Harmony's blend, the tobaccos are so perfectly suited to one another that they actually produce a NEW, more delightful flavor.

* * *

We experimented. We put together many different tobaccos in slightly varying combinations. Some of those experimental blends were *mild* enough. Others were *rich* enough. But it was not until we combined, *in certain true proportions*, the five tobaccos now used in Harmony's blend that we finally produced a smoke-flavor that was *mild* enough and, at the same time, *rich* enough, too.

* * *

That is why pipe-smokers call Harmony's flavor "*rich-mildness.*" Only a *true* blend could produce this flavor—and only the Harmony blend *does* produce it. Let your trustiest old pipe show you—*today.*

simply enormous. And right under them you wrote: 'When this you see, please think of me.' Why I kissed that little snapshot for a whole year, Tommy!"

"But in heaven's name, who are you?"

"I am Eloise's poor relation. I spent a whole month with her the summer I was sixteen. I was little and shy and wore a pigtail, and all the boys called me the Little Mouse, but the second evening you chased me round the grape arbor and kissed me. And you told me when I left that no one could ever take my place!"

"Little Pegs Irby! Little Mouse! And I felt hollow all through when you went away."

"I—I think I just stayed feeling hollow, Tommy. I thought so—that day on the rock."

But they spoke no more, for the storm below them broke. There came a battering rush at the outer door, a flocking of feet on the stair, a strenuous bombardment of the last barrier.

And Tommy, holding his true love against his heart, leveled his gun and fired. But the chamber was empty. And the door came down as it snapped. But it was not Asia—it was Europe and civilization that besieged them.

Little Teevey, pale and tousled, a streak of blood on his cheek, like Abou Ben Adhem led all the rest of the college.

"A close call—a near shave, doctor—but we are happily out of it without serious damage. A detachment of soldiery from the mandarin appeared in time to drive away our marauders."

Then a curious thing happened. The professor of bugs and bugology was seen shamelessly to gather the professor of English literature into his arms—who by the way looked like a lady mandarin ready for a fancy ball—and to kiss her with violent unrestraint and emotion. And Professor Teevey is sure he heard her addressed by the utterly undescriptive and inadequate term:

"Little Mouse! Little Mouse!"

THREE WITHOUT, DOUBLED

(Continued from Page 13)

Well, I bid three hearts; but Mrs. Garrett come up to three no trump and I couldn't go no higher. This time I led out my ace o' hearts, hopin' maybe to catch their king; but I didn't get it. And Mrs. Garrett copped all the rest of 'em for a little slam.

"If your husband ever starts drinkin' hard," I says, "you can support yourself by sellin' some o' your horseshoes to the Russian Government."

It wasn't no lie neither. I never seen such hands as that woman held, and Messenger's was pretty near as good. In the four deals they grabbed two rubbers and a couple o' little slams, and when they left our table they had over nine hundred to our nothin'.

Mr. Collins and another woman was the next ones to set down with us. The rules was to change pardners and Collins took the one I'd been playin' with. And what does she do but get lucky and they give us another trimmin', though nothin' near as bad as the first one. My pardner, this time, was a woman about forty-eight, and she acted like it was way past her bedtime. When it was her turn to say somethin' we always had to wait about five minutes, and all the other tables was through a long w'ile before us. Once she says:

"You'll have to excuse me to-night. I don't seem to be able to keep my mind on the game."

"No," I says; "but I bet you'd perk up if the lady's prize was a mattress. When you're goin' to be up late you should ought to take a nap in the afternoon."

Well, sir, my next pardner wasn't nobody else but the Missus. She'd started at the fourth table and lost the first time, but win the second. She come along with the husband o' the pardner I'd just had; so here we was family against family, you might say.

"What kind o' luck you been havin'?" the fella ast me.

"No luck at all," I says. "But if you're anywheres near as sleepy as your Missus, I and my wife should ought to clean up this time."

We didn't. They held all the cards except in one hand, and that was one my Missus tried to play. I bid first and made it a no trump, as they was three aces in my hand. Old Slumber begun to talk in her sleep and says: "Two diamonds." The Missus bid two hearts. Mr. Sleeper passed, and so did I, as I didn't have a single heart in my hand and figured the Missus probably had 'em all. She had six, with the king high and then the nine-spot. Our female opponent had only two, and that left five for her husband, includin' the ace, queen and jack. We was set three.

"Nice work!" I says to the Missus. "You're the Philadelphia Athletics of auction bridge."

"What was you biddin' no trump on?" she says. "I thought, o' course, you'd have one high heart and some suit."

"You don't want to start thinkin' at your age," I says. "You can't learn an old dog new tricks."

Mrs. Nap's husband cut in.

"O' course," he says, "it's a man's privilege to call your wife anything you feel like. But your Missus don't hardly look old to me."

"No, not comparatively speakin'," I says, and he shut up.

They moved on and along come Garrett and Mrs. Messenger. I and Mrs. Messenger was pardners and I thought for a w'ile we was goin' to win. But Garrett and the Missus had a bouquet o' four-leaf clovers in the last two deals and licked us. Garrett wasn't supposed to be as smart as his wife, but he was fox enough to keep biddin' over my Missus, so as he'd do the playin' instead o' she.

It wasn't till pretty near the close o' the evenin's entertainment that I got away from that table and moved to Number Two. When I set down there it was I and Mrs. Collins against her husband and Mrs. Sleeper.

"Well, Mrs. Collins," I says, "I'll try and hold some good hands for you and maybe I can have two helpin's o' the meat when we come to your house."

The other lady opened her eyes long enough to ask who was winnin'.

"Oh, Mrs. Garrett's way ahead," says Mrs. Collins. "She's got a score o' somethin' like three thousand. And Mr. Messenger is high amongst the men."

"Who's next to the leadin' lady?" I ast her.

"I guess I am," she says. "But I'm three hundred behind Mrs. Garrett."

Well, the luck I'd just bumped into stayed with me and I and Mrs. Collins won and moved to the head table. Waitin' there for us was our darlin' hostess and Messenger, the two leaders in the pennant race. It was give out that this was to be the last game.

When Mrs. Garrett realized who was goin' to be her pardner I wisht you could of seen her face!

"This is an unexpected pleasure," she says to me. "I thought you liked the third table so well you was goin' to stay there all evenin'."

"I did intend to," I says; "but I seen you up here and I heard you was leadin' the league, so I thought I'd like to help you finish in front."

"I don't need no help," she says. "All I ask is for you to not overbid your hands, and I'll do the rest."

"How many are you, Mrs. Garrett?" ast Mrs. Collins.

"Thirty-two hundred and sixty," she says.

"Oh, my!" says Mrs. Collins. "I'm hopeless. I'm only twenty-nine hundred and forty-eight. And how about you, Mr. Messenger?"

"Round thirty-one hundred," he says.

"Yes," says Mrs. Garrett, "and I don't believe any o' the rest o' the men is within five hundred o' that."

"Well, Messenger," I says, "if the men's prize happens to be a case o' beer or a steak smothered in onions, don't forget that I'm payin' you thirty-five a month for a thirty-dollar flat."

Now I'd of gave my right eye to see Mrs. Collins beat Mrs. Garrett out. But I was goin' to do my best for Mrs. Garrett just the same, because I don't think it's square for a man to not try and play your hardest all the time in any kind of a game, no matter where your sympathies lays. So when it come my turn to bid on the first hand, and I seen the ace and king and four other

What Would *You* Do If You Were About To Become a Mother and Your Husband Told You What Martie Monroe's Husband Told Her?

Kathleen Norris has never written anything in her life to compare with "Martie the Desirous," her sensational new novel beginning in Pictorial Review for February.

It is greater than "Julia Page." More interesting even than "The Heart of Rachael,"—the two big Pictorial Review successes now among the twelve best-selling novels all over the country.

Martie Monroe is a gorgeously real flesh-and-blood girl, who longs and longs to be loved. Life in a small town drives her almost crazy. She rebels, runs away to the big city, makes the mistake many young women make and tangles up her life.

The exciting adventures leading up to her sensational regeneration make a story that thrills you through and through.

hearts in my hand, I raised Mrs. Collins' bid o' two diamonds, and Mrs. Garrett made it two no trump and got away with it. On the next two deals Messenger and Mrs. Collins made a game, and Mrs. Garrett got set a trick once on a bid o' five clubs. The way the score was when it come to the last deal, I figured that if Mrs. Collins and Messenger made another game and rubber, the two women'd be mighty close to even.

Mrs. Garrett dealt 'em, and says:

"One without."

"Two spades," says Mrs. Collins.

Well, sir, they wasn't a spade in my hand, and I seen that if Mrs. Collins got it we was ruined on account o' me not havin' a trump. And w'ile I wanted Mrs. Collins to win I was goin' to do my best to not let her. So I says:

"Two without."

"You know what you're doin', do you?" says Mrs. Garrett.

"What do you mean, know what I'm doin'?" I says.

"No talkin' across the boards," says Messenger.

"All right," I says; "but you can depend on me, pardner, not to throw you down."

Well, Messenger passed and so did Mrs. Garrett; but Mrs. Collins wasn't through.

"Three spades," she says.

"Three without," says I.

"I hope it's all right," says Mrs. Garrett.

"I'll tell you one thing," I says: "it's a whole lot all-righter than if she played it in spades."

Messenger passed again and ditto for my pardner.

"I'll double," says Mrs. Collins, and we left it go at that.

Man, oh, Man! You ought to seen our genial hostess when I laid down my cards! And heard her too! Her face turned all three colors o' Old Glory. She slammed her hand down on the table, face up.

"I won't play it!" she hollers. "I won't be made a fool of! This poor idiot deliberately told me he had spades stopped, and look at his hand!"

"You're mistaken, Mrs. Garrett," I says. "I didn't say nothin' about spades."

"Shut your mouth!" she says. "That's what you ought to done all evenin'."

"I might as well of," I says, "for all the good it done me to keep it open at dinner."

Everybody in the room quit playin' and rubbered. Finally Garrett got up from where he was settin' and come over.

"What seems to be the trouble?" he says. "This ain't no barroom."

"Nobody'd ever suspect it o' bein'," I says.

"Look what he done!" says Mrs. Garrett. "He raised my no-trump bid over three spades without a spade in his hand."

"Well," says Mr. Garrett, "they's no use gettin' all fussed up over a game o' cards. The thing to do is pick up your hand and play it out and take your medicine."

"I can set her three," said Mrs. Collins. "I got seven spades, with the ace, king and queen, and I'll catch her jack on the third lead."

"And I got the ace o' hearts," says Messenger. "Even if it didn't take a trick it'd make aces easy; so our three hundred above the line gives Mrs. Collins a score of about ten more'n Mrs. Garrett."

"All right, then," says Garrett. "Mrs. Collins is entitled to the lady's prize."

"I don't want to take it," says Mrs. Collins.

"You got to take it," says Garrett.

And he give his wife a look that meant business. Anyway, she got up and went out o' the room, and when she come back she was smilin'. She had two packages in her hand, and she give one to Messenger and one to Mrs. Collins.

"There's the prizes," she says; "and I hope you'll like 'em."

Messenger unwrapped his'n and it was one o' them round leather cases that you use to carry extra collars in when you're travelin'. Messenger had told me earlier in the evenin' that he hadn't been outside o' Chicago in six years.

Mrs. Collins' prize was a chafin' dish.

"I don't blame Mrs. Garrett for bein' so crazy to win it," I says to her when they couldn't nobody hear. "Her and Garrett both must get hungry along about nine or ten P. M."

"I hate to take it," says Mrs. Collins.

"I wouldn't feel that way," I says. "I guess Mrs. Garrett will chafe enough without it."

When we was ready to go I shook hands with the host and hostess and says I was sorry if I'd pulled a boner.

"It was to be expected," says Mrs. Garrett.

"Yes," I says; "a man's liable to do most anything when he's starvin' to death."

The Messengers and Collinses was a little ways ahead of us on the stairs and I wanted we should hurry and catch up with 'em.

"You let 'em go!" says the Missus. "You've spoiled everything now without doin' nothin' more. Every time you talk you insult somebody."

I was glad that we didn't have to go far to our buildin'. The Missus was pleasant company, just like a bloodhound with the rabies.

I left her in the vestibule and went down to help Mike close up. He likes to be amongst friends at a sad hour like that.

At breakfast next mornin' the wife was more calm.

"Dearie," she says, "they don't neither one of us class as bridge experts. I'll admit I got a lot to learn about the game. What we want to do is play with the Hatches every evenin' this week, and maybe by next Tuesday night we'll know somethin'."

"I'm willin'," I says.

"I'll call up Mrs. Hatch this forenoon," she says, "and see if they want us to come over there this evenin'. But if we do go remember to not mention our club or tell 'em anything about the party."

Well, she had news for me when I got home.

"The San Susies is busted up," she says. "Not forever, but for a few months anyway. Mrs. Messenger called up to tell me."

"What's the idear?" I says.

"I don't know exactly," says the Missus. "Mrs. Messenger says that the Collinses had boxes for the opera every Tuesday night and the rest didn't feel like goin' on without the Collinses, and they couldn't all o' them agree on another night."

"I don't see why they should bust it up on account o' one couple," I says. "Why didn't you tell 'em about the Hatches? They're right here in the neighborhood and can play bridge as good as anybody."

"I wouldn't think o' doin' it!" says she. "They may play all right, but think o' how they talk and how they dress!"

"Well," I says, "between you and I, I ain't goin' to take cyanide over a piece o' news like this. Somehow it don't appeal to me to vote myself dry every Tuesday night all winter — to say nothin' o' two dollars a week annual dues to help buy a prize that I got no chance o' winnin' and wouldn't know what to do with it if I had it."

"It'd of been nice, though," she says, "to make friends with them people."

"Well," I says, "I'll feel a little more confident o' doin' that if I see 'em once a year — or not at all."

IV.

I CAN tell you the rest of it in about a minute. The Missus had became resigned and everything was goin' along smooth till last Tuesday evenin'. They was a new Chaplin show over to the Acme and we was on our way to see it. At the entrance to the buildin' where the Messengers lives we seen Mr. and Mrs. Hatch.

"Hello, there!" says the wife. "Better come along with us to the Acme."

"Not to-night," says Mrs. Hatch. "We're tied up every Tuesday evenin'."

"Some club?" ast the Missus.

"Yes," says Mrs. Hatch. "It's a bridge club — the San Susie. The Messengers and Collinses and Garretts and us and some other people's in it. Two weeks ago we was to Collinses', and last week to Beardsleys'; and to-night the Messengers is the hosts."

The Missus tried to say somethin', and couldn't.

"I been awful lucky," says Mrs. Hatch. "I win the prize at Collinses'. It was a silver pitcher — the prettiest you ever seen!"

The Missus found her voice.

"Do you have dinner too?" she ast.

"I should say we do!" says Mrs. Hatch. "And simply grand stuff to eat! It was nice last week at Beardsleys'; but you ought to been at Collinses'! First, they was an old-fashioned beefsteak supper; and then, when we was through playin', Mrs. Collins made us welsh rabbits in her chafin' dish."

"That don't tempt me," I says. "I'd just as soon try and eat a raw mushrat as a welsh rabbit."

"Well, we got to be goin' in," says Hatch.

"Good night," says Mrs. Hatch; "and I wisht you was comin' with us."

The movie we seen was called The Fly Cop. Don't never waste a dime on it. They ain't a laugh in the whole show!

Graphic Steel DUPLICATOR

Pays for Itself in Any Office

in a very short time. Makes from 10 to 150 copies in fifteen minutes. Duplicates typewritten and hand-written letters, orders, bills, reports, bulletins, sketches, etc., direct from original — no fussing with stencils. Saves 4/5 hours out of 5. Costs only $15. A remarkable photograph of a fire. The burning of the wooden warehouses of the Grand Trunk Pacific and of Dodwell & Co., at Seattle, Washington.

Ocean Steamship Company's Warehouses at Savannah, Ga., J. G. Bassinger of New York City, Engineer. 125 tons of Armco Iron employed for Sidings, Cornices and Flashings by the Sheet Metal Contractors, The Dowman-Dozier Mfg. Co. of Atlanta.

The final saving possible with the universal use of Armco Iron for all purposes requiring rolled or drawn metal, would compare favorably with the amount America could save by cutting out all her unnecessary fire losses.
From "Defeating Rust"

Fire is a risk, Rust is a certainty; both are resisted by Armco Iron

Armco Iron is used in tremendous quantities in fire-proof buildings that are built for permanency.

To insure against such fires as pictured above, great dock warehouses have been built, at many Atlantic and Pacific ports, largely or wholly of Armco Iron. These warehouses will resist rust, too, as no other sheet metal construction can.

The Victor Safe & Lock Co. of Cincinnati, leading manufacturers of safes, locks and bank vaults, adopted Armco Iron for the sheet and plate portions of their products after a rigid investigation had satisfied them that it was the most durable metal available.

AMERICAN ARMCO INGOT IRON

The trade mark **ARMCO** carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Co. with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

ARMCO IRON

is firmly established in the building world. A rust-resisting sky line seems a thing of the near future.

Roofing, coping, penthouses, skylights, water tanks, ventilators of Armco (American Ingot) Iron are already common specifications.

Window frames and sash, Armco Iron Lath, doors and heating ducts are a few more places where Armco Iron is used in rust-resisting construction.

Armco Iron resists rust because it is pure iron—the purest made. Every phase of its manufacture, from the furnace to the shipping platform, is the object of scientific and conscientious care. Armco Iron is, therefore, the most nearly perfect in respect to evenness and all the other qualities that form the basis of rust resistance.

If you do not know of a building supply manufacturer or dealer who furnishes Armco Iron products, write to us and we will put you in touch with one who can supply you.

Lasting Grave Vaults and Caskets are made from Armco Iron by the Galion Metallic Vault Co., Galion, O.; The Springfield Metallic Casket Co. of Springfield, O.; The National Casket Co. (branch offices in principal cities), and (caskets only) by the Cincinnati Coffin Co. of Cincinnati, O.

If you do not know the whole story of Armco Iron, send for

Book—"The Story of Armco Iron"—Free

It points the way to *eventual* economy. It tells the story of the struggle to produce pure iron—rust-resisting iron. Pay the rust-tax no longer—send for the book today.

"The Gas of a Thousand Uses"

Prest-O-Lite Dissolved Acetylene

(Ready Made Carbide Co.)

This remarkable gas solves thousands of welding, soldering and brazing problems

For instance, in laying over ten miles of 2-inch pipe to cover a floor, 210 ft. by 90 ft., in the immense new Winter Garden Ice Rink, San Francisco, oxy-acetylene welding (Prest-O-Lite Process) made possible one continuous, leak-proof pipe 55,000 feet long. The same process is used for welding gas, oil and steam pipe lines in every kind of construction work.

Oxy-acetylene welding *fuses* at intense heat two or more pieces of metal, giving a stronger, neater and more permanent joint.

In the manufacture of metal products—from delicate surgical instruments to massive locomotives—in nearly every leading industry of America, the Prest-O-Lite Process is introducing new economies and better methods. If you now use a bolt, rivet or threaded joint, it will pay you to investigate its possibilities.

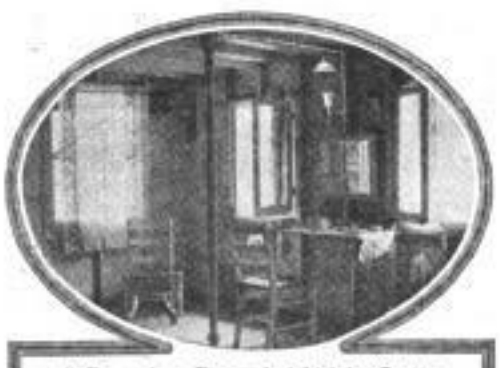
Millions of dollars worth of valuable castings, machine parts and tools are being reclaimed from the junk pile through this process alone.

The Prest-O-Lite Process is inexpensive. We furnish a high-grade welding apparatus for $60 (Canada, $75). Acetylene service and special metal-cutting blow-pipe provided at extra cost. It is simple to operate—any average workman who understands metals can do efficient work quickly and easily.

The great, universal system of Prest-O-Lite Service furnishes ready-to-use dissolved acetylene in convenient, portable cylinders in sizes to suit every need. It insures prompt exchange of empty cylinders for full ones—everywhere.

Prest-O-Lite Dissolved Acetylene gives better welds, quicker work, lower operating costs. Makes the outfit portable for use inside or outside the shop. Avoids the initial outlay and depreciation of making crude acetylene in carbide generators.

Welding for Reconstruction and Repair



Fuller Brothers, of Jersey City, N. J., had this seven-foot, 3,000-lb. gear wheel repaired by welding sixteen teeth at a cost of $40, saving cost of new gear worth $500. In many instances, one such repair has paid for the entire outfit. The process offers additional profits for garages, repair and job welding shops.

Blow-Torches for Brazing and Soldering

The Style "A" acetylene blow-torch, used above for brazing fuse plugs, costs but 75c (Canada, 85c). It is quicker, more convenient and more economical than the gasoline blow-torch. Used by dentists, jewelers, factories, repair shops, etc.

When you need intense heat or brilliant light

A Convenient, Economical Lighting System

Harvey Myers, a prominent attorney in Covington, Ky., is one of many house-boat owners who use Prest-O-Lite for illuminating purposes. Prest-O-Lite gas is, in many instances, the logical solution of difficult indoor and outdoor lighting problems.

Prest-O-Lite Dissolved Acetylene is used by chemists, blacksmiths, farmers, dentists, manufacturers and thousands of others. At least one of its many uses may solve a heating or lighting problem for you.

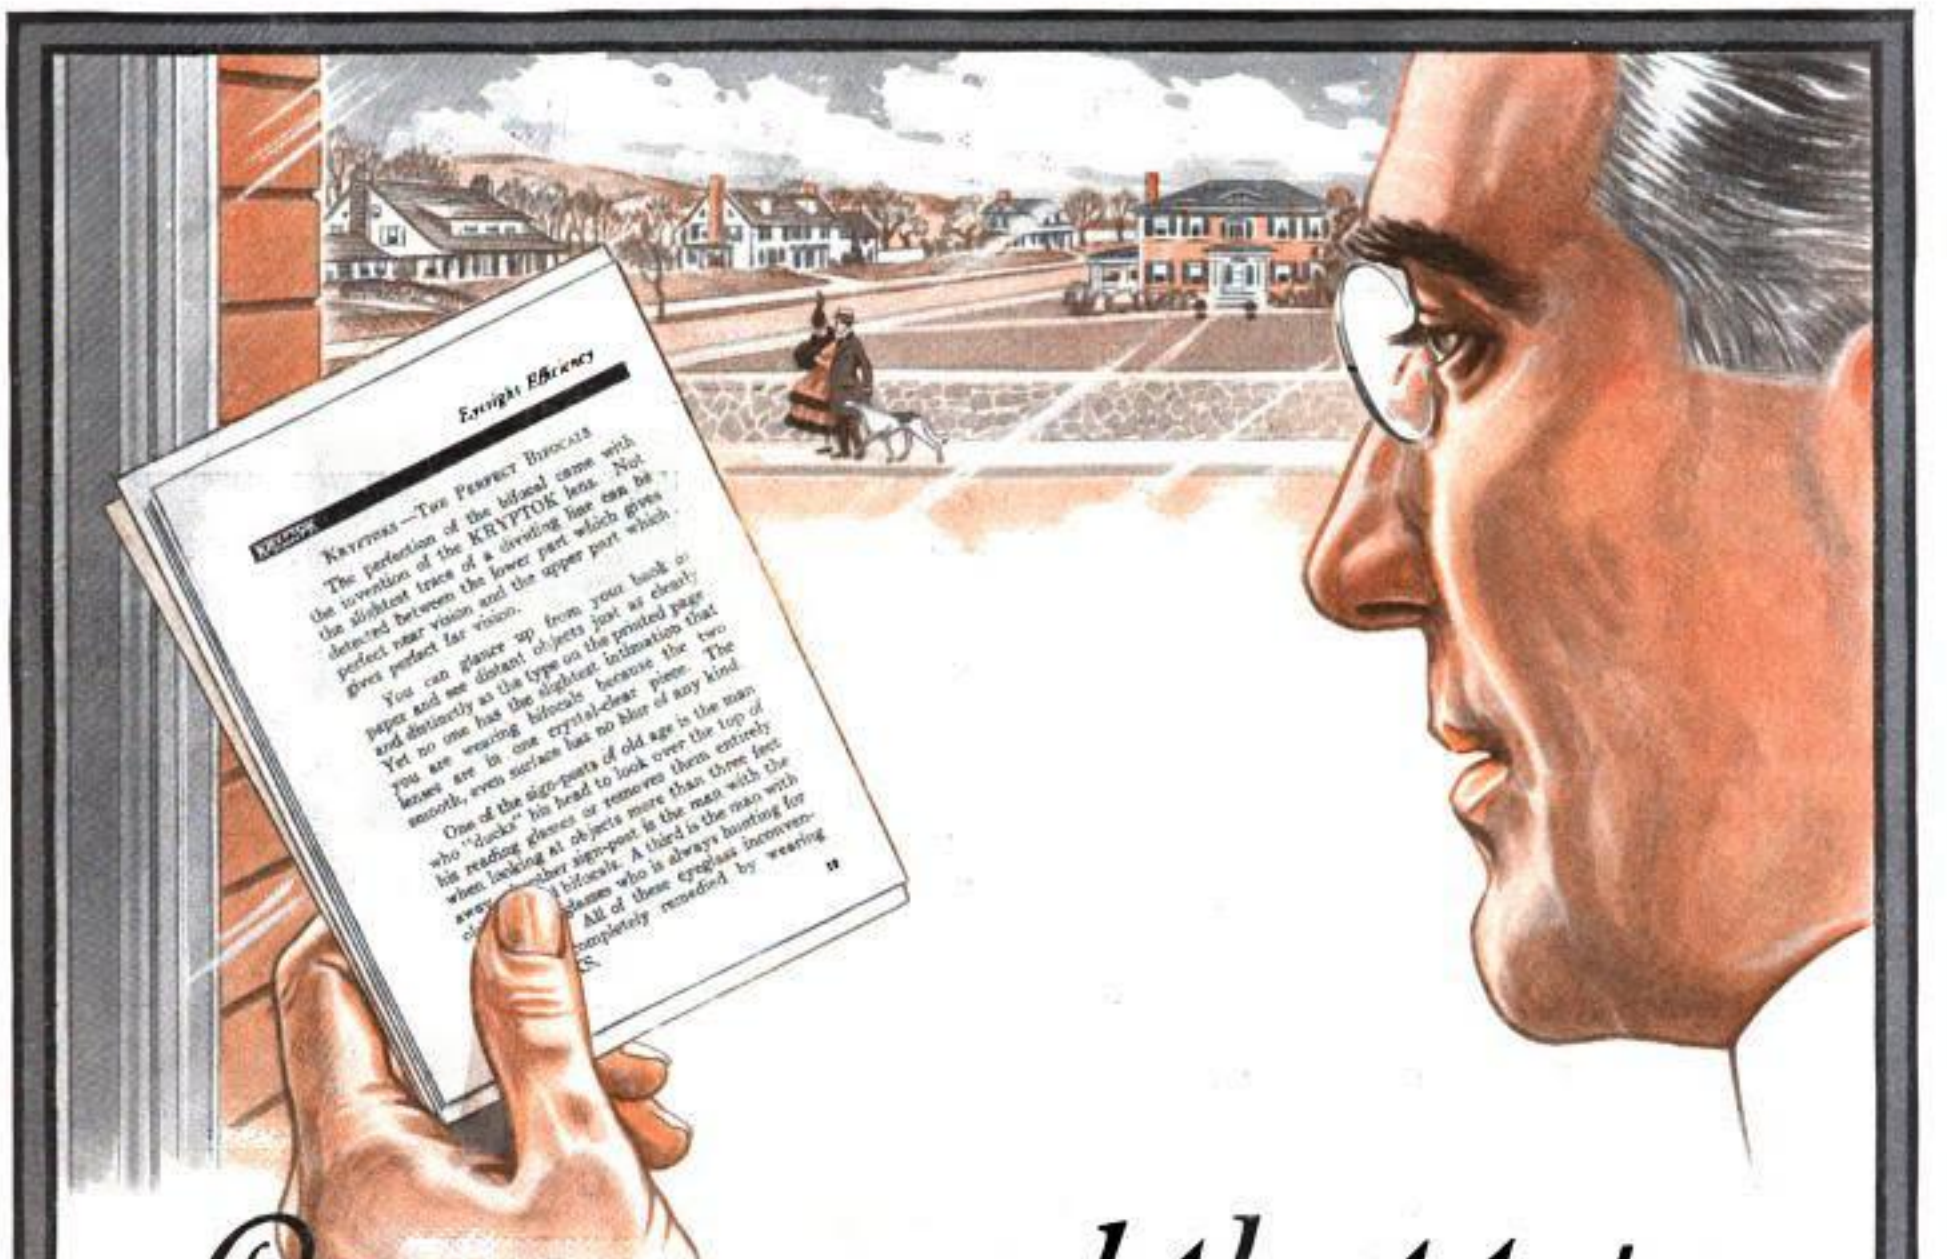
For heating it is used in a wide variety of special blow-torches and burners—for soldering, brazing, lead burning, removing paint and putty, "wiping" lead joints, reducing precious metals, tempering and annealing small metal parts, and scores of other applications requiring concentrated heat.

For lighting it is used for churches, tents, tractors, stereopticons, boats, etc. A simple, inexpensive stem and burner attachment for other lighting uses costs only 55c.

Ask us for illustrated literature and full information on welding or any other use for Prest-O-Lite gas in heating or lighting.

The Prest-O-Lite Co., Inc., 53 branches and charging plants in the principal industrial centers

U. S. Main Factory and Office, 861 Speedway, Indianapolis, Indiana
Canadian Main Office and Factory, Department I, Merritton, Ontario



Heating Torches for Many Purposes

The Prest-O-Torch is being used for heating granite, marble and other monument stone, to facilitate chipping out imperfections, and removing scratches, tool-marks, etc.

WORLD'S LARGEST MAKERS OF DISSOLVED ACETYLENE

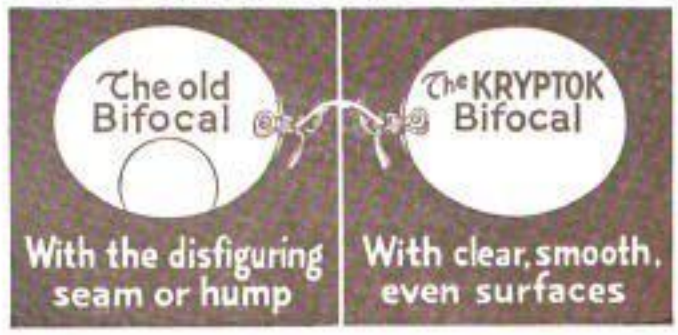
Can you read that type

and with the same glasses see distant objects clearly?

IF you cannot, then you need KRYPTOK ***(pronounced Crip-tock)*** Glasses—the invisible bifocals which combine near and far vision in one crystal-clear lens.

KRYPTOK Glasses enable you to adjust your vision from printed page to distant view, *instantly*. You see everything as clearly and distinctly as with the eyesight of youth.

KRYPTOKS end the trouble and annoyance of removing your reading glasses—or awkwardly peering over them—every time you look at objects more than a few feet away.



They free you from the even greater inconvenience of fussing with two pairs of glasses.

They are making the old-style bifocals, with the disfiguring seam or hump, a thing of the past.

KRYPTOK Glasses are entirely free from that unsightly, age-revealing seam or hump. Their surfaces are clear, smooth and even.

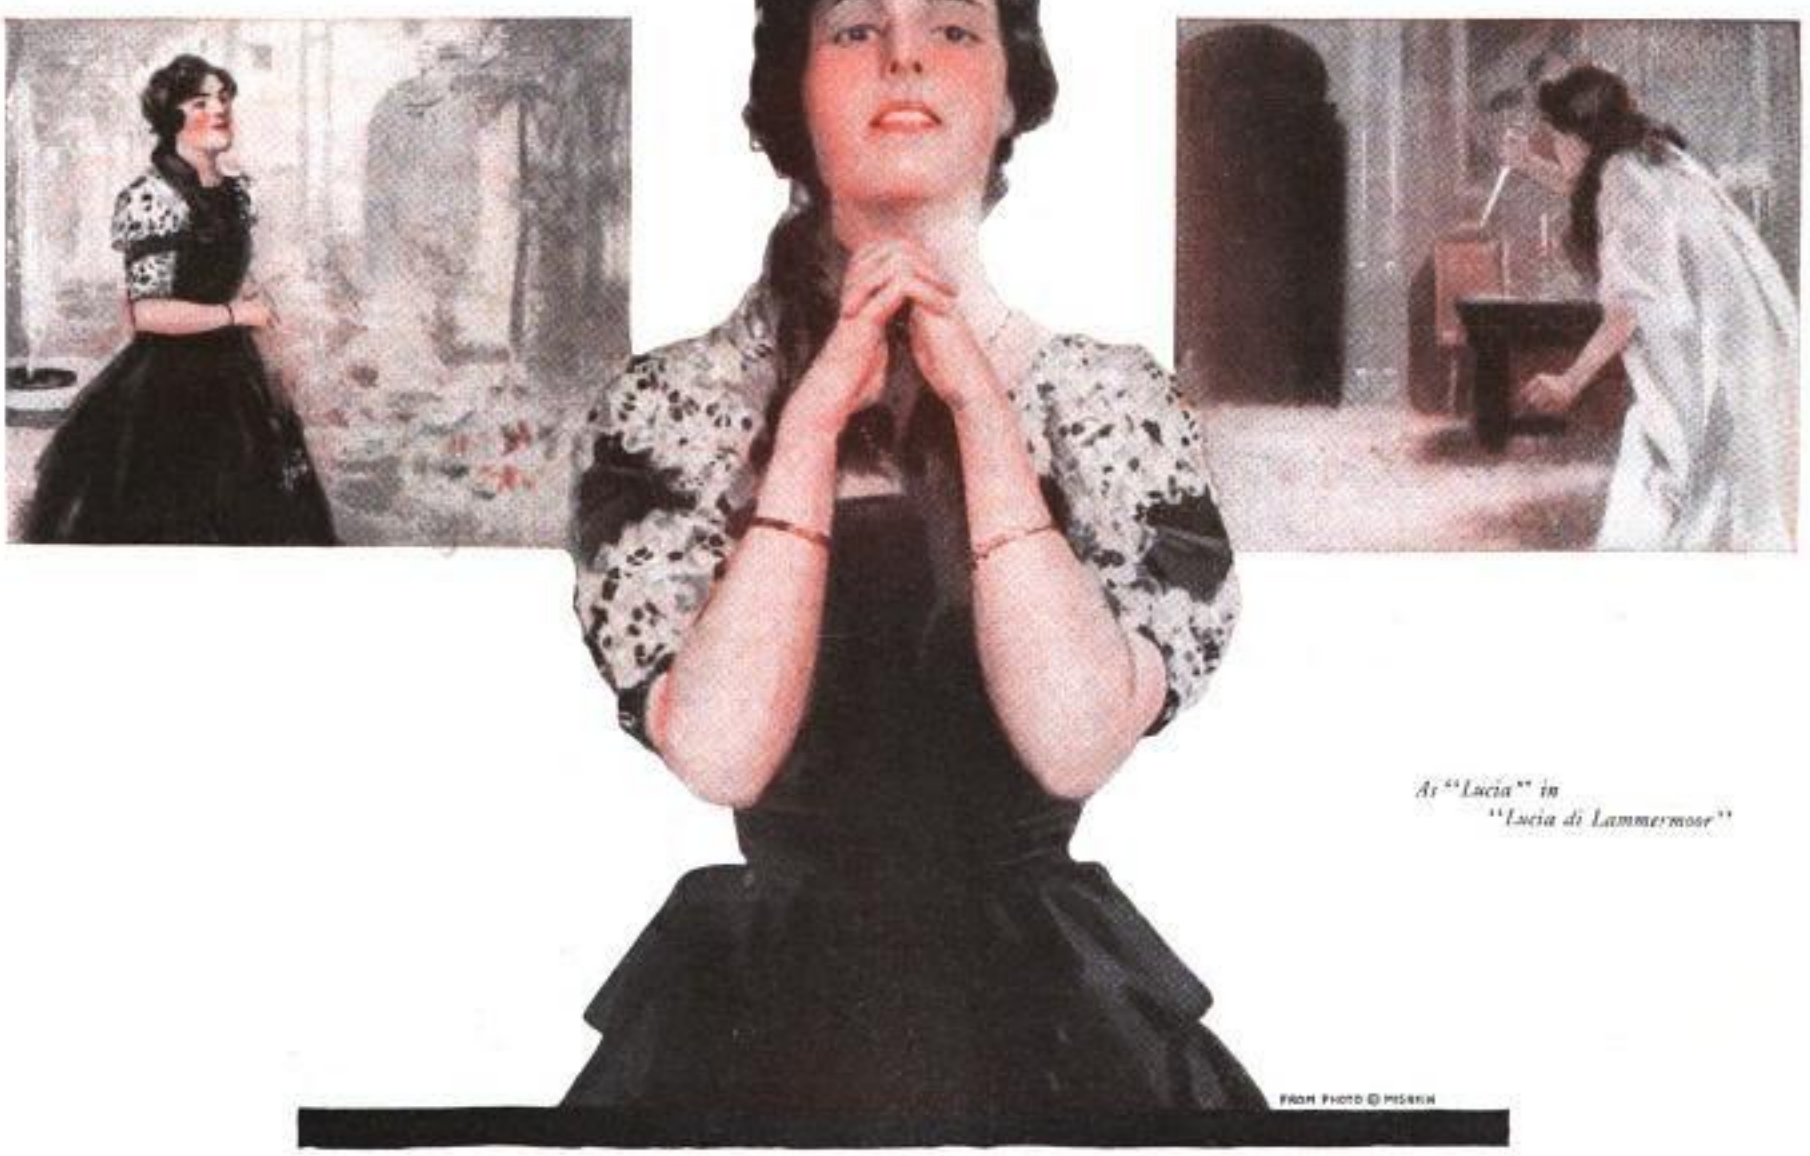
KRYPTOK GLASSES

THE INVISIBLE BIFOCALS

When you are wearing KRYPTOKS, no one can tell that they are double-vision glasses. Yet the upper part gives the necessary correction for far vision and the lower part for near vision.

In comfort and convenience; in improving the appearance; in preserving the eyesight; in the wonderfully clear vision which they give—KRYPTOKS are a revelation to people who have been accustomed to the old-fashioned bifocals or to simple reading glasses.

KRYPTOK Glasses are made on strictly correct optical principles and are universally recommended by oculists, optometrists and opticians. Ask *your* oculist, optometrist or optician about KRYPTOKS. Attend to it this week, which is being observed from coast to coast as "Kryptok Week."



Write for Booklet, "Eyesight Efficiency"

Eyesight Efficiency is the title of a booklet which should be read by everyone who needs glasses for near and far vision. It will be mailed upon request. When writing for your copy, please give (if possible) the name of your oculist, optometrist or optician.

KRYPTOK COMPANY, Inc., 1049 Old South Bldg., Boston, Mass.

Big Ben

A *Westclox* Alarm

To Beat the Time Clock

BIG BEN men are *all there* men, when the day begins at the works.—They make the time clock *boost* their game—put them in strong with the boss.

For, everywhere, it's factory talk that Big Ben starts the day—he gives the boys their breakfast call long before the whistle toots. They used to pound the pillow right up to the last dot—till Big Ben showed 'em a better way—as the paymaster soon found out.

Just give Big Ben a trial, *yourself;* make *your* roll-over-time pay, have extra time about the house, and beat the last-minute bunch.

You'll like Big Ben face to face. He's seven inches tall, spunky, neighborly—downright good all through. He rings two ways—ten half-minute calls or steadily for five minutes.

Big Ben is six times factory tested. At your jeweler's, $2.50 in the United States, $3.50 in Canada. Sent postpaid on receipt of price if your jeweler doesn't stock him

Westclox folk build more than three million alarms a year—and build them well. All wheels are assembled by a special process—patented, of course. Results—accuracy, less friction, long life.

La Salle, Ill., U. S. A. **Western Clock Co.** Makers of *Westclox*

Other Westclox: Baby Ben, Pocket Ben, America, Bingo, Sleep-Meter, Lookout and Ironclad

Office Building of Nashville, Chattanooga and St. Louis Railroad, Nashville, Tenn. The owners are protected by the Barrett 20-Year Guaranty Bond.

UNITED STATES FIDELITY & GUARANTY COMPANY

Barrett Specification Roof

20 Year Guaranty Bond

This is the Bond that guarantees your roof for 20 years.

Why We Can Afford To Give a 20-Year Guaranty Bond—

Many people have asked: "How can you afford to give a 20-Year Guaranty on thousands of roofs all over the country laid by hundreds of different local roofers?" Well, the answer is simple.

First, We know the materials are right because we manufacture them.

Second, The Barrett Specification, while it may seem complex to a layman, is straightforward, plain-sailing to experienced roofers.

Third, Under the guarantee plan the roof must be constructed under our supervision and receive our O. K. both as to materials and workmanship.

We further know from 50 years' experience that a Barrett Specification Roof, properly laid, will last a good deal longer than twenty years *without maintenance or repairs.*

A Barrett Specification Roof is constructed of five plies of Specification Felt, with a liberal quantity of Specification Pitch (the greatest waterproofing material known) between each layer.

No other type of roofing approaches a Barrett Specification Roof in the amount of protective waterproofing material used in its construction.

The weight of this waterproofing is not less than 235 lbs. to 100 sq. ft. compared with 75 to 125 lbs., at most, in other types of roofs.

And on top of all this waterproofing material is laid a wearing surface of gravel, slag, tile or vitrified brick.

That's why it lasts. That is why we can safely guarantee it for 20 years.

How to Secure the 20-Year Guaranty Bond

The 20-Year Guaranty is now given on all Barrett Specification Roofs of 50 squares and over in all towns in the United States and Canada with a population of 25,000 and over, *and in smaller places where our Inspection Service is available.*

Our only requirements are that The Barrett Specification dated May 1, 1916, shall be strictly followed and that the roofing contractor shall be approved by us.

Further information promptly furnished upon request.

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request.

ONE EVERY MINUTE

By Edwin Lefèvre

ILLUSTRATED BY F. R. GRUGER

WHEN the war broke out in Europe, Wilberforce Shadd had worked for the grocery jobbing firm of Morris & Cunningham sixteen years. He had been married twelve. Before his marriage he did not know what it was to fear anything or anybody. Unfortunately, Mrs. Shadd's childhood was a series of daily humiliations which made it impossible for her ever to forget her dear dead mother's ceaseless prayer: "If I only had five dollars that I could call my own I'd feel independent!" Mrs. Shadd's father was honest though improvident, and as he was always in debt and always was trying to pay, there was never any cash in the house that any member of the family could call her own.

Ann Elizabeth grew up to be a pretty girl, sun-crowned, but pathetic by reason of a slenderness suggestive of under-feeding, and a look in her beautiful blue eyes as though the world were a bill collector to whom she was saying: "I'm sorry. You'll have to come another time!"

She was not at all mercenary, being too unaggressive for that, but it certainly was not Wilberforce's good looks or his kindly and considerate ways that made her marry him. What happened was that she accepted her mother's association of earthly happiness with financial independence and of financial independence with five dollars in cash. Shadd, who was a nice, likable chap, was paid every Saturday and always had money in his pocket—actual cash. It was inevitable that she began to associate Shadd with happiness, and finally with that happiness that needs a home to complete it. As for the worshiping Wilberforce, he saw in Ann Elizabeth a beautiful girl bound to become more beautiful by becoming exclusively his; and, moreover, one whom it would be wisdom to wed since she was a wonderful manager. To have an improvident father is an excellent training for a bride, and Wilberforce clearly saw—it was in the month of May—that there was no need to wait to save up. They could economize after they were married.

Men Did All the Talking Because He Was Full of Wall Street and Had to Talk

And so Ann Elizabeth Page and Wilberforce Shadd were married and began to save. They paid for the furniture on the installment plan. It made saving compulsory and, therefore, relatively frictionless. But Ann Elizabeth saved a little more than the furniture money. To feel that within the little luster cream jug on the mantelpiece snugly reposed one five-dollar bill and two ones gave her a feeling of both comfort and security. It was great to have something she did not have to hand to the collector every Thursday!

After they had paid in full for the furniture, Wilberforce suggested a little theater party in celebration of their emancipation; but Mrs. Shadd said very earnestly:

"Darling, if we got along so comfortably without spending this money foolishly, we can keep on not spending it. I can't forget how it was the constant worriment that shortened mamma's life ——"

"All right, ducky," quickly interrupted Shadd, who had heard the story many times, and kissed her. Nevertheless, she told him all about her mother's unanswered prayer.

She had her way, and the little hoard grew until it was so large that she was afraid to leave it at home, thinking of burglars, and afraid to carry it abroad with her, mindful of footpads. There was also the danger of dropping dead from heart failure or of being run over by an automobile. After several months of insomnia and dyspepsia she let Wilberforce have his way and deposit it in a savings bank, only to regret it the very next day—it was such a comfort to have the money in cash within physical reach! But inventive, like all women when they wish to do what they should not and at the same time not do it, she adopted the plan of laying aside a fixed sum every week but of depositing it only once a month. After twenty-nine days of hoarding she could afford to suffer one day for the sake of safety.

Wilberforce could not bear to make his pretty young wife unhappy by refusing to do as she wished, especially when it was for their own good. In the beginning when she carried her thrift to the extreme of interfering with his pleasures he remonstrated with her. But just as he gave up smoking at her suggestion, in order that both of them could feel they could afford the expensive neckties he liked, so did he give up his Sunday trips to Coney Island, in order to pay for an easy chair without which no home-body can be happy. They bought the dining-room rug by giving up his Thursday night bowling club. He had fondly dreamed of doubling the pleasure of his mild dissipations by sharing them with his wife. Instead, he increased her happiness by giving up his own.

And yet the worm half-turned at times. Whereupon, tragedy visible in her startled eyes, she would ask: "Suppose you lost your position?"

"I'd get another!"

"You can't pick up a good steady position everywhere. And even if you did get another, what would we live on until you found the other job? No, Wilberforce, darling, after you've got something laid by you can be as independent as you please."

And rather than see the azure skies of her eyes cloud over with the prescience of famine, he would give up the reckless purchase of a new suit and, instead, give her the money to put in the savings bank.

That dream of hers beat him—the dream of a golden independence to be acquired by force of habit. It is the tragedy of life that whoso lives by habit perishes by habit. If this were not so, the wise would be both happy and immortal; instead of which, as Solomon discovered, "How dieth the wise man? as the fool."

To be sure the poison worked so slowly that Wilberforce Shadd did not become aware of his own condition in time to swallow the antidote. After four or five years of regular hours for eating, drinking, working and loving—that is, of happy married life—he capitulated to the obvious necessity of regularly laying by a portion of his salary. The power to do so became in due time one of the blessings which Providence vouchsafes to the lucky ones who get regular wages. Wherefore, his fear grew that he might lose the job which enabled him to save money every week in order that he might not be afraid of losing his job!

Occasionally the young couple enjoyed the luxury of trembling together over the one tragical possibility of their lives. But they would get their bank book and look therein,

Digitized by Google

and assure each other that if it were not for their savings they might indeed be afraid of losing his position. And then Mrs. Shadd reduced her hopes to one: That she might always have some money in cash that she could call their own. Whereupon he hoped that he might never lose his job.

And Shadd did not see that in becoming a slave to one habit he developed the far worse habit of forming habits. The friction of the unexpected makes some people unhappy. Shadd was the kind of man who wished all his days to be alike. He found comfort in making himself regularly miserable every morning by looking on his desk for a notice of dismissal. The failure to get the notice regularly gave him something to be grateful for during the rest of his working day and kept his nature sweet. Whenever Lipps, the office manager, approached, Shadd braced himself to hear the fatal words. When Lipps walked away without having uttered the death sentence, Shadd relaxed delectably. There was more comfort for Wilberforce Shadd in expecting the worst than in hoping for the best.

Old Mr. Morris and young Mr. Cunningham, his employers, took less and less notice of the clerk who insisted upon turning himself into a bit of office furniture. But that same clerk reflected on the safety of inconspicuousness, and became reconciled to the thought of not getting an increase in salary if, on the other hand, it meant not losing his job. After a few years his very face took on a peculiar expression—the look of a man forever afraid but forever telling himself that Fate, which always threatened him with dire things, was only jesting.

His fellow employees liked him, since there was nothing about him to arouse envy or contempt. He was kindly and considerate by nature, and he had additionally cultivated a dislike of violent emotions. Every morning he made it a point of greeting cordially two of his co-workers. One was William Ross, whose father had worked fifty-two years for old Mr. Morris' father, and then, according to the office legend, had died of a broken heart after Mr. Morris the First died of pneumonia. William himself was so old that he was utterly useless. He received eighteen dollars a week, ostensibly for keeping people from committing suicide by being crushed to a pulp at the bottom of the freight-elevator shaft. Of course everybody knew this was merely an excuse for giving the old chap regular wages without hurting his feelings. To Shadd old Ross gave comforting evidence that Morris & Cunningham were not addicted to the ruthless dismissal of faithful employees.

The other habitual friend was James Molloy, who, after being a promising lightweight, took the count and became a truck-driver for Morris & Cunningham. After five years the firm promoted him by raising him in the social scale. They made him chief packer and paid him five dollars a week more, but he got one hundred dollars a week more work out of his men. He could lick any two of them.

The reason why Shadd liked Molloy was that years before James had replied to a question:

"Afraid o' gett'n' fired? Aw, hell! Dere's more jobs lookin' for me than I kin fill in nineteen mont's and t'ree days, if I tried 'em out at de rate of six a week. Fergit it!"

And Wilberforce found pleasure in being brave by proxy. The firm would not summarily discharge him—as William Ross and his salary showed. And if it did, there was James Molloy to prove that better jobs were waiting for a good man to fill at the rate of six a week—for nineteen months and three days.

"No, Wilberforce, Darling, After You've Got Something Laid by You Can be as Independent as You Please"

II

WILBERFORCE SHADD, three months after the fall of Liège, was so sick of war news that he took to reading the scientific articles in his Sunday newspaper. On this Sabbath an eminent professor, of whom Wilberforce had never heard, had consented to be interviewed, and thus enabled the newspaper to prove that success could be won by anyone who went about it scientifically.

"A full-grown man's consciousness of himself has very little to do with that same man's success or failure. It is all a matter of his compulsions. He yields and is pushed upward or downward, as the case may be. A strong desire produces a soul deafness to everything else. The big captains of industry, the empire builders, the successful careerists everywhere, all have it. They get what they desire because they simply cannot hear arguments, threats, entreaties or moans. On the other hand, a given fear begets a fixed habit, and that habit drills a hole into the soul reservoir of his dynamic force.

"A man ceases to be a man when he ceases to have the potentiality of success within him. If a failure could diagnose his own case, he could cease being a failure and become at least a potential success by the simple expedient of ceasing to do that which made him a failure. But few men will acknowledge to themselves that they are failures, just as most men deny that they are henpecked when it is a fact that all American husbands are henpecked. A man whose life is not his own is a failure. Let such a man slay the tyrant—his fear of his wife which has engendered so many other fears, all of them success destroying! When she insists upon a Yes, let him say 'No' and stick to No!

"For a failure to realize he is a failure, he must ascertain the particular fear which made him one, and then determine honestly how that fear came to be born. Somebody planted the seed—his grandfather, his wife, his only child. Don't swat the individual mosquito within reach and think you have done away with malaria. Drain the breeding-pool! Don't fight your one dominating fear. Fight the source of all your fears. Be honest with yourself and learn who caused your failure. Then be ruthless!"

Wilberforce Shadd put down the newspaper with an unconvinced look. Was this writer right?

"Be honest with yourself!" he read again. To do this he frowned. The frown made him feel aggressive, and that made him ruthless toward everybody, and most of all toward himself.

The trouble with him was that same vision of a destitute old age which so stupidly benumbs all classes of men to-day. Financial fear; that is, the fear of losing his position—whence came that fear? He did not have it before he married. He did not have it immediately after he married. It came after he had been married some years. It came from his wife's constant harping on the need of saving a little every week, in order to have money in order not to fear the present or the future. Instead of valor, what came of that fear was the fear of everything.

Wilberforce Shadd saw clearly what had happened. His wife was to blame for his failure. His salary had not been raised in five years. The cost of living had gone up, and still he had not asked for a raise. And he was doing more work too. Half the time he acted as cashier. He had the work but not the pay—nor, to be just, the responsibility.

But how could he cease being afraid of his fear? The fear of years would die hard. All American husbands were henpecked. He had not realized it before. He had done what he had because he would not hurt his wife's feelings. In doing so he had become what he was.

He thought over his life and hers and determinedly went back to first causes, until he saw that his failure was due to that fixed idea of his that he must not be dismissed because he must save something every week.

By George, hereafter he must not save something every week!

Of course he had to live with Ann Elizabeth. She was a good and loving wife. He must not hurt her feelings. It would be much better to be fired! He felt like the man who committed suicide rather than run the risk of being killed in a duel. Death—that is, dismissal—offered the only solution.

What would he tell his wife? She would give him the money on the first of the month—on the very next day. He must be ruthless with her! The article said so. He was a rank failure because he was afraid, afraid of everything and everybody. He must not be afraid. He would ask for a raise. The worst that could happen was to be refused. No, they might dismiss him!

He must think calmly. There was time enough to be resolute in. Besides, why should asking for more salary and being refused necessarily mean that he must lose his position? He would sleep over it. A man always acted more wisely after sleeping on his perplexities.

On the next morning he decided that he was not yet really a failure, but that he was in danger of becoming one if he did not stop being afraid of everything and everybody. He was afraid of losing his job, and yet he had money enough in the bank to keep him and his wife two years.

Yes, but not enough to keep her silent two days! Poor thing, she worried so! He felt so sorry for her that he forgot himself for five minutes. He then decided to ask for the raise that same day, provided the opportunity offered.

He began to think that he ought to make his opportunity, instead of waiting for one to arrive of its own free will and accord. That is why, after breakfast, just before he left for the office, he said to his wife:

"I may have some news for you to-night."

He looked so serious, not to say menacing, that her face turned gray.

"Not—not—you're not afraid you—they ——" she stammered.

"I've been afraid too blamed long!" he accused her loudly. He regretted he had not said "damned," like a man, instead of "blamed," like a woman. Therefore, he slammed the door as he went out.

His anger grew as he walked, so that when he took the subway at Eighty-sixth Street he did not feel like reading the newspaper. From force of habit he glanced at the front page.

"STOCKS SCORE GAINS!" he read in one headline. That was it! People who gambled, damn 'em! made money, and those that worked faithfully got poorer and poorer!

Yes, but those that gambled were reckless devils. No, they simply were brave men, and those who meekly took what was given them and said thank you were cowards and deserved no better than they got from their employers.

He would be different!

And yet Wilberforce Shadd could not help his customary shudder in anticipation of his dismissal, as he looked on his

Digitized by Google

To Feel That Within the Little Luster Cream Jug Reposed One Five-Dollar Bill and Two Ones Gave Her a Feeling of Comfort and Security

desk for the fatal missive. And then he called himself names for being such a coward. He was almost desperate when Lipps, the office manager, stopped beside him.

"By gad, I don't know what we're coming to!" grunted Lipps. "Here I've got a bill from the butcher that—why, it takes a millionaire to afford meat these days."

"Yes," agreed Shadd, "it does. I often wonder," he added subtly, "how people with small salaries manage."

Lipps shot a sharp look at Shadd. Did this person dare to dream of being sarcastic? Wilberforce's heart quailed. He made haste to add, conciliatingly jocular: "Americans eat too much meat. I guess I'll be free from dyspepsia." And he looked at his chief for permission to live.

Perhaps Lipps suspected what was going on in Wilberforce Shadd's mind, or perhaps he was thinking of his own case. At all events he said: "That's all right, but I'll tell you something, Shadd: A man who has a steady job is lucky to keep it. Some of these fellows who are making money out of war orders will be digging ditches 'somewhere near Paris'—New Jersey—for a living before many months."

"I guess that's right," assented W. Shadd. To himself he called it a narrow escape. After all, as long as he kept a job that enabled him to save something every week he wasn't so badly off. Some men were born to be rich; others to be paid by the week.

On the way home from work that night he met Hen Wilkins, an old high school mate and chum. Hen was glad to see Wilberforce and Wilberforce was glad to see Hen.

Wilkins was an animated sapience. Whatever he knew, he knew to a certainty, as anyone could tell from his words, voice and manner. Even as a boy Hen had that way about him, that converted his most casual utterances into religious dogmas. There had grown a legend about Hen's success in life which carried respect with it. Somehow Shadd assumed that Hen's was an unusual mind but, like all unusual minds, abnormal and therefore not altogether sound or safe. Hen, in short, was a success who was not successful.

Hen did all the talking because he was full of Wall Street and had to talk, while Shadd, being full of good nature, was willing to listen. While listening to Hen speak about Undersea Craft Company, Wilberforce Shadd could not help admiring the wonderful optimism of the speaker and his admirable confidence in his own judgment. It was obvious that Hen could read the future like print. It took a good hour of sober second thought to realize that Hen was fooling himself. And even then, the realization of it made you like Hen all the better, poor chap!

Wilberforce was still smiling tolerantly at Hen Wilkins' tip as he entered his apartment. His wife turned her left cheek toward him as though she dared him not to kiss her—as all wives do after the third year of matrimony—whereupon he kissed her with relish twice, just to show her, as all husbands do when they feel guilty. She might be overworrisome, but she could not help it any more than she could help her skin's being as smooth and fresh as a girl's.

She broke the silence, saying almost encouragingly:

"What you grinning at?"

"Oh, something Hen Wilkins was saying to me." And as she looked mildly expectant, he added: "It's too long to tell now. I'll keep it for after supper."

"All right; I've got the steak on."

He washed his face and hands. Then he remembered it was Monday night and the first of the month, and that he must deposit her month's savings out of his month's wages. That is what made him bitter. Her saving of his money had made him a coward and therefore a failure!

He fished the bank book from under the newspaper lining at the bottom of the third bureau drawer. Four bills were within. He added the few deposits made since the book was last balanced, and found he had $1832.68.

Then he went into the kitchenette to tell his wife that he no longer proposed to be a spineless cactus. He perceived the steak. He would prepare her for the blow.

"It certainly looks fine," he told her in a congratulatory tone of voice.

"Yes. I made him change it three times before I got it. As long as I've got to pay war prices for every morsel we eat, I want my money's worth."

"I guess they don't fool you very often," he said admiringly.

"It's the same price everywhere. They've got a combination," she explained.

This made him think of the high cost of living and therefore of his fear of being discharged. And that made him think of the article he had read, and how he had not asked for the needed raise and how she was responsible for his failure.

Thinking of her misdeeds—sowing the seed of cowardice in him—made him look at her compassionately. Her own eyes instantly became fearful.

"What," she asked tremulously, "are you hiding from me?"

"Why do you think, my dear," he said, mildly rebuking, "that I must be hiding something from you?"

"Because you look so guilty."

"I was just thinking ——"

He paused, in order to find some reason that would not hurt her feelings.

"What?" she prompted, pale-faced in advance.

"Er—of what Wilkins said." He smiled as if at the recollection, but in reality it was with relief. Ruthlessness came harder than he thought.

"What did he say?"

"I met him on the car and he got off at my corner. He's got a notion he's going to make a million."

"A million what?"

"Dollars."

"He's crazy," said Mrs. Shadd.

Nobody could do that; only the privileged few—with whom she was not on speaking terms.

"N-no," murmured Wilberforce charitably. "No, I wouldn't say crazy; but like all speculators a little off on that one subject. You know, the war ——"

"Do you mean in Europe?"

"Of co—— Yes, dearie. Well, here's what Hen says to me: 'Ever read Mahan's book on the influence of sea power in history?' 'No,' I says. 'Neither did I,' he says, 'but I read what a newspaper said about it. The dope is that whoever controls the sea wins the war. It's always been so from the earliest known war to the present.'"

"Well, nobody's won the war yet," said Mrs. Shadd, to show she read the newspapers.

"No. 'Well,' Hen Wilkins says, 'who's got the best navy? England! What in blazes is the use of Germany having a crackajack army and big artillery if she can't have the sea? None! Now what does Germany stand to lose in cash if she loses the war? Her whole wad—thousands of millions. Well, now, listen: You can't make a battleship in less than two or three years. A little submarine can sink a big superdreadnought. You can make submarines for $50,000 in sixty days and sell 'em for anything you've a mind to ask. Another thing: You can't deliver a battleship, even if Uncle Sam gave you permission, because the British Channel Fleet would put it out of business. But you can deliver the submarine in any harbor—provided the cash is deposited in New York, U. S. A. I figure that anything that can shorten the war is worth a million apiece,' says Hen. 'Now, do you suppose Germany is going to shy at ten or twenty or a hundred millions to win the war?' Of course," finished Wilberforce Shadd with a knowing smile, "I had to say 'No.'"

"Why did you have to?" asked Mrs. Shadd.

"Why—why, I just wanted to lead him on. So Hen went on to tell me that the Undersea Craft Company had sixty-five submarines off Staten Island, completely equipped to the last torpedo, with stores of food, liquid oxygen and gasoline to take them to any German port. He said the company was capitalized at only $10,000,000. At a million per submarine they'd have $65,000,000. That's equivalent to a dividend of $650 per share. In fact, all Hen wanted was one dividend and then quit."

"Why would he quit?"

"He'd have enough." Shadd thought he himself would quit in Hen's place.

"H'm!" Mrs. Shadd shook her head. She would never quit, once dividends began.

"Of course if the company took contracts to supply the other belligerents and could keep the revenue officers from snooping too close, it would stand to make billions! So Hen says whoever picks up a few shares of Undersea Craft Common, which is selling at about a couple of dollars a share, and puts it away and forgets he's got it, will soon be swearing to the tax assessor he really isn't worth a penny over nine and a half millions, honest he ain't. So I left Hen," finished Wilberforce with a forgiving smile, "swearing by the bones of his ancestors that he would buy as much U. C. Common as he could carry. You know that's a curb stock and a man has got to buy it outright. Hen wanted me to ——" He broke off abruptly. It was quite obvious he was not telling the whole truth. It wouldn't help matters to have her know that Hen had asked him for a loan to enable him to pick up five thousand shares. The worst of it was that he had lent Hen two dollars in cash—the price of one share.

"Wilberforce Shadd!" said Mrs. Shadd, and pushed back her empty plate to the middle of the table as though she wanted room. "Do you think for one moment that I'll let you lose all my savings ——"

"Lose your savings?" echoed Shadd rather vacantly.

"Yes, my savings. If I hadn't made you save money every time you wanted to throw it away ——"

THE ENCHANTED CAPTAIN

How Villa Came Back—By George Pattullo

WHAT do you think they are now calling Páncho Villa down in Mexico? El Capitán Encantado—no less—The Enchanted Captain, using the word "Captain" in its higher sense.

Hasn't he come back from the very jaws of death and, by the fire of his own genius and force, triumphed over the armies of the First Chief? He has. Was not the First Chief backed by the support of the United States? He was. And did not the Barbarians of the North announce, with blare of bugle and beating of drums, that they would get Páncho for what he did at Columbus and scatter his forces to the winds? They did. Yet he is there in full view, with more than twenty thousand men under his flag, the virtual master of Northern Mexico. That is the way the Mexicans reason it out.

When one comes to examine the facts it appears a remarkable achievement for a bandit. What wonder the *pelado* holds Villa to be something more than man! What wonder that he looms almost supernatural to the ignorant peons! He is the one great hero they have, and when the chance comes they follow him. They are rallying to him by the thousands. Whoever fights Villa now, fights the very spirit of Mexico.

COPYRIGHT BY MUTUAL FILM CO., FROM PAUL THOMPSON

Villa is the Only Great Military Leader They Have and the Idol of the Masses

Of course we don't want to believe that; we would rather consider him a picturesque outlaw, who can be eliminated without our mixing in it. But there is nobody in Mexico capable of the trick. His strength grows prodigiously. There is no faction that can contend against him.

And yet there can never be peace in that harried land until Villa is suppressed. Two agents, and two only, are capable of accomplishing the feat—death and the American Army.

There has been a persistent effort to minimize his recent successes. The motives are obvious: The Carrancistas have to do that to keep up their bluff at authority, and we prefer to shut our eyes lest it become our duty to go after Páncho. It may be that this course will be impossible for us to sustain ere this article appears, and we shall be driven to act. The bulk of our people don't want that; but a situation understood loses much of its danger, and it would be well to face the real facts.

The Idol of the Mexican Masses

THESE are that Villa is again a formidable menace. His various commands will total close to twenty-five thousand men. The Mexicans won't fight him. It is true that their *jefes* can lead them into action against the bandit, but they go half-heartedly; and the first decent chance they get it's "Viva Villa!" and they bang away at their own officers and go over joyously to Páncho. Witness what occurred in Chihuahua City on September sixteenth.

He is the only great military leader they have and the idol of the masses. And, to give the devil his due, he is their only real patriot, whatever we may think of his methods.

Since September first Villa has acquired mastery of hundreds of miles of railroads and scores of towns; he has captured fifty per cent of the rolling stock of Northern Mexico and holds whatever territory he desires. The bandit could have Juarez any day he wanted it, so far as Carrancista opposition is concerned; but he prefers not to take chances so close to the American forces at El Paso. Jimenez, Parral, San Andres, Chihuahua City—he takes them as he needs them, evacuating when he wishes to trap another enemy force. Perhaps by the time this is published he will have Torreon, too, with its rich stores of cotton and wheat and corn.

And now he has proclaimed his mission. It is to drive out the army the Barbarians of the North maintain on Mexican soil. He has summoned Mexico to rise and sweep them from the face of the earth.

It is a trump card to play. The average native hates the gringo worse than a Chinaman, and Páncho can get ten willing volunteers to fight the United States where one would respond for service against his own breed.

As a declaration of the ideas that animate him, his manifesto to the people of Chihuahua, issued from San Andres the second week in December, is interesting. Here are a few of its gems:

"Our beloved country has reached one of those solemn moments in which, in order to oppose ourselves to the unjustified invasion of our eternal enemies, the Barbarians of the North, we should be united. We have had since last March an American Army, commanded by Pershing, in the Galeana district, constructing cement roads from the other side of the Rio Bravo to the San Buenaventura Valley, which has become, for the present, the base of operations for the abhorred Yankee. This has been done with the patient consent of the so-called Constitutionalist Government, which would like to build ammunition factories to continue the destruction of Mexicans with bloodshed, to make it easier for its leaders and allies to enter the interior.

"It is, therefore, a great and arduous task we must fulfill as Mexicans. I summon you to take up arms to overthrow the most immoral government we have ever had. . . .

"Without hope of seeing a change of conduct in the present rulers of this country, I have the honor of stating to the Mexican people that from this date on I will have my troops enter in the most active way possible, and will start military operations to overthrow the traitors and to put at the head of the government any citizen who, by his recognized integrity and civic virtues, can put Mexico among the free and cultured peoples, a place legitimately ours. . . .

"No military nor armed citizen may be nominated for President, because the army has its own definite uses. There are no exceptions to this rule. . . .

"Since the date of this document, the revolutionary army declares void all the concessions, privileges, etc., granted by the so-called Constitutionalist Government, excepting only the marriage licenses, certificates of birth, death, and all laws connected with the civil status of persons. . . .

"The revolution needing the resources of natives and foreigners alike for the reconstruction of the country, we will not be responsible for debts or claims made by foreigners. . . .

"No foreigner may acquire real estate or any other property hereafter if he has not been naturalized as a Mexican for twenty-five years, and has not resided continuously in this country during that period. . . . All property of foreigners is hereby confiscated to the nation.

"It having been demonstrated fully that the North Americans have been in the greater part responsible for our internal strife, which they have been fostering, as is proved by the unjustified and continued presence on our soil of their troops, all North Americans are declared incapable of acquiring any property, as well as Chinese. . . . All railroad lines, with all their stock, are hereby confiscated for the use of the nation. Foreign companies which claim rights of property in the railroads will not be considered. . . . Mining properties of the country, which are owned by foreigners, will be confiscated also for the use of the nation.

"To stimulate the Mexican manufacturer and to increase industries generally all over the country, all mercantile operations with the United States are hereby suspended. All rail and wire communication will be eighteen miles below the international boundary, to enforce this provision.

"All military chiefs are urged to require all male inhabitants of their respective territories to take up military training, to be prepared for the great struggle with the invader. Those who refuse will be declared traitors and shot, their property being confiscated."

Happenings Since the Columbus Raid

ALL of which makes it look as though the Enchanted Captain was organizing for a real struggle.

But how did he do it? How did Páncho Villa come back?

When pressure of other affairs made it expedient to drop the bandit off the front page, the newspaper correspondents eagerly seized the opportunity afforded by the Carrancistas. They buried Villa in fifty-seven lonely and unwept graves. One day he was shot to avenge a woman. Another, the American cavalry had riddled him with bullets. And, of course, the Carrancistas used to kill him off every morning before breakfast. Whenever they failed to do so you could be reasonably sure that their spokesman was sick in bed.

Here is the story of Páncho Villa from the date of the Columbus raid, on March ninth, as nearly as it can be gathered. It would be presumptuous for me to assert that it is flawless. But in my estimation this is as faithful a narrative of his doings as can be obtained from any sources outside of Villa himself.

Let me state at the outset that the American Army never actually engaged a force under personal command of Villa during his flight. Twice they almost had him when he was lying wounded; but they did not know it. The Mexicans who gave Pershing's army trouble were Carrancistas, armed civilians resentful of the presence of foreign troops, and small bands of Villistas under Julio Acosta and Candelario Cervantes.

Digitized by Google

The chief himself was in hiding, to recover from a dangerous wound. That explains his months of inactivity. And the Carranza forces made no real effort to effect his capture. A large portion of the time he was within striking distance of them, or actually under their noses.

To understand properly what follows, it is necessary to go back to November of 1915. Carranza had been recognized by the American Government, and permission had been granted to transport five thousand of his troops across United States territory for the defense of Agua Prieta, on the Arizona line. From the moment of that recognition Villa was a gone goose; and he knew it.

He failed dismally in front of Agua Prieta and started a retreat, going by way of Cananea and Nacosari back to the state of Chihuahua. I was over a portion of his trail not long afterward; it was strewn with the skeletons of horses and mules. Arrived in the capital, he was faced by a desperate situation. The Carrancista forces, with the material support of the United States to draw on, were pressing him hard. Many of his *jefes* were frightened, seeing doom ahead. The people were worn out and starving; there was no more fight in them. The country was wrung dry. One after another of his captains announced that they were through with Villa and hastened to join what they felt convinced would now be the winning side.

Realizing he was up against it, Páncho went out on a balcony of the National Palace, in Chihuahua City, one day in December, and made a speech to the populace. It was a farewell.

"You are sick of me now," he said. "You are exhausted and miserable. You do not want any more fighting. I leave you. But don't forget this—the man you hate at this moment will be back within nine months. I will never desert my country. I have never fought for personal enrichment, but for the people. Therefore, I will come back. Hear me! I will answer your call in the hour of need."

He is always picturesque in what he says, and has astounding magnetism to drive home his words. The people huzzaed and Villa went off to Bustillos, to which point he had summoned his forces for disbandment. They came from all the surrounding region, nearly eighteen thousand men.

There he released them for a period from his service and bade them good-by. They were passionately devoted to him; but they had, also, had their fill of fighting and privation, and were eager to be gone.

Villa Wounded and in Hiding

THEY broke up, but not all of them departed with their equipment. Some, operating under powerful chiefs, went off as units; but the majority, thus assembled to take leave of Villa, laid down their arms.

He buried in the vicinity of Bustillos twelve thousand rifles, eight light cannon, some machine guns, and nearly two million rounds of ammunition. They would need them later, he explained. Foresight is one of Páncho's most valuable assets.

This equipment was cached in several spots, some of it being buried near Colonia Dublan, now the American base. Ten heavy cannon and several caissons were among the lot.

Then he went off into his old haunts, with some hundreds of the faithful, to resume the life of a bandit. And one March day he was overcome by a fit of rage against the Americans for their treatment of him and headed for the border. In the darkest hours of the night he swooped down on Columbus, New Mexico, and there laid up more trouble for himself than had beset him in his entire career.

Francisco Villa and His Staff

Twelve hours after his mad act he repented the impulse in bitterness of heart. A presentiment of what it would bring down on them assailed Villa. He upbraided Pablo Lopez and Candelario Cervantes, his lieutenants.

"Now see what you have done!" he cried, with a fine disregard of his own leadership in it. "This will bring a whole nation on our backs."

Lopez merely groaned. He was on a stretcher because of bullet wounds in both legs, and had been carried in that manner from Palomas.

They struck into the Sierra Madre, on the border of Sonora. Their plan was to go south and fall on Guerrero in order to seize the ammunition and supplies of the garrison under Cavazos. He had about two hundred men and they anticipated no great difficulty.

Toward the end of March they tackled Guerrero about dusk and by dawn held possession of the town. It lies in a sort of bowl. Villa was entering the place as conqueror when some Carrancistas on one of the surrounding heights opened fire unexpectedly. A soft-nosed bullet caught him in the right leg below the knee, fracturing the bone in three places.

That is the way he obtained his wound. He was not shot by the pursuing American forces; and the stories about young Arrieta cracking down on him with a .45, in Guerrero, because Páncho had stolen his sister are without a shred of truth. Villa doesn't have to steal women in Mexico.

His followers took him into the house of Señor Fernando Gonzalez, where his leg was dressed. Then they put him in a buggy and took him into the Sierra Tarahumar by easy stages. There he was concealed by the Indians.

While he was in hiding, the forces operating under his flag split up under various leaders and went off to prey where they thought the pickings would be easiest. The Carrancistas saw their chance and grasped it. If they could announce that Páncho Villa was dead and convince the Americans of it, perhaps the expedition would be withdrawn. At any rate it would help their cause enormously to make people believe that he had been killed, and they set energetically to work on the job. The elimination of Páncho made their own task of pacification immeasurably lighter and gave them a weapon to use in negotiations with Washington for the hobbling and gradual retirement of the pursuing army.

It so happened that a large portion of the American press and public was utterly weary of the whole mess, and they jumped at the chance to believe that the cause of it all had been wiped out. They wanted to forget Mexico and return to business. Consequently the bandit was proclaimed dead, and Carranza commanders solemnly promised to produce his body immediately. Numerous bluffs at doing so were attempted, but they were feeble efforts at the best; and, despite the fact that energetic Carranza agents buried Villa over half of Chihuahua, strong doubts lingered in the public mind that he was really out of the way. The American military authorities never believed it for a moment.

All the while he was in the region of Guerrero, being nursed by the Tarahumar Indians.

Gossip and rumors were flying like wildfire over that country concerning the American column under Pershing. Word reached Villa that a force was approaching Guerrero, and he ordered that he be taken up into the mountain fastnesses, where Julio Acosta, one of his former generals, had his retreat. Two youths accompanied the wounded bandit on this trip—Juan Murga and Javier Hernandez.

Dodd's Cavalry on the Trail

BEFORE they had gone far the rapid advance of a detachment of Dodd's cavalry surprised them. The two attendants fled, taking everything belonging to the wounded man, and leaving him alone with a horse. Villa was in bad plight. The Barbarians of the North were close upon him and he might be discovered any minute. In this extremity he turned his horse loose and hid in a cave. From there he saw about fifty troopers ride by. They passed within ten yards of him. He has since asserted that he also witnessed from his cave an engagement between the American troopers and some Mexicans.

Villa dared not venture out, lest he be seen and taken. He remained in the cave three days, without food and suffering horribly. His leg swelled and turned black. Murga and Hernandez had left him without water, and he was almost unconscious a considerable portion of the time.

Then up to the cave, on the third day, came Nicolás Fernandez with a stretcher. Some Indians had advised him of the chief's hiding place. Fernandez and his men carried Villa toward Bachiniva, which town they circled in order to avoid the Carrancista garrison; on to El Royo, nothing more than a plantation, where the mother of Tomás Morales, one of the nine men who made up Villa's first army, dressed his wounds. Morales was killed in a fight against the Federals in 1913; Páncho was much devoted to him.

As soon as could be they moved on to Rubio. Followers joined him every hour. They had to cross a plateau miles in extent, which was bare of shelter of any description. Not a gulch or a tree offered screen; but they accomplished it, moving in the dark. They reached San Antonio de Orenales and then took refuge at a small ranch near the Bustillos Plantation.

Here they were unexpectedly set upon by a force of Carrancistas during the dressing of Villa's wound. He had only fifty men with him. While these went into action, to hold

DOUBLOON GOLD

By John Russell

ILLUSTRATED BY GEORGE WRIGHT

"Gentlemen, You Been Kidnap'," He Was Good Enough to Explain. "We are Sorry; But it Was of a Necessitate"

I REMEMBERED the big chap with the China-blue eyes and the great mop of tangled fair hair. I had seen him one night, a month or so before, at Monte Carlo, where he wound up a run against the red by snapping the sovereigns off his cuff links. And here, in the Casino Pavao, at Funchal, I remarked him in almost the identical gesture. He fumbled through all his pockets before he found and tossed out upon the board a goldpiece, broad and ruddy as his own open-air face. Now, as then, I saw him summon his last reserve for a final plunge. The coin fell on *manque*, and there he let it lie.

We were in charge of a highly superior banker at that table—a model banker, a window model of a banker, with spade-cut beard, jet brows, waxen face, and a perfectly faultless armor of full dress. Throughout the evening he had been spinning the wheel and shooting the little marble along its saucer rim with the detached regularity of an automaton. But when this strange token dropped shimmering beside him he stood like one transfixed, then bent over to stare, and presently passed a signal to the fat croupier across from him. And both of them stared at the thing, which shone like a full moon on the smooth green pool of the table.

I was not so sure of the rest. But it seemed to me that a sudden flame lighted their professionally indifferent eyes, that the spark of some swift excitement leaped between them. I say I could not be sure, because I was tiptoe with eagerness myself.

Nobody else was paying any noticeable attention to the big gambler or to his fortunes. A silent crowd jostled stiffly about the board, three deep, unmindful of the heat, the puddled air, the aching blue-white lights—a cosmopolitan crowd, such as one finds in the season at a minor crossroads like Madeira, where types are varied, if not extreme.

There was the English invalid contingent, of course—the prop and frigid corrective of so many subtropical resorts; and the local social element, dark, dapper and Portuguese, playing a wary and penurious stake; and the casual commercial, chiefly Teuton, playing high and stolidly; and the whole hodgepodge of chance tourists from the steamers in port—South Americans, South Africans, lean and yellowish administrators from the West Coast, one or two frock-coated Arabs, with the fez, Spaniards from Canary, and Hebraic gentlemen from the ends of the earth. In short, a Casino crowd, solely intent upon the game, and restrained from any common human sentiment like curiosity by its own multiplied strangeness.

And I rejoiced that this was so; for I desired no competition, and I meant to get that big gambler's big goldpiece, one way or another.

"*Faites vos jeu'!*" The banker had recovered sufficiently to make his spin, droning with guttural accent the familiar phrase: "*Faites vos jeu', mess'h!*"

I suppose every traveler likes to esteem himself rather a dab at collecting. How else account for the populations that live by the sale and the manufacture of assorted relics? I had lugged a bag of ancient coins half round the world, and I desperately wanted that particular coin, so large, so curious—and genuine—being offered as a bet. But there was something more to my temptation.

The day had been tinged for me with the charm and color of this Old World island town, lying like a flower wreath on a mailed breast, with its rioting gardens, its twining streets, its grim basalt barriers and savage beaches. I felt the lure of authentic adventure in pursuing such a memento, a goldpiece possibly historic, stamped with the flourish of dead kings. One has the sense at times of spying from ambush upon a promise of emprise and some great gain. It is the glamour of things, a magic flush on dull and sordid fact. It starts up anyhow, at a face, a whisper, a strain of music—a stock quotation. True, in the present state of a fallen world it often proves counterfeit—and expensive, too often. But what of that? One follows still; if only for the sake of the story.

"*Faites vos jeu'!*" advised the banker, who himself presided over romantic possibilities at a dollar a throw.

By the judicious use of an elbow I worked my way through the press. There fell the usual interval of suspense while the marble circled low. It gave me my chance to lean over the shoulder of the big gambler, who sat glowering and expectant, and to murmur in his ear.

"I'll take it up for ten pounds," I offered.

He nodded, without so much as looking at me; and I dropped five American eagles beside his stake.

"*Rien ne va plus!*"

But I had already effected my exchange; and I snatched away the big goldpiece just as the marble struck, hopped, and rattled into a socket.

"*Vint e uno,*" announced the banker, surprised into his own native tongue; and I caught the unmistakable quiver of a live disappointment as his glance crossed mine with the flash of a knifeblade.

The gambler waited until a silver rake had swept away his eagles. With a visible effort, then, he braced himself against the table and rose. He turned to me, met my smirk of triumph with a frown, and plowed out of the throng to the natural refuge, the little barroom on the terrace side, where I followed him quite shamelessly.

II

THE hour was early; we had the place to ourselves as we pledged each other in the quaint device they call a cocktail at the Pavao.

"You made a good bargain," he said, setting down his glass. "There must be at least twenty-five dollars' worth of pure gold in that slug if there's a penny—let alone its curio value."

His manner had a rough edge. Anyone who has lost over the green cloth knows the spleen it can raise against all reason. I was the better pleased next instant when he broke through, with a smile of sound good nature:

"Here's hoping it brings you better luck than mine."

I liked that smile, and the voice, easy and true as a bell, and the whole hearty, big-boned cast of him; and I marveled what twist had made a splendid great fellow like this, with his arching chest and walking-beam breadth of shoulder, the hanger-on at unhealthy gaming rooms. He was neither old nor young enough to be merely foolish. Forty would be about his age, I judged; but his eyes were new, like those of a child, and the only marks about them were the little sun crinkles of outdoor living.

"You were willing to sell," I reminded him with a half query.

"Of course!" he nodded. "When the game gets me running I'd stake my shoes if I could sell 'em. And ten pounds was more than the bank would have paid. All the same, you've got a rare piece, cheap."

"Just what have I got?"

"A doubloon—don't you know? One of those queer Portuguese cart wheels. Sink it! I made sure I'd found a lucky at last—anybody would."

I echoed that glorious old word:

"A doubloon?"

"Aye!" He smiled again. "Pieces of eight—what? The pirates used to cut throats for 'em."

On sudden impulse I risked a small experiment.

"I've no wish to profit by your misfortune," I said. "This is evidently very valuable. Call the ten pounds a loan."

He glanced at the coin as I laid it before him; and then, with a widening of pupil, at me. I was startled to see him hesitate.

"No," he decided. "No. But look here, that's decent of you. I will say it's downright decent."

"Not at all," I protested virtuously. "It might be worth many times what I paid you."

"That wouldn't worry me."

But something was worrying him as he frowned down at the golden disk. I felt a trouble on the man that bit deeper than his losses. He had an odd, abrupt trick of passing a hand hard over his brow as if to brush away some constant irritation, a gesture at once naïve and passionate. At such times he looked about him with an uneasy air, puzzled and, I could almost say, resentful.

"You must be very much attached to the thing," I persisted.

He slid it back to me brusquely, with a jab of his forefinger.

"Thanks. Would you mind putting it out of sight?"

We were sitting at one of the small tables that lined the side of the little room. It so chanced that I sat facing the bar, which was not a proper bar at all but a long, low sideboard, whereon an attendant compounded drinks. My new friend was at my left and thus failed to see what now I saw—a detached head glaring out of the wall, sharp and definite as a cameo. I was slow to connect this singular phenomenon with a strip of mirror over the sideboard and regarded it merely with wonder, for the face was very much alive, convulsed and eager. Tardily, then, I recognized the jet spadebeard of the superior banker, and at the same moment felt a hot breath stirring in my back hair.

"Hello!" I exclaimed, and spun round in time further to recognize a pair of perfect coattails; they were just disappearing through the doorway into the *salle* behind me.

He could not have had ten seconds' start, but when I reached the doorway the fellow had vanished in a fringe of bystanders. Another banker, bald-headed and not in the least superior, was now in charge at roulette, and I noticed that the fat croupier had also been replaced.

I turned back to the attendant at the bar, a popeyed nondescript in a white jacket.

"Who was that?" I demanded indignantly. "Who is that man, and what the devil did he mean by blowing down the back of my neck?"

He stared at me, with fluttering lids, chalk-faced—I was to appreciate presently what terror rode that obscure soul.

"*Ndo compriendo,*" he stammered, though I had heard him use good-enough English of a sort in wheedling for tips. Impatient at his stupidity and my own jumpy nerves, I flung away from him—or, rather, I started to fling and was halted there in my tracks.

Now the contact of a revolver is something that no man need be taught to identify. It is a part of instinctive knowledge. When a hard blunt nose snuggled suddenly under my lowest rib I required no verbal order to make me stand quite passive and obedient. So I did stand, while still mechanically resisting the furtive, tremulous fingers that came stealing round my wrist, trying to force my hand open.

I was not half so frightened as amazed, and certainly not half so frightened as the creature himself. I knew it must be the wretched little attendant who was tickling me with that revolver, and that he was trying to hold me up for something—what it might be I scarcely thought. If he had

Digitized by Google

been respectable in any way, through strength or skill or personality, I believe I might have yielded. But to be robbed by this miserable hireling, this popeyed dispenser of bad cocktails, himself in a state of the most abject funk, roused all the stubbornness of which I was capable. As if a sheep had assaulted me!

I suppose I should have allowed myself to be shot ingloriously had not the big gambler discovered what was going on. In two steps he was by me, pouched the weapon with a fist like a muff, and simply abolished Popeye.

"Easy now!" he warned him. "Don't yell!" It was an absurd anticlimax to see that bold, bad gunman being jammed upright to keep him from falling in a heap. "Reposo yourself, matey, if you know what's good. Be quiet—comprendo so much? Nobody's going to hurt you."

Somehow I found myself back at the little table. The gambler occupied the chair at my right this time, whence he could watch my late enemy, who hung collapsed over the bar. Except for these trifling changes, the whole incident might have seemed illusion.

"What was that for?" I managed to ask.

The gambler answered with a negligence that struck me in my condition of mind like an affront:

"Well, the lad's of no importance—don't you see? He had to do what he was told and he wasn't up to his job—that's all. But I thought we'd best keep him in view. No sense having him run off to report."

"How true!" I said with a faint attempt at emulation. "One concedes the frivolity of having the lad run off to report. After all, he could only confess that he had failed to murder me. But suppose I do it?"

"What—complain?"

"It occurs to me I might. I'm not vindictive, but I really don't care for pistols with my drinks."

"Who to?"

"Why, to the manager, I suppose; the maestro—the man who holds the gambling concession in this place."

"That's the johnny with the beard. He would be pleased to get a complaint from you!" he snorted. "Why, it was he who gave this poor fool his orders!"

"Oh!" I said, for lack of more adequate comment.

"And he, again, is only a lesser devil. And if you should call the police, or the military, or anybody, all the way up—the governor himself—you'd probably find the same."

I regarded him to know whether he was serious. He was; and his laconic method of statement had an extraordinary effect of bitterness. Action had lent him brief relief, but the cloud of some fixed discontent dwelt in this strong soul. Even as I watched, its shadow descended upon him again.

"From your account they seem prepared to spare no pains in making the visitor feel quite at home," I observed—"up to the point of inducing him to remain permanently. Was there any other object in the recent attention to me, do you think?"

"You've got it in your hand."

I unclenched my hand and sat blinking down, with some astonishment, at the thing I had held throughout and was still holding—the Portuguese doubloon. His smile was grim this time.

"Pieces of eight—what? They used to cut throats for 'em."

"Who wants the thing so badly?" I asked squarely. "Who's after it?"

"Number One," was his cryptic answer.

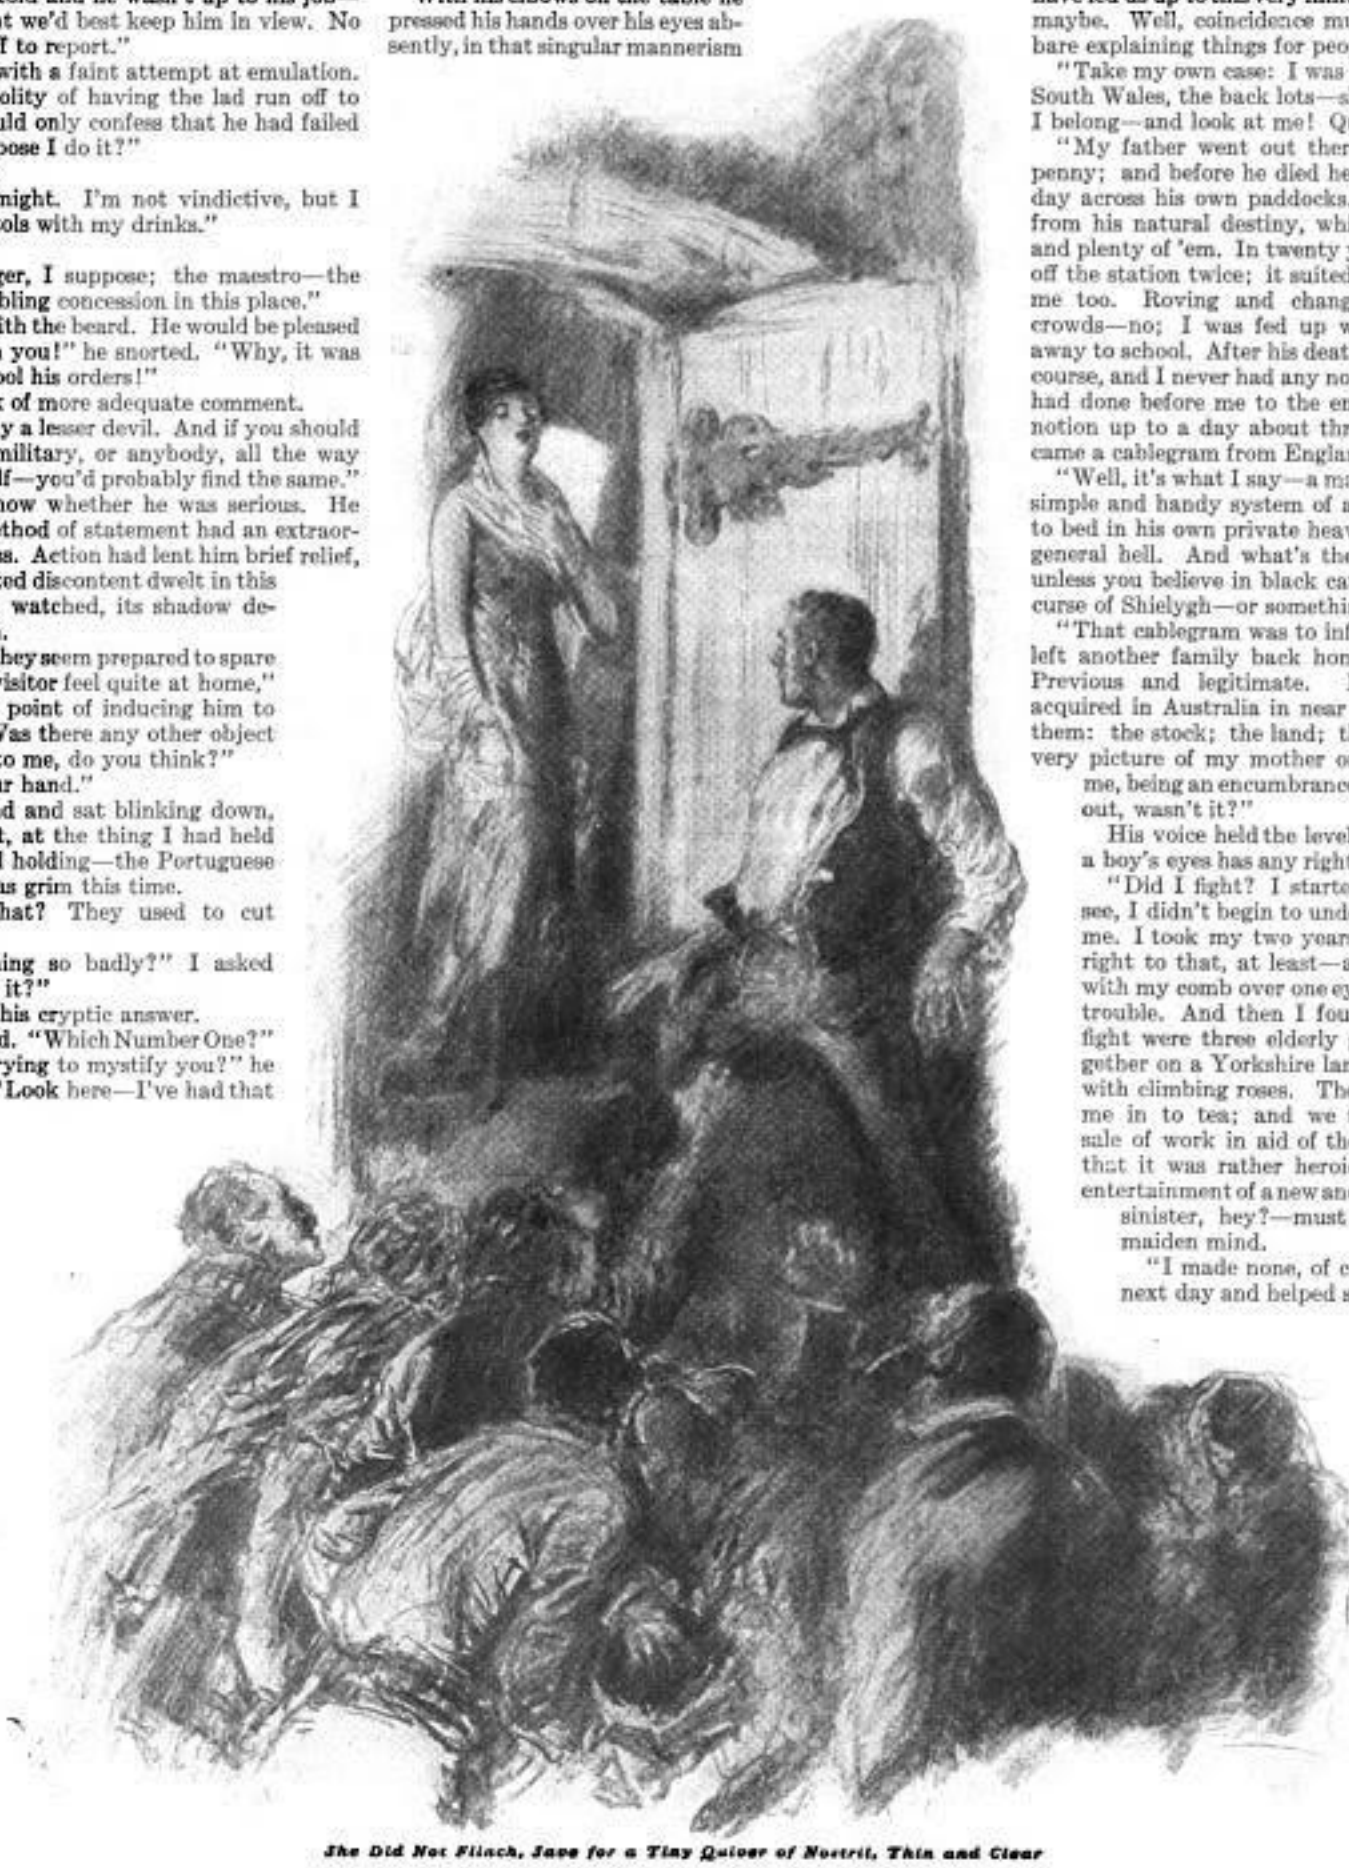
"Number One!" I cried. "Which Number One?"

"Do you think I'm trying to mystify you?" he returned impatiently. "Look here—I've had that confounded relic only since yesterday myself. They tried these same tricks on me until I got tired and wrung a little yellow viper's ears for him. Well, Number One wants it. Number One is the cause, the source, the trouble maker, for whose sake they move. I'm telling you every bit he could tell me—just that: Number One."

I drew a long breath. Adventure—romance? The most hardened realist must have admitted that here was a promising lead. From the opened windows on the terrace came a stealthy, sudden rush of rain, confusing and drowning the fret of the sea below. The curtains flapped inward and we had a whiff of the island night, warm and damp, charged with the heady scents of lush vegetation. Back in the ballroom they were starting a waltz of Waldteufel's, I think it was, some jingly strain that ran with the clink of money on the tables. A suitable setting for a wondrous tale; but it was borne upon me that if I wished full value for my venture I should have to play up now, and play up sharp.

This difficult man was not the kind to unbuckle offhand. He was hardly what one might call a subjective peddler of his wares. He would not care two pins for my thrills, my quest of fancy, which to him, in his own heavy obsession, must seem the most contemptible trifles.

With studied carelessness I took the doubloon on my thumb, flipped it and stuck it in my pocket.



"No wonder you were so willing to make a trade!" I said dryly. "One would say the liabilities outweigh the assets. As they have now descended to me, it remains to inquire whether they were honestly come by."

I had caught him fairly out of himself. He sat up as if stung, seemed ready to retort, and then yielded with a laugh—deep-throated tribute.

"You want an abstract of title?"

"My dear sir, I'm frank to say that's what I wanted from the first. I remembered you from Monte Carlo, you see."

With his elbows on the table he pressed his hands over his eyes absently, in that singular mannerism

She Did Not Flinch, Save for a Tiny Quiver of Nostril, Thin and Clear

he had; and when they were clear he searched me again, gauging my significance in some alien train of thought.

"You seem entitled to it," he acknowledged slowly, "if only by your cheek, you know. Please note you came asking. I shouldn't care to punch your head later for calling me a liar."

And this was the way I won his story at last.

III

"DO YOU happen to carry any good, live, working superstitions about you?" he began, and marked my blink of surprise. "No? It's a pity. Things must be so much simpler to a man who's satisfied to trust in laws outside himself and his own vision. A streak of fatalism, hey? What a comfort! No use kicking about anything—it's all been arranged for you. Or astrology, now: The stars were in the wrong house, which naturally accounts for Jemmy Jones being in the wrong pew. What 'o, there's warm cheer for Jemmy!

"Why are you and I chumming here together on this hole-in-a-corner of an island, for instance, with no end of a silly yarn between us? Likely you'd much rather be somewhere and doing something else—I'm blessed, but I should. Yet here we are; and both our lives, from a world apart, have led us up to this very minute. Now why? Coincidence maybe. Well, coincidence must be worked a bit threadbare explaining things for people.

"Take my own case: I was born in the Riverina of New South Wales, the back lots—sheep country. That's where I belong—and look at me! Quite a gap to bridge—what?

"My father went out there as a jackaroo, without a penny; and before he died he could ride straightaway all day across his own paddocks. Nothing ever turned him from his natural destiny, which was raising good sheep, and plenty of 'em. In twenty years I don't suppose he was off the station twice; it suited him. It would have suited me too. Roving and changing and mucking about in crowds—no; I was fed up with that when he sent me away to school. After his death I stepped into his place, of course, and I never had any notion except to carry on as he had done before me to the end of my billet. Never any notion up to a day about three months ago, when there came a cablegram from England.

"Well, it's what I say—a man is better off if he has some simple and handy system of accounting for life. He goes to bed in his own private heaven and he wakes up in the general hell. And what's the reason? There isn't any, unless you believe in black cats or astral influence, or the curse of Shielygh—or something.

"That cablegram was to inform me that my father had left another family back home. Previous, so to speak. Previous and legitimate. Naturally everything he'd acquired in Australia in near half a century belonged to them: the stock; the land; the house I was born in; the very picture of my mother on the wall—everything but me, being an encumbrance on the estate. A fair knockout, wasn't it?"

His voice held the level acerbity that no man with a boy's eyes has any right to know.

"Did I fight? I started to—rather! At first, you see, I didn't begin to understand what it was had hit me. I took my two years' wages as overseer—I'd a right to that, at least—and I came on to England, with my comb over one eye, regularly scratching after trouble. And then I found the only people I could fight were three elderly gentlewomen who lived together on a Yorkshire lane in a little cottage covered with climbing roses. They were most polite and had me in to tea; and we talked about something—a sale of work in aid of the local church, I think. At that it was rather heroic of them, you know. The entertainment of a new and unsuspected half brother—sinister, hey?—must present difficulties to the maiden mind.

"I made none, of course. I saw their solicitor next day and helped straighten out his papers for him. After which I departed.

"The only thing I took away was a bit of family history."

Such was his blunt way of putting it; yet I was not so dull as to miss a glimpse of what it meant, the sacrifice he had made in his bitter grievance; the true and knightly spirit he must have shown toward those three innocent gentlewomen, so lightly and whimsically touched in his narrative.

At this point he paused and reached into the side pocket of his dinner jacket.

Digitized by Google

"Have you seen the guidebook they sell about the streets here," he asked—"the English Guide to Madeira?"

I blinked again at the abrupt transition, but his hand came away empty.

"Never mind," he resumed. "I'll show you something presently to surprise you. Meanwhile hark to the family record:

"It seems my people had inhabited their corner of Yorkshire time out of mind. That's a common thing enough, a rural line rooted deep in the soil. But, what isn't so common, they've managed somehow to keep the precious old ancestral name alive and going—from the Ark, perhaps. Yeoman, franklin and squire, as they say, there is always a Robert Matcham above ground somewhere. Robert Matcham, the descendant of uncounted Robert Matchams—d'ye see? It was my father's name, and when he made his break to Australia the tradition was too strong for him: he never changed it—which explains how the solicitor came to trace him at last. You'd hardly call it a fortunate heirloom; but it's the only one I've got—my sole inheritance—for Robert Matcham happens to be my name as well."

He seemed to mean it as a sort of introduction, in spite of the discomfortable irony of his tone.

"It's now three months, as I tell you, since Nemesis or Belial or coincidence—whatever you like—began to play this scurvy joke on me. It hasn't quit yet. To what end, hey? What's it about? What's it damn well for? Perhaps that sounds like whining. Well, it's only whining for a chance to hit back at something or somebody. Wait till you've been caught up by the scruff and cuffed blind, as I've been, and no place to get your teeth in. Listen now:

"My one idea was to get a part of what I'd lost, money enough to buy a little place of my own away there in the bush, the only thing I cared about or knew. I needed a stake—not much, just a bit of stake. An easy thing for an able-bodied man, you'd say. But could I get it? Well, I'm broke again as I sit here—you'll understand why your suggestion of a loan rather knocked the smoke out of me—and what I've been through in trying makes a pitiful comedy.

"There was a syndicate undertook to send me out as managing partner on its big station in Victoria. They only required a deposit, which I paid; and when I went round for the receipt that syndicate had vanished into thin air. I found a place with a wool merchant, who promptly failed. Twice I booked for Sydney on my own—missed one boat through a train wreck, and the other was libeled at the dockhead. I tried stowing away, and got as far as Havre before they threw me off.

"Gamble? I gambled the way another man gets drunk—from exasperated craving, knowing the folly of it. Longchamp, Enghien, Monte Carlo—you follow my course? Once and again I made a winning, but never quite enough; and finally Monte Carlo left me flat. You say you saw me there? Then you know how flat that was. At Marseilles I had to ship for mere bread on a friendly tramp going round to Lisbon.

"Now notice how a man is made to look like a monkey on a string. I didn't even know where that tramp was bound till she anchored in the Tagus. The same evening I got caught in a monarchist riot on the Rocio, had the clothes torn off me and landed in a cell. They released me next morning, with handsome apologies and a coat, not so handsome, which they said was mine. It wasn't; mine was gone to rags. But in the lining of the one they gave me I found two Portuguese bills, and something else: a ticket by the Empreza Nacional steamer sailing for Madeira—within the hour! I took it. My word! What else was there to do?

"You'll observe I never was in Madeira before—never meant or wanted to come here; had hardly heard of the isle.

"I landed yesterday; and perhaps you can guess the first thing I did in a place where horses are so plenty and so cheap. Man, I was crazy to get a saddle between my knees again—me that was raised in a saddle. So I hopped aboard the likeliest nag and rode for the open, out the coast—eastward, it seems. Why again should it be eastward? I can't tell you; but it was the way that offered, winding along between the mountains and the sea, where the lava rocks prop the sugar terraces, black and green in layers, and the blue water below.

"Well, I rode on for an hour or more until the path led me down to the very edge of the tide, where I had rough going over a cobbled strand. At a certain place, which I need not describe, the girth slipped and I had to dismount to tighten it. And now, friend, I've brought you into the bit at last; and you can draw your own moral, for it was there, standing almost in the wash, as I was ——"

He seemed to hesitate on the phrase.

"You found the doubloon?" I finished for him.

"Winkjng up at me from the beach like a yellow eye!" he roared, and his big fist crashed upon the table and dropped a silence between us. I sat nonplused.

"Nobody could blame you after that," I said, at length, "for thinking you had a lucky. As you tell it, the whole purpose of your Odyssey was the finding of that pocket piece."

I should have laughed—had I not chanced to meet his clear blue gaze fixed upon me with deadly candor.

"Is such your opinion?" he asked.

"You were certainly justified in backing the thing for all you were worth," I answered lamely.

"I see I may have to punch your head after all." He smiled quietly. "I've no skill to show you how it struck me; that's the trouble."

He reached into his pocket again and this time brought out and flattened carefully before him, with his powerful, deliberate hands, a little red-bound pamphlet. "Then let me show you what I'd been reading along the way."

IV

I TOOK the pamphlet from him with expectation at low ebb. It was the guidebook to Madeira, a product of the local printer, I judged, thrown together to catch the coppers of the tourist trade. I took it, I say, rather skeptically, and glanced down the page to which he had folded; but before I had scanned the half a shock went through me. My incredulity vanished like mist in a wind. For here is what I read:

As for the dixovery of this lovely Island of Maderia, which is indeed a glorious pearl in the sea, it was probable in 1370; but not by the Portuguese, which come much later. The first was dixovered by sad accident by a lovely, oldest legend, by an Englishman named Robin à Machin, Roberto Machin, or Robert Matcham. He was brave lover of a too beautiful woman to describe, named Anna d'Arfet, his dear love, which he could not marry because the enterprise was not recommended by the patrons.

Hizory teaches us these two evaded together to establish in France and took shipment with a pilot captain friend named Pedro Morales, who was great fighting pilot of Spain. They delivered free on board and everything of best description, until the ship ran against a storm, which was indeed terrible. Many days they blow where the Pilots could not say; and after varied assortment of troubles they came against this strange shore of Maderia and all wrecked. So perished in each other arms this famous love story, which are indeed a sad and lovely legend.

The pilot Pedro Morales exaped and went away to Portugal, where he told the King about this Island. So it was dizovered again by a navigator for the King, and always the populations since named the place Machico, after Robert Matcham and Anna d'Arfet, which died together on the shore.

I had no least desire left to laugh when I had finished, not even to smile at the method of the quaint chronicler through whose commercial phrase there penetrated such a heroic gusto of sentiment. Again and more subtly, more alluringly, I felt the presence of that valid marvel, the delightful fantasy of truth, for which no man ever quite outgrows the yearning. It was here, under my hand.

"Where did you get this?" I demanded.

"Bought it from a hawker on the streets. Everybody buys 'em. They tell you the price of hammocks and seats in the theater and where to get sugar-cane brandy and 'article of native indus'ry.'"

"But is it true?"

"Quite true. Do you suppose I wouldn't go to the municipal library and see? You'll find it in all the history books, just as he says there—the local tradition about the discovery of Madeira."

"And you yourself are Robert Matcham!" I murmured.

All the excitement was on my side. Except for his single outcry, with the vivid flash of color it had lent, he betrayed none. "Have you chanced to examine the coin yourself?" he asked in his level voice.

I felt a kind of anger against him, that any chap with such a yarn should take such an indifferent way to spin it; and presently plucking out the doubloon and holding it under the lights, I came to the crowning wonder of all.

It was a rude bit of coinage, in size and weight considerably better than a double eagle, of a metal too soft to have long withstood the direct friction of the waves. An incrusted discoloration gave me a hint that it must have lain well bedded down; the bright scratches told what recent battering it had suffered on the rocks. On the reverse I made out a coat of arms, almost obliterated; but the obverse was clearer. It bore a profile head, with the titles of Fernando I, King of Portugal, and under that—the date.

"Thirteen-seventy," I read; and repeated aloud with a gasp: "Thirteen-seventy! Why—that's the very year!"

He nodded slowly.

"Do you realize what this means?" I cried at him. "In the same year this piece was minted a man of your own name set sail from England and was lost on these shores! It might

Sixty Tons of Water Will Presently Come Tearing Down the Stairs and Wash These Merrymakers Into the Sewer

By ROB WAGNER

BARRYWORTH in the movies? You're not serious, Kirk—surely! It's too shameful to contemplate! Why do you wish to sentence me to the lowest rung on the dramatic ladder when I've been so near the top? If my health really demands an outdoor life, as the medicine men declare, I'll get me a job selling orange orchards to Eastern tourists or driving an auto hearse. But the moving pictures? Not so long as I can look the world in its fishy eye and tell it to climb a tree!"

Yes, I said all that, and more, less than ten years ago; and I meant every word of it. The person to whom it was addressed was Kirkland, manager of the Tobosco Stock Company; the place was Los Angeles; and the time, to be exact, was January 5, 1907.

When nowadays you see the name of some world-famous star aggressively and proudly proclaimed on great twenty-four-sheet posters as appearing in a new film drama, it seems incredible that the moving picture should have grown from such a contemptible beginning to one of the highest forms of dramatic expression—and all in less than a decade!

To make those remarks of mine doubly absurd, here I am, sitting down to write of the photo play, not as a carping critic, but as a director—and, as things go, a fairly successful one.

The wheel of fortune that brought me to this unique position revolved somewhat as follows:

Four solemn and frowning diagnosticians sat round my bed in The Players, in New York, and gravely shook their heads, thereby registering "Not a chance!" When they left, my domestic manager came to me and said: "Stanley Barryworth, those ridiculous men have told you that your final curtain is due to ring down in less than a month—but I guess they have never heard of the Arizona Desert. We leave to-morrow."

The Healing Power of the Desert

MRS. BARRYWORTH is small and optimistic; but optimism in this case was difficult to share—for had I not been condemned to death by four very expensive doctors? Manlike, I thought their syndicated wisdom was more likely to be correct than the hunch of a mere woman. Besides, even if I did survive and starve the unwelcome colonists in my poor old bellows, what could an actor do in the desert?

Here I was, in the fullness of my manhood, one of the best-known stars of the stage; risen in my work from property boy to playing Shaksperean rôles and high comedy; big, and apparently as husky as ever. Yet I "had it"; and the desert was my only chance of survival.

Well, I'll say this much for women: Their hunches make the frowning wisdom of the male appear like the center of a doughnut. The owl looks wise, but his brains would never give him a headache.

Besides, who knows as much about a man as his wife?

When Mrs. Barryworth defied the pathological pilots, and took charge of the sinking ship, she soon had daughter and me bundled into a train and headed west. At Nogales we disembarked; and she immediately set to work and chartered a prairie schooner, loaded it with provisions, and in three days we had set sail on the great American Desert. She had anticipated my starving æstheticism by packing along paints, brushes and small canvases; for I was to paint my way across the great, gorgeous wastes of Arizona, until we reached California. Painting had always been my avocation and now I was to indulge my soul to its limit.

I will not dwell at length upon this voyage, for it had little to do with the story I am about to tell. But I picked up immediately and within a year I was apparently as well and strong as ever. When we finally landed in Los Angeles I had with me about forty canvases, which I immediately put on exhibition in a local gallery. Though the critics treated me kindly—or charitably—and I made a few sales, the result would scarcely have permitted my choosing painting as a profession.

Feeling that I had entirely recovered, I accepted the blandishments of a stock company, which flatteringly advertised my appearance as a momentous event in local dramatic circles. Within six months, however, I abruptly learned that I was not yet well enough to devote myself to the indoor confinement of the stage, and had about made up my mind to seek employment among the cow-punchers back in Arizona when Kirkland called me into his office and urged me into a life of dramatic crime.

I gave my objection to this urge in the first paragraph; but Kirkland, with more vision, believed there was a great future in motion pictures, and he was not at all impressed with my very superior attitude.

"Don't get too sniffy, old top," he said; "it won't be many years before actors better than you will be cavorting before the camera. Films have already killed melodrama, and they'll go after the big stuff too. This fellow Dodds, who wants you with him, is going to do notable things with canned drama; and if you take my advice you'll jump in and grow up with him in this newest of the arts. Your shame can be temporarily concealed by sworn secrecy and grease paint."

After all, there seemed to be something sporting about the adventure; and I finally agreed to meet this chap Dodds, who was the director of a moving-picture company pioneering in California.

I found him a quiet, modest, gentlemanly fellow, and I was very much impressed with his seriousness and artistic optimism; so, finally, I accepted his offer. I was to start anonymously in outdoor pictures, and was secretly to receive one hundred and twenty-five dollars a week. This was less than half of my salary when I was in my dramatic glory, but four times as much as the highest-salaried lead in the picture company. However, the rôles I was to play would at least permit me to live in the open; and, besides, I almost shared Dodds' hope of a splendid future for the film drama. By occasionally working in Mrs. Barryworth in character parts, and daughter as a juvenile, we all felt that we could at least live. Many people did not consider this important; but we did.

Rough-and-Ready Studio Methods

THE studio was a strange affair—a few shacks, an office, a dressing room, and a square platform, without sides or top. The cast was made up of cowboys, Indians, and a few actors, real and alleged. However, they were all adequate to the character of work the studio was doing, for the pictures were mostly holdups, train robberies, Indian fighting, and rodeos. Besides "Westerns," they were turning out comics—so called.

It was all lowbrow stuff, but purveying with profit to the taste of that period.

Contrary to the popular tenderfoot stories of the fiction writers, I was received cordially and generously. The cowboys did not think me a sissy because I could not bust an outlaw. Bronco-busting is as much a matter of special training as trap shooting or billiard playing, and the boys did not expect me to risk my neck in any vain four-flushing; in fact, I found them much better-mannered and more kindly than I had been led to believe in stories I had read of them. Furthermore, they recognized my particular excellence and would watch my dramatic technic with the wistfulness of children.

But I learned right away that good acting was not a first requisite in my new art, nor repression, nor quiet subtlety of expression. Action—action—all the time! The stories were usually violent or mawkishly sentimental; but always tempestuous.

As our locations were usually in the mountains or on the desert, we had small use for "sets." The side of a barn, with a few borrowed pictures nailed on; a carpet laid on the ground; a couple of chairs; a table—and behold an "interior" of the sheriff's home! A volume of Dante's Inferno served as a Bible, a law book, dictionary, and for purposes less polite, in all scenes where a book was needed. Sometimes, when we wanted to be very splashy, we had a set painted by a real scene painter. The men were "hired off" the legitimate stage; and, having worked under its traditions and artificial lights, they did not change their technic to meet the fierce white light of day.

As we had no diffusers our interiors were made in strong sunlight, which often resulted in shadows of the actors pointing east, while shadows on the scenery headed west.

The Director and Camera Men Ready to Start the Picture as the People are Swept Beneath This Bridge

Digitized by Google

Thomas Ince Directing a Round Peg Into a Square Hole

Instead of the painted mountains receding in atmospheric perspective through the open door or window, they looked like little painted mountains only a few feet away. Even when we attempted realism by sticking a eucalyptus branch in the ground, like as not it would cast a shadow on the sky!

These sets, painted on canvas, would shake like aspen leaves every time anybody opened or closed a door. An adobe wall or prison tower would suffer perpetual seismic disturbances whenever the action became at all rough. As we had no windbreaks, curtains and papers would fly about as though a tornado had come tearing through the transom.

We built one set, on the top of a department store downtown, which consisted of four "flats," eight feet high, with some tobacco advertisements tacked on the wall. This was an interior for a scene in a modern Carmen story.

To the film fans of to-day, used to the magnificent sets of the great feature plays, those of the early days would seem grotesquely inadequate and funny; yet they were most pleasing to the popeyed peasantry of that uncultured period.

I recall one picture made by a certain studio, which was incorrect in almost every conceivable detail. It was a Puritan story, in which the costumes ranged all the way from the Queen Elizabeth doublet to the powdered wig of the eighteenth century. The Puritans made the sign of the cross upon entering church, and when they were attacked by mounted Sioux Indians in war bonnets they staved off the enemy with rifles loaded at the breech.

Of course the least research would have informed the director that Massachusetts Indians shaved their scalps and had no horses. Even a schoolboy should not have made the other blunders.

Those Western pictures, made in Eastern studios, where the cowboys used bangtailed park horses and English saddles, and the sheriff looked like a New England "constibule," got by east of the Alleghanies and in Europe; but out here they were howled at.

Scenario departments were yet unknown—every director writing his own stories. Actors were paid from fifteen to thirty dollars a week; and, as can be seen from our stage equipment, our overhead expenses were very small. Under these primitive conditions we began to turn out five or six thrillers a month, very few of them costing more than four hundred dollars, and some as low as a hundred. A famous director, who, it is said, has spent more than a million dollars on one story, told me that the first picture he directed cost just seventy dollars.

The Whetstone of Endeavor

THE queer thing about the terrible stuff we were making was that it sold like hot cakes, and our Eastern bosses frowned upon further elaboration, expense, or "highbrow" pictures.

I may say in beginning that you might have had better pictures sooner if even these first directors—that is, some of them—had been allowed any expression of their real artistry. But always back East there were men grouped round a mahogany table who were interested only in cumulative nickels; they were the absolute arbiters of the stuff we made.

How we struggled and fought against the ignorance and inertia of our management! Dodds, for instance, one day tried some close-up stuff, only to get a letter from the New York office telling him not to repeat this offense. "Who ever heard of men talking when they were cut off at the knees? Show their feet!" At another time we made a whole story where the camera deliberately threw the background out of focus in order to concentrate on the figures; and the film came back with an order to retake eighteen scenes and see that every nail in the background showed plainly.

However, we managed to put one over on the New York office. We made Damon and Pythias, but in order to fool them we modernized it into a hair-pants story; yet we retained the motive of the classic from which it was adapted.

I do not wish to imply that Dodds and I were the only ones who wanted to make beautiful pictures. There were several men struggling with their bosses and the public taste, and it is interesting to note that those men are at present at the top of the heap. The director whose first picture cost seventy dollars made even those cheap productions artistic; but he never really expressed himself until he was able to command his own money.

It is fashionable among certain directors to think that public taste is so low that it does not pay to address pictures to a higher appreciation. Most of the early directors believed this; but their estimate was based upon an abnormal condition, for a few companies absolutely controlling the market could give the people anything they pleased—and they had to take it. Only an open market could really determine what the public wanted; but competition in the early days was negligible.

The Crude Construction of the Early Days of the Movies

Among the "wildcat" and "independent" companies struggling for existence there were a few men of vision—more, I think, than we had in our dear little Trust; but they were unable to market their pictures profitably, while we turned out the worst pictures imaginable and still made money.

When, along about 1910 or 1911, the camera patents which had given us our monopoly began to lapse, independent companies came into the game, and with their competition there began the most brilliant period of the motion-picture industry. Competition may be wicked in the struggle for the staff of life, but for things of the mind and heart it is the whetstone of highest endeavor.

Pretty soon, all over the United States, companies sprang up overnight; any fellow with a few thousand dollars could hire a camera man, throw up a studio, and start taking pictures.

With the multiplication of companies, which came like mushrooms, attendance increased, and for the next five years there was a veritable debauch of picture making. Everybody made money, and competition compelled spending it. Those were the golden days of the industry.

Dodds and I disloyally welcomed our new rivals, for we felt that competition would force our mahogany bosses to new and finer efforts. And, sure enough, we built a magnificent studio—concrete and steel—the finest, at that time, in the land. Then we started to spend money on equipment and personnel; and, the legitimate stage being in the dumps, we were able to corral a few fairly good actors.

We spent lavishly on everything except stories—supposed to be of little account. If we had a beautiful he-doll and a popular baby-doll, all we had to do was to provide a bunch of action in order to get a picture. This we did by ourselves. Dodds, being a busy person, usually unloaded this work upon my fair old back, and thus he was the cause of my becoming "one of the most prolific dramatists of the twentieth century." I wrote sometimes as many as three great dramas in a week! Any unusual occurrence would serve to hang a story on. I would often film the event and write the story afterward.

Once, while doing some pirate stuff on Santa Cruz Island, we learned of the wreck of the Santa Rosa, at Point Conception. So Dodds loaded me, with a hero, heroine, villain and camera man, into a launch, and told me to beat it over and get some pictures. Neither the villain nor the camera man could run a gasoline engine—this was before the day when even the extra man has his "motah"; so little Stanley became the engineer of a fragile little craft that put to sea on the tail of a great storm. It was sixty miles across the raging main to the wreck of the coaster, and the only reason we ever got there was because of a special Deity who looks after fools. We were very frightened, especially as our engine went dead about fifteen miles from shore and we began to drift toward New Zealand, seven thousand miles off our port bow.

Realistic Hardships of the Sea

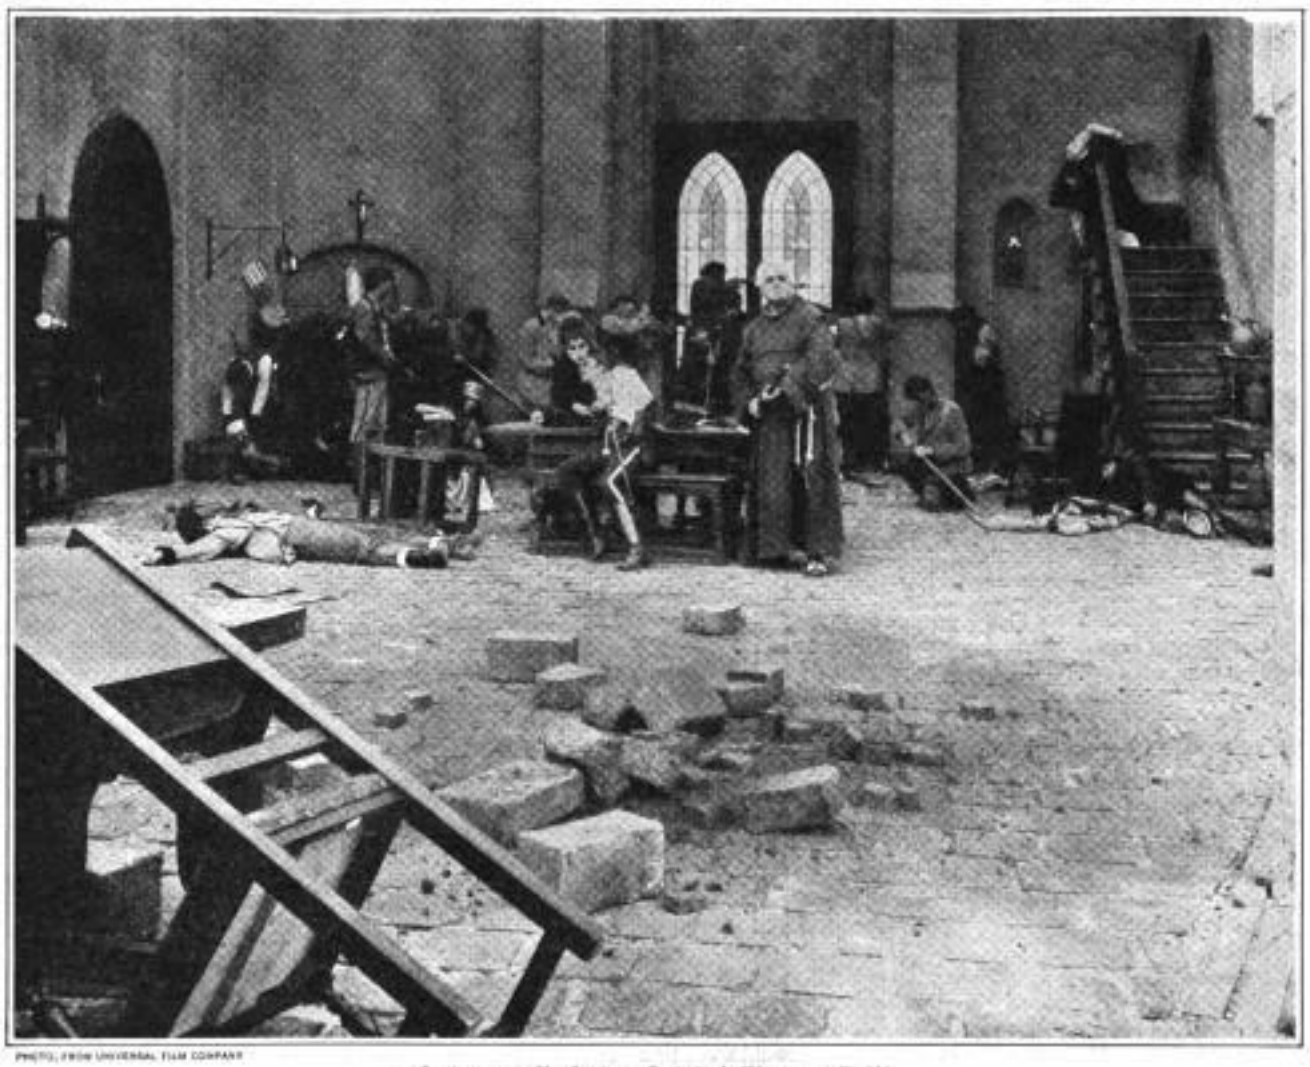
BESIDES my function as navigator and chief engineer, I had also to work at my trade of dramatist; for it was up to me to write a scenario for our wreck picture. This was rather difficult, as I did not know whether I should have a hero or heroine with me when we made a landing. They were both so ill that I feared their prayers for death would be answered. The wrenching that those poor children gave their plumbing speaks wonders for the human anatomy.

The camera man also grew very white round the gills during those four hours when we drifted helplessly in the swell and wind. He lay on his back and looked, but said never a word. But the villain became more sinister every minute. He held his stomach, but lost his temper. If he ever got ashore! Well, the things he promised are too terrible to contemplate; but the worst that could have befallen me was to have him beat it and leave me villainless just when I needed villainy the most.

Having steered our course since sundown by the lights of Point Conception, and later by the fires the refugees had built upon the beach, we reached our destination at just two A. M.

It's queer how everybody's point of view changed in the warmth of those fires and the thrilling stories of the folk about them. The camera man had come back to earth—figuratively as well; the hero and heroine were glad to be alive; and even the villain did not want to desert his part.

Pavlowa and Gerard Rehearsing The Dumb Girl of Portici



Digitized by Google

At sunrise they were still taking off passengers by means of a tugboat and life-saving apparatus; so that was our chance. The sea had gone down enough to permit a trip to the steamer. We made about ten scenes aboard, even to the loading of the lovers into the breeches buoy. Then we went back to the beach and made a bully one of the sweethearts coming ashore, while the villain rushed up and cut the cable, so that they went plunging into the sea. On this occasion the picture was made only up to the point where the villain starts to cut. The rest of it was staged six weeks later in the harbor off San Pedro.

That was one of the best wreck pictures ever done; even the story was pretty strong, for had I not put heart—and other things—into it? Chances to get scenes like this were rare, but we could always build stories round the laying of a corner stone or a colored funeral. Is it any wonder we never bought scenarios when we could write 'em as we went along? To be sure, many of the stories were pretty punk, but so great was the public demand that even this tremendous outpouring of one-reelers was insufficient.

The comedies of this period had even less structure than the dramas. A tramp, dude, burglar, policeman, girl, boy, father, mother, yap farmer and Chinaman were the *dramatis personæ* of nine-tenths of the comics. Any two or three of this cast would start out with a camera man in the morning and, without the least idea of what the day would bring forth, would cut didos whenever and wherever a dido suggested itself.

The one motive in the lives of these alleged comedians was to pursue or to be pursued. All the jumpy slapsticking of the first two hundred feet was a mere prelude to the pursuit of the burglar, which, starting with a single householder, accumulated like a rolling snowball until the whole village—nursemaids, police, charwomen and bankers—went tearing through the streets in the most undignified fashion. If the leading pursuer fell, the others, instead of running round him, piled up on his wriggling form like football scrimmagers. We all laughed at these sprightly races; and if the pursuing bunch ran into a scaffolding and spilled the mortar, or blindly ran off the end of the dock into the drink, we howled our heads off.

PHOTO, FROM UNIVERSAL FILM COMPANY

Scenes are No Longer Painted, They are Built

Low Costs and High Profits

A COMPANY near us, which did nothing but comics, made arrangements with the fire department to turn in all alarms at the studio, so that in case of a picturesque burning they could beat it out and make some foolish scenes. So enthusiastically had the neighborhood hook-and-ladder company entered into the spirit of the thing that on one occasion they loaned all their rubber coats and helmets to the cut-ups; and when an alarm was turned in the actors arrived at the burning dwelling fully equipped for their comedy, while the firemen had to put out the fire with consequent singeing and drenching.

Another time a telephone call announced that the oil fields near Bakersfield were on fire; so there was a chance to pull some real diabolism. They sent a camera man and a villain over there at sixty miles an hour, and made a picture of the dreadful man setting fire to a well; which act resulted in the burning of the country for miles round.

These comedies superseded the old camera tricks, wherein the feathers flew back into the pillow and swimmers popped feet foremost out of the water and landed on the springboard. Comics never ran more than five hundred feet and sometimes were as short as eighty. They were called split reels, and were usually tacked on to some drama that was shy the footage necessary to bring it up to the standard one thousand feet. Crude and elemental as these pictures were, they contained the germ of real comedy—as I shall show later on. The drama lacked story and structure, but they had the "punch"—that quality which to the bourgeois mind is so essential in a picture.

These were the great days of the moving picture! Life was full and splendid. As our work was only vaguely planned, we never quite knew what the immediate future held for us. It is true that art languished and we were simple purveyors of punch; but our stuff was selling.

Selling? Why, pictures that cost only a thousand dollars would net the manufacturer twenty thousand dollars! And even though the Trust had been broken and independents everywhere were making pictures, we had the great plants and were still supreme, because of the momentum of our equipment and our names. When we began to make two-reel and three-reel pictures—features, so called—we started to spend money and became wildly extravagant. Some of our stuff cost as much as a dollar and a half a foot! A three-reeler for twelve hundred dollars! Stupendous! And to think that in less than six years we should see productions costing close to a million dollars—seventy-five dollars a foot!

But our little twelve-hundred-dollar pictures were the grand little money-makers. I happen to know of one that netted the company more than ninety thousand dollars.

It was these great profits that wrought such ominous consequences. Knowing that we were making fortunes for our bosses, we were not particularly careful of our expenditures. True, we had not gone into the expense of the tremendous sets of the present-day pictures—nor were salaries insane; but when we wanted a certain location we went and got it. A director would send a company of twenty-five a distance of two hundred miles to get a single scene. We bought properties, rented trains and steamers, with the utmost prodigality. Yet our earnings kept miles ahead of our expenditures.

The public had gone movie-mad; but its madness did not make us a bit mad. We wrecked trains, rescued maids, pursued burglars, upset apple carts, with the most joyous abandon. Whereas before 1910 there were only about eight or ten manufacturers, with perhaps five or six companies each, by 1913 there were hundreds of them, some of the largest having as many as twenty companies. From whence, then, came all the directors? Actors could be recruited from the stage; but the stage could not possibly supply the thousands of directors who came into being almost overnight.

Well, they came from here, there and everywhere. Of the five directors in a neighboring studio, one had been a cowpuncher, one a policeman, one a messenger boy, one an undertaker—and, curiously enough, he was making comics—and only one from the stage. Others had come into the game as extra men, scene painters, camera kids and publicity men; and, as there was a constantly increasing demand for more directors, they were recruited right on the lot. I actually know of a chauffeur, with no more experience than that of piloting alcoholic beach parties, who was "chauffing" one morning and directing the next.

Needless to say, drama that is purveyed by the butcher, the baker, the candlestick maker, is likely to have about the dramatic standards of those tradesmen; yet in all walks of life Opportunity sometimes raps on the door of one who is equal to it. A few of our most popular directors were rescued from these humble occupations and are now great artists. The success of some of them is one of the most hopeful things of democracy. Many mute inglorious Miltons would not remain mute if they had an opportunity to sing.

I know of one chap who, only two years ago, was a butcher's boy, delivering meat at a certain studio. He went to the managing director and told him the Park Commission was going to drain a lake in one of the parks, and he had written a story round it in which the villain would open the gates, letting the water out, while he and the heroine would submit to being dragged through the black muck of the bottom by a rope from shore. The stunt sounded messy enough to be promising; so the director let the lad make the picture. So well did he do it that to-day he is getting two hundred and fifty dollars a week, and earning every cent of it.

Though uneducated and uncultured in the general acceptance of those terms, he had received a splendid education in the University of the Street, and knew human nature to a rare degree. Having a whimsical slant on the foibles of men, he now directs some of the most riotous comedies at which the world laughs.

Dodds' End

BUT these men were uncommon five years ago. The average director produced pictures no higher than his brow, and many of them had brows like old *Pithecanthropus erectus*. Coarse and vulgar men abused their enormous powers shamefully. They would roar and swear, hire and fire, at their own sweet will.

Fortunately, at our studio, Dodds, who was an artist and a gentleman, had permeated the place with an atmosphere of joy and decency. In the most exasperating circumstances he never lost his temper or raised his voice. Had he lived, he would to-day have been one of the great men of the profession; but—alas!—he was most tragically killed at the studio by a Japanese gardener who went suddenly insane.

This real tragedy, happening in a place where for two years we had been pulling stage violence of all kinds, had a curious psychological consequence. When the boy opened fire on Dodds, who was sitting at a desk, an actor who on the screen had always been applauded for his splendid heroics made his get-away faster than I am telling it. And the fellow who showed real heroism by jumping in and overwhelming the heavily armed murderer had probably been hissed at more than any stage villain of the time. He was 'way out by the gate, doing some roping stunts with the cowboys, when he heard the shot; but he knew by its sound that it was a ball cartridge, and with one bound he was in the studio, grappling with the Jap boy.

Among the women the same contrasts were noticeable. Several of them screamed and ran away in abject terror; yet one red-headed lass, who has since become famous for her nerve, daring and art, sat perfectly still, though one of the bullets crashed through the window right behind her.

Dodds' death cast a gloom over the studio for many months. It had the effect of a stimulant upon me, however; for I was more than ever anxious to realize the ideals that the poor fellow believed were latent in the pictures. I had been coöperating with him for several years and had directed many stories in which I had acted the lead.

SAVING IT FOR DAD

By Clarence Budington Kelland

ILLUSTRATED BY M. LEONE BRACKER

"If it Will Give You a Bit of Comfort to Try—Why, Go Ahead and Do Anything You Want To"

MARK SAWYER'S office door bore the word "President"; on the doors of the twins' offices appeared respectively the words "Treasurer" and "Secretary." But Mark's title was empty of anything except compliment, for power had departed from him because he was sixty-five years old and was the father of twin sons who forgot that he had created the business from nothing but energy and ability.

So Mark, being a loving but wise parent, gave each of the boys twenty per cent of the stock in his company, and retained sixty per cent for himself—at the same time effacing himself from active participation in the company's vicissitudes. He became, so to speak, an interested spectator with a reserved seat.

Mark's last important official step had been to increase largely the size and capacity of the plant; to add new lines of manufacture; and to accumulate an amplitude of indebtedness, perfectly justified by the concern's condition and prospects.

Then he stepped out—"to give the boys a chance," as he expressed it.

Luke and Peter, the twins—the Sawyer family showed a bias toward Biblical names—took hold with enthusiasm.

"Dad," said Luke, "you've worked like a dog all your life. Now you sit round and watch us go to it! Just forget you have anything to do with this institution, except to spend the money it earns."

"Sure," said Peter; "and don't worry. Luke and I have grown up in this woodenware game, and if there's a new wrinkle in it that we don't know, between us we'll start out to find it before dinner. Give us a couple of months to grab hold and we'll show you the most up-to-date, most efficient woodworking plant in the country."

The old gentleman's eyes twinkled.

"No more of the old man's back-number tactics go, eh?" he said.

"You know, dad, you've been pretty—conservative—about adopting new ideas."

"Once," said Mark, "there was a kitten that tried to teach the old cats a better way to catch mice; but when the kitten got its growth it went back to watching the mouse-hole just like the rest. That's the way I built up this business—by watching the mouseholes. I grabbed every mouse that came in and watched to see that none of 'em sneaked away. . . . But this mill belongs to you boys. Catch your mice any way you want to—only catch 'em."

The old gentleman walked into his office, shut the door, put his feet at a comfortable elevation, and lighted his pipe. If the prospects of inaction, of becoming an idler rather than a pulley, gave him uneasiness he showed no signs of it.

Peter and Luke laid out their campaign.

"The main thing to give our attention to now," said Luke, "is getting this mill done. We stopped operations in January and ought to be able to start again in June."

"Maybe we can shave that a little," said Peter.

But they didn't shave it. June saw the mills still inactive, with not days but weeks and possibly months of construction ahead. The war had intervened. Labor and materials were hard to come by, and their prices gave one something to think about with uneasiness. Hitherto day laborers had been plentiful at a dollar-seventy-five a day. Now they were scarce at two dollars and even two and a quarter. Shafting, pulleys and machine work had advanced—not by leaps and bounds, but by aëroplane flights.

"Pete," said his brother, "the machinery alone is going to run thirty thousand dollars over dad's estimates."

"Labor will go five or six thousand."

"And, at that, we can't get enough of it."

"Dad picked the right minute to get out. This is going to be no job for an old man. It'll take all the energy and strength and ideas we've got—and then some!" said Luke gloomily.

"Anyhow, we've got money enough to finish up. Thank goodness, dad fixed up that matter with the bank!"

"We've got enough to finish construction," said Luke, who was the financial and office man; "but we'll have just about a nickel to start moving on. And how long will it be before we get returns? Sixty days. And where will the pay roll come from? Tell me that! The pay roll for sixty days will be fifteen or sixteen thousand dollars. And supplies and material?" He mopped his forehead.

"Lucky for dad we're here!" said Pete. "We'll pull it through for him."

"Got to," said Luke. "We could start out at our age. Thirty-four years hasn't anything to be afraid of. But dad—where'd he be if anything happened?"

"How much are we going to need?"

"I figure about thirty thousand will do the business."

"Where'll we get it?"

"We'll have to find a bank to take our paper. We ought to have little trouble with that. This plant will show a value of two hundred and thirty thousand. We've borrowed fifty thousand so far. That isn't our limit, by any means."

The boys' figures were correct—if everything went through as they planned. But things seldom do. Only two days later a veneer lathe that was being skidded up an incline to the second floor became unmanageable and slewed over the edge. It had to be sent back to the factory, and repairs and freight amounted to nine hundred dollars. Two weeks later the boilers were fired and an attempt was made to start the engine to turn over and test out the machinery of one department. But the engine failed to start. Instead, it sucked over a few buckets of water from the boilers, with the result that the cylinder blew up, badly scalding the engineer, wrecking the roof of the engine room and making necessary the purchase of a new cylinder. Cost of the accident, twenty-two hundred dollars.

The result of these and a multitude of other mishaps, large and small, was that the mill, instead of starting up in June, was not ready to turn over till the first of October—and, instead of being paid for by the money from the last loan, faced a sheaf of material and machinery bills amounting to thirteen thousand dollars.

Then the twins went out to borrow money, applying now for fifty thousand dollars instead of the thirty they anticipated. Much to their chagrin and disquiet, the best they could do on the notes of the concern was twenty-five thousand dollars; which left them eighteen thousand dollars short of Luke's estimate of the minimum it was possible to commence business on.

"If she only runs now!" Peter said, in one of the conferences that were becoming almost hourly affairs—conferences of two, with the old gentleman in his office, taking no worry and supposedly smoking good cigars, with no thought for the morrow. "I never saw a new mill start up without some sort of trouble—but this one's got to!"

"You figure we ought to turn out eight carloads a week. That's about six thousand dollars. If a few folks come in with the cash and take their two per cent in fifteen days—why, we'll get past. If they don't——" Luke did not need to finish the sentence; in fact, he had finished it on a number of occasions before.

"There's as much chance of manufacturing to capacity the first week or the first month as there is of pouring kerosene on a cake of ice and burning it up. If I get out a couple of carloads for shipment in ten days I'll think I've done a good job."

That first week was difficult for the boys. Peter lived out in the plant; Luke sat in his office and figured, but got no pleasure from it, and listened to the small whistle blow for shutdowns. It seemed to him it had got the habit and couldn't stop. He was a high-strung, fidgety individual, and he came to hate that whistle with an active, virulent hatred. He personified it as the voice of a Jeremiah wailing of inevitable ruin.

And still the old gentleman sat in his office, smoking cigars and refraining from worry. Probably his hearing was a trifle affected by years, so that the sound of the whistle had no tale to tell him.

"Don't worry, dad!" had been said by each of the twins until it had reached the dignity of a creed; so dad was not worried—or if he was worrying he never mentioned it to the boys.

But Mother Sawyer was not so easily deceived.

"Ain't things goin' all right, Mark?" she asked more than once.

"I'm just fidgitin' a mite," said the old gentleman. "I hain't used to this job of loafin' yet."

"Why don't you buckle in and do somethin', then?"

"The truth is, ma, that I'm growin' old and sort of forgetful. And new ways of doin' things have come up that I don't know nothin' about; and I'm gen'ally a back number."

"Mark," said Mother Sawyer severely, "be you lettin' them childern run over you?"

"Now, ma," said Mark with a twinkle in his old gray eyes, "them boys is bein' right kind to me. I hain't got a worry in the world. If you could see the trouble they put themselves to so's to keep me from worryin' it 'ud do your heart good."

"Then there's somethin' to worry about?"

"I calc'late the boys is a mite disturbed in their minds. Just how much grounds for it they got I don't know. I hain't allowed to bother my head. But they do a heap of discussin'; and I dunno's I've heard one of 'em laugh right out for weeks."

"Pa," said the old lady, "be you goin' to let them two childern fool away what you worked a lifetime to build up? Eh? Hain't it about time you was takin' off your coat and bucklin' in?"

"Can't be done, ma. I've taken my step. I stepped out! I put it up to the boys to run the mill, and now I can't shove 'em aside, can I? 'Twouldn't be fair."

"I s'pose it 'ud be fair to sit by and let them lose every cent you got—at your age! Be you hankerin' for a trip to the poorhouse?"

"I was there visitin' the superintendent once, ma; and you hain't no idee how comfortable it is! Each old feller gets a plug of tobacco in the mornin' and don't have nothin' to do all day but chaw it."

"I'm agoin' to speak to them boys myself."

"No, you hain't, ma," said the old gentleman gently, but in a tone his wife had come to know as accompanying stubborn determination. "If the boys ever ask for help they'll git it—but I don't calc'late they'll ask. Till they do, things stands as they be."

Digitized by Google

Mother Sawyer made her disgust apparent by actions, but abandoned argument. She was not a woman to waste words that might be valuable at a later day.

From the moment actual manufacturing started, the boys faced the problem—not of showing a profit, not of producing dividends, but of meeting the bare pay roll. For themselves they drew only what was absolutely necessary to live; but their father's weekly salary check was not interfered with. Dad mustn't know. Dad mustn't worry. To hear the boys talk of their father, one would have figured him helpless and in his dotage.

"Poor old dad! Peter, we've got to pull it through for him. This concern simply can't bust!"

"Of course we could look after him and mother; but it would break his heart to be dependent. We're doing some better. Three cars this week. How's collections?"

Luke shook his head. So far, there hadn't been any such thing—no collections; and the pay roll continued inexorably. Nothing else was met; nothing could be met. Timber bills, which were to be met weekly, began to climb. Carloads of containers for shipping the product were in the storehouse unpaid for, the discount day past, the thirty days drawing to a close. Smaller bills for supplies, parts and necessities lay accusingly in a drawer, where Luke thumbed them over daily, dreading the day when they would be past due and creditors would begin making uncomfortable inquiries about their money.

"We've got orders enough. Business is good—if we could only ship and get returns. We can't hope to manufacture at a profit this first month; but we've got to get our money out of what we do turn out! I checked up the bills again to-day. What d'you suppose they amount to? And for heaven's sake, Peter, cut down on buying!"

"I haven't bought even a nail that wasn't necessary. But I've got to have what I've got to have. How much did they total?"

"Counting containers and timber, fourteen thousand and odd."

"Not such an awful lot," said Peter hopefully.

"It wouldn't be if we didn't owe seventy-five thousand on notes, and if we had a little capital to run on, and if they didn't all come due in a bunch. In another week we'll have to scratch gravel to raise the pay roll."

And that is about all they did. Bills arrived at the past-due stage; dunning letters arrived; the concern brought up at a point where its condition, from being merely precarious, was one of imminent ruin.

"There's something that can be done," said Peter. "We've got to reach out and pull off something. We've got to get money somewhere. Just sitting here and manufacturing isn't going to pull us out. We can't make it fast enough."

At the expiration of sixty days Luke succeeded in inducing the company from which their timber came to take sixty-day notes for the amount due them—notes aggregating upward of ten thousand dollars. The container people, to whom an item of six thousand dollars was now due, refused to make further shipments, and the tone of their letters suggested an uneasiness that might result in trouble. Other smaller creditors grew insistent.

"What keeps me awake nights," said Luke, "is that some little fellow, who has two hundred dollars coming, may get frightened and kick over the whole dish. Let somebody start suit—and the whole hive will be down on us!"

"Make another riffle at borrowing some money," suggested Peter.

Luke had tried and tried again. Money was tight, and the statement of the company did not appear to warrant the board of any bank in venturing a part of the money under their control; but there was nothing for it but to try again. He went to the city.

The board of one of the largest banks listened with courtesy to his story—and then gave him a mild shock. Any shock now, short of the announcement of actual bankruptcy, would have been mild.

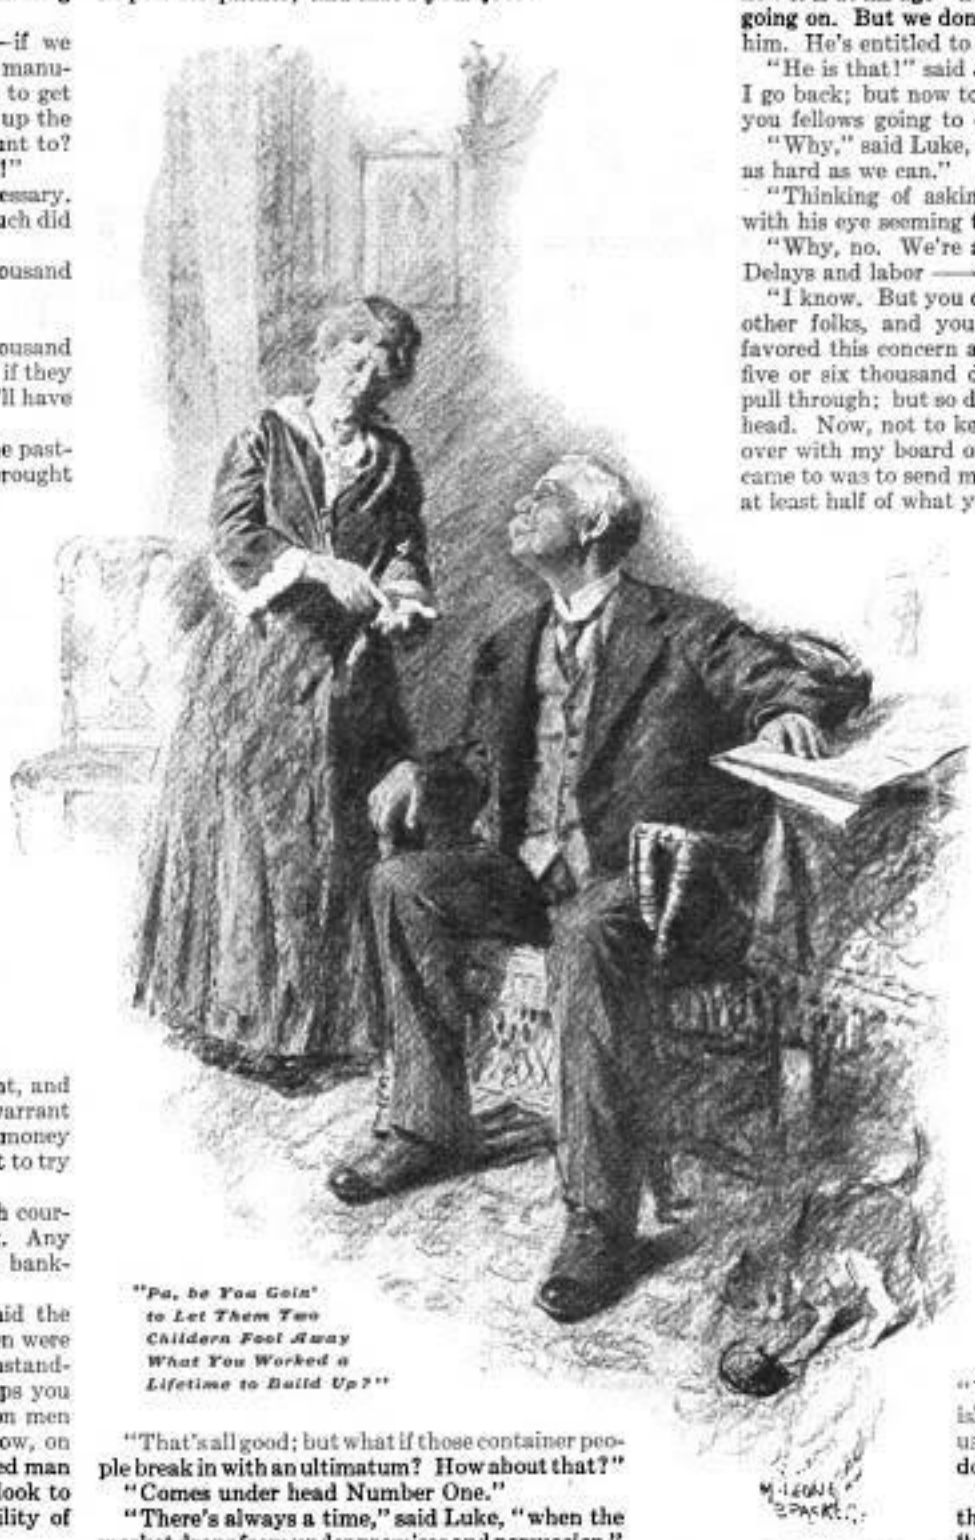
"Your statement isn't inviting on its face," said the president, not without kindness. "If you young men were known to us, even by reputation, we might, notwithstanding, be justified in taking a chance on you. Perhaps you don't know it, but to-day more money is loaned on men than on assets! A man of known ability can borrow, on nothing, more money than an unknown or suspected man can get on gilt-edged collateral. The first thing we look to is the moral risk—which includes the business ability of the individual under discussion."

"But ours is a well-known concern. We've been in business forty years and have always discounted our bills."

"The concern—but not yourselves. You, as you tell me, have been in charge of affairs only a few months. From the moment of your taking charge matters seem not to have prospered. Mind, I am not saying you are at fault. Every act you have performed may have been the act of a competent business man—and it may not. It may have been good business for you to arrive at the condition you are in. If we knew you we could tell better. But we don't know you. Therefore, in your case the moral risk—the man risk—is such an unknown quantity that we must decline to help you out. I'm sorry."

Luke tried his persuasive eloquence on two other banks in vain and boarded the train for home in discouragement but with new matter on hand to reflect upon—namely, that he and Peter were negligible quantities in the financial world. Bright, up-to-date, able they might be; but they were unproved.

They were not under suspicion—not that exactly—but there was no assayers' report on them. Nobody knew how much they ran to the ton—and the gods of finance traded few jackknives unsight, unseen.



He reported to Peter, who took the thing less seriously.

"Well," said he, "we've got to show 'em. But while we're showing 'em we've got to save this shop for dad. Nobody'll help us, so we've got to help ourselves."

"How?"

"First and foremost, by staving off creditors. That's your job. When a dunning letter comes in it's up to you to dictate a reply that'll make 'em sorry we don't owe twice as much. Second, we've got to economize. Nobody ever pared expense down so far that another slice couldn't be hacked off. That's my job.

"Third, we've got to manufacture and ship faster. That's my job. Fourth, we've got to get our money out of our shipments quicker; and that's your job."

"Pa, he You Goin' to Let Them Two Childern Fool Away What You Worked a Lifetime to Build Up?"

"That's all good; but what if those container people break in with an ultimatum? How about that?"

"Comes under head Number One."

"There's always a time," said Luke, "when the market drops from under promises and persuasion."

"I presume the timber folks might shut down on us too. I never mentioned that before, but it's a possibility."

"If only we'd gain on it, I wouldn't care if it wasn't more than a hundred dollars a month. But we don't. We keep up the pay roll; we pay our small incidental bills; but we don't pay off anything—and timber keeps gaining on us."

If two young men ever wriggled and twisted, and made black appear—if not white—at least a little grayish, to stall off financial ruin, Luke and Peter were those two young men. It is remarkable how long a business that is actually stubbing its toe on the edge of insolvency can stagger along before it falls. . . . And still Old Man Sawyer sat behind his door, with the ironic title of President on it, and didn't worry—and didn't know. The boys were saving it for dad!

And then, on a Tuesday, proving that any day in the week can be unlucky if pressure is brought to bear, a gentleman from Peoria, Illinois, alighted from the train and walked, with brisk determination, to the office and asked for Luke.

"Mr. Sawyer?" said he. "My name's Judkins. We know each other by letter pretty well."

Luke felt suddenly as if he wanted to sit down—as if, in fact, he would have to sit down. It had come at last; for this Judkins was none other than the Judkins of the Container Company, whose letters had grown stronger and stronger on the subject of something in the line of immediate cash payments.

"Sit down, Mr. Judkins," said Luke, recognizing with astonishment that his voice sounded calm and natural, and was not, as he feared, a sort of hysterical scream.

"How's your father?" said Judkins. "I suppose he's away sowing his wild oats, now that he's turned things over to you. He and I used to smoke cigars together once on a time."

"No; dad's here," said Luke. "He hasn't taken any active part in the business for six months; but—you know how it is at his age—he likes to be round and watch what's going on. But we don't let anything worry him or bother him. He's entitled to a good long loaf."

"He is that!" said Judkins. "I'll loaf with him before I go back; but now to get down to brass tacks—what are you fellows going to do?"

"Why," said Luke, "we're going right along, digging in as hard as we can."

"Thinking of asking for a receiver?" asked Judkins, with his eye seeming to Luke to bore into his very brain.

"Why, no. We're all right. We've been a little close. Delays and labor ——"

"I know. But you owe us a whopping bill, and you owe other folks, and you've borrowed to your limit. I've favored this concern all I could, but I can't afford to lose five or six thousand dollars. I know you think you can pull through; but so does every fellow who gets in over his head. Now, not to keep you in suspense, I've talked you over with my board of directors, and the conclusion they came to was to send me here to tell you that I had to have at least half of what you owe me in cash—or to start suit. And starting suit means the appointment of a receiver."

The stenographer rapped on the door, a diversion that helped Luke to pull himself together.

"Mr. Barnes is in the office," said the young woman. "He's got to catch a train and wants to know if you can see him."

Luke turned to Mr. Judkins, who nodded his head and said he would be glad to wait, for the whole afternoon was before him.

Foreboding weighed on Luke's mind as he went out, for Mr. Barnes was president of the lumber company that supplied the Sawyers with their logs—and moneys in the total sum of nearly thirteen thousand dollars were due them—some on notes, some on open account.

"Mr. Sawyer," said Mr. Barnes, "we've got to have a showdown." Mr. Barnes wasted no words in useless preliminaries. "I just want to notify you that we will furnish logs till the end of this week; then if the amount due us, above the face of the notes we hold, is not paid, we shall shut off on you—and ask for a receiver. There's nothing to discuss. Our decision is final."

"Very well," said Luke, still astonished to hear his voice sounding as usual. "We'll try to fix you up. You don't give us much time, though."

"We've given you more already than we should," said Mr. Barnes. "Good afternoon!"

Luke didn't go back to his office and Mr. Judkins. Instead, he walked steadily out into the mill to find Peter.

"Pete," he said when he found his brother, "it's come! We're busted. Judkins is here. Barnes just left. You might as well blow the whistle and send the crew home. We're done!"

"Hold on a minute!" said Peter. "They've got your goat. Tell me."

Luke told him with minute detail.

"But we can't bust," Peter said stubbornly. "There's dad. We've got to save it for him."

Digitized by Google

"Save it! I tell you it's gone now! We'll be in the hands of a receiver before to-morrow night."

"Poor old dad! We've got to tell him! We've foozled his business for him, and we've got to go in and stand there, with him looking at us, and tell him. . . . Come on! Let's get it over before I lose my nerve and run away."

For the moment, Mr. Judkins, of the Container Company, was forgotten, while the twins, with something of the air of schoolboys on their way to make a confession of putting sulphur in the furnace, rapped on their father's door.

"Come in!" called Mark; and they entered.

The old gentleman sat before his desk, his feet on its scratched top, smoking a cigar—and not worrying.

"Huh!" he said, looking them over with his twinkling gray eyes. "What you been up to now?"

"Dad," said Luke, his voice breaking, "we're busted."

Mark lowered his feet.

"What? Up-to-date efficiency and all?"

"Don't rub it in, dad. We've kept it from you because we didn't want you to worry; but things have gone wrong from the start. And when we got to manufacturing and showing a profit it was too late. We couldn't get money, and the debts kept climbing; and now Barnes and Judkins are going to throw us into bankruptcy."

"We don't care a darn for ourselves," said Peter unsteadily. "It's you! We've been trying to save it for you. Anyhow"—he said this lugubriously—"we've kept you from worrying about it."

"Oh, sure!" said Mark. "Bein' my age, I kind of miss some faculties I used to have. For instance, I can't see any more; and I can't hear; and I can't reason. Sure, you've kept me from worryin'. Your intentions was good and kind. . . . And now what?"

"Why—nothing, dad. We're goners!"

"You can't think of anythin' more to do?"

"We've done all that can be done. The end of the rope has slipped through and we can't grab it again."

"Don't figger an old feller like me might do somethin' in this here emergency?"

"Nobody can; but if you think you can, if it will give you a bit of comfort to try—why, go ahead and do anything you want to."

"Figger you'd sort of like to have me set in the game?"

Luke looked at Peter and Peter looked at Luke. There was something about their dad that heartened them. Perhaps it was a survival of their childhood, when they thought he was the most wonderful mortal under the sun, and believed in him, and depended on him with their whole hearts and souls—as every father should make his sons regard him.

"Dad," said Luke, "if we ever needed you I guess this is the time."

"All right!" Mark said. "Judkins is here, hain't he? Thought I see him pass my window."

"He's waiting for me, in my room."

"You boys go out and set on a log pile and whittle a spell," said Mark. "I'm goin' in and chat with him."

Mark rose and went into the next office. There was a new spring in his step, a something in his manner that was almost eagerness. The battle horse was once more scenting the fray.

"Hello, Frank!" he said to Judkins. "Glad to see you, even if you have come with both barrels loaded and a knife in your sleeve."

"Sorry, Mark; but things didn't look good to us, and the board sent me on."

"With instructions to get your money or spill the beans?"

"That's about what it amounts to."

"Um. . . . Well, let's get business off our minds, and then talk about things—eh? Now here's where you get off. We've bought about six hundred thousand dollars' worth of stuff from you, first and last, and we've paid for it. Owe you along about six thousand now? Eh?"

"Yes."

"Now then, Frank, my friend, maybe we can fork over that money to-day, and maybe we can't—that isn't the question. The point is, we don't want to. The next point is that we represent a business of sixty thousand a year to you—and we'll keep on representing it; for I ain't busted—not by a darn' sight!

"We need what money we've got, and the fellow that holds a gun to my head hain't goin' to be popular. Now I'll give you a check for what we owe and you can take your foot in your hand and hike, or you can take this firm's note for ninety days and stay and visit."

"You mean ——"

"I mean, if you want our business, give us something when we ask for it. We've never asked you for anything. Take the note and keep the business, or take the money and it's the last you ever get out of this concern."

"I don't get you, Mark. You're making a lot of talk with a capital I in it. Where do you come in? We thought you were out of it for good."

"Did, eh? Listen, friend—right now I'm the whole bag of tricks; and maybe I'll keep on being it."

"You've taken charge?"

"Perzactly!"

"Hum! . . . Ah! That changes things some. We know you! You assure me it's safe to take your note?"

"It's a chance I'd take, personal, to hold a million dollars of business in the next ten or twelve years."

Judkins considered a minute.

"Make your note," he said at last. "It's a bet I'm making on you."

That afternoon Mark and the boys had a talk. It was brief.

"Do I get the idea?" asked Mark. "You want I should take hold till things blows over?"

"There's no use," said Luke; "but we'd like to have you try, just so you'll see we've done all we could."

"I'm the boss?"

"Yes."

"Then," said Mark, "you kids git you a pack of cards and a cribbage board, and git into your office and play that pastime till I call you out. That's your job—keepin' out from underfoot. Start now. . . . How much stock we got?"

"About fifteen carloads, packed in the warehouse; but a rotten assortment. We can't ship a car to-day."

"How much unpacked?"

"Probably from fifteen to twenty cars of pins; two or three cars of turned stock, and the kilns full of veneer stuff."

"And about logs enough coming along to run half the mill? That's the trouble with assortment, hain't it? Tryin' to give a little timber to every department and gittin' no real assortment anywheres?"

For the Moment, Mr. Judkins Was Forgotten, While the Twins Rapped on Their Father's Door

"Yes."

"Git your cribbage board."

With that Mark stamped out to find the superintendent.

"Bill," he said, "I'm the works. Just got hired. Here's what happens: Shut down every department except the veneer and dish room. Ram every log that'll make veneer into veneer. Everybody from the other departments packs pins. Everybody! Git after it."

The result of this eruption was that the warehouse began to bulge with the packed product. Twelve veneer dish machines ran their full ten hours a day, turning out their forty thousand dishes each—building an assortment that made shipments possible. All hands packing pins turned out a matter of three thousand boxes a day, or two carloads. The second day a car went out; and after that a car went every day. Meantime Mark went to the bank.

"I know you fellows have given me all the money the law allows; but I want more. Here's the idea: I want money quick, and returns from shipments mean waiting from fifteen to thirty days.

"Now, then, every time I ship a car I'll fetch you the invoice and shipping papers. You pay me ninety per cent of the face for them, reserving the balance. I pay you a thirtieth of one per cent for each day that goes before the invoice is paid. See?"

"It's unusual, Mark. . . . What are you fussing round for? Thought you'd retired!"

"I've retired like a feller with that insomnia thing. Both eyes is darned wide open. I'm ringmaster and clown and performers in that show right now."

"That's different," said the banker. "Guess we can fix you up. We were getting fidgety about the boys."

This emergency measure gave Mark money to travel on, so to speak. His pay roll of fifteen hundred dollars a week was taken care of and some four thousand dollars in addition was to hand. Of course this was a temporary aid, for as soon as the accumulated product was shipped no more funds could come in from invoices; but danger, imminent danger, was pushed some weeks away. For instance, Mr. Barnes, of the lumber company, was paid what he demanded, and peace reigned in that quarter.

Nobody knew better than Mark Sawyer that what he was doing was makeshift, and dangerous makeshift, with a day of reckoning ahead; but what he must have was time, and anything that gave him time gave him a chance. He had gotten rid, for the moment, of the two most troublesome creditors, and by his extraordinary inflation of shipments he was taking care of all current expenses and making a little gain. But soon the stock would be shipped out; shipments would fall. If timber failed to come in, in sufficient quantities to run the mill, he would inevitably find himself losing ground again.

The task confronting him was: First, to raise a lump sum of, say, twenty-five thousand dollars; and, second, to compel the lumber company to live up to their contract for timber—or to get timber elsewhere.

"We owe about ninety thousand dollars," he said to himself, "and forty of that we hain't got any business to owe. I got to get that back somehow."

Then came a letter from Barnes, of the lumber company, which gave Mark a good hour of cogitation. The letter was a notice that the firm's note for six thousand dollars would not be renewed at maturity—and maturity was fourteen days distant!

"That letter means," he said to himself, "that Barnes hankers to get into the woodenware business, and this looks to him like the time and place. If he can bust us, and then bid us in at, let's say, fifty to seventy-five thousand dollars less'n we're worth, not countin' goodwill and sichlike, he stands to make a nice little wad. If he had this mill, ready to run at a cost of somewheres round two hundred thousand, and his sawmills and his timber—why, I calc'late he'd have a perty sweet thing. And that's what he's aimin' to bring about."

At the end of the third cigar Mark hauled down a dusty atlas, containing detailed maps of the adjoining townships, and studied it carefully.

"I hain't never knifed a man, even when it would show a profit—nor I hain't meddled with his schemes, but I guess this here situation sort of justifies a change of heart," he said. And then he called in the boys.

"How's cribbage?" he asked.

"You're game to take it this way," said Luke. "Have we got to the end?"

"Well," said Mark, "a feller with a telescope might see it from here, if he was to look through the little end; but sich hain't my habit. . . . Take a look at this map and see what kind of business men you are in a pinch."

They bent over the map spread out on the desk.

"Here," said Mark, "is Barnes' holdings—all up and down the east side of four townships, and stretchin' most across the bottom of two. Over here, shut-off-like, he's got a chunk of two sections. All the rest of it's timber, some cats and dogs, with one good whopping piece and a couple of good-sized ones thrown in. See?"

"Yes."

"Well, is there anything in it for us?"

Luke looked at Peter, who shook his head in a melancholy manner.

"What's the use, dad?" he said.

"I was figgerin' on buyin' a little stumpage, maybe."

"What with?"

"Some credit, a lot of bluff—and talk that listens like real money. Look here! Barnes bought up and put out of business Green's mill, over Dexter-way. He bought Wiggins' portable mill. Just a year ago he bought up and closed down that little chair company over there in Waverly. Why? Because he wanted to control all the timber in this valley—that's why! Because he wanted to fix it so's if anybody wanted to sell timber there was just one place to sell—and that to him. Right, eh?"

"Yes," conceded Peter.

A Boycott With a Brass Band

The Garment Trade Moves Out

Every Week Day, Between Twelve and One o'Clock, Shoppers Were Driven Away and the Sidewalks Made Almost Impassable

SOLID, serious New York business men, representing maybe one hundred million dollars, getting together to spend an afternoon—playing with dynamite! At least it looked like that in the beginning.

A great crisis had arisen in their affairs. They met at an uptown restaurant to discuss it and find a solution if possible. But before proceeding with their talk they went into a private room, carefully locked the door, and made certain that all proposals should be passed upon by an attorney.

These gentlemen owned or directed most of the big establishments in the Fifth-Avenue shopping district. For years they had been developing that district, linking it up with street-car lines, subways, railroad terminals and hotels, making it a center for choice merchandise of every kind—dry goods, garments, millinery, footwear, silks, linens, furs, jewels, plate, china, glass, musical instruments, antiques, pictures, books and the like—sold in the great department stores and in the little specialty shops. It had become a shopping center, not merely for New York but for the nation, a retail street second to none in the world. And now, almost overnight, it was threatened with destruction.

Another variety of business had been creeping into the side streets flanking the Avenue. Huge loft buildings for manufacturing purposes had been run up, and as fast as they were finished filled with firms in the women's-garment industry, which came up from streets farther south, round Union Square, bringing their thousands of employees. Every week day, between twelve and one o'clock, these garment workers thronged the Avenue to get a breath of fresh air during the lunch hour. The sidewalks were packed with them and made almost impassable. Shoppers were driven away. Hotels lost their lunch business. All that makes Fifth Avenue vanished wherever the employees of Potash & Perlmutter swarmed during the noon hour—character, color, atmosphere, leisure, dignity.

Such congestion had been familiar for years below Twenty-third Street, but it had been assumed that it would never cross this deadline. Now it was over the line and steadily moving north; it had already reached the Thirties. Many business men predicted that it would sweep on up Fifth Avenue, overwhelming the whole retail and residence district, and that nothing on earth could stop it. A gloomy outlook! For such an invasion from the East Side would wipe out the heart of New York as effectively as if it were swept by sixteen-inch shells.

What the Committee Has Accomplished

SO THESE gentlemen had come together to see what they could do to check the invasion. They locked the door because it seemed as though something terrible would be needed. At that period the problem was new and more or less unknown. The method they had in mind was drastic. It amounted to a boycott. If employed without due safeguards it might be illegal—in restraint of trade. Before going ahead they wanted to be certain that they were within the law.

Most of the Fifth-Avenue merchants bought goods of the women's-garment manufacturers. If they all agreed to purchase no goods of business houses that had invaded their territory, that would clearly stop the sweep of factories northward.

Moreover, the garment manufacturers were housed in new loft buildings erected by speculative builders. The speculative builder operates with money borrowed from banks, life-insurance companies and other lenders. If the banking interests could be brought to refuse further loans on loft buildings in the Fifth-Avenue district another check could be put on the invasion. For men of such business influence as met together that day this was quite feasible.

They had two powerful weapons, these Fifth-Avenue merchants, a club and a knife, and by using them blindly forthwith they might have amply protected their interests. But before going ahead on the obvious course they appointed a committee to make a thorough study of the whole situation; and when this Save New York Committee got deep into the situation it was able to deal with the difficulties, not by force, but by intelligence, persuasion and public spirit.

Here are some of the things that have been accomplished in six months:

A canvass showed that about two hundred and twenty-five manufacturers had invaded the shopping district. More than two hundred of these were led to sign agreements to move out at the expiration of their leases. Some have moved already, and fully ninety per cent will move in a little more than eighteen months. The influx of other manufacturers has been stopped.

Instead of merely safeguarding Fifth Avenue against the intrusion of factories, a great section called the Save New York Zone has been set aside for restriction. It extends from Thirty-second Street to Fifty-ninth Street, south and north, and from Third to Seventh Avenue, east and west. In this zone, comprising a hundred and fifty city blocks, no factories will be permitted in future.

Real-estate values have been influenced for the better. The invasion of factories lowered values in the retail section, and also in the manufacturing section from which the invaders had moved. The northward movement has been checked. Factories are being sent back to the south, in the districts where they were established before. The balance has been restored and realty values have improved in both districts.

As the factories move out, steps are being taken to replace them with wholesale concerns and manufacturers' salesrooms, which do not employ thousands of factory workers and so cause congestion. Their new location will give better purchasing facilities to the throngs of out-of-town buyers who flock to New York every year.

Best of all, something has been learned about the business troubles of Potash & Perlmutter. The women's-garment trades, so little understood even in the metropolis itself, make up a tremendous industry. More than one-quarter of all New York's manufacturing industries turns upon the cloaks, suits, skirts, waists, millinery, laces, furs, silks, underwear and trimmings of women's clothes. The women's-garment industry employs perhaps a quarter-million persons, pays wages and salaries exceeding two million dollars weekly, and makes goods worth more than half a billion dollars yearly. Only eleven states in the Union have that much total manufacturing output. The business of Potash & Perlmutter, if distributed through the West, would double the present manufacturing output of a dozen states. Something has also been learned about the haphazard real-estate operations that have dominated New York's growth and caused such enormous loss and congestion.

New York has the large carelessness and provincialism of a true metropolis. Like London, Paris and Berlin, it is an aggregation of self-satisfied villages that live pretty much to themselves, while growing into each other. The inhabitant of Billingsgate, in London, where the fish and the cockney accent come from, knows nothing of the West End and the fashionable world, and in New York the East Sider knows so little about the Central-Park region that sightseeing automobiles are actually run there for his benefit. In Manhattan a new bridge thrown open or a subway system finished takes enough of the population to some new section to make a city the size of Indianapolis, but the average resident, a mile or two away, will probably not be aware that such a community is in existence.

Putting on the Legal Screws

THIS provincialism and the lack of a general city plan have made New York rich territory for the freebooting real-estate operator, who has the town constantly torn up with his inchoate improvements.

"This will be a mighty fine town when they get it done," said a visitor, contemplating New York's building activities and street excavations.

"Yes," agreed the seasoned New Yorker, "but they'll never get it done!"

Some years ago a new bank building was being erected in Union Square, when the city, hunting for a courthouse site, contemplated condemning several blocks in that neighborhood. Eventually a site was found elsewhere. But had the project gone through the city would have started tearing down that new bank building—an action typical of New York, the gigantic, the expanding and, until just lately, the planless.

The Save New York Committee found that it had legal means of forcing Potash & Perlmutter out of the fashionable shopping district. Money-lending interests saw the folly of making more investments in loft buildings which would damage previous investments by lowering real-estate values. The Fifth-Avenue retail concerns were willing to enter into an agreement in buying that gave preference to manufacturers outside the threatened zone. Having settled matters from their own point of view, the committee called on Potash & Perlmutter to hear what they had to say.

And Potash & Perlmutter had a good deal to say. They explained that, far from wanting to invade the Fifth-Avenue section, they were more or less helpless victims of real-estate speculators, backed up by Dame Fashion. Brought there partly against their better judgment,

THE GARB OF MEN

By Irvin S. Cobb

ILLUSTRATED BY IVAN DE IVANOWSKI

THEY used to say—and how long ago it seems since they used to say it!—that the world would never see another world war. They said that the planet, being more or less highly civilized with regard to its principal geographical divisions, and in the main peaceably inclined, would never again send forth armed millions to slit the throats of yet other armed millions. That was what they said back yonder in 1912 and 1913, and in the early part of 1914 even.

But something happened—something unforeseen and unexpected and unplausible happened. And, at that, the structure of amity between the nations which so carefully had been built up on treaty and pledge, so shrewdly tongued-and-grooved by the promises of Christian statesmen, so beautifully puttied up by the prayers of Christian men, so excellently dovetailed and mortised and rabbeted together, all at once broke down, span by span; just as it is claimed that a fiddler who stations himself in the middle of a bridge and plays upon his fiddle a certain note may, if only he keeps up his playing long enough, play down that bridge, however strong and well-piered it is.

We still regard the fiddle theory as a fable concocted upon a hypothesis of physics; but when that other thing happened—a thing utterly inconceivable—we so quickly adjusted ourselves to it that at once yesterday's impossibility became to-day's actuality and to-morrow's certain prospect.

This war having begun, they said it could not at the very most last more than a few months; that the countries immediately concerned could not, any of them, for very long withstand the drains upon them in men and money and munitions and misery; that the people at home would rise in revolt against the stupid malignity of it, if the men at the front did not.

Only a few war-seasoned elderly men, including one in a War Office at London and one in a General Staff at Berlin and one in a Cabinet Chamber at Paris, warned their respective people to prepare themselves for a struggle bloodier, and more violent and costlier and possibly more prolonged, than any war within the memories of living men.

At first we couldn't believe that either; none of us could believe it. But those old men were right and the rest of us were wrong. The words of the war wiseacres came true.

Presently we beheld enacted the intolerable situation they had predicted; and in our own country at least the tallies of dead, as enumerated in the foreign dispatches, began to mean to us only headlines on the second page of the morning paper.

Then they said that when, by slaughter and maiming and incredible exertion, the manhood of Europe had been decimated to a given point the actual physical exhaustion of the combatants would force all the armies to a standstill. But the thing went on.

It went on through its first year and through its second year. We have seen it going on into its third year, with no sign of abatement, no evidence of a weakening anywhere among the states and the peoples immediately affected. And so, figuring what lies in front of us and them by what lies behind, we may, without violence to credibility, figure it as going on until all of Britain's able-bodied adult male population wears khaki or has been buried in it; until sundry millions of the men of France are corpses or on crutches; until Germania has scraped and harrowed and combed her domains for cannon fodder; until Russia's countless supply of prime human grist for the red hopper of this red mill no longer is countless but countable.

There is a town in the northern part of the Republic of France called Courney. Rather, I should say that once upon a time there was such a town. Considered as a town, bearing the outward manifestations of a town and nourishing within it the communal spirit of a town, it ceased to exist quite a time back. Nevertheless, it is with that town, or with the recent site of it, that this story purports to deal.

There is no particular need of our trying to recreate the picture of it as it was before the war began. Before the war it was one of a vast number of suchlike drowsy, cozy little towns lying, each one of them, in the midst of tilled fat acres on the breasts of a pleasant land; a town with the gray highroad running through it to form its main street, and with farms and orchards and vineyards and garden patches round about it; so that in the springtime, when the orchard trees bloomed and the grapevines put forth their young leaves and the wind blew, it became a little island, set in the center of a little, billowy green-and-white sea; a town of snug small houses of red brick and gray brick, with a priest and a mayor, a schoolhouse and a beet-sugar factory, a town well for the gossips and a town shrine for the devout.

Nor is there any especial necessity for us to try to describe it as it was after the war had rolled forward and back and forward again over it; for then it was transformed as most of those small towns that lay in the tracks of the hostile armies were transformed. It became a ruin, a most utter and complete and squalid ruin, filled with sights that were affronts to the eye and smells that were abominations to the nose.

"Let Me Go! Let Me Go Back! I am a Soldier of France!"

In this place there abode, at the time of which I aim to write, a few living creatures. They were human beings, but they had ceased to exist after the ordinary fashion of human beings in this twentieth century of ours. So often, in the first months and the first years of the war, had their simple but ample standards been forcibly upset that by now almost they had forgotten such standards had ever been.

To them yesterday was a dimming memory, and to-morrow a dismal prospect without hope in it of anything better. To-day was all and everything to them; each day was destiny itself. Just to get through it with breath of life in one's body and rags over one's hide and a shelter above one's head—that was the first and the last of their aim. They lived not because life was worth while any more, but because to keep on living is an instinct, and because most human beings are so blessed—or, maybe, so cursed—with a certain adaptability of temperament, a certain inherent knack of adjustability that they may endure anything—even the unendurable—if only they have ceased to think about the past and to fret about the future.

And these people in this town had ceased to think. They were out of habit with thinking. A long time before, their sensibilities had been rocked to sleep by the everlasting lullaby of the cannon; their imaginations were wrapped in a smoky coma. They lived on without conscious effort, without conscious ambition, almost without conscious desire: just as blind worms live under a bank, or slugs in a marsh, or protoplasms in a pond.

Once, twice, three times Courney had been a stepping-stone in the swept and garnished pathways of battle. Back in September of 1914 the Germans, sweeping southward as an irresistible force, took possession of this town, after shelling it quite flat with their big guns to drive out the defending garrison of French and British. Then, a little later, in front of Paris the irresistible force met the immovable body and answered the old, old question of the scientists; and, as the Germans fell back to dig themselves in along the Somme and the Aisne, there was again desperate hard fighting here, and many, very many, lives were spent in the effort of one side to take and retain, and of the other to gain and hold fast, the little peaky heaps of wreckage protruding above the stumps of the wasted orchard trees.

Now, though, for a long time things had been quiet in Courney. Though placed in debatable territory, as the campaign experts regard debatable territory, it had lapsed into an eddy and a backwater of war, becoming, so to speak, a void and a vacuum amid the twisting currents of the war. In the core of a tornado there may be calm while about it the vortex swirls and twists. If this frequently is true of windstorms it occasionally is true of wars.

Often to the right of them and to the left of them, sometimes far in front of them, and once in a while far back in the rear of them, those who still abode at Courney heard the distant voices of the big guns; but their place of habitation, by reasons of shifts in the war game, was no longer on a route of communication between separate groups of the same fighting force. It was not even on a line of travel. No news of the world beyond their limited horizon seeped in to them. They did not know how went the war—who won or who lost—and almost they had quit desiring to know. What does one colony of blind worms in a bank care how fares it with colonies of blind worms in other banks?

To Them Yesterday Was a Dimming Memory, and To-Morrow a Dismal Prospect Without Hope in It of Anything Better

You think this state of apathy could not come to pass? Well, I know that it can, because with my own eyes I saw it coming to pass in the times while yet the war was new; while it yet was a shock and an affront to our beliefs; and you must remember that now I write of a much later time, when the world war has become the world's custom.

Also, could you have looked in upon the surviving remnant of the inhabitants of Courney, you would have had a clearer and fuller corroboration of the fact I state, because then you would have seen that here in this place lived only those who were too old or too feeble to care, or else who were too young to understand.

All tallied, there were not more then than twenty remaining of two or three hundred who once had been counted as the people of this inconsequential village; and of these but two were individuals in what ordinarily would be called the prime of life.

One of these two was a French petty officer, whose eyes had been shot out, and who, having been left behind in the first retreat toward Paris, had been forgotten, and had stayed behind ever since. The other had likewise been a soldier. He was a Breton peasant. His disability seemed slight enough when he sustained it. A bullet bored across the small of his back, missing the spine. But the bullet bore with it minute fragments of his uniform coat; and so laden with filth had his outer garments become, after weeks and months of service in the field, that, with the fragments of cloth, germs of tetanus had been carried into his flesh also, and lockjaw had followed.

Being as strong as a bullock, he had weathered the hideous agonies of his disease; but it left him beset with an affliction like a queer sort of palsy, which affected his limbs, his tongue, and the nerves and muscles of his face. Continually he twitched all over. He moved by a series of spasmodic jerks, and when he sought to speak the sounds he uttered came out from his contorted throat in slobbery, unintelligible gasps and grunts. He was sane enough, but he had the look about him of being an idiot.

Besides these two there were three or four very aged, very infirm men on the edge of their dotage; likewise some women, including one masterful, high-tempered old woman and a younger woman who wept continuously, with a monotonous mewing sound, for a husband who was dead in battle and for a fourteen-year-old son who had vanished altogether out of her life, and who, for all she knew, was dead too. The rest were children—young children, and a baby or so. There were no sizable youths whatsoever, and no girls verging on maidenhood, remaining in this place.

So this small group was what was left of Courney. Their houses being gone and family ties for the most part wiped out, they consorted together in a rude communal system which a common misery had forced upon them. Theirs was the primitive socialism that the cave dweller may have known in his tribe. As I say, their houses were gone; so they denned in holes where the cellars under the houses had been. Time had been when they fled to the shelter of these holes as the fighting, swinging northward or southward, included Courney in its orbit.

Afterward they had contrived patchwork roofage to keep out the worst of the weather; and now they called these underground shelters home, which was an insult to the word home. Once they had had horse meat to eat—the flesh of killed cavalry mounts and wagon teams. Now perforce they were vegetarians, living upon cabbages and beets and potatoes which grew half wild in the old garden patches, and on a coarse bran bread made of a flour ground by hand out of the grain that sprouted in fields where real harvests formerly had grown.

The more robust and capable among the adults cultivated these poor crops in a pecking and puny sort of way. The children went clothed in ancient rags, which partly covered their undeveloped and stunted bodies, and played in the rubbish; and sometimes in their play they delved too deep and uncovered grisly and horrible objects. On sunny days the blind soldier and the palsied one sat in the sunshine, and when it rained they took refuge with the others in whichever of the leaky burrows was handiest for them to reach. If they walked the Breton towed his mate in a crippling, zigzag course, for one lacked the eyes to see where he went and the other lacked the ability to steer his afflicted legs on a direct line.

The wreckage of rafters and beams and house furnishings provided abundant supplies of wood and for fires. By a kind of general assent, headship and authority were vested jointly in the old tempestuous woman and the blind man, for the reasons that she had the strongest body and the most resolute will, and he the keenest mind of them all.

So these people lived along, without a priest to give them comfort by his preaching; without a physician to mind their ailments; with no set code of laws to be administered and none to administer them. Existence for them was reduced to its raw elementals. Since frequently they heard the big guns sounding distantly and faintly, they knew that the war still went on. And, if they gave the matter a thought, to them it seemed that the war always would go on. Time and the passage of time meant little. A day was merely a period of lightness marked at one end by a sunrise and at the other by a sunset; and when that was over and darkness had come, they bedded themselves down under fouled and ragged coverlids and slept the dumb, dreamless sleep of the lower animals. Except for the weeping woman who went about with her red eyes continually streaming and her whining wail forever sounding, no one among them seemingly gave thought to those of their own kinspeople and friends who were dead or scattered or missing.

Well, late one afternoon in the early fall of the year, the workers had quit their tasks and were gathering in toward a common center, before the oncoming of dusk, when they heard cries and beheld the crotchety old woman who shared leadership with the blinded man, running toward them. She had been gathering beets in one of the patches to the southward of their ruins; and now, as she came at top speed along the path that marked where their main street had once been, threading her way swiftly in and out among the gray mounds of rubbish, she held a burden of the red roots in her long bony arms.

She lumbered up, out of breath, to tell them she had seen soldiers approaching from the south. Since it was from that direction they came, these soldiers doubtlessly would be French soldiers; and, that being so, the dwellers in Courney need feel no fear of mistreatment at their hands. Nevertheless, always before, the coming of soldiers had meant fighting; so, without waiting to spy out their number or to gauge from their movements a hint of their possible intentions, she had hastened to spread the alarm.

"I saw them quite plainly!" she cried out between pants for breath. "They have marched out of the woods yonder—the woods that bound the fields below where the highroad to Laon ran in the old days. And now they are spreading out across the field, to the right and the left. Infantry they are, I think—and they have a machine gun with them."

"How many, grandmother? How many of them are there?"

It was the eyeless man who asked the question. He had straightened up from where he sat, and stood erect, with his arms groping before him and his nostrils dilated.

Digitized by Google

"No great number," answered the old woman; "perhaps two companies—perhaps a battalion. And as they came nearer to me they looked—they looked so queer!"

"How? How? What do you mean by queer?" It was the blind man seeking to know.

She dropped her burden of beetroots and threw out her hands in a gesture of helplessness.

"Queer!" she repeated stupidly. "Their clothes now—their clothes seemed not to fit them. They are such queer-looking soldiers—for Frenchmen."

"Oh, if only the good God would give me back my eyes for one little hour!" cried the blind man impotently. Then, in a different voice, "What is that?" he said, and swung about, facing north.

His ears, keener than theirs, as a blind man's ears are apt to be, had caught, above the babble of their excited voices, another sound.

Scuttling, shuffling, half falling, the palsied man, moving at the best speed of which he was capable, rounded a heap of shattered gray masonry that had once been the village church, and made toward the clustered group of them. His jaws worked spasmodically. With one fluttering hand he pointed, over his left shoulder, behind him. He strove to speak words, but from his throat issued only clicking, slobbery grunts and gasps.

"What is it now?" demanded the old woman.

She clutched him, forcing him to a quaking standstill. He kept on gurgling and kept on pointing.

"Soldiers? Are there more soldiers coming?"

He nodded eagerly.

"From the north?"

He made signs of assent.

"Frenchmen?"

He shook his head until it seemed he would shake it off his shoulders.

"Germans, then? From that way the Germans are coming, eh?"

Again he nodded, making queer movements with his hands, the meaning of which they could not interpret. Indeed, none there waited to try. With one accord they started for the deepest and securest of their burrows—the one beneath the battered-down sugar-beet factory. Its fallen walls and its shattered roof made a lid, tons heavy and yards thick, above the cellar of it. In times of fighting it had been their safest refuge. So once more they ran to hide themselves there. The ragged children scurried on ahead like a flight of autumn leaves. The very old men and the women followed after the children; and behind all the rest, like a rearguard, went the cripple and the old woman, steering the blind man between them.

At the gullet of a little tunnel-like opening leading down to the deep basement below, these three halted a brief moment; and the palsied man and the woman, looking backward, were in time to see a skirmisher in the uniform of a French foot soldier cross a narrow vista in the ruins, perhaps a hundred yards away, and vanish behind a culm of broken masonry. Seen at that distance, he seemed short, squatty—almost gnomish. Back in the rear of him somewhere a bugle sounded a halting, uncertain blast, which trailed off suddenly to nothing, as though the bugler might be out of breath; and then—pow, pow, pow!—the first shots sounded. High overhead a misdirected bullet whistled with a droning, querulous note. The three tarried no longer, but slid down into the mouth of the tunnel.

Inside the cellar the women and children already were stretched close up to the thick stone sides, looking like flattened piles of rags against the flagged floor. They had taken due care, all of them, to drop down out of line with two small openings which once had been windows in the south wall of the factory cellar, and which now, with their sashes gone, were like square portholes, set at the level of the earth. Through these openings came most of the air and all of the daylight which reached their subterranean retreat.

The old woman cowered down in an angle of the wall, rocking back and forth and hugging her two bony knees with her two bony arms; but the maimed soldiers, as befitting men who had once been soldiers, took stations just beneath the window holes, the one to listen and the other to watch for what might befall in the narrow compass of space lying immediately in front of them. For a moment after they found their places there was silence there in the cellar, save for the rustling of bodies and the wheeze of forced breathing. Then a woman's voice was uplifted wailingly: "Oh, this war! Why should it come back here again? Why couldn't it leave us poor ones alone?"

"Hush, you!" snapped the blinded man in a voice of authority. "There are men out there fighting for France. Hush and listen!"

A ragged volley, sounding as though it had been fired almost over their heads, cut off her lamentation, and she hid her face in her hands, bending her body forward to cover and shield a baby that was between her knees upon the floor.

From a distance, toward the north, the firing was answered. Somewhere close at hand a rapid-fire gun began a staccato outburst as the gun crew pumped its belts of cartridges into its barrel; but at once this chattering note became interrupted, and then it slackened, and then it stopped altogether.

"Idiots! Fools! Imbeciles!" snarled the blind man. "They have jammed the magazine! And listen, comrade, listen to the rifle fire from over here—half a company firing, then the other half. Veterans would never fire so. Raw recruits with green officers—that's what they must be. . . . And listen! The Germans are no better."

Outside, near by, a high-pitched strained voice gave an order, and past the window openings soldiers began to pass, some shrilly cheering, some singing the song of France, the Marseillaise Hymn. Their trunks were not visible. From the cellar could be seen only their legs from the knees down, with stained leather leggings on each pair of shanks, and their feet, in heavy military boots, sliding and slithering over the cinders and the shards of broken tiling alongside the wrecked factory wall.

Peering upward, trying vainly at his angled range of vision to see the bodies of those who passed, the palsied man reached out and grasped the arm of his mate in a hard grip, uttering meaningless sounds. It was as though he sought to tell of some astounding discovery he had just made.

"Yes, yes, brother; I understand," said the blind man. "I cannot see, but I can hear. There is no swing to their step, eh? Their feet scuffle inside their boots, eh? Yes, yes, I know—they are very weary. They have come far to-day to fight these Huns. And how feebly they sing the song as they go past us here! They must be very tired—that is it, eh? But, tired or not, they are Frenchmen, and

A SCRAP OF PAPER

XVI

By Arthur Somers Roche

ILLUSTRATED BY WILL FOSTER

MARTIN MASTERMAN had but one passion—that was his invalid daughter. Power, place and fortune, these were not passions—they were a disease with him. For Laurel he would have faced poverty cheerfully. No man is wholly bad, and Masterman, unmoral rather than immoral, hard, cruel, grasping, had his soft spot. If any doctor could have convinced him that it lay in his power to heal the little girl, and had demanded therefor all of Masterman's fortune, Masterman would have given it.

Laurel dined seldom with her parents—once or twice a week at the outside. When she did it was an event, planned a couple of days in advance, and Masterman allowed nothing to prevent his attending the function. The day following the loss of the fateful paper he left Cardigan and Blaisdell at five o'clock to keep his engagement to dine at home. What good did it do them to sit and brood? The Greenhams were doing the best they could, and the Greenhams were the best detectives in the business. If the Greenhams couldn't find the girl and young man who had procured the paper from Harry Mack—well, no one could find them.

"And if they don't," Blaisdell had piped, in reply to this summing up of the situation by Masterman, "what then?"

"Then," said Masterman heavily, "we confess defeat and do as this pair of precious maniacs demand."

"That means ruin!" cried Blaisdell.

"And our refusal means the same thing, doesn't it?"

There the argument had ended, to be succeeded by futile worryings. There was nothing to be done, except hope that the Greenhams would succeed in finding the possessors of the paper and wresting it from them. And the Greenhams were working as they had never worked before, for Martin Masterman had held before the two brothers the promise of a reward which would lift them at once into the wealthy class. They were combing the city. The three millionaires could do nothing save irritate one another. So Masterman went home.

Kirby dreaded the meeting with Masterman. She had pictured him as some all-devouring ogre whose baleful glance alone was enough to wither and shrivel ordinary humans. Instead, she met a grim-faced old man, deeper-lined of face and more burning of eye than anyone she had ever met. The events of the day, Kirby could see, were telling on him, but she noted the effect merely because she knew the cause. To his wife and to his daughter he seemed the same gentle husband and father he had always been, for they knew only his soft side. Mrs. Masterman was absolutely convinced that her husband had never done a wrong thing in his life, but was the victim of jealousy. She believed none of the charges made against him. Her faith was supreme.

The dinner passed pleasantly. Masterman, on being introduced to "Miss Rohan," had given her one moment of fright. On hearing her voice he had raised his eyebrows faintly.

"Your voice is vaguely familiar, Miss Rohan. Have I ever heard it before?"

"Possibly," said Kirby, with a flash of her teeth, "but I do not know where."

"My imagination probably," said Masterman. Then he spoke to her of Paris, of Colorado, complimented her on her work, asked what sort of portrait she planned to paint of Laurel, and other conventional questions. But mostly he devoted himself to his little daughter, causing Kirby to wonder at the many-sidedness of human nature. Here was a man whose every business action tended to reduce the opportunities in life of millions of children. Yet he loved his own daughter above everything else. Though in his business life he was relentless in pursuit of power to the exclusion of aught else, yet at home his every smile, his every look, his every caress showed that he was as human as other fathers. Why, then, this cruelty toward the world?

She began to understand: Masterman recognized nothing save family. Community, nation, world, these were less than nothing to him! Only his family counted where tenderness and generosity were concerned. Like the caveman, he protected his own, cherished them, but with all others he was at war. The family was his unit and his whole!

This was the explanation. He had the caveman's attitude toward the world and, like the caveman, had been outgrown by the rest of the world, passed in the race of civilization. Kirby told herself that, though the innocent suffer with the guilty, it is the greater good that counts. So she steeled her heart once more.

The meal passed. Laurel, clinging to her father's hand, insisted that he see her birthday book.

"I've four more names in it since you saw it last, daddy," she said. "You must see them."

He assented, and she sped away to her own room to fetch the volume.

"You are going to give me your best efforts?" queried Masterman, while his daughter was away. "Miss Rohan, no one, not even her mother, understands my little girl as I do. She has the soul of Joan of Arc! You have seen her; you know she is lovely; there is no doubt of your technical skill; you can reproduce her features. But so can a thousand other artists. I obtained your services for two reasons: One is because you are a fair and just woman. How do I know? I am somewhat of a connoisseur, Miss Rohan, despite that lying tale about my Botticelli in this morning's Citizen. I can read between the strokes of the brush even as one may sometimes read between the lines of a story or letter. I saw your portrait of Señora Davost, the Spanish dancer. That woman is a bad woman, and a woman like you," and he bowed, "would recognize and despise her in spite of her charm and good looks. And yet, in your portrait, while you do not hide the evil that is in her, while you bring it out upon the canvas with a soul analysis that is almost uncanny, you do not stop there. You also bring out the traits of generosity, of impulsive nobility that are in her soul. I read them in your painting, and I admired you. For it is not every woman, nor yet every man, that can be absolutely fair. And you were, when it was not necessary, for all the señora wanted was a portrait of herself, showing her hair, complexion and figure, eyes and teeth. But you painted her as the Book of Judgment must have her recorded.

"That is one of the reasons why I want you to paint my daughter—because you will accord her her spiritual due. The other reason is really part of the first—because you have genius. So then, Miss Rohan, you will paint, not the daughter of Martin Masterman, but a little girl named Laurel. For genius and a sense of fairness mean no compromise with yourself. Other artists have painted Laurel—they have made a doll of her, because they thought to flatter my pride in her. But you will give me her soul on canvas, and when she is gone—for she is not here for long, Miss Rohan—I shall have my child, not a painted image of her, to look upon."

Digitized by Google

Kirby, swept away by the man's emotion, touched him on the arm:

"Oh, Mr. Masterman, if you feel that way about her, I think ——"

But a smile, not directed at her, cut short the words that would have inevitably caused suspicion. Masterman had caught sight of Laurel returning.

"Here it is, daddy. Here's the book."

They were in Masterman's library now. Masterman was seated in a heavy armchair. Opposite him sat his sad-eyed, nervous wife. Laurel drew the book away as her father reached for it.

"Get out your pen first, daddy," she commanded. She looked at Kirby. "I give my own presents to those whose names are written here," she announced proudly. "But little girls don't always know what grown-ups want, so daddy gets something else for them—always. He never forgets!"

"You see, Miss Rohan"—the financier's smile left his daughter to rest on Kirby a moment—"those whom my daughter loves must pay the price. They must be prepared to accept the regard of Laurel's father, unwelcome though it may be."

"As if anyone isn't proud to have you love them, daddy," exclaimed Laurel indignantly.

There was incredulity in the whimsical smile which the financier turned on Kirby.

"When the important person feels this way I don't suppose it should matter about the rest of the world," he said.

Then he opened the book. Laurel's hand guided his. They found the first of the names, the second, the third and the fourth—Adele Rohan's. Carefully Masterman had written down the names of the first three. At the name which Kirby had written he found difficulty with his fountain pen.

"All out of ink," he said with a smile. "I'll have to get another."

He rose and walked into the little workroom which adjoined his library. Kirby stared after him, wide-eyed with apprehension. "Conscience does make cowards of us all!"

Not by the flicker of an eyelash had Masterman shown any emotion on seeing the signature of Adele Rohan. It was merely a coincidence that his pen should have run dry at the very moment it devolved upon it to transcribe the name of the Western-Parisian artist. It did not mean that Masterman knew the chirography of Miss Rohan, and, therefore, realized that an impostor was sitting in his library. Yet, though it was the merest coincidence, Kirby's muscles grew tense, and her brain was suddenly as alert as though pricked with needles. But she relaxed at Masterman's speedy return. He had another pen in his hand and his countenance was alight with that tenderness which she knew he reserved for his daughter.

"Now for Miss Rohan's name and birthday," he laughed.

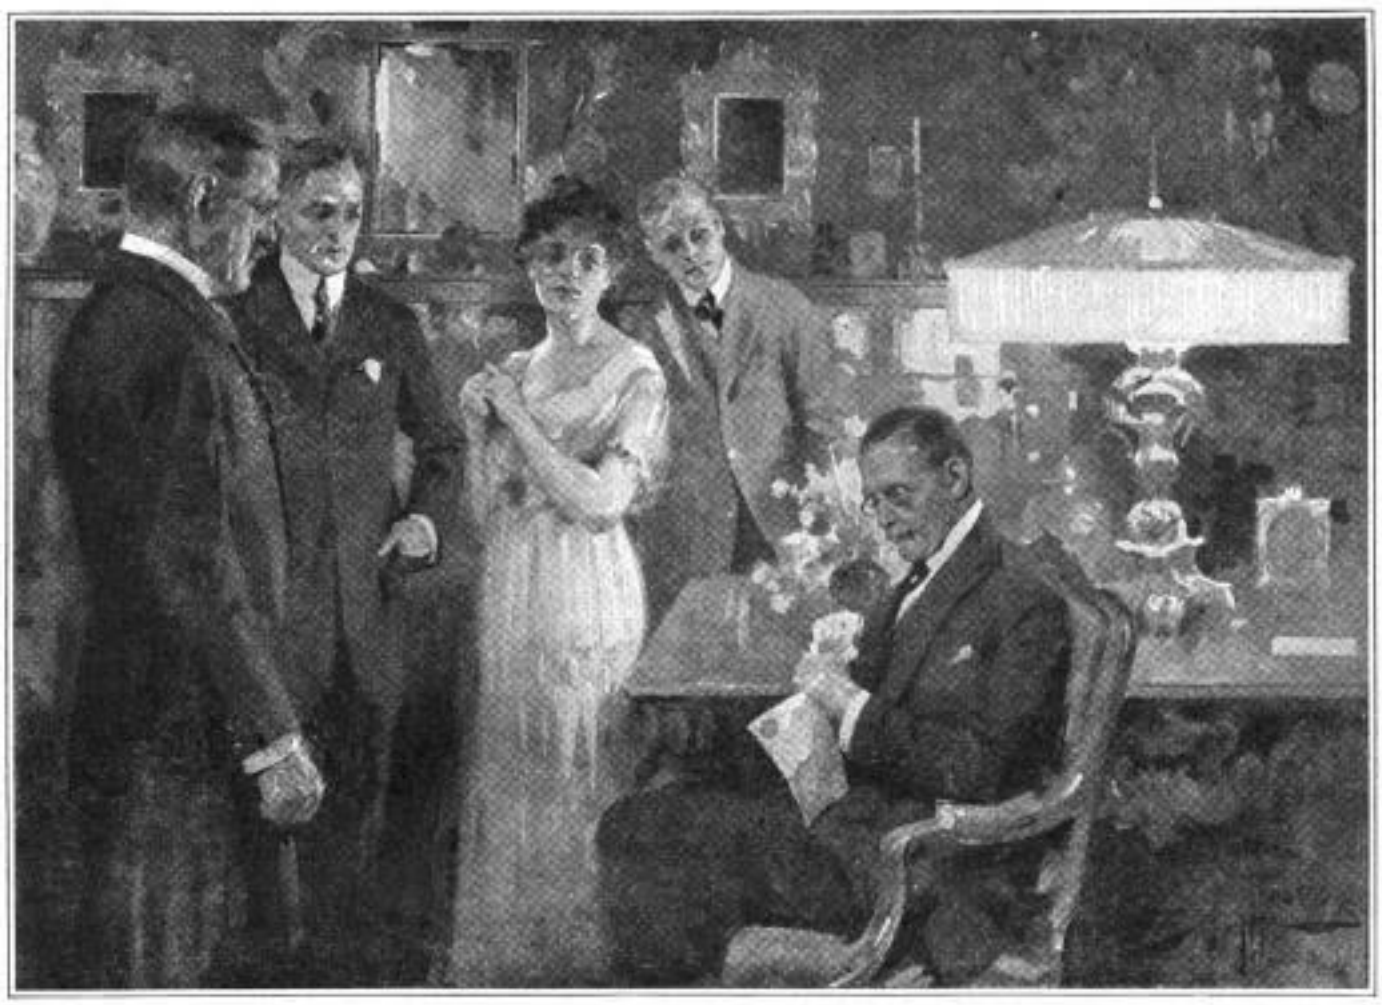
He worked sideways into the chair on whose arm Laurel was still perched. With her arm about his neck, and her cheek close to his, while she watched the operation, he wrote the name of Adele Rohan in the little notebook which seemed wholly devoted to the uses to which it was being put tonight. He closed the little book, placed it in an inside pocket, swung Laurel into the air and set her gently on the ground.

"And now to work," he said. "Daddy has a hundred and one things to do, so shoo-ooh!"

He waved her from the room laughingly, and she responded to his mirth.

"But Miss Rohan must stay with me till bedtime," she said, grasping Kirby by the hand.

"Miss Rohan may want to read or write letters," suggested Mrs. Masterman, "or perhaps she would like to call upon some of her friends in the city."



That a young lady, unattended, should go out at night to pay calls was contrary to Mrs. Masterman's idea of the conventions; but artists, especially women artists, even when as charming and well-mannered as Miss Rohan, were apt to be unconventional.

But Kirby shook her head.

"I'd rather play with a certain dear little girl I know than do anything else," she said.

"Then by all means do what you'd rather do," said Masterman with a genial smile.

But the benignity left his eye the moment that Kirby, hand in hand with Laurel and followed by Mrs. Masterman, left the room. He strode to the table, picked up the birthday book which Laurel, with the inconsequence of childhood, had left behind her, and carried it into his workroom. He placed the book upon a small table upon which was already an unfolded letter. The letter was dated

"This, Masterman, is a Warrant for Your Arrest"

Denver and was signed by Adele Rohan. Kirby's belief that Masterman and the girl she was impersonating had never met had been correct, but she had not thought upon the fact that they must have corresponded.

Swiftly Masterman compared the two signatures. He did so carefully, although anyone would have been certain at a glance that two different hands had penned them. He wanted to be quite sure! There was, of course, the possibility that Miss Rohan had dictated this letter, and that someone had not only written it but signed it. But there was nothing in this note, which was an acceptance of his offer of ten thousand for a portrait of Laurel, and which stated that the artist would arrive at about this very time, to indicate that it was other than Miss Rohan's own handwriting.

"Certainly," said Masterman to himself, "she would not commission anyone with so vile a handwriting to write her letters for her, eccentric though she may be. It's her own handwriting!"

Then who was the impostor? Masterman answered that question without hesitation. It was Kirby Rowland, the young woman who had over the telephone given him the command about universal transfers.

Masterman might have conversed with Kirby a year without definitely recognizing that voice which sounded so vaguely familiar—that is, without extraneous suggestion. But that extraneous suggestion had come with suspicion. It is often so. We meet a person who looks familiar, but we cannot name him. Then he mentions casually that he hasn't been in Philadelphia for seven years. We know him! The train of thought leading to recognition has been started.

So it was with Masterman. When he discovered, to his own satisfaction at any rate, that the guest in his household was not Adele Rohan, but was an impostor, he remembered at once the only place where he had ever heard her voice before—over the telephone the previous day. At first his rage was almost ungovernable. Not quite certain, or rather not willing to admit his certainty, until the two signatures were laid side by side, he had exhibited that wonderful self-control that had done so much toward placing him where he was.

His first impulse was to send a servant for Kirby and force the truth from her; but he dismissed that idea at once. There was a bare possibility that the guest in his house was not an impostor. Masterman never acted on impulse when great issues were at stake; he never acted on mere knowledge; he acted on evidence! And he wanted all the evidence obtainable. Quite calmly he sat down before his private telephone and had himself connected with the superintendent of the telegraph company, which Masterman practically owned.

"I want you," he said, "to find out for me at once if a Miss Adele Rohan, an artist, has left Denver and, if so, find out her destination." He gave the address which was on Miss Rohan's letter. "I want an answer within one hour."

"You'll have it, Mr. Masterman," said the superintendent obsequiously, and Masterman hung up. But he joggled the receiver again almost immediately. This time he connected with Terence Greenham, and demanded his immediate presence. After that he called up Cardigan and Blaisdell, and those harassed gentlemen promised to be with him as soon as swift automobiles could convey them from their homes, where they had been pacing their respective libraries, torn by a hundred fears.

Blaisdell and Greenham arrived almost together, Cardigan a few moments later. A servant, used to surreptitious visitors, smuggled the three men into the Masterman library without anyone else suspecting their presence. Masterman refused to talk until all three men were present. Then tersely he told them of his suspicions.

"But why wait for the Denver message?" demanded Greenham. "I've seen her; I'll know her! Send for her!"

"But wouldn't it be a good idea to find out if she really is Miss Rohan? It may not be Kirby Rowland masquerading as Adele Rohan, it may have been Adele Rohan masquerading as Kirby Rowland. She isn't alone in this, you know, Greenham. If by any chance she really is the Rohan woman, it will be the Rohan acquaintance among whom we must search for this Dixon Grant. That will help, won't it? Of course, if she is really Kirby Rowland, you'll have to stick to her acquaintances in hope of locating Grant. This woman, whatever her real name is—and we'll know that in a little while—isn't alone. Remember that! We've got her; before taking her let's find out what we can. Smoke."

In full control of himself he smoked in silence, while Blaisdell and Cardigan walked the floor, and Terence Greenham tried to compute how much Masterman would lop off his promised reward if Masterman had really succeeded where the detective had failed. Then the phone tinkled. Masterman listened a moment, then spoke:

"I want you, Keeler, to send at once to this house a message for Miss Adele Rohan. It must bear the Denver date line of a couple of hours ago. Have it brief. Something like this: 'Come at once.' Sign it 'Elise,' or any other name that suits your fancy. Understand? At once!"

He turned to his companions.

"Well, gentlemen, Keeler has received word from Denver that Miss Adele Rohan left that city, bound for New York, this afternoon! There is no possibility of mistake. Miss Rohan is well known in Denver, and the Denver office of the telegraph company even sent on the number of her drawing-room. I knew it before, but I am certain now—the young woman at present playing in the nursery with my daughter is not Miss Rohan; she is the woman who possesses the paper we lost yesterday."

Digitized by Google

"Then bring her in here," roared Cardigan, "and we'll make her give it up!" Masterman shook his head.

"I've had the pleasure of conversing with the young lady, Cardigan. The girl who's had the nerve to come up to my house when she knew that I'd give a fortune to get hold of her is not the kind to surrender in a moment. Besides, Laurel has taken a fancy to her, and no force is to be used on her."

Cardigan, fists doubled, glared at him.

"Then what do we do? Beg her to hand it back? Why are we here?"

"No," said Masterman coldly, "we don't beg her. Nor do we use force. We use restraint. You spoke of incarcerating Mack in your Long Island place. What's the matter with taking this young woman down there?"

"I suppose she'll come gladly," sneered Cardigan.

"There are measures, my dear Cardigan, that are effective without being brutal. It is one of those we shall use." He unlocked a desk and from a drawer he took a small bottle and a roll of surgical gauze.

"I think chloroform will do the work, eh?" He looked at Greenham, and the detective took bottle and gauze from the financier's hands.

"I can use it," said Greenham. "Send for her."

Masterman hesitated a moment.

"We'll give her a chance first. I'll try to reason with her. If I can't—this library is sound-proof—we'll go ahead with the chloroform. Then, Cardigan, you can carry her out the side entrance; I'll have a servant tell your chauffeur to move down there. And then—take her to Bellmere. When she wakes up in the morning and finds that she's locked in a room—who's down at Bellmere now?"

"Only a caretaker," answered Cardigan. "And he'll keep his mouth shut—he and his wife."

"Good," said Masterman. "Well, then, when the young lady learns that she's to remain in Bellmere until she surrenders that paper—after I've had a little talk with her, convincing her that she'll stay there until she dies of old age if she doesn't surrender it—I think we'll have no difficulty with her."

Blaisdell put his finger on the weak spot in Masterman's logic:

"But the men with her—Grant and Mack? Perhaps they have the paper? What good'll it do ——"

"Despite all that's happened—Mack's rescue of her and all that—I still do not believe that Mack and the girl are in league together. In the first place, their demands are so utterly opposed; in the second, I cannot conceive of this young woman's having anything at all to do with Mack. He is a blackmailing scoundrel; she, though acting insanely, is a lady who would not stoop to use the paper for personal profit. Why Mack rescued her I don't profess to understand, but that it means that he has any understanding with her I refuse to believe. And I'm sure that Mack hasn't got the paper. She has it. Why, that's it!" he exclaimed. "She has it, was on the verge of capture—was captured—and Mack rescued her. He rescued her, thinking that he could later obtain it from her. But he was immediately locked up, and since his release she's been in this house. Though she was out to-day—shopping, she told my wife—I do not believe she saw Mack. He is out of the game—for the present, at any rate.

"And the other man—Grant. From what you have told us, Greenham, it seems certain that he is no friend of Mack, although the latter gave him the paper. But he is a friend of Miss Rowland. More—he must be her lover. To no one else would he have confided the nature of that document. To no one else would he have apportioned a part in this little play.

"If this man Grant communicates with me I shall tell him that unless he surrenders the paper—provided that she hasn't it—he will never see her again. Further, if he threatens publication I will inform him that when it comes Martin Masterman's time to be destroyed by his enemies he will take whatever of those enemies he can along with him. I will tell him that publication means death to me; it will also mean death to Miss Rowland. Any more objections?"

The others were silent. Masterman spoke again:

"We'll give her a chance. If she is stubborn Cardigan will take her to Bellmere. You, Greenham, will at once order a woman operative, impersonating Miss Rowland, to take the night train to Chicago. Then let her disappear for awhile. This is merely in case Grant should try to trace the young woman. He might hire some private detective agency to locate her. They would learn that the supposed 'Miss Rohan' had received a telegram and left at once for Denver. It merely covers her trail. For I shall see that my servants know of the telegram which Keeler will send here, and of Miss Rohan's sudden departure.

Not Only Was the Game Up, But Masterman Had Him on the Hip!

"Then, if Grant loves the girl—and he must love her—he will know that it is useless to attempt tracing her, and if he has the paper in his possession he will surrender."

"You count a lot on the effect of love, don't you?" sneered Cardigan.

"The force that has made history is hardly to be scoffed at," was Masterman's reply. Then he gave his last instructions:

"Greenham, you keep after this Grant—and Mack, too, though I cannot see where he figures. Cardigan, you stay with this girl at Bellmere; but"—and he spoke with sudden vehemence—"if you harm her you'll settle with me. You, Blaisdell, go home and try to stop whimpering. Ready?"

He pressed a bell; a servant came, and immediately left to inform Miss Rohan that Mr. Masterman would like to see her in his library. Little Laurel had just been put to bed, and Kirby was on the verge of retiring to her own room. Mrs. Masterman and Kirby, in fact, were just parting in the hall outside Laurel's bedroom when the servant gave Kirby the message.

"If Mr. Masterman gets to talking art he doesn't know when to stop. I think I'll say good night now," smiled Mrs. Masterman. Impulsively she kissed Kirby, and with a heavy heart—why is it that a spy, doing a gallant service, despises himself?—Kirby went to the library.

Once across the threshold, seeing that Masterman was not alone, recognizing the faces of Blaisdell and Cardigan from their newspaper pictures, she would have turned and fled the room; but Greenham was too quick. He closed the door and locked it; and Kirby recognized him. She knew the purpose of the meeting. But the color came back to her cheeks as quickly as it fled. Her lips curled in a smile; her eyes sparkled with that light that illumines the eyes of the born fighter going joyously into battle. She had had tremors before; she had been frightened before; but this had been as the nervousness of the soldier on the eve of battle. Battle itself she did not dread. Moreover, she had taken a quick liking, that was really warm affection, for Laurel Masterman. It irked Kirby to be masquerading in the home of Laurel. She was glad the issue was joined. She waited for Masterman to speak.

"Miss Rowland," he said heavily, "you are in my house on false pretenses. You can go to jail for that."

"I dare you to send me there, Mr. Masterman," she smiled.

"We'll discuss that later. First, I want a paper which you possess. We won't beat about the bush, please. You know the paper I mean."

"Certainly. I shall not give it to you."

"Then we shall be compelled to search your effects."

She laughed.

"You are perfectly welcome. It is not among them."

"Then you will tell us where it is."

Again she laughed.

"You think so?"

"I am certain of it. If not now—in the future."

She met his eye.

"Mr. Masterman, I will never surrender that paper until the work which I have begun is finished. You may kill me, if you dare, but you will not get that paper."

Only a fool could have doubted her sincerity. There was nothing to be gained by argument. Resolute, unafraid, defiance in every inch of her, Kirby faced the master of transportation; and the great financier was a reader of character. He knew that it was hopeless to argue, futile to threaten. The only thing to do was to imprison Kirby, wait for Grant to make a demand, and then use her as the club to swing over him.

Ten minutes later a burly man descended the steps of the side entrance to the Masterman mansion, bearing a limp figure in his arms. He placed his burden inside the waiting limousine, and spoke one word to the chauffeur: "Hurry!"

XVII

GRANT telephoned the Masterman home in the morning. Both Kirby and he had agreed that telephoning was not the safest thing in the world, yet, if he asked for Miss Rohan, and their conversation was confined to conventionalities, there seemed hardly any risk. He, of course, would give an assumed name if requested to tell who wished to speak with Miss Rohan. There might be danger, but in the midst of the dangers which surrounded them this particular one seemed almost negligible.

"Miss Rohan is not here," said the servant who answered his call.

"Not there!" Grant was aghast. "What do you mean?"

"She left last night for Denver," was the amazing reply.

For a moment, dazed, Grant could say nothing. And when he could it was merely a feeble question:

"Are—are you sure?"

"Certainly, sir," said the servant icily. "If it's anything important you may speak with Mr. Masterman. His instructions are that anyone calling for Miss Rohan shall be connected with him if desired."

"Let me speak to him," said Grant hoarsely.

A moment later a harsh voice sounded in his ears.

"Well, who is this? Someone asking for Miss Rohan?"

"Yes, a friend of hers. I'm told she left for Denver last night."

"Are you inquiring for Miss Rohan or Miss Rowland?" queried the financier.

The game was up! Grant choked back an explanation.

"Either one," he stammered.

A grim chuckle came along the wire.

"Well, to any friends of Miss Rohan that happen to have known of her presence in town, I can only say that she received a telegram last night and took the night train for Chicago en route for Denver. To anyone asking for Miss Rowland, I can only say that if that person knew of Miss Rowland's presence in my home he must also know of the existence of a certain little paper. Am I correct?"

Grant glanced over his shoulder. He was telephoning from a drug store. His was the only booth. It would be impossible for Masterman to work the trick he had attempted when Kirby had phoned him—that of trying to attempt detention of the person talking with him. Drug stores do not have house detectives amenable to the sudden commands of money. Escape was easy if necessary. And of this last, now that Kirby was known for what and whom she was, he was not certain there was necessity. The game was up! Yet he temporized.

"And if you are correct? What then?"

"Then, Mr. Dixon Grant," snapped Masterman, "if you care to see Miss Rowland again you will turn that paper over to me at once."

"And supposing that I meet threat with threat? Unless I hear from Miss Rowland within the hour—she knows where to reach me—and learn that she is not annoyed by you, I will turn that paper over to the newspapers."

"Who wouldn't print it," jeered Masterman.

"Are you sure? I have noticed that one paper, the Citizen, seems glad to print anything that tends to show you up for what you really are! Furthermore, you seem to think yourself that certain papers would print it, else why did you grant universal transfers? Let's not bluff. You've hidden Miss Rowland away. You've taken advantage of her assumption of Miss Rohan's identity to concoct a telegram calling her away in order that anyone anxious to see the real Miss Rohan would be fooled. And also to clear yourself of any charge of abduction. Very clever! Only it doesn't work, Mr. Martin Masterman! One hour! If I don't hear from Miss Rowland by then I turn that precious document over to the papers!"

"And if you do, Mr. Grant, do you know what will happen? My life will be in danger—in fact, I am prepared to admit that I do not believe there is a spot on earth where

Digitized by Google

I would be safe from the people. I am ready to take my medicine; but someone else will take it before myself. As surely as I speak to you now, Mr. Grant, so surely will Miss Kirby Rowland go before me! If I'm to die, so does she—and first! Now then, do you print that paper or do you give it up to me? I'll reward you. You'll not lose anything by abandoning this insane scheme of yours to ruin property. You'll be rich ——"

A click at the other end of the wire made him realize that he was pouring his golden promises into a lifeless machine. For Grant had hung up and staggered from the booth. Not only was the game up, but Masterman had him on the hip! There was no doubting the sincerity of Masterman's threat. Grant believed implicitly that the publication of that paper meant the signing of Kirby's death warrant. His first impulse had been to promise Masterman surrender of that paper at once; to tell him where it was. That he did not yield to his impulse was due to no lack of love for Kirby, no disregard of the danger that menaced her; it was due to common sense—common sense which, even in this moment of surprise and shock, bade him hesitate. Dimly he could see that there was a weakness in Masterman's position, that the financier was by no means impregnably intrenched in his demands. But he realized that until his brain cleared from the cloud that Kirby's capture had caused he was in no position to deal with Masterman. One thing alone was clear to him—while publication of that paper was withheld Kirby was safe! Masterman would not dare harm her, knowing the inevitable result. Masterman would wait.

As he walked up the street his mind cleared; his mental processes became lucid once more. He sat down on a bench in a little park and reviewed the situation. Kirby had been captured; she had been smuggled away to some hiding place. Her trail had been covered by the pretense of her having received a telegram calling her to Denver. To the police Masterman could say that he had no idea that Miss Rohan was not what she represented herself to be—the eccentric portrait painter. Ostensibly, Miss Rohan had started for Denver; in reality, she had been taken ——

She was not in the Masterman home, that was positive. Masterman would not dare keep her there. So he had had her taken somewhere else. That was as certain as the course of the sun. And so was something else: Before abducting Kirby, Masterman had tried to get the paper from her. No one but a fool would have failed to demand the paper. Masterman was no fool. He had demanded it, and he had not got it! If he had he wouldn't be asking Grant for it. Why hadn't he got it? Because Kirby had refused. And why had Kirby refused? Because the game wasn't up!

It was clear as crystal. Kirby didn't want the paper surrendered. If she had—well, she'd have told Masterman where it was. Why argue any further than that? Moreover, Kirby knew the name of the hotel where Grant was stopping. She'd have got him on the phone and told him what had happened. But why wasn't the game up? Because Kirby relied on him, Dixon Grant, to play it through to a winning finish!

She relied on his wit to extricate her from her danger, and then go through with their plans to the end agreed upon by them.

And if Kirby wasn't a quitter, if Kirby was game enough to risk indignity and restraint, he must do his part. For the time being Kirby was safe. While the paper was unpublished Masterman faced a weapon as dreaded by him as Kirby's capture was hateful to Grant. The odds had shifted, that was all. Instead of being in favor of Grant and Kirby, they were even now. It was up to Grant to rescue Kirby and cause another shifting of the odds in Kirby's war. But how? There must be a way! Kirby, by her refusal to surrender the paper, showed her faith in Grant to find that way. It was up to him to justify that faith. He slumped farther down upon the bench, his brain clear now, and working at its utmost efficiency. Where had they taken Kirby? How could he rescue her?

Half an hour of concentrated thought and his head was dizzy with the problem. It was clear enough what must be done. How to do it he did not yet see clearly. Mechanically he reached for a morning paper, discarded by some earlier loiterer in the park. The sheet was open at the "Want Ads" page, and the first column of this page was devoted to personals. Idly, hardly seeing what he read, his eye went down the column. It stopped and read one advertisement a second time. It was the personal inserted by Harry Mack in every morning paper save the Citizen, which had not run his advertisement for the two simple reasons that Hanrahan had taken it away with him and had not returned, and that Mack had neglected to pay for its insertion. But as in the one intended to be inserted in the Citizen, this one gave the newspaper publishing it as the place to address Mack.

There was no question in Grant's mind as to whom it was addressed to. And this was Thursday. At six P. M., if Mack kept his word, the game would be out of the hands of the self-constituted battlers for the people. And publication—it would not matter to Masterman that Harry Mack caused the publication—Kirby would die. Now, indeed, the game was up! Mack could undoubtedly tell a story so convincing that his inability to produce the paper itself would not greatly affect credence in his tale. A paper like the Citizen, for example, careless of libel suits, would print greedily Mack's story. And Mack would give Kirby's name and his, Grant's. He must see Mack at once, and try to prevent his thwarted cupidity from wrecking a plan destined to ameliorate the conditions of the poor. The man's conscience must be appealed to. Grant must try—— Here Grant laughed at the idea of Mack's having a conscience. Then he remembered how Mack had rescued Kirby from the clutches of the Masterman agents.

Grant had scoffed at the idea that chivalry had actuated that rescue. But did it matter what had actuated it? Mack had done it. For his own reasons Mack had not wanted Kirby captured by Masterman. And then Grant laughed again at his own stupidity. For as Masterman had reasoned so did he at last. Mack had saved Kirby because she held the paper which he did not wish to pass into Masterman's possession. That was the answer to that riddle. And if Mack had saved Kirby once, would he not try it again? And could not Mack, with his underworld cunning, be of invaluable assistance to Grant? Grant alone could hardly hope to rescue Kirby if she were guarded properly. But with Mack—he smiled at the idea of forming an alliance with the crook; but he needed help, and the shrewd brain of Harry Mack could give that help. He entered a telegraph office and swiftly wrote a message:

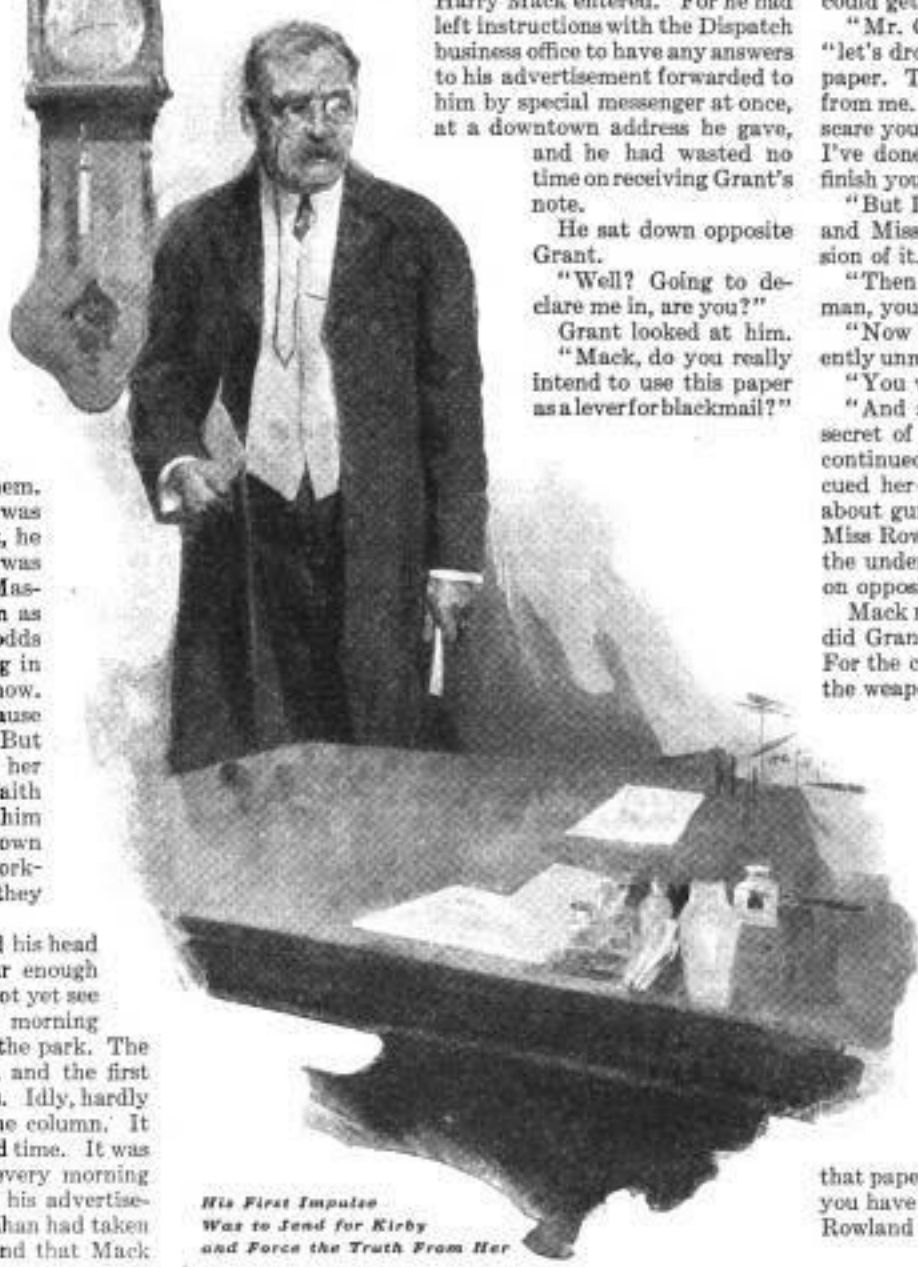
H. M. Will be in café of Hotel Blank waiting for you.
D. G.

He delivered the envelope to a clerk.

"This will go at once? How soon will it be delivered?"

The clerk saw that it was addressed in care of the Dispatch.

"Boy ought to get down there in the subway in ten minutes."



"Give him this for speed," said Grant, and passed a coin to the clerk. A moment later a boy dashed out of the office, and Grant entered the Blank and made his way to the café. Inside of an hour Harry Mack entered. For he had left instructions with the Dispatch business office to have any answers to his advertisement forwarded to him by special messenger at once, at a downtown address he gave, and he had wasted no time on receiving Grant's note.

He sat down opposite Grant.

"Well? Going to declare me in, are you?"

Grant looked at him.

"Mack, do you really intend to use this paper as a lever for blackmail?"

His First Impulse Was to Send for Kirby and Force the Truth From Her

"If you must be so crude of expression—yes," replied Mack.

"And there's no way in which I can persuade you to join with Miss Rowland and myself in using it as a weapon to get the people their rightful dues?"

Mack sneered.

"I can get twenty-five thousand from a newspaper for what I can tell them. Twenty-five thousand is a drop in the bucket compared to what I ought to get; but even a drop is a sizable drink to a man dying of thirst. I don't even get the drop working with you crazy people. Of course I'm going to use that paper for myself. But I'll divide the coin in three pieces—one for each of us. What's the answer? Do you join with me, or do I grab what I can from the papers?"

"Why hurry?" inquired Grant.

"Because you people will gum the game," snarled Mack. "You'll get caught by the Masterman gang and lose the paper, and then where'll I be? You people are the kind that wouldn't back my story up if you didn't have the paper. You'd be afraid of trouble. You'd be afraid of anarchy and heaven knows what not if you corroborated my statements. No, you people aren't after the coin. You'd have got it before this if you had been. Your girl gave me an idea of what you wanted. You want to reform the world. With the paper in your possession you think Masterman will do as you say. He ain't got sense enough to see that you people wouldn't publish the thing anyway, for fear of awful consequences to the country. That's the way I dope you two anyway, and I'll bet I'm right!"

Grant met his angry glance.

"Maybe you are, Mack; but, as you say, no paper is going to pay you a large sum for your story unless Miss Rowland and I corroborate it."

"By your actions," amended Mack. "By the fact that you two are lying low and hiding from Masterman. That'll be corroboration enough, considering the straight yarn I can spring."

"But you're too good a sport to sell for twenty-five thousand when there's a chance for millions."

"Where's my chance?"

"As long as Miss Rowland and I have the paper you think you have a chance, eh?"

"I know I've got a chance," snarled Mack. "But you won't have the paper long. Masterman's gang'll land you—and then I lose."

"And supposing that Masterman had landed Miss Rowland? Would you try to rescue her, thinking that later you could get hold of the paper?"

"Mr. Grant," said Mack, and his voice was menacing, "let's drop the foolish talk. I won't give my story to any paper. Twenty-five thousand or so won't buy that secret from me. I want a million. I put that advertisement in to scare you people. I've done it. I want to get hold of you. I've done it. Now you hand me over that paper or I'll finish you here in this café!"

"But I haven't the paper. It's locked away in a vault, and Miss Rowland is the only one who can get possession of it."

"Then lead me to her. I mean it, Grant. As I'm a living man, you'll be a dead one if you don't. Where is she?"

"Now we're getting down to cases," said Grant, apparently unmoved by the threat. "I don't know where she is."

"You what?"

"And as I don't care to entrust anyone else with the secret of this paper, I thought you'd help me find her," continued Grant calmly. "After we've found her and rescued her—well, then, Mr. Mack, I'll listen to your talk about gun play. But I haven't the paper. I can't get it. Miss Rowland can. Do you want to help me find her, with the understanding that after she's rescued you and I are on opposite sides again?"

Mack removed his hand from his pocket. Not until then did Grant realize how absolutely serious Mack had been. For the coat pocket sagged as the hand was removed and the weapon inside settled back into place. Mack was desperate, but Mack also was the only person Grant knew who could help him now. Wars, even people's wars, can make as strange bedfellows as politics. After Kirby was rescued—but let the future and Dixon Grant take care of Kirby. Kirby would come to no harm from Mack; Grant would die first. Moreover, armed men have been disarmed before this. The risk was slight, thought Grant, compared to the stake at issue—the rescue of a people.

"What's happened?" demanded Mack.

Swiftly Grant told him of Kirby's venture into the house of Masterman, and his own recent telephonic conversation with Masterman.

"You, Mack," he finished, "are powerless while Miss Rowland is in Masterman's hands. Though I warn you that you'll not get hold of that paper while I'm able to prevent you, you can see that you have absolutely no chance to get hold of it while Miss Rowland is a prisoner. Will you help me?"

Another Side to High Prices

HERE is an anthracite coal mine. The operator can take out forty per cent of the coal at a minimum cost a ton—as he used to do twenty-odd years ago. With improved methods, which involve more expensive equipment and a greater mine cost, he can take out sixty-five per cent of the coal, as at present. The supply of anthracite being strictly limited, so far as known, it is good long-run economy to recover sixty-five per cent and pay somewhat more a ton.

For many years we got cheap lumber by ruthless slaughter of forests, taking the timber that was easiest to reach and wasting much of the rest. On a long view we could have afforded to pay more for lumber then and conserve the timber supply. Cheap coal was wastefully burned; cheap lumber wastefully used. Many instances might be shown where cheapness that involves waste is not good economy.

Especially where it involves waste of human material. Cheap clothes and sweated labor, cheap articles made by overworked children, are not a good investment. Cheap food and discouraged farm boys do not spell long-run prosperity.

High prices that inspired better methods of distribution might well be a gain. In this matter of coal it has been declared that distribution to consumers in cities costs fifty cents a ton more than it should; which—according to a recent statement by members of the Geological Survey—is more than half of the total return on a ton to all the capital invested in the coal industry, including coal lands, mining machinery, railroads and coal yards.

If these high prices brought about a thorough study of our methods and habits of production, distribution and consumption they would be profitable in the long run.

More Coöperation

IF A MAN is selling lead pencils, first of all he wants people to use lead pencils, and in that basic respect his interest is identical with that of his competitors. He ought to be working heartily with them in every legitimate means of promoting the lead-pencil habit.

The principle applies in many cases where it is not so obvious. Banks generally opposed postal savings, in which they saw nothing but competition with themselves. At present, deposits in postal-savings banks are increasing at the rate of a million dollars a week. At the latest report there were six hundred and sixty thousand depositors in these institutions, with more than a hundred million dollars to their credit.

Meantime deposits in other savings banks have increased as never before. Far from injuring other savings banks, postal concerns have helped them. They have got some hundreds of thousands of persons into the habit of saving and made them potential bank customers. They have enlarged the common market.

Savings banks and life-insurance companies are in the same general line of trade. Both have something to sell to those who should make provision for the future. Their tendency has been to regard each other somewhat as competitors; but they ought to work heartily together on the sound principle that whatever either of them can do to enlarge the market for their common article—namely, provision for the future—will ultimately benefit both.

There is a lot of this purblind competition—for example, fratricidal jealousies between railroad and trolley, newspapers and periodical publications, gas and electric light. A pull together to enlarge the common market would be more to the point.

Saving and Insurance

NINE years ago savings banks in Massachusetts were authorized to write life insurance. The idea was that, by cutting out the expense of solicitation and of sending an agent round to collect the premiums, the cost of industrial life insurance could be considerably reduced. In nine years, according to a statement before us, the banks that took advantage of this authorization have written fourteen thousand insurance policies for a total of some six million dollars, which is merely a drop in the bucket.

A sound article of insurance was obtainable at low cost—waiting for anybody to come and take it. But there was no push behind the plan; no one to urge it. So comparatively very few people did come and take insurance.

Recently an enterprising Middle West savings bank formed an alliance with some life-insurance companies and launched a lively campaign to drum up savers and insurers on a plan that made a man's savings-bank balance automatically available to pay his life-insurance premium. Other banks are adopting the idea, and an important accretion of savings and insurance will probably result from it.

The motive, of course, is selfish—the bank wants more depositors; the insurance companies want more policy holders. But it is incomparably better for people to be drummed into saving and insurance through somebody's self-interest than for them not to save and insure.

By a great advertising propaganda the British Government has been selling millions of pounds of war-savings certificates to wage-earners. It wants the money to prosecute the war, and by a vigorous application of that interested motive it has got hundreds of thousands of people into the good habit of saving.

Ideas do not take hold in proportion to their goodness. They take hold in proportion to the steam behind them.

An Opening

BOTH major parties confessedly are bankrupt in issues. Neither stands for any broad, definable program.

What the country most needs is better organization. Europe, for the time being at least, is going over bodily to state socialism, because Germany has demonstrated that the energies of a nation can be more efficiently coördinated under centralized state management than on the individualistic, competitive plan.

We do not want state socialism; but we do want better coördination of national energies. Every intelligent person who looks at Europe, then at the United States, and calculates upon lively after-the-war competition between Europe and the United States, agrees to that.

Both parties have been, in about equal degree, agencies of disorganization and disunion. They have really done nothing to harmonize the pull of interest against interest—as in the case of labor and capital, producer and carrier—but rather have played upon those antagonisms for political gain. Only incidentally have they tried to teach sound economic thinking. They have carefully inculcated hostility to organization in business—only recently coming round, with various reservations, to sanction coöperation among manufacturers for export trade.

Will either party commit itself to a definite principle and program of better organization? That would involve looking over production, distribution and consumption, pretty much as the nations at war have done, to see where coöperation will give a better result than mere blind competition. It would involve continuous effort for a better understanding between interest and interest. It would involve a great propaganda of sound economics.

There is an opening adequate for the most soaring political ambition. But better organization means a lot of hard, sincere work. Is politics up to it?

Justice

A LADY suffering from low spirits carefully empties her revolver into the body of her husband. Of course she is not put on trial for murder. Society does not demand of her simply: "Were you mentally competent?" and "Did you deliberately kill this man?" Instead, she is permitted to put the deceased spouse on trial, without benefit of counsel or clergy; and a sloppy-minded, sensation-hunting audience, morally naked and unashamed, is treated to a real-life, heart-interest circus performance.

She was very happy; her husband was very rude; she is quite sure he was unfaithful; her own flirtations were merely the blind outreachings of an agonized child-soul that found cruel prison bars between itself and the gumdrops it craved. This part of the performance evokes prolonged slobbering from the more susceptible female auditors.

The judge sits by, a figure of shame, helpless to prevent the most solemn function of the law from being converted into a cheap and nasty melodrama.

When a murder trial holds rigidly to this: "Were you mentally competent?"—the answer to be given by disinterested experts—and "Did you deliberately kill?" slobbery sentiment will have to get its thrills at the movies; but there will be fewer murders. At present the "unwritten law" is the law that applies to murder in the United States.

Food Prices

THE final report from Washington puts the outturn of cereals in the United States in 1916 at over a billion bushels smaller than in 1915, and the farm value at over eight hundred million dollars greater.

That smaller production means more money to the producer is an old story. In 1912 farmers raised over three billion bushels of corn, and its farm value on December first was estimated by the Government at slightly over one and a half billion dollars. In 1916 they raised only two and a half billion bushels, and its farm value was over two and a quarter billion dollars—the farm price being eighty-nine cents a bushel against forty-nine in 1912.

Undoubtedly war helps to raise prices, for men are better fed when engaged in destruction than when engaged in production. The International Institute of Agriculture, at Rome, calculates the world's wheat crop for 1916 at a trifle under three and a half billion bushels and its consumption at more than three and three-quarter billion bushels; so there would be an actual lack of bread somewhere but for the large reserve carried over from the big harvest of 1915.

Smaller production and war demand are the big facts about high-priced food.

Shipping Outlook

MARINE war-insurance rates recently advanced to the highest point since the early weeks of the war. In two months last fall England lost, through mine and submarine, about half as much tonnage as in the whole year 1915. Our consul general at Christiania reports that Norway, the next heaviest sufferer, lost ten million dollars' worth of shipping in the same two months.

Up to last fall the submarine, as regards shipping economics, had been little more than a homicidal nuisance. The damage it inflicted was relatively so slight that one could get insurance against it at about one per cent, and shipyards turned out new tonnage about as fast as the old was destroyed. But the loss of five hundred thousand tons by two nations in two months and a rise in war-risk rates to eight per cent for North Atlantic and fifteen per cent for Mediterranean waters suggest a possibly very different complexion. The rise in insurance rates was partly due to a fear among British underwriters that rejection of Germany's peace overtures would bring more vigorous submarine warfare.

That fear, along with last autumn's destruction, suggests that the end of the war—in spite of Germany's interned merchant fleet—may find the world short of ships; in which case a ship would be an excellent investment.

The consul general at Christiania reports that the amount of tonnage now building for Norwegian owners in shipyards at home and abroad cannot be definitely stated, but is estimated at about twelve hundred thousand tons, "a large amount of which is building in American yards." This is no doubt much more ocean tonnage than is building for American owners. Mostly we are still just talking about merchant marine.

It is high time to get that new Shipping Board at work and to inject some ginger into this subject.

The Point of View

YEARS ago a very famous Englishman visiting the United States was escorted by a humble American citizen to a luncheon in a private house. The bottle-nosed cabby manipulated his vehicle so carelessly that the cab step was a good two feet from the carriage block, and the visitor had to step into the mud. The native apologized for this inadvertence; in the rush of American life, he said, many of the nicer points were overlooked. But the Englishman shook his head and asked: "What can your country come to?" He could see no promise for a country that landed distinguished visitors in the mud.

If you had been surveying the state of Italy under Austrian domination along about 1845 you would have found much that from the American point of view seemed utterly unbearable. But to a fine old Italian nobleman at that time the United States seemed the most dreadful of all habited regions of the earth. "There can be nothing more frightful," he solemnly averred, "than a country where servants refuse to give the name of master to those whom they serve."

Of course he was quite right from his point of view. It all depends upon that.

WOMEN, WAR AND WAGES

By Forrest Crissey

UNDER the pressure of war production, industry in America has learned many new things about work and workers; but few of these facts promise greater importance for the future than the findings on the score of the mechanical abilities of women.

Examples given along this line by managers, superintendents and production captains in munitions plants are so extreme as to stagger credulity and make any writer who has a proper regard for his standing hesitate to repeat them—even when they are hedged about with all the qualifying circumstances that he is able to see in connection with them.

Here is an example of what I have encountered along this line of inquiry. It is offered without any reflection upon the veracity of those who have given the statements, and at the same time with the frank admission that they must be accepted or rejected by each reader according to the measure of his faith. All that the writer vouches for is the fact that these statements came from men in high positions as production executives in munitions plants.

"I know of a case," declared the head of a large plant in the Philadelphia district, "where a young woman was put on a machine which had been handled, up to that time, by a man who was considered a very fair worker. Of course an exact record of the number of pieces turned out by him had been kept.

"After this young woman had been at the work for a much shorter time than the man she had succeeded, my attention was called to her score. She was turning out just two and one-half times as much work as he had averaged. True, she was an exceptional girl—probably the most proficient in a force of more than four hundred; but the fact remains that she had many sister workers who were not hopelessly behind her. In short, the girl munitions worker has demonstrated that the somewhat common masculine notion to the effect that the feminine mind is generally incapable of grasping mechanics is utter rot."

A Girl's Amazing Shop Record

THIS story was repeated to a production executive in one of the largest munitions plants in the East, with the comment that it seemed incredible and altogether too much to ask readers to believe.

"If that's too much for you," exclaimed this man in authority over hundreds of women workers at lathes, punches and presses, "you certainly can't stand for a statement of some of the things that have happened right here under my own eyes."

"Well; tell me the worst," I replied.

"There is a certain punch job here that had been held by a machine-tool man who was drawing sixty cents and turning out six units of product to the hour. He was considered a good man at his job too. Among the young women who came to us when the pressure for production decided us to use female help was one who demonstrated, right from the jump, that she had a keen, quick mind, and that her fingers were under its complete control.

"Consequently we decided to try her out on the machine-tool job to which I have just referred. She was put on a nineteen-cent piece basis and given the ordinary amount of coaching. In a very short time she turned out fifty-one perfect pieces in an hour as against the six pieces produced by the man whose place she had taken."

After watching for a moment the effect of this on his hearer the executive resumed:

"You are at liberty to accept this statement or not, as you like. I'm frank to admit that I would have hard work to swallow it if it had not occurred right under my own eyes, and if I were not in a measure prepared for it by the astonishing performance records of scores of other young women workers. The truth is, women are wonderful workers along mechanical lines. They have a deftness of movement and a touch that are marvelous and that turn out work with surprising facility. They are nimble of mind and of finger; and as ordinary operators, tool operators and inspectors they have given an account of themselves calculated to warm the heart of any executive who is pushing for production. In this connection it should be said that the quality of their work is up to a high standard that keeps pace with its volume."

"What about the future for women in mechanical lines?" he was asked.

"I'm not predicting anything beyond the fact that women must be reckoned with in this field. Their performance in this time of high pressure has put them on the map in a way that cannot be ignored. Both American industry and American workingwomen have found out something by this experience that neither is going to forget."

The production head of a large Eastern munitions plant makes the interesting point that girls and women take their tasks at the lathes, presses and benches with more seriousness than men, and that their minds are focused on production with an intentness that translates itself into remarkable results.

"And when it comes to a natural feeling for mechanics," exclaimed this authority, "you would be astonished at the startling demonstrations we have of that here at our plant every day! It is simply another case of feminine intuition taking the short cut and beating the man to it. There are girls who have been working here only a few months, and who are without technical training, who have an understanding of machinery that one would think impossible except as a result of an engineering course.

"Another point that does not get past the manufacturer is the fact that the girl operator does not begin to break so many tools as the boy or even the man at the same stage of experience. My observation is that a force of girl workers in a factory like this breaks about one-third as many tools as an equal force of men and boys—at least, this is true in the use of pellet tools. This is mainly because of the girl's natural manual dexterity. Her fingers move deftly and she does not fumble and blunder like the ordinary boy."

The president of a company making shrapnel fuses says: "I don't know how we could even handle the job of fuse assembling without women. The adaptability of girls for this peculiar task is simply astonishing. They 'catch on,' as the saying is, with almost incredible quickness. It is hard to exaggerate the value of this distinctive feminine quality of adaptability in mechanical work of this kind. And you can hardly say too much on the score of their intuitive dexterity, their facility with their fingers. This is why they leave the men and boys far behind, as a rule, when it comes to work on primers and fuses, and tasks of that character. The same is true in drill-press work, where nimbleness and sureness of movement are the essential factors in large production. The fingers of the girl or the woman fairly flash in their movements; but they are as sure as they are nimble."

Of course the leading European nations have been learning the lesson of woman's mechanical efficiency on a much larger scale than has the United States; but here it points to a different problem. There the adjustment must naturally be more simple, for the reason that several million men, whose places in industry have been taken by women, will never return to their old jobs. England has now about three and a quarter million women workers, and of these nearly three-fourths of a million are said to be filling places vacated by men who have gone to the Front. In Germany the most plausible authorities place the number of women who are doing industrial work at 4,793,000—or only 495,000 fewer than men thus engaged.

Though the readjustment in the United States, due to the fact that women have demonstrated their natural fitness and feeling for mechanical pursuits, will not be on a scale remotely approaching that of the European countries, it will be more complicated in principle, for the reason that the withdrawal of the abnormal demands on labor due to the Old World war will release the full quota of male workers to fill our normal working demands.

The Office Woman's Wage

FORTUNATELY this problem will not have to be solved in a moment. But it is well to remember that it is posted on the bulletin board of coming events! When womankind put on overalls and took her place at the lathe and the machinist's bench she certainly "started something." All manufacturers who have used women in their plants are agreed on this point.

Now for a glimpse of what has happened to the female salary earner who has stuck to the beaten paths that lead to office doors instead of to the entrance gates of munitions plants. The stenographer and the clerk represent the most numerous battalions of these workers in conventional fields, where the invisible portion of the salary check is the privilege of keeping soft and clean hands, and meeting the public.

Probably the most surprising statement that may be made concerning the present-day status of the stenographer is that her pay has advanced precious little in the last decade. No doubt many stenographers, and perhaps most employers of stenographic talent, will be inclined to question this; but fortunately one of the largest furnishers of this type of workers in America has kept extensive records, covering all the important cities of the United States for a period of more than ten years. This big typewriter company has been a natural source of supply for all grades of stenographic help, and consequently its records are sufficiently comprehensive to afford the basis for an average that is really representative of the whole field.

These records show that in 1906 the average weekly salary received by stenographers in the four largest cities of the country were: New York, $12.90; Chicago, $12.44; Philadelphia, $11.45; Boston, $10.45. To-day the score stands: New York, $13.21; Chicago, $13.02; Philadelphia, $11.66; Boston, $11.67. The average gain in the

DECORATION BY CARROLL T. BERRY

Digitized by Google

average stenographer's salary check in these great centers in ten years has been: New York, thirty-one cents; Chicago, fifty-eight cents; Philadelphia, twenty-one cents; Boston, $1.22.

Detroit appears to have done the largest job of salary boosting for its stenographers, so far as any important industrial city is concerned. In 1906 it was paying an average of $8.72, while this year the record stands at $13.52—an advance of $4.80. Richmond is a close second, with a gain of $4.46. San Francisco's average to-day is the highest of any large city, the figures being $15.10; ten years ago its average was $13.62. In connection with the fat wages received by workers in the great munitions center of Pittsburgh it is interesting to note that, according to this authority, the average pay given its stenographers in 1916 is $11.69.

All this, however, does not go to show that there have been no decided changes in the stenographic world as a result of war conditions.

A woman who handles this class of help for perhaps the largest employment organization in New York City declares that a distinctive development of to-day is the more independent and selective attitude of the stenographer who knows she is competent. She subjects both her present and prospective position and employer to a scrutiny not in the cards before. The typical stenographer, in other words, is keenly alive to the possibility of improving her working conditions or salary, or both.

"Her tendency," remarks this expert, who has observed so many, "is to 'shop' round until she is exactly suited. One girl of my acquaintance declined a good position because the location was outside the zone of a five-cent car fare from her boarding place. She said there were plenty of other equally good positions that were not open to this objection. The business man who needs a stenographer may insure himself against getting or keeping a really competent one by intimating that there is a liability he may require stenographic work on Saturday afternoons.

"Hundreds of harassed employers have lost their most valued stenographers of late by asking for overtime work—especially on Saturday afternoons. Again, it has been a period of extensive change and readjustment on the part of the experienced stenographers who have become dissatisfied with the atmosphere of their positions."

According to this authority, if any competent stenographer in New York City is remaining in a position where her employer or any of her working associates are distasteful to her, she is decidedly out of fashion and behind the times. Girls who have previously put up with irksome conditions are now often compelling their employers to change those conditions, or else they are moving on to new places that promise pleasanter environment. In a word, the capable stenographer of 1916 is decidedly "choosey," and keeps her hat and coat within easy reach. If her employer values her services he will do well to remember that it now takes only a slight cause to move her to another office.

Top-Notch Stenographers

Though the average salary of the stenographer has not advanced to any conspicuous extent within the last two years, or the last ten years, that average is admittedly held down by the immensely increased number of novices fresh from the shorthand schools. In other words, the seasoned and capable stenographer is in position today to command a somewhat higher salary than ever before. To a considerable extent she is living up to her opportunities in this respect; but she is apparently quite as much interested in securing working conditions exactly to her liking as in getting an advance in salary. At least this is the observation of a shrewd woman who passes upon hundreds of female applicants for stenographic positions of a better sort. In her opinion there is quite an improvement in the quality of the general run of applicants in this field, due to the fact that the great bulk of beginners became absorbed by industry in the earlier stages of the war boom.

Then, too, this same pressure has relieved the stenographic field of hundreds of girls who were unfitted by birth or lack of education to become competent office help, but who are admirably adapted to the bench or the lathe of the munitions plant, or to a line of mechanical work in a factory that has had its working force depleted by the demands of the munitions makers. Naturally this shifting of that element in the stenographic field least adapted to its demands also has the effect of improving the class of beginners now available for the shorthand schools.

Fewer girls of almost no education, who distinctly lack the mental quickness necessary to secure even a moderate success as stenographers and typists, crowd into the classes of shorthand schools simply because stenographic positions appear to give more leisure and comfort, and perhaps more pay, than a "store job." They can make unprecedented wages at munitions work without the mental stress and the expense of a course of study. Therefore, the ranks of shorthand undergraduates are relieved of a considerable burden in the way of vocational misfits.

This same authority says there is unquestionably a larger number of highly paid office positions open to women to-day than ever before; that a competent law stenographer, for example, is often able to secure thirty and even thirty-five dollars a week; and that these figures are also within reach of the woman stenographer who is capable of handling dictation and correspondence in German, French and Spanish. Uncle Sam's increased trade with foreign countries has created hundreds of good positions for the stenographers who are at home in languages other than English, says this woman who finds desk positions for hundreds of girls and women of the better grade.

Women Bookkeepers' Pay

"Another office helper," she says, "who has bided her time to secure concessions is the bookkeeper. If she is fairly competent her employer will do almost anything within human reason rather than let her go. He has, perhaps, a keener dislike for changing bookkeepers than for changing stenographers. The bookkeeper has not always realized this, but the pressure of war prosperity has brought this out conspicuously.

"In one way the woman bookkeeper has, in a sense, been a little more independent than the average man in the same line, for the reason that the man has more often been the breadwinner for a family. At any rate, she has experienced a decided awakening to the fact that she is now in better position than ever before to get the concessions necessary to make her situation more comfortable, and perhaps more profitable. This fact is not allowed to escape my attention for a moment, because I receive inquiries daily from this class of women workers, who are looking about for places better to their liking, or for those to which they can go if their present employers do not grant them the concessions they ask."

When this specialist in female office help was asked whether many of these office positions were not held by women who are no longer young, she answered:

"Certainly they are! Do not think for a moment that gray hairs are a handicap to a woman applicant for a position of this class and character. If anything gray hairs count as a help. The average business man might prefer a young woman for ordinary stenographic work, but when it comes to a woman who has the handling of accounts, of moneys, and even of highly technical matters—like legal stenography, for example—I am convinced that he looks with favor upon gray hairs and the settled temperament and ripened judgment which are supposed to go with them.

"What salary does a good woman bookkeeper get? I could, by consulting our records, show you scores of them who are drawing twenty-five dollars a week now. Of course some are drawing still better than that. That, however, is way above the average, and is mentioned only as an indication that competent women bookkeepers are not lightly considered, especially in these days of readjustment."

Shorthand schools have an unprecedented enrollment of students who are, according to a visiting expert, of uncommon fitness for work. In seven of these schools it was found that all their students were placed as fast as graduated, and that this failed to fill their applications from industry by about twenty-five per cent.

According to the head of an organization which places many thousands of stenographers every year, Greater New York alone has more than forty thousand stenographers and typists, of which fully four-fifths are girls and women. By this authority the great army of stenographers is divided into two classes—juniors and seniors—the latter being those who receive more than twelve dollars a week. The juniors are estimated as representing sixty per cent of the whole body of operators.

One specialist in the placing of women who work in offices makes the interesting observation that the girl clerk does not find it quite so easy to place herself in a new position as does the stenographer, for the reason that her experience does not "carry" from one position to another so readily as the stenographer's.

"Only a few weeks ago," remarked this keen observer, "I had an example in point, which is typical of a large class of experiences in the same line. A girl came in here who was getting fifteen dollars a week checking invoices. She was determined to leave her place at once, because certain elements in her environment were distasteful. Both her appearance and her record were excellent. The only opening for her at the moment seemed to be a position in which her work would be estimating materials. Her experience in checking invoices does not count in her new work and she is, therefore, set back to twelve dollars a week. If she was a stenographer she would undoubtedly have escaped this setting-back process. This is one of the disadvantages of doing clerical work instead of stenography."

The influence of the war upon the earnings of women appears to parallel, as a rule, the effect it has had in the field of male earnings. In other words, the largest increase in pay has come to the rougher and harder forms of labor. The scrubwoman has at last come into her own and has had a decided uplift in her wage scale, while the earnings of the "saleslady" and of the office girl have stuck at about the same old figure.

The head of a large Chicago department store says that scrubwomen who were content to get six dollars a week before the war can now command from nine to twelve dollars, with three meals a day at the store restaurant. This authority explains that foreign women of the immigrant class generally seek employment as scrubwomen when they land in this country. After they have been here about six months they generally contrive to master enough English and to learn enough of American ways to step up from the scrubbing squad into more profitable work.

Since the outbreak of the war, however, hardly any women of this class of labor have arrived from Europe. Those in this field, however, have graduated from it and left vacancies that can be filled only by a raise of wages ranging from fifty per cent to one hundred.

Good Times for Cash Girls

About the same situation has developed in the department store in regard to porters. The green immigrant man just over is naturally inclined to look for work as a porter. In this capacity a fair wage was a dollar and a half a day before war conditions made themselves felt. A store that secured all the porter help it needed at this figure is now paying two dollars and thirty cents and expects it will not long be able to meet its needs at that price.

The lowly cash girl of the department store is one of the star beneficiaries of the war-wage scale. Where before she was content to start in at two dollars and a half a week she now begins at four—sometimes at five. Stock boys have been advanced at about the same rate. They now begin at six dollars a week instead of at four.

One of the most interesting effects of the war-wage situation is the earlier attainment of long trousers on thousands of boys. The pressure of the demand for boy workers has become so intense that this symbol of adolescence is available at a younger age than ever before to the boy who prefers to go out into the present wage harvest rather than stick in school.

Though it is true that the present period of the swollen pay envelope has made it possible for thousands of families to keep their boys in school, whereas before it was not possible, it is also true that the boys, like their fathers, have tasted the blood of big earning and of a scale of spending beyond their former dreams. They are eager to get their share while the getting is good—irrespective of the fact that they are not positively compelled to toil and turn their entire earnings over to the head of the family.

The pressure of war prosperity has produced few effects more interesting than that of eliminating certain forms of juvenile loafing in the big industrial centers—at least in reducing it to a state of unpopularity that it has never known under conditions of ordinary industrial activity.

Here's one example, and the way in which this unpremeditated uplift worked out in an individual case is typical of an extensive class of experience. The pool rooms of a certain West Side district in Chicago were frequented by a boy who came of a fairly decent family, but fell into bad ways and contrived to pick up enough money to maintain his vice by "skinning greenhorns" at the pool tables. Of course he was welcomed by the management of the pool room, because he acted as a "come-on," who encouraged business. In this way he was able to "rustle" about eight dollars a week from the pockets of pool players who overestimated their skill with the cues.

The Temptation to Work

Once or twice, it is said, this young man fell into the hands of the law for some minor offenses and was sent to the bridewell. In short, he had taken the preparatory course in criminal training. Then came the war, with its urgent demand for workers. Consciously or unconsciously the attitude of the police and of the officers intrusted with the enforcement of the law seemed to change from passive tolerance of the pool-room and saloon loafer to that of resentment against idling and loafing.

This new form of moral pressure made itself felt to a decided extent in the locality frequented by this boy. Week by week his appointed job became more lonesome and less interesting, attended by an increasing number of unfriendly glances. At last he surrendered to this uncomfortable pressure, and when offered a job paying almost four dollars a day he went to work. He was surprised to find how interesting a real job was, and how agreeable it was to find himself regarded with the friendly eyes with which the world looks upon a producer. The sensation was decidedly different from that of being regarded as a loafer and a "skin." The boy was skillful with his hands and made good on his job.

Finally, however, his ambition was awakened by his work to the point where his mind was made up to a life enlistment in the ranks of the workers. He saw that a steady job, with a future before it, was more important than easy money for the passing moment. Consequently he watched his chance and found an opportunity to change to an eighteen-dollar job in a factory, where he has an excellent prospect ahead.

One informant familiar with this phase of city life says that he is personally acquainted with half a dozen young men who would not work at low wages, but preferred the shifty arts of loafing and panhandling until war prosperity came along and offered its prizes. This was a temptation too strong to be resisted, and these professional loafers have now left their life of idleness and belong to the dinner-bucket brigade. In the opinion of this informant it is probable they will remain permanently in the ranks of the producers; at least they will stick until a period of depression throws them into the old life of idleness again. Work is much a matter of habit and is decidedly catching—especially when adorned with the enticing bait of big wages.

The peculiar situation the middle-class male salary worker has been up against throughout the war period is graphically shown by the experience of a certain steady and ambitious young man holding an assistant chief-clerkship in a large financial institution in Chicago. His salary is about one hundred dollars a month.

Four years ago he determined to get ahead, taking two hundred dollars in savings as a basis. He used that as a first payment on a lot, on which he borrowed enough to build a house. His monthly payments amounted to thirty-five dollars, decreasing slightly each month. When nearly two years had passed he had paid about $528 on his principal and had an increased value in the property of nearly four hundred dollars. This gave him a total saving of some $928 above his rent, which had been twenty-eight dollars a month. He sold the place at a net profit of $748.

Then he repeated the operation; and at the end of eighteen months he disposed of

Good Morning, Have You Used Pears' Soap?

Yes, you've heard that before, but—*do you* use Pears' Soap?

Do you know that Pears' is recognized by chemists as the *ideal* toilet soap? By physicians, as ideal for the complexion?

Do you realize that back of every cake of Pears' is a standard of purity and skill more than a century old?

Do you know that the ordinary toilet soaps you buy contain a large percentage of water?

Do you know that there is not even a trace of moisture in Pears'? That every cake is aged *a year* before it is offered for sale?

Do you realize that a King can have no purer soap than Pears' and that the poorest man can have no more economical soap?

Do you know that Pears' Soap sells for only 15c a cake (box of one dozen, $1.50)? That Pears' Glycerine Soap (scented) sells for 20c a cake (box of 3 cakes, 51c)? They last twice as long as ordinary, un-aged, water-laden soap.

Thousands of families have standardized on Pears'. This means they have ceased to experiment, and order Pears' by the dozen cakes when their supply runs low.

Of course your dealer has Pears'. He has many customers who would refuse to consider any other kind.

If you wish to test Pears' for little expense, Walter Janvier, 419 Canal Street, New York (Pears' United States Agent), will send you a trial cake of the unscented for 4c in stamps.

Pears' Soap, made by A. & F. Pears, Ltd., has the largest sale of any high-grade toilet soap in the world.

This trade mark appears as a water-mark in every sheet

Eastern Star Business Papers

THE Eastern Manufacturing Company owns and operates at Bangor, Maine, one of the biggest writing paper plants in the world. Its excellent strategic position on tide-water, close to its own forests, gives it a decided advantage in freight rates.

The Eastern controls the important raw materials and processes that affect cost or quality of its papers. Its up-to-date machinery is operated by cheap electric power from a big hydro-electric development. An efficient system of scientific management increases production and reduces overhead. Its ownership of 200,000 acres of spruce forest assures a permanent supply of wood. It owns and operates its own pulp mills and bleach-making plant. The enormous volume of its purchases wins the lowest prices on the big rag markets.

All commercial papers are a mixture of wood and rag fibers. The art of paper making is to mix the right proportions in the right way. Writing paper can be made of rags alone. So can a ring be made of 24-karat gold. One would be about as sensible as the other. For every grade of Eastern Star Business Papers the mixture of rag and wood fiber is scientifically determined by exhaustive study of the practical use to which the paper will be put.

These are the essential manufacturing economies that will help business men understand how we can give so much quality at so little cost in all writing papers bearing the Eastern Star water-mark.

It's the manufacturer's control of raw materials that determines the price you pay for paper

Look at that sheet of paper on your desk, so familiar that you never think of the wonder of it. Listen. To bring that scrap of paper to you:—

Woodsmen felled trees in a northern wilderness in the zero-depths of winter. Lumberjacks risked their lives driving logs down mountain torrents.

Men toiled over great vats like witches' cauldrons that boiled and stewed with steam and gases.

Chemists peered into retorts and test-tubes and stirred strange mixtures in their laboratories.

Ragpickers combed the world's great cities.

Miners burrowed hundreds of feet into the earth.

Tugs towed barges around stormy headlands.

Waterfalls were harnessed to great dynamos to breed tame thunderbolts of electricity.

Men brewed chlorine gas, the terror of modern warfare, and turned it to a peaceful purpose.

All that and more men did to bring to your desk one crisp sheet of Eastern Star Business Paper.

There is a suitable quality at a right price for each purpose—letterheads, business forms, ledgers, advertising printing, and every commercial use

(Continued from Page 26)

his second place at a net profit of six hundred dollars, making the total earnings he had made by investment and by judicious discretion in the business of building about $1348 at the end of three and a half years.

At this point the increased cost of living began to pinch. Unfortunately he had invested about eight hundred dollars in another lot. Because of the big increase in the cost of building materials and building labor, the house he had planned was not put up. Now his lot is lying idle and the taxes are making him groan.

Living expenses have increased immensely and his present rent demands more from him each month than did his payments for his first house.

In the last six months he has saved nothing. Instead of watching his thrifty savings scheme add a little each month to his resources, his eyes are now fixed on the high cost of living, the thermometer of which is steadily climbing. Semimonthly his glance anxiously shifts to the figures on his salary check. They have not moved up a peg. As a self-starting thrifter he is a little discouraged; and when he hears what munitions workers and all other laborers, from common to semiskilled, are getting his disposition undergoes a severe strain. He says the only possible relief he can see ahead is the hope that he may be continued in his position and at his present salary when thousands of unskilled laborers who are now getting unprecedented wages are out on the street looking for jobs.

This young man, who receives one hundred dollars a month, is unable to draw any appreciable amount of sympathy from his fellow clerks. Most of them are able to point out to him that he is getting considerably more than they are and that he has at least something salted away for a rainy day. They remind him that they have reason to complain if anyone has.

Speaking of the situation generally, junior bank clerks appear to be getting from thirty-five to sixty dollars a month, depending upon their length of service; while, upon the same basis, senior clerks receive from sixty-five to eighty dollars a month. Bank "cage men" are a little better paid, their salaries ranging from seventy to ninety dollars a month. "Currency men" and stenographers seem to be in about the same class on the salary list, drawing from seventy-five to one hundred dollars a month. Stenographers drawing eighty-five dollars a month or more, however, are usually classed as secretaries.

The Tale the Tellers Tell

The salaries of tellers range from ninety to one hundred and twenty-five dollars a month in the large banks. If the man at the receiving or paying window who handles your funds gets one hundred and twenty-five dollars a month, or more, he is above the average, and his ability is being recognized in his pay.

When official rank is reached in banking circles salaries have a remarkably wide range, but the starting point is about twenty-five hundred dollars a year. Many bank presidents receive salaries of more than twenty-five thousand dollars a year, and it is reported that some of these officials get in the neighborhood of one hundred thousand dollars a year.

Though every bank clerk begins with the idea of becoming a president some day, times like the present compel him to turn sadly speculative eyes upon the callings where the worker enjoys less "class" and fewer white collars and sport shirts, but more coin at the end of the month.

The general manager of a New York labor exchange which handles about nine hundred accepted applications a month says that bookkeepers and clerks generally have not been advanced in salary to exceed ten per cent since the start of the war. He even believes that ten per cent is a high estimate. Bank clerks have benefited to some extent, in his opinion, by the war pressure. Every financial institution has been swamped with business, and consequently the call for additional help has been loud and strong. Contrary to precedent and tradition, therefore, the bank clerk and bookkeeper have looked at their positions in the light of competitive demand, and have forced a raise out of the scheduled order for advancement.

According to this man, whose observation is remarkably broad, the bank clerk who changes one employer for another, as a rule, does not realize more than three dollars a week as a result of his move. Young boys just starting at clerical work, in positions which are expected to be permanent and lead to promotion, begin at six dollars a week now, instead of at four dollars, and are extremely scarce at that. Male stenographers of the better grade, when taking initial positions, now receive fifteen dollars a week as against ten paid before the war.

In concert with nearly all students of the salary problem of to-day, this expert in furnishing office help calls attention to the fact that the perplexed employer of to-day is more inclined to pay an advanced price for the new or additional office help he must have than an advance in the salaries of his established helpers of the same grade. Of course he justifies this attitude on the ground that he will retain his old employees after he is obliged to dismiss the later recruits to his pay roll.

The extent to which the conflict between the classy allurement of the white-collar position and the sordid attainments of the munitions-maker's wage is pressing for an adjustment in the minds of workers is oddly illustrated by the experience of a young man in the Philadelphia district.

Back to the Overalls

His family had been inclined to education and had a decided leaning toward the professions. At the outbreak of the war, when the labor scouts were beating the highways for helpers who wanted big earnings in preference to genteel positions, Jimmy yielded to their bland statements and felt quite heroic—especially after he struck his gait and made an average of six dollars a day straightening rifle barrels.

It was rather expert work and for that reason was decidedly interesting. Consequently Jimmy was happy in his job until a particular circumstance impressed him with the fact that he was not living up to family traditions in making his way by the sweat of his brow rather than by the exercise of his mental faculties. After an inward struggle of some duration and seriousness Jimmy finally decided in favor of the family traditions and secured a transfer to the clerical department of the munitions plant, where his salary check was just one-half of what his pay envelope had contained, on the average, when he was a wage-earner.

For a time the consciousness that he was in the class to which he belonged, and that his working garments were neat enough to wear to a family gathering, seemed to fill the void between eighteen dollars and thirty-six. After awhile, however, Jimmy began to work his arithmetic overtime and to neglect the worship of his proud family traditions. He grew restless and irascible, and finally applied to the management for a shift back to his old job, on the ground that his eyes could not stand the strain of clerical work. But now they have no difficulty in squinting along the length of scores of shining rifle barrels and detecting the slightest curvature; and they can also see eighteen dollars a week in his savings account that was not visible when he wore a white collar at his work.

The question as to how the men who are helping to prepare "preparedness" for Uncle Sam are faring in comparison with those who are making munitions for other nations is both interesting and pertinent. On this score Col. George Montgomery, commandant of the Frankford Arsenal, at Philadelphia, said:

"There has been no advance whatever in the pay of government clerks, so far as I am informed, since the advance in prices; but there has been a very appreciable advance in the pay given to labor and to shopmen.

"In 1909 we were able to get plenty of labor for $1.50 a day. During the years between 1909 and this year that rate was advanced to only $1.76; but within the present year it has gone from $1.76 to $2.40. Ordinary workers on machines have been advanced from $1.76 to $2.24 and $2.40 a day here at the Arsenal. These men are not skilled mechanics at all in any sense of the word. We pay a little more to those working outside the shops than to those working inside. Other people here earn up to $3.50 and four dollars a day, without counting piecework reward.

"The fact is, we have men loading shells who have been earning seven dollars a day, without any overtime. And they deserve it. Before piecework was established the men did not make so much, and we did not have to pay so much before the present labor stringency began.

BLUE STREAKS

These Tires Must Be the Best We Can Make

Every Goodyear Blue Streak Bicycle Tire is our card of introduction to some boy. Through this tire he gets his first impression of The Goodyear Tire & Rubber Company. And first impressions are lasting.

Some day that boy will own an automobile and we will want to sell him tires for it. Or he will own a power plant and will be a prospect for belts and packing.

Can't you see that we *must* give him in Blue Streak Bicycle Tires a product that will reflect credit upon the name of Goodyear?

"Last July toolmakers were advanced twenty per cent. They have been advanced once since then. The advance in the pay of mechanics was as follows:

"Machine-tool makers have been advanced from the rate of $3.52, maximum, to five dollars a day. The lowest-paid have been advanced from $2.76 to $3.24 a day. Foremen have been pushed ahead from $4.25 and five dollars to from six to nine dollars a day. As a matter of fact, there are only two who are getting nine dollars a day. They are night foremen. They are practically night superintendents. They get three thousand dollars a year. Of course they get no piecework payments. Neither do mechanics working on instruments, because the work is too irregular and not of sufficient volume to warrant piecework payments.

"Operatives of automatic screw machines get $4.56 a day, and piecework raises that. Though these men—about fifty in number—are not machinists, they are bright and resourceful workmen. If they were not they could not operate such machines.

"The men in the shops have had large advances. In other words, it was no more than natural that we had to meet competition. On the other hand, the clerks have had no advances; though, of course, they have to pay just as high prices for necessities as the shopmen."

The Pay of Railroad Men

Railroad salaries out on the lines are certainly not on the munitions scale. When the average station agent compares his earnings with those of the members of one of the "brotherhoods" of railroad employees he is not moved to any great amount of hilarity. The country-station agent in the Middle West who receives above seventy-five dollars a month is undoubtedly more fortunate than most of those who hold down jobs like his. If he has half a dozen men or more under him his pay may amount to close to a hundred dollars a month; but if it goes above that point his post is an important one and he must show himself to be an executive and a business-getter.

The freight clerk out on the line is able to command fifty-five dollars a month and a cashier about sixty-five. A telegraph operator and ticket agent is not likely to receive much under sixty-five or more than seventy-five dollars a month in salary.

A prominent railroad executive remarked that the clerks and their helpers receiving from forty to eighty-five dollars a month are, of all railroad employees, the ones who feel the present high cost of living most keenly, because their salaries are stationary and the range of their natural and legitimate wants is continually increasing.

In spite of all this, there seems to be no trouble in filling these posts with young men who are intensely disinclined to step out of the white-collar class. Not a few of them, according to this railroad official, whose view is a broad one, have had some college training—about enough, perhaps, to give them the feeling that it would be beneath them to work for wages instead of a salary, even though the wages were decidedly the larger.

He does not consider it unnatural that these young men should prefer to do clean work instead of dirty, or that they would rather wear neat business suits, white collars and sport shirts at their work than to go about in soiled overalls. He only makes the point that for the first time in the history of this country there is a genuine economic pressure to determine how high a value, in dollars and cents, young men of this class put upon the gentility of clerical pursuits—upon white-collar associations as contrasted with the grime of the shop.

Apparently one must count on working in a city railroad office for at least five years before being able to draw ninety dollars a month; and he must give a good account of himself, at that, in order to reach that point on the salary scale. On the other hand, brakemen and firemen start at about that rate of wages. At least in the West the brakeman or fireman who is fairly steady and capable may reasonably expect to find himself drawing a hundred and fifty dollars a month within from three to five years from the time when he begins his work with the railroad.

In other words, the testimony of those familiar with promotion and pay in railroad service indicates that it takes the clerk longer to achieve a ninety-dollar-a-month position than is required for a brakeman or a fireman to reach a one-hundred-and-fifty-dollar job—and overalls and dinner-pail living are decidedly cheaper than natty business suits and the sort of sustenance and associations they demand.

In the words of a rate clerk, whose brother has just been promoted out of the fireman class:

"Bill has it over me, coming and going. His pay is not quite double my salary and he doesn't have to spend a cent to put on dog—not a cent! The more grease and dirt he can accumulate, the more efficient he appears. What's more, he's independent. Lord, he's independent! That's a luxury to an office man. He has to play up to a lot of superiors who are all pulling in different directions. The dignity of a position and the splendor of a two-dollar shirt are the most expensive mistakes I ever made. Bill's pay envelope proves that to me every time I see it. I'm certainly in on the wrong side of the railroad game.

"As a boy, in Sunday-school, I learned a text to the effect that blessed are the humble: for they shall be exalted. If that verse wasn't built to fit these days in the field of work and its compensation, then I can't understand a line of the Scriptures. Right now the brand of meekness that doesn't balk at putting on overalls and grabbing a dinner bucket is the sort which is inheriting the earth at the rate of about three hundred and thirty-three and a third per cent."

A traveling salesman for a large wholesale grocery whose territory is nearly one hundred miles from Chicago makes this interesting comment on the condition of the clerks in the retail-grocery trade of a district that is decidedly prosperous:

"The best-paid retail grocery clerk in all my acquaintance—and I have more than three hundred customers—draws twenty-five dollars a week and has a reputation throughout my entire district of being a wonder. Other clerks speak of him as a man who has arrived, and they think of his salary check with a mixture of envy and admiration. They may well envy him, for the rank and file of them are not getting more than fifteen dollars a week; in fact, I am convinced that the average pay of this class of workers is not more than twelve dollars a week.

"In other words, they are getting about two-thirds as much as the commonest kind of street labor commands in their towns. A laborer who can scarcely speak English is able to get three dollars a day in many of the towns where these experienced clerks—most of them keen, energetic and faithful boys, who are keen business-getters—are getting twelve. In some of the towns in my territory the difference between the pay of the unskilled wage-earner and the experienced grocery clerk is considerably larger than this."

The Ill-Paid Grocery Clerk

"One of my best friends is a grocery clerk who draws a salary of only twelve dollars a week—and he's a capable clerk, too, who's been behind the counter for years. It would naturally be supposed that he would at least have the advantage, by reason of his position, of securing his family food supplies at a price that would not yield his employer a profit—but such is not the case. He pays the same scale of prices as the customers he waits upon.

"Not far from him lives a mason who is by no means remarkably proficient at his trade. He is just a good, fair workman, who prefers to leave the more difficult and fancy tasks in his line to others, while he puts in the foundations of farm buildings. This mason gets seven dollars a day, and his board in addition, when handling country jobs. The carpenter who works with him receives two dollars less.

"If either of these men was to put in the hours the grocery clerk gives to his employer the results would be rather startling; for this would mean from six in the morning until seven at night for all week days, save Saturday, when the clerk is lucky to leave the store before ten or eleven at night.

"It would not be fair to leave the impression that the retail grocers are, as a rule, underpaying their clerks. The fact is that a very large proportion of them are paying their help all their businesses will stand. In other words, the retail-grocery business is not an easy road to wealth and its net profits are far smaller than the public supposes. Many of these merchants could improve their own financial condition if they were able to change places with the masons, the carpenters and the ordinary mechanics of their communities—more especially at the present time, when it is difficult for them to get many kinds of goods, without regard to price."

Generalizations regarding salaries, wages and savings are difficult—and they must be accepted as generalizations only. Wide and persistent inquiry among all classes of men whose opinions might naturally be expected to be closest to the facts indicates that the average increase in salaries for office and clerical help since the European war began has not been above ten per cent, and is probably nearer six per cent.

On the other hand, the average wage increase in that period has been so great that one hesitates to make the most conservative guess that can be made. Possibly the average increase in wages would not be more than fifty per cent the country over; but to one who has been mixing with munitions workers and seeing their bulging wage scores this guess looks altogether too conservative. Certainly there are thousands upon thousands of cases in every munitions district where the increase has been several hundred per cent. These instances, moreover, are by no means confined to munitions workers.

If there is any section of the country where common labor cannot command from thirty to thirty-five cents an hour it is decidedly well concealed from the munitions scouts who are after workers. This same grade of labor was receiving from fifteen and one-half cents to twenty and one-fourth before the war—that is, when it could find employment at all.

How much the cost of living has increased since the war began is a matter of much speculation. Some very plausible authorities assert that the average is forty per cent. One large financial concern in New York is said to have made a searching investigation into the increase of living expenses, so far as its own salaried employees below official rank are concerned, and to have found the increase to be thirty-one per cent.

How Much is Saved?

What percentage of salaries is being saved must remain a matter of conjecture. Banks in munitions districts and officers of munitions companies and of concerns most sensitively affected by the activities of the war stocks very generally express the opinion that the salaried men under their immediate observation who receive pay checks large enough to permit them, by the exercise of fair economy, to save anything are, as a class, putting away about fifteen per cent of their earnings.

They include in savings life and accident insurance premiums and real estate and stock investments, as well as bank deposits. But this percentage does not apply to salaried men in general, without regard to where they are located, or to all grades of salaried men in the munitions centers.

As to the relative amount of savings "salted away" by the wageworkers in the service of the munitions plants, the general opinion of their superintendents, and of bank tellers, to whom they would naturally take the overflow from their fat pay envelopes, appears to be that it does not amount to more than five per cent of the total wage pay roll of the plants under their surveillance.

Probably the world of salaried workers never descended upon the Christmas stocking with quite the hopeful hunger that characterized their approach on the morning of December 25, 1916. Where expectations had not already been satisfied by pre-Christmas announcements on the part of employers, the big question in the minds of the salary-earners was whether the signer of the familiar pay check would "come across" with the bonus, or "extra," in recognition of the greatly increased cost of living.

All other possibilities under the patronage of Santa Claus became insignificant beside this question. Hundreds of employers of office help gave generous checks to all persons on their salary pay roll. One large Wall Street financial house, for example, gave each clerk a bonus amounting to one-third of his salary for the year, besides an extra bonus of twelve per cent.

Some of the banks in the same district announced a salary increase of ten per cent, besides a bonus of ten per cent. One large public-service company distributed about six million dollars to its salaried workers.

As a rule the employers of salaried help placed special stress upon the point that the Christmas check was "a gift—not a raise."

The New Year Brings No Change

A year ago we said:

Borrow an
AutoStrop
Safety Razor

Use it for 30 days. If you like it, pay $5 for it. If not, return it.

To Dealers: This is your assurance of the continuation of our Trial-Offer sales policy. Actual results justify this. You may rely upon full protection against loss under its operation. Write for particulars.

WE devoted a whole year's advertising to this extraordinary offer. We wish every man who shaves to have an opportunity to try this razor.

Those who know the convenience of self-shaving, should experience the supreme comfort of shaving daily with an edge that does not grow dull, but actually improves while in use.

The unusual merit of the AutoStrop Razor makes it safe for us to leave the decision to your personal satisfaction, and this offer is made without any qualification whatever.

The habit of self-shaving is so great a convenience that it is never abandoned unless it involves discomfort through poor equipment and dull blades.

The AutoStrop Safety Razor is more than a razor, more than a safety device. It is stropped, it shaves and is cleaned without removing the blade; and like a perfectly stropped, ordinary razor, the blade improves with use.

That is why we offer it on approval. That is why dealers loan it on 30 days' trial.

Write to us if you have any difficulty in borrowing it from a dealer.

AutoStrop Safety Razor Co., 345 Fifth Ave., New York

This offer is also good in Canada. 83 Duke Street, *Toronto*

Heat Your Home Nature's Way-*with* Warm Moistair

Avoid Sickness! Save Money!!

NATURE built the perfect heating system. She gave the sun to warm us, the breezes to circulate the air, seas to furnish humidity—without which no human can live.

While men lived in the Open, coughs, colds, catarrh, pneumonia and tuberculosis were scarcely known. These ugly maladies are due largely to indoor life. And the principal cause has been the grossly unsanitary method of heating, ventilating, and humidifying hitherto employed.

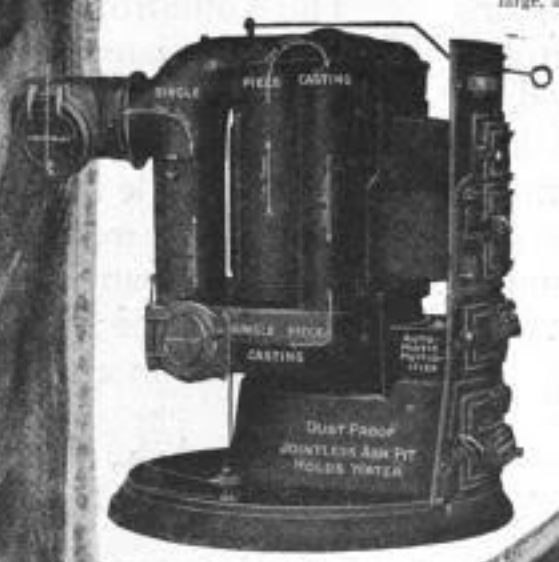
Dirty, stagnant, breathed-over worn-out air—alive with disease germs and dry as tinder—sends thousands to an untimely end, impairs the health and efficiency of millions.

But no longer need *any* family be exposed to such danger.

There is now a heating system which heats and ventilates, *Nature's* way—with warm, MOIST AIR. This is the ROUND OAK MOIST AIR HEATING SYSTEM!

Steam and Hot Water have supplied heat. Warm Air Furnaces have supplied fresh air. But the Round Oak System supplies not only ample warmth but *everchanging Moistair*—free from dust, gas, smoke and other impurities.

When you replace your present heating plant or build insist on getting a



Round Oak Moistair Heating System

"Made by the Makers of the Genuine Round Oak Stove"

Makers of Good Goods Only

Five Star Points of Round Oak Supremacy

* **Health** Only Heating System that automatically ventilates and HUMIDIFIES.
* **Comfort** Delivers pure, warm, everchanging moist air, free from dust, gas, smoke—fitted with gas-tight doors and dampers.
* **Economy** Longest fire travel all inside casing; improved hot blast *Ring*; extra deep fire pot; extra large combustion chamber affords perfect combustion, most heat on minimum of fuel.
* **Convenience** Simple regulator controls entire system. Self-cleaning. Ashpit dust-proof—seamless; fitted with sprinkler. Non-leak door frames cast on—not bolted. Easy to operate.
* **Durability** Materials used stand highest physical tests. All hinge pieces *drilled*, not cast. Never a bolt, where a rivet will do! Tight fittings guaranteed. *Good for generation of service.*

Of the 60,000 Round Oak Heating Systems in operation today, each, so far as we can learn, is giving unqualified satisfaction. Each is giving its owner a warm, cheery, comfortable home; each is flooding that home with *fresh* air; each is automatically humidifying the air; each is proving an extra durable plant, easily operated and requiring but little care and attention. And lastly, each

SAVES FUEL BY THE TON!

Properly humidified air at 68 degrees is more comfortable than dry air at 75 degrees. Add to this the further fuel economies effected by (1) the **Round Oak extra deep fire pot** with combustion chamber full size to the top; (2) longest fire travel inside the casing; (3) air-tight perfect fire control—and you will realize that every Round Oak owner makes a *fuel saving of 20 to 35 per cent.*

The Round Oak Moistair story of "Health, Comfort and Economy" is too big to be told here. But it is all told in book form, and if you'll send for and read it, you'll find it tremendously interesting—and instructive.

FREE! Valuable Book and Complete Heating Plan

After 46 years' experience we have published for home owners a large, attractive book. In this book are a number of simple questions. Answer and return them to us and the Round Oak Heating Engineers will design and blueprint and forward free of charge, a complete plan and cost schedule for the healthful, economical heating of your home.

Heat your home "Nature's Way." Safeguard your loved ones. Mail now coupon below which brings the facts.

With book we will send name of nearest authorized dealer selling Round Oak Moistair Heating Systems. Many dealers sell them on easy terms. To get the genuine buy only under the trade-mark showing the Round Oak Indian.

ONE EVERY MINUTE

(Continued from Page 5)

"I didn't buy what I wanted, so that if the savings belong to anybody ——" began the turning worm.

"Of course they belong to somebody. But that's no reason you should think that you can take 'em out of the bank ——"

"Hold on! I only told you that I met Hen Wilkins and that he said ——"

"I know what he said. A silly, crazy yarn that wouldn't fool a three-year-old ——"

The seed of rebellion within the soul of Wilberforce Shadd was sprouting. He said almost firmly:

"You really can't point to anything he said that isn't sound sense, my dear. If you admit that the control of the sea ——"

"Whoever heard," she interrupted, "that anybody made money in Wall Street?"

"Well, there was Harriman and ——"

"Who? Everybody I ever heard of loses money down there. Suppose you lose the money that you want to take out of the bank and ——"

"But I don't want to lose it. And I'm not going to."

He saw that her plump bosom was heaving. Her cheeks were flushed. She looked very pretty. Nevertheless, he must not do what she commanded him to do.

"Then why do you talk about it? Oh, Wilberforce, if you knew what it means to feel that you haven't a cent in the world that you can call your own, you wouldn't want to take the few dollars we've saved up with so much trouble ——"

It was the old story, the enslaving argument, the refrain of her lachrymose wail. He must do something to emancipate himself.

He must disobey her. He must!

"I will!" he cried shrilly.

"W-what?" she gasped, and gazed at him with such horrified incredulity in her eyes, that obeying a blind impulse to seek safety and success by sticking to his resolution he fled from the room.

III

HE HALTED, out of breath, at a corner three blocks distant and began to think. He felt that he had won a victory. A wave of courage engulfed his soul. He would be different in the future. By being different he would cease to be a failure. This thought cheered him greatly as he walked toward the savings bank.

He owned $1800. Not only did it represent the savings of years but it stood for all the pleasures he had not had. How many nice neckties he had not bought with that money! How many cigars he had not smoked, how many laughs at the theater he had not laughed! It was supposed, in return, to make him feel like telling all the world to go to Hades. Instead, what he felt like saying was "Leave me alone, please!"

The money had made him a coward!

Yet the rich were supposed to be arrogant. How much money would it take to make him arrogant? Millions! And he never would make more than he was making. He knew it!

That was the worst of it—he couldn't even delude himself into thinking that he would be rich some day. Not to dream of success was to be dead beyond all hope of resurrection. If what Hen Wilkins said could only be true he might make a lot of money.

Pshaw! The kind of man he was would never make money!

A burst of self-anger set fire to something within him and made him grit his teeth.

"I'll show them!" he muttered—aloud, as though he actually heard many derisive voices.

"I'll take the money out of the bank and make money with it," he asserted.

At the door of the institution that was supposed to be a reservoir of minted courage which would keep clerks from fearing to lose their jobs, he hesitated. Whereupon he again accused himself of cowardice and literally goaded himself into entering the institution. He approached one of the tellers.

The lack of practice at being a brave man made him loquacious. He smiled and said:

"I know I can deposit money after the usual hours, Monday nights, because I do it the first Monday of every month. But could I take out money?"

His sustaining anger having oozed out of his system, Wilberforce Shadd now hoped that the clerk would say No.

Instead, the clerk behind the bars stared a moment at Mr. Shadd, distinctly sneered, and replied in a voice full of insulting skepticism:

"Yes, if you have any money here to take out!"

It was a fresh prick, and Wilberforce's gorge rose again.

"I haven't got as much as a millionaire like you has," he said angrily, "but if I can take out ——"

"Unless you've got so much you need a truck, I guess we won't go out of business if you withdraw your deposit to-night."

"I'll take it all out," threatened Mr. Shadd with a fierce frown.

"You'll find blank checks just behind you," retorted the clerk with a murderous smile; and Wilberforce, with trembling hands, filled out a check and received from the savings bank $1832.68 in cash, the savings of ten years of a wife whose father had blighted her youth in order that she might blight her husband's life.

He clutched with a veritable death-grip the roll of bills that represented his entire fortune, and walked out. Once in the street he recalled every hold-up yarn he had ever heard. He saw a pedestrian coming who wore a woman's garb; but that merely made him remember that it was a favorite trick of thugs, as per Sunday newspapers, to don feminine habiliments in order to approach their victims unsuspected.

He forced himself to reason calmly. He concluded that if it had not been for his wife he never would have taken the money from the bank or risked having it stolen. She had accomplished this by forbidding him to lose the money in Wall Street.

He would not lose it. He would make money. Hen Wilkins was a clever chap. Just where was he wrong in his argument? Nowhere!

He saw again Hen Wilkins' confident face as he predicted that a fortune awaited all holders of the stock that was going to end the world war. With his soul in a tremble, Wilberforce Shadd decided that if he bought that stock he would make money.

If he had money how different life would be! He heard himself telling Morris & Cunningham to keep their job. No need to be vulgar. He would resign and live on the interest of his money.

Why not?

Fabulous fortunes had been made in Wall Street. Everybody knew it. Wall Street was the only place where a man could make a lot of money by risking a little.

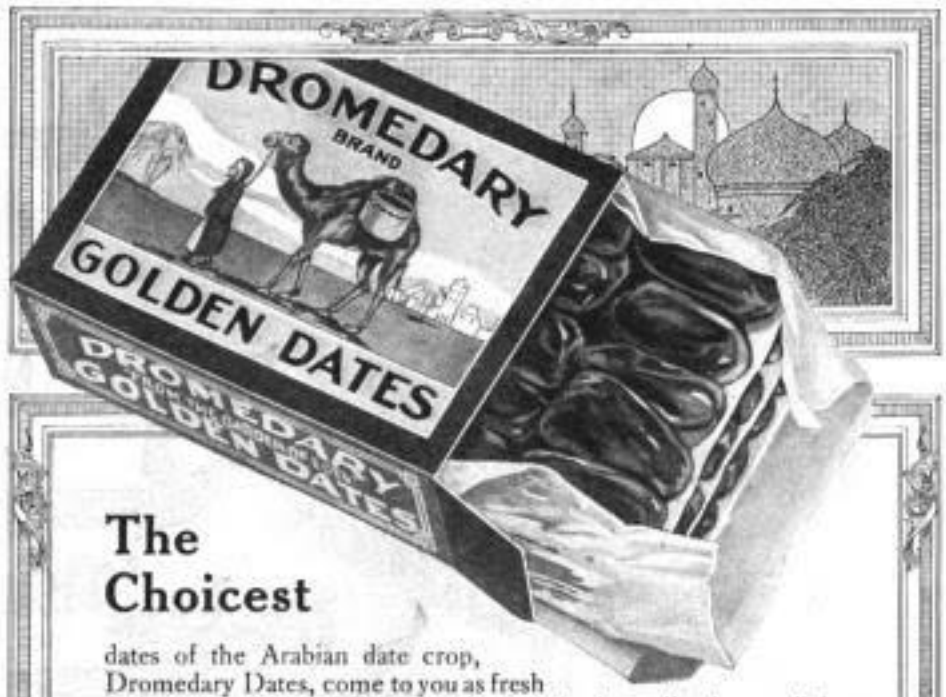
He couldn't go to Wall Street at night, but he could and would go to the residence of his tall friend, Francis T. Woodcock, who was a member of the New York Stock Exchange and, therefore, just the man through whom to lose the money. He used to bowl with Woodcock before Woodcock moved into a house in West Eighty-seventh Street as a result of several years of relentless stockbrokering.

"I'll do it!" he threatened; but still walked toward home. If he did and made money, a lot of money, it would be heaven.

He saw what desirable things he could change dollars into!

"I'll do it!" he told himself again, and determinately walked toward Woodcock's house.

The broker was surprised to see Shadd; also a trifle disturbed by reason of the subtly desperate look on Wilberforce's face. Like all good stockbrokers, Woodcock specialized in face-reading, to enable him to size up the other brokers' real intentions when they were offering or bidding for stocks in which Woodcock had orders "at the market."



To play safe, the face-reader now looked at his watch and synchronously put on an expression of intense regret.

"Hello, Shadd! Glad to see you. What can I do for you?" He shook hands with Wilberforce with hasty cordiality, and once more looked at his watch with one of those transparent efforts at concealment that accentuate the guilt. Mr. Shadd was impressed by the manifold occupations of this man who had but a minute or two to spare. In this hour of business he also must be all business. His fingers tightened on the wad they had not ceased to death-clutch since leaving the bank. He said quickly:

"I've come to give you some money."

Mr. Francis T. Woodcock promptly and naturally smiled. Then he grew serious, even forbidding. It was a new one and he nearly had fallen for it.

Like a man of success, United States Tires still keep on climbing in prestige—still keep on climbing in sales—because, like a successful man, they deserve to succeed.

For years everyone has admitted that United States Tires are *good* tires. Year-after-year sales increases have proved that.

Last year the prestige of United States Tires piled up to a still greater climax. Their sales increases in 1916 proved that.

This year United States Tires have the self-same service-giving qualities that have kept them climbing year after year.

Ask any motorist, who today uses United States Tires, why he uses them, and continues to use them.

Then you will understand why United States Tires have climbed, and are still climbing, in prestige and sales.

United States Tire Company

(Continued from Page 33)

"And after you've given it to me," the broker spoke coldly, "how much do I give you back?"

"That," answered Shadd, playing for time in which to prepare his little speech, "is something that I cannot tell." Seeing the distrust in the broker's eyes grow acute, he went on: "Look here, I want you to buy some stock for me."

"If you'll come to the office——"

"I—I c-can't," stammered Wilberforce Shadd, who did not see how he could very well tell this man he was afraid the firm would discharge him. "I—I—I can't get away from my work during business hours just now. We are rushed to death."

Stimulated by the excellence of his own excuse, he went on briskly: "I didn't think you'd mind taking the money and save me going downtown. I've brought it in cash—ah—so that there wouldn't be any trouble—er—about the check not being certified, you know."

He took the money from his pocket, gave it to the broker, said "There's $1832," and sighed with relief.

"Where did you get it?" jocularly inquired Woodcock after he had it in his possession.

"It represents our—no," he corrected himself, and said firmly, "it represents my savings. I took it out of the savings bank."

"They allow you only a measly four per cent," interjected Woodcock, to show that as a conservative business man he approved Shadd's action.

"Yes. Well, I want you to buy me as much——" Wilberforce Shadd paused and stared blankly at his tall and ruthless friend, Woodcock. He had forgotten the name of the stock Hen Wilkins was crazy about.

"What's the stock?" asked Woodcock, in the voice of an overworked dispensary surgeon asking "Which leg?"

"Wait a minute," entreated Wilberforce Shadd, and endeavored to recall the name. There would be a first dividend of 650 per cent out of war profits from Germany for winning the war by controlling the sea by submarines, under the sea——

"Undersea Craft common!" exclaimed Wilberforce Shadd triumphantly.

"What!" shrieked Woodcock, who still had a shred of conscience. "If you want to throw your money out of the window, why don't you do it without witnesses, instead of asking an old friend to cheer you on?"

"Look here," and Wilberforce Shadd spoke firmly, not being married to Woodcock. "Look here, I know what I'm doing. It's straight, scientific psychology."

"Ouch! Ouch!" squealed Woodcock so agonizedly that Wilberforce Shadd frowned angrily. This man was seeking to dissuade him from making money. But Shadd explained gravely: "I've doped it out that, of all the stocks you chaps in Wall Street trade in, Undersea Craft common is the——"

"It is! It is!" feverishly anticipated Woodcock. "The very worst! Why, I'm not sure the company did not go out of business years ago."

"That's all you know," said Shadd courageously, thinking of the money he would surely make. "It hasn't occurred to you that whoever controls the sea wins the war, and that since the company makes and sells submarines——"

"You'll need a d——d good one to dive after your money!" broke in Woodcock.

"Mr. Woodcock, you may be wonderfully well posted and know all about—er—normal securities and gilt-edge investments and first-mortgage bonds and such things; but"—and here Wilberforce Shadd looked earnestly at the broker—"you don't know everything!"

"I admit I don't," said Woodcock grimly. "I only know that you've been reading fool editorials by naval experts. Does your wife know what you are doing?"

"She does not," said Shadd, and almost shivered. The reaction made him add hotly:

"Will you take the order or do you wish me to find another broker? In that case give me my money back."

"I hate like the deuce to execute such an order," said Woodcock resignedly, since he could not return the money; "but I suppose you know what you are doing."

"Do I know what I am doing?" echoed Wilberforce Shadd, and thought of his years of suffering. He had become a slave, a coward. But he would no longer be one. He'd rather be flat broke. He finished in a ringing voice: "You bet your life I know what I'm doing!"

The words and particularly the voice impressed Woodcock so that he said coaxingly:

"Say, old fellow, just what do you hear about U. C. common?"

Shadd instantly thought of Hen Wilkins' impassioned oratory. To repeat it would make it sound like nonsense. He replied firmly:

"I can't tell you. I'm sorry."

"Why can't you?" persisted the broker, sure now it was a confidential tip from the inside.

"I—I can't," said Shadd. Then in desperation: "Do I get a receipt?"

"Excuse me," said Woodcock coldly, thinking it distrust. "Of course you get a receipt," and he led the way into the library, which also was den, lounging room or cardroom, according to the visitor's errand.

The broker made out a receipt, gave it to Shadd, jotted down the latter's office address, and shook hands with the cocky little chap who wanted to buy eighteen hundred dollars' worth of one of the worst of the "cats and dogs" in which people had lost money on the Curb years before.

IV

ON HIS way home Shadd wondered whether he ought to tell his wife what he had done. This, he reflected, would involve telling her why, and he could not tell her why without telling her that she with her foolish fears had robbed him of his manhood. And if he blamed her for making his life a failure, what would she say, how would she feel—the loving wife who couldn't help worrying because her father's improvidence had driven her to it?

"Poor Ann Elizabeth!" he muttered. Then he thought of himself.

"Damn!" he said.

He decided it was wiser—that is, safer—to say nothing. Then he hoped she would ask no questions. He had never lied to her and it did not occur to him that he might begin now.

He kissed her more affectionately than usual. He loved her; and he feared; and he hoped.

"Where's the book?" she asked abruptly. A black cloud enveloped him. He couldn't speak. When he could he said:

"What book? Oh, yes. It's—in the bank. Ah—they—they have to balance it."

"It isn't six months——"

"New rule!" he broke in desperately. "All the banks do it now. It's all right."

"I guess it is, if you say so, dear," she said trustingly.

Now how in blazes could he tell her that he had taken that money—her savings as much as his—to speculate with in Wall Street? Why had he taken it out of the bank at all? It was drawing four per cent, and everybody lost money in Wall Street. And the end of all unsuccessful gamblers, who had only themselves to blame, was the morgue or the penitentiary!

Gone! The savings of a lifetime, the refuge against a destitute old age, gone!

Eighteen hundred dollars!

What a lot of money any lot of money is when it is all the money you have in the world!

Ten thousand hardships endured in order to have that money in the bank—golden crutches for the days when the keepers of the house should tremble and the strong men bow themselves! The sweat of a life of toil solidified into eighteen hundred pieces of silver; courage coined and laid away for the day when he must be brave.

All gone!

And whose fault was it? Whose if not this woman's? If it had not been for her he wouldn't have had this money in the bank, and the tragedy of taking it and losing it would not have been enacted. And she must not know it was enacting under her eyes, like the ass that he was.

"I'll go to bed now," he told her. "I want to stop at the watchmaker's tomorrow morning." He had never before lied to her; but he wasn't going to make her unhappy.

After a night of troubled sleep he rose and was out of the house a half hour earlier than usual. Fortunately she did not notice that anything was the matter.

He wished to call up the broker and tell him not to buy that stock, but to hold the money and he would call for it. At 9.30 A. M. he told Mr. Lipps he wished to get a piece of toothache gum and went to the corner drug store—to telephone to Woodcock. He dropped his nickel in the proper slot with hands that trembled, and got the broker's office.

"I want Mr. Woodcock, in a hurry."

"He's out at the moment. We expect him in any minute. Will anyone else do?"

"Well, I just want to get my—er—my—It's a personal matter and I'd rather talk to Mr. Woodcock." Life wasn't worth living!

"If you tell us when and where to call up, the moment he comes in——"

"No. I'll call him up in five minutes."

"Better make it ten. Hold on! Here he is! One moment." Shadd waited in an agony of suspense.

"This is Woodcock. Who is it? Oh, good morning, Shadd. Just got in. Out all morning getting that stock for you. I had to pay nine dollars a share. The two hundred shares was all the man had. Lucky thing I went out myself, for just after I grabbed the stock there came a bid for it over the phone. Somebody wanted all the U. C. common they could lay their hands on. What did you want to say to me?"

Wilberforce Shadd, realizing that his fate was in the hands of a Higher Power, replied resignedly: "Oh, I just wanted to know if you had bought the stock."

"I got it all right."

"Good——" began Shadd, who, having lost all hope, could think of nothing but "good-by," but could not bring himself to say it when he recalled that "good buy" and "good-by" were the same over the telephone. But the broker took the syncopated farewell to denote approval and said:

"Don't mention it."

Shadd emerged from the telephone booth a corpse that somehow had not yet lost the power of locomotion. He felt he needed a bracer. For a moment he thought of having a drink of whisky. Then he thought that if he did, and Lipps smelled liquor in his breath and discharged him, he might as well curl up and die, now that he had nothing in the bank!

Nothing in the bank!

"Say," he said to the drug clerk, "I feel sick—kind of faint in my stomach. Will a drink of aromatic spirits of ammonia help me?"

"It won't hurt you," confessed the clerk.

"Give me one," said Shadd, forgetting to say "please" in his distress.

The money was gone!

He drank the bracer with the air of a Socrates gulping the hemlock, and returned to the office.

"Feel better?" asked Lipps with a perfunctory sort of kindness.

"Ye-es, thank you," said Shadd, and hastened to his desk.

▼

THAT night his wife talked to him about the latest advance in sugar. What she had to pay for beef was an outrage. And at that she had been obliged to go to a Harlem cut-rate market. There was no use in going to their old butcher. He was a robber not only as to price but also as to weight.

"Yes, I know," said Wilberforce gloomily, and prayed for the miracle of silence. He loved his wife, but his secret was blackmailing his soul out of its usual placidity.

"Other people," she said, avoiding his eyes, "are getting raises."

He knew what was coming, so he said coldly: "And others are losing their jobs on account of the war. Molloy told me he had orders to let one packer and one driver go last Saturday."

She sighed, the nervous sigh of a person who chronically fears and therefore chronically has a weight squeezing the air out of the lungs. She inflated her chest, but instead of growing courageous merely allowed herself to deflate again.

It was fully five minutes before she said: "I don't see—really I don't, dear, though I've tried and tried—but I don't see how we can save as much as we have. There's the bills for you to look over——"

"That's all right, sweetheart," he said kindly. "We won't save for a while, that's all. As long as we've got our health——"

"That's the most important thing," she assented without enthusiasm. "At the same time, when you know you are not eating up every cent you make——"

"Maybe I'll—I'll—get a raise," he said. Then quite boldly, almost threateningly, "I can ask for it!"

"Oh, Wilberforce! Suppose they said no and let you go, now that we are not going to be able to save up much. By the way, you haven't brought the book home. Is it in the bank? I can stop and get it——"

An icy hand clutched his heart. This is no mere figure of speech. He distinctly felt the four fingers and the thumb; they were very cold, and they gripped very tightly.

Quality Wire
in
Aëroplane
Service

The electrical current ignition circuit of an aëroplane must be reliable. The slightest defect in the insulated wire may stop the engine in mid-air. Aëroplane service is but one of the many exacting forms of use for

ECCO
Insulated Wire

Millions of feet of ECCO are being used in homes, all kinds of buildings and factories. In telephone, telegraph, railway-signal, aëroplane and automobile service, ECCO is known as the dependable wire. Quality counts with experts, and everyone using electrical current for any purpose, from call-bell circuit to high-tension transmission, is assured of quality when ECCO is used.

As a guarantee of dependability ECCO is marked every three feet on the outer surface of the braid. Each coil is separately tested, and certified copy of such test furnished upon request.

Remind your architect to specify ECCO, and insist that it be used by your contractor.

Nowadays everyone is interested in the use of electricity, and our booklet on Electrical Installation is in universal demand. May we send a copy of this booklet to you?

The Electric Cable Company
Makers of ECCO Wire for every purpose where rubber-covered wire is used

THE PULLMAN COMPANY

Women and children form a large proportion of the passengers of the Pullman Company. The safety of the cars, due to their unusually sturdy construction; the sanitary condition in which they are maintained; the numerous conveniences which their equipment affords, and the courtesy of the Pullman employes are all factors contributing to the increased comfort and enjoyment of railroad travel.

In the Pullman car only a limited number of passengers are accommodated; there is no crowding. Operating over practically every railroad in the country, it is rarely necessary for the passengers to change cars from departure to destination. Both of these conditions contribute to the safety and comfort of unescorted women and children.

For fifty years the Pullman Company has directed its efforts to the determination of the needs of the traveling public, and the development of a service to meet these requirements. That twenty-nine per cent of Pullman conductors and twenty-five per cent of Pullman porters have been in the continuous service of the Company for over ten years indicates the high personnel of the employes by whom the service is rendered.

(Continued from Page 35)

Then his heart got back on the job, the worse for the gripping.

He had assumed that the money had been lost. It was merely common sense to ask Woodcock if it had been a total loss. Then he must beg the broker to get some of the money back. Whatever was recovered he would instantly deposit in another bank, keep the book in the office and say nothing about the shrinkage.

If he could get a thousand back out of the eighteen-hundred-dollar investment, he would be more than happy!

"You haven't answered, Wilberforce," his wife reminded him.

"Answered what?" he said, in order to gain time in which to acquire a frozen face.

"Shall I get the book at the bank?"

"They wouldn't give it to you; and, besides, I've got it in the office. I think I ought to keep it there hereafter."

"Oh, Wilberforce!" she said tearfully. She did not like to tell him that she loved to look over the figures and add them and rejoice that they had that little nest-egg. She didn't wish him to think that she was getting to be a miser, because at times she feared she was.

"Won't you bring it home?" she pleaded.

She looked so broken-hearted that he couldn't help saying: "Very well. I'll try to remember to bring it to-morrow. It's in the safe."

He hoped it might be in the bank safe, so that it wouldn't be altogether a lie.

"Thank you, dear," she said, and looked her gratitude.

He couldn't bear it. He almost told her what he had done. That night he scarcely slept, thinking about that nonexistent bank book. He knew that sooner or later he must tell her. Well, suppose he got only a thousand back? It was better than losing the entire eighteen hundred. Woodcock, whom he had known for years, might be a decent chap after all.

On the next day, Wilberforce Shadd asked Lipps, the office manager, for permission to prolong his luncheon hour, and went to the office of Francis T. Woodcock & Co.

He was very brave on the way down, fully determined to hear the worst and be done with it. When he reached the door to the broker's office he hesitated. The toothache had ceased and he no longer wished to see the dentist.

While in doubt, a man may hope. When he knows that every cent is lost, there remains only death. As Wilberforce Shadd stood there, a man who evidently was a stranger to doubt and dyspepsia came out.

"Wish to see somebody in the office?" he asked, and smiled pleasantly at Shadd. Wilberforce gratefully thought him a fine man, not knowing that the kindly looking stranger was long of 'em to the hilt in a roaring bull market.

"Yes; I'd like to see Mr. Woodcock."

"Well, he's in there now, but he won't be in five minutes."

The stranger to dyspepsia—long of 'em and all going up!—stepped back into the office and held the door open for Wilberforce Shadd to enter.

"Hey, Frank! Somebody to see you!"

Woodcock came out. He did not seem surprised to see Wilberforce.

"Hello, Shadd! Got my message?"

"No. What message?"

"Why, about an hour ago I told them to telephone to you and find out if you wanted to do anything about that measly stock of yours."

That the heart can stop beating without causing death to the owner thereof is not a theory but a fact established by Wilberforce Shadd then and there.

"That's why I came," said Shadd; "though I didn't get your message."

He felt as if he had turned into lead. He asked himself why he had taken the eighteen hundred dollars from the bank. Then he asked himself the same question again. Then he shook his head. He didn't know why—now.

"It's fourteen bid," said Woodcock. "That means exactly one thousand dollars' profit."

"How—how—do you make exactly a th-thousand?" asked Shadd, not daring to hope it was true, yet hoping away!

"Of course, if I deduct commissions it may fall short by a few dollars. I call that being—er—careful!"

"Careful?" echoed the dazed Shadd.

"Well, close then," corrected the tall broker defiantly. "I call it a d——d good three days' work."

Shadd was blinking furiously. All he could see was the gate to heaven wide open. Above it he saw dollar signs made of glowing stars. He had made money, not lost it! He had beaten the game! He had taken the first step toward a fortune!

"At $14 a share you can get $2800 for your stock—that is, if you get a hustle on and slide out before the suckers get wise to the play," continued Woodcock. "The talk is, of course, that if the company can get some big contracts from the belligerent powers it will mean big profits ——"

Shadd laughed hysterically. Then, to account for his laughter, he explained sheepishly:

"I couldn't help laughing when you said if the company got big contracts ——"

"Of course," interrupted Woodcock seriously, even respectfully, "if you know what's going on ——"

"I do! I do!" cried Shadd.

"You might tell a fellow. When it gets to 30 or 40 you'll probably blame me for not advising you to load up to the guards."

At 30 or 40 it would be $6000 or $8000.

"You think so?" Shadd, who was now breathing pure oxygen, meant to ask whether Woodcock really thought the stock might sell at 30 or 40—preferably 40. Shadd himself did not know any reason why any stock that could sell at 14 should not sell at 30 or 40. Woodcock naturally thought the cagy, close-mouthed Shadd was making fun of him. It annoyed him, so that he said, almost rudely:

"Well, if you want to sell now at 14, I'll see what I can do."

"Is that the best price?"

"I'll find out," corrected Woodcock, "if I can still do as well as that," and he sent to the Curb for a quotation on Undersea Craft common. It came back: *U. C. 16 bid; offered at 20.* The broker read it aloud and added reluctantly, being an honest man: "That means we might do a little better than 16 for your stock."

Shadd, whose mind was now working most actively, instantly figured that at 18 he would get $3600 for his stock. He had doubled his money. And yet he had been praying for the boon of losing only $800.

"I was a darned fool!" he began, unaware that he was thinking aloud.

A young man, thin, nervous, ferret-faced, shrewd-eyed, came in. He nodded at Woodcock and looked distrustfully at Mr. Wilberforce Shadd.

"Spit it out, Eddie!" commanded Woodcock.

"Say, you sent out a while ago for a quote on ——" He paused.

"On U. C. common," prompted Woodcock.

"It's 20 bid. I think that maybe I could get you 21 or 22 ——"

"Fade, friend, in the general direction of the pavement." Then as Eddie looked injured, Woodcock asked: "What's it offered at? And, remember, we're buying it here!"

"Well, it isn't offered ——"

"Oh, no! What's it offered at?"

"At 35," defiantly confessed Eddie. "Of course nobody is going to pay that price!"

"And your customer?" coldly inquired Woodcock.

"He's a nut. Honest, his people ought to put him away. He's lousy with it and wants to get rid of it. Somebody's got to get the commissions, and it might as well be me. Maybe I could work him up to give 23, but I wouldn't promise ——"

"No. Well, you needn't hurt yourself trying to look as if you didn't know in your heart of hearts that I was a d——d fool, Eddie. Wait for us in the other room, will you?"

The moment they were alone, Woodcock said to Shadd: "There, Shadd; you probably can get 25. I don't want to urge you to do anything. All I say to you is that you've got five thousand beans waiting for you to put in the bank if you give the word. Five thousand dollars!"

Shadd saw what $5000 would mean. It was wealth, and wealth was happiness. But the unscrupulous little curb broker, Eddie, who looked like a regular fox and was so anxious to buy the stock, had reluctantly admitted that 35 was asked for U. C. common. That meant that nobody except Woodcock was willing to sell the 200 shares Shadd owned for less than $7000.

The square of the hypotenuse of a right-angled triangle is equal to the sum of the squares of the other two sides. Also $7000 was better than $5000.

"I won't sell at 25," said Shadd. Things which are equal to the same thing are equal to each other. He thought of 35 and 25. They were not equal to each other. Wherefore Shadd added: "Certainly not!"

"You know best," said Woodcock, and left the room to tell Eddie to be grateful he didn't have him arrested for trying to obtain money under false pretenses.

In the meanwhile, Shadd, knowing himself to be a coward and beginning to fear that Woodcock might return and irresistibly urge him to accept even the $5000, astutely went away, trembling with excitement and happiness. He had made money and he was going to make more.

A BOYCOTT WITH A BRASS BAND

(Continued from Page 17)

through cunningly planned combinations that made them afraid to stay downtown when their competitors were moving up, they had found rents too high and the advantages to themselves, their customers and their employees nothing like what they had anticipated.

Almost from the day it was born the women's-garment industry has been the football of the real-estate manipulator and promoter.

The first ready-to-wear clothes for women were made in New York back in the early seventies, with cloaks as the beginning. Women's suits followed in the eighties, and dresses and waists in the nineties; and since then the business has expanded in countless well-made, well-fitting, ready-to-wear garments for women, children and infants, American in every phase and feature, as any American woman who has searched the shops abroad will testify.

This business is the backbone of New York's manufacturing industries. It has also offered opportunities for advancement and prosperity to the thousands of Hebrew and Italian immigrants who have come to New York the past generation. When Abe Potash and Morris Perlmutter land from Ellis Island this business offers them jobs, an education in American business methods, and later sometimes a chance to go into business for themselves. Eighty per cent of our whole output of women's ready-to-wear clothing is made in New York. Small concerns are constantly making a start in aprons, petticoats, waists, trimmings, feathers and what not, and by energy, industry and singleness of purpose are growing into important manufacturing enterprises.

The business started far downtown, in the region of Grand Street, when there were still fine retail shops in that neighborhood. Its factories drove the retail business to Union Square. Then real-estate speculators moved the factories north, ruining land values round Grand Street, and the retail shops were driven to Twenty-third Street. Again the speculators moved the factories, and the shops went to Fifth Avenue, where they hoped to be left in peace. But the factories began to follow, and there was no other place for the shops to go, and so they were finally forced to make a stand and fight for life.

The New York real-estate speculator has been operating on a system peculiar to the metropolis, which has favored the planless moving about of different interests and industries. An obscure promoter, whose chief stock in trade may be an intimate knowledge of East-Side firms and conditions, gets hold of a site in some uptown street and erects a factory building. All the mechanism of New York money-lending seems to favor him in carrying out a project that would not be feasible elsewhere. He pays one hundred thousand dollars for the land, and puts up a building costing two hundred thousand dollars. He can borrow sixty thousand dollars on the land, and perhaps one hundred and fifty thousand on the building.

While the job is in hand he runs short of money, and the lenders advance him more to protect their own interests. When the building is done it stands as a masterpiece

in borrowing, with its first and second mortgages. While it is going up the promoter canvasses for tenants, skillfully playing competitors against each other, so that one firm is afraid to stay behind in its old locality when rivals are moving into this new structure. Various tempting inducements of low rents for a year or two may be employed to help along the enterprise. When the building is filled the promoter sells it bodily to some investor, as a profitable plant.

Then the promoter puts up another loft building, with his profits, maybe in that very neighborhood, financing and filling it in the same way. With dozens of promoters working on that scheme one building often robs another of tenants. For fifteen years New York has been suffering from building booms of this description. Fictitious real-estate prosperity in one neighborhood is accompanied by real-estate panics in other sections, and lower values usually result in five years where any section has been invaded by a loft-building boom. These methods have been possible because organization and control have been lacking among the banking interests, the city authorities and the business and real-estate interests.

This was what the Save New York Committee learned when it probed into the difficulties of the garment industry. And it also ran plump into Dame Fashion as a disorganizer. While the women's-clothing industry had been growing up in the metropolis, a men's-clothing industry had also been developed along almost the same lines technically, but in a vastly different way in organization and standardization.

An Unstandardized Industry

The making of men's ready-to-wear clothing started in numerous small plants. As the experimental stage of the industry was passed, however, the business centered in large factories, and these were established in suburbs and smaller cities, where expenses were reasonable and congestion problems absent. The men's-clothing manufacturers have a strong national organization for dealing with general problems. Men's fashions are fairly stable. The season's models can be planned months ahead, and manufacturing lends itself to routine.

But the women's-clothing industry, unorganized and unstandardized, is so close to fashion changes that routine manufacturing is said to be almost impossible, and location in a factory town not to be thought of.

"Why don't you fellows move your factories over to Brooklyn," asked the committee, "and maintain just a salesroom here in New York for your customers?"

All sorts of answers were given to that question, but the principal reason seems to be that many of the garment concerns are too small to separate factory from salesroom, and even the large houses have to keep all their facilities close to their customers. It is nothing out of the ordinary for a buyer in these lines to order a certain garment from a model, but with changes in cut, trimming, and so forth, that must be carried out in a few hours. For buyers are anxious to show the public novelties, and manufacturers keep as close to buyers and fashion changes as possible. It is necessary to have workrooms, designers, salesmen, supplies and all other parts of the business together, and to work from hour to hour in many cases. Even then, when Dame Fashion changes her mood, the garment manufacturer may be left in a quandary.

Men's clothing is a fairly settled industry. Women's clothing is not. Various efforts have been made to organize it, but without success. It is still an industry in the making, despite its vast extent, and about the only way in which the manufacturers hang together is in moving to the same locality, so that buyers calling on one concern will find the others handy.

The Save New York Committee used both its club and its knife. The Fifth-Avenue shops agreed to give the preference in buying goods to manufacturers outside the threatened zone, at the expiration of one year, which was considered ample time for everybody to move. And the banking interests were led to see that more discrimination in lending money in that zone would protect their investments and realty values generally.

To put matters bluntly, the committee had all the weapons for a vigorous little boycott. By using only its club and knife it could have prevented more factory building in the zone, and probably it would have driven out all the manufacturers already established there. With a bit of secrecy and some high-handedness, evacuation might have been secured quickly, effectively—and intolerably. However, the committee took the curse off its boycott—and here is a suggestion for making a boycott pleasant and popular:

From the beginning, everything was conducted as openly as possible. The Fifth-Avenue merchants subscribed a fund of twenty-five thousand dollars, which was spent for big page advertisements in the New York newspapers, telling everybody all about everything. The danger to the city's finest district was shown, and the way to save it pointed out. The committee told exactly what it was doing, and why, and how, and this very openness took off all the curse, purified all the motives, disarmed resentment and criticism, and aroused public spirit and support everywhere.

After that, clearing the zone and insuring its future protection was a matter of patient adjustment of the individual difficulties of the invading manufacturers. Everybody understood the why of moving, and approved it, even those who were put to great inconvenience. What puzzled them chiefly was the how.

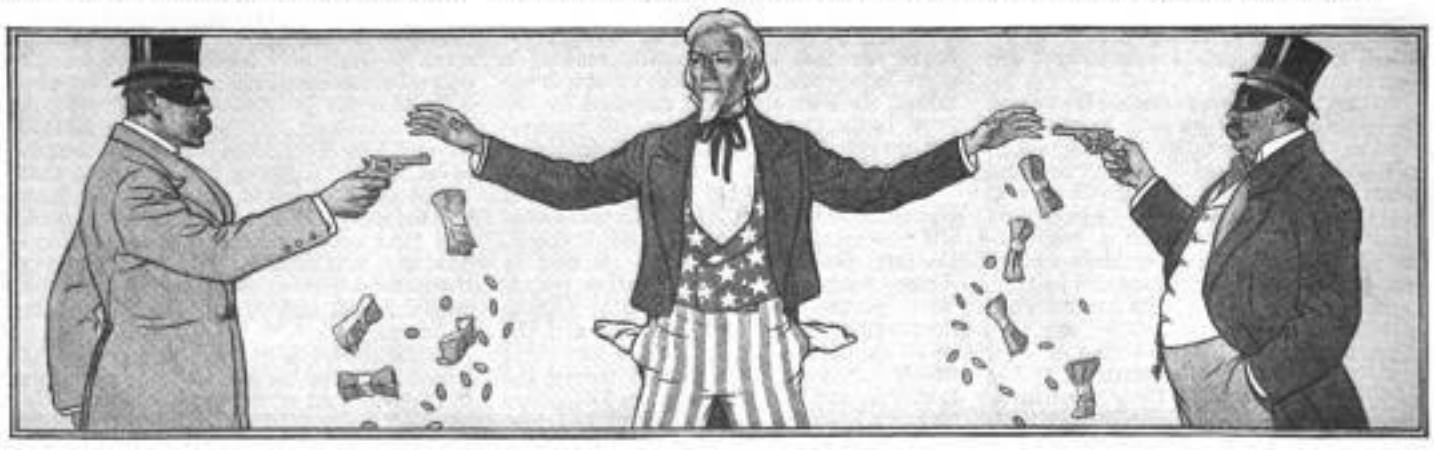
Mr. Perlmutter Has the Floor

Morris Perlmutter grew eloquently sentimental when the committee called on him, in the handsome new offices of Potash & Perlmutter, fitted up rococco, in antique bronze and Circassian walnut.

"Gentlemen!" he exclaimed dramatically. "Listen! For a lot of Fifth-Avenue retail fellers telling us we got to move, we should care nothing at all. Most of our customers is out-of-town firms, y'understand. This is the swellest place we ever had. We like it! We love it! Me and Abe, we live here all the day and half the night yet. All what we got in this world, everything what we been able to make since we come to America, poor young fellers, since way before the Spanish war, it's here, *Gott sei Dank!* But, gentlemen, more as our office, more as our customers, more as our business, more even as our very lives, we love New York. For, what we got, we got it in New York. *Aber* there was no more New York, like you pointed it out in the papers, I see myself our finish. Good night! We got a slim chance. So soon we could find out how we should get rid of our lease, and where we should move back to, move it is! And if your committee got more expense in this *Geschäft* as they counted on, and needs some more money for to save New York, call on us—y'see?"

And right there again is a question! When Abe and Morris moved north at the bidding of the real estater, they went into quarters larger than they had ever occupied before, and in a thoroughly modern manufacturing building, fireproof, light, clean, and conforming to the rigid factory regulations—very different from the loft building of twenty years before, from which they moved, and startling in its contrast to the converted brownstone residence where they first started in business. When they looked round to see where they could move back south, there was no building available of the same size and modernness.

In other words, there had to be coöperation between real-estate men, bankers, manufacturers and the committee, in order to erect modern loft buildings in the old manufacturing district, and these projects the committee took up in detail. Quarters for firms that were moving out within a year were found. But others had leases running for two years or more. They could not be moved back south until modern factory buildings were ready for them. So the committee had, in their cases, to extend the time set for giving preference in the buying of goods, and also to work with property owners and builders to provide proper quarters. The upshot was a comprehensive plan for centralizing the garment industry in a permanent home, where its customers could conveniently reach all the manufacturers, and all manufacturers be on a fair footing with their competitors.



A Lesson for Other Cities

Another phase was the finding of unobjectionable tenants for the loft buildings in the zone to be vacated by the manufacturers. This called for constructive work in creating a permanent center devoted to the showrooms of manufacturers and wholesalers, locating them where they would be handy to the hotels for out-of-town buyers.

During the past fifteen years New York, aided by the energetic real-estate promoter, has been pretty thoroughly scrambled by the construction of new bridges, subways, tunnels and street-car routes. Conditions have finally become so chaotic that something must be done to unscramble the town. Factories must be located in suitable districts, wholesale business centralized in other sections, residence neighborhoods protected against invasion, and real-estate values stabilized so that taxes will yield revenue for running the community. The future of New York has been safeguarded by a new zone system, imposed by law, under which certain classes of buildings only can be erected in certain districts. To provide for the future by such a zone system is one thing, but to move objectionable concerns out of an invaded district is another.

From one aspect the work of the Save New York Committee may look like turmoil round the parish pump, and people in other cities might well ask what bearing this local New York problem has upon them. But from another viewpoint it has a national lesson. The tendency to let a city grow unregulated will be found in communities one-tenth the size of the metropolis, and any community that permits itself to become scrambled in this way will have the same job of unscrambling sooner or later.

The committee thought it was simply going to make a few badly needed repairs to the parish pump when it started operations. Somebody was hurting certain business interests. Things could be set right apparently by vigorously swatting that somebody with the weapon closest at hand. But investigation laid bare a big civic shortcoming. Practically everybody in New York was responsible, and matters had to be explained to everybody. At the outset, all that seemed to be needed was a brisk, quiet little boycott. What happened, however, was the education of an entire city in its laws of growth and the arousing of a civic spirit that would correct this evil and prevent its ever happening again.

Wanted-A $50,000 Man

The response to this advertisement, run in several cities by a big Boston corporation, was enormous. Hundreds of applicants presented themselves, but one by one they were turned down. Their training and knowledge of business principles were not broad enough to fit them for the position. What was wanted was a man with a trained mind—a man who knew the great fundamental principles upon which all business is built.

There are many big positions waiting, right now, for men who are prepared to fill them. Yet qualified men are seldom found. There is a dearth of good material, a famine in the market. In almost every big business there are $10,000 and even $15,000 positions open, waiting for the right men to step in.

It is the knowledge of the fundamental principles of business, and the ability to apply these principles quickly and exactly, that make men valuable executives. Each move, each decision they make must be backed up by a clear grasp of the *why* and *how* of the problem at hand.

The problems that an executive must face are far more complicated than those listed below. Yet, these comparatively simple problems are the very rocks upon which business careers are smashed. Sooner or later you, too, will meet these questions. How will you answer them?

Do you know why most inexperienced promoters fail in trying to raise money for a new business, and how to avoid their mistakes?

Do you know what facts to get in order to figure the percentage of its sales that a business can afford to spend for advertising?

Do you know how to satisfy a bank as to your deserving a loan?

When you hire a man do you know what questions to ask and what to leave unasked in order to get a line on the applicant's character without his realizing it?

What are the essentials a business man should watch for and satisfy himself on before he signs his name to a business paper?

Can you answer a letter of complaint so as to satisfy the complainant and yet preserve the firm's prestige?

Can you analyze the market of a proposition so as to tell accurately whether it will be cheaper to sell direct by mail or thru usual trade channels?

By comparison of a series of financial statements, can you tell whether the business is going as it should, and then put your finger on the weakness or strength shown?

The knowledge that carries men thru

You cannot catalog the answers to these broad questions. Circumstances vary. But the big underlying principles always remain the same. It is the knowledge of the basic principles that carries men thru to success.

It is this broad grasp of the fundamentals of business that the Alexander Hamilton Institute is giving to more than 50,000 business men today.

The Modern Business Course and Service of the Institute gives you a logical foundation on which to build your future business knowledge and experience. All departments of business are covered and presented to you in interesting, practical form.

Based upon the actual experience of thousands of successful business men

The Institute collects, classifies and transmits to you thru the Modern Business Course and Service the best thought and practice in modern business. It will give you a thoro and sound training in the fundamental principles underlying all departments of business—it will give you a knowledge that could otherwise be obtained *only* by years of bitter experience—if at all.

Advisory Council

Business and educational authority of the highest standing are represented in the Advisory Council of the Alexander Hamilton Institute. This Council includes: Frank A. Vanderlip, President of the National City Bank of New York. Judge Elbert H. Gary, Head of the U. S. Steel Corporation. John Hays Hammond, the eminent engineer. Joseph French Johnson, Dean of the New York University School of Commerce; and Jeremiah W. Jenks, the statistician and economist.

The kind of men enrolled

Presidents of big corporations are often enrolled for this Course and Service along with ambitious young clerks in their employ. Among the 50,000 subscribers are such men as H. C. Osborn, President American Multigraph Sales Co.; Melville W. Mix, President of the Dodge Mfg. Co.; George M. Verity, President of the American Rolling Mills; William H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Co., and scores of others equally prominent.

In the Standard Oil Co., 242 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation, 450; in the National Cash Register Co., 194; in the General Electric Co., 282; in the Pennsylvania Railroad, 87; and so on down the list of the biggest concerns in America.

Helps men succeed in a big way

What the Alexander Hamilton Institute has done for its subscribers will probably never be known in its entirety. But daily there filter into headquarters in New York many intensely human stories, showing what the Modern Business Course and Service has done for its subscribers

One day you hear of a brilliant lad of twenty-two, in a big New York bank, rising to a $9,500 job, and giving credit to the Institute for his success.

The next day a factory manager writes that the Course has just helped him save his firm $7,000 a year and that a "fair slice" of this went to increase his salary.

The next day a man in a Western concern tells how he saved the firm $37,000 a year *by one suggestion*, and what happened then to *his* salary.

These are only typical cases. There are literally thousands of them. Such remarkable cases are cited by the score in "Forging Ahead in Business."

"Forging Ahead in Business"

A careful reading of this 130-page book, "Forging Ahead in Business," copy of which we will send you free, will repay you many times over. It will help measure what you know—what you don't know, and what you should know—to make success *sure*. This Course and Service will fit you to grasp the opportunities that are bound to come to those who are prepared.

No Other Six Resembles Hudson Super-Six

Don't Be Misled—It is a Hudson Invention

Sixes have come into renewed popularity since the Super-Six won the top place. But the Super-Six invention—controlled by our patents—added 80 per cent to the six-type efficiency. And that 80 per cent is what gave it supremacy, when the V-types threatened to displace the Six.

Late in 1915, remember, the Six in front rank cars seemed a waning type. Even the Light Six, which Hudson gave first rank, had revealed some vital engineering limitations.

It had not solved the problem of motor vibration. It had not minimized friction and wear. Its endurance had proved disappointing.

Sixes at that time held hardly a single record. They were mostly held by Fours.

And leading engineers, including the Hudson, were seeking a remedy in Eights and Twelves. At that time the Six, for high-grade cars, seemed to be giving way to 8's and 12's.

What Saved the Day

It was the Super-Six invention, remember, which then saved the day for the Six.

Hudson engineers discovered the shortcoming. By a basic invention they corrected the fault. They ended nearly all the vibration. They doubled the motor's endurance. Thus they created a motor which has since won all the worth-while records.

Don't think that the Super-Six is like any other Six.

'Twas the Super-Six That Won

The Super-Six, in a hundred tests, has out-performed all other motor types. It has not merely broken records. It has made new records which, a year ago, no man considered possible.

It broke the 24-hour endurance record by 52 per cent. It broke the transcontinental record twice in one round trip. A Super-Six touring car went from San Francisco to New York and back in 10 days and 21 hours.

It beat twenty famous rivals up Pike's Peak. It broke all stock-car speed records, and all for quick acceleration.

Then, after 7,000 record-breaking miles, it showed itself in new condition. Not a part or bearing showed evidence of wear.

No other motor ever built has shown anywhere near such endurance.

All By Saving Waste

The Super-Six develops no more power than other like-size motors. It simply delivers more. It almost eliminates motor friction and wear by ending nearly all the vibration.

That vibration, which wasted power, was the great fault of the Six. It is that which led to the Eight and Twelve as a possible solution. Any motor in which that fault remains can't compare with the Super-Six.

A New Gasoline Saver

The Hudson Super-Six, in endurance and performance, stands foremost in the world. The new-style bodies which we have created make the car look its supremacy. A new exclusive feature—a gasoline saver—gives it this year another advantage.

It now outsells any other front-rank car. It has 25,000 enthusiastic owners, who know that no rival can match them.

You can prove in one hour, at any Hudson showroom, that this car deserves its place. And that no other car, at any price, can be classed with its performance. Do that before the spring demand overwhelms us.

A SCRAP OF PAPER

(Continued from Page 23)

"Can you drive a car?" demanded Mack with seeming irrelevance.

"Yes; why?"

"Day before yesterday Cardigan wanted to drug me and take me to his place on Long Island. Masterman has country places at Bar Harbor and Pinehurst. Too far! Blaisdell's nearest country place is in the Thousand Islands. Now they wouldn't let any more people into the secret than necessary. They wouldn't send her to some other millionaire's place. Too risky. Cardigan's is the nearest place. It's a cinch they wouldn't keep her in town, so she must be in the country, and that means Cardigan's country place at Bellmere. You've heard of it?"

"Seen photographs in the Sunday papers," said Grant.

"So have I. Well, that seems the most likely place to look for her. Easily reached by automobile, no need of taking her on a train where crew and passengers might see something to arouse suspicion. And it's the place Cardigan proposed taking me! I'll bet she's there!"

"Then, let's start now," said Grant, rising. "It will take us four hours to get there, including the time we waste now getting started."

"No hurry," said Mack. "We don't want to get there until after dark, you know. Still, we'll want to get down to Edgewater, the nearest village to Cardigan's place, and scout round. Come on, let's hire a car!"

At eleven o'clock that night an electric wire, cleverly concealed in the shrubbery that girded the lawns about the Cardigan country house, was trod upon by the foot of Harry Mack. Within the house six Greenham operatives prepared for action. Ten minutes later Handsome Harry Mack and Dixon Grant were dragged into the presence of Martin Masterman. For the master of transportation was a very shrewd man. It had occurred to him that Grant might learn where Kirby was, and that Cardigan and an aged caretaker might not be sufficient to cope with an outraged lover. And as he wished to question Kirby, and to try to succeed where the Cardigan threats had failed, he had come down to Bellmere himself, bringing the Greenham operatives.

He looked from one to the other of the captives who had been surprised and overcome before Mack could even place his hand on the automatic pistol in his coat pocket.

"Well, gentlemen," said the master of transportation, "Miss Rowland won't tell where that paper is. One of you gentlemen will! No? I don't want to use force, gentlemen, but I want that paper! Cardigan, bring in the girl!"

And Kirby Rowland, sick at sight of brutal fingers crushing the throat of Dixon Grant, told the hiding place of the paper.

"In my own vaults!" said Masterman, gasping. "Of all the nerve ——"

He never finished that sentence, for at that moment the front-door bell clanged ominously. Bellmere had other visitors besides Mack and Grant that night; and these later visitors came not like thieves in the night, but boldly and unafraid. And they pounded on the front door.

"There's a dozen of 'em," gasped a Greenham operative who had peered through a window. "A dozen, and I just heard one of 'em orderin' the others to fire their guns at the lock to bust it in!"

Masterman glared.

"Cardigan, open the door for them and see who and what they are. Threaten them with the law. If that doesn't warn them off advise them that armed men are here and will resist any forced entrance."

But it takes more than threats, more than bullets, to stop the advance of United States marshals. They swept in like a tide, and at Cardigan's protest one seized him by the arm and declared that he was under arrest.

"On what charge?" demanded Cardigan.

"On the charge of conspiring in restraint of trade, and on a warrant issued by a United States Court! And we want Masterman! Where is he?"

They flooded into the house, followed by two men whom Cardigan, fear clutching at his throat, recognized. So did Masterman, a moment later, and he thanked the presence of mind that had made him order Kirby, Dixon Grant and Harry Mack hidden away in a room on the top floor.

"What does this mean?" he blustered, glaring at the men he recognized.

But his bluster broke down when one of them, ignoring his question, said:

"In addition to other charges, Mr. Masterman, there will be the one of kidnaping, for which I guarantee you twenty years behind the bars unless you immediately produce one Kirby Rowland, alleged to be detained by you."

Masterman knew the game was up. He looked at a Greenham operative. The man sullenly left the room. A moment later the three prisoners were confronting their erstwhile captors and their rescuers in a room where economic history was shortly to be made. For the thin-faced man with the stern manner was Morley Ellis, attorney-general of the United States of America; and behind him stood Lindley Jackson.

XVIII

WHEN Handsome Harry Mack flicked a pellet into the high ball of Tom Hanrahan, he thought that his little finger had sent enough of the narcotic into Tom Hanrahan's glass to render the reporter harmless for at least ninety-six hours. But the international crook reckoned without the newspaperman's wonderful constitution. Hanrahan had been a football star and captain of his crew at college. And during the four years that had elapsed since graduation he had kept himself in fine condition. Within twenty-four hours after being found unconscious on the floor of the Tube, Hanrahan awoke. He found himself in a small room whose white furnishings were proof of its connection with a hospital.

"Well, where the deuce — how the deuce ——" Then he knew, and despite a splitting headache and a nausea that enfeebled him he rolled out of bed and staggered toward a half-opened closet wherein he could see his clothes hanging. Halfway to the closet he collapsed, and the noise of his fall brought in a nurse from the hall outside. A passing doctor came in answer to her cry, and together they managed to get Hanrahan back into bed. But when the nurse put something to his lips Hanrahan had recovered his senses again and brushed it aside.

"Get Jackson — Lindley Jackson," he gasped.

"Here, here, my man, drink this," commanded the doctor. "You're mighty sick! No time to talk now."

He put his arm about Hanrahan's shoulders and raised him that he might swallow the easier. But a sudden fury seemed to sweep over Hanrahan. He broke the doctor's grip and hurled the glass across the room, where it splintered in a score of pieces.

"I'm Hanrahan—of the Citizen. Get Jackson—Lindley Jackson!"

The doctor looked at the nurse.

"Is this so? Did you find any papers on him?"

The nurse shook her head.

"Just some letters without their envelopes. Over ninety dollars, so we put him in a private room. His clothing was expensive too; but no identification."

The reporter listened to her, then spoke again.

"Inside pocket—my vest—police card. Send for Jackson—vital—important—get him."

The nurse sped to the closet; she brought out the waistcoat, and in that neglected pocket which Hanrahan mentioned she found his police identification card.

"Better phone his employers," suggested the doctor. "Tell them the man was found drugged in the Tube last night; that no one there seemed to know who he was; that we have just discovered his identity; and that, while he is in no danger, perhaps someone in the office might care to see him. Add that the man states that he has something of vital importance to tell his employers."

Hanrahan heard these instructions and sank back on his pillow with a sigh of relief. Twenty minutes later Lindley Jackson, who for twenty-four hours had wondered about Hanrahan, greatly perturbed entered the sick room. The doctor had told him of Hanrahan's condition, had stated that only a man wonderfully endowed with physical and mental strength could have recovered so quickly, and warned Jackson not to excite his employee.

Hanrahan thrust out a feeble hand.

"Got the goods, boss. Had most of it, and then met Harry Mack—wanted to put personal in paper, threatening Kirby Rowland and Dixon Grant with exposure unless they came across. Mack got wise that I was next to his game. Drugged me. Guess they must have a new barkeep in the Tube. All the old-timers know me." He grinned feebly. "Here's the dope: Mack found paper lost by Masterman. Kirby Rowland, chum of girl I know, Jessie Sigmund—and Miss Sigmund started me on right trail—got hold of paper. With Dixon Grant, friend of hers, started some game of their own. Masterman's agents—Greenhams—after them. Miss Rowland hides in Masterman's house under name of Adele Rohan, the artist. Rowland girl is artist herself. Don't know about Grant. Get the girl. She can tell story. In Masterman's house. I know it. Don't ask me how—get her! She'll talk. You'll find some way. But before you get her"—and now he fought desperately with the drowsiness that attacked him—"ask permission of Jessie Sigmund. Gave me first tip. Must have her permission to use tip. Got to be square or she won't—she won't—marry me. Got to be fair ——"

His voice died away. He was not to speak again for fifteen hours; he was not to be his old, jovial, healthy self for a month. Jackson looked down at him. His eyes softened; he patted the unconscious head.

"Some boy!" he said. Then he turned to the doctor.

"The best the hospital can afford, doctor," he said curtly. "Send the bills to me. Have you a telephone?"

Of course they had, and Jackson was led to it. He found Miss Sigmund's number in the book and called her up.

"Miss Sigmund? . . . This is Lindley Jackson, publisher of the Citizen. Mr. Hanrahan, one of my men, has informed me that before seeing Miss Kirby Rowland I must ask your permission. . . . Question of honor, I believe. . . . You gave him a tip that has led to her discovery. . . . Why doesn't he ask you? Well, Miss Sigmund, he's ill—not seriously, no. . . . Yes, you can come up and see him—Presbyterian Hospital. . . . Drugged—all right in a day or so, I assure you, Miss Sigmund. . . . We may act, then, upon whatever tip you gave him. Thank you. . . . No, don't worry; he's all right. Sleeping and in no danger. . . . And when he's able to talk, Miss Sigmund, kindly tell him that the paper gives him a month's vacation, and that he's to be managing editor on his return."

Then, with a last command that Hanrahan be treated well, Jackson dashed from the hospital and into the car that awaited him, giving his chauffeur the name of a hotel.

In ten minutes he had sent up his name to Morley Ellis, a guest at the hotel, and was riding in the elevator to Ellis' room. The attorney-general met him at the door. They shook hands warmly.

Each admired the other tremendously, and in addition to admiration and liking there was gratitude on the side of Ellis, for Lindley Jackson's money and support had made Ellis district attorney of his state. In that office he had made a remarkable record, and upon the accession of his party to national power Jackson, who had supported the new administration with both money and brains, had forced upon a president, reluctant to appoint so pronounced a radical, the name of Morley Ellis as his attorney-general.

Ellis never forgot a friend. He knew that what he was he owed in great measure to Lindley Jackson. He was his own man, nobody owned him, but he knew his debt and would pay on demand, provided the demand was in accord with his conscience. And Lindley Jackson's demand would not offend the conscience of Ellis! Jackson got right down to business.

"Meant to see you to-night anyway, Ellis," he said, "but didn't think it would be on business. However, it is. You're over here investigating the turpentine crowd, aren't you?"

Ellis nodded.

"Suppose you've got a pile of blank warrants, eh?"

"Lots of subpœnas and a few warrants, yes."

"Would you have the nerve to arrest Martin Masterman?"

Ellis smiled grimly.

What's the Good of Having Bunions?

"NO good at all," you *say*. But you go right on wearing narrow, pinching, bone-bending shoes that *cause* bunions—and corns, callouses, flat-foot, ingrown nails, etc.

Give up this cruel "fashion"! Wear broad-toed, comfortable Educators instead. Because Educators are built by experts to "let the feet grow as they should."

Made for
MEN, WOMEN, CHILDREN

Get your whole family fitted with them today. When buying, look for the mark EDUCATOR branded on the sole. It's your guarantee of the correct orthopædic Educator shape.

"Bent Bones Make Frantic Feet" is a startling booklet of facts about feet. Free. Send for copy today.

The two Godowskys

As makers of music they are the same. Liszt himself, virtuoso that he was, would find little fault with either's interpretation of his work. An ultra-critical audience of musicians and music-lovers heard them in joint recital at the Biltmore last October and applauded them both impartially.

But in one important respect they are entirely different.

One is the Godowsky of the metropolitan concert hall, inaccessible to thousands who would like to hear him, but are prevented by mere distance. The other is the Godowsky of the home—who is always yours to command—whose art will at your pleasure vitalize the works of the masters.

This is the Godowsky of the Ampico Reproducing Piano.

It needed that memorable "comparison concert" at the Biltmore to prove that the delicate art of a great concert pianist *can* be reproduced.

But the proof was made, and an audience including such artists as Ornstein, Adler, Brockway and Volavy were convinced. These artists, along with Godowsky and many others have already endorsed the Ampico and are recording their work for it, for they recognize in the Ampico the only perfect means of perpetuating their art for posterity.

To hear the Ampico, go to any music dealer selling the Chickering, Haines Bros., Marshall-Wendell or the celebrated Knabe pianos. There you can hear Godowsky, Busoni, Bauer, Ornstein, Goodson—the foremost living pianists of America. Also some celebrated rag-time virtuosi, who give you popular music at its best. For dancing the Ampico "automatic encore" enables you to repeat at will the whole or any portion of the roll.

A remarkable feature of the Ampico is that it may readily be transformed into a "player piano", playing any standard roll, to which you may impart your own interpretation. And the tone and touch of the piano itself are unimpaired for hand playing.

The Ampico may be had in the world's oldest and best pianos. Hear it at your dealer's. Our new illustrated catalogue will be sent on request.

(Concluded from Page 41)

"You know me, Lindley. Show me some evidence justifying his arrest, and I'll act."

"Then you'll act," said Jackson grimly.

Swiftly he reviewed the events of the past twenty-four hours, beginning with his invitation to attend the conference at Masterman's house and ending with the words of Tom Hanrahan.

"Of course," he ended, "I learned of the existence of this remarkable document only in confidence. I would not have thought to search for it except for what Masterman told me. And yet, what I've found out is without betraying the confidence. It was not to be expected of any newspaperman that, learning of the existence of such a paper, he should make no effort to find it, even though knowledge of its existence was learned in confidence. Masterman himself admitted that the paper might be brought to me. In that case I saw no reason why I shouldn't make an effort to have it brought to me. At any rate, right or wrong, I feel that I'm relieved of my promise to keep silent. From outside sources I have learned what Masterman was so anxious to keep secret. Further, before even exacting any confidences he mentioned a force that menaced something—himself. I've tried to be fair to him, Ellis, but the thing is too big. So then, do you summon a bunch of marshals, raid Masterman's house, get hold of the Rowland girl, force her—if we can—to tell the nature of this paper, arrest Masterman—or not?"

"You've given me evidence enough, Lindley," replied Ellis, "to make me believe that there is a criminal conspiracy behind this universal transfer business. And as the Consolidated Car Lines does a business in Jersey City, and is therefore an interstate concern, it comes under the control of the Federal Government. We'll raid Masterman in an hour."

And in just exactly that time Morley Ellis rang the bell of the Masterman mansion. Behind him were a dozen United States marshals. It was the United States Government against the Masterman money, and servants who would have scoffed at the police broke down before the attorney-general.

In ten minutes Ellis had learned that Kirby Rowland was at Cardigan's place at Bellmere, and that Masterman had gone down there an hour earlier. The servant who had aided in the laying of the false trail to cover Kirby's whereabouts, who had witnessed bribe money time and again, dared not lie to a member of the cabinet. And four hours later the attorney-general, Jackson, Cardigan, Masterman, Mack, Grant and Kirby Rowland, with a dozen or more marshals and detectives to act as supernumeraries, staged the final act of the drama that had begun when the hand of Handsome Harry Mack seized the paper that had blown from Masterman's office.

XIX

"MISS ROWLAND," said the attorney-general, "am I right in presuming that you have in your possession a paper signed by Martin Masterman?"

The old gray wolf of finance was not dead yet. He showed his teeth.

"I have it in my vaults," he snarled. "This woman just confessed to me that she had placed it there. You can't get it!"

"No?" Ellis smiled his thin-lipped, frosty smile. "I have yet to learn of the vault that will refuse to open for the United States Government! Miss Rowland, will you kindly tell us the nature of that document?"

Again Masterman spoke.

"There is a million dollars, Miss Rowland, to be distributed between you and Grant and Mack if you refuse to answer that question. No, Ellis, don't threaten me! You think you can jail me. For what? For kidnaping? But I think the young lady will listen to reason, a million dollars' worth of reason, and will refuse to press that charge. For conspiracy in restraint of trade? Prove it! My lawyers will fight for twenty years! Miss Rowland, refuse to answer him."

"And, Miss Rowland, the alternative is jail for contempt of court," said Ellis. "We have evidence that you know of a paper, have a paper, that would convict Martin Masterman and others of agreeing to sell Consolidated 'short' in advance of granting universal transfers. A conspiracy! Am I correct?"

"You are not," said Kirby. And while Jackson and Ellis gasped, Masterman smiled. But only for a moment, for Kirby went on: "Clear the room, Mr. Ellis, of your detectives, and then I will tell you ——"

Mack broke his silence.

"You'll tell him? So help me, if you do, I'll ——"

Grant, recovered from the throttling to which he had been subjected in the effort to make Kirby confess to Masterman, wheeled upon the crook.

"You'll do nothing, Mack," he said softly. "Nothing! You've bragged about being willing to go to the chair for either of us. You'll never see the chair. One threat against Miss Rowland, and I'll save the state expense—with my own hands!"

Mack stared into eyes as coldly angry as his own were hotly venomous, and gone were his dreams of great wealth. Opportunity had knocked, but she had not paused. He sank down into a chair and was a mere spectator and auditor of what followed. He held a part no longer.

Cardigan's voice broke the pause that followed this by-play:

"Make it more money, Martin!"

Kirby stilled him.

"Don't waste your breath," she counseled. Then she looked at her lover. "Will you tell, Dick, or shall I?"

He nodded:

"Go ahead, Kirby."

She turned to the attorney-general; her voice was calm, almost unexpressive.

"Mr. Masterman, Mr. Cardigan and Mr. Blaisdell signed a paper. In some way that paper got into the hands of Harry Mack there," and she pointed at the slumped figure of the international crook. "Mack placed it, for some reason or other—probably because he was in danger of arrest—in the pocket of Mr. Grant. Mr. Grant showed it to me. It seemed to me that with that paper Mr. Grant and I could reconstruct the country. We began by demanding that Mr. Masterman grant universal transfers in this city. We had made further demands—that he and his associates reduce railroad fares, the price of coal and food, and that they increase wages. We thought that in this manner the great corporations would be unable to meet expenses and that the Government would be compelled to step in and take charge. Which was what we wanted—all utilities, all wealth, to be owned by the people. Then Mr. Masterman captured me and, by hurting Mr. Grant, forced me to confess that I had hidden this paper in his vaults, under the name of Margaret Blake."

She paused.

"But the contents of the paper?" demanded Ellis and Jackson almost in the same breath.

The girl walked to the door and opened it; the detectives and marshals had left the room and were not in the hall. She returned. "It would not do for others to know the contents of this paper," she said. "Too many know it now. Gentlemen, it was an agreement whereby Masterman, Cardigan and Blaisdell agreed to act in concert with certain bankers. They were to cease the mining of coal, cease the production of food, cease the manufacture of all raw materials, call all loans issued by banks to all merchants, reduce all transportation facilities to an absolute minimum! In short, they were to tie up not only business but the function of eating—of living, practically. That was the paper!"

Ellis gasped.

"But the reason, Masterman, the reason?"

"To make money, more money. What better reason could we have?" said Masterman. "To make all the money possible to be made. To get the money of this country into the hands of the men who've made this country! If I could have trusted Cardigan and Blaisdell not to betray me by selling stocks short —— But you can't trust anybody in this world but yourself." He glared at Ellis and at Jackson. "Arrest me! Publish the story! And then what will the people say when they learn that half a dozen men could have done what I and my associates proposed doing?"

Never so tremendous, so virile, so scornful of mere humans had Masterman been as in this the hour of his defeat. Ellis stepped back from him, staring incredulously at the man whose ruthless motives had at last been disclosed. He spoke softly, incredulously.

"So this was your plan, Masterman?"

He drew a paper from his pocket. "This, Masterman, is a warrant for your arrest." He tore the paper into several pieces, then rose from the chair into which he had dropped.

"Miss Rowland, may we attend you back to town?"

Masterman's jaw dropped; Jackson stared; the others stood rigid in amazement.

"Good Lord, Ellis, are you mad?" gasped Jackson. "Aren't you going to arrest Masterman?"

The blue eyes of the thin-faced radical who was attorney-general took on a filmy look. Prophets scorned have worn that look—a look of communion with something beyond, something greater than this world holds.

"Arrest him? Jackson, it's too big! With that paper I could do anything. I could do as this enthusiastic but misguided young lady hoped to do. I could break the power of money, force Government ownership, could create a Utopia. But I won't!

"Why? Because a Utopia created by force could not last! The people are not ready for it. When they are it will exist already. But the time has not yet come! Only what God puts into the hearts and minds of men may last for long! Men do not want Utopia! If they wanted it they would have it. By struggle man shall achieve, not by gift! That is and has been God's law! And a Utopia created but to fail—as it inevitably would to-day—would postpone the coming of the real Utopia a thousand years. When men are ready for a world for which the Golden Rule shall be sufficient government, that world will be theirs. It cannot be forced upon them ahead of God's destined time!

"Arrest Masterman and let the world know? Masterman is right! The people, with definite proof of the puppets they have always been, would tear down in a day a nation it has taken a century to build! I will not see it torn down! Come!"

"But you can make yourself president," cried Jackson. "I get your point; almost I agree with you; I do agree with you! But the power, man, the power! You can win all your cases against the trusts! You can make a record such as no prosecuting officer has ever made! The White House—Ellis, are you mad? Don't publish the paper, but keep it to force Masterman, not to establish Government ownership or the Utopia you talk about, but to yield to the laws already established! You will win your cases ——"

But Morley Ellis shook his head.

"While that paper exists the nation is not safe! I want it destroyed. Someone would find it some day. In whatever place I put it, it would be found! The White House? Man dear, that's why I want it destroyed! I am ambitious. If the paper were in my possession God knows to what ambition would lead me. I might use this paper to force the moneyed interests to support me. I dare not use it legitimately; I will not use it illegitimately! If I cannot enforce the present laws against the trusts with the means provided my office, then I am a failure; and failures do not belong in the White House!"

He looked at Masterman.

"In your own heart, Masterman, you are convicted of being a traitor to your country. You have been false to your kind, and you know it. No words of mine can add to that knowledge. Come!"

He turned again to Jackson and Kirby, who stood with Grant, staring at a man whom suddenly they knew to be worthy of standing beside the greatest the nation had produced.

But Masterman stopped them with an upraised hand.

"Ellis, I thought all men were like myself; that all craved power, and merely pretended love for their kind because they were failures. But you have given up something for the right! I used to believe all you preachers of the people's rights were crazy—or liars. But you're a better man than I am. Morley Ellis, and it's Martin Masterman talking! A better man. You have eyes; you see! You almost make me see with your eyes. I have thought you a faker, a demagogue, but you're a man! And—Ellis, hereafter the trusts will obey the laws strictly. Your cases will not be defended. You will win for the Government.

"It's only in stories that a man reconstructs his whole view of life in a moment, not in real life. But, Ellis, you've made me think. And you, Miss Rowland; you gave up a fortune for the sake of others. I'll remember that."

He swept the room with his fiery old eyes. They lighted on Handsome Harry Mack. The harsh lips curled in a smile.

"Mack, you and Cardigan and myself are the same breed. No reason why we should quarrel. You're clever; if you want a chance in the world—an honest chance, not blackmail millions—well, I've been given another chance, there's no reason why you shouldn't be. Come to my office to-morrow."

Mack lifted his eyes. He did not answer, but his eyes spoke for his lips. Foreign to all his principles were these happenings of to-night, but something stirred in the breast of Handsome Harry Mack which we might call conscience. He felt a sudden desire to earn rather than to steal.

"And you, Grant," went on the suddenly mellow voice of the financier, "would you work for such a scoundrel as myself?"

"If you had my kind of work," said Grant.

"Books?"

Grant shook his head.

"I'm a civil engineer. I couldn't get work, so I entered Bryant & Manners' office. But it's not my line, and I hate it. If there were some construction work ——"

"Come to my office to-morrow," said the financier.

He looked at Kirby.

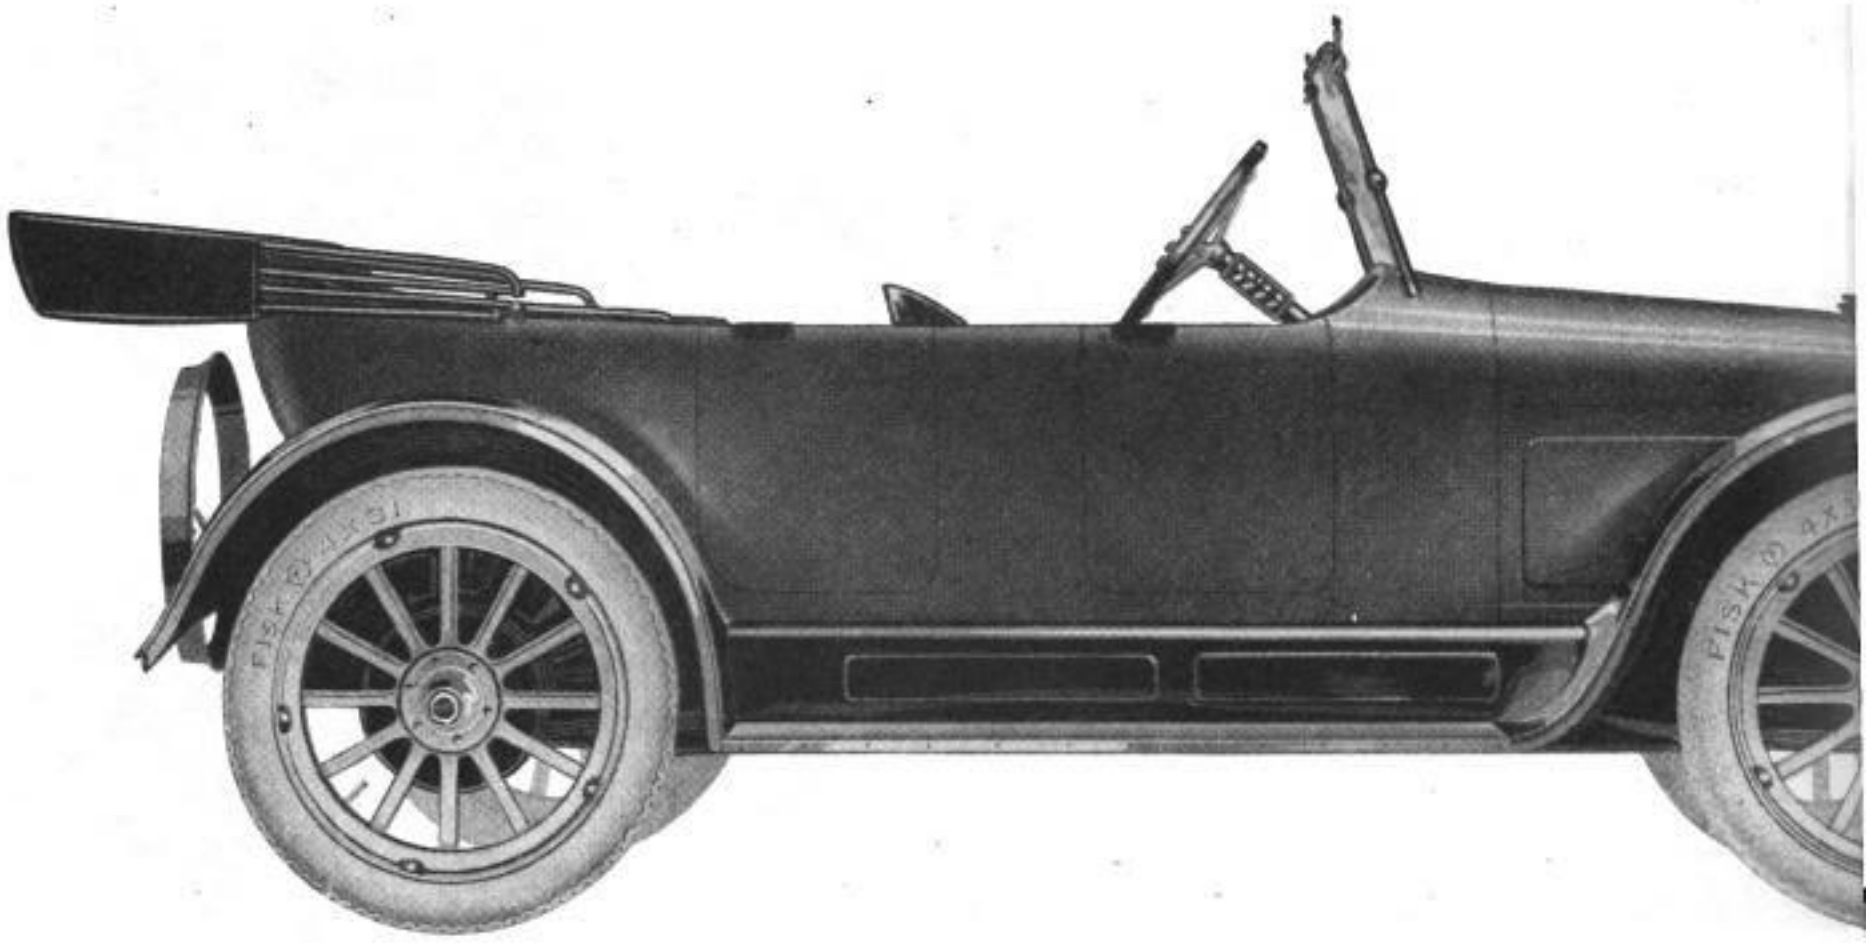
"Miss Rowland, to-day my daughter wept because you had gone away. I understand that you are an artist. Could you not come to my house? You are a miniature painter, eh? I would like one of my little girl. Miss Rohan will paint the portrait that shall hang in my study, but you will paint the likeness that I shall always carry with me. Will—will you come? It is not Martin Masterman who asks you; not the man you believe to be responsible for the poverty of millions—a poverty he will try to remedy, my dear, if you do not ask too much—but it is the father of a little girl named Laurel, who loves you and is unhappy because her new friend has gone away.

"You think I am a bad old man. Maybe I am, my dear, maybe I am not. At the moment it looks as though I were, and that my whole life has been wrongly employed. But I have only done what others before me, countless others, have done in lesser degrees—gained power and forgotten the weak. And even if I am guilty of evil, surely my little daughter is not to blame for my sins, sins which shall be balanced by good because Martin Masterman can play the game!"

He lifted his shaggy old head. "You had me down, Ellis! You let me up! I was beaten and spared. I do not strike the hand that spared me!" He turned once more to Kirby. "Will you come to Laurel, not to me?"

Kirby's hand stole out and gripped the fingers of Dick.

"If—if my husband"—and she blushed—"will let me, I'll come to both."



Next day Martin Masterman announced the gift of ten million dollars to found recreation parks for the children of the city. The papers which announced this munificent gift also announced Morley Ellis' great victories over the trusts. The Citizen was the only paper which did not express surprise over the failure of the trusts to fight the Government suits; but the Citizen gave no reason for its lack of surprise. Even Lindley Jackson, most violent radical, had yielded to the argument of Ellis. And he saw, as Ellis saw, that the time was not ripe for a people's war; and when it should be ripe there need be no war. For what belonged to the people would by that time have been given to them.

Time cannot be advanced. God does not hurry.

One of Seventeen New Body Designs i

A New Achievement

The Overland line now includes four complete groups of cars—light fours, big fours, light sixes and a seven passenger group.

From cars that emphasize the utmost economy without sacrifice of quality, to the very highest type of car in the luxurious class, virtually every size and type of car is represented in the Overland line.

This is a new achievement in the automobile industry.

Its accomplishment has necessarily been gradual, involving as it did the accumulation of vast resources, extensive physical properties, an enormous amount of equipment of itself, and the training of a huge organization.

This has been distinctively an Overland aim and achievement.

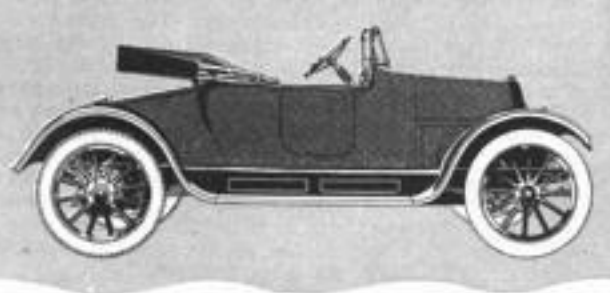
Its Value to You

From the beginning our policy has been the quantity production of quality cars.

It has been our steadfast policy to share the economies and advantages of quantity production with buyers of Overland cars.

Heretofore this policy has benefited certain classes of buyers only.

Our greatest pride in the accomplishment of our aim lies in the fact that now there is a quality car in the Overland line for every class of buyer.



And each car is bigger value because it has shared proportionately in the greater economies of our larger production.

the Line—Quality Higher Than Ever

A Concrete Example

The new Overland Light Four is an achievement in smart style and luxuriousness for a car of its size.

It has a new motor exhaustively tested over rough roads, mountain roads, through hub-deep mud and sand—a motor of the most modern type—quiet, powerful, flexible.

Its easy-riding qualities make a stride forward which of itself could not fail tremendously to increase Overland prestige.

Soft, deep cushions, large four-inch tires, generous wheelbase (106 inches) and long resilient cantilever rear springs, combined with carefully studied balance throughout, give it riding qualities which would be exceptional even in a much larger, heavier car.

See What You Save

This brief description of the Light Four will serve to illustrate Overland quality standards which are higher than ever and which are characteristic of the entire line.

And straight through from top to bottom quality considered with price will show you values in every class, possible only as the result of this consummation of our plans.

—*One* executive organization,
—*one* factory management,
—*one* purchasing unit,
—*one* sales management,
—*one* dealer organization, produce and sell the entire line.

Enormous economies thus effected are distributed so that every car shares proportionately.

And buyers of Overlands, regardless of class, save materially.

See the Overlands *first*.

G T D

American Industries Threatened

American manufacturers have been supreme in turning out high grade machinery and going a long way toward winning the world market, in spite of high labor cost and of methods in some respects both wasteful and inefficient.

To maintain leadership after the war, our manufacturers must correct their methods, eliminate the inefficiencies, adopt standardization.

There is shown below a Thread Limit Gage, one of the many G. T. D. Gages. The two pairs of points are set by standards to maximum and minimum limits respectively and sealed. Any bolt that is too large will fail to pass the upper points, or if too small will fall through the lower ones.

Using Limit Gages, an inexperienced workman can gage thousands of parts in a day, without error in measurement, and the manufacturer knows the parts will be interchangeable. Not only is accuracy insured, and material and money saved, but also assembling of parts is much more rapid, and the average quality of the finished product greatly improved.

For information as to Gages and their wide field of uses, send for the Bulletin on Limit Gages.

THE GARB OF MEN

(Concluded from Page 20)

they can fight. Oh, if only the good God for one little hour, for one little minute, would give me back my eyes, to see the men of France fighting for France!"

The last straggling pair of legs went shambling awkwardly past the portholes. To the Breton, watching, it appeared that the owner of those legs scarcely could lift the weight of the thick-soled boots.

Beyond the cellar, to the left, whither the marchers had defiled, the firing became general. It rose in volume, sank to a broken and individual sequence of crashes, rose again in a chorus, grew thin and thready again. There was nothing workmanlike, nothing soldierlike about it; nothing steadfastly sustained. It was intermittent, irregular, uncertain. Listening, the blind man waggled his head in a puzzled, irritated fashion, and shook off the grasp of his comrade, who still appeared bent on trying to make something clear to him.

With a movement like that of a startled horse the old leader-woman threw up her head. With her fingers she clawed the matted gray hair out of her ears.

"Hark! Hark!" she cried, imposing silence upon all of them by her hoarse intensity. "Hark, all of you! What is that?"

The others heard it too, then. It was a whining, gagging, thin cry from outside, close up against the southerly wall of their underground refuge—the distressful cry of an unhappy child, very frightened and very sick. There was no mistaking it—the sobbing intake of the breath; the choked, distressed note of nausea which followed.

"It is a little one!" bleated one woman.

"What child is missing?" screeched another in a panic. "What babe has been overlooked?"

Each mother took quick and frenzied inventory of her own young, groping out with her hands to make sure by the touch of their flesh to her flesh that her offspring were safely bestowed. But when, this done, they turned to tell their leader that apparently all of Courney had been accounted for, she was gone. She had darted into the dark passage that led up and outward into the open. They sat up on their haunches, gaping.

A minute passed and she was back, half bearing, half pulling in her arms not a forgotten baby, but a soldier; a dwarfish and misshapen soldier, it seemed to them, squatting there in the fading light; a soldier whose uniform was far too large for him; a soldier whose head was buried under his cap, and whose face was hidden within the gaping collar of his coat, and whose booted toes scraped along the rough flagging as his rescuer backed in among them, dragging him along with her.

In the middle of the floor she released him, and he fell upon his side in a clump of soiled cloth and loose accouterment; and for just an instant they thought both his hands had been shot away, for nothing showed below the ends of the flapping sleeves as he pressed his midriff in his folded arms, uttering weak, tearful cries. Then, though, they saw that his hands were merely lost within the length of his sleeves, and they plunged at the conclusion that his hurt was in his middle.

"Ah, the poor one!" exclaimed one or two. "Wounded in the belly."

"Wounded?" howled the old woman. "Wounded? You fools! Don't you see he has no wound? Don't you see what it is? Then, look, you fools—look!"

She dropped down alongside him and wrestled him, he struggling feebly, over on his back. With a ferocious violence she snatched the cap off his head, tore his gripped arms apart, ripped open the coat he wore and the coarse shirt that was beneath it.

"Look, fools, and see for yourselves!"

Forgetting the danger to themselves of stray bullets, they scrambled to their feet and crowded up close behind her, peering over her shoulders as she reared back upon her bent knees in order that they might the better see.

They did see. They saw, looking up at them from beneath the mop of tousled black hair, the scared white face and the terror-widened eyes of a boy—a little, sickly, undernourished boy. He could not have been more than fourteen—perhaps not more than thirteen. They saw in the gap of his parted garments the narrow structure of his shape, with the ribs pressing tight against the tender, hairless skin, and below the arch of the ribs the sunken curve of his abdomen, heaving convulsively to the constant retching as he twisted and wriggled his meager body back and forth.

"Oh, Mother above!" one yowled. "They have sent a child to fight!"

As though these words had been to him a command, the writhing heap half rose from the flags.

"I am no child!" he cried, between choking attacks of nausea. "I am as old as the rest—older than some. Let me go! Let me go back! I am a soldier of France!"

For all his brave words, his trembling legs gave way under him, and he fell again and rolled over on his stomach, hiding his face in his hands, a whimpering, vomiting child, helpless with pain and with fear.

"He speaks true! He speaks true!" yelled the old woman. Now she was on her feet, her lean face red and swollen with a vast rage. "I saw them—I saw them—I saw those others as I was dragging this one in. He speaks true, I tell you. There was a captain—he could not have been more than fifteen. And his sword—it was as long as he was, nearly. There are soldiers out there like this one, whose arms are not strong enough to lift the guns to their shoulders. They are children who fight outside—children in the garb of men!"

The widow, who continually wept, sprang forward. She had quit weeping and a great and terrible fury looked out of her red-lidded eyes. She screeched in a voice that rose above the wails of the rest:

"And it was for this, months ago, that they took away from me my little Pierre! Mother of God, they fight this war with babies!"

She threw herself down on all fours and, wriggling across the floor upon her hands and knees, gathered up the muddied, booted feet of the boy soldier and hugged them to her bosom.

In the middle of the circle the old woman stood, gouging at her hair with her hands.

"It is true!" she proclaimed. "They are sending forth our babies to fight against strong men."

The palsied man twisted himself up to her. He shook his head to and fro, as if in dissent from what she declared. He pointed toward the north; then at the sobbing boy at his feet; then north again; then at the boy; and, so doing, he many times and very swiftly nodded his head. Then he repeated the same gesticulations with his arms that he had made at the time of giving the first alarm of the approach of the enemy. Finally he stooped his back and shrank up his body and hunched in his shoulders in an effort to counterfeit smallness and slightness, all the while gurgling in a desperate attempt to make himself understood. All at once, simultaneously his audience grasped the purport of his pantomime.

"The Germans that you saw, they were children too—little boys like this one?" demanded the old woman, her voice all thickened and raspy with her passion. "Is that what you mean?"

He jerked his head up and down in violent assent, his jaws clicking and his face muscles jumping. The old woman shoved him away from in front of her.

"Come on with me!" she bade the other women, in a tone that clarioned out high and shrill above the sobbing of the boy on the floor, above the gurgling of the cripple and the sound of the firing without. "Come on!"

They knew what she meant; and behind her they massed themselves, their bodies bent forward from their waists, their heads lowered and their hands clenched like swimmers about to breast a swift torrent.

"Bide where you are—you women!" the blinded man commanded. "You can do nothing. The war goes on—this fight here goes on—until we win!"

"No, no, no, no!" shouted back the old beldam, and at each word beat her two fists against her flaccid breasts. "When babies fight this war this war ends! And we—the women here—the women everywhere—we will stop it! Do you hear me? We will stop it! Come on!"

She pushed him aside; and, led by her, the tatterdemalion crew of them ran swiftly from the cellar and into the looming darkness of the tunnel, crying out as they ran.

Strictly speaking, the beginning of this story comes at the end of it. Yesterday, in the morning paper, I read, under small headlines on an inner page, sandwiched in between the account of a football game at Nashville and the story of a dog show at Newport, a short dispatch that had been sent by cable to this country, to be printed in our papers and to be read by our people, and then to be forgotten by them. And that dispatch ran like this:

BOYS TO FIGHT WAR SOON

GERMANY USING SOME SEVENTEEN YEARS OLD. HAIG WANTS YOUNG MEN

LONDON—The war threatens soon to become a struggle between mere boys. The pace is said to be entirely too fast for the older men long to endure. It is declared here that next year, in 1917, the Entente Allies will be facing boys of seventeen in the German Army.

General Sir Douglas Haig, commanding the British Expeditionary Forces, is said to have objected to the sending out of men of middle age. He wants young men of from eighteen to twenty-five. After the latter year, it is said, the fighting value of the human unit shows a rapid and steady decline. . . . The older men have their place; but, generally speaking, it is said now to be in "the army behind the army"—the men back of the line, in the supply and transport divisions, where the strain is not so great. These older men are too susceptible to trench diseases to be of great use on the firing line. England already is registering boys born in 1899, preparatory to calling them up when they attain their eighteenth year.

So I sat down and I wrote this story.

THE THIRD ENCOUNTER

By ROLAND PERTWEE

ILLUSTRATED BY ROBERT McCAIG

A DEALER'S life is full of disappointments — any of them will tell you that—and Simon Caleb's had been no exception. Of all the bitter disappointments which had come his way not the least was that in connection with the strange old man he met on Dartmoor.

Caleb was visiting some of the remoter districts of Devon at the time in search of Welsh dressers, luster teapots or any other odds and ends the unsophisticated cottagers might be prepared to sell for about a third of their real value.

It was in a tiny house, just beyond the village of Mary Tavy, that he came upon the old man. Caleb had walked up the lane and, sensing that there was no one in the front room, had flattened his nose against the windowpane. To his astonishment he saw the room was furnished with a remarkably fine claw-and-ball-foot table and four Chippendale chairs of very rare design.

Caleb fairly gasped, and in another moment was rapping his stick against the door. It was opened by a quaint little old man in a shabby pair of breeches and waistcoat. He wore a green baize apron, with a white one over it. On his head was a skullcap embroidered with forget-me-nots and scarlet pimpernels. His sleeves were rolled up, showing a pair of hairy hands and arms, knotted and gnarled with toil. He had a simple, almost babyish face, and sported a short stubbly beard. He peered at Caleb benignly through a pair of pebble glasses and asked him what he needed.

"I've had a long trudge," said Caleb glibly, "and my throat is that dry I came to beg a drink of water."

"Won't you take a drop of cider?" said the old man. "I was about to have one myself. Step inside and sit down while I draw a jug." And he held open the door of his little sitting room as he spoke.

Caleb was enchanted. If ever he had seen a soft thing, here it was. While the old man was away he feasted his eyes on the furniture.

"No doubt about it," he murmured to himself; "these are the goods."

When his host returned, bearing a jug and two blue china tankards, he casually remarked:

"You've some nice bits of furniture here."

"You like 'em?" asked the old man, pouring out the cider.

"Quite nice," Caleb allowed, without too much enthusiasm.

"You know a bit about furniture perhaps?" the old man asked.

"Yes; I know a bit."

"Would you take these pieces to be genuine?"

Caleb did not entirely approve of the turn the conversation was taking. It appeared as if the old man might have some knowledge as to the value of his property, which would never do. Accordingly he assumed a critical expression and lied.

"They are effective enough pieces," he replied, "but they are certainly not genuine."

Then, intensely to his surprise, the old man clapped him upon the back and cried:

"Well done, sir! You are perfectly right."

"Eh? Beg your pardon?" exclaimed Caleb.

"You are a smart man, sir," the other went on; "one of the smartest I ever run against."

"Eh?" repeated Caleb, still uncomprehending.

"I made every bit of it myself."

"You're a liar!" broke forth from Caleb in spite of himself. "You never made these pieces any more than I did."

The old man took this remark in the light of a pleasantry.

"'Tisn't everybody would have spotted it," he said. "Why, sometimes when I turns out a thing I hardly know it from the original. Come along and see a bit I'm workin' on now."

So saying, he bundled Caleb through the back door and into a large shed, in which stood a carpenter's bench and a great assortment of broken-down pieces of furniture of different periods.

"Are You Mr. Simon Caleb?" He Asked of a Fusty-Looking Old Man

"These are all genuine," the old man rattled on, "and I uses them as models. There! Little Queen Anne table I'm makin'—see? When I've finished the joinery I polishes it up in the back room yonder and brings it down to the right color. I use naught but old wood; 'tis that makes it hard to tell the difference—that and my way of treating the surface. Lovely work! Keeps me happier nor any wife would. On'y thing that troubles me is that I mayn't be able to go on."

"How's that?" asked Caleb, who by this time had realized that he was in the presence of a veritable genius among woodworkers. "What's to prevent you goin' on?"

"Money," said the old man sadly. "Wood and tools costs a lot and I haven't much to spare."

"But you ought to be rich, bein' able to turn out stuff like this."

"I don't sell," said the other gravely. "I makes for my own pleasure. Maybe, here and there, a friend has a sample of my work; folks I can trust implicit—d'ye see?"

It was then that Caleb made the mistake of his life.

He introduced himself as a dealer in antiques of very high repute. He offered to supply the old craftsman with all the materials he wanted and give him fifty per cent on all sales. He asked for an option on the whole of his output.

"Stuff like yours," he wound up, "is good enough to deceive the Archbishop of Canterbury himself."

"Deceive?" roared the old man. "Understand me and then get out of here. It is folks of your kidney as stops me from selling what I make. Yes—because you'd be after taking people in with it. I'm an honest man; and, please God, I'll stay so. D'ye think I've so little respec' and rev'rence for those great masters Chippendale and Sheraton that I'd shame their memory by pretending my poor handiwork was theirs? I come to this place to get away from smooth-tongued robbers and sharks like you. Yes—so I did! So the sooner you clears out of this, the better."

And Caleb went.

Memory of that interview never failed to rouse the bitterest feelings in Simon Caleb's breast.

"If I'd have had that fellow workin' for me I'd have made me fortune," he declared. "I'd have sent stuff to Christie's and no one would have been any the wiser."

That, of course, is a matter for doubt, for shrewd men assemble in those famous salesrooms; but there is no doubt whatever that Caleb would have tried.

Mutual help being the essence of happy marriage, people who are engaged cannot begin the study of each other's requirements too soon.

Lord Louis Lewis was removing the peel from a Duchesse pear, balanced on the end of a fork; while his fiancée, Miss Jill Marston, sat opposite to him, in the dining room of the Clarence Hotel, cracking walnuts and placing the exquisitely skinned quarters beside his plate. The last of the peel having gone, he cut the pear in four pieces, extracted the core and proffered her the results.

"I have received an invitation to dine with a relative of yours on Saturday next," he remarked.

"Oh!" said Jill. "Who?"

"The Duke of Bethincourt."

"Then I certainly shouldn't go. Beth is a horrid little beast."

Lord Louis smiled.

"And yet," he murmured, "it is said that blood is thicker than water."

"He is only a second cousin twice removed," she returned. "I wouldn't be sorry if he were removed altogether."

"He wrote me a very charming letter."

"That's quite likely. It is also likely he will give you a very charming dinner; and more likely still he will borrow a hundred with the liqueurs."

"Dear me!" said Lord Louis. "And is he like that?" Jill nodded emphatically. "Tell me the worst," he pleaded.

"I can't," she said, "because I'm glad to say I don't know it. I do know that he drinks too much and that he ran through all his own money and most of his father's, who was a dear."

"Died a few weeks ago, didn't he?" queried Lord Louis.

"Yes; after selling the estate and nearly everything else to pay Beth's gambling debts."

"I wondered why the old duke had taken that house in the Avenue. Wasn't there a room in their old place which Queen Anne was supposed to have occupied?"

Jill nodded over a mouthful of pear.

"Um! There was some furniture in it you'd have loved!"

"Sold?" asked Lord Louis.

"Rather not. Uncle Jack had it put in a special room at the Avenue house."

"That being so, I am sorely tempted to accept your degenerate cousin's invitation. The Queen Anne Room intrigues me."

"It is a lovely period," said Jill. "One of my dreams is to have a Queen Anne Bedroom."

"For the future," said Lord Louis Lewis, "my chief ambition is to make your dream come true."

When people who are engaged begin to talk in that strain the wise man will remove and leave them to pursue its course alone.

Lord Louis accepted the invitation and presented himself on the day and hour indicated. (Continued on Page 50)

Clicquot
Pronounced Klee-Ko
Club
Ginger Ale

When ginger ale is bought for the home, by the case, it is usually Clicquot Club Ginger Ale.

Clicquot is an ideal home beverage—sparkling, lively and harmless.

It makes thirst a pleasure.

Good grocers and druggists sell it by the case. Also at fountains, clubs, hotels and cafés.

GOODYEAR

AKRON

Digitized by Google

THE SUPERLATIVE TRIBUTE

DOWN here in Akron our files are stuffed with enthusiastic letters from users of Goodyear Cord Tires.

There are thousands of these letters, each conveying its separate and particular note of approval. Some of them are brisk, brief, factful; some fairly glow with admiration for the tires they praise.

The experiences they detail, and the mileages they recount, are little short of astounding. Records of 10,000, 15,000, and even 20,000 miles of service from a single set of Goodyear Cord Tires are not uncommon.

But there is one letter here transcending all the others in importance—we call it the superlative tribute.

It recites, in effect, the experiences not of one man with one set of Goodyear Cord Tires, but of thousands of men with thousands of sets, in service under every condition of road and travel that broad America can offer.

It was written by Mr. Alvan Macauley, President of the Packard Motor Car Company, of Detroit, on his own impulse. It is expert testimony, voluntarily given.

"We have just ended the first year's use of your tires as standard Packard equipment," this letter reads—*"and have renewed with you for a second year.*

"Your tires have been so exceedingly satisfactory to us and to the owners of our cars that a word of appreciation from us is deserving. Our owners have found your tires exceedingly satisfactory in the following important qualities:

(1)—"Easy riding, comfort, resiliency and ability to absorb road-shocks.

(2)—"Durability and high mileage secured.

(3)—"Economy in gasoline consumption.

"In every respect in which a tire should be good, we have found your tires fully measuring up to expectations. We have never had a more successful or satisfactory tire equipment."

This letter is signed by President Macauley. It is, in many respects, the most remarkable indorsement of a product we have ever seen.

For it is the authenticated expression of a man at the head of an institution producing an article famous the world over for quality, the annual output of which can be valued only in multiplied millions—an expression commending, without reserve, a vital part of that article's equipment, after it had been tested at the hands of everyday users for a year.

Highly important as this indorsement is to us, it is even more important to the prospective buyer of automobile tires, as an unmistakable and unerring indication that Goodyear Cords represent the utmost in tire value and tire worth.

And the letter given here is not the only instance of President Macauley's outspoken approval of these tires.

In a communication to Packard dealers, written perhaps three weeks earlier, he concluded with these words:

"We call your attention to the very extraordinarily good service we have received from Goodyear Tires, since we find it not unusual to secure 8,000 to 10,000 miles before the tires have to be discarded."

There can be no higher praise. There can be no surer guide for you in the selection of superior tires for *your* car than this.

Chosen for the Packard Twin Six—Goodyear Cords are standard equipment on the Franklin, the Locomobile, the Peerless, the White, the Haynes Twelve, the Stutz, the McFarlan, the Roamer, the Lexington "Thoroughbred Six," the Daniels Eight, the Owen Magnetic, the Milburn Electric, the Detroit Electric, the Baker Electric, and the Rauch & Lang Electric as well. They will be underwheel three out of every four cars starting their careers on Cord Tires in 1917.

Their quality makes them higher-priced—and *better.*

The Goodyear Tire & Rubber Co.
Akron, Ohio

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

CORD TIRES

Digitized by Google

(Continued from Page 47)

The Duke of Bethincourt was twenty-eight years old and the direct product of overbreeding; which is quite as bad, if not worse, than no breeding at all. His face was colorless and cavernous; his eyes heavy lidded and slow of movement. His hair was so smooth as to resemble some form of lacquer. He had an irritating habit of polishing his finger nails on the lapel of his coat.

His greeting of Lord Louis was more than cordial.

"Delighted to welcome you, Lewis," he said; "and as you are marrying into the family I hope we shall become fast friends."

Lord Louis thought it unlikely, but refrained from observing as much.

The dinner, an elaborate affair of many courses and many wines, began pleasantly enough. The Duke of Bethincourt, however, addressed himself to the bottle with more energy than wisdom, and by the time the quails were served his tongue was so loosened that he began a series of amative reminiscences reaped from his lurid past.

Finding the subject distasteful, Lord Louis intervened with some personal adventures in search of antiques.

The duke enjoyed these very much, particularly one about Simon Caleb and Mr. Palliser, furniture dealers of the City of Bristol, who had tried to swindle Lord Louis in the matter of the Cellini Saltcellar, to their own undoing.

"What a pair of crooks!" he cried. "I suppose they cleared out—what?

"No. Caleb continues his business in Hennigan Street," said Lord Louis.

By the time they had lighted cigars and returned to the smoking room Lord Louis was painfully aware that his host was intoxicated. He experienced the greatest difficulty in articulating words of more than two syllables. His conversation began again to ramble through the glades of Eros, and he explained how many past indulgences were the cause of much present embarrassment, financial and otherwise.

"Th' ol' man lef' me jolly badly off," he declared. "If I get fif'een hun'ed a year after th' will's proved I'll b' lucky—dam' lucky! 'Fernal exec'tors taking a long time to wind up th' estate. Tol' me, t'day, be 'nuther four, five months—p'raps six. Tol' me mus' be 'conomical. I ask you! People won' wait—they dun a feller. Women worse than men—mush worse! Jolly glad you're marryin' int' th' fam'ly. Jill's a goo' girl—a straight girl; stral's a die!"

Lord Louis frowned.

"There are things, Bethincourt, too obvious to require indorsement," he said. "You will oblige me by making no further encomiums on my future wife."

"You miss th' point," continued the duke, unconscious of the reproof. "What I mean's this: Bein' one o' the fam'ly, shan't mind comin' t' you when I'm in a hole."

Lord Louis rose and glanced at his watch.

"Before I go," he said, "I should very much like to see the Queen Anne Room."

"So you shall," said Bethincourt, struggling to his feet—"so you shall—if I can fin' th' infernal key."

"The key?"

"Room's locked—val'ble stuff. Old Queen Anne slep' in th' bed—she's dead now. I know where 'tis—on my chain. Come on!"

The Duke of Bethincourt made very heavy weather in traversing the hall, but he contrived to unlock the door and with a perilous gesture invited Lord Louis to enter.

In the room were a carved bed, a tallboy, a very delicate little chest of drawers and mirror, four chairs and a writing table. There was nothing very remarkable about the pieces: they were merely well-made and well-proportioned examples of the period. Their chief charm lay, of course, in their association with the departed sovereign.

Lord Louis caressed the glowing surface of the little writing table and passed a loving hand over the front of the tallboy.

"The preservation of these pieces is wonderful," he remarked.

"My folk were crazy 'bout th' stuff. Silly, when you come t' think of it. After all, wha's it 'mount to? A few bits and sticks—tha's all."

"They belonged to a queen," said Lord Louis coldly; "and as such demand our respect."

"Don't get it, then—not from me. Som'-ing better t' think 'bout."

And he launched into a long recital of his financial woes. But Lord Louis was an unsympathetic audience, who offered neither practical nor verbal help.

"Tell you wha' 'tis, Lewis," said the young man, pointing an accusing and unsteady forefinger; "you're a miserly ol' devil! Sorry t' 'ave to say 't; but tha's what you are."

"Bethincourt," Lord Louis replied, "you are doing less than justice to the traditions of your family."

"Go to th' deuce!" said the duke with an airy gesture.

Lord Louis moved toward the door.

"Good night," he said; "and thank you for showing me the Queen Anne suite. I can, at least, compliment you on that part of the entertainment."

"Look here," said the duke, sobering a trifle; "if you are so struck on the stuff, why not buy it?"

"You can hardly be serious," said Lord Louis.

The duke explained that he was entirely serious. Furniture was nothing to him, and if Lord Louis cared to put up two thousand pounds he could have it and be welcome.

Lord Louis considered the point with mixed feelings of excitement and contempt. Presently he said:

"I shall take no advantage of your offer to-night, as your condition may cause you to make suggestions you may regret later on. If, however, you are of the same mind to-morrow I might be prepared to accept the proposal. *Au revoir.*" And he let himself out of the house.

At eleven o'clock the following morning he was back again, having responded to a note from the Duke of Bethincourt.

"Yes, I am willing to sell," said the duke. "I can see no other way. What did I tell you you could have the set for?"

"Two thousand," replied Lord Louis.

The Duke of Bethincourt laughed. "I must have been far gone!" he exclaimed.

"For the Future My Chief Ambition is to Make Your Dream Come True"

"You don't imagine I meant it? It's worth double that."

"On the contrary," said Lord Louis, "as furniture, pure and simple, it is barely worth a quarter. I am willing to pay the extra fifteen hundred, however, for the historic interest."

"I might let it go at three thousand," said the duke.

Lord Louis rose and buttoned his glove.

"Then you must seek another market," he said.

"What an impatient chap you are!" declared the other. "There, there! Sit down. To tell the truth, a couple of thousand would come in extremely useful just now. So if you'll give me your check I'll receipt for it and send along the stuff when the legal matters of my pater's will have been settled."

"I don't quite follow you."

"It isn't in my power to let you have it before. The delay won't be over six months. Plenty of time for your wedding."

"Very well," said Lord Louis. "I will ring up my solicitor to come round and draw up a contract."

"But I suppose I can have the check now?"

Lord Louis raised his eyebrows.

"I will give it you when the furniture is available," he answered.

The Duke of Bethincourt made a great fuss at this, but eventually consented.

"You are a tight-fisted beggar!" he said. "I was counting on that money to have a little flutter on the Grand National."

The solicitor appeared, the contract was drawn up, signed, and carried away to be stamped.

When his guest had gone the Duke of Bethincourt reviled the name of Lord Louis Lewis and drank deeply to his downfall and future misery.

The week that followed surpassed all others in his experience for bad luck. Everything went wrong. He was dunned; he lost at cards; and he had the ineffable anguish, at the Grand National, of watching the unbacked horse which he had so greatly favored win at a canter. Wherefore his rage against Lord Louis knew no bounds. About this time he made the acquaintance of a certain Mr. Edgar Salmon, who had made half a million by sheep farming in Australia. It was murmured abroad that this gentleman's methods of doing business were not always guided by the strictest principles of honesty. He spoke the English tongue with the purest Australian accent.

To borrow his own phrase, he was "leounging areound, on the lookeout for a few bits of first-class stuff" for the place he was building at Brisbane.

It flattered him greatly to know a duke, even though rather a degenerate example of the species, and he did not mind spending a bit of money for the sake of the *cachet* given to his vulgar dinner parties by Bethincourt's presence.

It was after one of these affairs, the rest of the guests having gone, that the duke confided the story of his deal with Lord Louis.

"Ts-s!" said Mr. Salmon. "Why didn't you let me know? I'd have put deown three theousand for that stuff and not minded waiting for it."

The Duke of Bethincourt declared that such luck as his was more than flesh and blood could endure.

"Well," said Mr. Salmon, "he hasn't got the stuff—and you haven't been paid. What's wrong with turning the deal over to me?"

"Can't be done," wailed the duke. "I've signed a contract."

"Never put your name to paper!" said Mr. Salmon, and recounted several anecdotes in support of the advice. Bethincourt heartily applauded his friend's business acumen and invited him to stroll round and have a look at the Queen Anne set. The invitation was readily accepted.

Mr. Salmon, as a connoisseur, lacked several essentials. He had no taste of any kind, but it pleased him to pay high prices for what he bought, for the pleasure of boasting about it afterward. He thought it would be very fine for a Brisbane sheep raiser to sleep in a bed once occupied by a queen, and to keep his offensive neckwear in a chest of drawers where the lavender-scented garments of a sovereign had reposed.

"I am pretty sick abeout missing this chance, Bethincourt," he said.

"So am I," said the duke.

"Seems a pity we can't come to some arrangement abeout it. Let's have a look at that contract." The paper was produced and examined. "H'm! He's pinned you deown, all right."

He turned his eyes covetously toward the furniture; then suddenly slapped his thigh.

"I say, Bethincourt!" he exclaimed. "I've got a notion!"

Briefly the notion was this: Why shouldn't Bethincourt raise a duplicate set for Lord Louis? He'd seen the originals only once; and, after all, there was nothing very unusual about them. There must be plenty of similar pieces knocking about, if one took the trouble to look for them. He—Mr. Salmon—would plank down three thousand pounds for the set then and there, and not mind waiting for delivery.

To the duke's credit it should be stated that he did not accept the proposal without demur. Probably he would have refused outright but for Mr. Salmon's masterly tact. With a wealth of oratory, and appropriate gestures with his check book, he denounced the meanness of Lord Louis. Whereby the Duke of Bethincourt fell from grace and became a partner to a fraud.

"He'll never suspect!" declared Mr. Salmon. "You'll show him the duplicate set in this room and in the same positions in which he saw the originals. There's not a scrap of risk—and that's where the advantage of your name comes in"—a remark which caused even the Duke of Bethincourt to blush.

He forgot his scruples, however, when Mr. Salmon's fat check had been tucked into his pocketbook. He awoke the next morning with a feeling of great uneasiness.

"I've let myself in for it," he mused, rubbing his finger nails on the front of his silk pyjamas; "but where the deuce I am to find duplicates I don't pretend to know."

At breakfast an idea came to him. He remembered the tale Lord Louis had told about Simon Caleb.

"That fellow bears my lord a grudge," he said.

An hour later he entered Mr. Caleb's shop in Hennigan Street.

"Are you Mr. Simon Caleb?" he asked of a fusty-looking old man who was winding up a grandfather clock.

The old man snuffled and said he was.

"You have been mentioned to me as knowing all about furniture," proceeded the duke. "Now I have six or seven pieces of Queen Anne that I want duplicated."

Mr. Caleb blew his nose.

"I have no facilities for making furniture," he said.

"You misunderstand me. I want some genuine pieces—exact replicas of the ones I have."

"Might be managed," grunted Caleb. "May I see the stuff?"

"Certainly. If you are free we can go at once. I have a car outside."

On the drive up Caleb asked the name of his patron.

"I am the Duke of Bethincourt," replied the other.

"Oh!" said Caleb. "Is it the Queen Anne set you want duplicated, then?"

"Yes," replied the duke with a start. "How did you know?"

"Thought it might be," said Caleb laconically.

Together they entered the house. The Duke of Bethincourt produced his keys and admitted Caleb to the Queen Anne Room.

"Here we are!" he said.

Simon Caleb stuck his hands into his pockets and, chanting a tuneless air, wandered round. He peered at the chairs, the bed and other appointments of the room. Sometimes he pushed his glasses to his forehead and scrutinized some detail at a range of about one inch. During the whole examination he made no remark. Then he took off his glasses, wiped them, put them on again, blew his nose, and sat down on the bed.

"Well?" said the duke, who found the ordeal a little trying to his nerves. "Can you get me some replicas?"

Simon Caleb whistled a scale of eight notes up and down again. Then he said:

"No, Your Grace, I can't; and, what's more, no one can."

"You surely don't mean that!" gasped the duke. "There is nothing out of the ordinary about these pieces."

"Yes, there is," said Caleb. "No end of little things you'd never find in another set. It was made by one man, this was; and he had his own ideas in the way of moldings and what not. Look at the back slats of those chairs! Different from any I've ever seen. That tallboy too! See the proportion? Never find another like it—and my fee is thirty shillings."

"Good Lord!" exclaimed the duke. "But this is serious. It is absolutely essential that I should find a duplicate set. Can't you suggest a way of helping me?"

Caleb's shrewd little eyes narrowed. "Not being in Your Grace's confidence,"

Science Has Created a Perfect Baking Powder

Several years ago a group of American scientific men determined to solve the baking-powder problem.

Their company had long been producing the materials used by baking-powder manufacturers, and included some of the most eminent men in chemistry. These scientific men cast aside all tradition, attacked the problem from its beginning and worked over it for years. Finally they were satisfied.

Samples were sent to famous cooking experts, who reported that this was the most wonderful baking powder they had ever tried, that less was required than of other baking powders, and that the results were *perfect.*

A great American pure food authority examined it and stated that this baking powder "has qualities of excellence and physiological relations which entitle it to the confidence and patronage of the public."

So the General Chemical Company offers to the public at a fair and moderate price the product of their genius—

RYZON

THE PERFECT BAKING POWDER

¼ lb., 10 cents ½ lb., 18 cents 1 lb., 35 cents

The finest and best known hotels, restaurants and clubs of New York City use RYZON. Institutions and cooking schools have adopted it. Thousands of American homes now use RYZON daily. Dealers are recommending it to their best customers.

And small wonder! RYZON is pure. It is healthful. It is economical to use, and the RYZON Baking Book insures perfect baking results.

The choicest recipes from the prize selections of ten thousand women, with Master Recipes from the Country's foremost cooking experts, edited by Marion Harris Neil, make the RYZON Baking Book a treasure for any home. It is the first scientific, accurate baking manual based on the use of standard level measures.

The RYZON Baking Book is for users of RYZON. It may be obtained free through grocers with the first order of RYZON. If your grocer cannot furnish it, the RYZON Baking Book, with a pound of RYZON, will be sent postpaid upon receipt of one dollar by General Chemical Company.

Leading grocers who desire to stock RYZON and obtain the RYZON Baking Books for their customers, are invited to communicate with General Chemical Company.

$1460 For 7-passenger Six—48 h. p. 127-inch Wheelbase
$1150 For Mitchell Junior—40 h. p. 120-inch Wheelbase Six
Both Prices f. o. b. Racine

John W. Bate's Standards

Judge if You Want Them in Your Car

The Mitchell claims your attention because it embodies the final result of Bate-method Efficiency. See what that means.

What the Mitchell offers is something unique in the field of high-grade cars.

That is, Efficiency carried to a fine art—in the factory and in the car.

It is coming, perhaps. It must come. But the Mitchell started with that aim. We have spent 15 years in developing it. Every building, every machine, every part and detail was designed with efficiency in view.

And we had the master expert. Since efficiency was first considered—30 years ago—its foremost factor in lines like this has been John W. Bate.

From the Beginning

We employed John W. Bate to design the first building for making the Mitchell car. And he designed it with the present plant in view.

It now spreads over 45 acres. But it is all like the first small plant. One-story construction; no elevators. No hitch, no delays—just ceaseless progress—from the steel to the finished car.

About 98 per cent of the Mitchell—including all bodies—is now built here, under Bate efficiency methods. Our best information is that such a car could not be built elsewhere within 20 per cent of our cost. And our extra values prove it.

15 Years of Efficiency

We employed Mr. Bate to direct our start. For we were old manufacturers then. In 68 years of fierce competition we had learned what efficiency meant.

But our first car was soon out-of-date. All our machinery soon had to be changed. We saw in this line the constant need of an efficiency engineer.

So Mr. Bate has remained here. And for 15 years—save for one year in Europe—he has directed the Mitchell production. That is why the Mitchell stands today unapproached in efficiency as applied to a fine car.

A Saving of 50%

The Mitchell in time became standardized. The present type was adopted. Since then every factory machine—more than 2000 of them—has been adapted to economical production of this type. Our factory cost has been cut in two.

Our prices have been lowered immensely. Our engineering standards have been raised to the limit. Our margins of safety have been doubled. Endurance has been multiplied. And all the extras conceivable, in finish and equipment, have been added to the car. All these have been paid for out of factory savings, evolved by Mr. Bate.

Now Another 15%

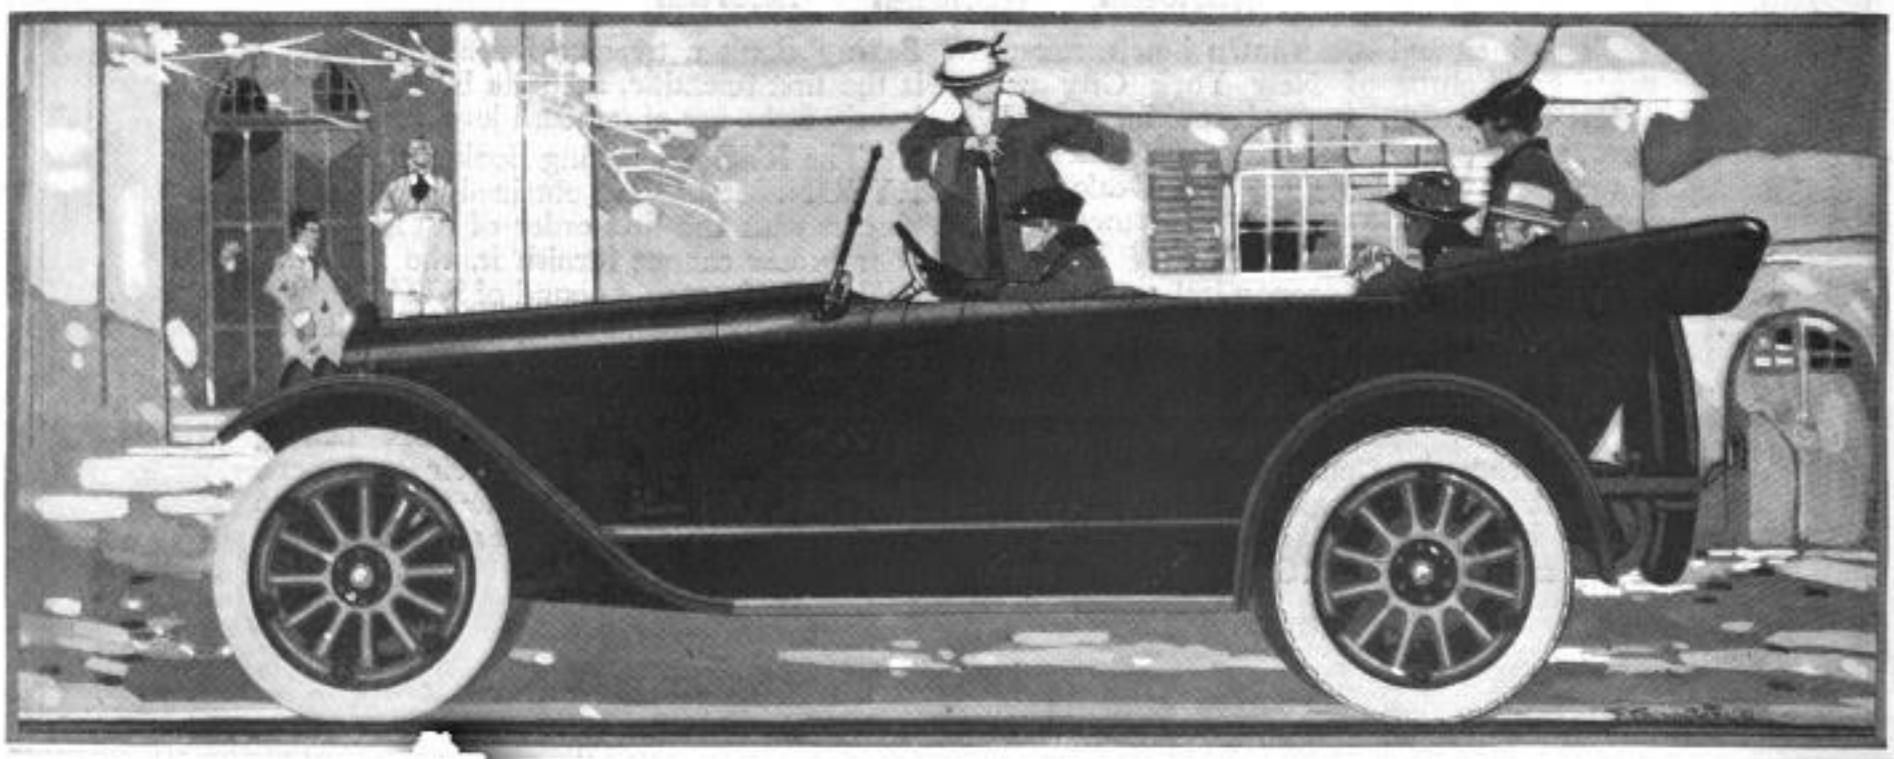
Last November we started operation in a new body plant. With the yards it covers 14 city blocks. From now on all Mitchell bodies, open and enclosed, will be built in our plant by Bate efficiency methods.

This will save at least 15 per cent on our bodies. Every penny of this saving goes into added luxury, as detailed on next page. So this car's extra beauty, extra finish and luxury, now show in a startling way the results of efficiency.

That's another new advance in fine cars. To save all body makers' profits and put them into added beauty.

When you see these results, you will want your next car built under Bate methods, we think.

TWO SIZES



Mitchell —a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.

Price $1460, f. o. b. Racine

Mitchell Junior —a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.

Price $1150, f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.

Some Notable Results

100% Over-Strength
24% Added Luxury
20% Extra Value
31 Unique Features

Here are some of the chief results of Bate efficiency methods. They mean more than economy, you see. They mean an ideal car.

The standard in the Mitchell for some years has been 50 per cent over-strength. That is, one-half more strength than needed in every vital part.

Even that was considered extreme. Under that standard the Mitchell attained a world-wide fame for endurance.

Seven Mitchell cars built under that standard have averaged 175,000 miles apiece—over 30 years of ordinary service. Two have exceeded 200,000 miles, and are still in good condition.

Because of that standard the Mitchell is called "The Engineers' Car." Many noted engineers have selected it. Every Mitchell dealer has a list of them.

Now a Lifetime Car

But in 1913 Mr. Bate spent a year in Europe. And he became impressed with the over-endurance embodied in costly cars.

He came back and said, "I shall aim in the Mitchell at a lifetime car, even for American roads. I shall double the over-strength."

In three years he has done that, part by part. He has worn out fifty Mitchell cars in learning strength requirements. And he has invented tests to prove for each important part twice the needed strength.

Now, for the first time, we announce Mitchell cars built to a new standard—100 per cent over-strength.

All Toughened Steel

Now over 440 parts in the Mitchell are built of toughened steel. Hardly a casting remains in it. All important parts are oversize. All parts which get a major strain are built of Chrome-Vanadium.

Let us cite one conspicuous example of this Bate over-strength. Rear springs, as you know, break under shocks very often. Countless lay-ups are due to that.

The Mitchell for two years has used Bate cantilever springs. In all that time—on thousands of cars—not one has ever broken. In all our factory tests, designed to learn the limit to these springs, not one leaf yet has broken.

Yet they are the most comfortable springs ever used on a motor car. Rough roads are like pavement to them. Shock absorbers are never necessary, never used. Not even rebound straps or snubbers.

Mitchell Models

The Mitchell is built with eight styles of bodies—

Touring Car	**4-Pass. Cabriolet**
Roadster	**Convertible Sedan**
Coupé	**Demountable Top**
Limousine	**Club Roadster**

***Mitchell Junior* is built with Touring Car and Roadster bodies only.**

Quoted prices, of course, apply only to open models.

Added Luxuries

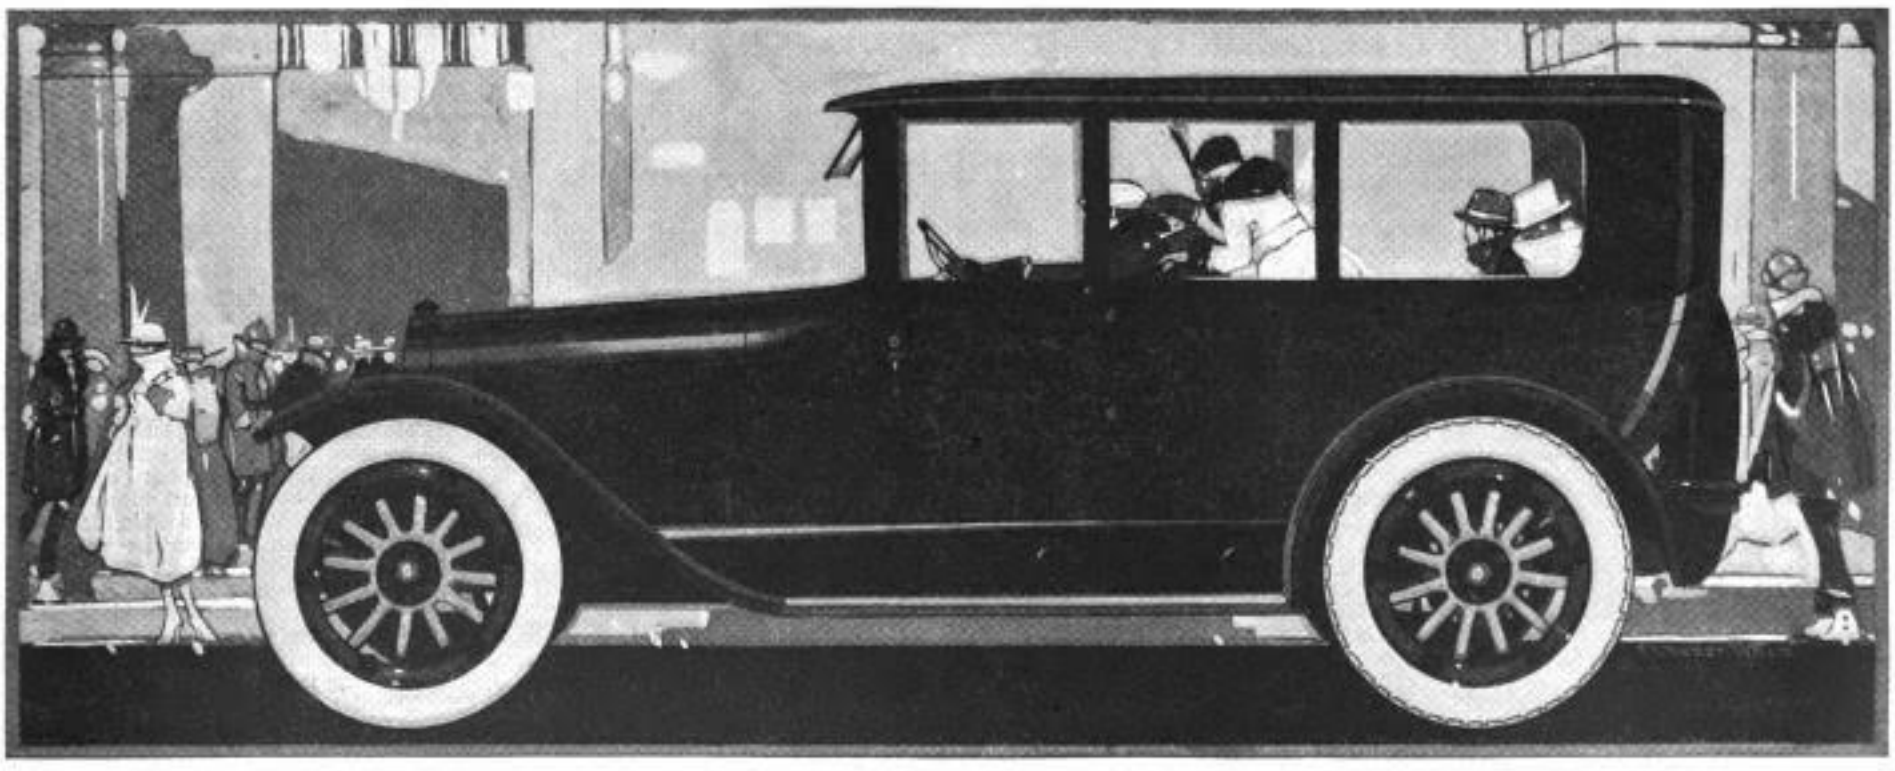
Our new body-plant savings go into added luxury. This year we have added 24 per cent to the cost of our finish, upholstery and trimming.

We have added 50 per cent to our leather—50 per cent to our cushion springs. Dainty touches have been added to a hundred details.

And now our finish coats are fixed by heat in enormous ovens. This gives a deep, enduring lustre which will long keep new.

The new Mitchells stand out among any cars as exquisite, artistic productions.

31 Extra Features



And this year we embody 31 extra features. That is, comforts, conveniences and economies which are generally omitted. No car at any price, we think, embodies more than four.

They include a power tire pump, reversible headlights, a new-type gear-shift, a ball-bearing steering gear, an engine primer at driver's hand. There is a light in the tonneau, a locked compartment in front, a tool box under hood. You will see 31 such extras.

We claim that in these ways the Mitchell offers 20 per cent extra value. Much more as compared with some cars.

See if you agree. If you do, you will want these results of efficiency.

(Continued from Page 50)

he replied, "I can add nothing to what I have said. I think I mentioned what my fee was."

He rose as if to go.

"One moment," said the duke. "It is like this, Mr. Caleb: In an ill-advised moment a few days ago I agreed to sell this set. I have since found out that, under the terms of my late father's will, I have no power to do so. I am faced with the awkward problem of having to return the money—which, I regret to say, I have already spent—or deliver the furniture. It seems as if I shall be obliged to do the latter, in which case I must have a duplicate set so as to keep my father's executors in ignorance. You will, of course, respect my confidence."

Simon Caleb assumed an air of the utmost piety.

"I would rather not be mixed up in an affair of this kind," he said. "My reputation ——"

But the duke did not allow him to finish the sentence.

"You can cut that out, Mr. Caleb," he said. "I know all about your reputation from Lord Louis Lewis."

Simon Caleb started.

"Oh, you do!" he exclaimed. "I suppose it isn't him that's bought the stuff—is it?"

"Yes; it is," came the reply.

"Then," said Caleb, "if you think I'm going to help him to get the goods you have made a big mistake. Good morning!" And he laid his hand on the doorknob.

"Hold on!" said the Duke of Bethincourt. "Suppose I tell you I mean to keep the genuine set myself and let him have the spurious one? Doesn't that appeal to you?"

Simon Caleb scratched himself behind the ear and smiled.

"I wouldn't mind putting one over on Lord Louis Lewis," he said; "and I'm not above confessing as much."

"That's the spirit!" said the duke, slapping him heartily on the back.

"It would have to be a very clever fake, Your Grace," went on Caleb. "I wonder whether I could get it done?"

His thoughts seemed far away. Suddenly he darted forward and looked at the brass fittings of the tallboy and dressing table.

"Ha!" he exclaimed. "That's lucky! I can get plenty of genuine ones like these. If the old man would tackle the job ——" He halted, then said abruptly: "I'll let you know in a few days. If it comes off I shall want forty per cent of what Lord Louis has paid you."

"To be strictly honest," said the duke, "he hasn't paid me yet; and he won't until the stuff is delivered."

"I see," said Caleb very slowly. "Then you were out to scalp him all the time?"

The duke nodded.

"He's an unpleasant fellow, Mr. Caleb."

"How much is he going to pay?"

"Two thousand. Here's the contract." He drew it from his pocket as he spoke.

"Good enough!" said Caleb. "Then you'll pay me eight hundred pounds when you get his check."

"And for that you will ——"

"I'll provide the duplicate set—if any man alive can do it."

Thereupon they shook hands; and Caleb, with a staccato little bow, withdrew.

As he shuffled homeward his thoughts were far away in distant Dartmoor. Not in that part where Prince Town Prison rears its granite wall as a warning to wrongdoers, but to a quieter recess, set back from the main road, above the little hamlet of Mary Tavy.

"If I could only hit on a way to make him do it!" Caleb muttered to himself. "There must be a way. But what are you to do with a man who ain't to be tempted by money? I wonder ——"

A vague idea began to take shape in his brain. The old woodworker had confessed that occasionally he did jobs for friends, or people he could trust.

"Thing 'ud be to find somebody he would trust—somebody of high standing, who'd bamboozle him into taking on the job."

It might almost have been regarded as the working of Fate that at this point of his reflections he should have observed the person of Mr. Palliser mouching along on the opposite side of the road.

Caleb had not seen his late partner since their disastrous venture with the Cellini Salteellar, the failure of which he laid at Palliser's door. Nevertheless, the ingenuity of the man was remarkable.

Caleb eyed the shabby figure as it proceeded, a little ahead of him, in the same direction. Palliser was evidently down on his luck. The idea of further association with the man was most distasteful to Caleb, but he was bound to confess that he knew of no one more likely to succeed with the old craftsman of Dartmoor.

Acting on impulse, then, Caleb whistled twice. It was an impertinent sort of whistle—the kind one employs to attract the attention of a lowbred dog. Palliser stopped and turned round.

"Bless my soul!" he said. "Simon Caleb!"

Caleb adopted a very high hand.

"If you'll walk round to the shop, my man," he said, "I might be able to put a bit of work in your way. But you can keep to the other side of the road, as I'm particular who I'm seen walking with."

In the Intervals Between Story-Telling He Contrived to Find Out the Names and Vocations of All Present

Mr. Palliser had his pride; also, what is more valuable, an understanding of the human mind. He knew that Caleb would not have addressed him unless he wanted something pretty badly. Accordingly he pulled his hat over one eye, looked Caleb up and down contemptuously, and sauntered off in the opposite direction.

In matters of diplomacy Caleb was no match for his late partner. Palliser had gone barely twenty paces before the crook of Caleb's stick arrested farther progress.

"Don't be touchy!" said Caleb. "I was having a bit o' fun—that's all. It'll pay you to come round to the shop."

Palliser had every intention of doing so, but he demurred not a little before consenting.

"Very well," he said; "but I hope you are not goin' to waste my time."

A few minutes later they forgathered in Caleb's parlor.

"We've talked over one or two little deals in here, Simon," said Palliser reminiscently.

"We 'ave," returned Caleb; "and if you want me to keep my temper you won't remind me of it. The question is, Do you think you could look like a gentleman?"

Palliser digested the plan in silence; then said: "Who is the fellow these fakes are to be planted on?"

"That I don't know," replied Caleb, thinking it inadvisable to mention Lord Louis' name. "But that doesn't matter to us, does it?"

"No; but I was just thinkin'," said Palliser, "if, b' any chance, it 'appened to be Lord Louis, I should stand off."

Caleb blew his nose.

"It's hardly likely to be," he said brazenly. "Anyway, I don't see what difference it 'ud make."

"We've had two goes at Lord Louis," said Palliser, "and I don't seem to recall any particular success in either of 'em. My nerves is gone, where he's concerned. I give him best, Caleb; so I tell you."

"That's not like you, Palliser."

"P'raps not; but, anyway, I'm not such a fool as to tackle a third encounter if I can help it."

"Well, we needn't waste time talkin' about that," said Caleb. "Will you do the job?"

"On terms," replied Palliser.

Mr. Palliser was never shy where terms were concerned and he now struck a hard bargain. He was to have four new suits, shoes, hats, socks, and all other impedimenta of a knight on a holiday. Five and twenty pounds for the week he proposed to spend on Dartmoor—traveling and hotel expenses. If he succeeded in inducing the old man to do the work he was to receive five pounds a week until the furniture was delivered, and a final sweetener of twenty-five per cent of Caleb's profits.

That evening Caleb consulted with the Duke of Bethincourt, who would have agreed to anything to extricate himself from the difficult predicament.

Mr. Palliser placed an order for four suits with the best tailor in Bristol and made innumerable purchases from hatters, hosiers and bootmakers.

The Duke of Bethincourt received some fairly staggering accounts for the decking out of Mr. Palliser's person, which, one regrets to state, are still unpaid.

While his clothes were being made Palliser spent what leisure was left him, after the barbers and manicurists had had their way, in studying the habits of the Upper Ten. He acquired a walk and a manner of swinging his cane only to be observed in the highest circles.

By a stroke of luck he came upon a copy of Stevenson's New Arabian Nights, and did his best to emulate the polished address of that cream of gentlemen, Prince Florizel of Bohemia.

At last the day arrived when, with a pile of elegant luggage, he entered a first-class compartment of the Devonshire express.

Caleb, who had come to see him off, could not refrain from expressing admiration at the picture of traveling nobility Mr. Palliser presented.

"You look Sir John Palliser to the life!" he exclaimed.

"Haven't made up my mind to take that name," said Palliser. "I may think of something a bit more classy."

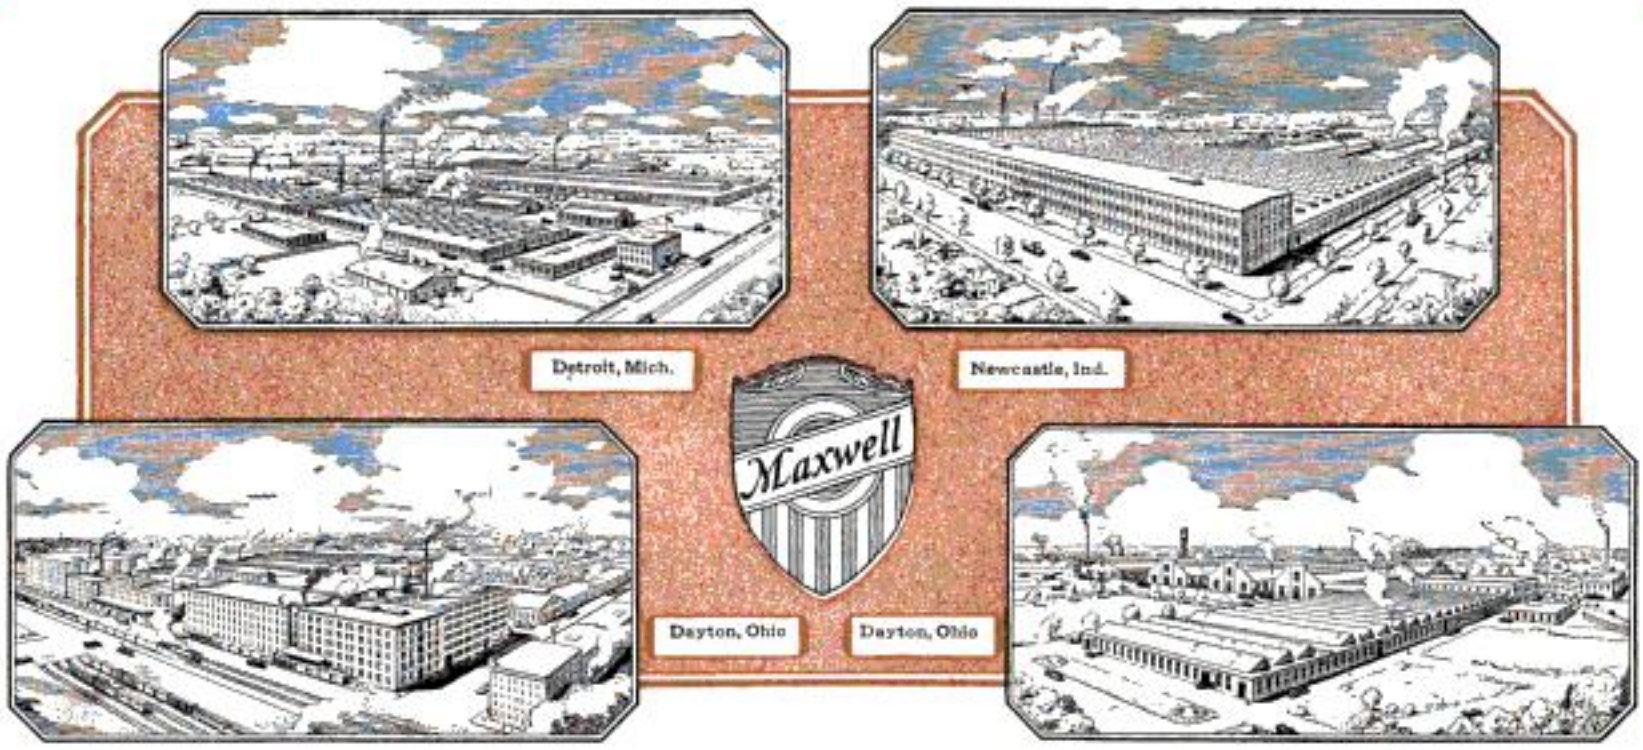
During the journey Palliser solved the problem of his future identity. Being alone in the carriage he threw back his head and laughed. The very thing! He would borrow, for the nonce, the august name and title of Lord Louis Lewis.

In the past he had worked for that nobleman and had had endless opportunities for studying his charming manners. He recalled Lord Louis' quiet way of dealing with all emergencies; his unfailing good humor, his gracious bearing toward those on the lower rungs of the social ladder. A hundred details crowded on Palliser's memory and he determined that his impersonation should lend luster to the original.

Accordingly he inscribed a new set of labels, which he tied to his luggage while waiting for the Lydford train at Oakhampton. A few curious passengers read the labels, and it was gratifying to observe their looks as they watched the pseudo Lord Louis lighting cigarettes and throwing them away half smoked, or playing imaginary golf with his silver-mounted Malacca walking stick.

Palliser alighted at Lydford and hired a fly to convey him to the village of Mary Tavy.

He was much distressed to find there was only a small inn, for he had looked forward to putting up at an expensive hotel. However, he bade the coachman carry his traps within. The proprietor, a simple-minded Devonian, was very effusive to his guest and apologized for the humbleness of his entertainment. Palliser inspected his room with kindly tolerance.



"It will serve," he was pleased to remark. "I perceive the sheets is passably clean, and an old campaigner, like what I am, can put up with a bit o' discomfort once in a way."

A little parlor was set aside for his use, and within half an hour he was seated before a dish of delicious troutlets, and a pigeon which had fallen to mine host's muzzle-loader. He addressed the landlord's daughter, who attended to his wants, by the title of "My good girl!" or "My dear young miss!"

In order to suggest an aura of gracious birth he ordered a bottle of Château Y'quem;

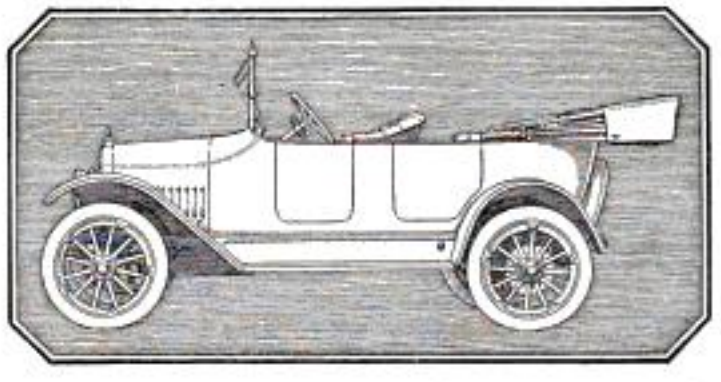
MAXWELL CARS ARE MADE IN MAXWELL FACTORIES

ALL of the finest and highest-priced cars in the world are made complete in their own factories. The manufacturers of these cars know that, in order to safeguard the high standards to which they attain—in order to be sure that every part is made as they want it made—the work must be done under their personal supervision.

Some manufacturers of assembled cars advance the argument that it is better to purchase the various parts from specialists. We do not agree with this argument. We maintain that this plan is not better, but is merely more expedient.

It requires large capital and years of effort to establish the facilities for actually manufacturing instead of simply assembling cars.

We know that Maxwell Cars could not be made as well if the parts were furnished by detached organizations instead of being manufactured in our own plants. There must be unity in the finished car.



Hence we have four great factories making all the vital parts for Maxwell Cars. Only the accessories and a few minor parts are purchased from outside sources.

The Maxwell Factories represent an investment of thirty-eight millions of dollars ($38,000,000). They contain fifty-seven (57) acres of floor space and they employ twelve thousand (12,000) men. This enormous investment is at stake in the operation of the Maxwell business.

We are making one hundred and twenty-five thousand (125,000) cars this season. Our future success and the growth of our business depend upon the satisfaction which these one hundred and twenty-five thousand cars—and the thousands of Maxwells made in years past—give to their owners.

These vast plants and the great investment which they represent are not only a guarantee of satisfaction to Maxwell owners. More than that, they explain why Maxwell Cars can be sold at such low prices.

With our own plants operating efficiently and making practically every part used in the car; with unlimited capital enabling us to purchase materials most advantageously; with building a single standardized chassis in great quantities—we are able to offer *the greatest automobile value obtainable anywhere in the world.*

And we have the satisfaction of knowing that the Maxwell Car is as much an outstanding value for quality as for quantity. We are wholly responsible for Maxwell quality. We know that it is built into the car—in our own shops.

Roadster, $580; Touring Car, $595; Cabriolet, $865; Town Car, $915; Sedan, $985.
All prices f. o. b. Detroit. All cars completely equipped, including electric starter and lights.
Canadian prices: Roadster, $830; Touring Car, $850, f. o. b. Windsor, Ontario.

Maxwell Motor Company, Inc.
DETROIT, MICH.

How I Make My "Pay Outs" Pay In

By William Flintzer

I had my delicatessen store on upper Second Avenue, New York, for two years before I fully realized that there are two parties to profit—Pay Out and Pay In.

Profit isn't merely a matter of cash received—it's even more a matter of cash paid out.

You can't always control prices but you *can* control expense.

That is, you can *if you know what your expenses are.*

I didn't know—but I decided to find out.

So I bought a Burroughs Figuring Machine.

The Simplest Kind of Bookkeeping

I keep my own books.

On the back of each "pay out" ticket from the cash register I make a note of what the amount is for. At odd moments I classify these tickets: merchandise bought for cash; merchandise charged; salary; heat and light; rent; furniture and fixtures; and general expense—all are grouped separately.

At the end of the day I list each item on the Burroughs, and total each group.

This machine-printed, accurate list is pasted in a yellow book as the day's record.

These daily totals are added for the month to show the monthly expenses under each division.

I don't guess at anything—I get facts. Monthly receipts are totaled and pasted in a cash book. Then expenses and receipts are compared.

I know each month just what my percentage cost of doing business has been—and my profits are there in plain figures.

In more ways than one the Burroughs Machine has helped me. It relieves me of figure worry. I use it in checking invoices. It prevents mistakes. Above all, it shows me the progress of my business from day to day and year to year.

Figure knowledge has been a big factor in my success. Is it any wonder I wouldn't be without a Burroughs Machine?

A Model for Every Business

Ninety-eight models of Burroughs Machines afford a wide selection. Your banker or your telephone book will supply the address of the nearest of the 170 offices maintained by the Burroughs Adding Machine Company in the United States and Canada.

FIGURING AND BOOKKEEPING MACHINES PREVENT COSTLY ERRORS-SAVE VALUABLE TIME

PRICED AS LOW AS $125

(Continued from Page 54)

but, on learning that neither that particular vintage nor any other was obtainable, he contented his lordly palate with a pint of half-and-half.

When he had finished he announced the intention of taking a liqueur in the bar and gave his host time to spread the tidings of this great condescension before putting in an appearance.

Giving the assembled company a very good evening, he graciously called for a round of drinks. Thereafter he made himself most agreeable, and recounted many anecdotes suitable to the intelligence of his audience.

In the intervals between story-telling he contrived to find out the names and vocations of all present, including some who were not. Thus he learned that everybody in Mary Tavy, with the exception of a certain Mr. Higgery, was engaged in either tending to the soil or raising those beasts which graze upon it.

He put a question as to Mr. Higgery's employment, and from the answer it appeared that this gentleman spent his time in making chairs and tables. Why? No one could tell. He never sold anything. Perhaps he was a bit strange in the head.

"Takes a wunnerful pride in his work," said mine host. "But the poor old chap's a bit low-spirited these days. Told me he could scarce afford to buy wood any more. Mus' be purty short, I think. Used to be in here most every night; but now 'tis only of a Wednesday or a Saturday us ever sees un."

"It is Wednesday night to-day," said Palliser.

"Dessay as you'll see un, then."

Sure enough, a little later on Mr. Higgery put in an appearance and was presented to the spurious Lord Louis with all ceremony.

Palliser was a little cold in his greeting—such coldness as a person of substance should affect when speaking with inferiors; and when Mr. Higgery happened to address him while he was conversing with Ebenezer Hannaford, pony owner, he remarked:

"Wotsay, my good man?" in quite a corrective tone.

It was plain that Mr. Higgery, no less than the others, was impressed by the personality of Mr. Palliser and desired to present himself in attractive colors. He mentioned his own poor skill as a craftsman and begged the nobleman, should he happen to be passing, to step into the cottage and have a look round.

"I'll see about it, my good Higgery," said Palliser; "and I can't say fairer than that."

For two days Palliser, with consummate tact, made no effort to better his acquaintance with the old man. On the morning of the third they chanced to meet and Mr. Higgery raised his hat in response to a curt salutation from the silver-mounted Malacca.

"And how do we find ourselves th' morning, Mr. Higgery?" inquired Palliser.

"A bit down, y' lordship, thanking you kindly. 'Tis the trouble of a small purse and the high prices of wood and tools."

"I perceived you was not yourself, my good man," said Palliser. "But don't take on; there's always a silver lining before dawn."

They conversed in this strain for a few minutes and Mr. Higgery repeated his invitation of before.

"Well, I don't mind havin' a look if your domicile isn't too far off," said Palliser very graciously. "But I must confess to a feeling of lassitood to-day and my feet ache something crool!"

All excitement, the old man ushered his famous guest into his humble abode. Palliser managed everything in a masterly fashion and acted the lord to his own complete satisfaction.

It is true he made one or two little slips of the tongue—as, for instance, his rejoinder when Higgery showed him an exquisite little spider-leg table, and claimed to have made it.

"Yes; did it all myself!" said the old man with justifiable pride. To which Palliser replied "Go on!"—an expression it is doubtful that Lord Louis would have employed.

"Well, my good Higgery," he allowed when he had seen everything, "there's no doubt at all you can turn out delectable furniture. I hope and pray you are never tempted to pass these things off as bein' genuine!"

This sentiment made an immediate appeal to Mr. Higgery, who condemned all furniture frauds as the vilest of offenses. Palliser heartily agreed and spoke feelingly on the beauty of honesty, which, he declared, was dearer to his soul than any other virtue.

They parted on the best of good terms and met again at the bar during the evening. Palliser invited Mr. Higgery to take a glass of something in the privacy of his parlor.

"I've been thinking things over," he said, "and wondering whether you would care to do a piece of work for me."

Mr. Higgery listened attentively while Palliser told a story of a beautiful Queen Anne suite of furniture in his possession. It appeared that his brother, Lord Archibald Marmaduke Lewis, was to be wed in six months' time; and now, in view of the said Archibald's great love for the Queen Anne suite, he—Palliser—had conceived the idea of having it duplicated as a wedding gift. Now would Mr. Higgery care to take on the job?

Mr. Higgery could hardly speak from excitement. He protested that nothing in the world would give him greater satisfaction.

And so it was arranged. The original set he was to copy would be sent down during the forthcoming week. The wood and any other materials he required would be paid for, and he was to receive one hundred pounds as remuneration when the work was done.

"But you'll have to keep your nose to the grindstone, old son—I mean, my good Higgery," said Palliser, by way of conclusion, "because the stuff must be finished in time for the wedding."

Mr. Higgery called heaven to witness that he would work day and night rather than disappoint his noble patron.

Then Palliser wrote to Caleb—and Caleb congratulated Palliser. The genuine Queen Anne set was dispatched to Dartmoor. Old Mr. Higgery rolled up his sleeves and got to work. The Duke of Bethincourt breathed freely for the first time in many days, and the pseudo Lord Louis Lewis returned to Bristol, covered with glory and four new suits, to enjoy six months' idleness, with five pounds a week in his pockets and the prospect of a fat commission when the completed copies were delivered.

We now approach a point in this narrative which owes so much to chance that one hesitates to set it down. It came about in the simplest manner three months after the foregoing scene.

Lord Louis' fiancée, Miss Jill Marston, had to pay a duty visit to a relative in Scotland. Being at a loose end, it occurred to Lord Louis that a week's motor tour through Devon would be a pleasant way of killing time till her return. Accompanied by a friend of his preëngagement days, Mr. Russell Yorke, they covered many a highway and byway of that delightful country.

One day, as they were passing over Dartmoor, Lord Louis observed that his engine was running very hot. Stopping the car, he found that the water in the radiator had reached a low level.

The roof of a cottage showed at the end of a short lane near by, and together they strolled thither to beg a pailful from the well. An agreeable old man opened the door and asked them to step into the hall while he went in search of their need. There was a half-open door a little to the right of where they stood, through which part of a Queen Anne tallboy was visible.

"That's a good piece," said Lord Louis, and when the old man returned with a brimming can he asked permission to have a look at it.

Readily acquiescing, the old man led them into the room.

"Beautiful!" said Lord Louis.

"A fine old piece!" said Mr. Yorke.

Following his usual custom, Mr. Higgery hastened to disabuse their minds on the point of the tallboy's antiquity.

"You can see for yourselves, gentlemen," he concluded; "the polish is hardly dry."

Lord Louis and Mr. Yorke were amazed.

"If this is indeed your work," said the former, "you are the finest cabinetmaker of the age. It is easily the best reproduction I have ever seen."

The old man's face saddened.

"Ah, sir," he replied, "Chippendale was the finest cabinetmaker of his age, and Sheraton of his; but they went beyond that—they had the Idea. I can use my tools as well as either of 'em—better maybe, for 'tis a subtle thing to give a semblance of age to a new piece; but I haven't got the Idea, and never had. If the imagination had gone with the craft King George might have seen his period in furniture as well as any of the others."

They continued talking for a little while, the old man confiding why he never worked for the trade. He told them the piece they had seen was part of a commission he was executing for a very highborn gentleman, whom he could absolutely trust.

Lord Louis would have liked to have seen more, but Mr. Higgery did not invite him into the workshop, where the genuine Queen Anne set was reposing, because he doubted whether his employer would approve. He insisted on walking with them as far as the car, so as to bring back the empty can. Then Mr. Yorke and Lord Louis shook hands with him very heartily and drove away.

Presently Mr. Yorke said:

"Wonderful work!"

And Lord Louis replied:

"Astounding!"

"I am ashamed to confess," said the first speaker, "that I left a finger mark on the wet polish of the tallboy. I simply hadn't the courage to own up."

Lord Louis smiled.

"I doubt whether I should have had," he admitted. "Did it show much?"

"Fortunately not. It was on the narrow edge of the second drawer—the part that closes inside."

"It is curious," said Lord Louis; "but, to the best of my recollection, that tallboy is identical with the one I am buying from Bethincourt."

"Really!" said Mr. Yorke. "But there is not a great deal of variation in the designs. I wonder for whom he is making the copies?"

Three months later Simon Caleb, accompanied by Mr. Palliser, called on the Duke of Bethincourt.

The legalities in connection with the old duke's will had been settled, with results disappointing to a young man of extravagant tastes. The three thousand pounds from Mr. Salmon had long since been dissipated, and the Duke of Bethincourt was quite looking forward to the margin of Lord Louis' check which would be left him after settling up with Caleb.

Up to this point Caleb had paid for everything—Palliser's five pounds a week; Mr. Higgery's fee; and all the materials. The only score the duke had settled was Palliser's original twenty-five pounds. Caleb had protested a bit at first; but his hold on the duke was a fairly good one, and he had no real objection to laying out his capital in so excellent an investment.

CHANDLER

This Great Car Leads All Sixes

THOUSANDS of men and women who would pay hundreds of dollars more for an automobile, if *paying* more would *get* them more, choose the Chandler. They are not seekers after a low price. They desire the best six-cylinder motor regardless of price. They desire a Six because time has shown that a six-cylinder motor, correctly designed, gives all the power and all the *flexibility* of power that any motor can give; that such a motor has the life and snap and "go" they desire; that such a motor is genuinely economical in cost of operation.

So these devotees of the Six choose the Chandler, because through four years of intelligent, conscientious, manufacturing effort, and without radical or experimental changes of design, the Chandler motor has been developed to a point approximating perfection.

Chandler Low Price is Important, Too

While with so many the question of price is of secondary consideration, still Chandler leads in price today quite as distinctly as it has always led.

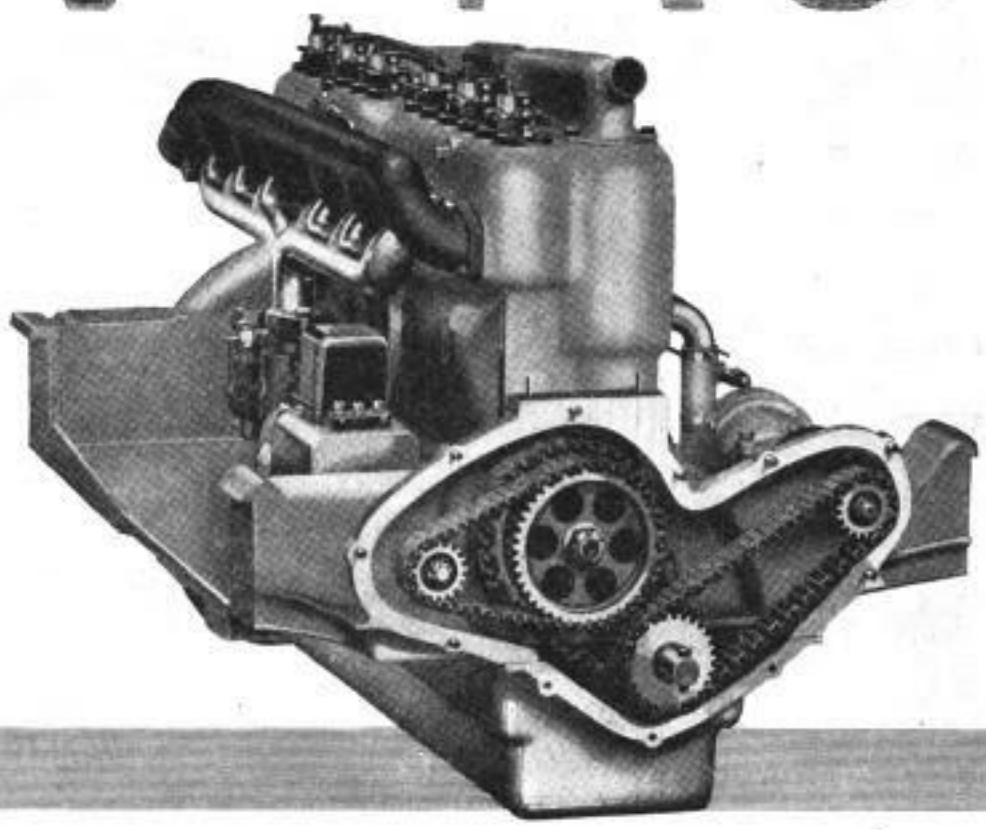
In the face of advanced cost of all materials and labor, the Chandler price is but $100 higher than two years ago. And the car is finer than then. Not a feature has been cut out of it. Much has been added.

And other cars in the Chandler field have advanced as much as three hundred dollars the past year, either because of necessity or opportunity.

The Chandler Company has not been willing to take advantage of a situation which would have permitted price inflation.

And this year we shall probably build and sell more cars than any other manufacturer building a car of even similar quality.

Owners Named it "The Marvelous Motor"



Chandler owners gave the Chandler motor the name by which it is now so commonly called—"The Marvelous Motor." Upon the remarkable performance of this motor, more than upon the beauty of its body design or the economy of its operation, the popularity of the Chandler car has grown. Men in position to *know*, believe it the most highly developed six-cylinder motor in the world. Its power, flexibility, freedom from vibration, its life, its responsiveness, are little less than marvelous. It has been well named.

Motor Refinement is Evident

The refinement of Chandler motor design is evident at a glance. The solid cast aluminum motor base extends from frame to frame and

Digitized by Google

SIX $1395

Because of its Marvelous Motor

insures rigidity of the engine mounting. Upon this motor base, and easily accessible, are mounted all the features of engine equipment. The Chandler crankshaft is heavy and perfectly balanced. Crankshaft and connecting rod bearings are extra large. The cam, pump and magneto shafts are driven by three big silent chains, running in a constant shower of oil. Starting and lighting are furnished by separate electric starting motor and separate electric generator. Ignition is by Bosch high tension magneto.

Built in the Chandler factory, under the constant supervision of Chandler officials, the Chandler motor naturally reflects in its operation, the most capable and careful workmanship, in every detail of its construction.

Wide Choice of Beautiful Bodies

You who demand such a motor as the Chandler demand grace of body design, also, and richness of finish. In its big seven-passenger touring car and graceful four-passenger roadster, the Chandler offers two of the most attractive models ever presented to the public. The popularity of the Chandler Roadster has created a demand never even approached in previous history of the trade. The four-passenger convertible coupé, with seating arrangement similar to that of the roadster, the seven-passenger convertible sedan, and the limousine, seating five in the enclosed compartment, are other models in the Chandler line. All these types of body are mounted on the one standard Chandler chassis.

Seven-Passenger Touring Car, $1395
Four-Passenger Roadster, $1395 *Seven-Passenger Convertible Sedan, $1995*
Four-Passenger Convertible Coupé, $1995 *Limousine, $2695*

The "Meditation" from "Thaïs" is a triumphant song of the soul as played by Thibaud on this new Pathé Record

SOFTEN the lights as you start this wondrous record playing. Let the magic of Thibaud's violin paint pictures for you in the darkness.

See—as Thibaud saw when he played—a vision of radiant *Thaïs*, idol of all Alexandria, beautiful beyond men's words.

See her as she muses—alone—struggling against the strange Power, greater than all earthly things, that has crept in upon her soul—has made her dissatisfied with her wanton life.

Listen to the haunting melody rise to its thrilling climax, then subside to the serene calm that means—*regeneration.*

With ravishing beauty of tone, with thrilling depth of feeling, with the eloquence of one who has sought out the hidden places of the soul, Jacques Thibaud, master violinist, plays this masterpiece of Massenet.

Hear it at the Pathé dealer's near you. Hear also great foreign singers who have never sung here; famous foreign orchestras and bands; foreign musical novelties. If you do not know the address of nearest Pathé dealer, write us.

The New "Professional" Model Pathéphone. Price $125.

PATHÉ FRÈRES PHONOGRAPH CO., 29 W. 38th St., New York City
PATHÉ FRÈRES PHONOGRAPH CO. OF CANADA, Ltd. 6 Clifford Street, Toronto, Canada

NEW Pathé Double Disc RECORDS for FEBRUARY 1917

THE NEW EXCLUSIVE THIBAUD RECORDS

THE exquisite music of Jacques Thibaud is familiar to countless Americans who prefer art in its fullest sense to mere pyrotechnics.

60048	Thaïs (Massenet) Meditation Aria for the G String (Bach) Jacques Thibaud, Violinist,	Piano Accompaniment	29 C/M (about 12 in.) $2.00
60046	Melody in F (Op. 3, No. 1, Rubinstein) Piccolini (Guiraud) Jacques Thibaud, Violinist,	Piano Accompaniment Orchestra Accompaniment	29 C/M (about 12 in.) $2.00

(To be issued early in February)

NEW OPERATIC SELECTIONS
By Muratore, Didur and De Cisneros

MURATORE is the success of the Chicago Opera season. His first appearance as *Canio* in *Pagliacci* was the occasion of a great demonstration. For this month's Pathé list, Muratore has sung, with all the richness of his superb lyric tenor, the pathetic "Vesti la giubba" (On with the Play), which closes the first act of *Pagliacci*. He also sings the gay "La donna è mobile" (Woman is Fickle) from *Rigoletto*. This double record is a treat for music lovers.

64005	I Pagliacci (Leoncavallo) "Vesti la giubba." Sung in Italian. Rigoletto (Verdi) "La donna è mobile." Sung in Italian. Lucien Muratore, Tenor,	Orchestra Accompaniment	29 C/M (about 12 in.) $4.00

TO be able to offer exclusive recordings by the famous basso of the Metropolitan, Adamo Didur, is a great privilege, as well as a striking tribute to Pathé reproduction. Didur this month uses his remarkable voice with telling effect in the popular "Porter's Song" from *Martha* and a famous *Ernani* aria. Do not miss hearing this double record.

62027	Martha (Flotow) "Canzone del Porter" Ernani (Verdi) "Infelice e tu credevi" (Unhappy One) Adamo Didur, Basso,	Orchestra Accompaniment	29 C/M (about 12 in.) $2.50

THE famous selections offered by Mme. De Cisneros this month have never been sung more strikingly before. The power and richness of this great mezzo voice and the warmth of color in the orchestral accompaniment are wonderfully reproduced.

62023	Le Prophète (Meyerbeer) "Ah! Mon Fils" Martha (Flotow) "The Last Rose of Summer" Eleonora de Cisneros, Mezzo-Soprano,	Orchestra Accompaniment	29 C/M (about 12 in.) $2.50

NEW BAND AND ORCHESTRA NUMBERS

A NOVELTY is offered this month in the waltz from Richard Strauss' opera, *The Rosenkavalier*. This waltz, together with a new intermezzo by Onivas, is played with great feeling and resourceful orchestral effect.

20110	La Coquette (David Onivas), Intermezzo. The Rosenkavalier (Strauss), Waltz.	Pathé Concert Orchestra Imperial Symphony Orchestra	27 C/M (about 10½ in.) 75c

THESE two characteristic numbers, with xylophone and bird effects, played by the Pathé Military Band, are going to be great favorites with lovers of novelty.

35090	In Tunis (Pericat), Polka with Xylophone Effects, Quail and Cuckoo (Fleche), Pastoral Polka,	Pathé Military Band Pathé Military Band	29 C/M (about 12 in.) 85c

NEW WHISTLING SOLOS

HERE are two more novel selections, whistling solos by a man who stands alone in his particular art, and recorded with great naturalness on this Pathé disc.

20119	Sphinx Valse (Francis Popy) Chaffinch Mazurka (Julius Becht) Joe Belmont, Whistling Soloist,	Orchestra Accompaniment	27 C/M (about 10½ in.) 75c

THE NEWEST POPULAR MUSIC

PATHÉ has captured another unique artist in Miss Ruth Roye, who is one of the best-known headliners in vaudeville. For the new Pathé list Miss Roye has recorded two of her favorite songs. Other selections this month cover the range of the most popular hits.

20104	When They Go Through a Tunnel (Lewis, Kalmar and Cottler) Ruth Roye, Soprano,	Orchestra Accompaniment	27 C/M (about 10½ in.) 75c
	How's Every Little Thing in Dixie? (Yellen and Gumble) Joe Remington, Baritone,	Orchestra Accompaniment	
20105	Since Maggie Dooley Learned the Hooley Hooley (Kalmar, Leslie and Meyer) Ruth Roye, Soprano,	Orchestra Accompaniment	27 C/M (about 10½ in.) 75c
	Take Me To My Alabam' (Dillon & Tobias) Joe Remington, Baritone,	Orchestra Accompaniment	
20106	Hello! I've Been Looking for You, from N.Y. Hippodrome Show (Golden and Hubbell) Louis J. Winsch, Baritone,	Orchestra Accompaniment	27 C/M (about 10½ in.) 75c
	Naughty! Naughty! Naughty! from "Show of Wonders," Winter Garden (Goodwin, Tracey and Vincent) Louis J. Winsch, Baritone,	Orchestra Accompaniment	
20115	Hawaiian Sunshine (Wolfe, Gilbert and Morgan) Sam Ash, Tenor, with Chorus	Louise and Ferera Hawaiian Orchestra Acc.	27 C/M (about 10½ in.) 75c
	Samoa (Halsey K. Mohr) Joseph Phillips, Baritone,	Louise and Ferera Hawaiian Orchestra Acc.	
20100	There's a Little Bit of Bad in Every Good Little Girl (Grant Clarke and Fisher) Justice Lewis, Baritone,	Orchestra Accompaniment	27 C/M (about 10½ in.) 75c
	My Skating Girl, from New York Hippodrome Show (Golden and Hubbell) Justice Lewis, Baritone,	Orchestra Accompaniment	
20080	Mississippi Days (McDonald and Piantadosi) Peerless Quartette,	Orchestra Accompaniment	27 C/M (about 10½ in.) 75c
	Whose Pretty Baby Are You Now? (Kahn and VanAlstyne) Roy Randall, Baritone,	Orchestra Accompaniment	

NEW PATHÉ "DE LUXE" DANCE RECORDS

THE Van Eps Trio, the Pathé Dance Orchestra and the American Republic Band present new selections which are full of that swingy rhythm, which immediately excites dance desire. The "Dance o' the Dollys" was written especially for the Dolly Sisters for use in their comedy, "His Bridal Night."

20107	Hawaiian Blues (Stanley Murphy) Fox Trot	Van Eps-Banta Trio	27 C/M (about 10½ in.) 75c
	On the Dixie Highway (Leo Friedman) One- or Two-Step	Pathé Dance Orchestra	
20041	Dance o' the Dollys (Milton Ager) Fox Trot	American Republic Band	27 C/M (about 10½ in.) 75c
	Volplane Waltz (Burnett)	Pathé Dance Orchestra

(Continued from Page 57)

The following figures indicate the future divisions of Lord Louis' check for two thousand pounds:

The Duke of Bethincourt—after paying Caleb forty per cent	£1200
Caleb—after paying all expenses	390
Palliser—twenty-six weeks at £5 a week £130	
Twenty-five per cent on Caleb's profits 130	260
Higgery—whose beautiful work made the above profits available	100
Materials, and so on	50

"Everything is ready, Your Grace," said Caleb.

"Excellent!" said the duke.

"It will have to come back in two journeys," said Palliser, "because the motor lorry will only hold half. I didn't like to go to furniture people for a bigger one, for fear they might talk. Question is which lot you want back first."

"The reproductions," replied the duke. "We can then get our client round to see them and pack them off before the other lot comes in."

Three days later Mr. Higgery's reproductions were arranged in the same order as the originals were when Lord Louis had first seen them. The Duke of Bethincourt was delighted.

"They are marvelous!" he exclaimed. "I will let our client know that he can have them at once. You, Mr. Palliser, might return to Dartmoor to-morrow to superintend the loading of the genuine set. As soon as I have received the check I will send you yours, Mr. Caleb."

In response to a letter from the Duke of Bethincourt, Lord Louis drove to the Avenue early next morning. He instructed his chauffeur to bring up the large luggage car and to take the gardener with him to help pack the furniture.

The Duke of Bethincourt met him in the Queen Anne Room and spoke feelingly about his sorrow at parting with the set. Lord Louis paid the check, pocketed his receipt and drove away, the larger car, containing the furniture, following behind.

Arrived home, he had all the pieces placed in a small room on the ground floor, which had been cleared for their reception. When this was done he lit a cigarette and feasted his eyes on his new acquisition, and felt good.

He was so employed when Mr. Russell Yorke put in an appearance and joined in the examination. He expressed the greatest admiration, pulled out the drawers of the writing table, and generally had a field day among the different pieces. Indeed, had it not been for his irritating habit of fussing about with things it is probable this story would never have been told. He was prying into the second drawer of the tallboy when he gave an exclamation of surprise.

"This is odd!" he said. "You remember my telling you I had made a finger mark on that tallboy the old fellow on Dartmoor showed us?"

"Well?" said Lord Louis.

"There is a mark in exactly the same place on this one."

Lord Louis crossed and examined the spot to which his friend was pointing.

"How very curious!" he said, and a puzzled expression came over his face. "Yorke, would you oblige me by wetting your thumb, rubbing it on your boot, and making an imprint on this piece of paper?"

When this was done Lord Louis compared the two carefully. Then he straightened up and looked very serious.

"That young blackguard has swindled me," he quietly observed. "I have paid two thousand pounds for an imitation set."

Mr. Yorke whistled.

"What are you going to do?" he asked.

"I am going to Dartmoor to have a little conversation with our old friend," he replied. "I shouldn't wonder if there is trouble ahead for somebody before very long."

Lord Louis Lewis' motor car entered the village of Mary Tavy and drew up before Mr. Higgery's door at four-forty-five the same afternoon.

Receiving no answer to his knock, he walked round to the back of the house. Across the yard stood a barn, with wide-open doors, into which Lord Louis stepped. He had hardly crossed the threshold when he caught sight of something that caused him to catch his breath violently. Arranged along one wall of the barn was the genuine set of Queen Anne furniture. He was moving forward when he heard the sound of a step behind him, and, turning round, he saw the old man.

"Eh! Why, if it isn't the gentleman who was down here last spring!" exclaimed Mr. Higgery.

"Sir," said Lord Louis coldly, "I should be glad of some private conversation with you."

"Come on, then," said Higgery. "My work's done. We'll step into the house."

They had entered the little sitting room before Lord Louis spoke again.

"Last time I was here, Mr. Higgery," he said—for the old man had mentioned his name as they crossed the yard—"you assured me you were an honest man."

"And so I am. What do you mean?" demanded Higgery with some heat.

"You said you were copying a set of furniture for a titled gentleman. Will you be good enough to tell me his name?"

"Certain'y! There's no secret about it. His name's Lord Louis Lewis."

"Ha! Then you knew these imitations were coming to me."

"Be you Lord Archibald Marmaduke Lewis, then?"

"I am Lord Louis Lewis."

"That you're not," exclaimed Higgery, "for 'twas with Lord Louis I made the arrangements!"

"Come, come, sir!" said Lord Louis sharply. "This is nonsense. I have never done business with you, directly or indirectly. Please be good enough to explain what you are talking about."

"I will," replied Higgery. "No man shall take away my character."

And he launched into a description of how he had met the spurious Lord Louis and consented to work for him, because he was a nobleman and a person to be trusted.

"I am afraid," said Lord Louis, "you have been shamelessly imposed upon. If you will listen to me I will explain how."

Systematically he reconstructed the details of the swindle.

Old Mr. Higgery shook with indignation.

"Sir," he said, "if your words are true it is the angriest man alive you see before you. You shall have your chance of proving them, for Lord Louis himself is coming here to-night to see the genuine set packed in the van for to-morrow's journey."

"Then, with your permission, I will wait till he arrives."

It was a quarter to six when the sound of Mr. Palliser's footsteps was heard in the lane, followed immediately by a jaunty knock at the door.

Mr. Higgery admitted him with every show of respect, and invited him to enter the parlor. A gentleman was sitting there, who rose as Palliser came in. The pink light of the setting sun fell on his face.

"Good Heavens! It's Palliser!" exclaimed Lord Louis.

Palliser turned as white as a sheet.

"Lord Louis Lewis!" he gasped.

That was sufficient for Mr. Higgery. With a bound, he seized Palliser by the throat and flung him sideways against the table. Under the shock the table collapsed and a pot of geraniums crashed to the floor beside the struggling pair. Mr. Higgery's disengaged hand came into contact with the main stem of the plant. He gripped it and brought down the mass of earth and roots into Palliser's open mouth. Then Lord Louis intervened and wrenched the combatants apart.

"Come, come!" he said. "Let us discuss this matter temperately."

Palliser rose from the floor, spitting out mold and trying to extricate a large piece from his eye.

"My lord," said he, "how did you come to be mixed up in this affair? When Caleb asked me to take a hand he swore solemn you had nothing to do with it."

"You were not aware these imitations were for me?"

"I swear I wasn't!" said Palliser.

"Then why," demanded Lord Louis, "did you masquerade under my name?"

Palliser shuffled uneasily.

"He wouldn't work for the trade," said he, jerking a thumb toward the indignant Mr. Higgery; "and as I was using your lordship's manner I made so free as to borrow the title as well."

Lord Louis concealed a smile.

"The penalty for that offense is very severe, Mr. Palliser," he said.

"Your lordship is always generous," he faltered.

"Silence!" said Lord Louis. "Do not speak again unless I address you. I understand a van is calling here to-night for the genuine set, which is to return to Bristol to-morrow." Palliser nodded. "Then, Mr. Higgery, will you please superintend the loading up and let me know, at the Inn, what time they propose to start in the morning? Palliser will come with me."

Taking Palliser's arm, he led him to the waiting automobile, which was concealed farther up the lane. As they drove down the village street they met a covered motor lorry.

"Is that the van?" Lord Louis asked.

"Yes," said Palliser.

Lord Louis addressed the driver.

"You will load up and be ready to start by five in the morning," he ordered.

"Very good, sir," said the man.

"Thanks," said Lord Louis, and started his car again. "By leaving at five, Mr. Palliser, we should be at Bristol in time for a late lunch. You have a room at the Inn, I suppose?"

"Yes, my lord."

"And a parlor too, maybe?"

"Yes, my lord."

"Good! I will share both with you. Your title will make it easy to persuade the landlord to put up an extra bed. By the way, I have no intention of destroying the illusion you have created among these simple folk; so I beg you to sacrifice none of the manner which, I understand, you have patterned from me."

Together they entered the Inn and the private parlor beyond the bar.

"If you will sit away from the door," said Lord Louis, "I will ask you to excuse me while I write a letter. Have one of these cigarettes—I am assured Lord Louis smokes no other."

The letter he wrote was addressed to Mr. Russell Yorke and contained some very minute instructions. Inside the envelope he placed a second letter, sealed, but addressed to no one.

"The last post for the first delivery at Bristol leaves here at seven, Mr. Palliser. To make quite sure this letter shall arrive in time we will register it and have it expressed. Will you accompany me as far as the post office?"

As they were walking back through the village Palliser plucked up courage to ask:

"My lord, what are you goin' to do with me?"

Lord Louis gave his arm a friendly pressure.

"I shall be guardian of your slumbers for one night," he replied. "In the morning you will occupy a seat in my car. We shall follow the furniture van to Bristol, where you, the driver and myself will lunch together at the King's Head. After that, Mr. Palliser, I think it unlikely we shall meet again."

"Did you pay for the imitation set, my lord?" asked Palliser tentatively.

"Alas, yes!" replied Lord Louis.

It may be imagined that to share a bedroom with a nobleman of such integrity as Lord Louis Lewis would have been most gratifying to a person of humble origin; but Palliser has since confessed that the night was the worst he ever spent. It is probable, had Lord Louis shown any disposition to sleep, Palliser would have left him in undivided possession of the room. But Lord Louis did not sleep; he sat up, smoking cigarettes and making the tenderest inquiries whenever his stable companion showed a disposition to move.

Shortly after two the following day a furniture van and a motor car entered the outskirts of Bristol. Lord Louis drove abreast of the van and said to the driver:

"We will leave the cars at Curzon's Garage while we have lunch. We are well ahead of time and you can deliver the furniture at the duke's during the afternoon."

They entered the garage a few minutes later.

"We shall be back in about an hour," said Lord Louis to a man in a suit of dungarees. "Give me your arm, Palliser. The King's Head is only a moment's walk."

As they passed through the doors of the hotel the motor lorry they had left at the garage was winding up the hill toward Clifton. Lord Louis' chauffeur was at the wheel and Mr. Russell Yorke sat beside him.

Lord Louis made himself more than charming at lunch, and fully an hour passed before they made their way back to the garage.

Palliser could not for the life of him fathom what Lord Louis' game had been. There was the van, with its contents, in exactly the same position they had left it. It would have taken a very keen eye to detect any difference between Mr. Higgery's copies and the originals, and Mr. Yorke had paid particular attention to Lord Louis' written instructions with regard to reloading the van. Even a wisp of straw which had projected beneath the foot of the chest of drawers was in exactly the same place after the transposition had taken place as it had been before.

"Good-by, Mr. Palliser," said Lord Louis, climbing into the driving seat of his motor car. "I trust so much of my society has not proved irksome."

He took a sovereign from his pocket and gave it to the driver of the van, then engaged his gears and was off.

Palliser returned home, sat on the bed, and wondered what had happened—or what was going to happen. Lord Louis met Mr. Yorke in the hall of his house.

"Very nicely done!" he applauded.

"It was a happy thought of yours," Yorke said. "I venture to say I carried it out in the spirit as well as the letter."

"The letter," said Lord Louis, "I trust, you placed in a drawer of the tallboy which has gone to His Grace the Duke."

Mr. Yorke nodded; then pointed to where the genuine set of Queen Anne was lined up in the hall.

"You have won," he said; "and I congratulate you."

"Yes," said Lord Louis; "but, after all, I have got what I paid for."

The Duke of Bethincourt was standing by a window when the van containing the furniture drew up.

"Don't unload," he said. "I want you to take it round to 37, The Vale."

Mr. Edgar Salmon, of 37, The Vale, cast a roving eye over his new possessions.

"Fine!" he remarked.

He pulled out the drawers of the writing table and the tallboy, and in one of the latter he came upon an envelope. Being addressed to no one, he broke the seal. The letter ran thus:

Dear Bethincourt: Dissipation, they say, rots the intelligence; I fancy this must be the case with you, as otherwise you would hardly have been so ill-advised as to attempt to foist upon me a set of reproductions.

The genuine Queen Anne suite is now in my possession; and I return you these excellent imitations, with every expression of contempt for your dishonorable failure.

I urgently suggest that you wind up your affairs in England and seek a different portion of the atlas for the exercise of your unique talents. A refusal to do this will result in having to face the public reproaches for your action.

Yours faithfully,
LOUIS LEWIS.

Mr. Salmon thrust the letter into his pocket, grabbed a hat, and rushed round to the duke's abode.

"You young swine!" he shouted. "So you thought to do the crooked on me, eh?" And he flung the letter on the table.

The Duke of Bethincourt was very white about the lips when he had finished reading.

"How—how did he change the stuff over?" he gasped.

"Damn that!" yelled Mr. Salmon. "Where's my three theousand peounds?"

The money was gone; but Mr. Salmon salvaged Lord Louis' check from the wreckage and stuck to the imitation set, which thereby cost him a thousand pounds, for all it was made for a hundred.

Having received no letter from the Duke of Bethincourt, Simon Caleb presented himself at the house in the Avenue the following afternoon. All the blinds were down and there were three cabs laden with servants' luggage at the door.

"Where is the duke?" he asked of a lady who had once been the cook.

"Went abroad this mornin'—all in a hurry," she replied.

That was all the information Caleb could obtain. No address—nothing! People who saw him returning from the Avenue thought the poor old man was quite mad.

Palliser lay low for a week; then curiosity and avarice got the upper hand of his discretion. Simon Caleb looked up with an awful expression as he entered the shop.

"Simon," said Palliser, "what about my commission on that Bethincourt deal?"

The Famille Verte jar which Simon Caleb threw caught Mr. Palliser full on the side of the head.

The local newspapers, commenting on the wedding of Lord Louis and Miss Jill Marston, observed that the bride's distinguished relative, the Duke of Bethincourt, was not present. He had gone abroad for an indefinite period.

Among the beautiful wedding gifts, they said, was a Queen Anne bedroom suite, at one time the property of that sovereign herself, from the bridegroom to the bride.

In firearms as in everything else, the one thing that everybody understands and respects is *service*.

HENCE the note of peculiar regard that comes into every sportsman's voice when he speaks of the Remington UMC shotguns and rifles.

It is a wonderful series, this line of Remington UMC Sporting Arms—so well thought out that no matter what branch of the sport a man follows, he can go to any one of eighty thousand dealers and get exactly the arm for it in Remington UMC.

Whether it is the Autoloading Shotgun or Rifle, the Pump Gun, the Slide-action Rifles in all calibers or the little single shot .22's—these arms embody a mechanical skill and special knowledge found nowhere else in the sporting arms world.

The up and coming dealer sees the signs of the times.

He may still carry a few odds and ends for certain old-line customers. But more and more he is cleaning up his stocks—concentrating on the Remington UMC arms and ammunition that the progressive sportsman wants—displaying the *Red Ball Mark of Remington UMC*, the sign of Sportsmen's Headquarters in every town.

REMINGTON UMC AMMUNITION

"Arrow" and "Nitro Club" *(smokeless)*—the steel-lined Speed Shells. Made in a full line of gauges, in standard loads: all proven and popular smokeless powders.

"New Club" *(black powder)*—the "old reliable yellow shells" for fifty years. Made in a full line of gauges, in standard loads: all proven and popular black powders.

Metallic Cartridges in all calibers and loads, for every standard make of rifle, pistol and revolver used in the world of sport.

The Remington Arms Union Metallic Cartridge Co.

Largest Manufacturers of Firearms and Ammunition in the World

NONE BUT THE BRAVE

By Philip E. Hubbard

NUMBER 047316, Private Steevens, A., formerly of the Line, and now, by the grace of need, of the Mechanical Transport, who is a cunning worker of metals, gave a last shrewd blow to the glowing steel, tink-tinked his hammer twice on the face of the anvil, lifted the once crumpled, now straightened axle on which he and his "striker," Private Drake, had been toiling for the last twenty minutes, squinted along its length and, being apparently satisfied with its appearance, laid it aside to cool.

I stop my work and stroll over to the forge while Private Steevens busies himself with preparations for the manufacture of a "Souvenir," such as he is wont to turn out in his spare time.

From odd pieces of Hun shell, aluminum nose rings, or cases of French .75's, he makes the most engaging ornaments; and, provided he uses no British cartridge or shell case, and so keeps within the letter of the law, I have nothing to say against his doing so.

He is a wizard with metals. I have seen him draw down a most unpromising chunk of German steel, once part of a shell, into a fine rod, and of it fashion a most ornamental toasting fork. And I remembered that the Padre attached to our Field Ambulance had asked me to remind my craftsman that he had promised a replica of this fork for the use of the Church Militant.

Now the first fork had taken about four hours of Steevens' spare time; so I was a little surprised, on placing my order, to see my smith turn to a corner of his forge and from it produce a second fork, even more elaborate than the first.

"You've been pretty quick over this one," I remarked.

I had a momentary suspicion that Private Steevens must have been making souvenirs in the forbidden hours of the day's work; but reflection told me that this was unfounded, since I had not left the camp that day. And, to do my smith justice, it must be said that he is punctilious in his obedience.

Private Steevens solemnly, but quite respectfully, shut one eye.

"Can yer keep a trade secret, sir?" he asked.

"Yes—if you wish to confide one to me."

The Ingenuity of Mr. Nickalls

"I finished 'arf a dozen o' these 'ere forks larst night, arter I finished that one fer yer, sir."

"Half a dozen! But the first one took you four hours."

"Ho, yes, sir; but it wos the drorin' aht took orl that time."

"But isn't this drawn out?"

"Yes, sir; to a cert'in hextent—but it ain't made aht o' shell."

"Then what is it?"

"D'yer remember that time at Eastoutre, sir, w'en we run short o' steel an' couldn't get none, an' 'ad them brackits ter make—an' yer found the church railin's wos all good wro't iron, sir?"

"Yes; what of it?"

"Well, sir, we used up abaart 'arf one side o' the fence making up them brackits fer the cars, an' it seemed a pity ter leave the job 'arf done; so I 'ad the rest o' the rails aht an' brought 'em wiv us w'en we moved, sir."

"But this is something rather like a swindle, Steevens."

"W'y, sir? The Padre won't never know it ain't made aht of a nice bit of 'Un shell w'at 'as tore a poor British soldger all ter bits. 'E fair makes me sick, sir!—no offense ter yer, sir—the questi'ns 'e arsks abaart these 'ere sooveneers: Am I sure this 'ere bullet wos the one w'at went through the 'Un's stummick? or, Did I realy get that bit o' shell aht o' the lootenant's cranyhum? 'E's a fair vampire, 'e is, wiv 'is 'orrors."

"Oh, well," I said; "it's none of my business—provided you don't go pinching the government stuff for your fakes. I shall never believe in your souvenirs again, though."

"W'y not, sir? I ain't never sold yer a fake; I ain't lookin' fer trouble, sir. An' this is fair tradin'—stan's ter reason, sir, I couldn't make a profit on me work if I 'ad ter spend four hours on every sooveneer—I ain't got so much spare time as orl that, sir. Besides, yer mark w'at I sez: in anuvver six munfs there'll be factories up, an' workin' overtime, puttin' aht 'undreds an' thousan's o' sooveneers o' the war w'at ain't never been nearer a battlefiel' than Birmingham."

"Very likely," I replied. "We live in a commercial age."

"Ye're right, sir. Yer'd 'ardly believe, sir, the numbers of men w'at's practicin' their trades an' gorn inter business 'ere in Flawnders! There mus' be thousan's of 'em, one way an' anuvver. Fer instance, there wos a bloke down Lillers way, workin' on the 'orspital barges—ever see 'em, sir?"

I was able to reply in the affirmative, and Private Steevens continued:

"Yer remember that woopin' great canal w'at runs from Lillers down ter G. H. Q.? Well, this bloke—Nickalls, 'is name wos—wos skipper o' one o' the tugs they use ter tow the 'orspital barges wiv, an' 'e wos carstin' abaart fer suttin' ter do in 'is spare time. An' one day a farmer bloke, w'at 'ad a farm close by the canal, comes an arsks 'im if, nex' time e' goes down ter G. H. Q. wiv a string o' barges, would 'e mind 'avin' a small scow, w'at belonged ter the farmer bloke, tied on be'ind an' towin' it down, an' bring it back empty nex' time 'e come up?

"Well, this bloke, Nickalls, 'e wosn't doin' any free trawnsport fer no French blokes, though the canal wos, in a way, the French blokes' own country; so 'e makes a arrangement wiv 'im ter tow the scow down an' back fer ten francs—five down an' five back—an' ter drop it at the wharf down there fer a pal o' the farmer's to unload an' take the stuff ter market. An 'e done it ter rights, an' no questi'ns arsked—nobody 'oo's a landsman ever does know w'ether things is right or wrong on any kind o' waterman's job; an', any'ow, the Naval Reserve bloke w'at commanded the barges didn't know nothink abaart boats, bein' a serliciter, or somethin', w'en there wosn't no war.

"So Nickalls, 'e sees as 'ow 'ere's a way o' makin' a bit on the quiet; an' 'e requisitions a ole barge w'at didn't seem to 'ave no owner jus' then—probably servin' wiv the French Awmy—an' in 'is spare time 'e paints er the same as the 'orspital barges, an' paints 'Stores' on 'er bow an' stern. An' 'e makes an arrangement wiv the farmer blokes round abaart ter cart all their stuff down ter G. H. Q. for 'em. The farmers wos at their wits' end ter know 'ow ter get their stuff carried, becos' the railroads wos all 'ung up wiv troop traffic, an' the French bargees 'ad gone aht o' business ter go scrappin'; an' Nickalls, 'e gets a fair monopoly o' the job.

"'E 'ad ter take a partner in down at G. H. Q., becos' o' gettin' the stuff unloaded; but 'e 'ad the sense ter go ter one o' the French blokes down there an' take 'im as a partner. An' Nickalls useter drop the stores barge at a wharf jus' outside the town on 'is way down, an' by the time 'e come back on the return trip the French bloke 'as the barge ready ter sling a line ter Nickalls, an' 'e tows 'er up ag'in, an' nobody ain't none the wiser."

Lending a Helping Hand

"'E an' the French bloke wos makin' a pot o' money aht o' the business w'en I come away—pretty nigh all profit, yer see, w'at wiv our gover'mint providin' the tug an' payin' fer the coal. They didn't pay no lock dues on the canal, neither, bein' 'orspital barges; the on'y out-o'-pocket expenses wos squarin' the bargee on the last barge ter make the line fast an' cast orf at the right place; an' 'e wos a simple sort o' cove w'at 'adn't got any ideas beyond a gallin o' beer."

"But suppose somebody had asked questions and found out?"

"Serpose somebody 'ad started ter arsk questi'ns o' Rockefeller w'en 'e started in business? 'E'd 'ave 'ad 'is tale ready ter pitch; an' so 'ad this bloke, Nickalls. E'd on'y gotter say as 'e didn't know there wos any 'arm in givin' the French farmers a 'elpin' 'and on account o' the entong cordial; an' orl as would 'a' been said would be 'Don't do it any more!' At the worst 'e'd 'ave 'ad ter close down the business; an', as it wos, 'e wos doin' so well that 'e reckoned that if the war on'y 'ung on fer abaart five years 'e wouldn't 'ave ter work any more so long as 'e lived."

"Still," I said, "that's rather an exceptional case."

"I dunno, sir," said Private Steevens, filling his pipe from my offered pouch. "There wos anuvver bloke up 'ere that run quite a big business openin' a shop w'at didn't belong to 'im. Yer reckollec', sir, arter Wipers was shelled aht, all the people cleared aht o' this town for a time, becos' it looked mos' remarkable as if the 'Uns'd start on it next?"

"Yes; I remember—it was deserted for nearly six weeks."

"That's right, sir—it was; an' this bloke wos put in on perlice dooty, an' found 'isself a billet in a little shop on the Square. W'en things quieted down a bit an' troops begun ter come through ag'in, this bloke sees 'is chawnce ter do a bit o' business; so one night 'e goes round on perlice dooty an' collects all the likely stuff 'e can lay 'is 'ands on from other shops—seegars an' fags, an' note paper an' fag papers, an' anythink w'at 'e knew our chapses'd be likely ter buy. An' w'en 'e'd got the shop stocked up proper 'e opens the shutters one mornin' an' sticks up a big card, w'at 'e'd written, ter say the shop wos open; an', sure enough, there wos a fair run on the bank by Tommies w'at thort they could get things cheap from the hunsuspectin' Belgi'ns.

Smith's Private Graft

"They didn't know so much abaart the Belgi'ns as they does now; but, instead of a poor Belgi'n refugee, all they finds is this perlice bloke, sittin' in the shop, 'oo tells 'em the owner 'as just run aht fer sutthink, but if they wants a packet o' cigarettes, they're a franc a packet; an' 'e'll take the money an' give it ter the woman w'en she comes in. 'E even sold some seegars to 'is own orficer—the Town Major—and told 'im the same tale an' never got so much as serspected—I always did think they picked orficers w'at wos soft in the 'ead fer Town Majors—beggin' yer pardon, sir, for speakin' so free.

"Well, this bloke told me 'e took fifteen pounds the first week an' a bit more than that the next, an' no expense w'atever! 'E 'ad to close down the third week becos' the people begun to come back, an' 'e couldn't take a chance on the real owner turnin' up. 'Owever, 'e made a matter o' thirty pounds aht o' nothin' at all—w'ich ain't so bad."

"That is another exceptional case," I objected.

"Well, sir, there wos a bloke—Smith, 'is name wos—used ter be howner of a garage down Isleworth way—an' w'at a garage bloke don't know abaart makin' charges ain't worth considerin', as yer know, sir. 'E was a 'eadquarters dispatch rider on a motorbike down near Bethune, 'oo made quite a tidy bit by collectin' charges on every telegram 'e delivered."

"Oh, nonsense!" I said. "You don't expect me to believe that?"

"W'y not, sir? It wos w'en the Territorials an' the first lot o' K.'s come aht; an', as yer know, sir, most of 'em 'adn't been long enough on the job to know much abaart the awmy, or to know that the awmy don't pay fer anythink if it can 'elp it. 'E got the idea, first, from a bran'-new second lootenant, 'oo wos so pleased at gettin' a real dispatch on a real battlefiel' all to 'isself, that 'e up an' gives this bloke, Smith, a couple o' francs an' tells 'im to get a drink. That gives 'im the nod; an' for abaart a month 'e collected anythink from a franc up to five francs fer what 'e called porterage, an' the poor blighters paid up like lambs.

"'E might 'a' been doin' it now, on'y 'e made a bloomer an' tried ter get three francs' pay-on-delivery charge aht o' w'at 'e thought wos a Terrier second lootenant just aht from 'ome. 'E wos, too; on'y w'en 'ee wos at 'ome 'e 'appened to be a feenanceer on the Stock Exchange, 'oos name wos Ikestein; so, o' course, 'e ain't payin' away no three francs without a argyment about it. An' w'ile they wos flappin' their mouths abaart it up comes a wanderin' general an' wants ter know w'at it's all abaart; so Smith collects a court-martial an' gets abaart fifty-six days' Field Punishment, Number One, instead of 'is three francs. Serve' 'im glad, too!"

"Still, that's another exceptional case, Steevens. The ordinary man in the ranks doesn't get these opportunities."

Marrying for a Living

"I dunno, sir; 'e can always marry fer money. There's blokes aht 'ere marryin' fer a livin', an' doin' well at it."

"Marrying!" I exclaimed, aghast.

"Yes, sir. W'y not? You often 'ears o' English lords marryin' rich Hamerican hairesses—w'ere's the 'arm in a Swaddy doin' the same? There wos a bloke in my old battalion w'at 'ad spent quite a lot of 'is time gettin' married. 'Owever, 'e overdid it w'en we come aht 'ere. Yer reckollec' me tellin' yer 'ow we 'ad a munf's rest back at ——, be'ind the Lines, sir?"

"Yes."

"Well, the very fust day we wos back there, Bill—I won't tell you 'is other name—'e spots a little caffy doin' a roarin' trade wiv our chapses; so 'e goes in ter 'ave a drink. The howner wos a widder woman 'oos 'usban' 'ad got 'isself killed at the start o' the war, an' Bill sees as 'ere's a chawnce fer a good 'ome in France. So 'e makes the runnin' wiv the widder, an' before we'd been there a fortnight 'e puts up the banns, or w'atever it is you does in this country, an' 'e marries 'er. Big, lusty wench she wos, too.

"Well, they lives very 'appy fer abaart a fortnight; an' the caffy does a bigger trade than ever on account of all our blokes goin' there w'enever they could, in the 'opes that Bill'd stand 'em free beer, like 'e did the night 'e got married—on'y 'e never lorst 'is 'ead ag'in like 'e did that night; an' then we wos pushed up ter the Front Line ag'in.

"Then comes the big gas attack, an' our Line gets pushed back a lot, an' that brings the village w'ere Bill's caffy wos within range o' the 'Uns' shellin'; but, o' course, Bill didn't know abaart that. So, w'en things quiets down a bit, Bill manages to get a pass to go an' see 'is brother in anuvver ridg'mint—w'at's been dead abaart five years, as a matter o' fact—an' 'e goes down ter this villidge an' finds the 'Uns 'ad been shellin' it an' 'ad registered one slap on 'is caffy.

"'E wos fair upset abaart it. Yer see, 'e wos fond o' the widder, an' the caffy 'ad looked like bein' a good thing fer 'im all the time 'e wos aht 'ere; an', as it wos, 'e not on'y wasted a day's pass, an' dug up 'is brother fer nothin', but 'e 'as all the trubbel o' goin' down ter this place only ter find that one blessed 'Un crump 'as made 'im a French widder man an' knocked 'is caffy out o' business at one go."

"It doesn't seem to be quite the game," I said.

"I dunno, sir. It'll bring a bit o' new blood into the country. They'll get to hunnerstan' English a sight better'n w'ot they do now. In abaart fifteen years' time, w'en the families is growed up a bit, yer'll 'ardly 'ave to shout at 'em at all to make yerself hunnerstood, like you do now. An' then, look at the flip it's goin' ter give the cross-Channel traffic w'en the war's over! Those blokes w'ot don't settle down 'ere orltergether 'll be poppin' acrost now an' ag'in to see their wives an' families, an' collec' a bit to go on wiv from the caffys an' businesses w'ot their French wives is runnin'—do a lot o' good, I should say, one way an' anuvver."

"But suppose, Steevens, that the wives should take it into their heads to come to England and look their husbands up?"

"Ferget it, sir—they won't be allowed to land. W'at's Parlymint been an' passed a Aliens' Act fer? Besides, these French women ain't so fond o' gaddin' abaart. They're 'ard-workin' women w'at'll stay at 'ome an' look arter the business."

"I hope you are not contemplating marriage with Mathilde?" I said.

"Me, sir? No bloomin' fear! I ain't a marryin' man; besides, I can earn all I wants at me trade."

HISTORIC CABINETS $6,000 ~ and down

MUSIC'S RE-CREATION IN HAND MADE CABINETS

REPRODUCED FROM OLD WORLD MASTERPIECES FOR

The NEW EDISON

"the phonograph with a soul"

THOMAS A. EDISON'S genius and $3,000,000 of his money, courageously spent in research work, have recently given to the world an instrument which literally Re-Creates all forms of music. To prove that this is true, Marie Rappold, Anna Case, Arthur Middleton and eighteen other great artists have stood beside this new invention and sung in direct comparison with its Re-Creation of their voices. Three hundred thousand music lovers have heard these astonishing tests and they, as well as the music critics of nearly three hundred of America's principal newspapers, concede without reservation or qualification that the New Edison's Re-Creation of an artist's voice cannot be detected from the original. Instrumentalists have made similar tests with similar results. Edison has accomplished the miracle of Music's Re-Creation.

It is not surprising that there should be a demand for cabinets as much superior, in a furniture sense, to familiar kinds of talking machine cabinets as the New Edison is superior, in a musical sense, to all other devices for the reproduction of musical sounds. A competition was held among designers and two master craftsmen were selected, who have produced what are not alone the finest phonograph cabinets in the world, but also deserve to take place with the finest furniture of any description to be found in America. The illustrations on these pages give but a faint idea of these wonderful cases. Licensed dealers will show you large prints in colors.

In addition to the historic hand made cabinets pictured on these pages the New Edison is supplied in other period models at $100 to $375. There is no Edison cabinet which will not appeal to sophisticated taste, and there is an artistic type for every setting. You will oblige us if you will write for a booklet depicting the less expensive models in colors.

MR. EDISON REQUIRES THAT WE MAKE THE FOLLOWING ANNOUNCEMENT:

"Those who are concerned solely in obtaining the best musical result need not pay more than $250, as the Official Laboratory Model, which sells at $250, is equal in a musical sense to the most expensive models. It is in fact the model we have used in the public comparisons at Carnegie Hall and elsewhere between the living voice and our Re-Creation of it."

IF INTERESTED IN THE TESTS TO WHICH MR. EDISON REFERS, PLEASE WRITE US FOR THE BOOKLET "WHAT THE CRITICS SAY"

Please do not ask an Edison dealer to sell you Edison Re-Creations if you intend to attempt to play them on any other instrument than the New Edison. No other instrument can bring out the true musical quality of Edison Re-Creations. Furthermore, injury to the records is likely to result if you attempt to play them on an ordinary phonograph or talking machine.

THOMAS A. EDISON, INC.

DEPT. 2351, ORANGE, N. J.

ITALIAN
(WALNUT)
4 feet 10 inches long and 3 feet 2 inches high
Expresses authentically the adornment characteristic of Italian Renaissance

XVIII CENTURY ENGLISH
(MAHOGANY)
4 feet 8 inches long and 3 feet 4 inches high
Contains hand painted decorations characteristic of the latter half of the XVIII Century

QUEEN ANNE
(WALNUT)
5 feet 8 inches long and 3 feet 2 inches high
Typical commode formation of the time of Queen Anne. Decorated with Chinese motifs, a form of embellishment much in favor at that time

SHERATON
(MAHOGANY)
5 feet long and 3 feet 4 inches high
Reproduced from an old Sheraton piece, and typical of the best work of the great Sheraton

SAVING IT FOR DAD

(Continued from Page 16)

"He's got six-seven year run off his own holdings, but he's got to have twenty-thirty year to charge off that mill he's got. And he figgers he's got it. He figgers all that timber's as good as bought at his own price. Now looky!" Mark drew his finger from the top of the map to the bottom, between Barnes' major holdings and his two sections that stood isolated. "What you calc'late would happen if somebody went and grabbed up that strip—eh? Cuttin' Barnes off from all the rest to the west. Huh? Tickle him, eh?"

"Dad," said Luke, "I hate to say anything that may hurt your feelings; but any notion like that is insane!"

"Sure!" agreed Peter.

"Git back to your cribbage!" Mark said gruffly. "What you lack hain't so much brains as nerve."

Down the line Mark's finger had indicated were, first, a number of small timber lots—quarter sections and up. Below them was a rectangular limit of eight sections, four sections from north to south and two sections wide. Below that was an irregular-shaped piece, roughly taking the form of an L, which dropped just below Barnes' land and swung slightly under it. In all, these pieces contained about thirty thousand acres of hardwood and spruce. To the west of them lay fifty to sixty thousand more—and upon the whole ninety thousand acres hung the destiny of the lumber company and of Mr. Barnes.

Mark went to his superintendent, gave him minute directions for the running of the mill, and said:

"I'm goin' away for a few days. If anybody asks you where, say you forgot."

He then went to the bank, where he drew out in currency twenty-five hundred dollars of money that it was impossible his company could spare. It was blood from the heart. Following that, he rented a rig at the livery and drove northward.

In three days he was back; and, taking down his atlas, he blocked off in red the sections of timber along his line of attack. The lands so marked extended from the northern end of the valley southward through the tract of eight sections. The largest piece at the bottom remained in white.

"Got 'em, all but that," he muttered. "And them options cost me twenty-one hundred too. No options for old Purdy, though. Cash deal or nothin'. Seventy-two hundred acres that old coot's got, and he wants twelve-fifty an acre; and that's ninety thousand dollars. Twenty-five thousand down—the rest on mortgage. Huh!"

He went to the door and called Luke.

"Son," he said, "I'm going to the city. Want you along."

"What are you going for, dad?"

"Goin' to borrow a trifle of twenty-five thousand dollars."

"Dad—why, dad, we've tried that. It can't be done."

"It's got to be done! Git your bag packed."

Luke went hurriedly into Peter's office.

"I'm afraid," he said with his voice breaking, "that this thing's got dad hard. It looks like—like ——" He couldn't go on, but tapped his brow with significance. "He wants me to go to the city with him while he borrows a mere nothing of twenty-five thousand."

"Better go with him, Luke, to keep an eye on him. If he's set on going—why, he'll go, hell or high water!"

So it came about that Mark Sawyer boarded the early morning train in company with his son, arriving in the city shortly after noon.

They went to the identical bank that had declined to loan to the boys because their moral risk was an unknown quantity. Luke was accompanied by sensations of a nature so unpleasant as to make him no desirable companion. They were shown at once into the office of the president.

"Mark Sawyer, eh?" said that gentleman. "Never met you before, but often wanted to. That timber deal you pulled off back in ninety-six—remember that? Say, that was doing business!"

"Met my son, though, hain't you? Tried to borrow money from you a while back."

"Surely. He and his brother are active in the business now, I understand, and you've retired."

"Do I look retired? No, sir; I'm up without the aid of an alarm clock, with my pants on, ready for trouble. Just now I'm running the business, such as it is, and the second generation's playing cribbage for a spell."

"Indeed! . . . And what can we do for you?"

"Money. Want twenty-five thousand. Not on the plant—on a deal I'm figgerin'. Here's the idee."

He spread before the bank's president his map, laid before him the sheaf of options, and outlined tersely the situation.

"I've got to have the cash to pay Purdy. The whole thing hangs on that. . . . Don't seem quite friendly to Barnes to slice into him that way; but he's tryin' to bust me!" Old Mark's eyes snapped and his clenched fist threatened the equilibrium of the president's inkwell. "Do you get the notion of it?"

"Yes," said the president; "but—it's purely speculative."

"Purely fiddlesticks! If somebody gets your finger in a pair of pincers you'll holler. Can't dispute it. I've got Barnes in somethin' worse'n pincers, and he'll holler, too; but when he's done hollerin' he'll pay within reason to get that land. Maybe he wouldn't, knowin' I held it. But he won't know. If this loan goes through, our paper'll print a story about a new lumber outfit that's bought up the land and is goin' to start buildin' a mill to cut out two hundred and fifty thousand feet a day. And that company, Barnes'll see, is between him and that other sixty thousand acres, shuttin' him off from it for good. He's got to buy!"

The president sat back, with closed eyes, for five minutes.

"If you weren't a known man," he said finally, "I wouldn't even bother to listen to such a yarn; but you're Mark Sawyer, who pulled off that deal in ninety-six. You know timber. You never backed a loser. You've always been a success—and no man ever lost a dollar by you. Moral risk, A Number One. I'll call in enough of the board to talk it over."

Luke gazed at his father with bewildered eyes. He himself had come for a legitimate loan and had been refused; his father, a back number, whom he had come to look after and protect, was listened to with respect when he described a proposition that sounded to Luke like wildcatting of the highest order. And that phrase "moral risk" sat heavy on his mind. It was something his father had, and apparently had in merchantable quantity. Luke's education made a remarkable advance in a few seconds.

Presently three members of the board appeared and to them Mark again outlined his plan.

"I'm for it!" said a stout man called the "Judge."

"Me too!" said his neighbor on the right. "I'm glad to have Mr. Sawyer for a customer of this bank. And I'm glad to see him getting a bit of Barnes' hide. I wouldn't loan that man a dollar on a government bond! All you'd be loaning on would be the bond—with nothing back of it."

Again Luke felt the impact of the moral risk.

"You can take the deed in the bank's name if you want it that way," said Mark.

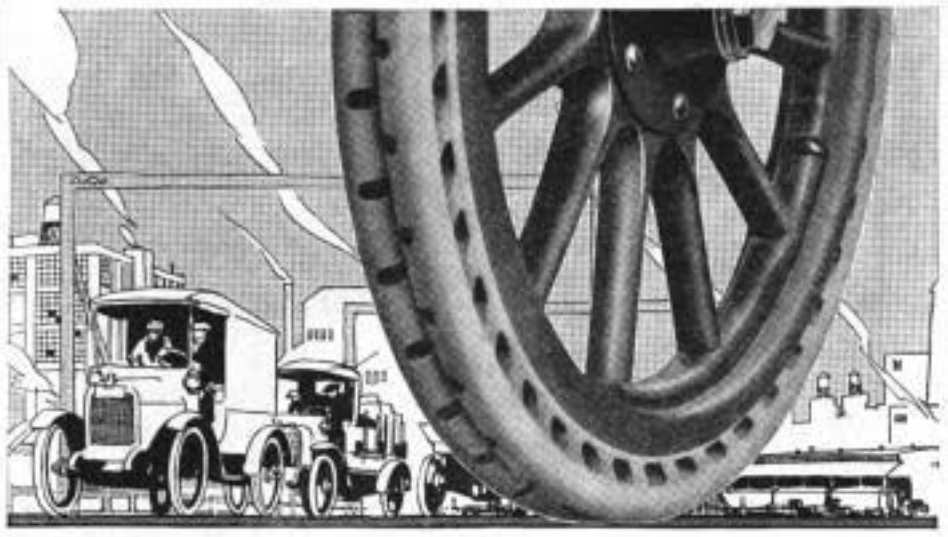
"Not necessary. Fix it some other way."

"Rather you would," said Mark. "You'll notice these options run to the Judge, here. If he'll handle it for me I want him to oversee this end—look after the law, and sich-like. I don't appear, you know."

"We'll take the deed in his name, then."

And so it was settled.

That afternoon incorporation papers for the Palmer Lumber Company were filed with the Secretary of State. Mark Sawyer's name did not appear among the incorporators.



On Thursday the local paper carried a full account of the transaction, as it saw it, and an accurate description of the new sawmill, to be erected at once. Then followed two days of waiting.

The third day Mr. Barnes appeared in Judge Palmer's office; and the Judge could not see him, but wired for Mark, who arrived next morning. After that Mr. Barnes had no difficulty in obtaining an interview with the Judge.

"What's this about a lumber company you're heading?" he blustered.

"You have the facts, I guess."

"I know you, Palmer. You're not a timber man. You haven't the money or the backing. You can't swing it."

Speed, the Truck Cost Saver

Business increases. More deliveries must be made. Customers complain that they do not get the goods quickly enough.

But your trucks are loaded to capacity now and the drivers working overtime.

What shall be done?

Either put on more trucks or increase the efficiency of trucks now in operation.

The latter is the better way.

And it's easy to accomplish. You merely equip your fleet with the Goodyear Motz Cushion Tire.

For if you need greater speed and greater cushioning qualities than the solid tire affords—or if you want freedom from those pneumatic tire troubles due to unusual road conditions—the Motz Cushion Tire offers you these things.

On light, high speed trucks carrying medium loads, at speeds up to 25 miles an hour, the Motz Tire frequently adds 50 per cent to the efficiency of a given delivery unit.

It does this by combining the resilience and speed capacity of the pneumatic with the trouble-proof qualities of the solid tire.

Perhaps Motz Tires would save you a lot of money. Your Goodyear Motz Service Station Dealer can give you expert and final advice on this important question or ask the nearest Goodyear Branch.

Gets 'em Up---These Winter Mornings

IT'S Supreme Bacon—sizzling, fragrant, appetizing! The little-uns need no second breakfast call. And bacon is a needed winter food for youngsters. You keep the home warm and cozy to protect them from the cold. Why not keep their bodies glowing with this energy fuel that makes rugged and enduring strength?

Supreme Breakfast Bacon

is the food of foods for little folk. It has the "heat units" good bacon should have—the fine digestibility. It is Morris-cured. That means quality. It passes the Morris Supreme Test. That means uniform flavor and fineness—just the right proportion of lean and fat. Tender, mouth-melting, satisfying Morris Supreme Bacon or Supreme Ham—served with Supreme Eggs. That's SOME breakfast!

MORRIS TESTED FOODS

Write for new Morris Cook Book—"The Supreme Test"—a wealth of recipes for dainty menus and sturdy meals. Address

CHICAGO E. ST. LOUIS OKLAHOMA CITY ST. JOSEPH OMAHA KANSAS CITY

"It's swung," said the Judge succinctly.

"That timber was as good as mine," said Barnes.

"Not quite," said the Judge suavely.

"Morally it was mine."

"Hum!" said the Judge.

"I've got to have it!"

"Sorry. We see a legitimate profit there; we have the timber and we're going ahead."

"I'll take it off your hands at what you paid and take care of the expense you've been to."

The Judge smiled. Barnes threatened, blustered, begged; but the Judge maintained a courteous firmness.

"I'll tell you what we'll do," he said finally, as though in disgust: "We have thirty thousand odd acres. They cost us twelve dollars and a half an acre. If you want them you may have them for fourteen—if not, why, we're satisfied as things stand."

Again Barnes had much to mention; but, though he roared loudly, he thought deeply. The land was a bargain at twelve dollars and a half; it was reasonably cheap at fourteen. And he was caught. He was caught as he had never been caught before.

"How long does your offer hold?" he asked in capitulation.

"Till two o'clock this afternoon," said the Judge, and got to his feet, indicating that the interview was at an end.

At ten minutes to two Mr. Barnes was again in Judge Palmer's office. In his pocket was a certified check for seventy-two thousand one hundred dollars. He laid it on the Judge's desk.

"Just a moment," said the Judge, getting up and going to the door of the adjoining office. "Mr. Sawyer!" he called.

Mark came in, with Luke in attendance—respectful attendance.

"Give it to him," said the Judge. "It's his. . . . And, Mr. Barnes, my advice to you is, hereafter, when you enter into contractual relations with an individual, do not use them in an effort to wreck his business—especially an individual of the known potentialities of Mr. Sawyer. The check to Mr. Sawyer, please."

The boys and Mark Sawyer were going over matters in Mark's dining room next morning.

"It gives us forty-five thousand dollars, cash," said Luke, the amazement not yet lost from his voice.

"Leaves us owing less than fifty thousand. Why, it puts us clean on our feet!"

"Calc'late so," said Mark. "And now I guess I can step down again. You'll go better from now on. Throw away your cribbage board and grab hold."

Neither Luke nor Peter replied, but a significant glance passed between them.

"Let's get down to the office, dad," said Luke.

They walked down through the village streets, and the two young men breathed more deeply of the forest-scented air; perceived more homely beauties in the place; looked upon the world and found it good. Into the office they went, pushing their father ahead to his door, the door on which had been the ornamental but purely complimentary title of "President."

Now freshly added below it were the pregnant words: "and General Manager"!

No Drawing Power

A THEATRICAL producer in New York, whose education was not acquired from books but in the University of Hard Knocks, put on a new farce by a well-known writer of dramatic comicalities. Somehow the play did not seem to go very well on its first night. After the performance the manager met another playwright in the lobby.

"Well, what did you think of the show?" he asked anxiously.

"I'm afraid it's salacious," admitted the dramatist.

The producer fetched a deep sigh, as though his own forebodings had been confirmed. "I guess you're right," he said. "I don't believe it's got a chance to make money, neither."

NO MORE LEAKY RADIATORS

NO MORE SCALE *A Message to Consumers, Garage Men, Accessory Dealers, Hardware Dealers* NO MORE RUST

No more expensive soldering jobs that put the car out of commission for days and weaken the delicate, honeycomb metal fabric. "X" Radiator Liquid repairs leaky radiators in ten minutes—does a $25.00 repair job for $1.50—and makes the radiator permanently leak-proof. Contains no cement, powder, meal, glue or shellac to clog radiator. Not affected by alcohol or any anti-freezing mixture. Sold under a money-back guarantee.

"X" RADIATOR LIQUID

TRADE MARK

CAR OWNERS! How would you like to be told by your repair man that your radiator repair job bill came to $25? It will, if you neglect this message. In time, the small leak you notice now will get worse. It's bound to. The corroding elements of the water in your radiator are gradually eating away its thin metal walls. You can save an expenditure of many dollars. You can put your radiator in perfect condition, make it scale proof, rust proof, leak proof by the use of "X" Radiator Liquid. Yes, and you can do a $25 repair job yourself in ten minutes with one can of "X" by simply pouring it into the radiator. It works automatically by closing the leak. It makes no difference whether it is in the radiator, water pump, water jacket, hose or hose connection around packing, "X" goes directly to the spot. "X" cannot clog the radiator. It is not a compound, not a cement, contains no glue, meal or other harmful dope to ruin your car. "X" is a scientific process recommended by radiator manufacturers, endorsed by automobile engineers.

DEALERS! "X" Radiator Liquid is backed by men big in enterprise. They are sure of the product, know beyond question that it is going to benefit hundreds of thousands of motorists, so it will be advertised to the limit. Just as it has attracted intense interest, made thousands of dollars of sales when demonstrated at the big Automobile Shows in New York and Chicago, so will this advertising make sales, create interest and a demand that means sales and profit for you. Every wise car owner will carry a can of "X" as regular equipment in his tool kit. Every radiator should have "X" liquid in use as a preventive against leaks. There is a jobber who carries "X" in your district. Write him. Use the coupon shown below. It contains a special time offer to make it doubly profitable for you to act now—today. Use the display stand for reinforcing our broadcast advertising. Every motorist will be reminded when he sees your display that he needs "X." And he does. And so you do.

FEDERAL TIRES

DOUBLE CABLE BASE

FEDERAL TIRES, in white "Rugged" tread or black "Traffik" tread, are safe tires for winter use. They are scientifically built to help your car hold its own against slipping or skidding.

Federal Tire quality is exceptional. It ensures maximum service always—even under the roughest and hardest of winter road conditions.

Federal "Double-Cable-Base" construction (four strong steel cables in the base of each tire) holds the tire firmly to the rim against severest service strains. It is an exclusive strength and safety feature that overcomes the causes of most tire troubles.

Federal Tires are especially built for "Extra Service." They are recommended and sold as such by leading dealers everywhere.

THE ENCHANTED CAPTAIN

(Continued from Page 7)

off the enemy so that he might escape, a woman and an ancient man of the neighborhood carried the bandit on a stretcher into a dry arroyo. There he was found later by his followers, who took up the stretcher and headed into the dense forests that have their beginning near Bustillos.

They climbed up into the Sierra Madre and left him in charge of Indians. He remained concealed near the Chihuahua-Durango line and then changed his hiding place to the Nonoava region, northwest of Parral.

At this time Villa's condition was really serious. Gangrene had set in. But the Indians undertook to cure him with herbs, and he had faith in the treatment. The Tarahumaras of the region have a tremendous reputation for healing with boiled herbs. They even claim to possess a cure for cancer.

Recovery in Villa's case was slow and painful.

He had several relapses. A Jap, who had been a cook in Villa's official family when he was at the pinnacle of his power, nursed him under direction of the Indian herb specialists.

That the treatment failed to come up to expectations is proved by the fact that Villa realized toward the end of April that he would need skilled medical attention to save his leg—and perhaps his life.

One day a physician of Parral was called to Pilar de Conchos, ostensibly to attend the wife of a man employed by the Boquillas Electric Company. He was taken to a small house, where he found a wounded soldier, wearing a thick beard. The doctor recognized him as Páncho Villa. He had been shot below the knee in the right leg, which was in bad shape, as the bone had been shattered and he had apparently gone a considerable time without the attention it needed.

The wounded man asked the doctor to make regular visits. This he could not afford to do, since the distance from Parral was too great. Accordingly Villa was moved to the village of Minas Nuevas, not far from Parral, and lay there in a tiny ranch house until the latter part of May, the physician making frequent trips to dress his wounded leg.

He was in hiding there, and a helpless cripple, when the force under Major Frank Tompkins, of the Thirteenth Cavalry, had their fight with the Mexicans at Parral. Carranza forces were close to his retreat constantly. At the time the American troops passed from Balleza back to Parral, Villa was watching their movements as they went along the road.

Villa Comes to Life Again

Then the American pursuit was halted and the bandit breathed easier. He seems never to have feared capture by the Carrancistas to any extent; whether from contempt of them or through an understanding, is hard to say.

Under proper medical care Villa gradually improved. He gained strength and weight, and immediately he began to chafe for action.

He sent a couple of couriers to scout for information and sound the sentiment among the people. They came back with word that most of the population of the region believed Páncho Villa was dead. The Carrancista campaign to this end had been successful. The bandit was furious.

"Go back and tell them I'm alive. Here is my signature," he commanded.

Immediately the news spread, his old followers began to flock to him. Bunches of ten and twenty and thirty came in under their own *jefes*. They were amazed and transported with delight. They looked upon their chief's recovery as a sort of miracle. From that moment he was The Enchanted Captain.

Páncho quickly recovered his spirits. He is at his best against difficulties and there was work of the hardest sort ahead. He sent messengers to all the ranches and small towns of the region, announcing that the time had arrived for the resumption of operations and summoning the men to his flag. This was in the latter part of June.

Evidently he had been thinking hard during his illness and had come to the conclusion that some new stuff was required to attract adherents. At any rate he produced it. Páncho flung a new standard to the breeze. His was now El Partido Democratico—the Democratic Party.

Volunteers appeared in large numbers. A lot of them came on the run, of their own volition, and some were brought at the end of a rope. Villa set to work on the task of mounting and equipping his forces.

For this purpose he moved toward the Bustillos district in order to dig up his buried stores of rifles and ammunition. And when all were armed he marched against San Andres, whose garrison fled in panic. San Andres is Páncho's lucky town. It was there he got his first start against Huerta, in 1913; and it was there he married Luz Corral. So now he made the place his headquarters, from which he kept couriers galloping in all directions day and night. Soon he had nearly four thousand men.

Captured by Strategy

Though various bands under Villista chieftains were operating early in the summer, they kept in small bodies, on account of difficulty in securing food, until their chief ordered a concentration. His first action of any consequence was on the Corralitos Ranch, southeast of Jimenez; and in this Páncho showed that he had been studying tactics to advantage during his long rest.

One of the Ramos brothers was his opponent. Villa sent a small bunch of men against these Carrancistas, as though ignorant of their strength. They advanced confidently to the attack and drew the full enemy fire. Then the bandits beat a retreat. It was skillfully executed. Ramos' force came pouring in pursuit, sure of victory; and Páncho with his main body fell like an avalanche on their rear, utterly routing them. He took about a thousand prisoners and a considerable quantity of ammunition.

His foe is always Villa's chief source of supply.

"Why should I worry about weapons?" he has often boasted. "I can get them from my enemies."

Up to date he has done so whenever his needs became pressing. Villa's problem is not to find men, but to equip them; and he will be able to do even that if the United States shall lift the embargo on ammunition so that the Carrancistas can import it. Nothing would suit the bandit better. To permit shipment of arms to Mexico is the same thing as sending them to our sworn enemy. The bulk of them will fall into his hands, either by capture or desertion; for a Carrancista to-day is a Villista to-morrow.

Having disposed of Ramos, he occupied Jimenez without opposition and obtained there supplies and recruits. Then he moved on to concentrate his bands at Santa Rosalia. His strength was growing hourly. Eight hundred Yaquis from Sonora joined him and accessions from the ranks of the First Chief's army were considerable. At this time Villa traveled in a buggy on the march. In walking he used a crutch, but he could mount a horse with assistance.

While all this was going forward, Trevino had large forces scattered over the state. They were seemingly reluctant to fight Páncho, however, and it was common talk among the natives that an understanding existed between certain Carranza *jefes* and the brigand they were supposed to be hunting. It seems difficult to explain their apathy in any other way.

From Agua Puerca, near Santa Rosalia, he sent out detachments into all the surrounding country to rustle up horses and supplies, and then struck for a small mining town called Santa Gertrudes. A Carrancista garrison held Satevo, his old home; he fell upon the place like a thunderbolt and wiped out the entire force.

San Andres, only fifty miles from Chihuahua City, was his headquarters; and one day, without announcing his name, Páncho got General Trevino on the long-distance telephone.

"Hello!" he bellowed. "This is me—Villa—the bandit. I am waiting here for your generals. Why don't you send them out to meet me?"

Trevino replied:

"Whom do you want most to meet?"

"Nobody better than yourself."

The Carranza commander sent General Cavazos, who was feeling warlike and declared an intention to eat Páncho alive, crutch and all. The bandit ambuscaded him not far from Santa Ysabel, and out of

Sports That Teach Manliness

Football and Marksmanship —Two Great Sports for Boys

Leading educators say that every American boy should know how to swim, to box, and to handle a gun and shoot straight. He should also be able to play well at least one good outdoor game—football, baseball, or tennis.

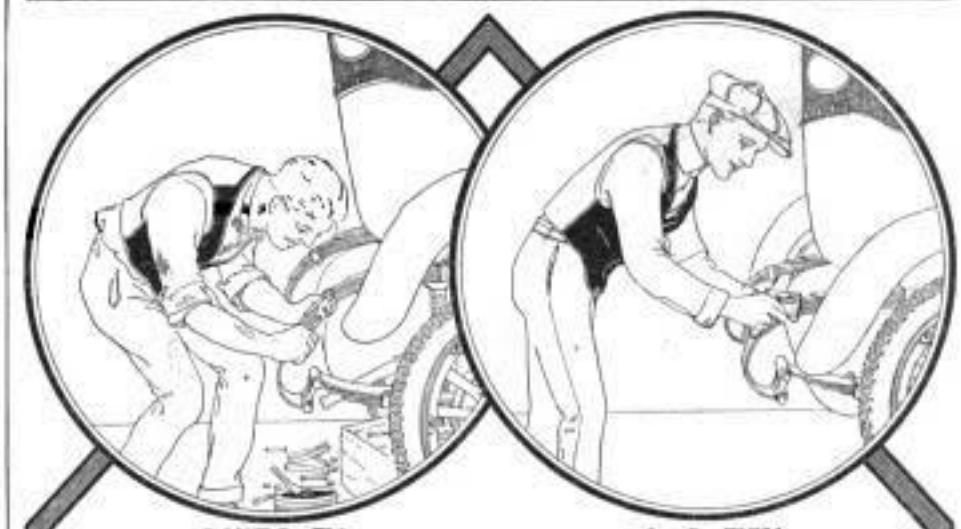
The two newest Daisy models, the Daisy Pump Gun and the Military Daisy, have changed the ideas of the entire country about air rifles. Hundreds of thousands of boys and young men are using these rifles to study the sport and art of marksmanship. Nothing so attractive or so safe has ever before been offered to the American boy and his parent.

Orders came in to us so fast just before Christmas that we couldn't keep up with the rush, and many boys were disappointed. But don't give up your plan of owning a Daisy. We are catching up now, and if your dealer hasn't the Daisy model you want right in stock, he will be glad to send and get it for you.

The Daisy Pump Gun has the genuine pump action of a high-grade sporting rifle, 50-shot repeater, length 38 inches, adjustable sights, turned walnut stock; price $3.50

The Military Daisy, also a 50-shot repeater, has the lines and accuracy that make it ideal for drilling and target practice; price $3.50

Other Daisy Models, 25c to $2.50.



At your dealers or direct from factory, postpaid, on receipt of price. Send for descriptive circular.

DAISY
AIR RIFLES

DON'T Do This— Just Do THIS!

Stop Spring Squeaks

The Easy Way—With 3-in-One

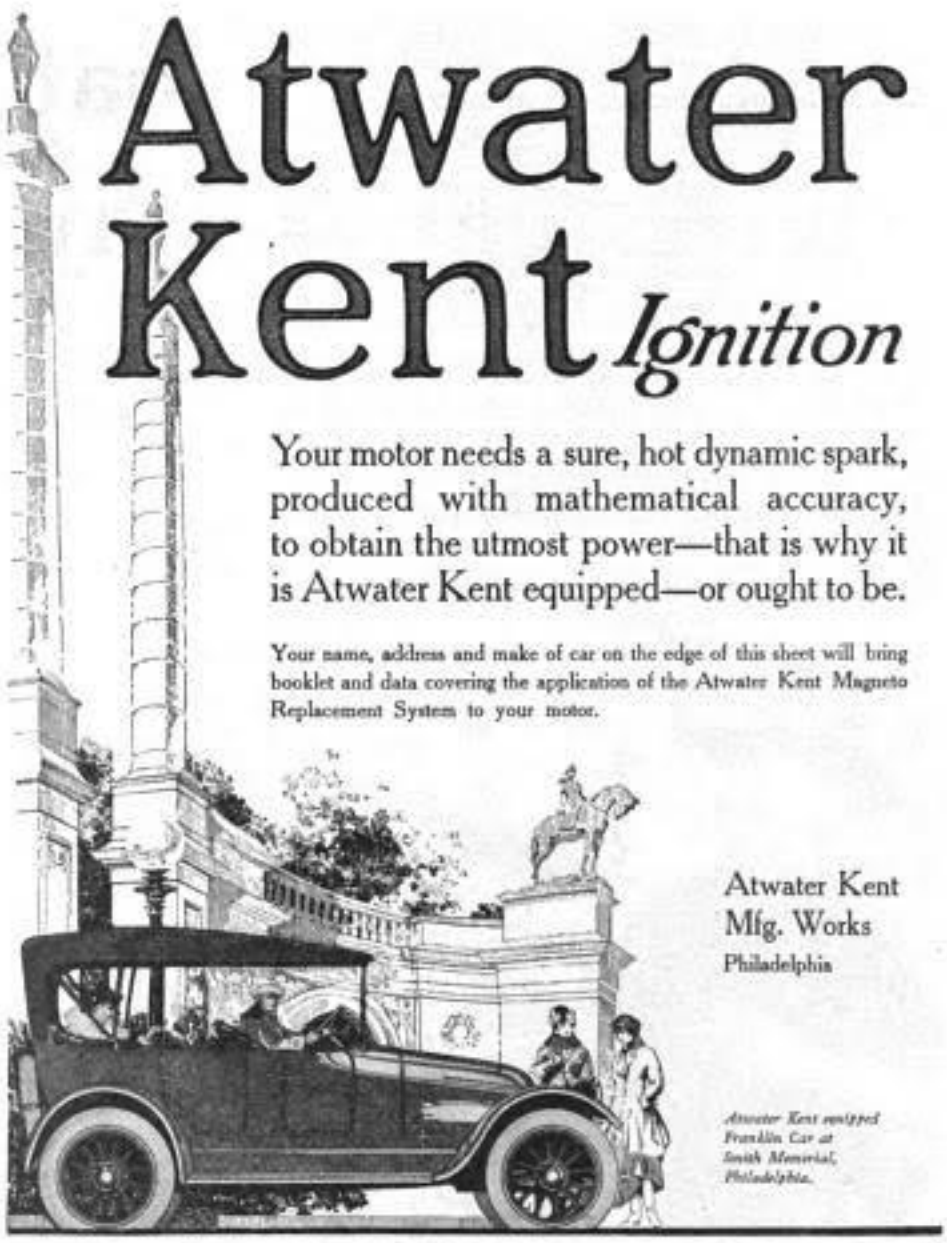
Lubricating auto springs the old way is a slow, disagreeable, dirty job. The new 3-in-One way is quick, clean and easy. Don't waste energy jacking up the car, loosening the clips and forcing the leaves apart. Just buy a Handy Oil Can full of 3-in-One for 25 cents. Squirt the oil along the edges of the leaves and on the ends of the springs. *That's all!*

3-in-One

does the rest. It penetrates between the leaves—lubricates them perfectly—stops all squeaking. Prevents breaking of springs, 85% of which is caused by rust. Takes stiffness out of new springs.

3-in-One is the right oil for all magnetos. Manufacturers recommend it. Ford owners use it on the commutator—makes cranking easier. All motorists should use it for brightening up the car-body, polishing windshield, preserving upholstery and cushions, preventing rust on metal parts.

FREE Liberal sample of 3-in-One Oil and Special Automobile Circular—both free. Send a postal to:



Three-in-One Oil Co., 42 EUW. Broadway, New York

the entire Carrancista command Cavazos, one captain and four soldiers escaped.

Páncho is always doing dramatic things; he would make a fine stage director. Witness his raid of September sixteenth on Chihuahua City. It was perhaps the most picturesque event of his entire campaign of 1916.

He had scattered his troops round San Andres and Bustillos, as far as Madera, to which point he was already operating trains. Suddenly he ordered a small force toward El Fresno, a ranch seven miles from Chihuahua City, which Villa owns personally. He bought it at the height of his power for thirty thousand dollars. His men engaged the small Carrancista garrison there and drove them in panic.

Páncho then moved in and occupied his own home. There was an enemy force of about six thousand in the city, within plain sight; but the fact did not seem to give the bandits any concern. They held cockfights and went happily about their business.

On September fourteenth Villa sent a letter to Trevino, announcing that he would be in Chihuahua City on the sixteenth to shake hands with him. He added that he might be hungry, in which case he would require something to eat. Therefore, he hoped General Trevino would prepare a suitable reception.

Now September sixteenth is the Mexican national holiday. It is equivalent to our July Fourth, and the natives celebrate it with bands and jubilation.

Of course Trevino considered this message a bluff. It had been his experience that Villa usually did the opposite to the plans rumor credited him with; and yet—and yet—the garrison grew uneasy.

At nine o'clock on the night of September fifteenth the Enchanted Captain entered the capital, heavily cloaked, accompanied by Martin Lopez and several other *jefes*. Bands were playing and the streets were thronged.

They went to La Partida, a gambling house, and there mingled with the men, attracting no particular attention. Páncho wished to hear what the city was saying, to sound out the sentiment. He was rewarded with much favorable talk.

"Páncho is coming. He'll be here soon," said one.

And his companion replied with a cautious glance all round:

"I, for one, shall be glad to see him."

Satisfied in his own mind that the civil population would welcome him, Villa returned to his camp and issued final instructions to his commanders. About eleven o'clock he gave the signal; and as the chimes of the churches were ringing out El Grito de Dolores the first shouts of "Viva Villa!" apprised Chihuahua that the bandits were upon them. Indescribable confusion ensued.

Villa took with him for this attack only five hundred men, divided into four columns, under Martin Lopez, Baudelio Uribe, José Beltran, Nicolás Fernandez and Tarango. He himself remained with one of these *jefes* in a little house in the residential section; the others led the fight.

Villa's Force Grows

The Carrancistas were paralyzed with fright. Their officers had been at a banquet and some were asleep; they could not find their commands amid the tumult. Consequently the Carranza forces fired volleys into each other. General Trevino ran out to direct the defense and a man of his own bodyguard blazed away at him. The fellow was a former Villista. The bullet caught Trevino in the arm.

The bandits seized the penitentiary, the governor's palace and the federal building. Thereupon Villa went to the palace, stepped out on the balcony and made a speech to the crowd below.

"Viva Mexico!" he shouted. "You do not have your liberty. I will give you your liberty, for I am your brother. Do not be afraid; I am going to return in a few days."

Of course they yelled; and Páncho went briskly to work collecting plunder. He held the city until almost nine o'clock in the morning. Meantime Trevino had made his way to Santa Rosa, where his artillery was stationed. About daylight he opened up on the palace and the theater. Tarango, one of Villa's commanders, sent to take the palace, was caught there by this fire. It became a question of surrender or death. Tarango chose death. He leaped from the roof to the ground, dying instantly. Some followers imitated him.

The fire growing hotter, Villa resolved to withdraw. He sounded the retreat and his forces moved out, taking with them sixteen automobiles filled with arms and ammunition, and some artillery under escort of Carranza troops. Villa had entered the capital with about five hundred men. He lost about sixty in the fighting, and departed with nearly two thousand! The difference represented desertions from the garrison to his flag.

He also took with him a bunch of prisoners from the penitentiary. Among them were José Inez Salazar, Flores Maller and José Rochin. Páncho seemed very glad to see Salazar, a former chief of Red-Flaggers who had fought against him more than once. The bandit embraced José warmly and promised to give him command of an army.

Some months previously to this, Salazar had gathered about two hundred followers and sent a manifesto broadcast, announcing that he was affiliated with no faction and recognized no chief, but that he proposed to conduct a revolution on his own hook for the relief of stricken Mexico.

The new movement did not get very far. Salazar fooled round for a month and found pickings so meager that his men deserted in disgust. The country was swept clean; there was no loot worth the name. Therefore he sent word to General Gavira, a Carranza commander, that he was willing to surrender, with all his force, if granted amnesty; and Gavira, who had a wholesome respect for Salazar's military prowess, and was ignorant of his strength, readily promised it. The formal surrender took place at Guzma. Salazar's army consisted of himself, El Mudo, El Tuerto and El Tito—in other words, he had three men, known as The Mute, The One-Eyed and The Little One. All were nearly starved and mounted on wrecks of horseflesh.

A Deal in Ammunition

Salazar was very grateful to Gavira and presented him with a pair of field glasses. He appears to have enjoyed his liberty until August, when he was thrown into prison at Chihuahua for alleged complicity in a plot with Colonel Tames. It was from that prison Villa released him on September sixteenth. By last accounts in command of four thousand troops. For all I know, The Mute, The One-Eyed and The Little One may be among them.

Another recent stunt of Páncho's, and very characteristic of him, was directed against General Gonzales, at Juarez. The bandit needed ammunition for his warfare. In some manner he obtained Trevino's code—from a captured staff officer, it is said—and forged a telegram in cipher from Trevino to Gonzalez, asking for the speedy dispatch of a supply of ammunition to Chihuahua. Gonzalez sent what was asked. Villa thereupon captured the train and wired Gonzalez in his own name, thanking him courteously for the shipment.

The stroke of September sixteenth increased his prestige enormously. Men laughed over it and applauded. Hundreds hurried to join his army.

Next he sent a formal notification to General Elizondo, at Cusihuiriachic, that he would make an assault on the town at eight-thirty A. M., September twenty-seventh. He did so, completely routing the enemy and then occupying Cusi. While there he received word that another Carranza army was moving against him, under command of a brother of that Ramos he had previously beaten. Páncho resolved to meet him in the open; and luck favored the bandit, as it has a way of doing. Ramos, encountering his own allies, retreated from Cusi, mistook them for Villa's men, and attacked.

A brisk engagement began. At the height of it the bandit swooped down and finished the business for both. Only a remnant escaped to Santa Ysabel. Ramos himself fled to Chihuahua City, badly wounded.

And now it was Ozuna's turn. Up from the South he came, with three thousand men and eleven trains of provisions and ammunition. Villa gave him battle near Palomas. His tactics were the same as at Corralitos. Two hundred of his force engaged Ozuna's army, which drove them back. The Villistas fought vigorously as they retreated. Ozuna pressed his advantage hotly, which resulted in his forces becoming strung out. The main body of Villistas contrived to get round in his rear and cut the railroad.

Compare The Dictaphone with what you think is modern—stenography

That's the real comparison—between the system that eliminates all lost motions in converting dictation into finished typewriting, and the old-fashioned, wasteful method of writing letters *twice*, once in shorthand and once on the typewriter.

The Dictaphone System is *direct*. Your letters are written *once*, on the typewriter. Your typist realizes her utmost as a producer—whether it is typewriting or other important work.

With The Dictaphone you dictate letters, notes, memos, or whatever. You do it your way the instant you are ready. Your typist does not have to depend upon notes. She hears your voice; and she writes what she hears.

That explains the simplicity and efficiency of The Dictaphone. That it saves a third on the cost of letter-writing and produces vastly more letters and better letters; that it makes dictating a matter of ideal convenience, are some reasons why thousands of business men dictate to The Dictaphone. The same reasons why you, too, should dictate to The Dictaphone.

You can't buy a Dictaphone under any other name
The genuine bears the name The Dictaphone

"ACID-MOUTH"

"The Secret Enemy of Teeth"

In the dark the masked assassin hides. Unseen, unheard, he creeps upon his unsuspecting victim. Then—he strikes. The worst has been done.

"Acid-Mouth" comes upon you unseen and unsuspected. In secret it weakens the enamel of your teeth. Gradually and undetected it lets germs of decay into the soft interior. Cavities grow. Then—a sharp stab of pain. Your teeth have met their hidden enemy.

No respecter of persons is "Acid-Mouth." Rich man, poor man, "Judy O'Grady," "The Colonel's Lady," you, your family, your friends—*all* are subject to "Acid-Mouth." Unless—and only unless—preventive measures are taken.

It is estimated that nine out of every ten persons who neglect to guard against "Acid-Mouth" suffer from it. It is the estimated cause of 90 to 95 per cent of all tooth-decay.

To ward off "Acid-Mouth," to prevent tooth-decay, to keep your teeth sound and white and gleaming, use Pebeco twice daily and visit your dentist twice yearly. That is the sure way.

As well as to yourself, you owe it to your family to see that all within your household guard properly against tooth-decay—against "Acid-Mouth," its greatest cause. It is more than a mere matter of good looks. It is a question of health.

Is it likely that *you* can be neglectful and escape? Surely you wish to escape—to retain your teeth?

When teeth are not sound, germs of many kinds can find and lurk within the cavities, and from them multiply all through the system.

Send for Free Ten-Day Trial Tube and Acid Test Papers

Test Papers enough for a family test to show how many have "Acid-Mouth" and how Pebeco counteracts it. The Free Sample of Pebeco will show you how a real dentifrice tastes and acts.

Pebeco leaves a fresh, keen, refreshing taste. Children and grown-ups soon learn to like it immensely. Its business is to polish your teeth beautifully—to remove unpleasant odors—and to help you keep your own teeth for life.

Pebeco is sold everywhere in extra-large size tubes. Write for Free Sample today.

"The Known Foe of 'Acid-Mouth'"

Digitized by Google

(Concluded from Page 74)

Ozuna's men pursued the fleeing Villistas into a cañon of the foothills, along whose sides Páncho had stationed twenty men every hundred yards for ten miles, under command of José Inez Salazar, late of the Chihuahua prison. When they began to pour volleys into the enemy a panic broke out. Villa then attacked from front, rear and both sides; and Ozuna's men fled like scared sheep. He lost all his trains and ammunition.

The bandit took the loot toward San Andres, from which point he began to organize for an attack on Chihuahua City. He occupied Santa Rosalia and there received advices that General Maycotte was advancing against him, with five thousand men, over the Mexican Central Line. So once more Páncho disposed his forces for battle; and he gave Maycotte an awful drubbing.

"I have the bandits beaten!" Maycotte wired, during the battle, to the Arrieta brothers, who were at Jimenez with a considerable force to support him. "Come to my aid, to repel reënforcements."

The Arrieta brothers replied:

"We are moving instantly."

So they were—they moved back to Torreon as fast as they could go.

El Capitán Encantado seized all of Maycotte's trains and returned in triumph to Santa Rosalia. He did not execute the prisoners. He seldom does now. It was formerly his custom, whenever he captured any Carrancistas who would not immediately join his cause, to order a firing squad; but he had been thinking things over while he lay sick.

"A weapon can be easily bought," he said severely to Baudelio Uribe, one of his commanders, "and a cannon can be snatched from the enemy. Everything artificial can be secured by money, or by making it. But when we kill a man it takes a long time to reproduce him."

Therefore he now takes a less destructive method of identifying his foes to the world. He brands them with acid on the cheeks or forehead; and the mark he puts there is V. C., the initials of Venustiano Carranza. Hundreds of these burns have been treated at Juarez. Another method of marking his enemies is by cutting off their ears. After the battle with Maycotte, Villa sent eighty-three mutilated men back to Trevino to assure him that the reports of Páncho's demise were unfounded.

With Maycotte out of the way, the victorious rebel turned his eyes toward Parral, where General Luris Herrera was intrenched with an army. Once, during the summer, he had made a feint at it, only to be driven off through the eagerness of Uribe in attacking before Villa's arrival with the main body. Parral is naturally defended and a hard nut to crack, but he was determined to do it. Leaving only a small garrison in Santa Rosalia, he announced he would go to the hot springs in the mountains, and sent his forces out, himself preparing to follow in a buggy. Instead of going there, however, he headed for Parral, which he reached on the morning of November fifth.

The Assault on Chihuahua City

Tidings of this reaching him, Herrera got cold feet and withdrew in the direction of Santa Barbara, about eighteen miles away; but the bandit caught up with him that same afternoon and battered his army to pieces. Villa captured all his ammunition, a pack train of two hundred mules, and more than fifty thousand dollars of silver bullion.

Then he returned to Santa Rosalia. The bandit was now in complete control of that part of the state. His troops held all the region from Santa Ysabel to Madera, which is not far from the base of Pershing's army, and his trains operated from Ortiz and Jimenez to Parral.

But his hardest task was still ahead. He was going to tackle Chihuahua City itself.

Gathering his forces, he started from San Andres toward the capital with from ten to twelve thousand men, and early on the morning of November twenty-third the first shots were fired. His men broke up barbed-wire entanglements with bombs and gained a line of trenches during the next two days; then pretended to retreat—only to return to the assault with added fury.

After four days of tough fighting the Villistas stormed Santa Rosa Hill, the key to the city. It was there Trevino had his artillery, and when that was lost Chihuahua was doomed. The bandits rushed triumphantly through the streets, while the disbanded Carrancista troops fled toward Ojinaga and other points. Trevino was wounded a second time, and his men received a warm reception from their own allies in Aldama, who declared for Villa.

By this victory Páncho obtained thirty-two cannon of the 75-millimeter kind, five of which were disabled, however; seventy-five machine guns; and seven thousand rifles. He also dug up a great quantity of ammunition that had been buried in the cellars of the Federal Building.

The bandit was in his glory. He worked like a ninety-horse-power engine and soon had Chihuahua organized. There was some promiscuous looting and he had five of his followers executed. Any looting there may be he wants done systematically and in order, and proposes attending to it himself.

"You're not a German," he said sharply to José Bovio when the latter lined up with a bunch of German residents.

Bovio said he was an Italian mining man.

"All right," said Villa. "You go and fetch all the storekeepers to me."

"Suppose I can't get them all, General?"

"Any you can't find don't own stores—they'll belong to me, *hombre*," was the reply; and it produced a fine attendance of foreign merchants to meet the conqueror.

Attack Better Than Defense

Villa looked them over and demanded three hundred thousand pesos. They responded with less than two hundred thousand, claiming it was all they could raise. But he got his hands on a large quantity of bullion.

"General," Bovio announced, "the consuls in the city wish an audience with you to intercede for the Chinese."

"I don't want to see them," answered Villa. "Consuls are only fellows who can't stay in their own countries, anyhow."

During the few days he held Chihuahua City nearly a hundred Chinamen were murdered. And Villa looted like a medieval freebooter. Whole trainloads of food and medical supplies, hay, forage and gasoline were sent out daily. One of them was recovered. The last to leave before he evacuated the city was captured by Murguia, who came up from Torreon and reoccupied Chihuahua for the First Chief.

He did not arrive in time to take any part in its defense under Trevino, and it has been charged that failure to get reënforcements to the capital was due to treachery in Mexico City; but the fact of the matter is that Salazar was holding Murguia off with four thousand men somewhere north of Bermejillo, and keeping him extremely busy. They clashed at Jimenez and the Villista commander was obliged to fall back, but not before accomplishing the destruction of the railroad track, which delayed Murguia's advance. Indeed, Páncho utilized reports of Murguia's approach to fool Trevino, and thereby got close to the city before the Carrancistas realized it was an enemy army and not the expected relief.

Though the reasons for his evacuation are not known, it is probable that the bandit's rooted antipathy to defending a place prompted him to move out. He distrusts that method of fighting. His theory is that the advantage lies with the attacker, and, unless in overwhelming strength, he prefers to let the other fellow hold a town; then when he needs it he will take it.

By withdrawing to Fresno, only seven miles distant, he enticed Murguia into the capital, which is exactly where he wants him. At this writing Villa is striving to wipe out Murguia's force there. That done, he will have all clear behind him for a march on Torreon, which he will very likely take before this is printed.

Where will he end up? One guess would be as good as another. But it is certain that he will dominate the Mexican situation while he lives, and that when Villa dies he'll die with his boots on.

As You Plant, So Will You Pick

Big, heavy, meaty tomatoes are not accidental, they come from pedigreed seeds.

Crisp, spicy, tender radishes are not accidental, they come from pedigreed seeds.

This is a law of life.

FERRY'S SEEDS

are developed with as much care as the purest blooded live stock. They come from plants with long family histories of perfect production. They are carefully selected and then tested for trueness to type in the great Ferry greenhouses and trial gardens.

This spring plant Ferry's pedigreed seeds and be sure of having a garden of superior quality vegetables and flowers in abundance.

There's winter sport too—in a

KODAK

Outdoors with skates and skis and coasting, when the trees are snow laden and great drifts tell the tale of last night's storm, there are pictures well worth taking.

And indoors there are group pictures and home portraits, by daylight or flashlight, and in the long winter evenings, when rain and sleet make the outdoors impossible, there's good fun in developing and printing. Every step is simple by the Kodak system.

Catalog free at your dealer's or by mail.

EASTMAN KODAK COMPANY,
ROCHESTER, N. Y., *The Kodak City.*

DOUBLOON GOLD

(Continued from Page 10)

easily have come with him—the ship was Spanish. It probably did come with him! He may have owned this gold; he may have held it, clinked it, gambled with it! And now to be flung up out of the wreck, more than five hundred years afterward, not for the first comer to find, not for just anybody, but for you—at your feet! Do you get that?"

"It figures out to fifteen generations, doesn't it?" was all the answer he made.

"And the place—the place! The book says they still call it Machico. Was it there—is it possible it was there you found the coin?"

"Within a stone's throw of the village itself."

I could only stare at him.

"Coincidence — what?" said Robert Matcham grimly.

He folded up the little book and put it away without haste, and pressed his hand over his eyes again; and suddenly the simplicity and passion of that action hit me like a blow. The man was seething. Within the stolid bulk of him lay pent a pit of emotion. He could not vent it; as he said himself, he had no skill. But I saw how each casual word had come molten from its source and how immeasurably that very lack of art had added to its stark sincerity.

I sat back with a long sigh.

"Go on telling in your own fashion, please," I begged.

"There's little left to tell. I was rather muddled at first—I don't know that I'm much better now. But, all the same, it was stupid of me to flash the doubloon when I got back to Funchal. I didn't even know what the thing was, you see; and so I asked the first shopkeeper with an English sign at his door. You should have seen the rascal's eyes bulge.

"It's clear enough I touched off a regular blessed conspiracy with that coin. What it means you can guess as well as I. I've had a pack of penny detectives on my trail ever since—the maestro here was dogging me all last night. I squeezed all I could out of one lad—how their head devil is called Number One. And that's all I know."

"But why should they be so eager after one doubloon?"

"I don't believe they are so eager after one doubloon," he answered with slow emphasis.

"And what do you propose to do about it?"

"Well, it's some time since I got any good of proposing anything much." I saw the lean muscles tighten along his jaw. "But I'm not dead yet." He glanced at his watch. "It's now eleven o'clock. I can get a horse up to midnight at the hotel. Before dawn I propose to take my morning plunge off the rocks, not far from the village of Machico."

"Alone?" I demanded.

He looked at me oddly.

"Suppose you answer that yourself."

I sprang to meet his grip across the table, and thereby almost lost the use of my fingers.

"Come," he said as he rose, with his compelling smile on me; "you're about the best coincidence I've met yet."

IT WAS still raining when we climbed into a curtained bullock shed, one of those public conveyances that snatch the visitor over the pebbled streets of Funchal at a slithering speed of two miles an hour. The *carro* is hardly a joyous vehicle at the best of times. We sat in close darkness, oppressed by an atmosphere of wet straw and leather, listening to the mimic thunder on the roof, the gibbering of the yoke pin and the wail of the driver, a goading fiend in outer space. Possibly these melancholy matters heightened the dour mood of my new friend, who stayed silent. To me they were nothing, for I hugged myself in a selfish content.

Gold! It was all gold—real gold of romance; sunken treasure; mystery; legend; and a most amazing and veridical trick of Fate that had cast back five centuries—no less!

I sought to conjure up that other Robert Matcham from the long past; that "lover of a too beautiful woman," who ran across the sea with his heart's desire in the old wild way. A bold and gallant figure, I was pleased to fancy; an adventuring squire or swaggering free companion in those red, rude times; a traveler by the sword; perhaps a follower of the Black Prince to the Spanish Wars, wherein he might have made such stout allies as the "pilot captain" who served him for his flight.

I pictured him on the deck of his tempest-tossed galley against a strange and savage coast, standing among the hard-lipped sailors, with the woman at his side, facing death as one of that breed would know how to face it; but defiant, clinging to life and to love with grim tenacity, with a tremendous will to survive. He would be hard to kill—such a man—elemental; desperately resentful of the mischance. And I thought I could almost fix the image of him; and he was big-bodied, full-blooded, with arching great chest and tangled hair and fierce Saxon blue eyes.

The *carro* drew up with a sudden jolt; the curtains parted on a dazzling flood of light.

"Would the gentlemen kindly to step down?"

The gentlemen would, both somewhat surprised at having reached the hotel so soon, but rather more surprised the next moment at finding that this was not the hotel at all.

We were in an open, wind-blown street on the water front, where the rain and salt spray drove in our faces and the few lamps showed neither house nor garden. Beside the sea wall lay an automobile; we could hear the churn of its engine, and its headlight split the dark in a sharp wedge and threw a bright zone against the high stone embankment across the road. Midway, and just before us, stood the one who welcomed us so suavely.

It was the roulette banker, he of the spade-cut beard and the superior clothes. He was still superior, in a topper that shone like varnish and a long cape tucked most jauntily over one arm. And he smiled and smiled, like a villain downstage with the spot full upon him.

"Now w'ere," he inquired—"w'ere are that damn doubloon?"

He was effective—the sartorial rogue; and doubtless he knew it. He stroked his beard and thrust his hand to his hip; and behind him on the embankment his huge shadow moved alike, as if some monstrous power there was pulling puppet strings upon him.

"Gentlemen, you been kidnap'," he was good enough to explain. "We are sorry; but it was of a necessitate. If you got away with that gol'piece you are—'ow you say?—leaving us dished up. Therefore"—he waved a ringed hand—"therefore, we arrange' to 'esitate you here, so nize and comfortable."

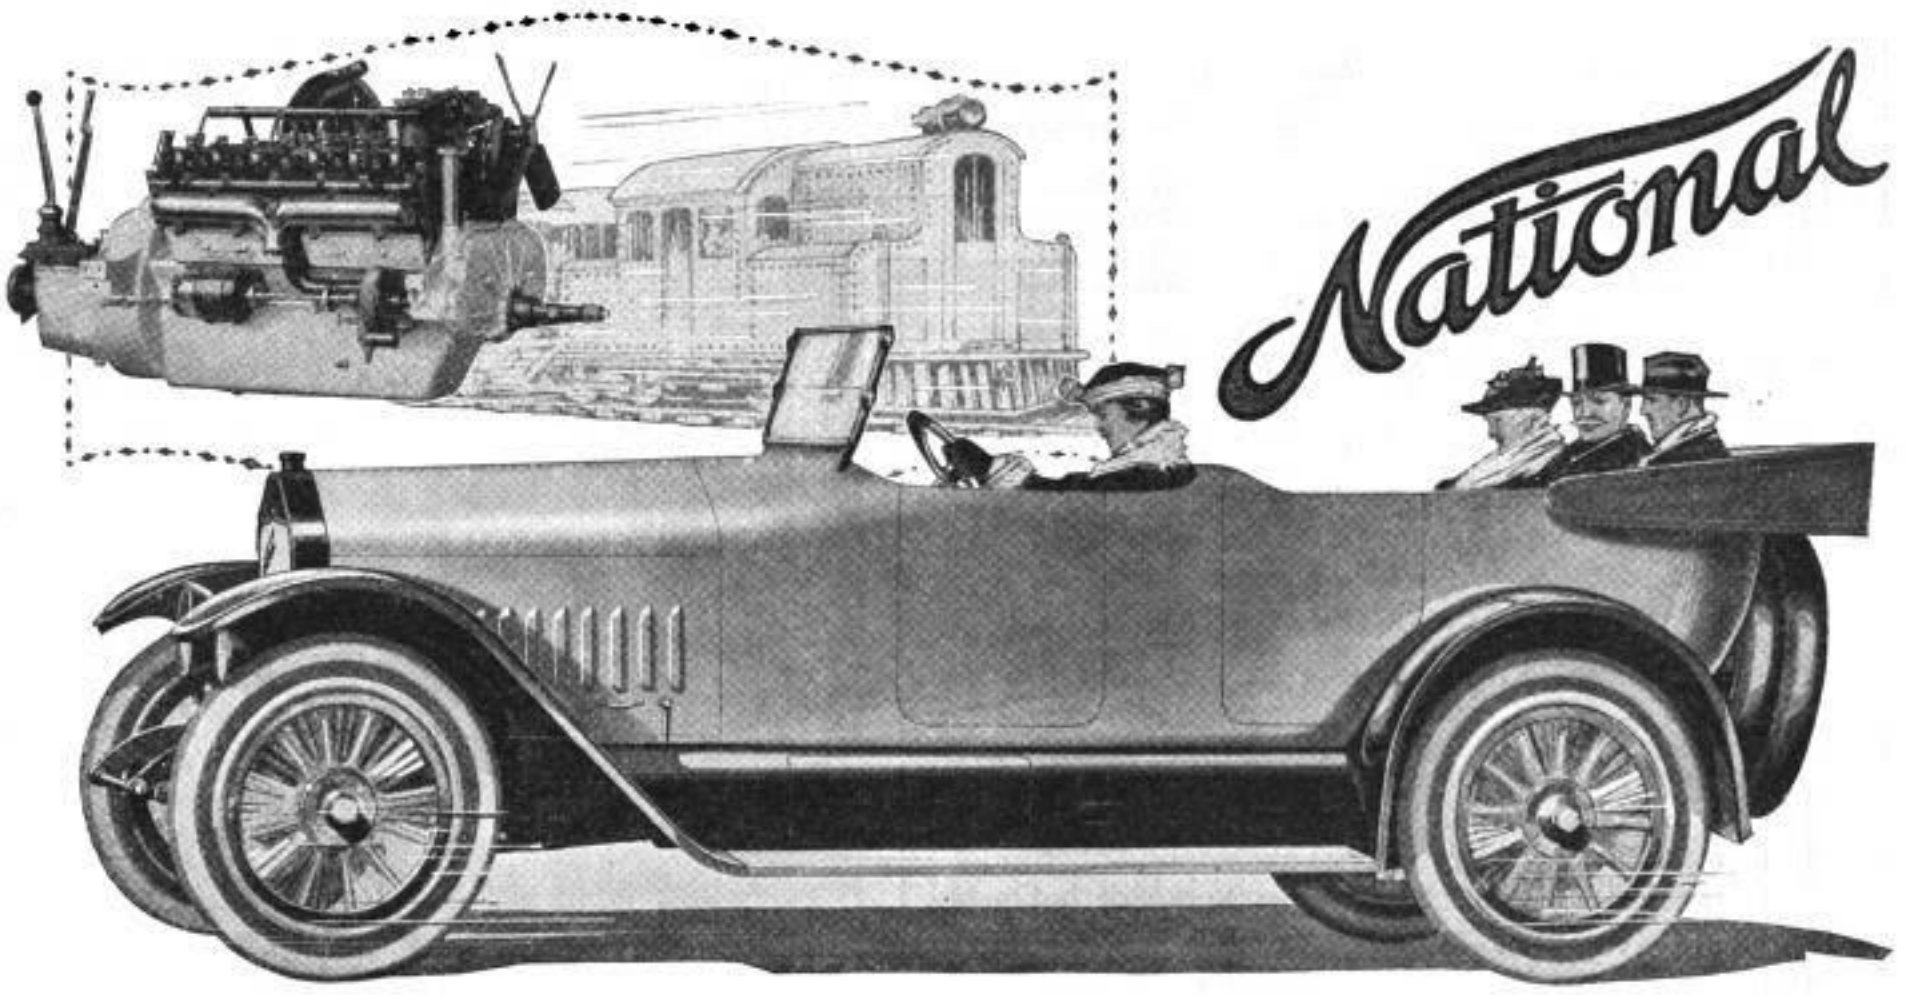
He would have passed in comic opera anywhere; but the dart of his black eye was keen, his voice crisp and assured. I admired him—with reserve; aware that we were lost in a strange city and that this amiable brigand seemed to know quite well what he was about. Aware more particularly of the forward-drooping shoulder and lowering gaze of Robert Matcham.

I felt rather like a man who travels with a box of dynamite—in no position to kick very hard at any incidental pocket picking along the road.

"Is this a holdup or only the request of a loan?" I asked.

"We are many enough to make it whatever we please," he said with a gleam. "I think maybe you bes' call it a public ex'bition of rare and valuable coins."

I thought so too. He was not bluffing. I could detect the scrape of feet all about us in the dark. It seemed to me the one needful thing was to bring Robert Matcham through in safety. I certainly did not intend that there should be any explosion on my behalf or for the sake of any single doubloon. From which considerations I made haste to submit with the best possible grace.



"Allow me," I said, "to contribute to such a worthy design."

Robert Matcham took a lurching step, but I caught him by the sleeve and forestalled any other answer by tendering my prize.

There was no pose about the banker when he grabbed it, held it to the light and loosed a shrill Portuguese yelp of triumph. The whole street seemed to echo and then fell as suddenly quiet. It was daunting to feel that lonely place alive with unseen

(Continued on Page 81)

Third Series of Twelves

A *NEW* MODEL

National built motors have always been abreast, and generally ahead of the industry. When four cylinders were the proper thing, National built the world's Champion Fours. When sixes came into vogue, it was National that built the first American Sixes, and National Sixes of today are the highest development of that type. National was a pioneer in the latest type motor—the Twelve Cylinder.

National Twelve Cylinder cars are today in operation in every state in the Union and in eleven Foreign countries. Owners everywhere testify to the success of the Twelve.

The same corps of engineers who have produced previous successes, have within the last year, concentrated on improvements for this third National Twelve.

NEW FEATURES

Removable cylinder heads to facilitate cleaning and inspecting.

Increased size of cylinder with corresponding increase in power.

Balanced crankshaft—another power increasing improvement.

Heated intake manifold to handle effectively the low grade fuel.

Larger main bearings reduce the vibration in a practically vibrationless motor.

Valves on outside of V continued together with new design valve lifters make National Twelves most accessible of all V motors.

Independent electrical units—

Delco for Ignition and separate, independent Starting and Lighting units.

To Dealers: Some excellent territories still available. Others now subject to revision.

Silent Power

Silence of Skill *vs.* Noise of Crude Power

THIS new National Twelve cylinder motor is the last word of all multi-cylinder efforts to achieve perfection. Its undemonstrative power entirely abolishes engine distraction and annoyances. It is infinitely more refined and dignified; infinitely more serviceable.

From low to high speed—at every stage between—there is the same *high pressure* of power, even, supple and subject to your perfect control.

You are not reminded of the mighty and faithfully working motor under the National's hood, because no mechanical effort is observable.

Quality Without Extravagance

EVERY time National sets a new style in body creations, there are always added new accommodations, for National body designs are essentially practical. They are not conceived alone for the sake of striking appearance, but for the *sake of the passengers' welfare.*

The inspiration behind the National gives you outdoors the same status your drawing room gives indoors.

Six or Twelve Cylinder "Highway" Models

THE marvelous success of the National Twelve is the greatest boon for the Six. Paradoxical? Isn't it logical the engineers who master multi-cylinder problems by perfecting a Twelve are best qualified to build the most efficient Six? National, too, had the advantage over all others by building America's first Sixes. Let a demonstration convince you National's Six is a superior Six in *every* respect.

Furnished in Touring Car, Roadster, Phaeton, Coupé and Touring Sedan in both Six and Twelve Cylinder Models.

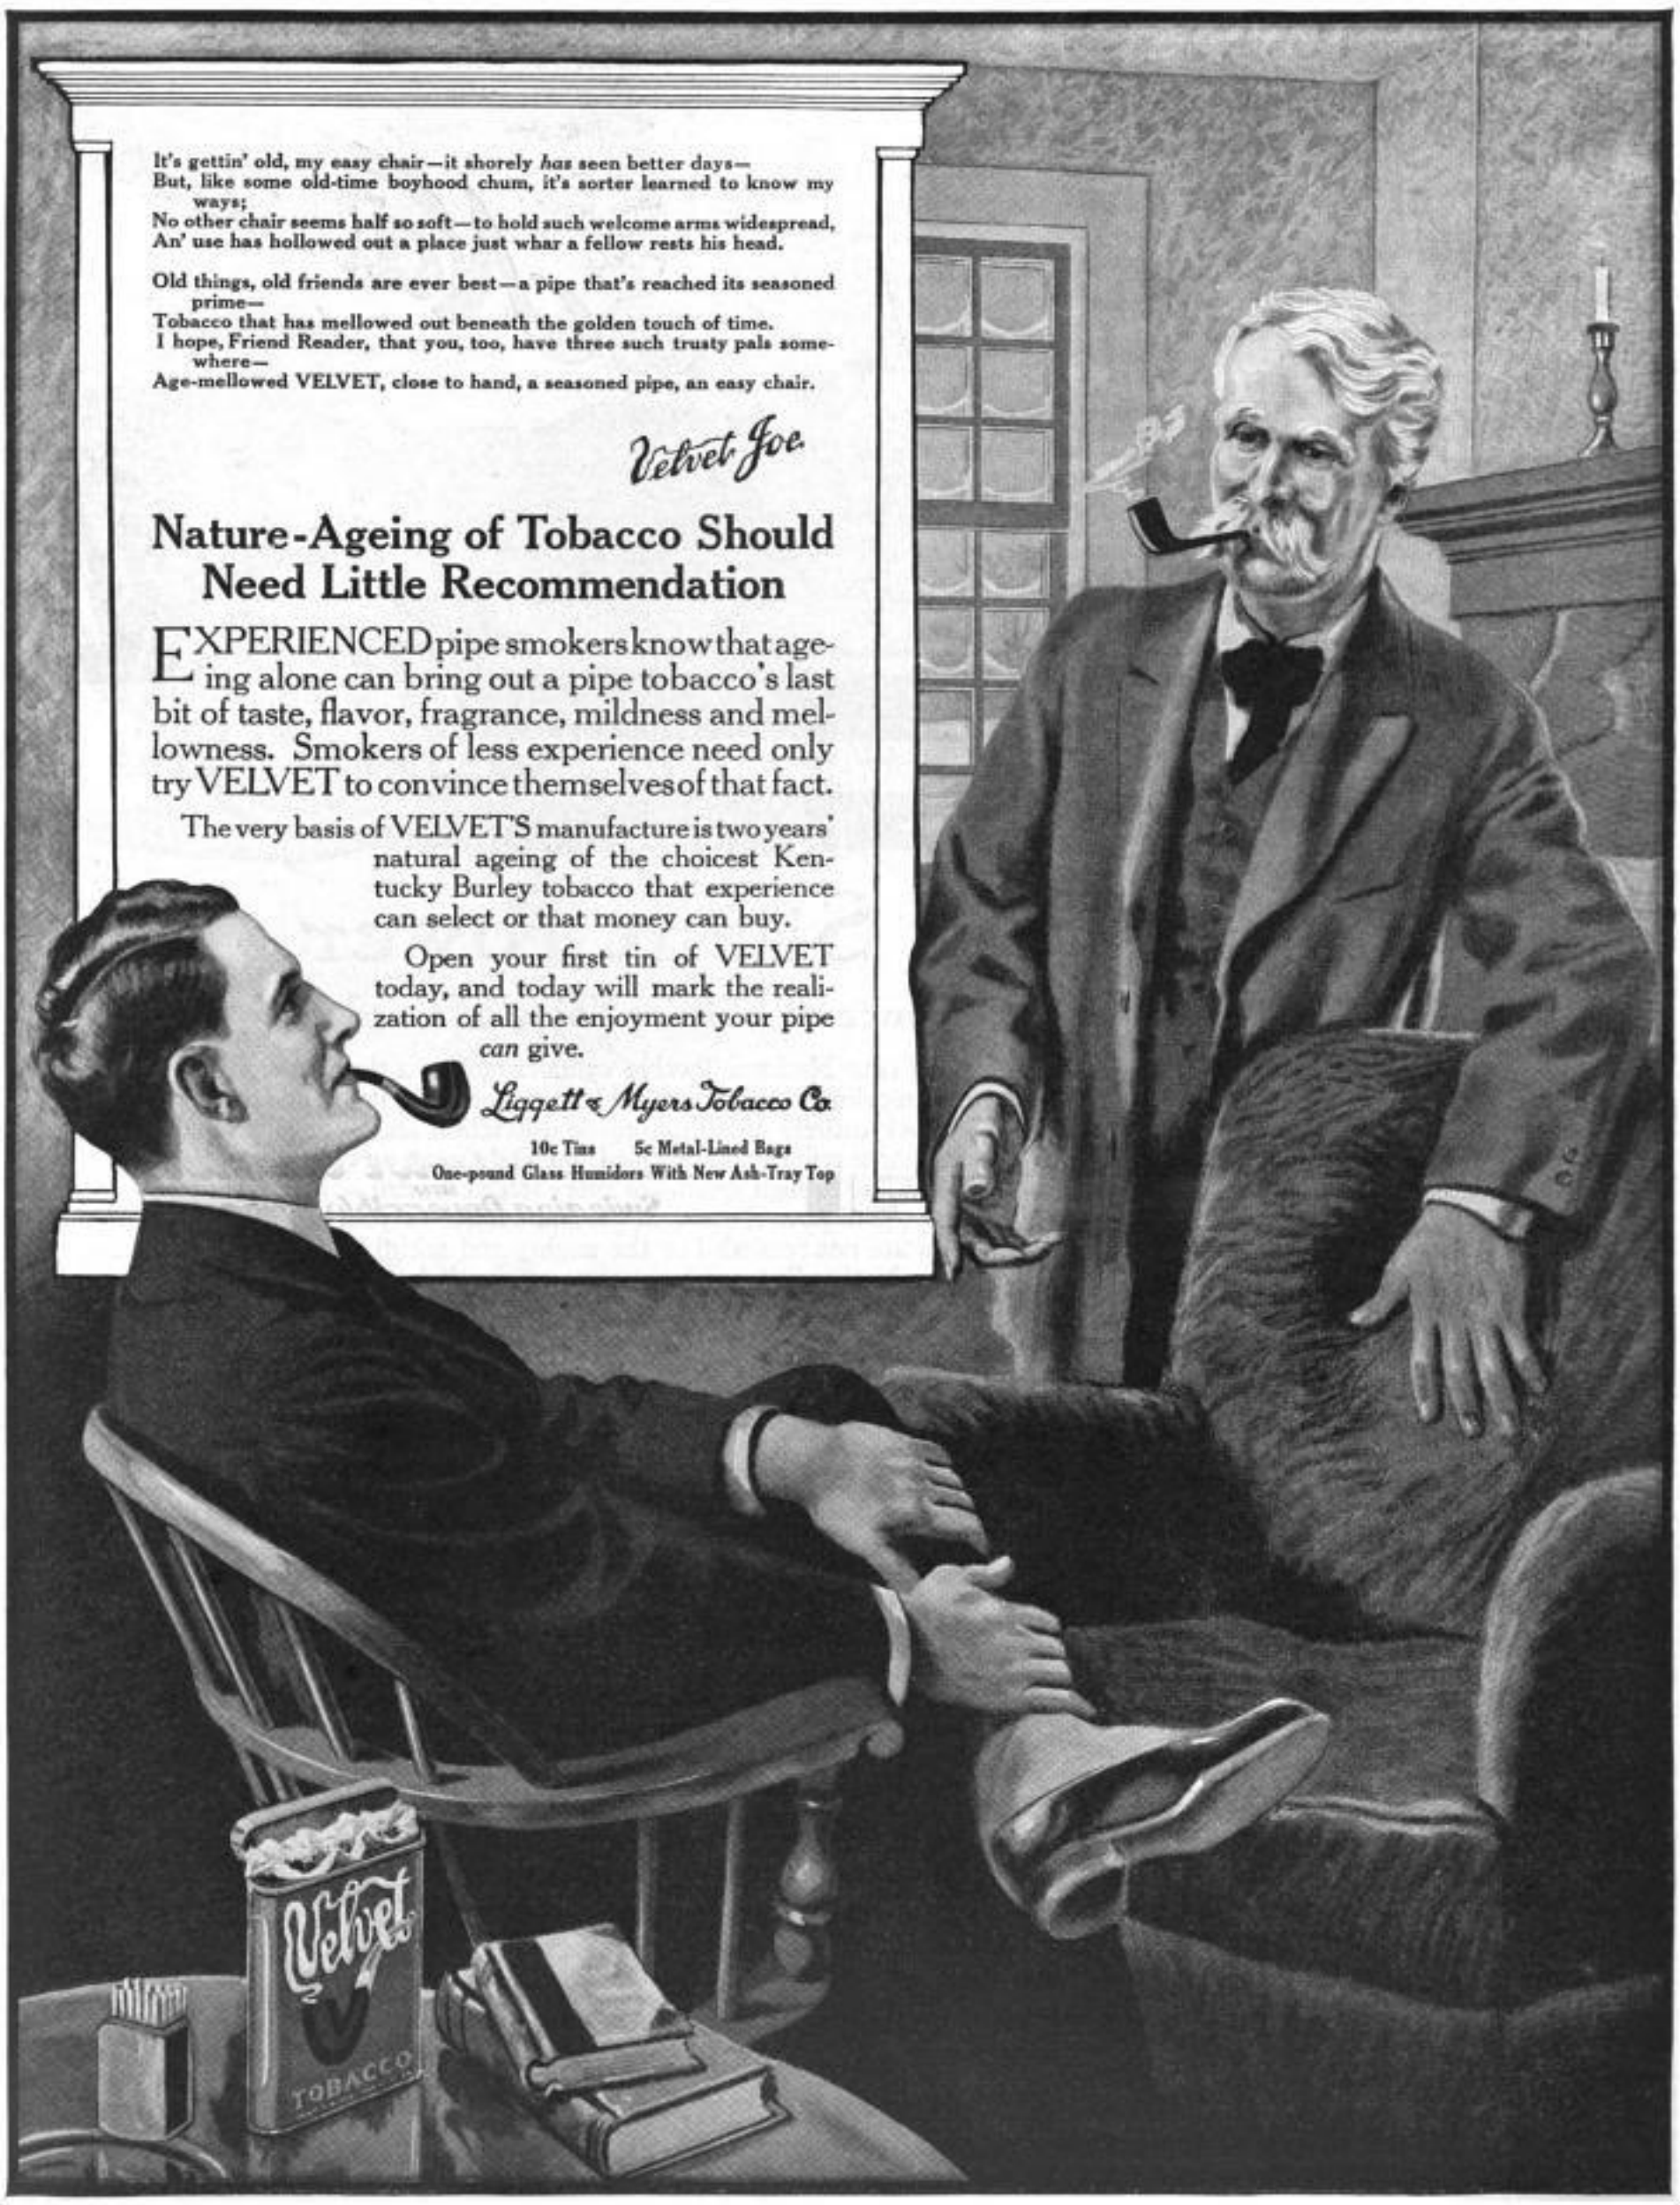
It's gettin' old, my easy chair—it shorely *has* seen better days—
But, like some old-time boyhood chum, it's sorter learned to know my ways;
No other chair seems half so soft—to hold such welcome arms widespread,
An' use has hollowed out a place just whar a fellow rests his head.

Old things, old friends are ever best—a pipe that's reached its seasoned prime—
Tobacco that has mellowed out beneath the golden touch of time.
I hope, Friend Reader, that you, too, have three such trusty pals somewhere—
Age-mellowed VELVET, close to hand, a seasoned pipe, an easy chair.

Velvet Joe.

Nature-Ageing of Tobacco Should Need Little Recommendation



EXPERIENCED pipe smokers know that ageing alone can bring out a pipe tobacco's last bit of taste, flavor, fragrance, mildness and mellowness. Smokers of less experience need only try VELVET to convince themselves of that fact.

The very basis of VELVET'S manufacture is two years' natural ageing of the choicest Kentucky Burley tobacco that experience can select or that money can buy.

Open your first tin of VELVET today, and today will mark the realization of all the enjoyment your pipe *can* give.

watchers. I hoped that now they might let us by; but I had not understood their purpose.

"Sir, I give you kindes' thanks." The banker was bowing, in character again. "Your intelligence are only equal', I 'ope, by that of your frien'. Jus' one more little, so little favor."

He turned to Robert Matcham and held up the doubloon between finger and thumb, so that his eyes blazed over it in the light; and I knew then, with a springing pulse, that the affair had passed quite beyond me and must take its own fateful course.

"You will inform us please w'ere you fin' this."

"Me?" said Robert Matcham with concentrated vehemence. "I'll see you fry in hell!"

The other's suavity fell away from him like a disguise. His teeth showed white in his beard; he gesticulated and the shadow behind him danced with fury.

"In 'ell! In 'ell? Look out! Tha's a place—tha's a place w'ere people speak out of their mouths the way they are told! They make you talk in 'ell, mister, whether you like or not!"

He controlled himself with a strong effort.

"Sir, why you should demand so peevish to be sorry? You got no business with that coin—no; not one damn little affair. What does it make to you? Be nize, now."

Robert Matcham only glowered at him.

"It was by Machico. Yes? Tell me anyways it was near Machico. It must 'ave been. Tell me that."

"No!" said Robert Matcham.

"No?" But once again he clutched his beard. "You want money to tell? Put your price."

"No!" said Robert Matcham; and the word came hot as an oath.

One instant I saw the banker toss his arms like a semaphore; the next we were overborne. Of that I retained chiefly a bewilderment at the force of our captors and the ease with which they dealt with us. Shy with the gun they might be, and indeed it is no natural weapon of their race; but these operators knew the use of trip and hamstring—the hugger-mugger arts; none better. My feet were driven from under me; my wrists paralyzed; I was caught and wound like a cocoon; and when I dropped it was on the cushions of the automobile. And, though this might be a slight-enough feat regarding myself, it was the measure of their cleverness that I found Robert Matcham already there, packeted in a helpless bale. I believe he had no chance so much as to lift a hand.

"You won' be nize with me?" The banker's chuckle floated back to us. "Then you can try being not nize with our Number One, and see 'ow you like it!"

He left us that threat to ponder during our journey to Machico. For it was Machico. Where else? As soon as they whisked us away toward the eastern coast road I knew it must be Machico. Where else should they take Robert Matcham, whose five centuries looked down on him this night? The rain had ceased; the clouds were lightening and shredding out to sea when we arrived.

VI

THERE stands a tiny ruined *fortaleza* on a hill near the southeast point of Madeira, whereof I know more than most folks. You may seek and never find it, for it is now quite lost among the sugar fields, overtopped by the rank cane. Its square tower, whence the first lords of the soil used to keep stern ward against the Moorish marauder, was long ago shorn to the lowly uses of husbandry and built about with arbors; but its walls are a yard thick under the plaster, thick enough for a dungeon—or an inquisition chamber. No place could be more secret, and a man might lie hid there, like a toad in a hollow rock, never to be traced.

This was the obscure and really sinister prison to which they brought Robert Matcham and myself by tortuous ways along the terraces. And here they carried us in from the forecourt to a low-ceiled hall and set us up for judgment, where many another unhappy captive must have stood before.

It was dim and chill as a vault, relieved only by a hanging iron lamp, which shed one yellow splash of light in the center. For some time I could discern nothing outside that wavering radiance on the deep-worn flags of the floor, though conscious of shifting figures in the gloom, of whispered stir and preparation.

For myself I had no great fear. The thing was so remote, and in itself so certain, sure, inexorable; a play of issues that held no part for a trifler like me. I was only a supernumerary, who had blundered on at the climax; a spectator who, having bought a stage seat, finds himself hustled into the riot. I had "come asking"; and it was hard for me to take our picturesque knave and his plottings and struttings quite seriously.

But how of Robert Matcham? The case was very different with him. When I glanced at his face I knew the possibilities for that harried giant to be just exactly as serious as life and death.

Throughout the long run he had spoken only once; and of all the comments he might have made!

"It was wrong of me to let you in for this," he had said very quietly; one of those phrases that throw a lightning glint on a whole nature.

He would yield no more. Circumstance could prod him no further. I swear the fellow was volcanic to the touch. Heaven help the first brigand within reach if ever they loosed him again!

A door opened behind us and closed again with a heavy jar, and quickly we were aware of a new presence. The waiting hush took an electric quality, a tension. Someone was standing there, across; and I peered nervously, for this could only be the chief of the band, the "head devil," on whose will or whim we must suppose ourselves to hang. I scarcely know what I expected; what image I had formed of that mysterious Number One, who had put such strange events in motion. Something very alarming and formidable, at least, and certainly very far detached from the sort of greeting that reached us now. Its words came rippling like notes of music:

"I am sure there must be some meestake. It could not be theese who rafuse a kindness to a stranger! Pedro—theese are zaintlemen! Pedro—Pedro—you shall answer to me! Oh, stupid-head—always to bungle some more!"

I despair of conveying that trick of speech, subtly exotic—like the tang in some rare wine. But the voice! Each has heard such a voice for himself, once or twice perhaps, and felt his blood leap to answer, singing. It was a woman's voice, mellow-throated as a bird's.

Robert Matcham raised his head at the first sound of it; but still we could see nothing to distinguish the speaker—only a vague apparition, nebulous, tall and slim. She moved before us, and presently sank half-reclining on some divan or deep settle midway of the room.

A hurried, anxious mumble seemed to show that the unfortunate Pedro made his excuses; but she waved them away.

"*Messieurs*," she said—"*Senhores*—I must truly apologize to r'ceive you so. My friend' have exceed' their instruction. I would not that they should treat you with such rudeness. I would not have you sink us *criminel*. Believe me—no!"

But, though she protested warmly, I could not observe any offer to release us.

"And English too!" Her soft drawl was a caress. "See how *bête* is that Pedro—to sink he could make you tell anysing to a r-robber in the street! Of course you would not tell! But me—I shall ex-plain so clear and so simple; and then you shall understand. Attend me, please:

"There is a great treasure on the shore of these island. A gr-reat treasure wrecked with a ship long taime bifore. Always, always it is known—only where? Thad nobody can know! By Machico, they say—yes. But z' waters by Machico are deep and cruel, and thad ship has went all to li'l' piece' hundreds years ago; and only the gold—the heavy, heavy doubloon gold—r'main down there; and to find it is not possible. So at last thad story is nearly forgot! You see?

"But listen now: Only three mon's ago a poor fisher boy finds a one coin on the rocks. Somewhere—somewhere he finds it, and quick the news shoots to Portugal, to Spain. My friends and me, we heard thad news. We are very much excite'; for w'ere thad coin is—you comprehend—there z' rest must also be! So we make a company among us; and me, bicause—oh, bicause I am not quite unknown in several co'ntries and I have some little hinfluence, it may be—I am bicome the Madame Presidente—ze Number One. Yes.

"We hurry to Madeira. And what do you sink? Thad boy—thad poor fisher boy—he don' know w'ere he find thad coin!

Legal Tender

The gambler sits there, a big, easy-going man, when the woman slips in, with a black shawl, creepy hair, ragged skirt, white face, eyes a cross between Gabriel's and a sick kitten's. She stands there without a word and looks at the money. Old Jack gets up, peels a bill off the roll and then—but

O. HENRY

tells it better. He saw, and, seeing, understood. That is the secret of his power. With swift, sure strokes he drives his story home. Never a word is wasted. From the first word the interest starts and you are carried on in the sure magic of his vivid sentences to the unexpected climax. But the big sale of O. Henry at the low price soon draws to a close.

It costs 40% more to make these sets, because paper and ink and binding have all gone up. So the price of O. Henry must go up at once. This is your last chance for the low price. Send the coupon.

Last Chance for the Low Price

"These are O. Henry days. With so much else that should absorb us—with Emperors dying almost unnoticed, with twenty million men struggling on a dozen 'fronts,' with the cost of living gripping at our vitals, and with the mad diversion of the New Luxury to hold us back from thinking of anything at all—we are all thinking and talking of the man who called himself O. Henry. Our neglected author is dead in his grave, with scarcely a publisher to walk behind his hearse, and lo! six years after his death he is bursting upon us afresh, as it were, with all the splendor of a rising genius."—*Stephen Leacock.*

The founder of a new literature—no wonder the sale goes up and up—higher and higher each day. Long ago he reached beyond the world's record for short stories. 1,500,000 already in the United States. How many in France and England—Germany—Africa—Asia and Australia—we cannot tell. As the years go by his fame grows greater, for the wisdom—the understanding—the love—the humor—the sweetness of these pages. Always healthful in their influence—always facing truth when truth has to be told—a bracer to the heart and mind—while the tears and laughter struggle together and neither wins.

Don't get him to read him once—you'll read him a hundred times—and find him each time as fresh and unexpected as at the first. He puts his finger on the pulse-strings of your heart and plays on them to your delight and your surprise. That is the mystery of O. Henry—his power beyond understanding.

KIPLING 6 Volumes 179 Stories FREE

Before the war started Kipling easily held place as the first of living writers. Now we know him to be greater than ever. For in his pages is the very spirit of war. Not only the spirit of English war, but the spirit of all war regardless of nation or flag—the lust of fight, the grimness of death, and the beating heart of courage.

What 15c Will Bring You from the Nation's Capital

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Center, for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new Friends. The Pathfinder, Box 95, Washington, D. C.

True, I tell you! We take him here; we take him there—no good! He never can remember w'ere he found it. He is so stupid—a li'l' fool' in the head, thad poor João, who now makes drinks in the Casino. *Pobrecito! Pauvre gars!* And so our treasure is lost again.

"Until you come along—you big zaintleman there. You are a stranger, a foreign'—knowing nothing of all this. You take yourself for a walk by the beach and, very first thing—what? You pick up another one coin of this treasure! Ah, thad is so remark-able! Thad is a wonderful, truly! But what can we do? We must know w'ere you pick it up—thad is es-sential to us. And nobody knows but you. So now you understand why my friends should make you all this trouble."

The red dot of a cigarette glowed to life between her lips, and by that tormented spark we glimpsed a face that seemed to advance out of the darkness and to retreat again as swiftly—the merest fleet vision of an exquisite and roseate loveliness.

She waited for an answer; but Robert Matcham made none.

"Perhaps," she said, with the gentlest concern, "perhaps I do not make myself yet quite clear. You will r'mark thad we are going to know! Somehow or another we are going to know. Thees is a too ancient claim of ours—writ' on ancient parchmen'—and nobody can kip us from it now, when we are so close. *Voilà!*"

The stillness weighed again and I saw Robert Matcham's great chest heave and fall.

"I, too, have a claim," he said, his full, deep tone rolling under the roof like an organ pipe.

She drew herself up to stare toward him.

"How?" she breathed.

And it was given Robert Matcham then to have his say out.

"Either that or nothing!" he declared quite simply. "Either I have a claim or there's no sense to life. Lady—look at me! Do you see a fool, a weakling or an imbecile? None of these, I think.

"When a man has been knocked blind and silly by his luck; when he's been hammered out of all hope and pride in himself—what can he do, lady? Well, there's one of two things for him: He can lie down and curl up like a worm, and confess he's only a lump of flesh, with no more control over his destiny than a bit of flotsam on the sea. He can do that—or else he can sink teeth and claw on the first hold and make it have a meaning; stick to it, and die sticking!

"I've had enough. I call enough! I'm half a world out of my place. I've lost everything I ever wanted; stood every mock and failure—a plaything for events. And now there's got to be a meaning: I'm going to put a meaning to it. If there's a treasure, as you say, it's mine; it must be mine; it's got to be mine—and it's going to be mine or nobody's! And all hell can't make me speak!"

The fellow seemed to swell beside me; I heard the ropes creak about his limbs; and heard, too, the sharp-drawn gasp of the woman in the shadow.

"No! And how do you think you can privent?"

"Well," said Robert Matcham—and his voice rang with high exultation at last—"I can begin this way!"

His bonds snapped from him like thread; his fist went to his breast and came away armed with glitter—João's revolver, which he had hidden there. It spat saffron, twice and thrice, toward the door. He followed on and met a rush of opposing figures. I saw the fat croupier fall. I myself was bowled over, deafened by the bursting clamor, trampled, kicked in the head. Half-stunned, I writhed round to watch the struggle, adding my feeble pipe to the din.

"Go on, Robert Matcham!" I yelled. "Go on! Smash through! Oh, smash 'em!"

They swarmed upon him, reaching for their deadly holds. Three had him about the waist; another clung to his feet; still others barred his path. So I saw him for the click of a shutter; and then, roaring with battle, he broke away, stripped them off like rats, waded on—plucked up the last one bodily and used him like a flail.

He was free! Free long enough to tear the door open and step back for a dash—and there she met him.

A bright bar of light cut in from the outer court and shone full upon her—a splendor of beauty to stop a man's heart in his breast. She was dark, like some tinted pearls—dark as he was fair—and ripe as her own lips. Her eyes, heavy-lidded, were slightly lifted to him with an amorous languidness. She did not flinch, save for a tiny quiver of nostril, thin and clear like a roseleaf, and the rise of her bosom, and when her little hand crept up to her throat.

So she stayed, and so he stayed, while the uproar died and fell away into the void—long and long; while time lost all count; while these two exchanged such a message as five centuries could not change, but no man can guess or words declare. And then ——

"Robert," she said, "this is your treasure!"

"Anna!" said Robert Matcham. "Anna!"

I heard them—I, myself; I heard them.

VII

IT WAS the spade-bearded banker who brought me to.

"So," he nodded, with an amazing grin, "you are not a daid? Tha's nize! Now there are not any daids at all, and everybody being much pleased."

I blinked up at him from the divan on which I lay, and then round the room, gray and bare in the dawn, which had stolen in by opened door and casement. The banker sat down at a little table near by and beamed at me. I noticed that he carried one arm in a sling, but otherwise he was still the model rogue, jimp and smiling. There was no one else in sight.

"They are all down 'elping to fish up that box of gol'pieces," he explained. "You didn' know that, eh?"

"Where?"

"Below the beach. Your frien' showed the place; and, sure enough, there we dived and foun' it. But him —— Oh, *là là!*" He chuckled. "Him and her, what do they care? They 'ave gone off together by their lones to see the sunrise—those dears!"

"Who was she?" I cried, starting up dizzily.

"What? You not know that divine *ballerina*, that dancer so sublime, that singer so sweet?" He kissed his finger tips. "Anna Darfetho, of Lisbon, and Paris, and Madrid! Only now—good-by! It is finish'! She are going with him to Australia. Imagine! And what for, do you think? To spend their share—'Oly Virgin!—in raising little woolly sheeps together!"

"Share?"

"Oh, we all share—that is agree'. Only me—you understand, I am—'ow you say?—the tiger for eat the mos'. Yes, I get the mos', because truly it should belong all mine. Be'old—for this our fazers used to cut the throat."

He took up from the table one of several blackish, common-looking lumps, like slag, and weighed it; and smiled his smile of the gentlemanly brigand who gloats upon the fortune won. And as I stared at that superior knave the whole stupendous marvel closed up with a final click.

Pilot? Pilot? I remember the quaint phrase of the chronicle: "Great fighting pilot of Spain"—pilot? Pirate, rather. Pirate, of course!

"Then you must be Pedro Morales?" I gasped.

"Ah, you know my name?" he twinkled pleasantly. "What, another coincident?"

But I had had enough—enough of coincidence, of romance and adventure and authentic thrill to last me for some time, and rather more than I had bargained for with my ten pounds. I groped my way out into the open and the brisk morning breeze; and there, looking down to seaward through an alley in the cane, I saw the new sun come up, as round and broad and ruddy as—as a doubloon.

New Facts About Teeth

Which Supplant All Former Theories

By Wm. M. Ruthrauff, A. B., A. M.

All Statements Approved by High Dental Authorities

The Source of All Tooth Troubles

Is a Slimy, Albuminous Film

Now it is known that a film on the teeth is the basic cause of all tooth troubles.

That discovery has upset many former theories. Now it is known that tooth preservation demands that film's removal.

You can feel the film, with your tongue—a slimy film—even after brushing. But you cannot see it, for the film, unless stained, is transparent. That is why teeth look clean.

It absorbs stains—nicotine stains in particular. That is why teeth discolor.

That film is albuminous. Therefore it forms a perfect breeding place for germs. And germs are a cause of pyorrhea.

It clings to the teeth, grows thicker and firmer, and finally hardens into tartar. And tartar is another cause of pyorrhea.

It holds food particles which shortly ferment, forming lactic acid. And that's the cause of tooth decay.

So that film causes all tooth troubles.

The most common is tooth decay. That is caused by an acid which that film holds in contact with the tooth. The film protects it where it can't be reached by neutralizing alkalies.

The most dreaded is pyorrhea. That is a disease caused by tartar and germs. Both are the result of that film.

Tartar is hardened film. Stains and discolorments are in the film.

Thus clean teeth mean filmless teeth.

Brush them as often as you will in your present way. While that film exists your teeth remain unclean. They remain unsafe. Germs are bound to breed around them. Decay cannot be avoided. Teeth will not long stay white. New-day dentistry is founded on this fact.

Feel your teeth now. That film is there, no matter when you cleaned them. Your dentist will assure you that it must be kept away.

Brushing Does Not Remove It

Many Applications Harden It

That film resists the tooth brush, and in crevices escapes it. So ordinary brushing does not clean the teeth.

Many applications have alkali in them. And alkali hardens albumen.

That is why our old methods proved ineffective. That is why tartar formed. That is why teeth discolored and decayed. That is why they bred germs, despite all our attention.

We brushed them, but did not dislodge all the film. A stain like iodine will prove this.

Three years ago a way was found to keep rid of this film by the aid of a digestant. Five governments already have granted patents on it.

The way is called Pepsodent. The basis is pepsin, the digestant of albumen.

But pepsin alone won't do. It must be activated by an acid. And the usual acid—hydrochloric—is destructive to the teeth.

The solution was found in an acid salt—a neutralized acid which will activate pepsin. That discovery made Pepsodent possible. And with it came this revolution in the use of dentifrice.

Pepsodent brings activated pepsin in contact with that film. The object is to digest and dissolve it, so brushing can remove it. Two or three applications will show its amazing results. Your teeth will feel as though just cleaned by a dentist's polisher. You will know that the film has met a dentifrice which it can't resist.

Send this coupon for a One-Week Tube to prove this. We will mail it free. Use it, and let the clear results argue for themselves. You will never go back to a method which leaves your teeth coated with film. Please act today. Clean, white, filmless teeth are too important to delay. Cut out the coupon now.

HOW do you know where the honeysuckle grows?

"Your Nose Knows"

and your memory holds always dear the places of your childhood that were so purely *fragrant* with the yellow and white blossoms. You can't forget anything that has impressed its pure fragrance upon you. Pure *fragrance* is the *Soul* of things. A tobacco with a pure, satisfying *fragrance* is *a smoke with a Soul.*

Such a tobacco is

Tuxedo

The Perfect Tobacco

made, as it is, from a blending of rich, ripe Burley leaves, grown in the Blue Grass section of Old Kentucky, TUXEDO has a pure *fragrance* that is all its own.

Try this Test:—Rub a little Tuxedo briskly in the palm of your hand to bring out its full aroma. Then smell it deep—its delicious, pure fragrance will convince you. Try this test with any other tobacco and we will let Tuxedo stand or fall on your judgment—

"Your Nose Knows"

READY! ACTION! CAMERA! GO!

(Continued from Page 13)

Not from choice, however, as the dual rôle was too strenuous; but the fact was I had become better known as a lead than as a director, and the Eastern office wanted me in the former rôle.

By this time, too, I had entirely lost my sniffy attitude toward the pictures and I rather proudly permitted my identity to become known. True, I received many letters and occasional visits from the co-stars of my legit days, and they usually expended much interest, but more pity, to see me sunk so low; but I had only a few years' waiting to find them, one after the other, rapping at the door.

I have said that the power of the director in the early days was almost absolute, and this was true in his relation to his producing force; but he had one serious check upon him, and that was the manufacturer. With us, this overlord usually lived in the East; so the friction was often most exasperating. The owner demanded a certain type of picture, and he, in turn, got his taste from the exhibitor. Of course the exhibitor got his point of view from his picture fans and was loath to try anything new.

These men insisted that their patrons demanded the rough stuff; so our bosses spent our artistic lives in every kind of violence imaginable.

It was a most hopeless inertia and conservatism that well-nigh made some of us give up in despair. I recall our first efforts to put over a two-reel story. The exhibitors fought us tooth and nail, and it was only after a most threatening controversy that we were finally permitted to make one. Then, as now, the manufacturers and exhibitors underestimated the public taste, for the two-reelers went famously—then three-reelers—four—five; and now we have them in ten, twelve and fourteen.

With the beginning of the multiple reel we had to begin actual stories—two thousand feet of action was not enough to sustain interest; and we began to buy scenarios and to dramatize popular magazine tales.

Within a very short time the public taste had so changed, and the fans had become so sophisticated, that more and more care had to be exercised in all our productions. Painted scenery gave way to solid sets built of real material, and the cost of productions went up and up. Also, with the feature picture there came into the business the stars of the stage—at first the lesser lights and finally the greatest of them all. Some of the stars drew much bigger salaries than even the directors; nevertheless, we made money. Notwithstanding the fact that the stars drew more than we did, our powers were still supreme.

Artistic Work Mangled

Though we were all-powerful, our troubles were manifold. We were, as yet, either writing most of our own stories or adapting those we bought; and often I would lie awake until the small hours of the morning, organizing in my mind the continuity of my scenario. Then I had to order and supervise all sets, choose my casts, and often seek my locations.

We might get a picture half made, when the weather would change, and we would have to dismiss the cast for a week or more, and then renew the taking of the picture. This was always dangerous, for costumes or props might be mislaid, or the set struck so as to make room for some studio stuff that could be taken in the rain. Then came the task of rebuilding the first set exactly as it was before; or, to cap the climax, the second lead would get his hair cut; or some other idiot would pi the picture in some outrageous way.

Perhaps we would employ some outside person for a certain character, because of his type, and he would do very well at first, and fall down entirely in the big scene; then we would either have to employ a new person to do the previous scene all over, or skin down the part to nothing, with the chance of spoiling the story. Often, after we sent the film East, we got most of it back for retakes, because the Eastern laboratory would claim that the film was weak or scratched—there was always a feud on between our Eastern and Western laboratories; or because the big boss couldn't see the feet of the hero in a certain scene; or somebody else couldn't read a street number a block away.

Never, by any chance, did we see our pictures run in positive or with the titles. These were made in the Eastern laboratory.

When, finally, we went to the theater to see our child projected on the screen, we would find that certain scenes had been cut or new titles substituted. As if this was not enough to break our hearts, careless projectors would tear the film, cut out the torn parts and splice the ends together again, with the result that a person sitting at a table would suddenly jump way across the room. Projectors often even deliberately cut several feet out of a film if they happened to be enamored of the girl in the picture.

Remember this, girls: Whenever your friend Harry, who projects down at the Excelsior Theater, gives you three feet of film of your favorite actor, the chances are that he has all but ruined a scene that was the result of infinite pains and labor.

Usually the whole artistic effect of a picture depends upon the tempo, and we would make and take our scenes with the utmost care that this might be correct. Imagine our aesthetic joy in going to a theater and seeing our people go through their scenes as though the whole cast was on casters! This would be accomplished by projecting the picture faster than the standard speed, and was done for two purposes—one to rush through the program in order to corral a new handful of nickels; and the other to put pep into the show. Punch and pep—how I hate those words! I firmly believe they have been the greatest curse to our art. Think of putting pep into Hamlet!

Some Early Troubles

Another of our earliest troubles was in getting permission to use certain locations. Before the films became "respectable," people were very tight across their chests about allowing their estates to be used as backgrounds for violence and rough-stuff comedies. It was almost impossible to get public officials to appear publicly or to gain their consent for any picture purposes. Ex-President Taft helped immensely in this respect. Seeing the historical possibilities of the films, and being too genial to refuse, he permitted the first official pictures to be made; and during his Presidency he often permitted directors to use the White House. Since then, the respectability he lent our business has opened the way to every reasonable demand we make.

But there are certain locations that are becoming harder and harder to get. At present it is the saloon exterior in California. When the wet-and-dry agitation began there some months ago the saloon men realized that it was mighty bad for their cause to permit the use of their places for moving pictures, for the reason that they were almost invariably made the background for some form of crime or intemperance. Now we have to build our own saloons.

The success of the feature story soon began to make the one-reeler less popular, and almost every studio turned to the manufacture of the multiple reel. A feature story, at first, was intended to dramatize some well-known popular novel or stage success, or to exploit the personality of a famous star; but it soon grew to mean any film that was more than two or three reels long. Many of the so-called feature films of to-day are nothing more than the old one-reeler padded out; in fact, many of them are retaken from one-reelers the companies hope you have forgotten. But the exhibitors are feature-crazy, and it's pretty hard now to sell a one-reeler, no matter how good it is.

The feature film, however, gave the director the chance that he always longed for—a fine story, good actors, unlimited money, and time in which to make the picture. These were the grand old days for the reckless producer and still more reckless director.

Money was pouring in so fast that the cost of production was hardly considered. Great companies of expensive actors were kept on salary, and often would work but a few days a month. Furniture was bought, huge sets built, and armies of men employed with almost insane recklessness. Ruins were wrecked, real ships sunk; aëroplanes, touring cars and great buildings were tossed into the dump just to get a few feet of realism.

Any Weather Is Billiard Weather!

And Any Home Has Room for a BRUNSWICK TABLE

Carom and Pocket Billiards are a captivating sport, and nowadays the Brunswick Home Table is the family playground. *When school lets out it quickens home-bound footsteps.*

Soon then the clicking balls proclaim that eager eyes are training to debate dad's mastery when he arrives from work.

This manly love of skillful achievement is built right into these scientific Brunswicks. They are packed full of health, they are wrapped with tense moments, *and they are brimming over with raillery and laughter!*

BRUNSWICK HOME BILLIARD TABLES

Used by Experts

Don't think that Brunswick Home Tables are toys—they are not. Many professionals use them constantly. Accurate angles, fast ever-level beds and quick-acting Monarch cushions give them expert playing qualities.

In design and cabinet work these tables are superb. Fine oak and handsomely figured mahogany, richly inlaid and built to last a lifetime. All reproduced in actual colors in our de luxe catalog. Write for free copy today.

Low Prices—Free Trial

Our plan lets you test any Brunswick 30 days at home and *pay while you play*, if you keep the table. Prices are low because we are selling to thousands.

High class equipment given with every table—Balls, Cues, Markers, Tips, etc., and Expert Book of 33 games.

Our handsome catalog tells all—don't fail to send for a copy at once. It's free.

Mail This Coupon Today

Learn how our "Quick Demountables" can be set up anywhere and put in a closet when not in use.

See the "Grand" and celebrated "Baby Grand" for homes with spare room, attic, basement or private billiard room.

Full information, color-pictures and letters from owners contained in our latest catalog—"Billiards—The Home Magnet." Thousands of requests are coming for it. The coupon brings a copy free by return mail—send today.

Modern Method of Home Building

is factory efficiency applied to the building business; enabling you to buy your house, *complete*, with all lumber and millwork *cut-to-fit* by machinery; all hardware, paint, shingles, even nails, etc., included, at lowest factory price.

1917 Prices Based on 1916 Costs

Our preparedness is your gain. Dodge the exorbitant prices—compounded profits—extra labor—extravagant waste—and tedious delays of the old-fashioned building method. Investigate this newer, better, quicker system, already tried and approved by thousands of home-builders.

Get Our Catalog of 100 Houses

Cottages and Bungalows; make your selection; we ship the complete house direct to you, ready-cut, at factory price. Accurate plans and full instructions free. Machine-cut lumber saves 40% carpenter labor. No waste. No delays. No costly mistakes. One price. One profit. One responsibility. Money-back guarantee of satisfaction.

WRITE TODAY for catalog showing actual photographs, floor plans, full specifications and prices. Enclose 4c postage. (Also Home Furnishings catalog on request.)

BEECH-NUT PACKING COMPANY, CANAJOHARIE, N.Y.

I recall one instance of a fellow, directing in one of the largest studios here, who employed more than two hundred people for a ballroom scene. The script called for the tango, or some new dance; but when the orchestra struck up it was found that only a few could dance modern steps. Rather than change to a waltz, which everybody could do, the director lost his temper, ordered the scene stopped, and then announced that the company was to report at the studio daily for a week, as he was going to have that scene if it necessitated employing a dancing master to teach the whole cast! This he did; and that one little thirty-foot piece of film cost the company six thousand dollars.

Another chap ordered thirty-six tons of coal for a mine picture. His assistant, hoping to save money, bought six tons for the foreground and thirty tons of crushed rock for the rest. This, when washed with lampblack, looked exactly like coal. When the director was told of the deception—he never would have noticed it—he ordered the scene stopped and everybody away until he had real coal, by heck! That kind of realism is pretty expensive.

This condition couldn't last, for the sheer spending of money had its limits. Only companies of unlimited resources could finance the huge productions; and sooner or later the fans would cease to marvel at the big stuff and would demand quality rather than quantity. Even the comic fellows are beginning to feel the reaction from useless expenditures, and are more bent now upon real comedy than the destruction of valuable property.

The Custard-Pie Motif

After the "pursuit" picture, directors were at their wit's end until the most famous impresario of knockabout fun invented the motif of the custard pie. A custard-pie bombardment has two very strong elements of humor concealed in its action—one is surprise; and the other is messiness. There are lots of "nice" people who think it is vulgar and outrageous to laugh at such elemental humor; yet there is something fundamentally funny in seeing a body's face projected through the soft goo of a custard pie.

If you do not believe this, try it some day on your neighbor when he pushes his head over the fence to say good morning or to borrow the lawn mower. Hit him full-on, butter side out, with a custard pie, and see whether the result is not funny—or tragic; a hair often divides the two. If you try this experiment you will learn that only a complete bull's-eye is funny. If the pie should hit on the edge, or only partially break, the joke is held in suspense and spoiled; but if you "moon him," I assure you the neighbors for miles round will all laugh. My, the number of custard pies that we have wasted while one of the comedians perfected his technic and aim! A good custard-pie thrower is invaluable in the comics. It is queer that the pie must be custard.

This same director also invented the comedy police, who have had more trouble with the real police than any actors on the screen. The humor of the wild exploits of these volatile officers of the law is based upon two motifs—one is the collapse of dignity; and the other is a kid desire in the hearts of nearly all of us to see authority get it in the neck.

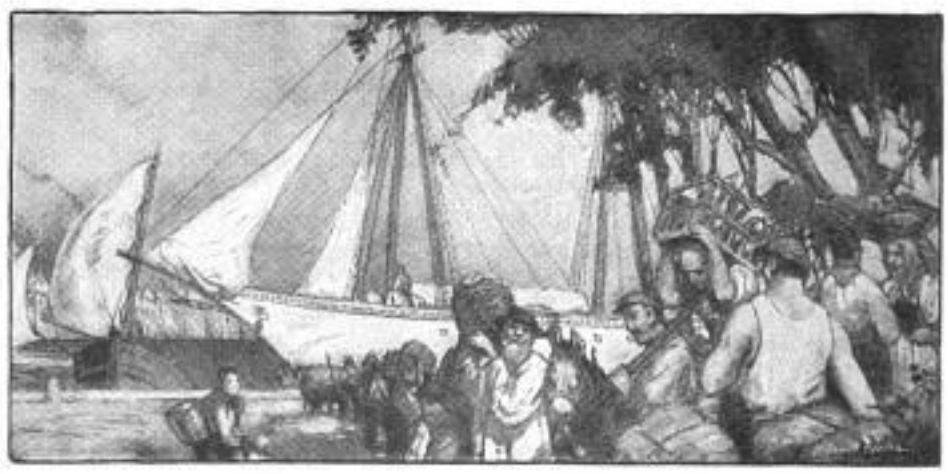
There has been no great comic inspiration in the last few years—we can't laugh forever at the pursuit, the pie, or the police. So the comic studios, taking their contagion from the drama, have gone in to spend huge sums on sets.

The money blown in on a few feet of film is incredible. Only a month ago one of our directors was going to do a comic in which the fellow on horseback chases a girl; and just as he gets to the edge of a cliff she ducks, and the horse with his man rider jumps over the cliff into the ocean. At first they couldn't find a jumping horse; and, as the authorities wouldn't permit pushing the horse off, they had to train one. It took two weeks in the big studio tank—going up a few feet each day, until the horse got to the high dive.

There is an old rumor that once upon a time a mouse ran up a clock. Our comic director, believing that the clock in question was on a lady's stocking, attempted to repeat the feat for a two-reeler he was making. For three days a camera man stood at alert attention while the lady sat in receptive horror and a foolish little mouse ran everywhere except up the clock. Every inducement was resorted to, so that the mouse might fulfill the nursery rime. Even a piece of cheese—the kind that mice are reported to relish—was balanced on the lady's knee; yet he preferred the lower altitudes. After all this labor and expense the result was finally attained by trickery.

The Dearth of Comedy Material

Bears and monkeys are sometimes put through months of training to get but one or two scenes. The sets necessary to show the flooding of a hotel from top to bottom, where the guests are all washed out into the sewer, are also very expensive.



And now in the comics comes the same reaction, from great expenditures and startling destruction to something less expensive, but with more brains. Comedies of situation are superseding the slapstick and the custard pie. Our greatest difficulty is in getting stories. We have the plants and we have the comedians; but where, oh, where is our boasted national humor? A perusal of the scenarios sent to the comic studio is one of the saddest and most lugubrious experiences I have ever undertaken.

It is difficult enough, heaven knows, to get good dramatic stories. One reason, no doubt, is because situations are fairly limited, and the output of the studios in the last five years has been so enormous that there is mighty little left which has not been done. Good plays for the legitimate drama are difficult to get, and our problem may perhaps be appreciated when it is known that one studio will sometimes turn out in a month as many plays as New York produces upon the stage in a year.

But, if dramas are hard to get, comedies are even harder. Every script that comes in is put into all the test tubes in the laboratory to find even the germs of a good comic situation; if, perchance, one is discovered the author is encouraged with enthusiasm, hope and money. Yet, because our comedians either do not understand the needs of the comics, or because their humor finds expression in some other way, the stuff sent in is almost hopeless. It therefore devolves upon the poor, worked-out director to frame most of his own stories.

Now that my place as an actor has been taken by any one of the great army of film favorites, and I have become only a publicly inconspicuous director, Mrs. Barryworth is anxious that I shall seek fresh immortality as a comic-scenario writer; but—alas!—I fear I am just like the rest of my countrymen, whose wits seem brighter in repartee, exaggerated metaphor and whimsical observation than when they take their pens in hand.

Editor's Note—This is the first of two articles by Mr. Wagner. The second will appear in an early issue.

The talk has turned to equipment

"Now, gentlemen," said the General Manager of a large motor-car factory, "the success of our car has been built up by sincerely studying where improvements could be made in efficiency, durability and quality refinements that mean so much to the prospective buyer.

"We are here, this morning, to talk about our new models What about bearing equipment?"

"I am convinced that this matter of bearings is vitally important," replied the Sales Manager. "I have been looking into it thoroughly, from the standpoint of the purchaser of the car, and as a selling proposition, ball-bearing equipment—a full-jeweled job, giving every rotating part in the chassis the frictionless movement of a full-jeweled watch—has a decided selling advantage. I submit that we equip throughout with ball bearings."

"I second that recommendation," said the Advertising Manager. "For ball bearings throughout will be an added and convincing publicity feature in the sale of our car."

"What do you say, Mr. Engineer?" inquired the General Manager.

"It certainly follows the best engineering practice," replied the Engineer, "that ball bearings reduce frictional resistance and wear to the vanishing point, give longer life to every part of the machine, successfully resist shocks, thrusts, stresses, from any and all directions. In my opinion, ball bearings in our car mean chassis perfection where the wear comes and the weight is carried."

And the Master Mechanic added: "Yes, and ball bearings are a complete, self-contained unit that never require adjustment, are absolutely trouble-proof, and offer the advantage of comparatively inexpensive installation, car assembly, and upkeep."

This conversation is interesting to every car owner and buyer, for

New Departure Single Row Type

A highly perfected anti-friction Bearing for use where radial loads only are to be carried.

NEW DEPARTURE BALL BEARINGS

mean not only mechanical perfection, but highest efficiency in service and lowest operating and upkeep cost.

Before you buy your car, send for the interesting booklet on "New Departure Ball Bearings and What they mean to the Car Owner."

THE NEW DEPARTURE MANUFACTURING CO.

BRISTOL, CONN., U. S. A.

Conrad Patent Licensee.

New Departure Double Row Type

A single, self-contained "foolproof" unit carrying all the loads and stresses simultaneously from whatever direction they may come with equal efficiency, and reducing friction to the vanishing point.

from every point of view, past record, present condition or your future outlook, justifies your thoughtful consideration. Don't delay—it's dangerous—tomorrow may never come. Considered as a Fraternal Society, its advantages are great. You need never be without friends; brothers, always ready with the helping hand, the friendly word.

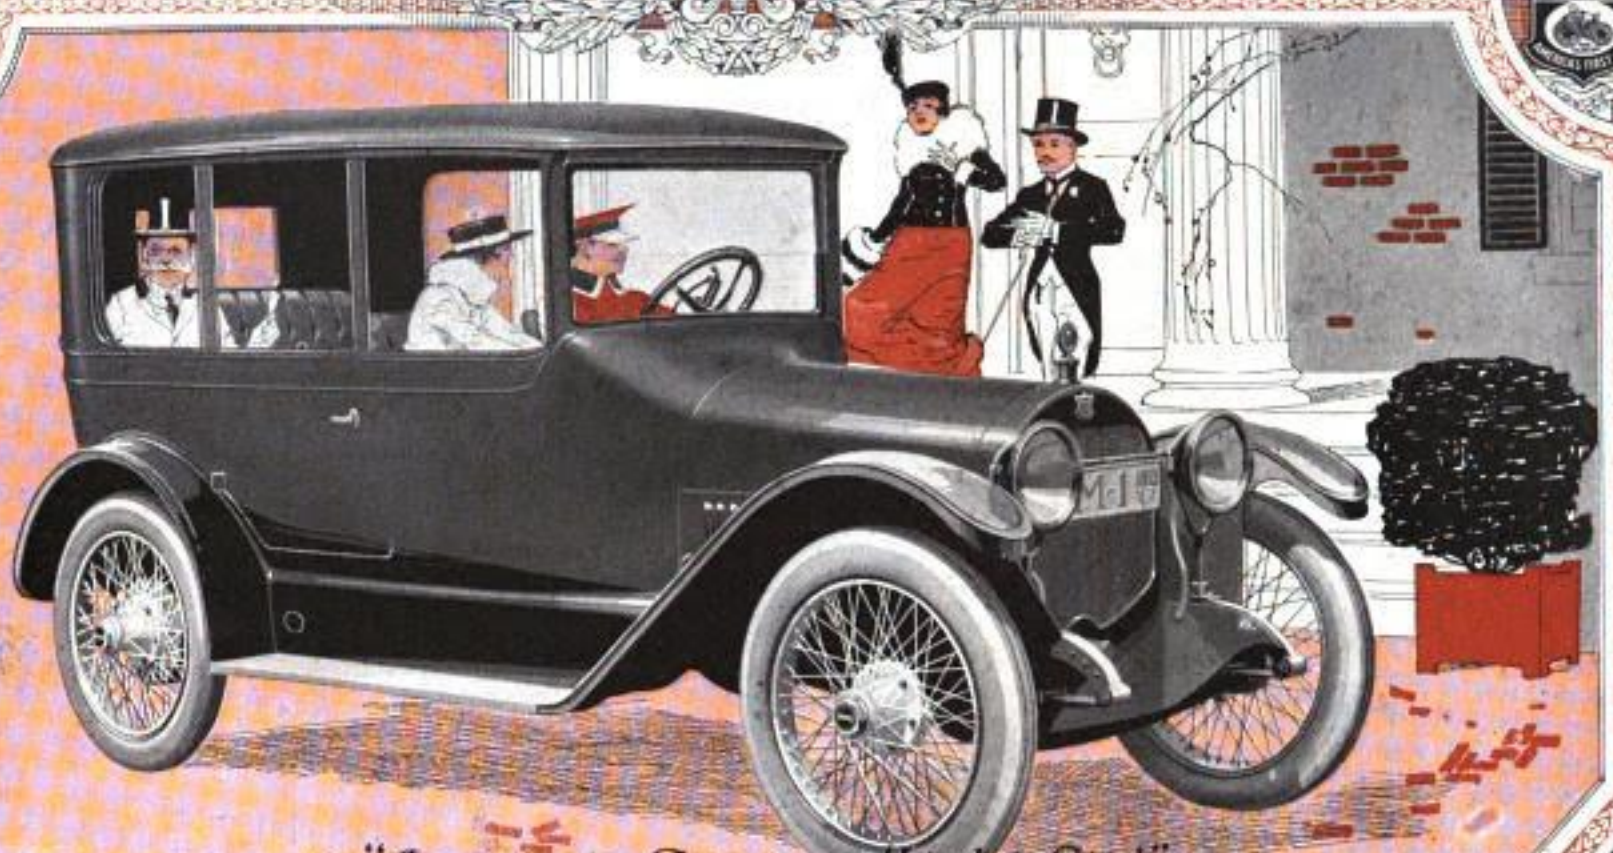
Insurance Protection—Certain, Safe and at Minimum Cost

A certificate in The Maccabees is a guarantee of protection, for yourself in old age, for your family in the event of your death—and complete security for every dollar invested.

Because The Maccabees is a business organization as well as a brotherhood. In every detail of management it keeps step with the most efficient commercial methods of today, and provides against future emergencies, economic and financial.

Benefits are provided in case of death, sickness, accident and old age. Certificates are issued on popular, easy payment plans, **$500** to **$3,000.** Contributions or premiums may be paid monthly, semi-annually, or annually. White persons from **18** to **50** years of age are eligible to membership if in sound health, Certificates on the Whole-Life Special, Whole-Life 20 Annual Payment Plans—provide for paid up and extended insurance protection after three full years of membership.

Ask any man why he joined The Maccabees, and he will tell you it was for the complete protection of his home and because **a Maccabee certificate is as good as gold.** In short, if you are a Maccabee, you have the kind of insurance protection you want.



Present members may transfer to the new plans without cost, and receive credit for all accumulations.

You will find a local Lodge or "Tent" near you. You want its open door, its protection, for yourself and your loved ones; its fellowship, its influence for you and the youth of your family. Write headquarters or any branch manager for complete information as to plans and benefits.

THE MACCABEES — General Offices, 1021 Woodward Avenue, Detroit, Michigan

"America's Greatest Light Six"

HAYNES

"America's Greatest 'Light Twelve'"

The lower priced car really costs more!

Lower *after* cost! Longer life! That's why many a buyer who expected to pay $1000 or $1200 for a car has bought the Haynes at $1485.

Study after costs—look ahead a few years—and you, too, will buy a Haynes. Your Haynes will be in tip-top shape—running better than ever—at a time when the cheaper car will be getting worn out and a frequent visitor to the repair shop.

The Haynes you buy now will be *thoroughly modern* for years—*in design and in mechanical features.*

The Haynes design never has followed fads or freakishness. It is distinctly and distinctively Haynes. The Haynes of two years ago is a modern car today. The Haynes of today will be a modern car for years—a car you'll *always* be proud of.

The Haynes high-speed motor has seen no change of any consequence in thirty-two months. *It develops more power than any other engine of equal bore and stroke.*

With ordinary road conditions and regular gear ratio, the Haynes gives you sixty miles per hour on high. It throttles down to one mile per hour on high. Inside of seven and a half seconds, you can mount up to a speed of thirty-five miles an hour. It takes the longest hills on "high."

The Haynes gives real comfort. The springs are long, cushions are deep and packed plump with finest quality curled hair. There is abundant room for a full quota of passengers.

Haynes upkeep is surprisingly low. Tires average 8,000 miles or better. Oil and gasoline give surprising mileage. Trouble or incidental expense runs very small.

You get this extra comfort, this extra power and speed—you enjoy this big car of good reputation for a moderate extra first-cost investment. You *save* much or all the extra cost in low upkeep. You get the additional cost back several times over in the end.

If you will *thoroughly investigate* the Haynes, it *will sell itself* to you.

THE HAYNES AUTOMOBILE COMPANY, 40 So. Main St., Kokomo, Ind.

Dependable Spark Plugs

Champion Toledo

Zero weather—your car waiting out in the cold!

You start your motor—sharp, quick explosions in your cylinders hammer and heat your cold spark plugs.

Extending above and out into the frigid air, the porcelain insulators of your spark plugs are brittle with cold one minute, expanding with heat the next.

And the hammering of quick, sharp explosions from below beats against them.

Champion porcelains are cushioned against these blows by patented asbestos-lined copper gaskets.

Absolutely dependable, unqualifiedly guaranteed, sold everywhere.

Look for "Champion" *on the porcelain*—not merely on the box.

Champion Spark Plug Company, Toledo, Ohio.

THE NEW ARISTOCRACY

By WILL IRWIN

MOST Americans without immediate ties of blood in the belligerent countries have made up their minds—in a general way, at least—that Armageddon is a struggle between oligarchical governments and general democratic governments; which is one secret of the general sympathy, ranging from boiling hot to lukewarm, for the Entente Allies. On one side stands France, probably the purest large democracy in the world; England, an imperfect democracy steadily working toward perfection; Italy, a monarchy always on the verge of republicanism; and Belgium, somewhat in the same stage of development. Russia, it is true, has lined up with these democracies; but Russia is far away from us, and we feel that she does not give the tone or set the pace for the alliance. The tone has been given by Great Britain, most democratic among monarchies; and the pace has been set by France, a nation so advanced in democracy that she has been able to make a most effective army, under thorough discipline, through a system of social equality which resembles that of an old-time cow-camp.

On the other side, Germany, both giving the tone and setting the pace for the Central Powers, has repudiated democracy, as we know the term. Her monarch, long before the war, reaffirmed the doctrine of the divine right of kings. In half of his proclamations he calls on the God who guards his dynasty—"he has mobilized the Almighty," say the French. An open oligarchy—this is the phrase which most nearly describes the political and social creed prevailing in Germany, in spite of the Social Democrats. At the head are "the best people," the "well born." When ability arises, when it makes itself insistent enough, the oligarchy must open up and let it in. This new ability has now received the *cachet;* its sons and daughters will be "well born." So is the force and strength of the oligarchy renewed a little in each generation, and so the oligarchy rules, "as God intended it should."

This oligarchy must be responsible; it must take care of the people. But if it fails to do so, that is a matter which lies for settlement not between the oligarch and the people, but between the oligarch and his God—whether that God be the Trinity or Odin. It is a matter of private conscience. This, though not the idea of every German, is that of the group which controls the war. Under Germany is Austria. The class in power there is German, holding to the same idea. The late Francis Joseph was forced in 1859, by the efforts of Garibaldi and Napoleon III, to surrender his Italian provinces to the new United Italy. "These provinces to be ceded to the people therein residing to choose whatever form of government they may wish," read the document presented for his signature—I quote not literally but in substance.

Francis Joseph gave it back. "The people have no right to choose their form of government," he said; "the principle is immoral. I will lose my kingdom sooner than sign this document." He compromised finally by handing over Northern Italy to Napoleon III, who handed it over to the people. Now such ideas still largely prevail in the group that governs Austria. Turkey is an absolute monarchy, zealous for a religion that makes democracy almost impossible. Bulgaria is still under dominance of the king idea.

The Germans of the governing class and, for the most part, of the higher commercial class, are perfectly frank about their system. "Democracy is a failure," they say. We have grown used to democracy in our century and a quarter of national life; it has become an axiom. We no more doubt that it is essentially right and must prevail than the religious among us doubt that Christianity is right and must prevail. If people oppose it, we think in our hearts, it is because of self-interest. Surely they can no more believe that they are right than the ordinary sinner against the moral law believes that he is right.

We do not know, until we encounter the aristocratic school of thought in Europe, that these people have made a social religion, for which they will perform even the supreme sacrifice of death, out of the self-interest of a class. We do not realize that they consider democracy, as we know it, an experiment, bizarre, unsound, perhaps wicked, which ran its course like a disease in the nineteenth century, and which must fall before a more practical, sound and moral form of society.

Now when the superficial observer begins to discuss the war in the neutral countries of Europe he finds opinion divided along pretty definite social lines. I was in Spain a year ago. Spain has a religious issue with France. The most devout country in Catholic Europe, she resents the suppression of the church establishments. Whenever that question did not affect judgment I found the line-up almost strictly social. The aristocracy

was pro-German. The revolutionary element, the industrial element, the progressives in general, were pro-Ally. That open-minded and liberal young ruler, the king, was pro-Ally, partly doubtless owing to the influence of his English queen. Yet the old grandees were so wholly pro-German that war talk, in spite of royal preferences, had been forbidden at court.

"The situation at the palace is funny," said the court reporter of a Madrid newspaper. "Court reporter" means something other than "police-court reporter" in Madrid. "You can't talk of the fashions, because that would involve the shortage in Parisian styles—and the war. You can't talk of finance, because that would involve the present state of the stock market—and the war. You can't talk politics, because that would involve the war all along the line. The weather was a safe topic until last week, when the little Duchess of X, who's noted for her blunders, said that the rain must be caused by the firing up North—and the Queen Dowager nearly burned a hole in her through her lorgnette! Now they're down to personal compliment and scandal!"

The situation, I found later, was almost exactly the same in Holland. The sturdy little country of the dikes was mostly pro-Dutch, ready to smite whomsoever made the first move into their territory; yet in private opinion the court was all pro-German, the truly liberal element all pro-Ally. The queen was maintaining neutrality with difficulty in view of the pressure from her Germanophile intimates. An allied government sent a man to find the real opinion of Sweden. "Omitting those who have been hit in the pocket by our blockade, and ignoring such issues as the fear of Russia," he said, "I find the aristocratic element solid for Germany, and the democratic element all for the Entente." So, I am told, it went in Italy before that country entered the war. Switzerland has no special aristocracy, being more democratic than even France. She has divided on lines of blood; she merely furnishes the exception.

A Spanish Nobleman's Views

IT WAS a young noble of Spain who gave me the cue, if cue were needed. Most of the upper-class Europeans will not discuss such subjects with an American, holding us to be hopeless heretics. But he was more frank or more aggressive than the rest, and in an evening of conversation he laid out the aristocratic view on this war. Germany was winning, he said; and, though he did not like many things about the Germans, especially their prevailing religion and their manners, he believed that the hand of God was in it.

"We had grown dead in the head," he went on. "Science and modern invention came in the nineteenth century. We did nothing to control or use them; so this damned noisy democracy got its start. Now Germany has shown how autocracy can be made effective. She has brought it up to date. She will win. Her idea will prevail in the world. Before we die we'll see a king in France, and you Americans will have to fall into line or perish. Of course it will be hard for you. You haven't any real aristocracy, but your aristocracy of wealth will serve until you get something better."

Now this man was young; and he was stating the extreme unmodified view, without light or shadow, inevitable to his years. Yet in his violent way he was expressing the true opinion of European aristocracy, the true reason why they incline toward Germany in this war. Autocracy and oligarchy brought up to date—aristocratic government made possible and successful in a twentieth-century state—that is the idea of Germany, they feel; and the great success of the German idea in the early stages of the war has filled them with hope.

This, however, does not state the whole situation as it exists at present in Europe. The battle for and against democracy is not only external but internal. Not only are France and England, with their democratic majorities, fighting against a set of nations held and governed by aristocratic minorities, but the aristocratic minorities in France and England have taken heart of grace from the success of German method, and are preparing to renew the struggle, which they had almost lost, against the growing democratic ideal.

Old Ideas Cast in New Forms

THESE people, of course, do not favor Germany as a nation. They hold to a set of old-fashioned ideals, and to none more strongly than that exaggerated nationalism which is the parent of wars. But they have seen the German system successful; they have seen the Western nations, under the pressure of war, adopt many of its features. They propose to beat Germany—no part of the Entente nations is sterner in this resolve than they; but when they have her beaten they would like to take her system, modified to suit their national characteristics, and impose it upon their own peoples.

These oligarchs are a minority in England and still more so in France. However, in England they are very able, and they are not without brains in France. Out of these terrible times has come unexpectedly a new struggle—the principle of hereditary and sanctioned power against the principle of popular rule. This struggle, begun with the war, will not end with the peace—rather, the sharpest conflict may begin when the armies return to the plow and the lathe. The battle for democracy, which in 1914 we complacently thought won, has only entered a new phase.

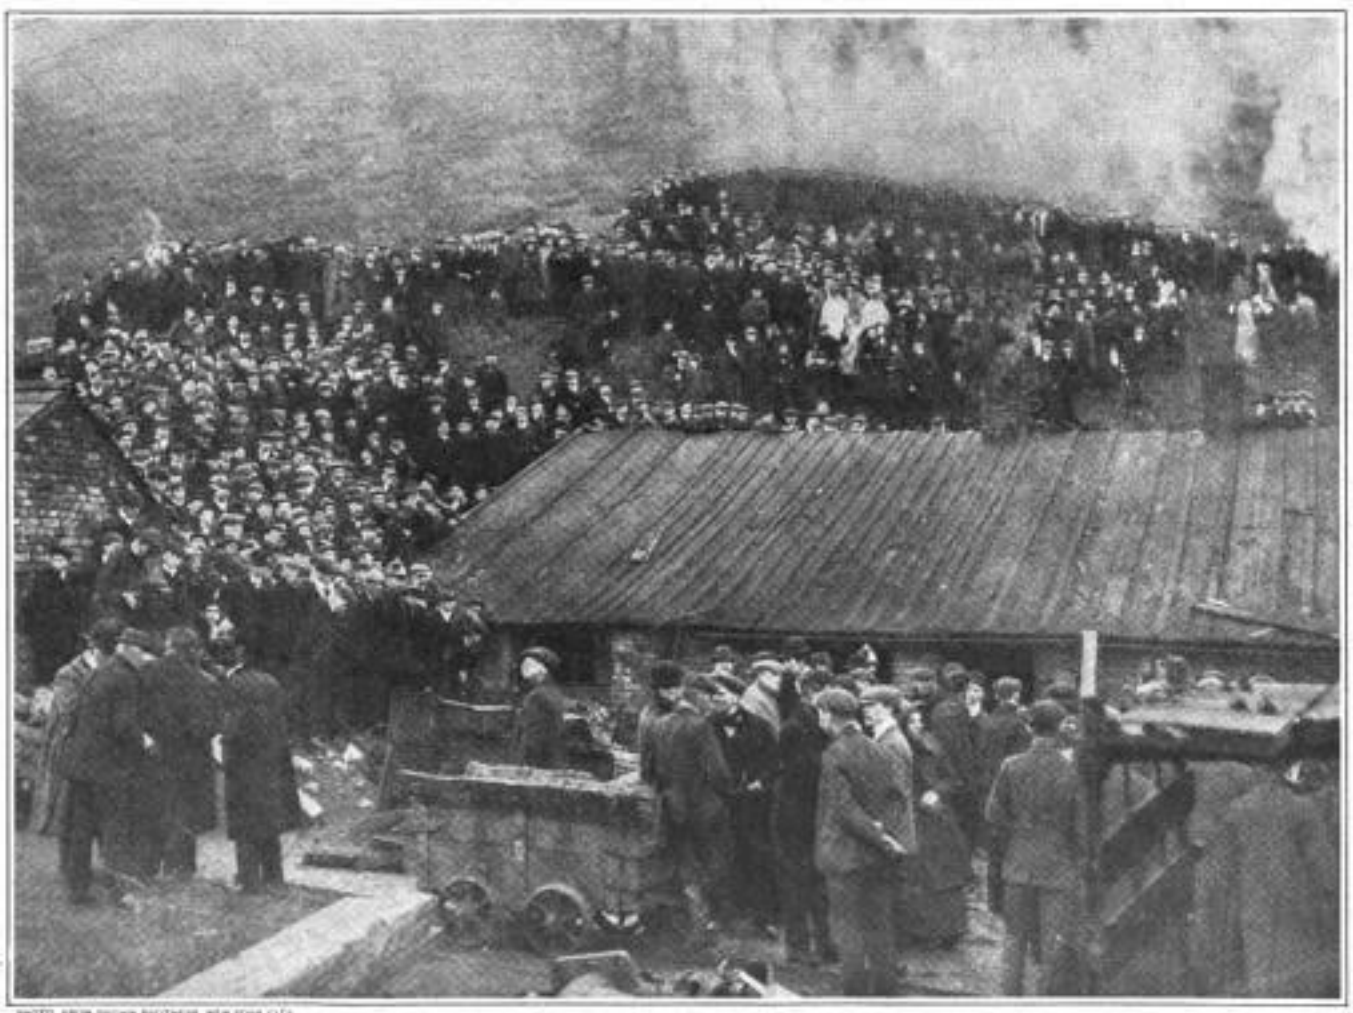
It may seem quaint for a writer to sit down in the year 1917 and define democracy. Most of the defining, one would think, was done more than a century ago in such documents as Tom Paine's Rights of Man—perhaps, also, in Mary Wollstonecraft's Vindication of the Rights of Woman—and the Declaration of Independence. But the new times have cast old ideas in new forms; and here is the philosophy of the two schools of European political thought, as they appear through the confused battle hazes of Europe. Like most Americans of this generation, I have no patience with the aristocratic view; but I shall try to be fair.

The aristocrat, or the person of common birth who accepts the system, believes in his bones that there is a kind of divine sanction for the classes, for the special privileges and emoluments granted the upper class. Equality shocks him, appeals to him as something grotesque. An Englishman of aristocratic ideas was speaking to me last summer of the prison camps for German civilians. "The camp at X goes very well," he said. "All sorts in there—gentlemen, middle class, servants, tradespeople. The camp at Y is simply ridiculous. All well-to-do men there—just alike in social circumstances. It's a dreary place—no point to it!"

Indeed, to the aristocratic temperament, whether it inhabits the person of a duke or a butler, social equality appears like a view across a perfectly level and barren plain—one longs for hills and valleys—there is "no point to it!" What sense of art they have rebels against such a system; for all the beauties and romance of those old lands are intertwined with the aristocratic system—their ruins were the homes of nobles, their cathedrals the offerings of prelates, their paintings the luxuries of kings.

The most blind and zealous converts to the aristocratic system in Europe I have found among expatriate American artists. They will tell you that art cannot flourish save in an autocracy; that beauty is impossible save under an "orderly arrangement of society." It was one of these who, knowing me as a journalist, reproached me for "putting into the minds of the lower classes ideas beyond their grasp." This is the spirit infusing much great European literature of the nineteenth century—for example, Matthew Arnold's Culture and Anarchy, and the art criticism of Ruskin.

Virtually it is feudalism, kept alive by the spirit of conservatism. In the upper layers of the system, its brains and force, it is based, quite unconsciously, upon self-interest. The maintenance of the system enables the hereditary aristocracy to have without struggle, to hold without work. But almost any man can in a few years make a creed, a thing to live and die by, out of self-interest.



Military Aristocracy and Pacifist Democracy

I HAVE never been able fully to understand why a belief in the sanctity of war goes always hand in hand with the aristocratic idea; but so it does in my observation. Perhaps this is because war was the highest expression, the supreme sacrifice to humanity, in those feudal times from which aristocracies draw their sanctions. Perhaps, also, having enjoyed most of the immunities, privileges, pleasures and dissipations of the normal world, they are driven on by a half-unconscious desire for the supreme, unnatural excitement, which is war.

However, nothing about the present mind of Europe impresses me so strongly as the fact that aristocracy is by nature militant; democracy, naturally pacifist. Whenever I find a man in Europe who glories in the war, who longs to get back to it; whenever I find one who calls it the "purifier of nations"; whenever I find one who believes that it has "rescued us from decadence"—I find, on further investigation, that he is an aristocrat to the marrow of his bones.

Whenever I find a man who loathes it, but is "doing his bit," standing a life he abominates for the security of his nation, fighting for a permanent peace and for the dim hope that this will be the last war, I find, upon better acquaintance, that he is a democrat. Here, also, the issue is joined between oligarchy and popular rule. We have grown accustomed to think that the defense of war is a monopoly of the Germans. This is only because the aristocratic element controls Germany, and has free, frank expression. The German Bernhardi called war a "biological necessity," a "cleaner of nations." Yet Lord Roberts, in an essay published since his death, expresses the same idea: "The war has saved us from decadence."

Making allowance for the difference between the smooth, chary, English method of expression and the blunt, violent Prussian method, Roberts is exactly as militaristic as Bernhardi. Indeed, he betrays himself for

what he is when, in his catalogue of British degeneracies, he mentions, along with loose morals and luxuriousness, the "demands of labor unions." To him, they who have dared organize to enforce their rights against the upper class and the accepted social order are sinners, are decadent, along with the frankly immoral.

The aristocrat, of course, is not without reason for the faith that is in him. His highest activity, war, he defends with vigor and subtlety. The philosophical basis for the defense of war, imperfectly expressed throughout the ages, was finally crystallized by Kant in his harmful political philosophy. That gentle and ascetic old person, who pondered and wrote in an age when any philosophy, not scientific inquiry, was the basis of thought, worked it out that a state has a soul apart from the individual souls that compose it. The duty of citizenship is to advance the state without regard to the interests of the individuals in that state. If, by a given political movement, like a war, the interests of the state are advanced, it matters not whether every person in the state is rendered poorer and unhappier. The glory of the state has been achieved and the highest duty is fulfilled.

The modern philosophers of war have simplified and modified Kant in this manner: Life, they say, is struggle. We must struggle to fulfill our destiny. The highest expression of that principle is the struggle in groups—those groups bound together by proximity, blood and character, which we call nations. The struggle between nations, in its "highest" form, is war. Between wars, nations are only gathering strength for new battles; peace is but the rest at the end of each round. If nations rest too long they take to certain soul-destroying activities, like the mad pursuit of pleasure, just because there is no nobler outlet to their surplus human energy, their lust for activity.

I may say here, before going further, that this point of view presupposes a mind which does not look far beyond its own class. The appropriate reply to these people came to me in an indignant remark of a certain English workingman. An Oxford don had just said to me: "The war has been a blessing; we were growing soft." I quoted this to the workingman. "He means," said the latter, "that his class was growing soft!" The German coal miner, the British weaver, the French peasant, the great working middle class, have never known the chance to grow soft. Work, struggle against adversity, the discipline of industrialism, have kept them hard and virile. The proof lies in the history of this war. After the longest peace that Europe ever knew, the European peoples have shown such valor and hardihood as makes all the old heroic ballads seem tame.

The Instinct of Aristocracy

ON THE question of the right to rule, the European aristocrat has borrowed from modern science a reason for the faith that is in him. Whatever one thinks of evolution as a theory, all hands agree that the process of breeding works along the same lines both in men and in animals. Strong horses breed strong colts; able men breed able descendants. Not that the immediate children are always able; the strength skips here and there in a manner which used to puzzle Science until it found the Mendelian Law.

Almost every noble race is founded upon ability. The first ancestor to bear the title won it by a big brain and a strong hand. Behind the Dukes of Marlborough lie a John Churchill and a Sarah Jennings; the Duc d'Orléans, who claims the French throne, sprang from the loins of Henry of Navarre. The descendants of these able ancestors breed with those of similar supermen. So we have families "well born" in the scientific as well as the social sense. They have a right to rule; it is best that they should rule, the logical aristocrat insists, because they are a picked breed. They know better the interests of the "lower classes" than those people can know them themselves.

The true basis of the aristocratic feeling, as I have stated, is a kind of instinct. These people believe in the aristocratic theory, first of all, because they like that sort of thing; they thrill to old, sanctioned forms; to the inheritance of beauty from a feudal age; to those subtleties of human contact which rise when one is master and one is man.

The basis of the democratic feeling is probably no less an instinct. The democrat thrills to the future as the aristocrat to the past. Artificial distinction between man and man jars on him. He glories in the thought that a Lincoln, spelling out his letters by the light of a pine knot, may become the guiding star of a whole great people—as the aristocrat smiles sentimentally at the thought that the young heir to the earldom will some day rule in his father's ermine over a peasantry happy because of his goodness.

Carrying it farther, the democrat, however his ideals may be blurred by self-interest, clings at least to a dim faith that his system will work more and more to eliminate the wide inequalities among men; to end poverty and unnecessary suffering.

As the aristocrat has his supernatural sanction—the divine right—and his philosophy to bolster up his theory of government and his attitude toward war, so has the democrat. His divine sanction is the social philosophy of simple Christianity, nowhere openly expressed in the Scriptures, but everywhere implied—"Men are not equal—some are weak and some strong; some are clever and some stupid. Nevertheless, I will order my conduct on the theory that they are equal. Because I am strong, I will not oppress my brother who is weak; because I am clever, I will not scorn my brother who is stupid; nor will I deny him opportunity."

Democracy Opposed to War

HE HAS his answer—if not philosophical at least scientific—for the aristocratic theory of breeding. H. G. Wells, in his article on the Passing of the Effigy, has expressed it better than I can. To breed a picked stock within a race is against the law of Nature. She does not proceed in that way. The improvement of a species does not mean the creation of supermen. A species does not advance by volcanic upheavals which throw up mountain peaks; it is rather like the slow, even rising of a tide. To lift the whole mass together—that is the democratic ideal, and also the natural ideal. The vindication of natural law in politics is the fact that though aristocracies, based as they are on a principle of artificial selection, may produce able people for a time, they all fade away in the end to a pale or vicious decadence.
